USER NOTES
##############################################################################

====================================================================

USER NOTES FOR ALL SUPPORTED OPERATING SYSTEMS
====================================================================

* This version of Server Administrator cannot be upgraded from
  earlier versions.

====================================================================
USER NOTES FOR SUPPORTED WINDOWS OPERATING SYSTEMS
====================================================================

* This version of Server Administrator requires an MSI version
  of 3.1 or later on your system.

* During installation/uninstallation, the Windows Installer Service
  may display the time remaining for the current task to complete.
  This is only an approximation by the Windows Installer Engine based
  on varying factors.

* During installation of Server Administrator on supported Windows
  systems, if an "Out of Memory" error message displays, exit
  the installation and free up memory. Close other applications
  or perform any other task that will free up memory, before
  re-attempting Server Administrator installation.
