

Installation of CACStar™ on a Dell C3765dnf MFD

The kit arrives assembled as shown in the photo below. The contents of the box includes the CACStar option, User's Guide, and a bag containing 3 screws required for securing the CACStar option to the back of the printer. The bag contains an M3 x 10mm screw, an M3 x 40mm screw, and an M4 x 40mm screw. You will need a Phillips #1 screwdriver. If you wish to see an example of the installation process, go to YouTube at <https://www.youtube.com/watch?v=-SPu4-i4OBY> for a 4 minute video.

Turn off power to the C3765.

Slide the assembly onto the left hand side of the C3765 so the USB connector on the CACStar is inserted into the USB socket on the front of the C3765. The CACStar will wrap around the left scanner post as shown below.

At the rear of the C3765, remove the two mounting screws indicated by arrows in the following picture:

Connect the CACStar Ethernet cable to the C3765 Ethernet port as shown below:

Use three screws to attach the back assembly to the C3765. Use the M4 x 40mm screw for the top hole and the M3 x 40mm screw for the lower hole. These two screws use the two holes from which screws were removed in the previous step. Use the M3 x 10mm screw to attach the back assembly to the base CACStar assembly as shown below.

Turn on the C3765. Refer to the CACStar User's Guide for configuration.
