

Integrating Dell Networking W-AirWave 7.7 with Centralized NMS Event Correlation

Overview

This document describes the AirWave alert/trap workflow when integrating with a centralized NMS Event Correlation System. This document includes the following topics:

- "Adding NMS Event Correlation Servers to AirWave" on page 1
- "Configuring Alerts/Traps in AirWave" on page 2
- "Viewing Alerts in Various Destinations" on page 4
- "Acknowledging Alerts" on page 5
- "Compiling the AirWave MIB on NMS" on page 5
- "Matching Severity in the NMS Event Correlation Servers" on page 5
- "Actual MIB for SNMPv2c" on page 5

Adding NMS Event Correlation Servers to AirWave

Perform the following steps to add an event correlation server to AirWave

1. Navigate to **AMP Setup > NMS** and click **Add**.
2. Configure server settings. Note that the configuration options can vary depending on the SNMP version that you select.

If you select SNMPv3, then you must also configure your application (i.e the application that will receive the traps/informs) for SNMPv3. You will need to set up the engineID, authentication, and Priv parameters and then restart your application before you can receive the SNMPv3 informs.

Figure 1 AMP Setup > NMS > Add NMS Server Page Illustration

NMS Integration

AMP can send SNMPv1, SNMPv2 traps or SNMPv3 informs to NMS servers. First, add one or more NMS servers below, then select *NMS* as a notification option for *triggers*.

The *Sync* action will send one traps/informs for each device managed by AMP to notify an NMS of each one's up/down and configuration status.

[Download the AMP MIB files.](#)

NMS Server

Hostname:	<input type="text"/>
Port (1-65535):	<input type="text" value="162"/>
SNMP Version:	<input type="text" value="2c"/>
Community String:	<input type="text"/>
Confirm Community String:	<input type="text"/>
Enabled:	<input checked="" type="radio"/> Yes <input type="radio"/> No
Send Configuration Traps:	<input checked="" type="radio"/> Yes <input type="radio"/> No
SNMP Retries (1-40):	<input type="text" value="3"/>
SNMP Timeout (3-60):	<input type="text" value="3"/>

No NMS servers for other roles found

Configuring Alerts/Traps in AirWave

1. Navigate to **Systems > Triggers**, as shown in [Figure 2](#).
2. Select one of the built-in Alerts/Traps.
3. Click **Add**.

Figure 2 *Configuring a Client Count Trigger*

Client Count Trigger

Type: Client Count

Client Count: At Least At Most

Severity:

Duration: e.g. '15 minutes', '75 seconds', '1 hr 15 mins'

Limit by:
Changing this value will remove existing conditions

Conditions

Matching conditions: All Any

Available Conditions: Device Type

New Trigger Condition

Option	Condition	Value	
<input type="text" value="Device Type"/>	<input type="text" value="is"/>	<input type="text" value="Access Point"/>	<input type="button" value="X"/>

Trigger Restrictions

Folder:

Include Subfolders: Yes No

Group:

Alert Notifications

Notes:

Additional Notification Options: Email NMS

NMS Trap Destinations: 10.2.32.213
[Select All](#) - [Unselect All](#)

Logged Alert Visibility:

Suppress Until Acknowledged: Yes No

Configure properties for the Alert/Trap

- Thresholds for the alert (quantity and time)
- Severity of alert
- Distribution options
- Notification Method
 - Sender
 - Recipient
 - NMS – sends SNMP traps
- Alert Suppression

Viewing Alerts in Various Destinations

As seen on the **System > Alerts** page of the AirWave console:

Figure 3 System > Alerts Page Illustration

Alerts

1-6 of 6 Alerts Page 1 of 1 Choose columns Export CSV

```

OID Breakdown

12028.4.15.1.102 contains Severity Code

- 2 = Normal
- 3 = Warning

- 4 = Minor
- 5 = Major
- 6 = Critical

12028.4.15.1.103 contains several fields separated by colons

- Object Type {Client, AirWave, Device/AP, Group}
- Object Name and URL (the URL is optional, if it exist then it will be separated by a dash (-)}
- Trap Description and Evaluation Elements

12028.4.15.1.104 contains device IP Address

- Group Traps will contain AirWave’s IP address.

Acknowledging Alerts

AirWave alerts must be manually acknowledged from the **System > Alert** page. AirWave does not currently provide an external interface to acknowledge alerts from an NMS server.

Compiling the AirWave MIB on NMS

1. Navigate to **AMP Setup > NMS**.
2. Click on the **Download** link.
3. Transfer to NMS server.
4. Compile on NMS server.

Matching Severity in the NMS Event Correlation Servers

Most NMS Event Correlation systems have the ability to color code and escalate based on information received in the trap, as shown in Figure 5. The OID **12028.4.15.1.102** contains the AirWave severity code.

Figure 5 Color Codes

Node	Alert Group	Alert Key	Summary
dnrc.airwave.com, IP: 10.51.3.46	Access Point Configuration Error	Alert: 10.51.3.46.001	Access Point Configuration Error: 10.51.3.46.001
