

Microsoft  
**Windows**  
Small Business Server 2003

### If you have a broadband connection and one network adapter

Plug the cable for your server's network adapter into the internal (local) interface of the Internet connection device.

### If you have a broadband connection and two network adapters

Plug one network adapter into the switch or hub to which your client computers will connect, and then plug the other network adapter into the broadband connection device.

### If you have a dial-up connection

Plug the network adapter into the switch or hub to which your client computers will connect.

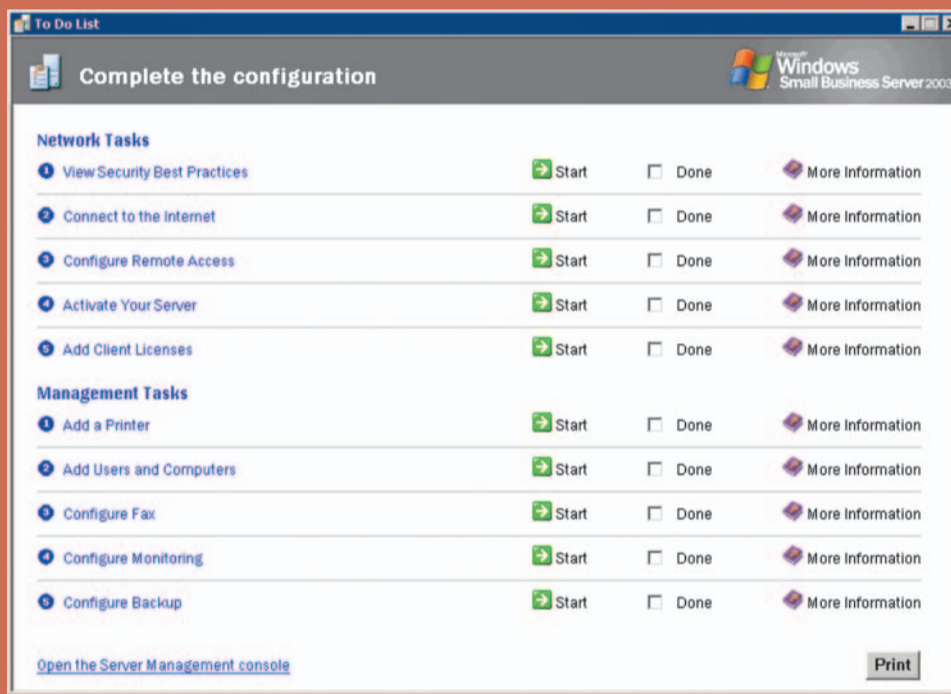

## connecting...

## Choose Your Network Environment

### Completing Setup

Before you turn on your system for the first time, set up your server as shown in the above section, and then perform the following steps:

- 1 Turn on your system.
- 2 Follow the instructions on the screen to complete the setup. For detailed setup instructions, see the *Setup and Installation Guide* that was shipped with your server.
- 3 If you have Premium Edition software applications, install them at this time.
- 4 If you have a Windows Small Business Server 2003 R2 feature CD, install it at this time.
- 5 When the **To Do List** appears, perform the steps in the order listed to complete the setup.

## configuring...

### Important Configuration Information

- If your system has two network adapters, you will be prompted to specify which network adapter is connected to your local network during setup. When you reach the setup screen titled **Local Network Adapter Information**, perform the following steps:
  - 1 Disconnect the network adapter that is connected to your Internet connection device. Its status will change to *Disconnected*.
  - 2 Select the network adapter with the *Connected* status.
  - 3 Click **Next** to proceed with setup.
- If you have an Internet connection device that supports DHCP or you have another server on your network that is running the DHCP service, follow the instructions on the screen during setup to properly configure your DHCP settings. Dell recommends that you use the DHCP service provided by Windows Small Business Server 2003.
- Windows Small Business Server 2003 must be installed as the single primary domain controller on the network. You are allowed to specify the domain name during setup, but you cannot change the domain name after the setup is completed.
- Dell recommends that you connect your server running Windows Small Business Server 2003 to a local network before beginning setup so that the client computers that are on the network can be configured automatically during setup. However, if you want to complete setup without connecting to a local network, connect your server to a stand-alone hub or switch to ensure that setup will complete successfully.
- To help keep your system secure, Dell recommends that you download any recommended patches, hotfixes, and service packs by visiting the Downloads for Windows Small Business Server 2003 website at <http://go.microsoft.com/fwlink/?LinkId=16918> or by clicking **Downloads and Updates** under the Information Center in the Server Management console for Windows Small Business Server 2003.

### Installing the Small Business Server 2003 R2, Premium Edition Software Applications

If you purchased Small Business Server 2003 R2, Premium Edition, the following software applications are included on the *Microsoft Windows Small Business Server 2003 Premium Edition Premium Technologies CD* and the *Microsoft Office FrontPage 2003 CD*:

- Microsoft SQL Server 2005 WorkGroup Edition
- Microsoft Internet Security and Acceleration (ISA) Server 2004
- Microsoft FrontPage® 2003

For step-by-step instructions on installing these software applications, insert the *Premium Technologies CD* into your CD drive, and then click **How to Install**.

### Application Product Keys

The Microsoft Windows operating system Certificate of Authority (COA), a multicolored label located on your system, contains two product keys for your Premium Edition applications.

- Use the Windows Small Business Server 2003 R2 operating system product key when installing SQL Server 2005.
- Use the Outlook 2003 product key when installing FrontPage 2003.

### Getting Help

- The *Setup and Installation Guide* that was shipped with your server contains detailed setup instructions and general information.
- The Microsoft *Completing Setup* document for Windows Small Business Server 2003 that is included with your server provides detailed information on completing the installation procedures for Windows Small Business Server 2003.
- You can verify the version of the operating system installed by clicking **Start** → **Server Management** → **View Bitmap Header**.
- If at any time you do not understand a procedure described in this document or if your system does not perform as expected, Dell provides a number of tools to help you. For more information about these help tools, see "Getting Help" in the *Installation and Troubleshooting Guide* or *Hardware Owner's Manual* that was shipped with your server.
- Technical information, documentation for your system, and the latest file downloads are available from the Dell Support website at [support.dell.com](http://support.dell.com). For additional information, refer to [www.dell.com/ostechsheets](http://www.dell.com/ostechsheets).

Use the Dell PowerEdge™ Installation and Server Management CD if you ever need to reinstall the operating system.

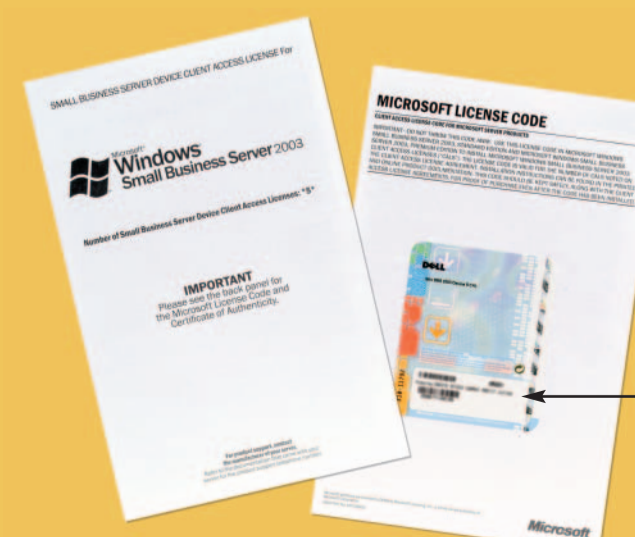

## helpful info...

### Client Access Licensing Requirements

Two types of Windows Small Business Server 2003 Client Access Licenses are available: device-based or user-based. You can either purchase a license for every device (used by any user) that accesses your server, or purchase a license for every named user who accesses your servers (from any device).

Your Dell system with Windows Small Business Server 2003 comes pre-installed with five Client Access Licenses. If you need to purchase additional licenses, contact your Dell Account Representative.

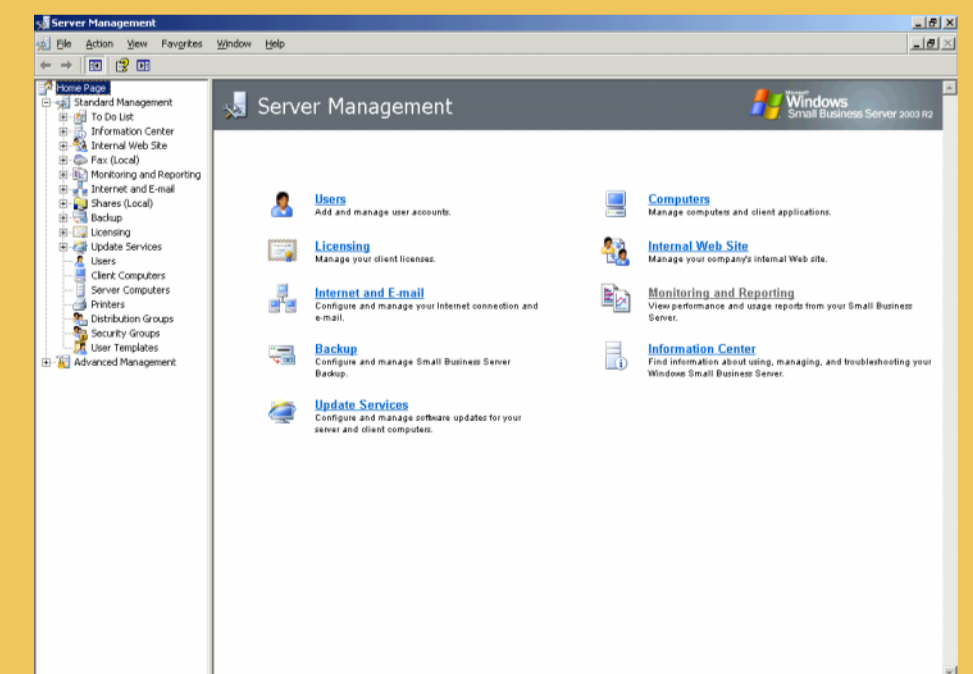

If you did not add client licenses from the **To Do List** or if you need to install additional licenses, click **Start** → **Server Management** → **Licensing** → **Add Licenses**. Follow the steps in the **Add Licenses** wizard.

The product key is located on the back of the Windows Small Business Server 2003 license agreement. Be sure to keep this code in a safe location.

### Managing Windows Small Business Server 2003

Use the Server Management console for ongoing management of your server. To open the console, click **Start** → **Server Management**.
