

Statement of Volatility – Dell Mono and Color Laser Printers

To Whom It May Concern

1. Dell Color Printers contain both volatile and non-volatile (NV) components. Volatile components lose their data immediately upon removal of power from the component. Non-volatile components continue to retain their data even after the power has been

	Memory Application	Memory Size	Memory Type	Volatile / Non-Volatile	User Data
C2665dnf	Firmware, Usage Statistics, Configuration	NA	EEPROM	Non-Volatile	No
	Running Code	NA	FLASH	Non-Volatile	No
	Base Memory	1024MB	DDR3-SDRAM	Volatile	Yes
	Optional Memory	NA	DDR3-SDRAM	Volatile	No
	Drum	NA	NA	Volatile	Yes
	Fuser	NA	NA	Volatile	Yes
	Hard Disk	NA	NA	Non-Volatile	NA

Note:

- Flash memory may be used and contains no user data.
- EEPROM may be used and contains no user data.
- User Data utilized by memory type.

All other components on the motherboard will lose data once power is removed from the system. Primary power loss (unplugging the power cord) will cause user data on the memory to be lost.

2. All Dell mono and color laser printers do not have to print any blanks pages to address any security concerns regarding the transfer rollers retaining the image of the job after printing.
