

**Dell SupportAssist Version 1.2 For Dell OpenManage
Essentials
User's Guide**

Notes, Cautions, and Warnings

NOTE: A NOTE indicates important information that helps you make better use of your computer.

CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

WARNING: A WARNING indicates a potential for property damage, personal injury, or death.

Overview

Dell SupportAssist collects information about your computer hardware and software, and automatically creates support cases when issues arise. This helps Dell to provide you an enhanced, personalized, and efficient support experience. Dell uses this data to help solve common problems and design and market the products and services features you use most.

SupportAssist integrates with Dell OpenManage Essentials to provide support capabilities for the following Dell enterprise server and storage solutions, using the existing environment data:

- Dell PowerEdge servers running:
 - Microsoft Windows Server 2008 Standard, Enterprise, or R2
 - Red Hat Enterprise Linux 5.5
 - SUSE Enterprise Linux 10 or 11
 - VMware ESX or ESXi 3.5, 4.x, or 5.0
- Dell PowerVault NX storage servers
- Dell PowerVault MD storage arrays
- Dell EqualLogic SAN devices (except PS5000)
- Dell PowerConnect Ethernet switches
- Dell Force10 S4810 Ethernet switch
- Dell PowerEdge M1000e Blade Enclosure
- iDRAC7
- Dell PowerEdge VRTX

 **NOTE:** SupportAssist does not support Dell CloudEdge, Dell PowerEdge C servers, and Dell EqualLogic NAS, and Dell PowerVault NAS devices.

 **NOTE:** SupportAssist provides limited support only for Force10 and PowerConnect stacked configurations.

 **NOTE:** SupportAssist provides limited support only for PowerEdge VRTX devices. Collection of system logs is not supported for the PowerEdge VRTX chassis.

SupportAssist also provides rich device, support case, and service contract reporting.

You can access information about the OpenManage Essentials-managed Dell devices and related support cases from the **Device Inventory** and **Case List** reports in the SupportAssist dashboard.

Equipping your OpenManage Essentials server with SupportAssist is voluntary, and results in improved support, products, and services designed to meet your needs.

Key Features

The key features of Dell SupportAssist include:

- Remote monitoring — Monitors your hardware to inform you of critical alerts.
- Automated log and configuration collection — Information required for troubleshooting the issue is automatically collected and sent to Dell.

- Automatic support case creation — When a critical alert is received from your hardware by OpenManage Essentials, the alert information is sent to Dell and a service request is automatically created. A Dell technical support agent contacts you about the alert and helps you resolve the issue.
 - ✍ **NOTE:** Support cases opened prior to SupportAssist installation, do not appear in the SupportAssist dashboard.
- Proactive parts dispatch — Based on examination of the troubleshooting data, if the Dell technical support agent determines that a part needs to be replaced in your environment, a replacement part is dispatched to you with your consent.

Features Supported With Dell Service Contracts

The features supported in your environment may vary based on your Dell service contract.

The following table provides a comparison of the features available with the Dell Basic Hardware and Dell ProSupport service contracts.

Feature	Basic Hardware	ProSupport	ProSupport Plus
Remote monitoring	✓	✓	✓
Automated log and configuration collection	✓	✓	✓
Automatic support case creation	✗	✓	✓
Proactive parts dispatch	✗	✓	✓

Case Data Handling

For increased performance, Dell SupportAssist case data is cached prior to display in the dashboard, and is not displayed in real time. When SupportAssist launched, it:

- Queries Dell once every three minutes for cases in the **Submitted** state to determine if it needs to update the case status.
- Determines the last time the case data was updated for a submitted case. It then queries those cases whose cached status information has expired in the last three minutes.
- Queries Dell once every 15 minutes for cases in all status other than **Submitted**.

✍ **NOTE:** If the data for a particular case is older than 15 minutes by the next poll time, SupportAssist queries for that data in the current poll. Therefore, SupportAssist may only poll for cases that are in the **Open** state for case data every 12 minutes.

Event Handling

Dell SupportAssist intelligently handles event storm conditions, allowing up to nine separate alerts from your OpenManage Essentials-managed environment in a 60-minute time span. However, if it receives 10 or more separate alerts it automatically enters Maintenance Mode.

Maintenance Mode suspends any further processing of alerts, enabling you to make infrastructure changes without generating unnecessary alerts. After 30 minutes in Maintenance Mode, SupportAssist automatically exits Maintenance Mode and resumes normal alert processing.

Data Collected

Dell SupportAssist continually monitors the system configuration data and usage information of your OpenManage Essentials-managed Dell computer hardware and software. While Dell does not anticipate accessing or collecting personal information, such as your personal files, web browsing history, or cookies, in connection with this program, any personal data inadvertently collected or viewed will be treated in accordance with the Dell Privacy Policy.

The information encrypted in the data log file sent back to Dell includes the following categories of data, among others:

- **User Information** — Computer name, domain, IP address, and Dell Service Tag.
- **Hardware Configuration** — Installed devices, processor(s), memory, network devices, and usage.
- **Software Configuration** — Operating system, installed applications, and application usage.

For more information about the collected troubleshooting information, see [Accessing And Viewing The System Log Collection](#).

What Is New In This Release

- Addition of Microsoft Windows Server 2012 as a supported operating system.
- Limited support for Dell PowerEdge VRTX devices — Collection of system logs is not supported for the PowerEdge VRTX chassis.
- Support for installing SupportAssist on a Windows Server 2008 R2 Domain Controller.
- User interface enhancements.

Installing, Upgrading, And Uninstalling Dell SupportAssist

The following sections provide information about installing, upgrading, and uninstalling Dell SupportAssist.

Prerequisites

The following are the prerequisites:

- Dell PowerEdge servers running Dell OpenManage Essentials version 1.0.1 or later
- Familiarity with OpenManage Essentials installation, configuration, and operation

For more information about installing, configuring, and using OpenManage Essentials, see the latest *Dell OpenManage Essentials User's Guide* and *Dell OpenManage Essentials Release Notes* at dell.com/support/manuals.

 **CAUTION:** Dell does not support, and strongly suggests that you do not attempt, installing or operating Dell SupportAssist and OpenManage Essentials on the same server that runs Dell Proactive Systems Management Enterprise (PSME). Doing so may cause duplicate cases or other unintended results. In addition, the OpenManage Essentials and PSME trap receivers are incompatible, which can cause SNMP traps issues.

Minimum Requirements

This section provides the minimum requirements for Dell SupportAssist to provide proactive support for Dell PowerEdge servers (9th Generation and above), Dell EqualLogic and PowerVault MD arrays and storage solutions, iDRAC7, Dell PowerConnect Ethernet switches, Dell Force10 S14810 Ethernet switch Dell PowerEdge M1000e Blade Enclosure, and Dell PowerEdge VRTX, .

 **NOTE:** For information about SNMP configuration, firewall settings, web services, supported ports and protocols specific to your environment, see the *Dell SupportAssist Version 1.2 Quick Start Guide* and the *Dell OpenManage Essentials User's Guide* at dell.com/support/manuals.

[Hardware Requirements](#)

[Network Requirements](#)

Software Requirements

The following are the minimum required software configurations:

- Dell OpenManage Essentials 1.0.1 or later.
- Optional: Dell OpenManage Server Administrator (OMSA) installed and operational on all managed PowerEdge devices.
- SNMP agent enabled on all managed PowerEdge, EqualLogic, PowerVault, iDRAC7, CMC, Force10, PowerConnect, and PowerEdge VRTX devices for OpenManage Essentials discovery.

- All managed PowerEdge, EqualLogic, PowerVault, iDRAC7, CMC, Force10, PowerConnect, and PowerEdge VRTX devices configured to send SNMP traps to the OpenManage Essentials server.
- All managed PowerEdge, EqualLogic, PowerVault, iDRAC7, CMC, Force10, PowerConnect, and PowerEdge VRTX devices discovered, categorized, and inventoried by the OpenManage Essentials server.
- PowerVault Modular Disk Storage Manager (MDSM) installed on the OpenManage Essentials server to support PowerVault MD Series arrays.
- A trust relationship must exist between the domains of the management station and the managed nodes.
- Microsoft .Net Framework 4.0 or 4.5
- Microsoft ASP.Net
- IIS 7.x
- Web browser – Internet Explorer 8, 9, or 10, Mozilla Firefox 19 or 20; supported only on Windows-based operating systems.

[Minimum Requirements](#)

Hardware Requirements

The following are the minimum recommended hardware configurations:

Hardware	Medium Deployments	Large Deployments
Number of managed systems	Up to 500	500 to 2000
Processor	6 cores (1.8 GHz minimum)	10 cores (1.8 GHz minimum)
Memory	10 GB	12 GB
 NOTE: If SupportAssist is configured to collect the system logs at regular intervals, additional hard drive space is required. The hard drive space required can be determined as 10 MB x number of managed devices.	8 GB	12 GB

Related Links

[Minimum Requirements](#)

Network Requirements

The following are the minimum network requirements:

- Internet connection – standard Gbe network.
- Port 443 must be open on the OpenManage Essentials management server.
- The OpenManage Essentials management server on which the Dell SupportAssist client is installed must be able to communicate with the Dell SupportAssist server hosted by Dell over the HTTPS protocol.

[Minimum Requirements](#)

Downloading The Installation Package

To download the installation package:

1. Visit **support.dell.com** .
2. In the search box, type `SupportAssist` and click **Search**.
3. Download the installation package to your OpenManage Essentials management server.

Installing Dell SupportAssist

By installing Dell SupportAssist, you agree to the Dell End User License Agreement, available for review at dell.com/softwarelicenseagreement, and the Dell Privacy Policy available for review at dell.com/privacy. Your use of SupportAssist is also subject to the terms of your Service Agreement and Terms and Conditions of Sale.

You can install SupportAssist using one of the following:

- Dell SupportAssist installation package.
- OpenManage Essentials installation package.

[Setting Up SupportAssist](#)

Installing Dell SupportAssist Using The SupportAssist Installation Package

By installing Dell SupportAssist, you agree to the **Dell End User License Agreement — Type A**, available for review at dell.com/licenseagreements; and the Dell Privacy Policy available for review at dell.com/privacy. Your use of SupportAssist is also subject to the terms of your Service Agreement and Terms and Conditions of Sale.

To install:

1. On the Dell OpenManage Essentials management server, right-click the SupportAssist installer package, then select **Run as administrator**.

 **NOTE:** Microsoft User Access Control (UAC) requires that the installation is performed with elevated privileges that are obtained only through the **Run as administrator** option. If you are logged on to the OpenManage Essentials server as an administrator-level user, you can double-click the installer package to install SupportAssist, but UAC displays the **Open File - Security Warning** dialog box that you must acknowledge to proceed.

The **Dell SupportAssist - InstallShield Wizard** (installation language selection) dialog box is displayed.

2. From the **Select the language for the installation from the choices below** list, select a language and click **OK**.

 **NOTE:** If you want to change the language after installing SupportAssist, you must uninstall and then reinstall SupportAssist. Changing the default language of the web browser has no effect on the SupportAssist dashboard display.

The **Preparing to Install** dialog box is briefly displayed and then the **Welcome to Dell SupportAssist** dialog box is displayed.

 **NOTE:** SupportAssist installation requires that you allow Dell to save certain Personally Identifiable Information (PII) such as your contact information, local administrator credentials, and so on. SupportAssist installation cannot proceed unless you allow Dell to save your PII.

3. Read the terms, and click **I Agree**.
The **License Agreement** dialog box is displayed.
4. Read the software license agreement, select **I accept the terms in the license agreement**, and then click **Next**.
The **Registration Information** dialog box is displayed.
5. Provide the following information for the primary contact to whom Dell must send alert notifications, case status notifications, and so on:
 - **Company Name** — The company name must contain one or more printable characters, and must not exceed 256 characters.
 - **Country/Territory** — Select your country or territory.
 - **First Name** — The first name can contain letters, quotation marks ['], periods [.], spaces, and must not exceed 50 characters.
 - **Last Name** — The last name can contain letters, quotation marks ['], periods [.], spaces, and must not exceed 50 characters.
 - **Phone Number** — It must contain a minimum of 10 characters and not exceed 50 characters.
 - **Alternate Phone Number** — Optional, with the same format and character requirements as the **Phone Number**.
 - **Email Address** — Provide the e-mail address in the name@company.com format. It must contain a minimum of five characters and not exceed 50 characters.
 - **Preferred Email Language** — Select the desired language for SupportAssist e-mail notifications.
 - **Receive email notification when a new support case is opened** — Select the check box to receive an e-mail when SupportAssist creates a support case.

 **NOTE:** You can update the primary contact information and also provide a secondary contact information after installing SupportAssist. If your primary contact becomes unavailable, Dell can contact your company through the secondary contact. If both the primary and secondary contacts are configured with valid e-mail addresses, both receive SupportAssist e-mails. For information about updating the contact information, see [Viewing And Updating The Contact Information](#).

The **Ready to Install the Program** dialog box is displayed.

6. Click **Install** to install SupportAssist and the associated system log collection tools. By default, SupportAssist is installed at: **C:\Program Files (x86)\Dell\Dell Integrated Support** in 64-bit operating systems and at **C:\Program Files\Dell\Dell Integrated Support** in 32-bit operating systems.

As the SupportAssist application installs, the following system log collection tools install in the background:

- Dell System E-Support Tool (DSET) — Collection tool for Dell PowerEdge, Dell PowerVault NX storage servers, and iDRAC7 devices.
- Dell Lasso — Collection tool for Dell PowerVault, Dell EqualLogic, Dell Chassis Management Controller (CMC), Dell Force10, Dell PowerConnect, blade server chassis, and PowerVault MD series devices.

 **NOTE:** DSET and Lasso generate the system log collection from your OpenManage Essentials-managed Dell devices, then compress and upload it for use by Dell technical support to diagnose issues.

For more information about the generated system log collection, see [Accessing And Viewing The System Log Collection](#).

 **NOTE:** SupportAssist requires both DSET and Lasso in order to install and operate. If you cancel either DSET or Lasso installation, SupportAssist installation will exit. Your system will not be changed, and SupportAssist will not be installed.

The **Install Wizard Completed** dialog box is displayed.

7. Click **Finish**.

The SupportAssist client opens in a web browser and the **First-Time Setup** dialog box is displayed.

The SupportAssist client installed on your system registers with the SupportAssist server hosted by Dell, and sends you a registration confirmation e-mail.

 **NOTE:** If there is an issue with registering the SupportAssist client with the SupportAssist server and your system connects to the Internet through a proxy server, ensure that you configure the proxy server credentials in SupportAssist. See [Configuring Proxy Server Settings](#).

To configure SupportAssist to monitor your devices, after installing SupportAssist, follow the instructions in [Setting Up SupportAssist](#).

Installing Dell SupportAssist Using The OpenManage Essentials Installation Package

To install:

1. On the Dell OpenManage Essentials management server, right-click the OpenManage Essentials installer package, then select **Run as administrator**.

 **NOTE:** UAC requires that the installation be performed with elevated privileges. If you are logged in to the OpenManage Essentials server as an administrator-level user, you can double-click the installer package to install SupportAssist, but UAC displays the **Open File - Security Warning** dialog box that you must acknowledge in order to proceed.

 **NOTE:** SupportAssist installation requires that you allow Dell to save certain Personally Identifiable Information (PII) such as your contact information, local administrator credentials, and so on. SupportAssist installation cannot proceed unless you allow Dell to save your PII.

The **Dell OpenManage Install** dialog box is displayed.

2. In **Available Options**, select **Dell SupportAssist**, and then click **Install**.
The **Dell SupportAssist - InstallShield Wizard** (installation language selection) dialog box is displayed.
3. Follow the instructions from step 2 to step 7 in [Installing Dell SupportAssist Using The Dell SupportAssist Installation Package](#).

[Installing Dell SupportAssist](#)

Verifying The Installation

To verify if the software, hardware, and network components required for Dell SupportAssist to provide proactive support are configured correctly, see the *Dell SupportAssist Version 1.2 For Dell OpenManage Essentials Quick Start Guide* at dell.com/ServiceabilityTools.

Upgrading Dell SupportAssist

If Dell SupportAssist version 1.1 or 1.1.1 is installed on the system, you can upgrade to SupportAssist version 1.2.

To upgrade:

1. On the Dell OpenManage Essentials management server, right-click the installer package, then select **Run as administrator**.

 **NOTE:** UAC requires that the installation is performed with elevated privileges that are obtained only through the **Run as administrator** option. If you are logged on to the OpenManage Essentials server as an administrator-level user, you can double-click the installer package to install SupportAssist, but UAC displays the **Open File - Security Warning** dialog box that you must acknowledge to proceed.

The **Dell SupportAssist - InstallShield Wizard** dialog box is displayed.

2. At the **This setup will perform an upgrade of 'Dell SupportAssist'. Do you want to continue?** prompt, click **Yes**.
The **Preparing to Install** dialog box is briefly displayed, and then the **Resuming the Install Wizard for SupportAssist** dialog box is displayed.
3. Click **Next**.
The **Install Wizard Completed** dialog box is displayed.
4. Click **Finish**.
The SupportAssist client opens in a web browser and the **First-Time Setup** dialog box is displayed.

 **NOTE:** The **Service Contract** column in the SupportAssist dashboard displays `unknown` for all support cases created prior to the SupportAssist upgrade. Once an alert is received from the device, the **Service Contract** column is updated with the appropriate service contract type.

Uninstalling Dell SupportAssist

To uninstall:

1. On the OpenManage Essentials management server, click **Start** → **Control Panel** → **Programs and Features**.
The **Programs and Features** window is displayed.
2. Select **Dell SupportAssist**, and then click **Uninstall**.
3. If the **Programs and Features** dialog box is displayed, prompting you to confirm the uninstallation, click **Yes**.
SupportAssist and its troubleshooting tools are now uninstalled from your OpenManage Essentials server.

 **NOTE:** All device, case, service contract, and user-entered information are removed when you uninstall SupportAssist. If you reinstall SupportAssist, it registers with the SupportAssist server as a new client. The support case information that was generated prior to uninstalling SupportAssist is not displayed.

Dell SupportAssist Interface

The top-right corner of the SupportAssist dashboard displays links that you can use to navigate the interface. The following table describes the links that are displayed.

Link	Description
SupportAssist Community	Opens the SupportAssist User Group website in a new browser window.
Help	<p>Move the mouse pointer over the link to display a drop-down that provides the following options:</p> <ul style="list-style-type: none"> • Help — Opens the Help window that provides links to Dell technical support and product manuals. • About — Opens the About window that provides information about the SupportAssist version, copyright information, and also notifies if a newer version of SupportAssist is available.
<i>User name</i>	<p>Displays the user name of the currently logged in user. Move the mouse pointer over the <i>user name</i> link to display a drop-down that contains a link to the Connectivity Test page.</p> <p> NOTE: The Connectivity Test link is enabled only if you are logged in as a member of the Dell OpenManage Essentials Administrators or Power Users group.</p>

By default, the **Cases** tab is displayed when SupportAssist is launched. The **Devices** tab displays the supported OpenManage Essentials-discovered devices. The **Settings** tab enables you to configure SupportAssist.

 **NOTE:** The **Settings** tab is accessible only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

[Device Inventory](#)

Case List

The **Case List** is the default Dell SupportAssist dashboard view. You can filter the cases that are displayed by selecting an option from the **Filter By** drop-down box. The  icon enables you to refresh the cases that are displayed.

The following table describes the automatically-generated support case information for your supported Dell devices, as displayed in the **Case List** page.

Column	Description
Case Status	<p>The current state of the support case. The status of a case may be:</p> <ul style="list-style-type: none"> • Open — Dell technical support has opened the submitted case. • In Progress — The case is currently being worked by Dell technical support.

Column	Description
	<ul style="list-style-type: none"> • Customer Deferred — Dell technical support has deferred the case at the customer's request. • Submitted — SupportAssist has submitted the case. • No Case — No case exists for this device. • Reopened — The case was previously closed, and has been reopened.
Case Number	The numeric identifier assigned to the support case.
Case Title	<p>The case name, which identifies:</p> <ul style="list-style-type: none"> • Case generation method • Device model • Device operating system • Alert ID, if available • Alert description, if available
Collection Status	<p>The current support case progress status. The progress status may be:</p> <ul style="list-style-type: none"> • Case Access Error — SupportAssist cannot currently access the case information. • Case Service Unavailable — Dell's support case service is currently unavailable. • Collection Tools Not Supported — This device does not support SupportAssist's collection tools. • Troubleshooting Opted Out — Customer has opted out of SupportAssist's troubleshooting capabilities. • Collection Scheduled — Collection tool is scheduled to be run on this device. • In Progress — Collection tool has been invoked on this device. • Failed to Run — Collection tool started, but failed to run on this device. • Collection Uploaded — Collection information has been uploaded to Dell. • Collection Failed to Upload — Collection information was not successfully uploaded to Dell.
Service Contract	<p>The Dell service contract level under which the device is covered. The service contract column may display:</p> <ul style="list-style-type: none"> • Unknown — SupportAssist cannot determine the service contract. • Invalid Service Tag — The service tag of the device is invalid. • No Service Contract — This device is not covered under a Dell service contract. • Expired Service Contract — The service contract of the device has expired. • Basic Support — This device is covered under a Dell Basic Hardware service contract. • ProSupport — This device is covered under a Dell ProSupport service contract. • ProSupport Plus — This device is covered under a Dell ProSupport Plus service contract.
Device Type	<p>Indicates the type of device as discovered by OpenManage Essentials:</p> <ul style="list-style-type: none"> • Storage — The device is a Dell PowerVault or Dell EqualLogic storage array. • Server — The device is a Dell PowerEdge server, PowerEdge VRTX, iDRAC7, or CMC device. • Switch — The device is a Dell Force10 or Dell PowerConnect Ethernet switch.

Column	Description
Service Tag	A unique, alphanumeric identifier that enables Dell to individually recognize each Dell device.
Date Opened	The date and time when the support case was opened.

You can set the number of support cases displayed per page by using the **Display Cases** drop-down box. The navigation icons enable you to navigate the pages of the **Case List**.

Device Inventory

The **Device Inventory** displays the supported OpenManage Essentials-discovered devices. The **Edit Device Credentials** link allows you to edit the credentials of a selected device. The **Send System Logs** link allows you to collect the system logs from a selected device and uploads it to Dell. You can filter the devices that are displayed by selecting an option from the **Filter By** drop-down box. The  icon enables you to refresh the devices that are displayed.

The following table describes the automatically-generated inventory information for your supported Dell devices, as displayed in the **Device Inventory** page.

Column	Description
Device Type	Indicates the type of device as discovered by OpenManage Essentials: <ul style="list-style-type: none"> • Storage — The device is a PowerVault or EqualLogic storage array. • Server — The device is a Dell PowerEdge server, PowerEdge VRTX, iDRAC7, or CMC device. • Switch — The device is a Force10 or PowerConnect Ethernet switch.
Service Tag	A unique, alphanumeric identifier that enables Dell to individually recognize each Dell device.
Device Name	Indicates the NetBIOS name of the device as discovered by OpenManage Essentials.
Collection Status	Indicates the status of the system log collection. The collection status may be: <ul style="list-style-type: none"> • Case Access Error — SupportAssist cannot currently access the case information. • Case Service Unavailable — Dell's support case service is currently unavailable. • Collection Tools Not Supported — This device does not support SupportAssist's collection tools. • Troubleshooting Opted Out — Customer has opted out of SupportAssist's troubleshooting capabilities. • Collection Scheduled — Collection tool is scheduled to be run on this device. • In Progress — Collection tool has been invoked on this device. • Failed to Run — Collection tool started, but failed to run on this device. • Collection Uploaded — Collection information has been uploaded to Dell.

Column	Description
	<ul style="list-style-type: none"> • Collection Failed to Upload — Collection information was not successfully uploaded to Dell.

You can set the number of devices displayed per page by using the **Display Devices** drop-down box. The navigation icons enable you to navigate the pages of the **Device Inventory**.

Username	Enables you to view or edit the user name.
Password	Enables you to view or edit the password in a masked format.
Enable Password  NOTE: The Enable Password field is displayed only when the Device Type selected is Switch .	Enables you to view or edit the enable password in a masked format.
Community String  NOTE: The Community String field is displayed only when the Device Type selected is Storage .	Enables you to view or edit the community string in a masked format.
Overwrite the device-specific credentials with the Default Device Type Credentials for all devices belonging to the current Device Type and Credential Type	Enables you to overwrite the device-specific credentials that you had previously configured for some devices, with the Default Device Type Credentials . Only devices (of the selected Device Type and Credential Type) that you had configured with device-specific credentials are affected.

The following table provides information about the fields displayed under **System Log Collection Schedule**.

 **NOTE:** The **System Log Collection Schedule** options are enabled only if the **Enable system log collection scheduling** option is selected in the **Preferences** page.

Field	Description
Frequency	Enables selecting the frequency at which system logs are collected. The available options are: <ul style="list-style-type: none"> • None • Weekly • Monthly
Specify day and time	Enables selecting the day and time when you want to collect the system logs. If the Frequency is set to Weekly , the available options are: weeks (1 or 2), day of the week (sunday, monday, tuesday, wednesday, thursday, friday, and saturday), hour (in hh:mm format), and AM/PM . If the Frequency is set to Monthly , the available options are: week of the month (first, second, third, fourth, and last), day of the week (sunday, monday, tuesday, wednesday, thursday, friday, and saturday), hour (in hh:mm format), AM/PM , and months (1 or 3).
Start Date	Displays the date and time at which the system logs will be collected next.

Connectivity Test

The **Connectivity Test** page enables you to test the inbound and outbound connectivity status of SupportAssist, in order to ensure that you can receive the most current case and device updates. For example, you may want to check the connectivity status following a network outage, a router or firewall configuration, or change made to the e-mail address of the primary user. When you perform the connectivity test, SupportAssist receives the connectivity test request, and sends a sample e-mail with connectivity status and a reminder to configure your devices for monitoring.

Using Dell SupportAssist

The following sections provide information about configuring and using Dell SupportAssist.

Launching Dell SupportAssist

To launch SupportAssist:

1. On the OpenManage Essentials management server, do one of the following:
 - Double-click the Dell SupportAssist desktop icon.
 - Click **Start**→ **All Programs**→ **Dell OpenManage Applications**→ **Dell SupportAssist**→ **Dell SupportAssist**.
 - In OpenManage Essentials dashboard, click the **Extensions** tab, and then click the SupportAssist **Launch** link.

The **Windows Security** dialog box may be displayed.

2. If the **Windows Security** dialog box is displayed, type the **User name** and **Password**, and then click **OK**.

The SupportAssist dashboard opens in a web browser, and may display the **First-Time Setup** dialog box.

Setting Up SupportAssist

To ensure that SupportAssist is able to monitor the supported devices, generate support cases if there is a problem with any devices, and transmit the system logs to Dell, you must perform the following:

1. Establish Internet connectivity — If your system connects to the Internet through a firewall or proxy server, the proxy server settings must be configured in SupportAssist. See [Configuring Proxy Server Settings](#).
 **NOTE:** You must update the proxy server settings in SupportAssist whenever the proxy server settings in your environment are changed.
2. Establish system log collection — Configure the **Default Device Type Credentials** in the **System Logs** page for each **Device Type** and **Credential Type**. See [Configuring The Default Device Type Credentials](#).
3. For monitoring Dell Force 10 Ethernet switches only — Rediscover Force 10 Ethernet switches in Dell OpenManage Essentials. For information about discovering devices, see the *Dell OpenManage Essentials User's Guide* at dell.com/support/manuals or the OpenManage Essentials context-sensitive help.

[Installing Dell SupportAssist](#)

Configuring Proxy Server Settings

If your system connects to the Internet through a firewall or proxy server, the proxy settings must be configured in Dell SupportAssist.

To configure the proxy server settings:

 **NOTE:** The **Settings** tab is accessible only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Settings** tab.
The **System Logs** page is displayed.
2. Click **Proxy Settings**.
The **Proxy Settings** page is displayed.
3. Select **Use Proxy Settings**.

 **NOTE:** SupportAssist supports Windows NT LAN Manager (NTLM) authentication protocol only.

4. Type the **Proxy Server Address or Name** and **Proxy Port Number** details.

 **NOTE:** If the proxy server credentials are not provided, SupportAssist connects to the proxy server as an anonymous user.

5. If the proxy server requires authentication, select **Proxy requires authentication**, and then provide the following information in the corresponding fields:
 - **Username** — The user name must contain one or more printable characters, and not exceed 104 characters.
 - **Password** — The user password must contain one or more printable characters, and not exceed 127 characters.
 - **Confirm Password** — Repeat the user password. The password should match with the one provided in the **Password** field.
6. Click **Apply**.
SupportAssist tests the proxy server settings, and the result of the test is displayed in a dialog box.

You can verify if the proxy settings has been configured correctly by testing the connection through the proxy server. See [Confirming Connectivity Through The Proxy Server](#).

Configuring The Default Device Type Credentials

SupportAssist runs the appropriate collection tools and gathers the system logs from OpenManage Essentials-managed Dell server, storage, and switch devices. To run the collection tools on your supported devices, you must configure SupportAssist with the Administrator credentials for each managed device type. The **Default Device Type Credentials** section in the **System Logs** page allows you to configure SupportAssist with the Administrator credentials for each supported device type and credential type.

To configure the default device type credentials:

 **NOTE:** The **Settings** tab is accessible only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Settings** tab.
The **System Logs** page is displayed.
2. Under **Edit Device Credentials**, select the **Device Type** from the list. You can select from:
 - **Server**
 - **Storage**
 - **Switch**

3. Select the **Credential Type** from the list. The options listed vary based on the **Device Type** you selected.

The options for **Server** are:

- **Windows**
- **Linux**
- **ESX/ESXi**
- **iDRAC7**
- **CMC**

The options for **Storage** are:

- **EqualLogic**
- **MDSeries**

The options for **Switch** are:

- **PowerConnect**
- **Force10**

4. Type the credentials in the corresponding fields:

 **NOTE:** For Force10 and PowerConnect Ethernet switches, the **Username**, **Password**, and **Enable Password** fields are optional. However, information must be provided for these fields if the Force10 or PowerConnect Ethernet switch is configured with these details.

- **Username** — The user name must contain one or more printable characters, and not exceed 104 characters.

 **NOTE:** Windows user names must be of the form [Domain\Username]. You can also use a period [.] to indicate the local domain. This rule does not apply to Linux or ESX/ESXi credentials.

 **NOTE:** For Force 10 and PowerConnect Ethernet switches the domain name need not be specified.

Examples of Windows user names: .Administrator; MyDomain\MyUsername

Example of Linux, ESX/ESXi user name: Username

- **Password** — The user password must contain one or more printable characters, and not exceed 127 characters.
- **Enable Password** — For Ethernet switches only. The enable password must contain one or more printable characters, and not exceed 127 characters.
- **Community String** — For EqualLogic storage devices only. The community string of the storage device.

 **NOTE:** The **Default Device Type Credentials** are encrypted and saved locally.

5. Click **Save Changes**.

If the credentials for a device differs from the **Default Device Type Credentials** you provided, you can edit the device credentials for that particular device. For more information about providing the credentials for a specific device, see [Editing Device Credentials](#).

Confirming E-Mail Connectivity

You can test the SupportAssist e-mail connectivity status, to ensure that you receive the most current case and device updates. For example, you may want to check the e-mail connectivity status following a network outage, a router or firewall configuration change, or change made to the e-mail address of the primary user.

To test the SupportAssist e-mail connectivity status:

 **NOTE:** The **Connectivity Test** link is enabled only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Move the mouse pointer over the *user name* link that is displayed beside the **Help** link, and then click **Connectivity Test**.

The **Connectivity Test** page is displayed.

2. Click **Send**.

 **NOTE:** If you have opted to not receive e-mail notification when a new support case is generated, SupportAssist does not send the connectivity confirmation e-mail as well. For more information about e-mail notification settings, see [Configuring E-Mail Notification Settings](#).

SupportAssist initiates an e-mail connectivity test.

- If the test is successful, a confirmation e-mail message is sent to you. The message provides the connectivity status and a reminder to configure your devices for monitoring. The SupportAssist dashboard displays the following message:

```
A connectivity test has been successfully sent to Dell SupportAssist.
```

When you receive the connectivity confirmation e-mail from SupportAssist, ensure that your supported Dell devices are properly configured for monitoring. For more information, see the *Dell OpenManage Essentials User's Guide* at dell.com/support/manuals.

- If the connectivity test fails, the following error message is displayed:
Error: Connectivity test failed. Please check your network settings.
If your network settings are correct, please contact Dell Technical Support for further instructions.
 - * If SupportAssist displays an error message, ensure that your network settings are correct, and then click **Retry**. If the error persists, and you are certain that your network settings are correct, click the **Dell Technical Support** link that appears below the error message to engage Dell technical support for troubleshooting assistance. Once the error is resolved, repeat step 1 to step 2.

Filtering The System Log Collection

The system logs collected by SupportAssist includes personally identifiable information (PII) such as the complete configuration snapshot of storage systems, hosts, and network devices which can contain host identification and network configuration data.

In most cases, part or all of this data is required to properly diagnose issues. The security policy of your company may restrict sending this data outside of your network. You can prevent sending this data to Dell by configuring SupportAssist to filter the system log collection.

 **NOTE:** When the **Send network identification information to Dell** option is disabled, some of the data about your network is not transmitted to Dell. This may impede Dell technical support from resolving your issue.

 **NOTE:** If your devices are covered under the Dell ProSupport Plus service contract, when the **Send network identification information to Dell** option is disabled, you will not receive some reporting information about your devices.

To filter the system log collection:

 **NOTE:** The **Settings** tab is accessible only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Settings** tab.
The **System Logs** page is displayed.
2. Click **Preferences**.
The **Email Settings, Support Collection, and Maintenance Mode** page is displayed.
3. Under **Details**, clear the **Send network identification information to Dell** option.

 **NOTE:** By default, the **Send network identification information to Dell** option is selected.

4. Click **Save Changes**.

[Preferences](#)

Editing Device Credentials

The **Default Device Type Credentials** that you provided for each **Device Type** and **Credential Type** in the **System Logs** page is used to run the collection tools on your managed devices and gather the system logs. If the credentials for a particular device differs from the **Default Device Type Credentials** you provided, you can edit the credentials for that device.

 **CAUTION:** After you edit the credentials for a specific device, SupportAssist uses the device-specific credentials you provided to collect the system logs on that device.

 **NOTE:** To ensure that SupportAssist is able to generate the system log collection for all devices, you must edit the credentials for each device which has credentials that are not the same as the **Default Device Type Credentials**.

To edit the credentials for a device:

 **NOTE:** Editing the credentials for a device is enabled only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Devices** tab.
The **Device Inventory** is displayed.
2. Select a device in the **Device Inventory** table.

 **NOTE:** You can only select a device that has a valid Service Tag. If a device does not have a valid service tag, the check box for that device is disabled.

The **Edit Device Credentials** link is enabled.

3. Click **Edit Device Credentials**.

 **NOTE:** If the device you selected does not require credentials to generate the system log collection, a message is displayed on the dashboard.

The **Edit Device Credentials** dialog box is displayed.

4. Type the **Username, Password, Enable Password** (if applicable), and **Community String** (if applicable) in the appropriate fields.

5. Click **Save Changes**.

The **Confirmation** dialog box is displayed.

 **CAUTION:** If you select the **Do not show this reminder again** option, SupportAssist does not prompt for your confirmation when you attempt to edit the device credentials the next time.

6. Click **Yes**.

The dashboard displays the following message: Your device credentials were saved successfully .

Resetting The Device-Specific Credentials To The Default Device Type Credentials

If you had edited the credentials for a particular device, and later want to reset the credentials for that device to the **Default Device Type Credentials**, you can do so through the **Edit Device Credentials** dialog box.

 **CAUTION:** Resetting to the **Default Device Type Credentials** overwrites the device-specific credentials with the **Default Device Type Credentials**. After you reset the credentials, SupportAssist uses the **Default Device Type Credentials** to collect the system logs on that device.

 **NOTE:** You can reset the device-specific credentials to the **Default Device Type Credentials** for only one device at a time through the **Edit Device Credentials** dialog box. To overwrite the device-specific credentials for multiple devices belonging to a particular **Device Type** and **Credential Type** at a time, see [Overwriting The Device-Specific Credentials With The Default Device Type Credentials](#).

To reset the device-specific credentials to the default device type credentials:

 **NOTE:** To reset the device-specific credentials to the **Default Device Type Credentials**, you must be logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Devices** tab.

The **Device Inventory** is displayed.

2. Select a device in the **Device Inventory** table.

 **NOTE:** You can only select a device that has a valid Service Tag. If a device does not have a valid service tag, the check box for that device is disabled.

The **Edit Device Credentials** link is enabled.

3. Click **Edit Device Credentials**.

The **Edit Device Credentials** dialog box is displayed.

4. Click **Reset to Default Device Type Credentials**.

 **NOTE:** The **Reset to Default Device Type Credentials** link is displayed only if you had previously configured the selected device with specific credentials.

The **Confirmation** dialog box is displayed.

 **CAUTION:** If you select the **Do not show this reminder again** option, SupportAssist does not prompt for your confirmation when you attempt to reset the device-specific credentials the next time.

5. Click **Yes**.

Overwriting The Device-Specific Credentials With The Default Device Type Credentials

If you had edited the credentials for several devices, and later want to overwrite the credentials for all those devices to the **Default Device Type Credentials**, you can do so through the **System Logs** page.

 **CAUTION:** Once you overwrite the device-specific credentials, the **Default Device Type Credentials** overwrites the credentials of devices that you had previously edited through the **Edit Device Credentials** link.

 **NOTE:** You can overwrite the device-specific credentials to the **Default Device Type Credentials** for all devices belonging to a particular **Device Type** and **Credential Type** at a time through the **System Logs** page. To reset the device-specific credentials for only a particular device, see [Resetting The Device-Specific Credentials To The Default Device Type Credentials](#).

To reset the device-specific credentials to the default device type credentials:

 **NOTE:** The **Settings** tab is accessible only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Settings** tab.
The **System Logs** page is displayed.
2. Select the device category from the **Device Type** list.
3. Select the credential category from the **Credential Type** list.
4. Select **Overwrite the device-specific credentials with the Default Device Type Credentials for all devices belonging to the current Device Type and Credential Type**.
The **Confirmation** dialog box is displayed.

 **CAUTION:** If you select the **Do not show this reminder again** option, SupportAssist does not prompt for your confirmation when you attempt to overwrite the device-specific credentials the next time.

5. Click **Yes**.
6. Click **Save Changes**.

Sending The System Logs Manually

When a support case is opened or updated, the SupportAssist client, runs the collection tools on the devices that generated the alerts, and then uploads the system logs to Dell. In certain conditions, if required by Dell technical support, you may be required to manually collect the system logs and send it to Dell.

To send the system logs manually:

 **NOTE:** The **Send System Logs** option is enabled only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Devices** tab.

The **Device Inventory** is displayed.

2. Select a device in the **Device Inventory** table.

 **NOTE:** You can only select a device that has a valid Service Tag. If a device does not have a valid service tag, the check box for that device is disabled.

The **Send System Logs** link is enabled.

3. Click **Send System Logs**.

The **Collection Status** column in the **Device Inventory** displays the status of the collection and upload of the system logs.

Disabling The Scheduling Of System Log Collection For A Specific Device Type

To disable the scheduling of system log collection for a specific device type:

 **NOTE:** Disabling the scheduling of system log collection for a specific device type only disables the generation of system log collection at periodic intervals on those devices. It does not disable SupportAssist from generating a system log collection and uploading it to Dell, if a support case is opened for those devices.

 **NOTE:** The **Settings** tab is accessible only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Settings** tab.
The **System Logs** page is displayed.
2. Under **Edit Device Credentials**, select the **Device Type** for which you want to disable scheduling. You can select from:
 - **Server**
 - **Storage**
 - **Switch**

3. Select the **Credential Type** for which you want to disable scheduling. The options available vary based on the **Device Type** you selected.

4. In **System Log Collection Schedule** section, set the **Frequency** to **None**.

5. Click **Save Changes**.

The following message is displayed in the **System Log Collection Schedule** section: System Log Collection scheduling is turned off for the current Device Type and Credential Type.

Confirming Connectivity Through The Proxy Server

To test if Dell SupportAssist can connect to the Internet through the proxy server:

 **NOTE:** The **Settings** tab is accessible only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Settings** tab.
The **System Logs** page is displayed.
2. Click **Proxy Settings**.
The **Proxy Settings** page is displayed.
3. Ensure that the proxy settings has been configured correctly. See [Configuring Proxy Server Settings](#).
4. Click **Apply**.

A dialog box appears to inform the status of the connection through the proxy server.

Viewing The Case List

To view the **Case List**, click the **Cases** tab on the Dell SupportAssist dashboard. A progress indicator may appear at the bottom of the report to inform that SupportAssist is in the process of updating its cache of open support cases.

 **NOTE:** By default, the Case List is sorted by **Date Opened**, in descending order. See the following sections for more sorting options.

 **NOTE:** Pre-existing support cases (opened prior to SupportAssist installation), and cases opened by means other than SupportAssist, do not appear in the **Case List** report.

 **NOTE:** The **Service Contract** column in the SupportAssist dashboard displays `unknown` for all support cases created prior to the SupportAssist upgrade. Once an alert is received from the device, the **Service Contract** column is updated with the appropriate service contract type.

Support case information is automatically available, for Dell OpenManage Essentials-managed Dell PowerEdge, Dell PowerVault, Dell PowerVault NX storage server, Dell EqualLogic, iDRAC7, Dell Force 10, and Dell PowerConnect devices with valid service tags, when SupportAssist connects to the Dell support case and service contract databases over the Internet.

 **NOTE:** If you do not have Internet access, no case information is populated. It is downloaded and displayed when you next connect to the Internet and open the **Case List** report.

Once SupportAssist has completed its open support cases update, the **Case List** displays the current cases.

Filtering The Case List Data By Column Name And Keyword

To filter the case list display data by column name and keyword:

1. Select the column name from the **Filter By:** list.
2. If you are searching for **Case Status**, **Progress**, **Device Type**, or **Service Contract**, select the search criteria from the search list.
3. If you are searching for **Case Number**, **Date Opened**, **Case Title**, or **Service Tag**, type the search keyword in the search text field.
4. Click **Apply Filters**.

The report refreshes to display the data according to your criteria. If there are no matches, the following message is displayed:

No support cases found. Please review your search criteria and try again.

5. To clear the search criteria and try again, click **Clear Filters**.

The report refreshes to display the default content.

6. Repeat step 2 through step 3.

The report refreshes to display the data according to your criteria.

Setting The Number Of Cases Displayed Per Page

To change the total number of rows displayed in a page, select the number of cases to display from the **Display Cases:** list. You can choose from:

- 10 per page
- 20 per page
- 30 per page
- 50 per page
- 100 per page

By default, the dashboard is set to display 50 cases per page.

Filtering The Device Inventory Data By Column Name And Keyword

To filter the device inventory display data by column name and keyword:

1. Select the column name from the **Filter By:** list.
2. If you are searching for **Device Type**, select the search criteria from the search list.
3. If you are searching for **Device Name**, **Service Tag**, or **Collection Status**, type the search keyword in the search text field.
4. Click **Apply Filters**.
The report refreshes to display the data according to your criteria. If there are no matches, the following message is displayed:
`No support cases found. Please review your search criteria and try again.`
5. To clear the search criteria and try again, click **Clear Filters**.
The report refreshes to display the default content.
6. Repeat step 2 through step 3.
The report refreshes to display the data according to your criteria.

Refreshing The Case List Or Device Inventory Display Data

The **Case List** or **Device Inventory** display data can be refreshed in two ways:

- Click the  icon that appears in the **Case List** or **Device Inventory** dashboard to update the displayed data using the currently selected filters. This is handy for displaying updated information between poll cycles.
- Click the **Refresh** button on the web browser to regenerate the last sort operation. The web browser may display a dialog box with the following message:

To display the webpage again, the web browser needs to resend the information you've previously submitted.

If you were making a purchase, you should click **Cancel** to avoid a duplicate translation. Otherwise, click **Retry** to display the webpage again.

In the dialog box that is displayed, click the **Retry** button to continue.

Viewing And Updating The Contact Information

To view and update the contact information:

 **NOTE:** The **Settings** tab is accessible only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Settings** tab.
The **System Logs** page is displayed.
2. Click **Contact Information**.
The **Contact Information** page is displayed.
3. Select the type of contact:
 - **Primary**
 - **Secondary**
4. Make the required changes to any of the following fields:
 - **First Name** — The first name can contain letters, quotation marks ['], periods [.], spaces, and not exceed 50 characters.

- **Last Name** — The last name can contain letters, quotation marks ['], periods [.], spaces, and not exceed 50 characters.
- **Phone Number** — In 123-456-7890 format, or in 123-456-7890 x 123 format (to include an extension). It must contain a minimum of 10 characters, and not exceed 50 characters.
- **Alternate Phone Number** — Optional, with the same format and character requirements as the Phone Number.
- **Email Address** — Provide the e-mail address in the name@company.com format. It must contain a minimum of five characters, and not exceed 50 characters.

5. Click **Save Changes**.

Configuring E-Mail Notification Settings

You can configure the e-mail notification settings based on your:

- Preference to receive e-mail notifications from Dell SupportAssist
- Preferred language

To configure the e-mail notification settings:

 **NOTE:** The **Settings** tab is accessible only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Settings** tab.
The **System Logs** page is displayed.
2. Click **Preferences**.
The **Email Settings, Support Collection, and Maintenance Mode** page is displayed.
3. To receive e-mail notifications when a new support case is opened, under **Email Settings**, select **Receive email notification when a new support case is opened**.

 **NOTE:** Disabling support case e-mail notifications also disables e-mail connectivity test e-mails.

4. To set the language in which you want to receive e-mail notifications, from the **Preferred Email Language** list, select a language.

 **NOTE:** The **Preferred Email Language** is enabled only when the **Receive email notification when a new support case is opened** option is selected.

5. Click **Save Changes**.

Setting Dell SupportAssist To Maintenance Mode

SupportAssist can also be set in or out of Maintenance Mode. Maintenance Mode disables automatic case generation activity, thereby allowing you to make infrastructure changes without generating unnecessary alerts.

To set SupportAssist in or out of maintenance mode:

 **NOTE:** The **Settings** tab is accessible only if you are logged on as a member of the OpenManage Essentials Administrators or Power Users group.

1. Click the **Settings** tab.
The **System Logs** page is displayed.
2. Click **Preferences**.
The **Email Settings, Support Collection, and Maintenance Mode** page is displayed.
3. Under **Maintenance Mode**, select or clear **Temporarily suspend case generation activity (for example, for purposes of downtime, external troubleshooting, etc.)** to toggle the Maintenance Mode status.
 - If you select this option, SupportAssist is placed in maintenance mode.
 - If you clear this option, SupportAssist is taken out of maintenance mode.
4. Click **Save Changes**.
A banner appears along the top of the SupportAssist dashboard displaying `Maintenance Mode`.
Once manually placed in maintenance mode, SupportAssist remains in that state unless you clear the option as in step 3.

 **NOTE:** This procedure differs from how maintenance mode feature handles event storms. See [Event Handling](#) for more information.

[Preferences](#)

Using The Update Available Notification

The update available notification icon  is displayed in the header area or the **About** dialog box, if a newer version of SupportAssist is available.

Click  to navigate to the Dell support website from where you can download a newer version of the SupportAssist.

Accessing And Viewing The Logs

The Dell SupportAssist dashboard stores Windows events and log messages in two locations:

- The Windows Event Log
- The dashboard installation logs directory (typically, **C:\Program Files (x86)\Dell\Dell Integrated Support\logs** in 64-bit operating systems and at **C:\Program Files\Dell\Dell Integrated Support\logs** in 32-bit operating systems)

A new log is created daily at 11:59 PM as per the time zone configured in the system, and is stored in the logs directory with the date appended to the file extension. This enables you to identify the exact log file stored for a given date when alerts occur. For example, log files similar to the following can be seen:

- **log-file.txt** 20120226
- **log-file.txt** 20120227
- **log-file.txt** 20120228

Log files are purged from storage after 45 days.

To view the Windows Event Log, invoke the Event Viewer application and then expand Applications and Services Logs. The DellIntegratedSupport log file contains entries from the dashboard service. The dashboard logs messages here that correspond to the value of the Windows Registry key, `WindowsEventLogLevel`, or higher.

In the dashboard installation directory, you can view one log file per day. The current log file is named **log-file.txt**, and contains log messages that correspond to the following values (or higher) in the Windows Registry key `LogFileLevel`:

FATAL, ERROR, WARN, INFO, and DEBUG, with special values of OFF and ALL. A registry value of ERROR results in logs messages of FATAL, and ERROR, since FATAL is a higher level than ERROR.

The LogFileLevel Windows Registry key can be located at **HKEY_LOCAL_MACHINE\SOFTWAREWow6432Node\Dell\Dell Integrated Support** in 64-bit operating systems and at **HKEY_LOCAL_MACHINE\SOFTWARE\Dell\Dell Integrated Support** in 32-bit operating systems.

Accessing And Viewing The System Log Collection

When a support case is automatically generated by Dell SupportAssist, data required to troubleshoot the issue is collected and sent to Dell technical support. The collected troubleshooting information is also compressed and stored on your OpenManage Essentials server in the reports directory (typically, **C:\Program Files (x86)\Dell\Dell Integrated Support\reports** in 64-bit operating systems and at **C:\Program Files\Dell\Dell Integrated Support\reports** in 32-bit operating systems).

The filename includes the device's IP address, Dell service tag, and the date/time when the file was created. For example:

- **DSET_Report_for[192.168.1.254_SvcTag_AL12G26_2012-03-07T132648].zip**
- **Lasso_Report_for[10.94.216.76_SvcTag_897672S_2012-08-21T094147].zip.gpg** (without PII)
- **Lasso_Report_for[10.94.216.76_SvcTag_897672S_2012-08-21T094147].xml.gpg** (with PII)

The report file is encrypted with the password, dell (all lowercase). The report information can then be viewed by opening the dsetreport.hta file in your web browser.

 **NOTE:** You should open the reports only when asked to do so by Dell technical support. Your report will not be reviewed unless you have an open support case.

Viewing Dell SupportAssist Product Information

The **About** window displays the SupportAssist product version, copyright information, and detailed SupportAssist feature descriptions.

To view general and detailed SupportAssist product information:

1. Move the mouse pointer over the **Help** link at the top-right corner of the SupportAssist dashboard, and then click **About**.
The **About** window is displayed, where you can view the general and detailed product information and also the copyright information.
2. Click **Close** to return to the SupportAssist dashboard.

Viewing Support Information

The Help window displays Dell SupportAssist product version and copyright information, and provides access to Dell Technical Support and Dell OpenManage Essentials information.

To view the support information for SupportAssist:

1. Move the mouse pointer over the **Help** link at the top-right corner of the SupportAssist dashboard, and then click **Help**.
The **Help** window is displayed.
2. In the **Help** window :
 - Read the General product and copyright information.

- Click the links under **Dell SupportAssist Additional Information & Updates** to view:
 - * Dell Technical Support launch points, community forums, blogs, and much more
 - * Dell product manuals for hardware and software products
 - Click the link under **Dell OpenManage Essentials (OME) Additional Information & Updates** to view Dell OpenManage Essentials Frequently Asked Questions, updates, videos, and much more
3. Click **Close** to return to the SupportAssist dashboard.

Accessing The Context-Sensitive Help

The context-sensitive help provides information about features and tasks that are applicable to the current view on the dashboard. Once you invoke the context-sensitive help, you can navigate or search through the entire SupportAssist help system.

To access the context-sensitive help, click the  icon that appears in the dashboard. The context-sensitive help is displayed in a new browser window.

Troubleshooting

The following sections describe procedures you can use to troubleshoot Dell SupportAssist issues

Installing Dell SupportAssist

SupportAssist installation requires elevated Microsoft User Authentication (UAC) privileges, and may fail if you attempt to install by double-clicking on the installer executable. If this occurs, install SupportAssist as follows:

1. Right-click the installer executable.
2. Select **Run as administrator**.

 **NOTE:** SupportAssist installation requires that you allow Dell to save certain Personally Identifiable Information (PII) such as your contact information and local administrator credentials, and so on. SupportAssist installation cannot proceed unless you allow Dell to save your PII.

Launching Dell SupportAssist

If you see a `Problem starting the Dell SupportAssist Service` error upon launching SupportAssist:

- There may be a Microsoft Windows registry configuration problem with the SupportAssist Windows service. To resolve this issue, uninstall and then reinstall SupportAssist.
- The SupportAssist dashboard requires some DLLs that are installed in OpenManage Essentials version 1.1. The SupportAssist installer checks that OpenManage Essentials is installed, and then checks the OpenManage Essentials version. If the DLLs are manually removed, the following error appears during installation:

```
Error 1920. Service Dell SupportAssist Service  
(PhonePluginWindowsService) failed to start.
```

If this occurs:

- Verify that you have sufficient privileges to start system services.
- Check the `log-file.txt` file in the logs directory (typically, `C:\Program Files (x86)\Dell\Dell Integrated Support\logs` in 64-bit operating systems and at `C:\Program Files\Del\Dell Integrated Support\logs` in 32-bit operating systems) to see which component failed to load.

Service Tag Warnings

On rare occasions some cases may display an invalid Dell service tag warning. If you presume that the warning is incorrect, you can use the Windows Management Instrumentation CLI command (`wmic`) to find the correct Dell service tags for Windows devices.

To resolve service tag warnings:

1. Identify the service tag for your device.
2. Contact Dell technical support. See [Contacting Dell](#).

Service Contract

The **Service Contract** column on the **Case List** report, may display a warning icon or `Unknown`. See the following sections for more information about these messages.

Service Contract Warning

A warning icon may appear in the **Service Contract** column of some cases if the associated device is not covered under a Dell service contract or the service contract has expired.

If any cases display a warning icon in the **Service Contract** column:

1. Move the pointer over the warning icon to display a tooltip.
2. Click the Dell Support link displayed in the tooltip to open the service contract information page.

You can obtain current service contract information for your Dell devices, obtain new service contracts, and so on.

Service Contract Type Is Unknown

The **Service Contract** column on **Case List** report displays `unknown` for all existing support cases.

This issue occurs when you upgrade Dell SupportAssist. Once an alert is received from the device, the **Service Contract** column is updated with the appropriate service contract type.

Services

- Dell SupportAssist may not initially connect to the SupportAssist server if your network requires passing web browser traffic through a proxy server. If this occurs:
 - A dialog box may be displayed prompting you to configure your proxy settings. Provide the information required in the appropriate fields to connect to the SupportAssist server through your proxy server.
 - Configure the proxy server settings in SupportAssist. See [Configuring Proxy Server Settings](#).
 - After configuring the proxy server settings, verify if the SupportAssist dashboard can connect to the SupportAssist server through the proxy server by performing the e-mail connectivity test. See [Confirming Connectivity Through The Proxy Server](#).
- If the SupportAssist dashboard does not seem to connect to the SupportAssist server or behave appropriately, ensure that the SupportAssist Windows service is running:
 1. Click **Start** → **Run**.
The **Run** dialog box is displayed.
 2. Type `services.msc`, and then click **OK**.
The **Services** Microsoft Management Console (MMC) is displayed
 3. Check if the **Dell SupportAssist Service** displays the status as **Running**.
 4. If the service is not running, start the service by right-clicking **Dell SupportAssist Service** → **Start**.
 5. If the service cannot or does not start, open the most recent log file (**log-file.txt**), and then search for text with a timestamp of when you tried to start the service. The log file may contain a message indicating any dashboard startup errors and a possible problem diagnosis.
 6. To verify that the SupportAssist dashboard can connect to the SupportAssist server, perform the e-mail connectivity test. See [Confirming E-Mail Connectivity](#).

- If the server is responding a success message is displayed in the dashboard. If not, the server may be down. If this occurs, look through the **log-file.txt** file, typically located in **C:\Program Files (x86)\Dell\Dell Integrated Support\logs** in 64-bit operating systems and at **C:\Program Files\Dell\Dell Integrated Support\logs** in 32-bit operating systems, to find details. If there are no discernible details in the log file, and the server is not reachable, call Dell technical support.
- If communication is successful, but no data updates occur, the dashboard may be identifying itself with an ID that is unknown to the server. If this occurs, look through the **log-file.txt** log file, typically located in **C:\Program Files (x86)\Dell\Dell Integrated Support\logs** in 64-bit operating systems and at **C:\Program Files\Dell\Dell Integrated Support\logs** in 32-bit operating systems to find details. The log file may contain a message stating that the dashboard was not recognized. If the dashboard is not recognized by the SupportAssist server, uninstall and reinstall SupportAssist.

The SupportAssist dashboard registers as a new client, enabling the SupportAssist server to recognize it.

Security

- The **Settings** tab is inaccessible and the **Connectivity Test** link is disabled. On clicking **Settings** tab, a dialog box is displayed with the following message: `Access Denied. You must be logged in as a member of the Dell OpenManage Essentials Administrators or Power Users group to access this content.`
- The **Edit Device Credentials** and **Send System Logs** links remain disabled even after selecting a device in the **Device Inventory**.

If this occurs, ensure that you are logged on as a member of either the OpenManage Essentials Administrators or Power Users group.

Contacting Dell

 **NOTE:** If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

1. Visit dell.com/support
2. Select your support category.
3. Verify your country or region in the Choose a Country/Region drop-down menu at the top of page.
4. Select the appropriate service or support link based on your need.
