Power Management Modes

If you have VESA's DPMSTM compliance display card or software installed in your PC, the monitor can automatically reduce its power consumption when not in use. This is referred to as Power Save Mode. If input from a keyboard, mouse or other input devices is detected by the computer, the monitor will automatically "wake up". The following table shows the power consumption and signaling of this automatic power-saving feature:

VESA Modes	Horizontal Sync	Vertical Sync	Video	Power Indicator	Power Consumption
Normal operation	Active	Active	Active	White	20 W (maximum)
Active-off mode	Inactive	Inactive	Blanked	Amber	Less than 2 W
Switch off	-	-	-	Off	Less than 1 W

 ${\color{red} {\mathbb Z}}$ NOTE: Zero power consumption in OFF mode can only be achieved by disconnecting the main cable from the monitor.

Plug and Play Capability

You can install the monitor in any Plug and Play-compatible system. The monitor automatically provides the computer system with its Extended Display Identification Data (EDID) using Display Data Channel (DDC) protocols so that the system can configure itself and optimize the monitor settings. If required, the user can select different settings, but in most cases monitor installation is automatic.

LCD Monitor Quality & Pixel Policy

During the LCD Monitor manufacturing process, it is not uncommon for one or more pixels to become fixed in an unchanging state. The visible result is a fixed pixel that appears as an extremely tiny dark or bright discolored spot. When the pixel remains permanently lit, it is known as a "bright dot." When the pixel remains black, it is known as a "dark dot."

In almost every case, these fixed pixels are hard to see and do not detract from display quality or usability. A display with 1 to 5 fixed pixels is considered normal and within competitive standards. For more information, see Dell Support site at: support.dell.com.

Maintenance Guidelines

Caring for Your Monitor

CAUTION: Read and follow the $\underline{\textbf{Safety Instructions}}$ before cleaning the monitor.

CAUTION: Before cleaning the monitor, unplug the monitor from the electrical outlet.

For best practices, follow the instructions in the list below while unpacking, cleaning, or handling your monitor:

- 1 To clean your antistatic screen, lightly dampen a soft, clean cloth with water. If possible, use a special screen-cleaning tissue or solution suitable for the antistatic coating. Do not use benzene, thinner, ammonia, abrasive cleaners, or compressed air.

 Use a lightly-dampened, warm cloth to clean the monitor. Avoid using detergent of any kind as some detergents leave a milky film on the monitor.

- If you notice a white powder when you unpack your monitor, wipe it off with a cloth.

 Handle your monitor with care as dark-colored monitors may scratch and show white scuff marks more than lighter-colored monitors.

 To help maintain the best image quality on your monitor, use a dynamically changing screen saver and turn off your monitor when not in use.

OSD Warning Messages

When the monitor does not support a particular resolution mode you will see the following message

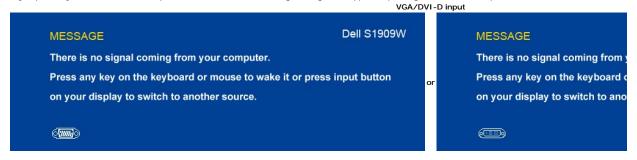

This means that the monitor cannot synchronize with the signal that it is receiving from the computer. See Monitor Specifications for the Horizontal and Vertical f monitor. The recommended mode is 1366 x 768.

When monitor enters Power Save mode, the following message appears :

Activate the computer and wake up the monitor to gain access to the OSD

If you push any button other than the power button one of the following messages will appear depending on the selected input:

If either VGA or DVI-D input is selected and all VGA and DVI-D cables are not connected, a floating dialog box as shown below appears.

See Solving Problems for more information.

Setting the Optimal Resolution

To set the optimal resolution for the monitor.

- Right-click on the desktop and select Properties.
- Select the **Settings** tab.
 Set the screen resolution to 1366 x 768.
 Click **OK**.

If you do not see 1366 x 768 as an option, you may need to update your graphics driver. Depending on your computer, complete one of the following procedures

If you have a Dell desktop or portable computer:

o Go to support.dell.com, enter your service tag, and download the latest driver for your graphics card.

If you are using a non-Dell computer (portable or desktop):

- o Go to the support site for your computer and download the latest graphic drivers. o Go to your graphics card website and download the latest graphic drivers.

Using the Dell Soundbar (Optional)

The Dell Soundbar is a stereo two channel system mountable on Dell flat panel displays. The Soundbar has a rotary volume and on/off control to adjust the overall system level, a blue LED for power indication, and two audio headset jacks.

- 1. Attach mechanism
- 2. Headphone connectors
- 3. Power indicator
- 4. Power/Volume control

Using the Tilt

With the built-in pedestal, you can tilt the monitor for the most comfortable viewing angle.

NOTE: The stand is attached when the monitor is shipped from the factory.

Setting Up the Monitor

Dell™ S1909W Flat Panel Monitor User's Guide

- Attaching the Base
- Connecting the Monitor
- Attaching the Soundbar (optional)
- Removing the Base

Attaching the Base

NOTE: The base is detached when the monitor is shipped from the factory.

After placing the monitor panel on a soft cloth or cushion, complete the following steps to attach the base.

- 1. Place the monitor on a flat surface.
- 2. Attach the base to the monitor.

Connecting Your Monitor

CAUTION: Before you begin any of the procedures in this section, follow the safety instructions.

To connect your monitor to the computer perform the following steps/instructions:

- Turn off your computer and disconnect the power cable.
 Connect either the white (digital DVI-D (optional)) or the blue (analog VGA) display connector cable to the corresponding video port on the back of your computer. Do not use both cables on the same computer. Use both the cables only when they are connected to two different computers with appropriate video systems.

Connecting the blue VGA cable

Connecting the white DVI cable (optional)

NOTE: Not all monitor models ship with a DVI cable. To purchase a DVI cable Contact Dell.

NOTE: The Graphics are used for the purpose of illustration only. Appearance of the the computer may vary.

After you have completed connecting the DVI/VGA cable, follow the procedure below to complete your monitor setup:

- Plug the power cables for your computer and monitor into a nearby outlet.
 Turn on the monitor and the computer.
 If your monitor displays an image, installation is complete. If it does not display an image, see Solving Problems.

 Use the cable management slot on the monitor stand to organize the cables.

Attaching the Soundbar (optional)

- 1. Working from the rear of the monitor, attach the Soundbar by aligning the two slots with the two tabs along the bottom rear of the monitor.
- 2. Slide the Soundbar to the left until it snaps into place.
- 3. Connect the Soundbar with the DC power connector.
- 4. Insert the mini stereo plug from the rear of the Soundbar into the computer's audio output jack.
- NOTICE: Do not use with any device other than the Dell Soundbar

Removing the Base

After placing the monitor panel on a soft cloth or cushion, complete the following steps to remove the base.

- 1. Pull down the tab on the bottom of the base.
- 2. Detach the base away from the monitor.

Solving Problems

Dell™ S1909W Flat Panel Monitor User's Guide

- Self-Test
- Built-in Diagnostics
- Common Problems
- Product Specific Problems
- Troubleshooting the Dell™ Soundbar (Optional)

CAUTION: Before you begin any of the procedures in this section, follow the Safety Instructions.

Self-Test

Your monitor provides a self-test feature that allows you to check whether your monitor is functioning properly. If your monitor and computer are properly connected but the monitor screen remains dark, run the monitor self-test by performing the following steps:

- Turn off both your computer and the monitor.
 Unplug the video cable from the back of the computer. To ensure proper Self-Test operation, remove both Digital (white connector) and the Analog (blue connector) cables from the back of computer.
- 3. Turn on the monitor

The floating dialog box should appear on-screen (against a black background) if the monitor cannot sense a video signal and is working correctly. While in self-test mode, the power LED remains white. Also, depending upon the selected input, one of the dialogs shown below will continuously scroll through the screen.

- This box also appears during normal system operation, if the video cable becomes disconnected or damaged.
 Turn off your monitor and reconnect the video cable; then turn on both your computer and the monitor.

If your monitor screen remains blank after you have performed Step 5, check your video controller and computer system.

Built-in Diagnostics

Your monitor has a built-in diagnostic tool that helps you determine if the screen abnormality you are experiencing is an inherent problem with your monitor, or with your computer and video card.

MOTE: You can run the built-in diagnostics only when the video cable is unplugged and the monitor is in self-test mode. To run the built-in diagnostics:

- Ensure that the screen is clean (no dust particles on the surface of the screen).
 Unplug the video cable(s) from the back of the computer or monitor. The monitor then goes into the self-test mode.
- Press and hold the and hours on the front panel, simultaneously for 2 seconds. A gray screen appears.
- 4. Carefully inspect the screen for abnormalities
- 5. Press the houtton on the front panel again. The color of the screen changes to red.
- Inspect the display for any abnormalities.

 Repeat steps 5 and 6 to inspect the display in green, blue, and white colored screens.

The test is complete when the white screen appears. To exit, press the A button again.

If you do not detect any screen abnormalities upon using the built-in diagnostic tool, the monitor is functioning properly. Check the video card and computer.

OSD Warning Messages

For OSD-related issues, see OSD Warning Messages

Common Problems

The following table contains general information about common monitor problems that you might encounter and the possible solutions.

Common Symptoms	What You Experience	Possible Solutions
No Video/ Power LED off	No picture	Ensure that the video cable connecting the monitor and the computer is properly co secure. Verify that the power outlet is functioning properly using any other electrical equipm Ensure that the power button depressed fully.
No Video/ Power LED on	No picture or no brightness	Increase brightness & contrast controls via OSD. Perform monitor self-test feature check. Check for bent or broken pins in the video cable connector. Run the built-in diagnostics.
Poor Focus	Picture is fuzzy, blurry, or ghosting	Perform Auto Adjust via OSD. Adjust the Phase and Pixel Clock controls via OSD. Eliminate video extension cables. Reset the monitor to Factory Settings. Change the video resolution to the correct aspect ration (16:9).
Shaky/Jittery Video	Wavy picture or fine movement	Perform Auto Adjust via OSD. Adjust the Phase and Pixel Clock controls via OSD. Reset the monitor to Factory Settings. Check environmental factors. Relocate the monitor and test in another room.
Missing Pixels	LCD screen has spots	Cycle power on-off. Pixel that is permanently off is a natural defect that can occur in LCD technology. Run the built-in diagnostics.
Stuck-on Pixels	LCD screen has bright spots	Cycle power on-off. Pixel that is permanently off is a natural defect that can occur in LCD technology. Run the built-in diagnostics.
Brightness Problems	Picture too dim or too bright	Reset the monitor to Factory Settings. Auto Adjust via OSD. Adjust brightness & contrast controls via OSD.
