Statement of Volatility – Dell C3765dnf

⚠ **CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.**

The Dell C3765dnf Color Laser Printer contains both volatile and non-volatile (NV) components. Volatile components lose their data immediately after power is removed from the component. Non-volatile (NV) components continue to retain their data even after power is removed from the component. The following NV components are present on the system board.

Table 1. List of Volatile and Non-Volatile Components on System Board

Color Laser Product	Memory Application	Memory Size	Memory Type	Volatile/ Non-Volatile	User Data
C3765dnf	Firmware, Usage Statistics, Configuration, Fax	SIZE NOT AVAILABLE	EEPROM	Non-Volatile	No
	Running Code	SIZE NOT AVAILABLE	FLASH	Non-Volatile	No
	Base Memory	512 MB	DDR2-SDRAM	Volatile	Yes
	Optional Memory	512 MB	DDR2-SDRAM	Volatile	Yes
	Drum	NA	NA	Volatile	Yes
	Fuser	NA	NA	Volatile	Yes
	Hard Disk	160 GB or greater	HDD	Non-Volatile	Yes

⚠ **CAUTION: All other components on the motherboard will lose data if power is removed from the system. Primary power loss (unplugging the power cord) will cause user data on the memory to be lost.**

Notes:

- EEROM may be used and could contain user data.
- User Data utilized by memory type.
- User data is not stored in EEPROM.
- User data is not stored in FLASH.
- Last Print job latent image from user, overwritten with next print job
- Print Job, user data remains as photogene on the surface of Fuser roll.
- Secure Print job stay on hard disk, periodic force erase available
