

Dell Networking W-AirWave 8.0

Supported Infrastructure Devices

Dell Networking W-AirWave provides a range of features to manage network infrastructure devices from Dell and other vendors. This document describes the supported product families, software versions, and feature set for the following product sets:

- "Dell Devices" on page 1
- "Third-Party Vendor Devices" on page 3
 - "Cisco® Devices" on page 4
 - "HP® Devices" on page 6
 - "Juniper® Devices" on page 8
 - "Meru® Devices" on page 9
 - "Motorola® Devices" on page 10
- "Other Third-Party Devices with Monitoring Support" on page 11
- "Other Switches" on page 11

Dell Devices

This release of AirWave supports management of global configuration profiles/settings, monitoring, and software upgrades on the following Dell devices and software.

AOS

AirWave 8.0 supports all Dell Networking W-Series controllers and most access points, that are running Dell AOS 6.4.3.0 and all prior versions, that have not reached the End of Support milestone.

AOS-FIPS

AirWave 8.0 supports Dell Networking W-Series controllers, running W-Series ArubaOS 6.0.x through 6.4.x FIPS and all prior versions, that have not reached the End of Support.

Aruba Devices

This release of AirWave supports the following Aruba devices and software.

Aruba Mobility Access Switches

The Aruba series of Mobility Access Switches (S3500, S2500, and S1500) are supported for profile configuration, monitoring, and software upgrades.

In addition to the port statistics supported for most Ethernet switches with the supported firmware described below, AirWave also tracks the activity of authenticated wired clients on Aruba switches.

Third-Party Vendor Devices

AirWave provides basic monitoring and, in some cases, management of the third-party vendor devices listed below. The following section describes the features, and provides the list of supported devices and firmware versions.

Monitoring

AirWave supports the following basic monitoring features for third party devices, unless specified otherwise:

- User monitoring data such as connection time, username, SSID, and bandwidth
- Network monitoring data, including real-time and historical bandwidth and user count metrics
- Rogue detection and classification using our customizable rules
- VisualRF heatmaps and user/rogue location
- Reports

- Triggers and alerts

Management

AirWave supports the following basic management features for third party devices, unless specified otherwise:

- Basic configuration
- Firmware upgrades
- Controller and AP discovery

Cisco® Devices

This section describes the Cisco devices and software versions supported in AirWave.

Cisco Autonomous APs running IOS

The following IOS AP product families are supported for monitoring, configuration, and software upgrades.

The firmware versions listed in the table below represents the latest firmware version verified as fully supported by AirWave 8.0. Informal testing shows that AirWave supports devices running more recent versions of firmware, but full support for these later versions is not guaranteed.

The following table describes the Cisco Autonomous APs supported for monitoring and management.

- Mobility Services Engine
- 500 series APs

Cisco Switches

Cisco switches have the following additional support through AirWave:

- Automated discovery through SNMP
- Model & software version identification
- CDP neighbor information and extended port error stats
- 3750 stack information
- 3850 and 3650 configured as a switch

HP® Devices

The following HP devices are supported for in AirWave 8.0. These devices are available within the VisualRF product catalog and can be selected when setting up device-specific triggers and alerts. In addition, these devices

can be set up as trap receivers, and the SNMP traps can be seen on the **System > Syslog & Traps** page.

The firmware versions listed in the table below represents the latest firmware version verified as fully supported by AirWave 8.0. Informal testing shows that AirWave supports devices running more recent versions of firmware, but full support for these later versions is not guaranteed.

In VisualRF, the utilization value for HP devices will be 0 because AirWave does not get utilization values for these devices.

HP ProCurve

HP ProCurve switches have the following additional support through AirWave:

- Automated discovery through SNMP
- Model & software version identification

Juniper® Devices

The following Juniper controllers and APs are supported for monitoring, configuration, and software upgrades.

Juniper®

Juniper switches have the following additional support through AirWave:

- Automated discovery through SNMP
- Model & software version identification
- Rogue AP detection is supported using the Q-BRIDGE MIB

Meru® Devices

The following Meru controllers and APs are now supported in VisualRF.
