

Statement of Volatility – Dell S2716DG Monitor

△ CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

The purpose of this document is to certify that the Dell S2716DG monitor will not save, retain, or reproduce a signal to any internal or external component after power has been removed and reapplied to the unit.

The Dell S2716DG monitor contains both volatile and non-volatile (NV) memory ICs. Volatile memory(s) lose their data immediately upon removal of power. Non-volatile memory ICs continue to retain their data even after the power has been removed. However, no input video data is written into these memory ICs during operation.

List below contains volatile and non-volatile memory ICs used in the Dell S2716DG monitor.

Table 1. List of Non-Volatile Components on System Board

| | |
|---|--|
| System EEPROM | ROHM BR24G32 |
| Size | 32Kbit |
| Type [e.g. Flash PROM, EEPROM] | EEPROM |
| Volatility | Non-volatile |
| Can user programs or operating system write data to it during normal operation? | OSD setting: Yes |
| Purpose | Storage of system setting (OSD) |
| How is data input to this memory? | Control the OSD menu and change OSD setting(ex. Brightness, contrast, color setting) and the setting will be stored into system EEPROM |
| How is this memory write protected? | Software write protected |

| | |
|---|--|
| HDMI EDID EEPROM | ST M24C02 |
| Size | 2Kbit |
| Type [e.g. Flash PROM, EEPROM] | EEPROM |
| Volatility | Non-volatile |
| Can user programs or operating system write data to it during normal operation? | No |
| Purpose | Storage of HDMI EDID |
| How is data input to this memory? | HDMI EDID is embedded in the firmware, and copied to EEPROM after F/W programming. (or via customized EDID tool) |

| | |
|-------------------------------------|---------------------------------------|
| How is this memory write protected? | Hardware and software write protected |
|-------------------------------------|---------------------------------------|

| | |
|---|---|
| Flash ROM | MXIC MX25L4006 |
| Size | 4Mbit |
| Type [e.g. Flash PROM, EEPROM] | Serial flash memory |
| Volatility | Non-volatile |
| Can user programs or operating system write data to it during normal operation? | No |
| Purpose | To store firmware |
| How is data input to this memory? | Loading flash memory requires a vendor-provided tool and firmware |
| How is this memory write protected? | Software write protected |
