Introduction to this Guide

This chapter provides information about what is contained in the *vFoglight Cartridge for VMware Reference Guide*. It also provides information about the vFoglight documentation suite and Vizioncore Software.

This chapter contains the following sections:

About vFoglight	8
About this Guide	8
vFoglight Documentation Suite	8
Text Conventions	10
About Vizioncore Inc.	11

About vFoglight

vFoglight is an application management solution that reduces or eliminates service disruptions to unify IT and the business. Unlike other solutions, it provides a correlated, 360 degree view of your applications from end user to database and from service levels to infrastructure—to source the root cause of every incident impacting your business and fix them quickly. vFoglight correlates data from multiple perspectives into a single version of the truth to provide deep insight into the service relationships that exist between end users, the business and infrastructure components. Its unique adaptive technology rapidly adjusts to change for improved application performance and service levels, reduced operational cost and risk, and enhanced visibility for all stakeholders.

About this Guide

vFoglight ships with predefined rules and views that help you monitor your virtual infrastructure. The *vFoglight Cartridge for VMware Reference Guide* lists those rules and views, and provides a definition for each.

This guide is intended for any user who wants to learn more about any vFoglight rule or view.

This *Cartridge for VMware Reference Guide* is organized as follows:

Chapter 1, vFoglight Rules — Lists and describes the predefined rules included with vFoglight.

Chapter 2, vFoglight Views — Lists and describes the predefined views included with vFoglight

vFoglight Documentation Suite

The vFoglight documentation suite is made up of the core documentation set plus the documentation set for each vFoglight cartridge that you deploy. Documentation is provided in a combination of online help, PDF, and HTML.

- **Online Help:** You can open online help by selecting the Help tab in the action panel.
- **PDF:** The *Getting Started Guide*, *What's New Guide*, *System Requirements and Platform Support Guide*, *Installation and Setup Guide* set, *Administration and*

Configuration Guide, *vFoglight User Guide*, *Command-Line Reference Guide*, *Transition Guide*, *Web Component Guide*, and *Web Component Tutorial*, are provided as PDF files. In addition, the cartridges ship with PDF guides. The PDF guides are installed in the *docs* directory of your vFoglight installation directory. Adobe® Reader® is required.

- **HTML:** Release Notes are provided in HTML.

Core Documentation Set

The core documentation set consists of the following:

- *Release Notes* (HTML)
- *Getting Started Guide* (PDF)
- *What's New Guide* (PDF)
- *System Requirements and Platform Support Guide* (PDF)
- *Installation and Setup Guide* set (all in PDF format):
 - Installation and Setup Guide — *Installing on Windows with an Embedded MySQL Database*
 - Installation and Setup Guide — *Installing on Windows with an External MySQL Database*
 - Installation and Setup Guide — *Installing on Windows with an External Oracle Database*
 - Installation and Setup Guide — *Installing on a UNIX System with an Embedded MySQL Database*
 - Installation and Setup Guide — *Installing on a UNIX System with an External MySQL Database*
 - Installation and Setup Guide — *Installing on a UNIX System with an External Oracle Database*
- *Administration and Configuration Guide* (PDF and online help)
- *vFoglight User Guide* (PDF and online help)
- *Command-Line Reference Guide* (PDF and online help)
- *Transition Guide* (PDF)
- *Web Component Guide* (PDF and online help)
- *Web Component Tutorial* (PDF and online help)

- *Web Component Reference* (online help)

When you deploy vFoglight, the documentation set gets installed along with the other vFoglight files. The online help is integrated automatically with the help for vFoglight. When you open the help, the vFoglight name is displayed in a top level entry within the table of contents.

Feedback on the Documentation

We are interested in receiving feedback from you about our documentation. For example, did you notice any errors in the documentation? Were any features undocumented? Do you have any suggestions on how we can improve the documentation? All comments are welcome. Please submit your feedback to the following email address:

infor@vizioncore.com

Please do not submit Technical Support related issues to this email address.

Text Conventions

This section outlines an approach for using this guide, reviews the text conventions that are used, and summarizes the rest of the documentation set.

The following table summarizes how text styles are used in this guide:

Convention	Description
Code	Monospace text represents code, code objects, and command-line input. This includes: <ul style="list-style-type: none"> • Java language source code and examples of file contents • Classes, objects, methods, properties, constants, and events • HTML documents, tags, and attributes
<i>Variables</i>	Monospace-plus-italic text represents variable code or command-line objects that are replaced by an actual value or parameter.
Interface	Bold text is used for interface options that you select (such as menu items) as well as keyboard commands.

Convention	Description
<i>Files, components, and documents</i>	Italic text is used to highlight the following items: <ul style="list-style-type: none">• Pathnames, file names, and programs• Figure captions• The names of other documents referenced in this guide

About Vizioncore Inc.

Vizioncore was formed in July 2002 as a consulting and software-development company with the mission to create easy-to-use software solutions that performed reliable and repeatable automation of datacenter functions specifically for the Citrix platform. A main corporate goal was to enable business partners to offer solutions that targeted real-world IT issues and provided the best possible installation and automation for their clients' systems.

Vizioncore's solutions have proved successful in organizations from small to mid-sized businesses to large enterprises, in a wide variety of vertical industries, including Financial Services, Government, Healthcare, Manufacturing, and High Tech. Vizioncore, Inc. can be found in offices around the globe and at www.vizioncore.com.

Contacting Dell

Note: If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

- 1 Visit <http://support.dell.com>.
- 2 Verify your country or region in the Choose A Country/Region drop-down menu at the bottom of the page.
- 3 Click Contact Us on the left side of the page. Note: Toll-free numbers are for use within the country for which they are listed.
- 4 Select the appropriate service or support link based on your need.
- 5 Choose the method of contacting Dell that is convenient for you.

vFoglight Rules

The vFoglight Cartridge for VMware includes a number of predefined rules that capture the expert knowledge of our virtualization specialists and are used to monitor the health of your virtual infrastructure. vFoglight allows you to modify these rules or create your own flexible rules that can be applied to complex, interrelated data from multiple sources within your distributed system.

In this chapter, rule descriptions are organized into logical groupings. To see a rule description, select the appropriate grouping from the sections listed below.

This chapter contains the following sections:

Overview of Rules	26
Thresholds	27
Agent Rules	27
Cluster Rules	30
Datacenter Rules	37
Datastore Rule	43
Resource Pool Rules	44
ESX Server Rules	51
VirtualCenter Rules	63
Virtual Machine Rules	69

Overview of Rules

vFoglight allows you to create flexible rules that can be applied to complex, interrelated data from multiple sources within your distributed system. You can associate several different actions with a rule, configure a rule so that it does not fire repeatedly, and associate a rule with schedules to define when it should and should not be evaluated.

Different types of data can be used in rules, including registry variables, raw metrics, derived metrics, and topology object properties.

There are two types of rules in vFoglight: simple rules and multiple-severity rules. A simple rule has a single condition, and can be in one of three states: *Fire*, *Undefined*, or *Normal*. A multiple-severity rule can have up to five severity levels: *Undefined*, *Fatal*, *Critical*, *Warning*, and *Normal*.

Rule conditions are regularly evaluated against monitoring data (metrics and topology object properties collected from your monitored environment and transformed into a standard format). Therefore, the state of the rule can change if the data changes. For example, if a set of monitoring data matches a simple rule's condition, the rule enters the *Fire* state. If the next set does not match the condition, the rule exits the *Fire* state and enters the *Normal* state.

A rule condition is a type of expression that can be true or false. When it evaluates to true, the rule is said to fire, causing any actions that are associated with the rule or severity level to be performed. You can configure a rule to perform one or more actions upon entering or exiting each state. When a multiple-severity rule fires, an alarm also appears in vFoglight.

See “Introduction to Rules” and “Creating and Editing Rules” in the *vFoglight Administration and Configuration Guide* for more information.

Thresholds

Many of the rules listed and described in this chapter have thresholds (standard deviations, utilization percentages, etc.) defined within them. Those thresholds are default values predefined in the registry.

Agent Rules

This section lists and describes the agent rules.

Rules in this section:

- [“VMW Agent Data Updates”](#) on page 27
- [“VMW Agent Messages”](#) on page 28
- [“VMW Agent Updates”](#) on page 29

VMW Agent Data Updates

Purpose

An alarm fires when the agent does not report on data (dataType) in the appropriate amount of time (timeDiffSecs).

Scope

VMWAgentDataUpdate

Rule Definition

Conditions	State	Action
The agent reports on the data in the appropriate amount of time.	Normal	None
The agent does not report on the data in the appropriate amount of time.	Critical	E-mail VMW admin

Views Displaying Alarms Based on this Rule

- vmAgents Dashboard; see the *vFoglight User Guide*
- [“Alarms Overview”](#) on page 102
- [“Alarms List View”](#) on page 103

VMW Agent Messages**Purpose**

This rule converts agent messages into vFoglight alarms.

Scope

VMWAgent

Rule Definition

Conditions	State	Action
There are no agent messages with a severity value of either 2, 3, or 4.	Normal	None
When there is an agent message with a severity value of 2, an alarm fires displaying the message.	Warning	None
When there is an agent message with a severity value of 3, an alarm fires displaying the message.	Critical	E-mail VMW admin
When there is an agent message with a severity value of 4, an alarm fires displaying the message.	Failure	E-mail VMW admin

Views Displaying Alarms Based on this Rule

- vmAgents Dashboard; see the *vFoglight User Guide*
- [“Alarms Overview”](#) on page 102
- [“Alarms List View”](#) on page 103

VMW Agent Updates

Purpose

An alarm fires when the agent does not report any data in the specified amount of time (timeDiffSecs).

Scope

VMWAgent

Rule Definition

Conditions	State	Action
The agent reports data in the specified amount of time.	Normal	None
The agent does not report any data in the specified amount of time.	Critical	E-mail VMW admin

Views Displaying Alarms Based on this Rule

- vmAgents Dashboard; see the *vFoglight User Guide*
- [“Alarms Overview”](#) on page 102
- [“Alarms List View”](#) on page 103

Cluster Rules

This section lists and describes the cluster rules.

Rules in this section:

- [“VMW Cluster CPU Utilization”](#) on page 30
- [“VMW Cluster Disk IO”](#) on page 31
- [“VMW Cluster Memory Utilization”](#) on page 32
- [“VMW Cluster Network IO”](#) on page 33
- [“VMW Cluster Percent Ready”](#) on page 35
- [“VMW Cluster Redundancy Verification”](#) on page 36

VMW Cluster CPU Utilization

Purpose

This rule monitors for spikes, dramatic drops, and sustained high levels in CPU utilization for a cluster.

Scope

VMWCluster

Rule Definition

Conditions	State	Action
The CPU utilization is no more than 2.2 standard deviations (NumSTDevs) from the mean CPU utilization and the CPU utilization is at 75% or less.	Normal	None
The CPU utilization is more than 2.2 but no more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 75% but not greater than 83%.	Warning	None
The CPU utilization is more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 83%.	Critical	E-mail VMW admin

Views Displaying Alarms Based on this Rule

VMW Cluster Disk IO

Purpose

This rule monitors for spikes and dramatic drops in disk IO for a cluster.

Scope

VMWCluster

Rule Definition

Conditions	State	Action
The disk usage is no more than 2.2 standard deviations (NumSTDevs) from the mean disk usage.	Normal	None
The disk usage is more than 2.2 but no more than 2.8 standard deviations from the mean disk usage.	Warning	None
The disk usage is more than 2.8 standard deviations from the mean disk usage.	Critical	None

VMW Cluster Memory Utilization

Purpose

This rule monitors for spikes and dramatic drops in memory utilization for a cluster.

Scope

VMWCluster

Rule Definition

Conditions	State	Action
The memory utilization is no more than 2.2 standard deviations (NumSTDevs) from the mean memory utilization.	Normal	None
The memory utilization is more than 2.2 but no more than 2.8 standard deviations from the mean memory utilization.	Warning	None
The memory utilization is more than 2.8 standard deviations from the mean memory utilization.	Critical	None

VMW Cluster Network IO

Purpose

This rule monitors for spikes and dramatic drops in network IO for a cluster.

Scope

VMWCluster

Rule Definition

Conditions	State	Action
The network usage is no more than 2.2 standard deviations (NumSTDevs) from the mean network usage.	Normal	None
The network usage is more than 2.2 but no more than 2.8 standard deviations from the mean network usage.	Warning	None
The network usage is more than 2.8 standard deviations from the mean network usage.	Critical	None

VMW Cluster Percent Ready

Purpose

This rule fires an alarm to report that when a virtual machine within the cluster is requesting CPU cycles from the ESX Server on which it is running, it is not receiving them some percentage of the time. This will impact performance on the virtual machine.

Scope

VMWCluster

Rule Definition

Conditions	State	Action
When the virtual machine requests CPU cycles, it is only not receiving them 2% or less of the time.	Normal	None
When the virtual machine requests CPU cycles, it is not receiving them greater than 2% but no greater than 8% of the time.	Warning	None
When the virtual machine requests CPU cycles, it is not receiving them greater than 8% but no greater than 12% of the time.	Critical	E-mail VMW admin
When the virtual machine requests CPU cycles, it is not receiving them greater than 12% of the time.	Fatal	E-mail VMW admin

VMW Cluster Redundancy Verification

Purpose

This rule fires an alarm to report that if an ESX Server within the cluster fails, the remaining servers in the cluster may not or do not have enough available CPU and/or memory to handle the increased workload.

Scope

VMWCluster

Rule Definition

Conditions	State	Action
The cluster has sufficient redundant CPU and memory capacity to handle the failure of a single ESX Server.	Normal	None
Although the cluster can handle the failure of a single ESX Server, either the resulting combined CPU utilization or the resulting combined memory utilization on the remaining servers, or both, would be beyond the warning threshold. The resulting alarm message will indicate the values of both of the new combined utilizations.	Warning	None
If an ESX Server within the cluster fails, the remaining servers do not have the capacity to handle the increased workload. The resulting alarm message will indicate the values of both of the new combined utilizations.	Critical	None

Datacenter Rules

This section lists and describes the datacenter rules.

Rules in this section:

- [“VMW Datacenter CPU Utilization”](#) on page 38
- [“VMW Datacenter Disk IO”](#) on page 39
- [“VMW Datacenter Memory Utilization”](#) on page 40
- [“VMW Datacenter Network IO”](#) on page 41
- [“VMW Datacenter Percent Ready”](#) on page 42

VMW Datacenter CPU Utilization

Purpose

This rule monitors for spikes, dramatic drops, and sustained high levels in CPU utilization for a datacenter.

Scope

VMWDatacenter

Rule Definition

Conditions	State	Action
The CPU utilization is no more than 2.2 standard deviations (NumSTDevs) from the mean CPU utilization and the CPU utilization is at 90% or less.	Normal	None
The CPU utilization is more than 2.2 but no more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 90% but not greater than 93%.	Warning	None
The CPU utilization is more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 93%.	Critical	E-mail VMW admin

Datastore Rule

This section describes datastore rules.

Rules in this section:

- [“VMW Datastore Estimated Fill Time”](#) on page 43

VMW Datastore Estimated Fill Time

Purpose

This rule fires an alarm to report about when the datastore is likely to reach full capacity, based on its present growth rate.

Scope

VMWDatastore

Rule Definition

Conditions	State	Action
At the present growth rate, the datastore will not reach its capacity within the next month (within the next 672 hours).	Normal	None
At the present growth rate, the datastore will reach its capacity within the next month (within the next 672 hours).	Warning	None
At the present growth rate, the datastore will reach its capacity within the next week (within the next 168 hours).	Critical	E-mail VMW admin
At the present growth rate, the datastore will reach its capacity within the next 48 hours.	Fatal	E-mail VMW admin

Resource Pool Rules

This section lists and describes the resource pool rules.

Rules in this section:

- [“VMW Resource Pool CPU Utilization”](#) on page 44
- [“VMW Resource Pool Disk IO”](#) on page 46
- [“VMW Resource Pool Memory Utilization”](#) on page 47
- [“VMW Resource Pool Network IO”](#) on page 48
- [“VMW Resource Pool Percent Ready”](#) on page 49

VMW Resource Pool CPU Utilization

Purpose

This rule monitors for spikes, dramatic drops, and sustained high levels in CPU utilization for a resource pool.

Scope

VMWResourcePool

Rule Definition

Conditions	State	Action
The CPU utilization is no more than 2.2 standard deviations (NumSTDevs) from the mean CPU utilization and the CPU utilization is at 75% or less.	Normal	None

Rule Definition

The CPU utilization is more than 2.2 but no more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 75% but not greater than 83%.	Warning	None
The CPU utilization is more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 83%.	Critical	E-mail VMW admin

- [“VMW ESX Server Network IO”](#) on page 60
- [“VMW ESX Server Consumed Vs. Granted Memory”](#) on page 61

VMW ESX Server Balloon Memory Deflation

Purpose

This rule monitors for servers working excessively to reclaim memory. To better balance memory utilization across servers within a cluster, you can add more physical resources to a server or you can use VMotion to move a virtual machine from one server to another.

Scope

VMWESXServerMemory

Rule Definition

Conditions	State	Action
The balloon has not been growing excessively and is deflating normally.	Normal	None
The balloon has reached 20% of the server's memory over the course of the last 90 minutes and has failed to deflate to less than 5% over the last 15 minutes.	Warning	None
The balloon has reached 20% of the server's memory over the course of the last 90 minutes and has failed to deflate to less than 12% over the last 15 minutes.	Critical	E-mail VMW admin

VMW ESX Server CPU 0 High Utilization

Purpose

This rule monitors for situations in which an incomplete SOAP message sent to the Web services API results in a dramatic increase in CPU usage on CPU 0 within an ESX Server or VirtualCenter.

Scope

VMWESXServerProcessor

Rule Definition

Conditions	State	Action
The CPU usage on CPU 0 is not greater than 95%.	Normal	None
The CPU usage on CPU 0 is greater than 95%.	Fatal	None

VMW ESX Server CPU Utilization

Purpose

This rule monitors for spikes, dramatic drops, and sustained high levels in CPU utilization for an ESX Server.

Scope

VMWESXServerCPUs

Rule Definition

Conditions	State	Action
The CPU utilization is no more than 2.2 standard deviations from the mean CPU utilization and the CPU utilization is at 90% or less.	Normal	None
The CPU utilization is more than 2.2 but no more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 90% but not greater than 93%.	Warning	None
The CPU utilization is more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 93%.	Critical	E-mail VMW admin

VMW ESX Server Disconnected

Purpose

This rule checks for a loss of connectivity between the VirtualCenter and an ESX Server that had virtual machines running on it.

Scope

VMWESXServer

Rule Definition

Conditions	State	Action
The ESX Server, which has virtual machines running on it, is currently connected to the VirtualCenter.	Normal	None
The ESX Server, which had virtual machines running on it, is no longer connected to the VirtualCenter.	Critical	E-mail VMW admin

VMW ESX Server Heap Free Memory

Purpose

This rule monitors heap memory in the vmkernel and fires an alarm when the heap memory for a particular ESX Server drops below a predefined amount.

If the amount of heap memory in the vmkernel for a particular ESX Server drops to the critical level, you may want to add more physical memory to the server or use VMotion to better balance memory utilization across servers within the cluster.

Scope

VMWESXServerMemory

Rule Definition

Conditions	State	Action
The amount of free memory in the vmkernel for the ESX Server is 10,240 KB or more.	Normal	None
The amount of free memory in the vmkernel for the ESX Server is less than 10,240 KB but not less than 6,144 KB.	Critical	E-mail VMW admin
The amount of free memory in the vmkernel for the ESX Server is less than 6,144 KB.	Fatal	E-mail VMW admin

VMW ESX Server Memory Utilization Upward Trend

Purpose

This rule monitors for upward trends in memory utilization for an ESX Server.

Scope

VMWESXServerMemory

Rule Definition

Conditions	State	Action
Over the last ten minutes the mean memory has not increased (relative to the historical mean memory) by any more than 1%.	Normal	None
Over the last ten minutes the mean memory has increased (relative to the historical mean memory) by more than 1% but not by more than 2%.	Warning	None
Over the last ten minutes the mean memory has increased (relative to the historical mean memory) by more than 2% but not by more than 3%.	Critical	None
Over the last ten minutes the mean memory has increased (relative to the historical mean memory) by more than 3%.	Fatal	None

VMW ESX Server Consumed Vs. Granted Memory

Purpose

This rule compares the amount of memory that is being requested by the virtual machines on an ESX Server to the amount of memory available on the the ESX Server.

If the application workload of the ESX Server is requesting an excessive amount of the available memory resources, you must either add memory to the ESX Server or use VMotion to better balance the virtual machines across the servers within the cluster.

Scope

VMWESXServerMemory

Rule Definition

Conditions	State	Action
The virtual machines on the server are requesting just 75% or less of the memory the server has available.	Normal	None
The virtual machines on the server are requesting more than 75% but no more than 83% of the memory the server has available.	Warning	None
The virtual machines on the server are requesting more than 83% but no more than 90% of the memory the server has available.	Critical	E-mail VMW admin
The virtual machines on the server are requesting more than 90% of the memory the server has available.	Fatal	E-mail VMW admin

VirtualCenter Rules

This section lists and describes the VirtualCenter rules.

Rules in this section:

- “[VMW VirtualCenter CPU Utilization](#)” on page 63
- “[VMW VirtualCenter Disk IO](#)” on page 64
- “[VMW VirtualCenter Memory Utilization](#)” on page 65
- “[VMW VirtualCenter Network IO](#)” on page 66
- “[VMW VirtualCenter Percent Ready](#)” on page 67

VMW VirtualCenter CPU Utilization

Purpose

This rule monitors for spikes, dramatic drops, and sustained high levels in CPU utilization for a VirtualCenter.

Scope

VMWVirtualCenter

Rule Definition

Conditions	State	Action
The CPU utilization is no more than 2.2 standard deviations (NumSTDevs) from the mean CPU utilization and the CPU utilization is at 90% or less.	Normal	None
The CPU utilization is more than 2.2 but no more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 90% but not greater than 93%.	Warning	None
The CPU utilization is more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 93%.	Critical	E-mail VMW admin

VMW VirtualCenter Disk IO

Purpose

This rule monitors for spikes and dramatic drops in disk IO for a VirtualCenter.

Scope

VMWVirtualCenter

Rule Definition

Conditions	State	Action
The disk usage is no more than 2.2 standard deviations (NumSTDevs) from the mean disk usage.	Normal	None
The disk usage is more than 2.2 but no more than 2.8 standard deviations from the mean disk usage.	Warning	None
The disk usage is more than 2.8 standard deviations from the mean disk usage.	Critical	None

VMW VirtualCenter Percent Ready

Purpose

This rule fires an alarm to report that when a virtual machine within the VirtualCenter is requesting CPU cycles from the ESX Server on which it is running, it is not receiving them some percentage of the time. This will impact performance on the virtual machine.

Scope

VMWVirtualCenter

Rule Definition

Conditions	State	Action
When the virtual machine requests CPU cycles, it is only not receiving them 2% or less of the time.	Normal	None
When the virtual machine requests CPU cycles, it is not receiving them greater than 2% but no greater than 8% of the time.	Warning	None
When the virtual machine requests CPU cycles, it is not receiving them greater than 8% but no greater than 12% of the time.	Critical	E-mail VMW admin
When the virtual machine requests CPU cycles, it is not receiving them greater than 12% of the time.	Fatal	E-mail VMW admin

- [“VMW Virtual Machine Power State Change”](#) on page 83
- [“VMW Virtual Machine VMware Tools”](#) on page 84
- [“VMW Virtual Machine Zero Page Memory Detection”](#) on page 85

VMW Virtual Machine Active Vs. Granted Memory

Purpose

This rule compares the amount of physical memory that is actively being used by the virtual machine to the amount of memory granted to the virtual machine by the vmkernel.

If active memory approaches the granted memory value in the virtual machine's configuration, you should consider increasing the granted memory value.

Scope

VMWVirtualMachineMemory

Rule Definition

Conditions	State	Action
The virtual machine is actively using only 75% or less of the memory it has been granted by the vmkernel.	Normal	None
The virtual machine is actively using more than 75% but no more than 85% of the memory it has been granted by the vmkernel.	Warning	None
The virtual machine is actively using more than 85% but no more than 90% of the memory it has been granted by the vmkernel.	Critical	E-mail VMW admin
The virtual machine is actively using more than 90% of the memory it has been granted by the vmkernel.	Fatal	E-mail VMW admin

- [“Alarms Overview”](#) on page 102
- [“Alarms List View”](#) on page 103

VMW Virtual Machine Balloon Memory Deflation

Purpose

This rule monitors for virtual machines working excessively to reclaim memory.

To better balance memory utilization across hosts in a cluster, you can add more physical resources to a host or you can use VMotion to move a virtual machine from one host to another.

Scope

VMWVirtualMachineMemory

Rule Definition

Conditions	State	Action
The balloon has not been growing excessively and is deflating normally.	Normal	None
The balloon has reached 20% of the host's memory over the course of the last 90 minutes and has failed to deflate to less than 5% over the last 15 minutes.	Warning	None
The balloon has reached 20% of the host's memory over the course of the last 90 minutes and has failed to deflate to less than 12% over the last 15 minutes.	Critical	None

- [“Alarms List View”](#) on page 103

VMW Virtual Machine Balloon Memory Target

Purpose

This rule monitors the ability of the virtual machine to swap memory locally in order to free it up for reclamation. If the virtual machine is having no trouble swapping memory normally, the balloon (and therefore the balloon target) is not excessively large. If the virtual machine is having trouble swapping memory, the balloon is excessively large.

Scope

VMWVirtualMachineMemory

Rule Definition

Conditions	State	Action
The balloon target is 33% or less of the virtual machine’s configured memory.	Normal	None
The balloon target is greater than 33% but not greater than 50% of the virtual machine’s configured memory.	Warning	None
The balloon target is greater than 50% of the virtual machine’s configured memory.	Critical	E-mail VMW admin

- [“Alarms List View”](#) on page 103

VMW Virtual Machine Consumed Vs. Granted Memory

Purpose

This rule compares the amount of memory that is being requested by virtual machines (the application workload) to the amount of memory granted to the virtual machines by the ESX Server.

If the application workload of the ESX Server is requesting an excessive amount of the available memory resources, you must either add memory to the ESX Server or use VMotion to better balance the virtual machines across the servers within the cluster.

Scope

VMWVirtualMachineMemory

Rule Definition

Conditions	State	Action
The virtual machine is consuming 75% or less of the memory it has been granted by the ESX Server.	Normal	None
The virtual machine is consuming more than 75% but no more than 83% of the memory it has been granted by the ESX Server.	Warning	None
The virtual machine is consuming more than 83% but no more than 90% of the memory it has been granted by the ESX Server.	Critical	E-mail VMW admin
The virtual machine is consuming more than 90% of the memory it has been granted by the ESX Server.	Fatal	E-mail VMW admin

VMW Virtual Machine CPU Utilization

Purpose

This rule monitors for spikes, dramatic drops, and sustained high levels in CPU utilization for a virtual machine.

Scope

VMWVirtualMachineHostCPUs

Rule Definition

Conditions	State	Action
The CPU utilization is no more than 2.2 standard deviations (NumSTDevs) from the mean CPU utilization and the CPU utilization is at 75% or less.	Normal	None
The CPU utilization is more than 2.2 but no more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 75% but not greater than 83%.	Warning	None

Rule Definition

The CPU utilization is more than 2.8 standard deviations from the mean CPU utilization, or the CPU utilization is greater than 83%.	Critical	E-mail VMW admin

VMW Virtual Machine Disk Command Aborts

Purpose

This rule monitors for situations in which a disk command has been aborted because these may be an indication of hardware problems.

Scope

VMWVirtualMachineHostStorage

Rule Definition

Conditions	State	Action
There are no disk command aborts to report.	Normal	None
A disk command abort has occurred.	Critical	E-mail VMW admin

VMW Virtual Machine Logical Drive Estimated Fill Time

Purpose

This rule fires an alarm to report on when the logical drive for the virtual machine is likely to reach full capacity, based on its present growth rate.

Scope

VMWVirtualMachineLogicalDisk

Rule Definition

Conditions	State	Action
At the present growth rate, the logical drive will not reach its capacity within the next month (within the next 672 hours).	Normal	None
At the present growth rate, the logical drive will reach its capacity within the next month (within the next 672 hours).	Warning	None
At the present growth rate, the logical drive will reach its capacity within the next week (within the next 168 hours).	Critical	E-mail VMW admin
At the present growth rate, the logical drive will reach its capacity within the next 48 hours.	Fatal	E-mail VMW admin

VMW Virtual Machine Memory Allocation Versus Limit

Purpose

This rule monitors for virtual machines that have a memory limit that is lower than their memory allocation, which could result in poor performance on the virtual machine.

Scope

VMWVirtualMachineMemory

Rule Definition

Conditions	State	Action
The virtual machine has a memory limit that is higher than its memory allocation.	Normal	None
The virtual machine has a memory limit that is lower than its memory allocation.	Critical	None

VMW Virtual Machine Memory Swapping

Purpose

This rule monitors for the swapping in and out of virtual machine memory.

Scope

VMWVirtualMachineMemory

Rule Definition

Conditions	State	Action
The virtual machine has not moved any of its memory from its physical pages to the VMware swap file within the ESX Server.	Normal	None
The virtual machine has moved some of its memory from its physical pages to the VMware swap file within the ESX Server. This may adversely affect the virtual machine's performance.	Critical	None
The virtual machine is actively using memory that it has moved to the VMware swap file. This will adversely affect the virtual machine's performance.	Fatal	None

VMW Virtual Machine Memory Utilization

Purpose

This rule monitors for high memory utilization for a virtual machine.

Scope

VMWVirtualMachineMemory

Rule Definition

Conditions	State	Action
The memory utilization is less than 85%.	Normal	None
The memory utilization is equal to or greater than 85% and less than 90%.	Warning	None
The memory utilization is equal to or greater than 90% and less than 93%.	Critical	E-mail VMW admin
The memory utilization is equal to or greater than 93%.	Fatal	E-mail VMW admin

VMW Virtual Machine Power State Change

Purpose

This rule fires an alarm if a virtual machine has been suspended or powered off recently.

Scope

VMWVirtualMachine

Rule Definition

Conditions	State	Action
The virtual machine has not been suspended or powered off recently.	Normal	None
The virtual machine has been suspended recently.	Warning	None
The virtual machine has been powered off recently.	Critical	E-mail VMW admin

VMW Virtual Machine VMware Tools

Purpose

This rule fires an alarm if the VMware tools on a virtual machine are out of date or not running properly.

You should always keep the VMware tools on each virtual machine up-to-date to enable the collection of all relevant data.

Scope

VMWVirtualMachine

Rule Definition

Conditions	State	Action
The VMware tools on the virtual machine are up-to-date and running properly.	Normal	None
The VMware tools on the virtual machine are either out of date or not running properly.	Warning	None

Views Displaying Alarms Based on this Rule

VMW Virtual Machine Zero Page Memory Detection

Purpose

This rule monitors for any virtual machines that have a large amount of memory that is only zero memory.

Scope

VMWVirtualMachineMemory

Rule Definition

Conditions	State	Action
The virtual machine does not have overcommitted memory resources.	Normal	None
The virtual machine may have overcommitted memory resources; more than 33% of its memory is filled with zeros. It is likely that the memory allocated to this virtual machine can be reduced without any impact on performance.	Warning	None

vFoglight Views

The vFoglight Cartridge for VMware ships with predefined views to help you monitor your application server environment. This chapter provides quick reference information about each view.

The chapter contains the following sections:

Overview of Views	88
Virtual Infrastructure View	89
At A Glance View	90
vmExplorer Primary View	91
Summary View	92
Utilizations Views	93
Resource Pools Relationship Tree View	94
Related Objects Views	95
Actions Panel	97
Navigation View	98
Infrastructure Overview	99
VirtualCenter Messages View	100
Agents View	101
Alarms Overview	102
Alarms List View	103
Report Templates View	104
Scheduled Reports View	105
Generated Reports View	106

For more detailed information about the each view, along with detailed descriptions of the Cartridge for VMware dashboards, see the chapter titled *Interacting with vFoglight* in the *vFoglight User Guide*.

Overview of Views

vFoglight displays monitoring data in views that group, format, and display data. The main types are described below.

Dashboards are top-level views that do not receive data from other views. Dashboards usually contain a number of lower-level views. The dashboards supplied with vFoglight, as well as those created by users, are available in the navigation panel.

Lower-level views in vFoglight can be added to dashboards or can be accessed by drilling down from a dashboard. They receive and display data directly from the vFoglight Management Server or from other views. Some views filter or select data that appears in other views in the same dashboard. Some are tree views with expandable nodes for selecting servers, applications, or data.

Virtual Infrastructure View

The vmExplorer Dashboard provides a Virtual Infrastructure View. The Virtual Infrastructure View is located in the navigation panel at the left of the vFoglight GUI, under the dashboards list.

Purpose

The Virtual Infrastructure View provides an organized view of the various virtual infrastructure objects that are monitored by vFoglight. It serves as a navigational tool, and it also presents pertinent alarm information.

When you select an object from the Virtual Infrastructure View, all of the views in the vmExplorer Dashboard are updated with information pertaining to that object.

Content and Embedded Views

The Virtual Infrastructure View contains two embedded views: the Topology View and the Hierarchy View.

Within the Topology View, all of the virtual infrastructure objects are organized into a tree using object type (or topology type) containers for branches. The top-level objects in the Topology View are always the VirtualCenters.

Within the Hierarchy View, each VirtualCenter object is organized into a tree that has the same hierarchical structure as the VirtualCenter and displays the objects (Datacenters, Clusters, Resource Pools, Virtual Machines, Folders, etc.) within the VirtualCenter as branches.

Mouse-over Status Popups

When you hover the cursor over an object in the Virtual Infrastructure View, you see a popup that provides a summary of the present state of that object.

For more detailed information about the Virtual Infrastructure View, see the chapter titled Interacting with vFoglight in the *vFoglight User Guide*.

At A Glance View

The vmExplorer Dashboard provides an At A Glance View. The At A Glance View is located in the navigation panel of the vFoglight GUI, below the Virtual Infrastructure View.

Purpose

The At A Glance View provides key statistical information for the object that is selected in the Virtual Infrastructure View (that is, for the object that is being viewed in the vmExplorer Dashboard).

Content and Embedded Views

The content of the At A Glance View depends on the object that is being viewed in the vmExplorer Dashboard.

The At A Glance View may or may not contain the following embedded views:

- Top 5 CPU View - shows the top five CPU-consuming virtual machines for the selected object
- Top 5 Memory View - shows the top five memory-consuming virtual machines for the selected object
- Top 5 Disks View - shows the top five virtual machines in terms of disk activity for the selected object
- Top 5 NIC View - shows the top five virtual machines in terms of NIC activity for the selected object
- Top 5 Ready View - shows the top five virtual machines in terms of percent-readiness for CPU cycles for the selected object
- Status View - provides a brief summary of the present status of the parent object for a selected Virtual Machine

For more detailed information about the At A Glance View, see the chapter titled *Interacting with vFoglight* in the *vFoglight User Guide*.

vmExplorer Primary View

The vmExplorer Dashboard has a Primary View that takes up the entire display panel of the vFoglight GUI.

Purpose

The vmExplorer Primary View is the most content-intensive view in vFoglight. It provides access to summary (of alarm, resource, and other) information for the object being viewed in the vmExplorer Dashboard, as well as detailed information on performance with respect to the four core ESX infrastructure resources: CPU, memory, disk usage, and network usage.

It provides navigational links that can be used to view a variety of valuable information pertaining to the object being viewed.

Content and Embedded Views

The metrics and the amount of detail displayed in the Primary View vary depending on the type of object you select.

Also, due to the ability to change the information displayed in the Primary View through the use of the navigational links and to the fact that the Primary View consists of several embedded views, the Primary View can change quite a lot in appearance and content.

The Primary View may or may not contain the following embedded views:

- Summary View
- Utilizations View
- Resource Pools Relationship Tree View
- Related Objects View

Each of these views is described in this chapter.

For more detailed information about the vmExplorer Primary View, see the chapter titled *Interacting with vFoglight in the vFoglight User Guide*.

Summary View

The Summary View is provided as part of the vmExplorer Dashboard Primary View. If you select the Summary navigational link from the top of the vmExplorer Primary View (that is, from the Primary View heading), the Summary View is displayed just below the heading.

Purpose and Content

Typically, the Summary View provides a brief description of the object being viewed in the vmExplorer Dashboard, an overview of its available compute resources, and a count (if applicable) of the objects that are contained within it.

Sometimes the Summary View includes a graph. For example, if you select a collection of ESX Servers (that is, the ESX Servers container for a particular VirtualCenter) from the Topology View, the Summary View displays a graph that illustrates the combined CPU consumption for all of the ESX Servers in the collection.

Within a collection of objects Summary View, you can hover the cursor over any graph to see an exact unit measurement that corresponds to the placement of the cursor, and you can click any metric or chart to see a popup with a detailed chart.

For more detailed information about the Summary View, see the chapter titled *Interacting with vFoglight* in the *vFoglight User Guide*.

Utilizations Views

A Utilizations View is provided in both the vmExplorer and the vmMonitor Dashboards.

In the vmExplorer Dashboard, the Utilizations View is part of the Primary View and is typically located at the center of the Primary View.

In the vmMonitor Dashboard, the Utilizations View is not considered part of another View and is typically located at the center of the dashboard.

Purpose and Content

In the vmExplorer Dashboard, the Utilizations View provides numerical and graphical representations of utilization metrics associated with the single object (Datacenter, Cluster, Server, Resource Pool, Virtual Machine, or Datastore) or collection of objects of a particular type (Datacenters, Clusters, Servers, Resource Pools, Virtual Machines, or Datastores) that is selected.

In the vmMonitor Dashboard, the Utilizations View only provides numerical and graphical representations of utilization metrics associated with single objects.

The metrics and the amount of detail displayed on the Utilizations View vary depending on the type of object that is being viewed.

In the vmExplorer Dashboard, a Utilizations View may not appear at all depending on the object or collection of objects selected from the Virtual Infrastructure View and on the navigational link selected from the vmExplorer Primary View heading.

Within a single object Utilizations View, you can hover the cursor over any metric to see a description of that metric, and you can click any metric or chart to see a popup with a detailed chart.

In the vmExplorer Dashboard, within a collection of objects Utilizations View, you can hover the cursor over any graph to see an exact unit measurement that corresponds to the placement of the cursor, and you can click any metric or chart to see a popup with a detailed chart.

For descriptions of the various metrics available in the Utilizations View and elsewhere in vFoglight, refer to “[vFoglight Rules](#)” on page 25.

For more detailed information about Utilizations Views, see the chapter titled *Interacting with vFoglight* in the *vFoglight User Guide*.

Resource Pools Relationship Tree View

The Resource Pools Relationship Tree View is provided in the vmExplorer Dashboard. If you select a Resource Pool container from the Topology View on the Virtual Infrastructure View and you click the Summary navigational link within the vmExplorer Primary View, a Resource Pools Relationship Tree View is displayed in the Primary View. A Resource Pools Relationship Tree contains every Resource Pool that belongs to the Clusters within the associated VirtualCenter.

Purpose and Content

The Resource Pools Relationship Tree View is useful if you want to see how the Resource Pools within the Clusters are laid out or if you want to take a look at the utilization statistics for each configured Resource Pool on the VirtualCenter.

The default Resource Pools Relationship Tree simply displays the names of the various Resource Pools and their parent/child relationships.

You can use the Normal Zoom Level button on the mini map at the top right of the Relationship Tree to zoom into a more detailed version of the Tree. You can use the Minimized Zoom Level button on the mini map to zoom back out again.

You can browse through a Relationship Tree by clicking and dragging the rectangular shadow provided on the mini map.

For more detailed information about the Resource Pools Relationship Tree View, see the chapter titled Interacting with vFoglight in the *vFoglight User Guide*.

Related Objects Views

At least one Related Objects View is provided in both the vmExplorer and the vmMonitor Dashboards.

In the vmExplorer Dashboard, Related Objects Views are part of the Primary View and are typically located at the bottom of the Primary View. In the vmExplorer Dashboard, more than one Related Objects View may appear at a time.

In the vmMonitor Dashboard, the Related Objects View is not considered part of another view and is located at the right of the dashboard. Only one Related Objects View appears on the vmMonitor Dashboard.

Purpose and Content

Related Objects Views provide summary information on either the parent or child objects or both (whichever are applicable) of the object being viewed in the dashboard.

In the vmExplorer Dashboard, Related Objects Views differ from each other and may not appear at all depending on the object or collection of objects selected from the Virtual Infrastructure View and on the navigational link selected from the vmExplorer Primary View heading.

In the vmExplorer Dashboard, Related Objects Views for an individual object display tables that list either the parents or descendants or both (whichever are applicable) of the selected object and provide pertinent summary details about each one. The Related Objects View for a collection of objects displays a table that lists all of the objects in the selected collection and provides pertinent summary details about each one. You can sort Related Objects View tables by a particular column by clicking the corresponding column heading. If you select an object from the table by clicking on one of the table rows, all of the views in the vmExplorer Dashboard get updated with information about that object.

In the vmMonitor Dashboard, the Related Objects View provides Status Views of summary details for either the parents or descendants or both (whichever are applicable) of the object being viewed in the dashboard. The information presented varies slightly depending on the object that is being viewed. Within the vmMonitor Related Objects View, if you click an object's icon, all of the views in the vmMonitor Dashboard are updated with information about that object.

In the vmMonitor Dashboard, the combination of the Related Objects View and the breadcrumbs at the top of the dashboard provide you with an effective way to traverse up and down through the various virtual infrastructure object levels and view all of the available metrics vFoglight provides for the virtual infrastructure.

For more detailed information about Related Objects Views, see the chapter titled *Interacting with vFoglight* in the *vFoglight User Guide*.

Actions Panel

The actions panel is located at the far right of the vFoglight GUI.

Purpose and Content

The actions panel provides you with easy access to a number of useful functions. However, it only provides additional vFoglight related actions and tasks when you are viewing the vmExplorer Dashboard.

The vFoglight actions and tasks available in the actions panel vary depending on the object displayed in the vmExplorer Dashboard, and are located under the Actions, Other Actions, and Tasks headings.

Under Actions, the actions panel may provide the following additional vFoglight related actions:

- Find ESX Servers
- Find Virtual Machines
- Run Migration Modeler
- View Virtual Infrastructure Alarms

Under Tasks, the actions panel may provide the following additional vFoglight related tasks:

- Object Monitor
- View Alarms
- Top CPU Consumers
- Top Memory Consumers

For more detailed information about the actions panel with respect to vFoglight and any associated actions or tasks, see the chapter titled Interacting with vFoglight in the *vFoglight User Guide*.

Navigation View

The vmMonitor Dashboard provides a Navigation View, which is located at the top of the dashboard.

Purpose and Content

The Navigation View displays an icon and an object type name that together indicate the type of object that is being examined.

The vmMonitor Dashboard does not provide a direct hierarchical structure in which you can change between objects. Instead, the Navigation View has a drop-down menu with which objects from the current level may be selected. In order to traverse up or down through the infrastructure, an administrator can use the breadcrumbs at the top of the vmMonitor Dashboard or select from the various objects on the Related Objects View.

The Navigation View also contains an alarm summary which is located at the far right of the view.

For more detailed information about the Navigation View, see the chapter titled *Interacting with vFoglight* in the *vFoglight User Guide*.

Infrastructure Overview

The vmMonitor Dashboard provides an Infrastructure Overview, which is located toward the top left of the dashboard.

Purpose and Content

The Infrastructure Overview is provided at the VirtualCenter, DataCenter, and Cluster levels. This view contains information about the descendent or child objects of the object being viewed in the vmMonitor Dashboard.

The Infrastructure Overview provides a simple mechanism that you can use to see the total number of the various types of child objects within the selected object and the outstanding alarm with the highest severity that exists for an object of each type.

The number on each disk indicates the number of descendent objects of that type that exist within the selected object. The disk color indicates the status of the outstanding alarm with the highest severity that exists for an object of that type. These disk colors correspond to the colors used throughout vFoglight to indicate alarm severity.

If you click any of the disks, a popup appears that displays a current alarm list for the corresponding object type. If you then click an alarm message, you are taken to a vmMonitor Dashboard for the object to which the message corresponds.

The Infrastructure Overview provides a simple way for an administrator to troubleshoot problems within the virtual infrastructure.

For more detailed information about the Infrastructure Overview, see the chapter titled *Interacting with vFoglight* in the *vFoglight User Guide*.

VirtualCenter Messages View

The vmMonitor Dashboard provides a VirtualCenter Messages View, which is located toward the bottom of the dashboard.

Purpose and Content

vFoglight receives VirtualCenter messages (including status changes and VirtualCenter alarms, if configured) and presents them in the vmMonitor Dashboard.

Note These messages are not generated by vFoglight.

The VirtualCenter Messages View displays these VirtualCenter messages for the dashboard time range specified. For specific information about dashboard time ranges, refer to the *vFoglight User Guide*.

If you click a message within the VirtualCenter Messages View, you are taken to a vmMonitor Dashboard for the object to which the message corresponds. You can always use the breadcrumbs at the top of the vmMonitor Dashboard to navigate back up through the virtual infrastructure.

For more detailed information about the VirtualCenter Messages View, see the chapter titled Interacting with vFoglight in the *vFoglight User Guide*.

Agents View

The Agents View is the only view in the vmAgents Dashboard.

Purpose and Content

The Agents View displays information on the various agent systems that are collecting and sending details to vFoglight. This view can be used to verify that agents are properly reporting information at regular intervals to vFoglight.

The Agents View also contains an alarm summary that shows you the number of alarms of each severity that are presently outstanding for agents.

For more detailed information about the Agents View, see the chapter titled *Interacting with vFoglight* in the *vFoglight User Guide*.

Alarms Overview

The vmAlarms Dashboard provides an Alarms Overview, which is located at the top of the dashboard.

Purpose and Content

The Alarms Overview provides a quick and easy way for you to view vFoglight alarms grouped by object and severity level. You can use this Overview to monitor alarms and to identify the sources of problems within the virtual infrastructure. If you click any of the alarm counts for a particular object, a popup displaying just the alarms for that object appears.

For more detailed information about the Alarms Overview, see the chapter titled *Interacting with vFoglight* in the *vFoglight User Guide*.

Alarms List View

The vmAlarm Dashboard provides an Alarms List View, which takes up the majority of the dashboard.

Purpose and Content

Each alarm row in the Alarms List contains an object icon that identifies the source of the alarm, an alarm icon that indicates the severity of the alarm, the time that the alarm occurred, and the text of the alarm. The columns are sortable so that alarms can be listed in order by source, severity, time or message. Simply click a column heading to sort the table by that column.

If you click an alarm's severity icon, a popup for acknowledging or clearing that alarm is displayed. If you click the message or any other column in the row, a vmMonitor Dashboard displaying information pertaining to the corresponding object appears.

For more detailed information about the Alarms List View, see the chapter titled *Interacting with vFoglight* in the *vFoglight User Guide*.

Report Templates View

The vFoglight Report Browser Dashboard provides a Report Templates View, which is located at the left of the dashboard.

Purpose and Content

The Report Templates View provides a list of templates that can be used to create reports that are scheduled to run against a particular object.

For more detailed information about the Report Templates View, see the chapter titled *Interacting with vFoglight* in the *vFoglight User Guide*.

Scheduled Reports View

The vFoglight Report Browser Dashboard provides a Scheduled Reports View, which is located at the top right of the dashboard.

Purpose and Content

The Scheduled Reports View lists the reports that have been configured by an administrator to run at regular intervals. It also provides you with an interface you can use to create and schedule a report to run.

For more detailed information about the Scheduled Reports View, including a procedure for scheduling reports, see the chapter titled Interacting with vFoglight in the *vFoglight User Guide*.

Generated Reports View

The vFoglight Report Browser Dashboard provides a Generated Reports View, which is located at the bottom right of the dashboard.

Purpose and Content

The Generated Reports View lists reports that have run and are available for viewing in PDF format.

Once a report is generated it is displayed in the Generated Reports View. Simply click **pdf** in the View column of the Generated Reports View to view the generated report. To view a pdf file, Adobe Acrobat Reader must be installed on the system that is accessing the Report Browser Dashboard.

For more detailed information about the Generated Reports View, see the chapter titled Interacting with vFoglight in the *vFoglight User Guide*.
