Statement of Volatility – Dell EMC PowerEdge R7525

Dell EMC PowerEdge R7525 contains both volatile and non-volatile (NV) components. Volatile components lose their data immediately upon removal of power from the component. Non-volatile components continue to retain their data even after the power has been removed from the component. Components chosen as user-definable configuration options (those not soldered to the motherboard) are not included in the Statement of Volatility. Configuration option information (pertinent to options such as microprocessors, remote access controllers, and storage controllers) is available by component separately. The following NV components are present in the PowerEdge R7525 server.

Item	Non-Volatile or Volatile	Quantity	Reference Designator	Size
