

Dell Networking W-AP210 Series Wireless Access Point

Installation Guide

The Dell Networking W-AP210 Series (W-AP214 and W-AP215) wireless access points support the IEEE 802.11a and 802.11n standards for high-performance WLAN. These access points use MIMO (Multiple-Input, Multiple-Output) technology and other high-throughput mode techniques to deliver high-performance, 802.11n 2.4 GHz and 802.11ac 5 GHz functionality while simultaneously supporting existing 802.11a/b/g wireless services. The W-AP210 Series access points work only in conjunction with a Dell Networking W-Series Mobility Controller.

The W-AP210 Series access point provides the following capabilities:

- Wireless transceiver
- Protocol-independent networking functionality
- IEEE 802.11a/b/g/ac operation as a wireless access point
- IEEE 802.11a/b/g/ac operation as a wireless air monitor
- Compatibility with IEEE 802.3at PoE+ and 802.3af PoE
- Central management configuration and upgrades through a controller

Note: The W-AP210 Series access point requires Dell Networking W-Series ArubaOS 6.4.2.0 or later version.

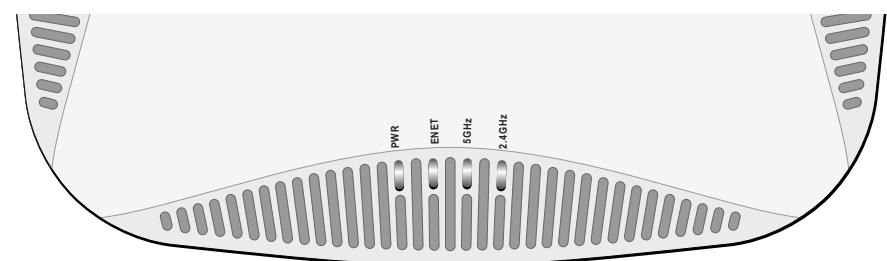

Package Contents

- W-AP214 or W-AP215 Access Point
- 9/16" and 15/16" Ceiling Rail Adapters
- Installation Guide (this document)

Note: Inform your supplier if there are any incorrect, missing, or damaged parts. If possible, retain the carton, including the original packing materials. Use these materials to repack and return the unit to the supplier if needed.

W-AP210 Series Hardware Overview

Figure 1 W-AP210 Series LEDs

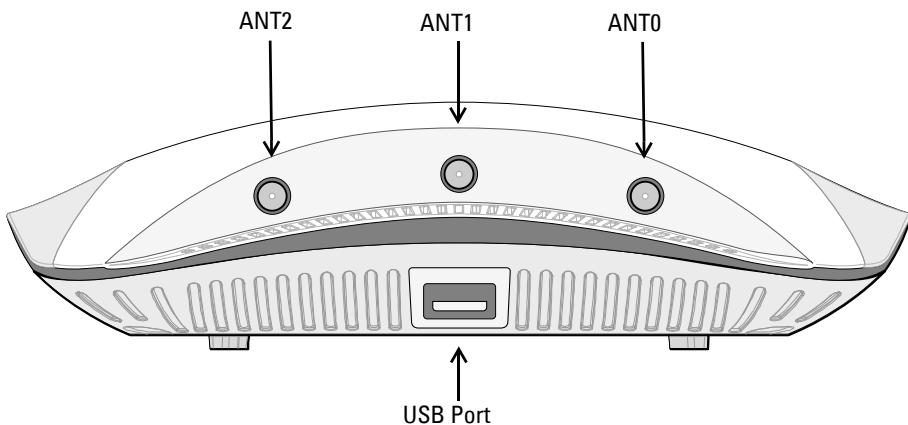

LEDs

The W-AP210 Series is equipped with four LEDs that indicate the status of the various components of the AP.

- PWR: Indicates whether or not the AP is powered-on
- ENET: Indicates the status of the AP Ethernet port
- 5 GHz: Indicates the status of the AP 802.11a/n radio
- 2.4 GHz: Indicates the status of the AP 802.11b/g/n radio

LED	Color/State	Meaning
PWR	Off	No power to AP
	Red	Initial power-up
	Green - Flashing	AP booting
	Green - Steady	AP ready
ENET	Off	Ethernet link unavailable
	Yellow - Steady	10/100Mbps Ethernet link established
	Green - Steady	1000Mbps Ethernet link established
	Flashing	Ethernet link activity
5 GHz	Off	5 GHz radio disabled
	Yellow - Steady	5 GHz radio enabled in non-HT WLAN mode
	Green - Steady	5 GHz radio enabled in HT WLAN mode
	Flashing - Green	5 GHz Air or Spectrum Monitor
2.4 GHz	Off	2.4 GHz radio disabled
	Yellow - Steady	2.4 GHz radio enabled in non-HT WLAN mode
	Green - Steady	2.4 GHz radio enabled in HT WLAN mode
	Flashing - Green	2.4 GHz Air or Spectrum Monitor

Figure 2 W-AP210 Series Side View (W-AP214 shown)

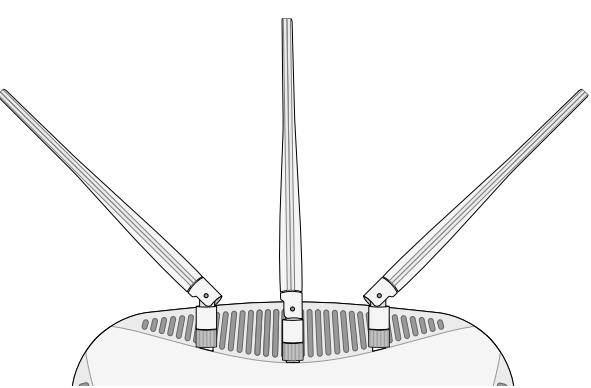

External Antenna Connectors

The W-AP214 is equipped with three external antenna connectors. The connectors are labeled ANT0, ANT1, and ANT2, and correspond to radio chains 0, 1, and 2.

For optimal performance when using articulating direct-mount antennas, professional installers must orient the antennas with ANT0 and ANT2 at 45 degree angles and ANT1 oriented straight out (see [Figure 3](#)).

Figure 3 W-AP214 Antenna Orientation

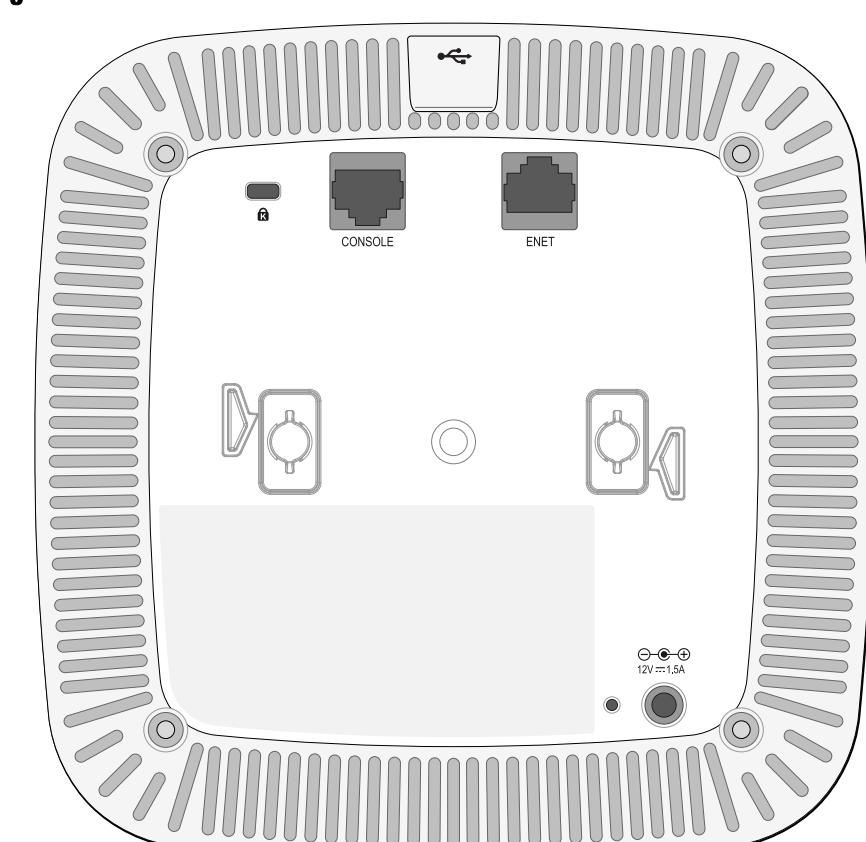

USB Interface

The W-AP210 Series is equipped with a USB interface for connectivity with cellular modems.

Note: The USB interface is disabled when the W-AP210 Series is powered from 802.3af PoE.

Figure 4 W-AP210 Series Bottom View

Console Port

The serial console port allows you to connect the AP to a serial terminal or a laptop for direct local management. This port is an RJ-45 female connector with the pinouts described in [Figure 5](#). Connect it directly to a terminal or terminal server using an Ethernet cable.

Ethernet Port

W-AP210 Series is equipped with one 10/100/1000Base-T (RJ-45) auto-sensing, MDI/MDX wired-network connectivity port. This port supports IEEE 802.3af and 802.3at Power over Ethernet (PoE) compliance, accepting 48 VDC (nominal) as a

standard defined Powered Device (PD) from a Power Sourcing Equipment (PSE) such as a PoE midspan injector, or network infrastructure that supports PoE.

The 10/100/1000 Mbps Ethernet port is on the bottom of the AP. The port has RJ-45 female connectors with the pin-outs shown in [Figure 6](#).

Figure 6 Gigabit Ethernet Port Pin-Out

1000Base-T Gigabit Ethernet Port	RJ-45 Female Pin-Out	Signal Name	Function
		1 BI_DA+	Bi-directional pair +A
		2 BI_DA-	Bi-directional pair -A
		3 BI_DB+	Bi-directional pair +B
		4 BI_DC+	Bi-directional pair +C
		5 BI_DC-	Bi-directional pair -C
		6 BI_DB-	Bi-directional pair -B
		7 BI_DD+	Bi-directional pair +D
		8 BI_DD-	Bi-directional pair -D

DC Power Socket

If PoE is not available, an optional Dell AP AC-DC adapter kit (sold separately) can be used to power the W-AP210 Series.

Additionally, a locally-sourced AC-to-DC adapter (or any DC source) can be used to power this device, as long as it complies with all applicable local regulatory requirements and the DC interface meets the following specifications:

- 12 VDC (+/- 5%)/18W
- Center-positive 1.7/4.0 mm circular plug, 9.5 mm length

Reset Button

The reset button can be used to return the AP to factory default settings. To reset the AP:

1. Power off the AP.
2. Press and hold the reset button using a small, narrow object, such as a paperclip.
3. Power-on the AP without releasing the reset button. The power LED will flash within 5 seconds.
4. Release the reset button.

The power LED will flash again within 15 seconds indicating that the reset is completed. The AP will now continue to boot with the factory default settings.

Before You Begin

Caution: FCC Statement: Improper termination of access points installed in the United States configured to non-US model controllers will be in violation of the FCC grant of equipment authorization. Any such willful or intentional violation may result in a requirement by the FCC for immediate termination of operation and may be subject to forfeiture (47 CFR 1.80).

Caution: EU Statement: Lower power radio LAN product operating in 2.4 GHz and 5 GHz bands. Please refer to the [Dell Networking W-Series ArubaOS User Guide](#) for details on restrictions.

Produit réseau local radio basse puissance operant dans la bande fréquence 2.4 GHz et 5 GHz. Merci de vous référer au [Dell Networking W-Series ArubaOS User Guide](#) pour les détails des restrictions.

Low Power FunkLAN Produkt, das im 2.4 GHz und im 5 GHz Band arbeitet. Weitere Informationen bezüglich Einschränkungen finden Sie im [Dell Networking W-Series ArubaOS User Guide](#).

Apparati Radio LAN a bassa Potenza, operanti a 2.4 GHz e 5 GHz. Fare riferimento alla [Dell Networking W-Series ArubaOS User Guide](#) per avere informazioni dettagliate sulle restrizioni.

Pre-Installation Network Requirements

After WLAN planning is complete and the appropriate products and their placement have been determined, the Dell controller(s) must be installed and initial setup performed before the Dell APs are deployed.

For initial setup of the controller, refer to the [Dell Networking W-Series ArubaOS Quick Start Guide](#) corresponding to the software version installed on your controller.

AP Pre-Installation Checklist

Before installing your W-AP210 Series AP, ensure that you have the following:

- CAT5e or better UTP cable of required length
- One of the following power sources:
 - IEEE 802.3at or 802.3af-compliant Power over Ethernet (PoE) source. The POE source can be any power source equipment (PSE) controller or midspan PSE device
 - Dell AP AC-DC adapter kit (sold separately)
- Dell Controller provisioned on the network:
 - Layer 2/3 network connectivity to your access point
 - One of the following network services:
 - Aruba Discovery Protocol (ADP)
 - DNS server with an "A" record
 - DHCP Server with vendor-specific options

- Aruba Discovery Protocol (ADP)
- DNS server with an "A" record
- DHCP Server with vendor-specific options

Summary of the Setup Process

Successful setup of a W-AP210 Series access point consists of five tasks, which must be performed in this order:

1. Verify pre-installation connectivity.
2. Identify the specific installation location for each AP.
3. Install each AP.
4. Verify post-installation connectivity.
5. Configure each AP.

Note: Dell, in compliance with governmental requirements, has designed the W-AP210 Series access points so that only authorized network administrators can change the settings. For more information about AP configuration, refer to the [Dell Networking W-Series ArubaOS Quick Start Guide](#) and [Dell Networking W-Series ArubaOS User Guide](#).

Caution: Access points are radio transmission devices and as such are subject to governmental regulation. Network administrators responsible for the configuration and operation of access points must comply with local broadcast regulations. Specifically, access points must use channel assignments appropriate to the location in which the access point will be used.

Verifying Pre-Installation Connectivity

Before you install APs in a network environment, make sure that the APs are able to locate and connect to the controller after power on.

Specifically, you must verify the following conditions:

- When connected to the network, each AP is assigned a valid IP address
- APs are able to locate the controller

Refer to the [Dell Networking W-Series ArubaOS Quick Start Guide](#) for instructions on locating and connecting to the controller.

Identifying Specific Installation Locations

You can mount the W-AP210 Series access point on a wall or on the ceiling. Use the AP placement map generated by Dell VisualRF Plan software application to determine the proper installation location(s). Each location should be as close as possible to the center of the intended coverage area and should be free from obstructions or obvious sources of interference. These RF absorbers/reflectors/interference sources will impact RF propagation and should have been accounted for during the planning phase and adjusted for in VisualRF plan.

Identifying Known RF Absorbers/Reflectors/Interference Sources

Identifying known RF absorbers, reflectors, and interference sources while in the field during the installation phase is critical. Make sure that these sources are taken into consideration when you attach an AP to its fixed location. Examples of sources that degrade RF performance include:

- Cement and brick
- Objects that contain water
- Metal
- Microwave ovens
- Wireless phones and headsets

Installing the AP

Note: Service to all Dell products should be performed by trained service personnel only.

Using the Ceiling Rail Adapter

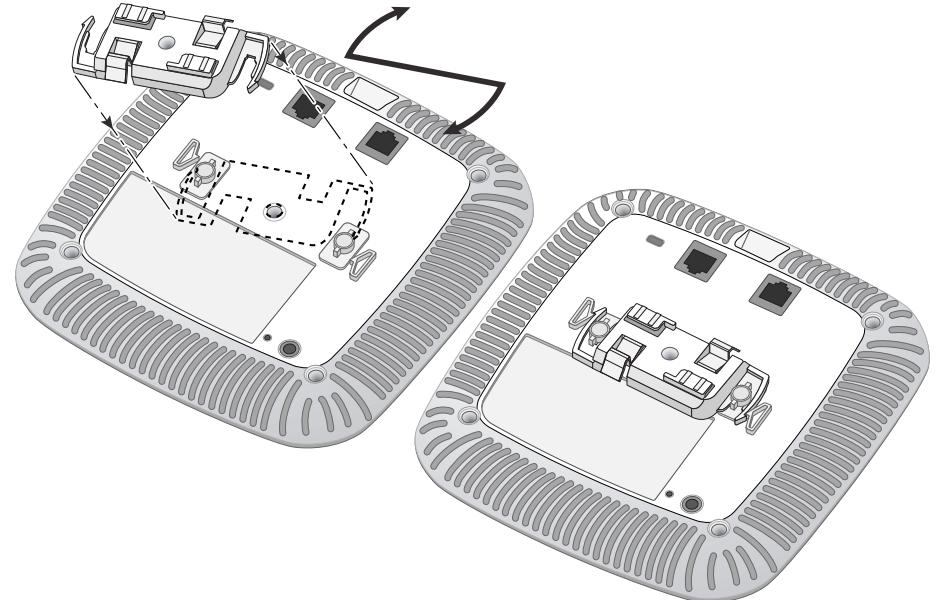

The W-AP210 Series ships with two ceiling rail adapters for 9/16" and 15/16" ceiling rails. Additional wall mount adapters and ceiling rail adapters for other rail styles are available as accessory kits.

Caution: Make sure the AP fits securely on the ceiling tile rail when hanging the device from the ceiling, because poor installation could cause it to fall on people or equipment.

1. Pull the necessary cables through a prepared hole in the ceiling tile where the AP will be placed.
2. Place the adapter against the back of the AP at an angle of approximately 30 degrees to the tabs (see [Figure 7](#)).

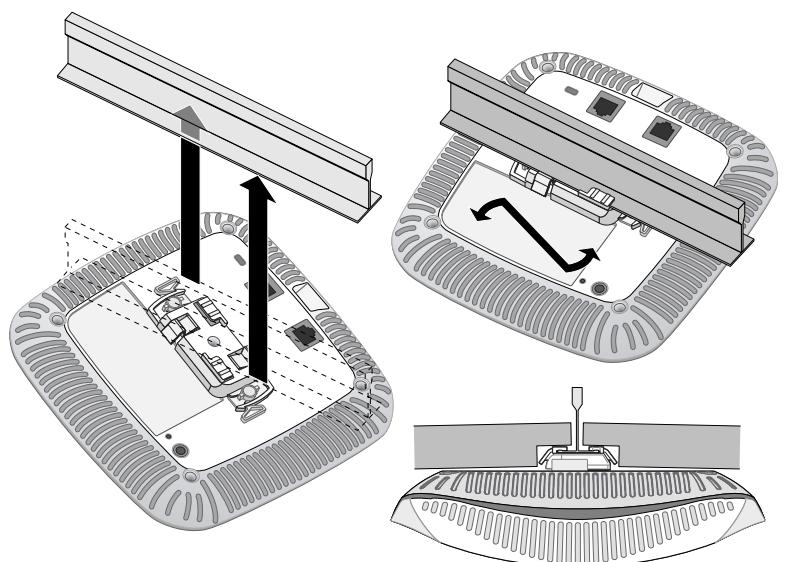

3. Twist the adapter clockwise until it snaps into place in the tabs (see [Figure 7](#)).

Figure 7 Attaching the Ceiling Rail Adapter to the AP

- If necessary, connect the console cable to the console port on the back of the AP.
- Hold the AP next to the ceiling tile rail with the ceiling tile rail mounting slots at approximately a 30-degree angle to the ceiling tile rail (see [Figure 8](#)). Make sure that any cable slack is above the ceiling tile.
- Pushing toward the ceiling tile, rotate the AP clockwise until the device clicks into place on the ceiling tile rail.

Figure 8 Mounting the AP

- On the W-AP214, install the external antennas according to the manufacturer's instructions, and connect the antennas to the antenna interfaces on the AP.

Connecting Required Cables

Install cables in accordance with all applicable local and national regulations and practices.

Verifying Post-Installation Connectivity

The integrated LEDs on the AP can be used to verify that the AP is receiving power and initializing successfully (see [Table 1](#)). Refer to the *Dell Networking W-Series ArubaOS Quick Start Guide* for further details on verifying post-installation network connectivity.

Configuring the AP

AP Provisioning/Reprovisioning

Provisioning parameters are unique to each AP. These local AP parameters are initially configured on the controller which are then pushed out to the AP and stored on the AP itself. Dell recommends that provisioning settings be configured via the ArubaOS Web UI only. Refer to the *Dell Networking W-Series ArubaOS User Guide* for complete details.

AP Configuration

Configuration parameters are network or controller specific and are configured and stored on the controller. Network configuration settings are pushed out to the AP(s) but remain stored on the controller.

Configuration settings can be configured via the ArubaOS Web UI or ArubaOS CLI. Refer to the *Dell Networking W-Series ArubaOS User Guide* and/or *Dell Networking W-Series ArubaOS CLI Reference Guide* for details.

Product Specifications

Electrical

- Ethernet:
 - 1x 10/100/1000 auto-sensing Ethernet RJ-45 Interface
 - MDI/MDX
 - IEEE 802.3 (10Base-T), IEEE 802.3u (100Base-T), IEEE 802.3ab (1000Base-T)
 - Power over Ethernet (IEEE 802.3at and 802.3af compliant), 48V DC (nominal) and 56V DC (maximum)/350mA (see [Figure 6](#) for pin configuration)

- Power:

- 12 VDC power interface, supports powering through an AC-to-DC power adapter
- POE support on Ethernet ports: 802.3at-compliant and 802.3af-compliant POE sourcing devices

Note: If a power adapter other than the one provided by Dell is used in US or Canada, it should be cULus (NRTL) Listed, with an output rated 12 VDC, minimum 1.5A, marked "LPS" and "Class 2," and suitable for plugging into a standard power receptacle in US and Canada.

For additional specifications on this product, please refer to the product data sheet on [dell.com](#).

Proper Disposal of Dell Equipment

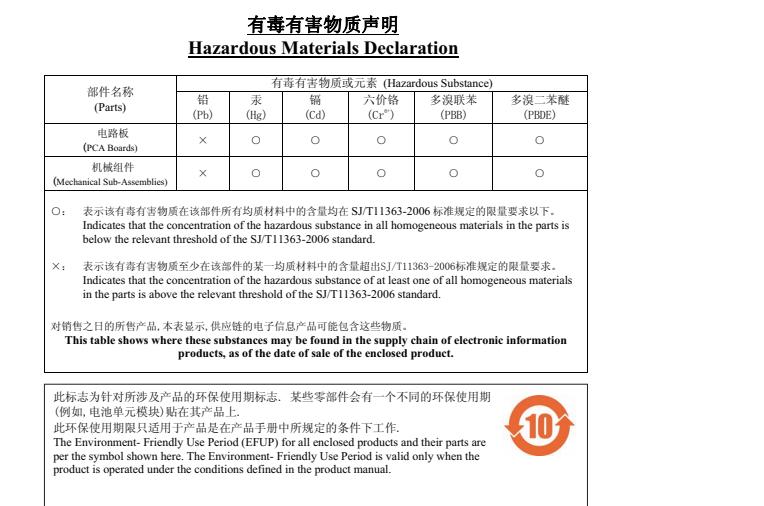

For the most current information about Global Environmental Compliance and Dell products, visit [dell.com](#).

Waste of Electrical and Electronic Equipment

Dell products at end of life are subject to separate collection and treatment in the EU Member States, Norway, and Switzerland and therefore are marked with the symbol shown at the left (crossed-out wheeled bin). The treatment applied at end of life of these products in these countries shall comply with the applicable national laws of countries implementing Directive 2002/96EC on Waste of Electrical and Electronic Equipment (WEEE).

China RoHS

Dell products also comply with China environmental declaration requirements and are labeled with the "EFUP 10" label shown at the left.

European Union RoHS

Aruba Networks Inc., hereby, being the manufacturer of this product, declares that all CE Marked Dell wireless controller and access points product are manufactured in accordance to the provisional requirements set forth in the RoHS Directive 2011/65/EC. A copy of the Aruba Declaration of Conformity may be obtained upon request from: Aruba Networks International Ltd, Building 1000, Citygate Mahon, Cork Ireland.

Please include the regulatory model number located on the product's regulatory nameplate with the request.

India RoHS

This product complies with RoHS requirements as prescribed by E-Waste (Management & Handling) Rules, governed by the Ministry of Environment & Forests, Government of India.

Safety and Regulatory Compliance

Note: For country specific restrictions and additional safety and regulatory information, refer to the multi-language *Dell Networking W-Series Safety, Environmental, and Regulatory Information* document included with your Dell controller.

Regulatory Model Names

The following regulatory model names apply to the W-AP210 Series:

- W-AP214: APIN0214
- W-AP215: APIN0215

FCC

This device is electronically labeled. To view the FCC ID:

- Log into the controller WebUI.
- Navigate to Maintenance > Controller > About.

Caution: Dell access points must be installed by a professional installer. The professional installer is responsible for ensuring that grounding is available and it meets applicable local and national electrical codes.

Caution: RF Radiation Exposure Statement: This equipment complies with FCC RF radiation exposure limits. This equipment should be installed and operated with a minimum distance of 7.9 inches (20 cm) between the radiator and your body for 2.4 GHz and 5 GHz operations. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter. When operated in the 5.15 to 5.25 GHz frequency range, this device is restricted to indoor use to reduce the potential for harmful interference with co-channel Mobile Satellite Systems.

Caution: RF Declaration sur la radioexposition: Cet équipement est conforme aux normes IC Limites d'exposition aux rayonnements RF. Cet équipement doit être installé et utilisé à une distance minimum de 7,9 pouces (20 cm) entre l'radiateur et votre corps pour 2,4 GHz et 5 GHz opérations. cet émetteur ne doit pas être co-localisées ou opérant en conjonction avec une autre antenne ou émetteur.

Medical

FCC Class B Part 15

This device complies with Part 15 of the Federal Communications Commission (FCC) Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference.
- This device must accept any interference received, including interference that may cause undesired operation.

Caution: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the manufacturer's instructions, may cause interference harmful to radio communications.

If this equipment does cause interference, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio or TV technician for help.

EU Regulatory Conformance

This product is CE marked according to the provisions of the R & TTE Directive (1999/5/EC) - CE(!). Dell hereby declares that the APIN0214 / APIN0215 device models are in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC - CE(!).

The Declaration of Conformity made under Directive 1999/5/EC is available for viewing at [dell.com](#).

Canada

Complies with the Class B limits for radio noise emissions as set out in the interference-causing equipment standard entitled "Digital Apparatus," ICES-003 of Industry Canada.

Cet appareil numerique de la classe B respecte toutes les exigencies du Règlement sur le matériel brouilleur du Canada.

Users are advised that high power Radars are allocated as primary users of the bands 5250-5350 MHz and 5650-5850 MHz and these Radars could cause interference and/or damage to Licensed WLAN devices.

(i) les dispositifs fonctionnant dans la bande 5 150-5 250 MHz sont réservés uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux;

(ii) le gain maximal d'antenne permis pour les dispositifs utilisant les bandes 5 250-5 350 MHz et 5 470-5 725 MHz doit se conformer à la limite de p.i.r.;

(iii) le gain maximal d'antenne permis (pour les dispositifs utilisant la bande 5 725-5 825 MHz) doit se conformer à la limite de p.i.r. spécifiée pour l'utilisation point à point et non point à point, selon le cas.

De plus, les utilisateurs devraient aussi être avisés que les utilisateurs de radars de haute puissance sont désignés utilisateurs principaux (c.-à-d., qu'ils ont la priorité) pour les bandes 5 250-5 350 MHz et 5 650-5 850 MHz et que ces radars pourraient causer du brouillage et/ou des dommages aux dispositifs LAN-EL.

Note: Aucune émission n'est permise dans la bande 5 600-5 650 MHz. Jusqu'à nouvel avis, les dispositifs visés par la présente annexe ne doivent pas être en mesure d'émettre dans la bande 5 600-5 650 MHz, afin de protéger les radars météorologiques d'Environnement Canada exploités dans cette bande.

Caution: RF Déclaration sur la radioexposition: Cet équipement est conforme aux normes IC Limites d'exposition aux rayonnements RF. Cet équipement doit être installé et utilisé à une distance minimum de 7,9 pouces (20 cm) entre l'radiateur et votre corps pour 2,4 GHz et 5 GHz opérations. cet émetteur ne doit pas être co-localisées ou opérant en conjonction avec une autre antenne ou émetteur.

Medical

- Equipment not suitable for use in the presence of flammable mixtures.
- End product system, including power supply, must be evaluated to IEC 60601-1 and IEC 60601-1 by the end user.
- Wipe with a dry cloth, no additional maintenance required.
- No serviceable parts, the unit must be sent back to the manufacturer for repair.
- No modifications are allowed without Dell approval.

第十二條

經型式認證合格之低功率射頻電機，非經許可，公司、商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。

第十四條

低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。

前項合法通信，指依電信法規定作業之無線電通信。

低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。
