

Dell Command | Update 2.1

Release Notes

Version

2.1

Release Date:

July 2015

Previous Version

Dell Command | Update 2.1

Dell Command | Update is installed as a standalone application on a business client supported platform to provide a Windows update experience for systems software released by Dell. This application is installed locally on the target systems and simplifies BIOS, firmware, drivers, and application update experience on Dell Client Hardware. This application can also be used to install drivers after the Operating System and network drivers are installed based on the system identity.

Dell Command | Update is primarily targeted at customers who want to manage systems on their own. The tool is designed to allow users to specify their update preferences and apply updates based on the criticality. Alternatively, end users can use the scheduling option to keep their system up-to-date with the systems software released by Dell.

The command line scripting mode of the tool allows administrators to use their automated remote deployment infrastructure for their updates.

Dell Command | Update also features a command line mode to point customers to an intranet repository and deploy applicable updates.

What's New

- Support for Windows 10 operating system
- Ability to suspend Windows BitLocker for applicable updates
- Ability to provide feedback from application GUI.
- Support for additional languages

Known Issues

For Windows 7 systems, if windows updates are not current, at times the GUI may not completely finish redrawing. Please update Windows or as a temporary measure, resize the window.
