CHAPTER 1: SETTING UP YOUR LAPTOP

## CHAPTER 1: SETTING UP YOUR LAPTOP

## Before Setting Up Your Laptop

### Congratulations on the purchase of your Alienware® M17x!

Read all safety and setup instructions before connecting your new laptop. Begin by carefully opening the box and removing all components that were shipped to you. Before setting up your laptop or components, be sure to inspect all items for any physical damage that may have occurred during shipment. Be sure to report any damaged items to customer service immediately upon receiving your shipment. You must report shipping damage within the first 5 days of receiving the shipment or your damage report will not be honored.

Before setting up your laptop or components, see the included invoice to verify that all items ordered are present. Report any missing components to customer service within 5 days of receiving the shipment. Anything reported missing after the first 5 days of receiving a shipment will not be honored. Some of the most common items to check for include:

- Laptop and AC adapter with power cable
- Microsoft CD-key located at the bottom of the laptop
- Monitor with power cable and video cable (if ordered)
- Keyboard (if ordered)
- Mouse (if ordered)
- Multimedia speakers and sub-woofer (if ordered)
- Joystick controllers (if ordered)

You may also need a small flathead and/or a Phillips head screwdriver for connecting peripheral cables to the laptop.

## Product Documentation and Media

The documentation that ships with your Alienware® laptop is designed to provide answers to many of the questions that may arise as you explore your new laptop's capabilities. You may see the documentation for technical information or general use as needed to answer questions in the future, or aid you in finding answers and solutions. The media included with your laptop is referenced in some sections of the documentation and may be needed to complete certain tasks. As always, our technical support staff is available to assist you.

## Placing Your Laptop

**WARNING: Do not place the laptop near or over a radiator or heating vent. If your laptop is placed in a cabinet, ensure that adequate ventilation is provided. Do not place the laptop in a humid location or in any area where the laptop may be exposed to rain or water. Be careful not to spill liquid of any kind on or into the laptop.**

When placing your laptop, ensure that:

- It is placed on a surface that is both level and stable.
- The power and other cable connectors are not jammed between the laptop and a wall – or any other object.
- Nothing obstructs airflow in front of, behind, or below the laptop.
- The laptop has enough room so that optical drives and other external storage drives can be easily accessed.

## Connect the AC Adapter

**WARNING:** The AC adapter works with electrical outlets worldwide. However, power connectors and power strips vary among countries. Using an incompatible cable or improperly connecting the cable to a power strip or electrical outlet may cause fire or equipment damage.

**NOTE:** The AC adapter should be connected to the laptop for maximum gaming performance.

## Press the Power Button

## Set Up Microsoft Windows

 **CAUTION:** Do not interrupt the operating system's setup process. Doing so may render your computer unusable.

Your computer is preconfigured with the operating system you requested while ordering your computer. To configure the remaining settings, follow the instructions on the screen.

 **NOTE:** For optimal performance of your computer, it is recommended that you download and install the latest BIOS and drivers for your computer available at [support.dell.com](http://support.dell.com).

 **NOTE:** For more information on the operating system and features, see [support.dell.com/MyNewDell](http://support.dell.com/MyNewDell).

 **NOTE:** It is recommended that you create a full system backup as soon as you set up Microsoft Windows. To create a full system backup, see "AlienRespawn/DataSafe Local Backup" on page 52.

## Connect to the Internet (Optional)

### Setting Up a Wired Connection

- If you are using a dial-up connection, connect the telephone line to the optional external USB modem and to the telephone wall jack before you set up your Internet connection.

- If you are using a DSL or cable/satellite modem connection, contact your ISP or cellular telephone service for setup instructions.

To complete setting up your wired Internet connection, follow the instructions in "Setting Up Your Internet Connection" on page 11.

### Setting Up a Wireless Connection

 **NOTE:** To set up your wireless router, see the documentation that shipped with your router.

Before you can use your wireless Internet connection, you need to connect to your wireless router.

To set up your connection to a wireless router:

2. Save and close any open files, and exit any open programs.
3. Click **Start**  → **Control Panel** → **Network and Sharing Center** → **Connect to a network**.
4. Follow the instructions on the screen to complete the setup.

## Setting Up Your Internet Connection

ISPs and ISP offerings vary by country. Contact your ISP for offerings available in your country.

If you cannot connect to the Internet but have successfully connected in the past, the Internet Service Provider (ISP) might have a service outage. Contact your ISP to check the service status, or try connecting again later.

Have your ISP information ready. If you do not have an ISP, the **Connect to the Internet** wizard can help you get one.

1. Save and close any open files, and exit any open programs.
2. Click **Start**  → **Control Panel**.
3. Click **Network and Internet** → **Network and Sharing Center** → **Set up a new connection or Network** → **Connect to the Internet**.

The **Connect to the Internet** window appears.

**NOTE:** If you do not know which type of connection to select, click **Help me choose** or contact your ISP.

## Using Removable Media and Cards

Observe the safety measures below:

When no ExpressCard or Media Card (SD/MMC/MS cards) is inserted into the ExpressCard or Media Card slot, ensure that the blank cards that shipped with your laptop is inserted in the unused slot(s). The blank cards protect the unused slots from dust and other particles. When inserting a blank card, ensure that the correct side is on the top (indicated by an arrow mark on some blank cards). Inserting a blank card upside down may damage your laptop.

## Using the Optical Drive

Your laptop has a slot load optical drive. Depending on the configuration ordered, your laptop may have one of the following drive types. These logos are used to indicate each drive's capabilities and media compatibility.

DVD±R/W Dual  
Layer Writer

DVD±R/W drive can read CD-ROM, CD-R, CD-R/W, DVD, DVD+R/W, and DVD-R/W media.

It can also record to CD-R, CD-RW, DVD+R/W, DVD-R/W, and DVD+R Dual Layer (DL) media.

Blu-ray Disc™  
Reader/Writer

Blu-ray drive can read CD-ROM, CD-R, CD-R/W, DVD, DVD+R/W, DVD-R/W, DVD+R Dual Layer (DL), BD-ROM, BD-R, and BD-RE media.

It can also record to CD-R, CD-R/W, DVD+R/W, DVD-R/W, DVD+R Dual Layer (DL), BD-R, and BD-RE media.

## Using the Integrated Camera

### Turning the Camera On and Off

Press the key combination <Fn><F9> to switch on or switch off the camera. After switching on the camera, you need to activate its function through the Microsoft Windows operating system. In addition, you can also use Windows Movie Maker to create, edit, and share videos.

### Using the Wireless Control

The wireless control allows you to quickly turn all of your wireless radios (Bluetooth® and WLAN) off, such as when you are asked to disable all wireless radios on an airplane flight. Gently touching this control one time turns all of your radios off. Gently touching it again returns your wireless radios to their respective states they were in before you touched the control the first time.

### Battery Pack

Your laptop is equipped with a high-energy rechargeable lithium ion (Li-ion) battery pack. Battery life will vary depending on your laptop configuration, model, applications installed, power management settings, and features used. As with all batteries, the maximum capacity of this battery will decrease with time and usage.

The battery meter lights on the battery pack indicate the charge level of the battery. When you press the battery meter once, the charge level lights illuminate. Each of the five lights represent approximately 20% of the total battery charge. For example, if four lights turn on, there is 80% of battery charge remaining and if no lights turn on, there is no charge remaining in the battery.

## Power Management

### Understanding Power Consumption

In order to fully utilize the power of your battery, it would be a good idea for you to spend some time acquiring a basic understanding of the power management concept from your operating system.

You can use the power options in your operating system to configure the power settings on your computer. The Microsoft® Windows® operating system installed on your computer provides three default options:

- **Balanced** — Offers full performance when you need it and saves power during periods of inactivity.
- **Power Saver** — Saves power on your computer by reducing system performance to maximize the life of the computer and by reducing the amount of energy consumed by your computer over its lifetime.
- **High Performance** — Provides the highest level of system performance on your computer by adapting processor speed to your activity and by maximizing system performance.

## Customizing Your Power Settings:

1. Click **Start**  → **Control Panel**.
2. Click **All Control Panel Items**.
3. Double-click the **Power Options** icon.
4. Select a power plan from the options shown. To customize specific settings, click **Change plan settings** next to the selected power plan.

## Reducing Power Consumption

Although your laptop (together with the operating system) is capable of power conservation, there are measures you can take to reduce the power consumption:

- Use the AC power whenever possible.
- Lower the intensity of the display backlight. A very bright screen translates to higher power usage.
- Switch to the Stealth mode to activate additional system power savings. Switching into and out of Stealth mode may require a reboot depending on your computer configuration and the operating system.

**NOTE:** The battery pack should be locked in the battery compartment all the time.

## Alienware Command Center

The Alienware® Command Center gives you access to Alienware's exclusive software and is a continuously upgradable control panel. As Alienware releases new programs, they download directly into the Command Center allowing you to build a library of system management, optimization, and customization tools. You can access Alienware Command Center by gently touching the touch control located near the top of the keyboard. The control will illuminate temporarily to confirm your selection. For the exact location of the control, see "Computer Base and Keyboard Features" on page 18.

## Stealth Mode

Stealth mode is designed to reduce the processor and graphics utilization and thereby reduces the energy consumption and noise level of your computer.

**NOTE:** Stealth mode has no effect while the computer is running on battery power.

You can access Stealth mode by gently touching the touch control located near the top of the keyboard. The control will illuminate to full brightness until the function is deactivated. For the exact location of the control, see "Computer Base and Keyboard Features" on page 18.

## Free Fall Sensor

Free fall sensor protects your computer hard drive from possible damage, by detecting a free fall state caused by accidentally dropping the computer. When a free fall state is detected, the hard drive is placed in a safe state to protect against damage to the read/write head and possible data loss. Your hard drive returns to normal operation, when the free fall state is no longer detected.

## Configuring the BIOS

### System Setup

The System Setup options allow you to:

- Change the system configuration information after you add, change, or remove any hardware in your laptop.
- Set or change a user-selectable option.
- View the installed amount of memory or set the type of hard drive installed.

Before you use System Setup, it is recommended that you write down the current System Setup information for future reference.

 **CAUTION: Do not change the settings in System Setup unless you are an expert computer user. Certain changes can cause your computer to work incorrectly.**

## Entering System Setup

1. Turn on (or restart) your laptop.
2. While the laptop is booting, press <F2> immediately before the operating system logo appears to access the **BIOS Setup Utility**. If an error occurs during POST (Power On Self Test), you may also enter the **BIOS Setup Utility** by pressing <F2> when prompted.

**NOTE:** If you wait too long and the operating system logo appears, continue to wait until you see the Microsoft® Windows® desktop, then shut down your laptop and try again.

**NOTE:** Keyboard failure may result when a key on the keyboard is held down for extended periods of time. To avoid possible keyboard failure, press and release <F2> in even intervals until the System Setup screen appears.

## System Setup Screens

The **BIOS Setup Utility** window displays current or changeable configuration information for your laptop. Information is divided into five menus: **Main**, **Advanced**, **Security**, **Boot**, and **Exit**.

Key functions appear at the bottom of the **BIOS Setup Utility** window and lists keys and their functions within the active field.

## System Setup Options

**NOTE:** Depending on your computer and installed devices, the items listed in this section may not appear, or may not appear exactly as listed.

**NOTE:** For the updated system setup information, see the *Service Manual* at [support.dell.com/manuals](http://support.dell.com/manuals).

## CHAPTER 4: INSTALLING ADDITIONAL OR REPLACEMENT COMPONENTS

This chapter provides guidelines and instructions for increasing the processing power and storage space, by upgrading equipment. You can purchase components for your computer at [www.dell.com](http://www.dell.com) or [www.alienware.com](http://www.alienware.com).

**NOTE:** See the *Service Manual* at [support.dell.com/manuals](http://support.dell.com/manuals) for installation instructions of all serviceable components. Parts purchased from Dell and Alienware will ship with specific replacement instructions.

## Before You Begin

This section provides procedures for removing and installing the components in your laptop. Unless otherwise noted, each procedure assumes that the following conditions exist:

- You have performed the steps in “Turning Off Your Computer” and “Before Working Inside Your Computer” in this section.
- You have read the safety information that shipped with your computer.
- A component can be replaced or—if purchased separately—installed by performing the removal procedure in reverse order.

## Turning Off Your Computer

**CAUTION:** To avoid losing data, save and close all open files and exit all open programs before you turn off your laptop.

1. Save and close all open files and exit all open programs.
2. Click **Start**  **Shut Down**.  
The laptop turns off after the operating system shutdown process finishes.
3. Ensure that the computer is turned off. If your computer did not automatically turn off when you shut down your operating system, press and hold the power button until the computer turns off.

## Before Working Inside Your Computer

Use the following safety guidelines to help protect your computer from potential damage and to help to ensure your own personal safety.

**WARNING:** Before working inside your laptop, read the safety information that shipped with your computer. For additional safety best practices information, see the Regulatory Compliance Homepage at [www.dell.com/regulatory\\_compliance](http://www.dell.com/regulatory_compliance).

**CAUTION:** Handle components and cards with care. Do not touch the components or contacts on a card. Hold a card by its edges. Hold a component such as a processor by its edges, not by its pins.

**CAUTION:** Only a certified service technician should perform repairs on your computer. Damage due to servicing that is not authorized by Dell is not covered by your warranty.

**CAUTION:** To avoid electrostatic discharge, ground yourself by using a wrist grounding strap or by periodically touching an unpainted metal surface (such as a connector on the back of the computer).

**CAUTION:** When you disconnect a cable, pull on its connector or on its pull-tab, not on the cable itself. Some cables have connectors with locking tabs; if you are disconnecting this type of cable, press in on the locking tabs before you disconnect the cable. As you pull connectors apart, keep them evenly aligned to avoid bending any connector pins. Also, before you connect a cable, ensure that both connectors are correctly oriented and aligned.

**CAUTION:** To avoid damaging the computer, perform the following steps before you begin working inside the computer.

1. Ensure that the work surface is flat and clean to prevent the computer cover from being scratched.
2. Turn off your computer (see “Turning Off Your Computer” on page 34).

**CAUTION:** To disconnect a network cable, first unplug the cable from your computer and then unplug the cable from the network device.

3. Disconnect all telephone or network cables from the laptop.
4. Press and eject any installed cards from the ExpressCard slot and the Media Card slot.
5. Disconnect your computer and all attached devices from their electrical outlets.

**CAUTION:** To help prevent damage to the system board, you must remove the battery from the battery bay before you service the laptop.

6. Remove the battery from the battery bay (see “Replacing the Battery Pack” on page 36).
7. Press the power button to ground the system board.

## Replacing the Battery Pack

This battery pack can easily be removed and replaced. Ensure that the laptop is properly shut down before changing the battery pack.

**CAUTION:** To avoid damage to the laptop, use only the battery designed for this particular Alienware laptop. Do not use batteries designed for other Alienware or Dell laptops.

To remove the battery pack:

1. Follow the instructions in “Before You Begin” on page 34.
2. Shut down the laptop.
3. Turn the laptop over.
4. Slide the battery latch to the unlock position as shown.
5. The battery pack will pop up.
6. Remove the battery pack.

To replace the battery pack:

1. Follow the instructions in “Before You Begin” on page 34.
2. Align the three battery pack tabs with the slots in the battery bay.
3. Push the battery pack into the battery bay until the battery pack clicks into place.

## CHAPTER 5: TROUBLESHOOTING

## Basic Hints and Tips

- Computer does not power on: Is your AC adapter cable securely connected to a working electrical outlet? If connected to a power strip, ensure that the strip is actually working.
- Connections: Check all the cables to ensure that there are no loose connections anywhere.
- Power Savings: Ensure that your computer is not in hibernate or standby mode by pressing the power button for less than 4 seconds. The power status light will fade from blue to black while in standby mode; in hibernate mode it will be off.
- Brightness: Check and adjust the brightness of the display by pressing the key combinations <Fn><F4> or <Fn><F5>.
- Display Choice: Press the key combination <Fn><F6> to ensure that the computer is not set to "External Only" display.
- Use only the AC adapter that shipped with your laptop.

## Backup and General Maintenance

- Always backup your important data on a regular basis and keep copies of your operating system and software safe. Do not forget to note the serial numbers if you are storing them outside of their original cases - e.g., in a CD wallet.
- Run maintenance programs as often as you can. You may schedule these programs to run at times when you are not using your computer. You can use those provided with your operating system, or buy more powerful, dedicated programs to do so.
- Write down your passwords and keep them safe (away from your computer). This is especially important if you choose to password-protect your computer's BIOS and operating system.
- Document vital settings such as network, dialup, mail and Internet settings.

### *When troubleshooting your computer, remember the following safety guidelines:*

- Before touching any of the computer's internal components, touch an unpainted portion of the chassis. Doing so will safely discharge any static electricity, which could damage your computer.
- Turn off your computer and any connected peripherals.
- Disconnect any peripherals from your computer.

### *Things to check before troubleshooting:*

- Ensure that the AC adapter cable is properly connected between your computer and a grounded, three-prong power outlet. Ensure that the power outlet is working.
- Ensure the UPS or power strip is turned on (if applicable).
- If your peripheral devices (e.g. keyboard, mouse, printer, etc.) are not working, ensure that all connections are secure.
- If any computer components were added or removed before the problem began, check to see if you performed the installation or removal procedures properly.
- If an error message appears on the screen, write down the exact error message prior to calling Technical Support to aid in diagnosing and resolving your issue.
- If an error occurs in a specific program, see the program's documentation.

## Software Diagnostic Tools

### Pre-Boot System Assessment (PSA)

The computer runs the Pre-boot System Assessment (PSA), a series of initial tests of your system board, keyboard, display, memory, hard drive, etc.

To invoke PSA:

1. Turn on (or restart) your computer.
2. Press <F12> to access the **Boot Menu**.
3. Select **Diagnostics** from the menu and press <Enter>.

During the assessment, answer any questions that appear.

- If a failure is detected, the computer stops and beeps. To stop the assessment and restart the computer, press <n>; to continue to the next test, press <y>; to retest the component that failed, press <r>.
- If failures are detected during the Pre-boot System Assessment, write down the error code(s) and contact Alienware (see "CONTACTING ALIENWARE" on page 61).

If the Pre-boot System Assessment completes successfully, the following message appears "Do you want to run the remaining memory tests? This will take about 30 minutes or more. Do you want to continue? (Recommended) ."

If you are experiencing memory issues, press <y> else press <n>. The following message is displayed: "Pre-boot System Assessment complete."

Press <o> to reboot your computer.

## Alienware® Diagnostics

If you experience a problem with your Alienware laptop, run the Alienware Diagnostics before you contact Alienware for technical assistance. It is recommended that you print these procedures before you begin.

 **NOTE:** Back up all data before initiating a system recovery. It is recommended to backup critical files onto an external media before initiating recovery.

 **NOTE:** The Resource DVD contains drivers for your computer. You can also download the latest drivers and software for your computer from [support.dell.com](http://support.dell.com).

Review your laptop's configuration information, and ensure that the device that you want to test displays in the system setup program and is active. Start the Alienware Diagnostics from the Resource DVD.

## Starting Alienware Diagnostics From the Resource DVD

1. Insert the Resource DVD.
2. Shut down and restart the laptop.  
When the Alienware logo appears, press <F12> immediately.

 **NOTE:** If you wait too long and the operating system logo appears, continue to wait until you see the Microsoft® Windows® desktop; then, shut down your computer and try again.

 **NOTE:** The next steps change the boot sequence for one time only. On the next start-up, the computer boots according to the devices specified in the system setup program.

3. When the boot device list appears, highlight **CD/DVD/CD-RW** and press <Enter>.
4. Select **Boot from CD-ROM** from the menu that appears and press <Enter>.
5. Select **Alienware Diagnostics** from the numbered list. If multiple versions are listed, select the version appropriate for your computer.
6. When the Alienware Diagnostics **Main Menu** appears, select the test you want to run.

 **NOTE:** Write down any error codes and problem descriptions exactly as they appear and follow the instructions on the screen.

7. After all tests have completed, close the test window to return to the Alienware Diagnostics **Main Menu**.
8. Remove your Resource DVD, then close the **Main Menu** window to exit the Alienware Diagnostics and restart the computer.

# Answers to Common Problems

## System

### The computer fails the POST

The POST (Power On Self Test) tests the computer, ensuring that it meets the necessary system requirements and that all hardware is working properly before starting the remainder of the boot process. If the computer passes the POST, the computer will continue to start normally. However, if the computer fails the POST, the computer will generate a single beep to indicate a general failure and an error message will be displayed. For assistance, contact Technical Support (see “CONTACTING ALIENWARE” on page 61).

### The computer stops responding or a solid blue screen appears

**CAUTION:** You might lose data if you are unable to perform an operating system shutdown.

If you are unable to get a response by pressing a key on your keyboard or moving your mouse, press and hold the power button for at least 6 seconds until the computer turns off, then restart your computer.

**NOTE:** The chkdsk program may run when you restart the computer. Follow the instructions on the screen.

### A program stops responding or crashes repeatedly

End the program:

1. Press <Ctrl><Shift><Esc> simultaneously.
2. Click the **Applications** tab and select the program that is no longer responding.
3. Click **End Task**.

Check the software documentation.

If necessary, uninstall and then reinstall the program.

### A program is designed for an earlier version of Microsoft® Windows®

Run the Program Compatibility Wizard:

The **Program Compatibility Wizard** configures a program so that it runs in an environment similar to an earlier version of Microsoft Windows operating system environments.

1. Click **Start**  → **Control Panel** → **Programs** → **Programs and Features** → **Use an older program with this version of Windows**.
2. In the welcome screen, click **Next**.  
Follow the instructions on the screen.

## Other software problems

### Back up your files immediately

Use a virus-scanning program to check the hard drive, or CDs

Save and close any open files or programs and shut down your computer through the Start menu

### Scan the computer for spyware:

If you are experiencing slow computer performance, you frequently receive pop-up advertisements, or you are having problems connecting to the Internet, your computer might be infected with spyware. Use an anti-virus program that includes anti-spyware protection (your program may require an upgrade) to scan the computer and remove spyware.

### Run the PSA Diagnostics:

If all tests run successfully, the error condition is related to a software problem.

Check the software documentation or contact the software manufacturer for troubleshooting information:

- Ensure that the program is compatible with the operating system installed on your computer.
- Ensure that your computer meets the minimum hardware requirements needed to run the software. See the software documentation for information.
- Ensure that the program is installed and configured properly.

- Verify that the device drivers do not conflict with the program.
- If necessary, uninstall and then reinstall the program.

## Hard Drive Problems

### Allow the computer to cool before turning it on

A hot hard drive may prevent the operating system from starting. Try allowing the computer to return to room temperature before turning it on.

### Run Check Disk

1. Click **Start**  → **Computer**.
2. Right-click **Local Disk C:**.
3. Click **Properties** → **Tools** → **Check Now**.  
If the **User Account Control** window appears, click **Continue**.  
Follow the instructions on the screen.

## Memory

### Memory errors detected on startup

- Check memory modules for correct seating and orientation. Reseat the memory modules if applicable (see “Upgrading or Replacing Memory” on page 37).
- Computers using a dual-channel memory configuration require that memory modules be installed in pairs. If you require assistance, contact Technical Support (see “CONTACTING ALIENWARE” on page 61).

## Display

### If the display is blank

**NOTE:** If you are using a program that requires a higher resolution than your computer supports, it is recommended that you attach an external monitor to your computer.

### The computer may be in a power saving mode:

Press a key on the keyboard or press the power button to resume normal operation.

### Switch the video image:

If your computer is attached to an external monitor, press <Fn><F6> to switch the video image to the display.

## Power

### When you press the power button, the computer does not turn on

- If the AC adapter cable is connected to a surge protector or UPS, ensure that the surge protector or UPS is securely connected to an electrical outlet, is switched on and is working correctly.
- Check that the wall outlet is working properly by testing another device such as a radio or lamp that you know works. If the wall outlet is not working, contact an electrician or your power company for further assistance.

If the problem persists, contact Alienware support (see “CONTACTING ALIENWARE” on page 61).

# APPENDIX A: GENERAL AND ELECTRICAL SAFETY PRECAUTIONS

## Computer Setup

- Read all instructions marked on the product and in the documentation before operating your computer.
- Retain all safety and operating instructions.
- Never use this product near water or a heat source.
- Only set-up the computer on a stable work surface.
- Only operate the computer using the power source type indicated on the rating label.
- Never block or cover any openings or fans in the computer case. These are required for ventilation.
- Never insert objects of any kind into the ventilation openings.
- Ensure that your computer is properly grounded when in use.
- Do not attempt to connect your computer into an outlet that is not properly grounded.
- If an extension cord is used with your computer, ensure that the total ampere rating on the computer does not exceed the maximum rating on the extension cord.

## Computer Use

- Route the power cable and all cables away from where people might walk or trip over them. Do not allow anything to rest on the power cable.
- Do not spill anything on or into your computer.
- To avoid electrical shock, always disconnect all power, modem and any other cables from the wall outlets before handling the computer.

## Electrostatic Discharge (ESD) Warning

Electrostatic Discharge (ESD) can cause damage to internal system components if precautions are not taken. ESD is caused by static electricity and the damage caused is usually permanent.

Computer technicians wear a special wrist-strap that grounds them to the computer's case to prevent ESD damage. You can reduce the chances of ESD damage by doing the following:

- Turn off your computer's power and wait several minutes before starting to work.
- Ground yourself by touching the case of the computer.
- Touch only those items which must be replaced.
- Avoid walking around while replacing items inside the case, especially if you are on a carpet or during low temperature and low humidity.
- If you have to remove peripheral cards for any reason, place them on the portion of the computer's case that was removed. Do not touch the edge connectors at the bottom of the card that connect to the system board.

## General Safety Precautions

- **Mechanical Shock:** Your computer should never be subjected to severe mechanical shocks. Careless handling of your computer may cause damage. Mechanical Shock is not covered by the warranty.
- **Electrical Shock:** If you do not open up your computer, there is nothing to worry about. Your computer protects itself against most irregularities in the power source.
