Message A predictive failure detected on power unit *arg1*.

Arguments · *arg1* = number

Detailed Description Status from the power supply indicates a power supply exception occurred. The power supply will try to operate. System Performance and power redundancy may be degraded or lost.

Recommended Response Action Remove input power and re-install supply at the next service window.

Message Power supply *arg1* is offline.

Arguments

- **arg1** = power supply unit

Detailed Description The power supply unit identified in the message is offline, because of the one of the following reasons: 1) The power supply unit is not correctly seated. 2) The power cable may not be connected properly or disconnected. 3) The power supply unit has failed. 4) There is an input power failure.

Recommended Response Action Do one of the following to resolve the issue: 1) reseal the power supply unit. 2) Reconnect the power cable to the power supply unit. 3) Install a new power supply unit 4) Restore the input power supply.

PSU1000

Message Power supply cable has been removed from *arg1* .

Arguments

- **arg1** = PSU Sensor Name

Detailed Description The power supply unit is not receiving input AC power. The power cable may not be connected properly or removed. This can happen if there is an AC failure or problems with the power strip attached to the enclosure power supply.

Recommended Response Action Reconnect the power cable to the power supply unit if it was disconnected. Restore the input AC power supply. Make sure the power supply is restored to the enclosure from the mains.

PSU8522

Message PSU *arg1* reported input under voltage fault and has been turned off.

Arguments

- ***arg1*** = slotnum

Detailed Description The power supply unit (PSU) identified in the message was turned off because the input under voltage fault occurred.

Recommended Response Action 1) Check PSU AC input power source. 2) Remove AC power and reapply power to the PSU to get it functional again. 3) If the issue persists, contact technical support.

Category Audit (PSU = Power Supply)

PSU8523

Message PSU *arg1* reported input over current fault and has been turned off.

Arguments

- *arg1* = slotnum

Detailed Description The power supply unit (PSU) identified in the message was turned off because the input over current fault occurred.

Recommended Response Action 1) Verify system load is within PSU capacity and no short circuits are present in the system. 2) Remove AC power and reapply power to the PSU to get it functional again. 3) If the issue persists, contact technical support.

PSU8524

Message The system power is automatically recovered because of an AC brownout in the power supply unit (PSU).

Detailed Description The system power is automatically recovered because of an AC brownout in the power supply unit (PSU).

Recommended Response Action Do one of the following: 1) Make sure that the system load is within the power capacity of power supply unit (PSU) and no short circuit exists.2) Make sure that the AC input to the PSU is correct. For information about input voltage specifications, see the "CMC Technical Guide". 3) Disconnect the power supply and reconnect. If the issue persists, contact your service provider.

PWR8557

Message The System Input Power Cap is too low to be enforced using the current Power Supply configuration.

Detailed Description The current Power Cap setting cannot be enforced. This may be the result of changing the redundancy mode or by changing the PSUs. The power cap setting must be increased to be usable.

Recommended Response Action Increase the Power Cap value. To increase the Power Cap do one of the following: 1) Using CMC Web interface: Select "Chassis Overview" -> Power -> Configuration and then adjust System Input Power Cap values. 2) Run the following RACADM command at the command line interface: "config -g cfgChassisPower -o cfgChassisPowerCap <value>". Try setting the power cap above the lower bound displayed on the power configuration page.

Message The Chassis Management Controller is unable to communicate to the iDRAC, when trying to turn off the server *arg1*.

Arguments

- ***arg1*** = server id

Detailed Description The Chassis Management Controller is not able to communicate with the iDRAC on the server identified in the message. Therefore the server could not be turned off. This situation may occur when iDRAC is restarting.

Recommended Response Action Wait for three minutes, and then retry the operation. If the issue persists, remove and reinsert the server and wait for the iDRAC to finish restarting before retrying the operation.

PWR8670

Message Unable to turn on server *arg1* because the required power *arg2* AC Watts exceeds the subsystem Connector Limit *arg3* AC Watts for IO modules, Blowers and Servers.

Arguments

- **arg1** = slot ID
- **arg2** = power level
- **arg3** = power limit

Detailed Description The server identified in the message cannot be turned on if the Connector Limit for the subsystems identified in the message is exceeded .

Recommended Response Action Make sure the system operates within the subsystem Connector Limit for the components specified. To review power budget information select Chassis Overview -> Power -> Budget Status. Turn off unused components within the subsystem to make power available for the server to turn on or turn off low priority servers and try the operation again.

PWR8671

Message The Chassis Management Controller is unable to set the Enhanced Cooling Mode because the requested power *arg1* AC Watts exceeds the subsystem power limit *arg2* AC Watts for IO Modules, Blowers and Servers.

Arguments

- **arg1** = requested power level
- **arg2** = power limit

Detailed Description The Enhanced Cooling Mode feature cannot be enabled because the requested power exceeds the Chassis subsystem power limit for IO Modules, Blowers and Servers.

Recommended Response Action Make sure the system operates within the subsystem Connector Limit for the components specified. To review power budget information select Chassis Overview -> Power -> Budget Status. Turn off unused components within the subsystem to make power available to set Enhanced Cooling Mode.

PWR8672

Message The server in slot *arg1* does not have a *arg2* mezzanine card in slot *arg3* .

- Arguments**
- ***arg1*** = server slot number
 - ***arg2*** = card type
 - ***arg3*** = mezzanine position number

Detailed Description The server identified in the message does not have a card in the Mezzanine slot as identified in the message. A mezzanine card position is identified with the following numbers: For quarter-width server, the position number is 1. For half-width server mezzanine C & B maps to position numbers 1 & 2 respectively. For full-width server, mezzanine C & B on the upper- or left part of the server maps to position numbers 1 & 2 respectively. Mezzanine C & B on the lower- or right part of the server maps to position numbers 3 & 4 respectively.

Recommended Response Action Insert a mezzanine card in the slot identified in the message.

PWR8687

Message The Chassis Management Controller (CMC) is unable to turn on the storage sled controller installed on server in slot *arg1* because the server does not have a Mezzanine card.

Arguments

- ***arg1*** = server slot

Detailed Description The Chassis Management Controller (CMC) is unable to turn on the storage sled controller installed on the server in the slot identified in the message because the server does not have a Mezzanine card. A Mezzanine card position is identified with the following numbers: For quarter-width server, the position number is 1. For half-width server mezzanine C & B maps to position numbers 1 & 2 respectively. For full-width server, Mezzanine C & B on the upper- or left part of the server maps to position numbers 1 & 2 respectively. Mezzanine C & B on the lower- or right part of the server maps to position numbers 3 & 4 respectively.

Recommended Response Action Install a Mezzanine card in the Mezzanine card slot of the server identified in the message, and then retry the operation.

Message	An error occurred while uploading the vFlash image.
Detailed Description	A separate message will provide more detail about this error which was detected while uploading the vFlash image.
Recommended Response Action	Try uploading the vFlash image again.
Category	Audit (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC0238

Message	vFlash is currently in-use by another process. Try again later.
----------------	---

Detailed Description	vFlash is unable to service the request at this time. Try again later.
Recommended Response Action	Try the operation after a few minutes.
Category	Audit (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC0239

Message	SD Card is write-protected.
Detailed Description	The contents of a write protected SD Card cannot be modified.
Recommended Response Action	Make sure the SD Card is not write-protected before attempting to change its contents.
Category	Audit (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC024

Message	Unable to VLAN is Disabled so cannot set VLAN Priority because VLAN is Disabled.
Detailed Description	Unable to VLAN is Disabled so cannot set VLAN Priority because VLAN is Disabled.
Recommended Response Action	Enable VLAN to set VLAN Priority.
Category	Configuration (RAC = RAC Event)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC0240

Message	vFlash is disabled.
Detailed Description	vFlash needs to be enabled before attempting this operation.
Recommended Response Action	Enable vFlash before trying the operation.
Category	Audit (RAC = RAC Event)
Severity	Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

RAC0241

Message The specified size exceeds the maximum size of *arg1* MB.

Arguments

- ***arg1*** = size

Detailed Description SD Card does not have enough free space available.

Recommended Response Action Delete existing data or insert a SD card of greater size and retry.

Category Audit (RAC = RAC Event)

RAC0244

Message	The partition label must be unique.
Detailed Description	This message is displayed when a duplicate vFlash partition name is entered.
Recommended Response Action	Enter a unique label name for the partition.
Category	Audit (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC0245

Message	The partition is in-use by another process.
Detailed Description	The vFlash partition is in-use by another process. Therefore, the current operation cannot proceed.
Recommended Response Action	Try the operation after a few minutes or with another partition. If the problem persists, reset iDRAC and repeat the operation.
Category	Audit (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC0246

Message	Partition is read-only.
Detailed Description	The contents of a read-only partition cannot be modified.
Recommended Response Action	Make sure the partition is writable before attempting to change its contents.
Category	Audit (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC0247

Message	The partition is currently attached.
----------------	--------------------------------------

Detailed Description	This message is displayed when trying to format or download to an attached vFlash partition.
Recommended Response Action	Detach this partition and try again.
Category	Audit (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC0248

Message	This operation deletes the partition permanently. Do you want to continue?
Detailed Description	This message is displayed when trying to delete a vFlash partition.
Recommended Response Action	Press OK to delete this partition of the SD Card. This action will erase all the data in this partition. If undesired press Cancel.
Category	Audit (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC0249

Message	One or more partitions are in-use by another process.
Detailed Description	The vFlash partition is in-use by another process. Therefore, the current operation cannot proceed.
Recommended Response Action	Try the operation after a few minutes. If the problem persists, reset iDRAC and repeat the operation.
Category	Audit (RAC = RAC Event)

RAC0294

Message	The Character Accumulate Interval value is invalid. Expected range: 1-255.
Detailed Description	The amount of time iDRAC waits before sending a partial Serial Over LAN (SOL) data packet. This parameter is specified in milliseconds. It is recommended to use 10 milliseconds for optimal performance.
Recommended Response Action	Enter a valid Character Accumulate Interval value. Expected range: 1-255.
Category	Audit (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC0295

Message	The Character Send Threshold value is invalid. Expected range: 1-255.
Detailed Description	This is the number of characters per Serial Over LAN (SOL) data packet. When the number of characters accepted by iDRAC is equal to or greater than the Character Send Threshold value, iDRAC starts transmitting SOL data packets that contain the numbers of characters equal to or less than the Character Send Threshold value. If a packet contains fewer characters than this value, it is defined to be a partial SOL data packet. It is recommended to use 255 characters for optimal performance.
Recommended Response Action	Enter a valid Character Send Threshold value. Expected range: 1-255.
Category	Audit (RAC = RAC Event)

RAC0513

Message	There are no virtual disks to be displayed.
Detailed Description	There are no virtual disks to be displayed. There may be no virtual disks created, the controller(s) may not be in RAID mode, or there may be pending creation or deletion jobs that have not completed.
Recommended Response Action	Check the following: 1) Check if the server is turned off. If the server is turned off, turn it on and wait until POST completes. 2) If no virtual disks are created, to start the virtual disk creation process, click <code>#{create_virtuallink}</code> . 3) If create virtual disk operation(s) are in a pending state, complete the creation process. To complete the virtual disk(s) creation, go to the Pending Operations page and create a configuration job on the appropriate controller. 4) If delete virtual disk operation(s) are in pending state, then cancel the operation. To cancel delete virtual disk pending operation(s), go to the Pending Operations page and delete all pending operation(s) on the appropriate controller. 5) If the Controller(s) are in HBA mode, switch the controller(s) to RAID mode. To switch controller(s) to RAID mode using the F2 System Setup utility, go to Device Settings > RAID Controller > Controller Management > Advanced Controller Management > Switch to RAID mode.

RAC0514

Message	Unable to create virtual disk(s) on the selected controller.
Detailed Description	Virtual disk(s) cannot be created because of one or more reasons identified in the Recommended Response Action.
Recommended Response Action	Check the following: 1) If no physical disk drives are available for virtual disk (VD) creation, install additional physical disk drives. 2) If the maximum number of VDs that can be created on the controller has been reached, a new VD cannot be created until an existing VD is deleted. 3) If the maximum number of VDs supported by drive

group has been created, a new VD cannot be created until an existing VD is deleted from the selected drive group. 4) If the physical disk drive(s) are in non-RAID mode, convert them to RAID mode by pressing Ctrl+R while restarting the server, and then select the required controller. Press F2 and select the Convert to RAID capable option, and then complete the operation. 5) If a job is currently running or scheduled on the selected controller, the job must be completed or deleted before attempting a new operation. Status of the scheduled job can be viewed and managed on the Job Queue page on iDRAC. Click Job Queue link to view the status of the scheduled jobs.

RAC0676

Message	Unable to assign physical disk drives as global hotspare(s).
Detailed Description	Unable to assign physical disk drives as global hotspare(s). This may be because there are no disk drives available in a ready state or there are no virtual disks present.
Recommended Response Action	Do one of the following and retry the operation: 1) If there are no disk drives available in ready state, insert additional disk drives and make sure the drives are in ready state. 2) If no virtual disks are present, click <create virtualdisk link> and create at least one virtual disk. 3) If the physical disk drive(s) are in non-RAID mode, convert them to RAID mode by pressing Ctrl+R while restarting the server, and then select the required controller. Press F2 and select the Convert to RAID capable option, and then complete the operation.

Detailed Description	Unable to view the Automatic Backup (autobackup) feature settings because the feature has not been configured.
Recommended Response Action	Configure the Automatic Backup feature by running the RACADM command "racadm systemconfig backup" with the desired option settings.
Category	Configuration (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1054

Message	Successfully cleared the Automatic Backup (autobackup) feature settings.
Detailed Description	Successfully cleared the Automatic Backup (autobackup) feature settings.
Recommended Response Action	No response action is required.
Category	Configuration (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1055

Message	Unable to clear the Automatic Backup (autobackup) feature settings because there is currently no configuration.
Detailed Description	The Automatic Backup (autobackup) feature settings must already exist in order to be cleared.
Recommended Response Action	No response action is required.
Category	Configuration (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1056

Message	Rollback operation initiated successfully.
Detailed Description	The requested firmware Rollback operation was initiated successfully.
Recommended Response Action	No response action is required.
Category	Configuration (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1057

Message	Rollback operation did not complete successfully. The component identifier specified is not valid or does not have a rollback firmware image available.
Detailed Description	Rollback operation did not complete successfully. The component identifier (FGDD) specified in the operation is not valid or does not have a Rollback firmware image available.
Recommended Response Action	Run the RACADM command "racadm swinventory" to see the list of Rollback firmware images available and the corresponding component identifier (FGDD).
Category	Configuration (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1058

Message	Rollback operation did not complete successfully because Lifecycle Controller is disabled.
Detailed Description	The requested firmware Rollback operation did not complete successfully because Lifecycle Controller is disabled.
Recommended Response Action	Run the RACADM command "racadm set LifecycleController.LCAttributes.LifecycleControllerState 1" to enable Lifecycle Controller, and retry the operation.
Category	Configuration (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1059

Message	Rollback operation could not be performed because another firmware update job is running.
Detailed Description	The requested firmware rollback operation could not be performed because another firmware update job is running or being scheduled.
Recommended Response Action	Wait until the existing firmware update jobs are completed or scheduled before retrying the operation. To monitor the status of the existing jobs, run the RACADM command "racadm jobqueue view". If the issue persists, restart the iDRAC and then retry the operation after the iDRAC has finished restarting.
Category	Configuration (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1060

Message	System inventory may not be current because the Collect System Inventory On Restart (CSIOR) feature is disabled.
Detailed Description	The system inventory information may not be current because the Collect System Inventory On Restart (CSIOR) feature is disabled.
Recommended Response Action	To enable the CSIOR feature, run the RACADM command "racadm set LifecycleController.LCAttributes.CollectSystemInventoryOnRestart 1". Then restart the server to cause system inventory information to be collected.
Category	Configuration (RAC = RAC Event)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1061

Message	SystemErase operation initiated successfully.
Detailed Description	The requested SystemErase operation was initiated successfully.
Recommended Response Action	Check the job status by running the RACADM command: "racadm jobqueue view -i <JobID>".
Category	Configuration (RAC = RAC Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1062

Message	Unable to initiate the SystemErase operation. The component identifier specified is not valid.
Detailed Description	Unable to initiate the requested SystemErase operation. The component identifier specified is not valid.
Recommended Response Action	Run the RACADM command "racadm help systemerase" to see the list of supported components.
Category	Configuration (RAC = RAC Event)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1063

Message	Unable to initiate the SystemErase operation because Lifecycle Controller is disabled.
Detailed Description	Unable to initiate the SystemErase operation because Lifecycle Controller is disabled.
Recommended Response Action	Run the RACADM command "racadm set LifecycleController.LCAttributes.LifecycleControllerState 1" to enable Lifecycle Controller, and retry the operation.
Category	Configuration (RAC = RAC Event)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1064

Message	Unable to initiate the SystemErase operation because another instance of SystemErase job is already in progress.
----------------	--

Detailed Description	Unable to initiate the requested SystemErase operation because another SystemErase job is already in progress.
Recommended Response Action	To check the job status, run the RACADM command "racadm jobqueue view" and retry the operation after the current SystemErase operation has completed.
Category	Configuration (RAC = RAC Event)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

RAC1065

Message	Unable to initiate the SystemErase operation because iDRAC encountered an internal issue.
Detailed Description	Unable to initiate the SystemErase operation because iDRAC encountered an internal issue.
Recommended Response Action	Retry the operation. If the issue persists, restart the iDRAC and then retry the operation after the iDRAC has finished restarting.

Message	Lifecycle Controller in use. This job will start when Lifecycle Controller is available.
Detailed Description	The Lifecycle Controller is unable to access internal storage currently in use by another operation.
Recommended Response Action	Make sure all other Lifecycle Controller operations are finished and retry the operation. Using the iDRAC Web UI, select Server (on 12th and 13th Generation servers) or Maintenance (on 14th Generation Servers) and then Job Queue, check the job queue for unfinished jobs and wait for the jobs to finish before retrying the operation. Also, check whether there are update packages being executed in the server OS and wait for these operations to finish before retrying the operation. For remote web services API access, make sure that the GetRemoteServicesAPIStatus method returns Ready status, and then retry the operation. If OS Deploy has been enabled then boot the server into LC UI to clear. Always exit LC UI using "Exit" and not by removing power.

Message The requested job cannot be scheduled because Lifecycle Controller is not enabled.

Detailed Description Lifecycle Controller is not enabled and must be enabled in order for scheduled jobs to be created.

Recommended Response Action Enable Lifecycle Controller and retry the operation. Lifecycle Controller can be enabled by using the F2 System Setup by pressing F2 during server startup, then select iDRAC Settings > Lifecycle Controller and enable the Lifecycle Controller feature. Retry the operation after the server restarts.

Message The SAS IOM is currently configured for redundancy but SAS IOM *arg1* has a firmware mismatch with SAS IOM *arg2* .

- Arguments**
- ***arg1*** = IOM name1
 - ***arg2*** = IOM name2

Detailed Description The SAS IOM is currently configured for redundancy but the firmware version of the SAS IOM devices identified in the message do not match.

Recommended Response Action Update the firmware version and retry the operation. If the issue, persists, replace the SAS IOM. For information about managing SAS IOM devices, refer to OpenManage Enterprise Modular Version Users Guide available on the support site.

SRV031

Message	The OS Collector application is unable to communicate with WMI services.
Detailed Description	The OS Collector application is unable to communicate with the WMI service. This may be because the user context the application is running in does not have appropriate access privileges or firewall/security settings are preventing retrieving registry and software data from WMI.
Recommended Response Action	Do the following: 1) Make sure the user context the OS Collector application is running in has the appropriate privileges to access WMI. Make sure that firewall or security settings are set to allow access and retry the operation. 2) If the issue persists, restart the WMI service and retry the operation. 3) If the issue continues to persist, restart the server OS and retry the operation.

STOR Event Messages

STOR001

Message	The command is successfully run.
Detailed Description	The command is successfully run.
Recommended Response Action	No response action is required.
Category	Configuration (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR003

Message	Missing parameter.
Detailed Description	Required parameter is missing.
Recommended Response Action	Refer to the RAID profile to determine required parameters.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR004

Message	Invalid parameter value
Detailed Description	Provided parameter value is not valid.
Recommended Response Action	Refer to the RAID profile to determine the valid parameters values.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR006

Message	Unable to complete the operation.
Detailed Description	The operation could not be completed because of an issue with the management controller (either the iDRAC or the Chassis Management Controller/Management Module (CMC/MM)) that is managing the storage.
Recommended Response Action	Retry the operation. If the issue persists, contact your service provider.
Category	Configuration (STOR = Storage)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR007

Message	Unable to allocate resources.
Detailed Description	The operation could not be completed because of insufficient memory space on the management controller (either the iDRAC or the Chassis Management Controller/Management Module (CMC/MM)) managing the storage.
Recommended Response Action	Retry the operation. If the issue persists, contact your service provider.
Category	Configuration (STOR = Storage)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR009

Message	Unable to complete the operation because either the Fully Qualified Device Descriptor (FQDD) entered did not match any virtual drive (VD), the physical drives available, or the operation is not supported on the physical drive (s).
Detailed Description	The operation cannot be completed because either the Fully Qualified Device Descriptor (FQDD) entered did not match any virtual drive (VD), the physical drives available, or the operation is not supported on the physical drive (s).
Recommended Response Action	Make sure of the following and retry the operation: 1) A physical drive or virtual drive with the FQDD entered exists. 2) The physical drive (s) supports the operation being tried. For more information about supported physical drives, see the iDRAC Users Guide available on the support site.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	

No alerts are applicable for this message

STOR010

Message	Unable to complete the operation either because the RAID level entered is not supported by the controller, or the current RAIDType of "MD Software RAID" does not allow the operation.
Detailed Description	The operation cannot be completed either because the RAID level entered is not supported by the controller, or the current RAIDType of "MD Software RAID" does not allow the operation.
Recommended Response Action	Enter a valid RAID level and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0101

Message	No RAID controller is displayed.
Detailed Description	No RAID controller data to display. The system is powered off, no RAID controller is present in the system, or the RAID controller is not connected to the system.
Recommended Response Action	Check if the server has power, RAID controller is available, and that a RAID controller is connected to the system.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0102

Message	No batteries are displayed.
Detailed Description	No battery data to display. The system is powered off, batteries are not present on the system, batteries are not connected to the RAID controller, or the batteries are depleted.
Recommended Response Action	Check if the server has power, batteries are available, and batteries are connected to the RAID controller.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0103

Message	No physical disks are displayed.
Detailed Description	No physical disk data to display. The system is powered off, physical disks are not present on the system, or physical disks are not connected to the enclosure or backplane.
Recommended Response Action	Check if the server has power, physical disks are available, and physical disks are connected to the enclosure or backplane.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0104

Message	No virtual disks are displayed.
Detailed Description	No virtual disk data to display. The system is powered off, physical disks are not present on the system, or virtual disks are not created.
Recommended Response Action	Check if the server has power, physical disks are available, and virtual disks are created.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0105

Message	No enclosures are displayed.
Detailed Description	No enclosure data to display. The system is powered off, enclosures are not present on the system, or enclosures are not connected to the RAID controllers.
Recommended Response Action	Check if the server has power, enclosures are available, and enclosures are connected to the RAID controllers.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0106

Message	Fans are not connected to enclosures or data about fans is unavailable.
Detailed Description	No fan data to display. The system is powered off, no fan enclosures are present in the system, or the fans are not connected to the enclosures.
Recommended Response Action	Check if the server has power, enclosure fan is available, and fan is connected to the enclosure.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0107

Message	EMMs are not connected to enclosures or data about EMMs is unavailable.
Detailed Description	No EMMs data to display. The system is powered off, no enclosure EMMs are present, or the EMMs are not connected to the enclosures.
Recommended Response Action	Check if the server has power, EMMs are available, and EMMs are connected to the enclosure.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0108

Message	Temperature probes are not connected to enclosures or data about temperature is unavailable.
Detailed Description	No temperature data to display. The system is powered off, no enclosure temperature probes are present in the system, or the temperature probes are not connected to the enclosures.
Recommended Response Action	Check if the server has power, enclosure temperature probe is available, and temperature probe is connected to the enclosure.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0109

Message	Power supply unit is not connected to the enclosure or data about power supply unit is unavailable.
Detailed Description	No power supply unit data to display. The system is powered off, no power supply unit is present in the system, or the power supply unit is not connected to the enclosure.
Recommended Response Action	Check if the server has power, enclosure power supply unit is available, and power supply unit is connected to the enclosure.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR011

Message	Stripe size not supported on controller.
Detailed Description	The operation cannot be completed because the stripe size entered is not supported by the controller.
Recommended Response Action	Enter a valid stripe size and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0110

Message	Invalid Fully Qualified Device Descriptor (FQDD).
Detailed Description	The specified Fully Qualified Device Descriptor (FQDDs) system component name is invalid.
Recommended Response Action	Verify that the correct Fully Qualified Device Descriptor (FQDD) system component name is specified. See the help text (The help text for the raid subcommand can be obtained by running "racadm help raid") or documentation for valid FQDD system component names.
Category	Storage (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR011

Message	Invalid reference key.
Detailed Description	The specified reference key is invalid.
Recommended Response Action	Verify that the correct reference key is specified. See the help text or documentation for valid reference keys.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR012

Message	Provided Physical disk not valid for this operation.
Detailed Description	One or more of the specified physical disks cannot be used for the operation requested. Physical disk protocol and media type, along with other physical disk characteristics like Secure Encryption and T10 protection, need to match the requirements of the requested operation.
Recommended Response Action	Make sure the specified physical disk has the appropriate protocol and media type for the requested operation. Specify a different physical disk with a state appropriate for the requested operation and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR013

Message	One or more storage device(s) are not in a state where the operation can be completed.
Detailed Description	One or more storage device(s) are in a state that prevents the operation from completing.
Recommended Response Action	Make sure the specified storage devices are in a state appropriate for the requested operation and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR015

Message	Maximum virtual disks allowed for this controller has been reached.
Detailed Description	A new virtual disk cannot be created because the maximum number of virtual disks are already created.
Recommended Response Action	A new virtual disk cannot be created until one is deleted.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR016

Message	The physical disk specified is not large enough to be a hot spare for this virtual disk.
Detailed Description	The physical disk drive cannot be assigned as the hot-spare of this virtual disk because the capacity of the physical disk is not sufficient.
Recommended Response Action	Specify a physical disk with a larger capacity or replace the specified physical disk with one with more capacity, and then retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR017

Message	The specified Virtual Disk is not valid for the operation.
Detailed Description	The virtual disk specified is not compatible with the requested operation or a specified operation parameter is not appropriate for the virtual disk type specified.
Recommended Response Action	Make sure the operation parameters are appropriate for the virtual disk type. Specify a compatible virtual disk for the requested operation and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR018

Message	No foreign configurations detected.
Detailed Description	This operation did not detect any foreign drives. This may be because no foreign drives are present or the only foreign drives are in a secured locked state.
Recommended Response Action	If the only foreign drives present are in a secured locked state, run a secure erase operation on the drives to securely erase data or unlock these drives and retry the operation. Otherwise the operation was not successful because there are no foreign drives.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR019

Message	The specified passphrase is not valid.
Detailed Description	The passphrase specified does not follow the passphrase character criteria of the controller character.
Recommended Response Action	Enter a passphrase that meets the passphrase character criteria of the controller, and then retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR020

Message	A controller key is already present.
Detailed Description	The controller key cannot be set because a key is already present.
Recommended Response Action	Delete the current key and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0200

Message	Array Manager is installed on the system.
Detailed Description	Installing Storage Services and Array Manager on the same system is not a supported configuration. Storage Services is not installed on a system where Array Manager is installed.
Recommended Response Action	Uninstall either Storage Services or Array Manager and retry the operation.
Category	Storage (STOR = Storage)

STOR0202

Message The configuration file (Path: *arg1*) that contains firmware and driver information for *arg2* is not updated or is incorrectly formatted to complete the comparison.

Arguments

- ***arg1*** = file path
- ***arg2*** = controller name

Detailed Description Storage Services is unable to determine whether the system has the minimum required versions of the RAID controller firmware and drivers because a configuration file is not readable, corrupted, or has missing data.

Recommended Response Action Reinstall Server Administrator and Storage Services.

STOR027

Message	Virtual Disk name is not supported.
Detailed Description	Setting the Virtual disk name is not a valid operation on the specified controller.
Recommended Response Action	Do not specify the virtual disk name and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR028

Message	Virtual disk not found.
Detailed Description	The requested operation cannot be completed because the specified virtual disk is not found.
Recommended Response Action	Provide a valid virtual disk FQDD (Fully Qualified Device Descriptor) and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR029

Message	Physical disk not found.
----------------	--------------------------

Detailed Description	The requested operation cannot be completed because the specified physical disk is not found.
Recommended Response Action	Provide a valid physical disk FQDD (Fully Qualified Device Descriptor) and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR030

Message	Controller not found.
Detailed Description	The requested operation cannot be completed because the specified controller is not found.
Recommended Response Action	Provide a valid controller FQDD (Fully Qualified Device Descriptor) and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR031

Message	Lifecycle Controller is not enabled.
Detailed Description	For 11G systems: System Services must be enabled to perform the requested operation. System Services has been disabled through the iDRAC configuration utility accessed by pressing CTRL+E on boot up or through a remote operation. For 12G and above generations: Lifecycle Controller must be enabled to perform the requested operation. Lifecycle Controller has been disabled by pressing F2 Setup, selecting iDRAC Configuration, and selecting Lifecycle Controller Settings on boot up or through a remote operation.
Recommended Response Action	For 11G systems: Use the iDRAC configuration utility to enable the System Services by pressing on the CTRL+E option on boot up at the targeted system. For 12G and above generations: Use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings, to enable the Lifecycle Controller on boot up of the targeted system.

Message	Missing required parameter <i>arg1</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = parameter name
Detailed Description	Unable to complete the requested operation because one or more input parameters identified in the message are not specified.
Recommended Response Action	Enter all the required parameters and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR038

Message	Invalid parameter value for <i>arg1</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = parameter name

Detailed Description	Unable to complete the requested operation because one or more input parameters identified in the message are not valid.
Recommended Response Action	Specify a valid value for identified parameter.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR039

Message	Mismatch in AttributeName and AttributeValue count.
Detailed Description	Unable to complete the requested operation because of a mismatch in the number of AttributeName and AttributeValue values specified.
Recommended Response Action	Specify a valid number of AttributeName and AttributeValue pair values and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR040

Message	Invalid AttributeName <i>arg1</i> .
Arguments	<ul style="list-style-type: none"> · <i>arg1</i> = attribute name
Detailed Description	Unable to complete the requested operation because an invalid AttributeName value is specified.
Recommended Response Action	Specify a valid AttributeName value for the attribute identified in the message and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR041

Message	Invalid value for AttributeName <i>arg1</i>
----------------	---

Arguments	· arg1 = attribute name
Detailed Description	Unable to complete the requested operation because an invalid value for the attribute identified in the message is specified.
Recommended Response Action	Specify a valid value for the attribute identified in the message and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR042

Message	Unsupported value for AttributeName <i>arg1</i>
Arguments	· arg1 = attribute name
Detailed Description	Unable to complete the requested operation because the attribute value specified is not supported in the current configuration.
Recommended Response Action	Specify a value for the attribute identified in the message by using one of the possible values currently available for that attribute.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR043

Message	One or more selected physical disk drives are part of virtual disk that is not Secondary RAID Level 0.
Detailed Description	One or more physical disk drives selected for the operation are part of a virtual disk that is not Secondary RAID Level 0.
Recommended Response Action	This operation is not supported unless the previous virtual disk on the selected physical disk drives are deleted first. To perform the operation, delete any virtual disk on the selected physical disks drives and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR044

Message	All physical disks specified are not part of the same disk group.
Detailed Description	One or more physical disks specified to create virtual disk (VD) is not valid because it is not part of the same disk group.
Recommended Response Action	Enumerate existing virtual disks to find the physical disks of the same disk group. Specify physical disks that are of the same disk group and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR045

Message	StartingLBA and Size parameters are required to create a virtual disk.
Detailed Description	The specified physical disks have fragmented disk space, therefore StartingLBA and Size parameters are required to be specified in order to create a virtual disk.
Recommended Response Action	Specify StartingLBA and Size parameters and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR046

Message	The specified StartingLBA and Size values combination result in an overlapping virtual disk.
Detailed Description	Unable to complete the create virtual disk operation because the StartingLBA and Size value combination results in an overlapping virtual disk.
Recommended Response Action	Refer to the users guide to provide the correct StartingLBA and Size combination values.

STOR052

Message	Unable to create virtual disk, maximum number of created virtual disks per controller or diskgroup has been reached.
Detailed Description	Virtual disks cannot be created because the maximum number of logical drives per controller or diskgroup is reached.
Recommended Response Action	Refer to the Users Guide of the specific controller available at the support site for information on the number of supported virtual disks allowed.
Category	Configuration (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR053

Message	The controller key is not present. The key must be retrieved from the Dell Key Management Server.
Detailed Description	The system could not obtain a controller key from the Dell Key Management Server.
Recommended Response Action	For more information about obtaining a key, see Dell Key Manager or Lifecycle Controller Remote Services Guide available at dell.com/support/manuals .
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR054

Message	Controller is not CacheCade capable.
Detailed Description	The controller or the firmware on the controller does not support the CacheCade feature.
Recommended Response Action	Refer to the specific controller users guide for more information.

Category	Configuration (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR055

Message	BIOS does not support Dell Key Manager capabilities.
Detailed Description	The BIOS on the server is not Dell Key Management capable.
Recommended Response Action	For more information about key management capabilities, see Dell Key Manager or Lifecycle Controller Remote Services Guide available at dell.com/support/manuals .
Category	Configuration (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR056

Message	Physical disk is not security capable.
Detailed Description	Unable to complete the requested operation because the specified physical disk does not support data encryption.
Recommended Response Action	Specify a physical disk that is security capable and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR057

Message	The specified RAID controller is not currently available for configuration.
Detailed Description	The instrumentation for the specified RAID controller is not in state where the requested operation can be performed because system inventory collection (the CSIOR feature) has not been executed.
Recommended Response Action	Enable the CSIOR (Collect System Inventory On Restart) feature and restart the server to cause CSIOR execution. Make sure the Remote Services status is Ready and retry the operation. To get the Remote Services status, invoke the GetRSStatus method. For more information about this method, see Lifecycle Controller Remote Services Guide.

STOR059

Message	The requested operation is not currently valid because there are no virtual disks on the controller.
Detailed Description	The requested operation cannot be completed because there are no virtual disks (VD) available on the specified controller.
Recommended Response Action	Create a virtual disk and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR060

Message	Configuration operations are not supported on the specified storage controller.
Detailed Description	The requested operation is not supported on the specified storage controller.
Recommended Response Action	For more information about supported operations, see the documentation specific for the targeted storage controller.
Category	Configuration (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR061

Message	Initializing virtual disk is not supported on the RAID controller.
Detailed Description	The initializing virtual disk operation is not supported on the target device.
Recommended Response Action	For more information about supported operations, see the documentation specific for the targeted RAID controller or the Lifecycle Controller Remote Services Quick Start Guide.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR062

Message	One or more physical disks specified are full and cannot be used to create additional virtual disks.
Detailed Description	One or more physical disks specified are full and cannot be used to create additional virtual disks.
Recommended Response Action	Make sure all physical disks specified to create a virtual disk have the required amount of free space and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR063

Message	Unable to assign the specified virtual disk to multiple Virtual Adapters in single assignment mode.
Detailed Description	In order to prevent data loss, the system has prevented the assignment of a Virtual Disk to multiple Virtual Adapters because the clustered assignment mode is not enabled.
Recommended Response Action	Enable clustered assignment mode or unassign the virtual disk from the Virtual Adapter it is currently assigned to and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR064

Message	One or more physical disks specified for creating a virtual disk do not have the same block size.
----------------	---

Detailed Description	Unable to create the requested virtual disk because the physical disks specified did not have the same block size.
Recommended Response Action	Verify that the physical disks selected for creating the virtual disk have the same block size and retry the operation. The block size can be determined by reviewing the physical disk inventory and checking the BlockSize property for each physical disk.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR065

Message	One or more physical disks specified for creating a virtual disk are not T10 Protection Information capable.
Detailed Description	Unable to create the requested virtual disk because one or more specified physical disk(s) is not T10 Protection Information capable.
Recommended Response Action	Verify that the physical disks selected for creating a virtual disk are T10 Protection Information capable, and then retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR066

Message	Controller is not T10 Protection Information capable.
Detailed Description	The requested operation did not succeed because the selected RAID controller is not T10 Protection Information capable.
Recommended Response Action	Verify that the RAID controller selected for the operation is T10 Protection Information capable, and then retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR067

Message	Controller does not support uneven span RAID10 virtual disks.
Detailed Description	The operation did not succeed since the selected controller does not support creating uneven span RAID10 virtual disks.

Recommended Response Action	The selected controller is not capable of creating an uneven span RAID10 virtual disk. Specify the proper span length and span depth combination for creating RAID10 virtual disk on the selected controller, and then retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR068

Message	Unable to perform the requested RAID configuration because the Lifecycle Controller version on the server does not have the necessary capabilities.
Detailed Description	The requested RAID configuration operation did not succeed because the Lifecycle Controller version on the target server does not have the necessary capabilities.
Recommended Response Action	Check the Lifecycle Controller version on the target server and update it with the latest version available.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR069

Message	Unable to run the <i>arg1</i> method, because the number of elements entered for VDPPropNameArray and VDPPropValueArray is unequal.
Arguments	<ul style="list-style-type: none"> • <i>arg1</i> = method name
Detailed Description	The method name identified in the message could not be successfully completed, because the number of elements entered for VDPPropNameArray and VDPPropValueArray is not equal.
Recommended Response Action	Enter equal number of elements (pair value), and then retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR070

Message	Unable to run the WS-MAN method <i>arg1</i> , because an invalid parameter <i>arg2</i> is entered.
----------------	--

Arguments	<ul style="list-style-type: none"> · arg1 = method name · arg2 = parameter name
Detailed Description	The method name identified in the message could not be successfully completed, because the number of elements entered for VPropNameArray and VPropValueArray is not equal.
Recommended Response Action	Enter a valid parameter, and then retry the operation. For more information about a valid parameter, refer to the SimpleRAIDProfile document available at DellTechCenter http://en.community.dell.com/techcenter/extras/m/white_papers/20263535.aspx .
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0701

Message	Storage objects are unavailable in the current system configuration.
Detailed Description	There are no RAID controllers, physical disks or virtual disks discovered by instrumentation that can be configured.
Recommended Response Action	Storage objects are unavailable in the current system configuration. Make sure that the storage devices are installed in the system, and then retry the operation after the Collect System Inventory On Restart (CSIOR) feature has updated the system inventory. If the issue persists, contact your service provider.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR0702

Message	The value entered for the <i>arg1</i> option is invalid
Arguments	<ul style="list-style-type: none"> · arg1 = option name
Detailed Description	The value entered for the option name identified in the message is invalid.
Recommended Response Action	For more information, run the RACADM command "racadm raid help createvd".
Category	Configuration (STOR = Storage)

Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR071

Message	The Span Count is not valid for creating a RAID 10. Valid Span counts are <i>arg1</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = valid span counts
Detailed Description	The configuration operation could not be performed because the specified span count is not valid.
Recommended Response Action	Enter a valid span count, and then retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR072

Message	iDRAC Service Module (ISM) is either not present or not running on the server OS.
Detailed Description	The configuration operation could not be performed because it requires iDRAC Service Module (ISM) service to be present and running in the server Operating System.
Recommended Response Action	Make sure the iDRAC Service Module (ISM) service is running on the server Operating System and then retry the operation. Refer to the iDRAC User Guide for installing and starting ISM.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR073

Message	The iDRAC Service Module version present on the server OS does not support the requested PCIe SSD (NVMe) device operation.
Detailed Description	The iDRAC Service Module version present on the server OS does not support the requested PCIe SSD (NVMe) device operation.
Recommended Response Action	Update the Dell iDRAC Service Module (ISM) to the version that supports the requested operation on the PCIe SSD (NVMe) device.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR074

Message	The requested RAID configuration operation is not allowed because the controller is currently in HBA mode.
Detailed Description	The requested RAID configuration operation will not be allowed because the RAID controller is currently in HBA mode.
Recommended Response Action	In order to perform a RAID configuration operation, change the controller mode to RAID and retry the operation. For switching to RAID mode using the F2 System Setup utility, go to Device Settings > "RAID Controller "> Controller Management > Advanced Controller Management > Switch to RAID mode.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR075

Message	The operation cannot be performed because the enclosure configuration mode (Split or Unified) change request is pending.
Detailed Description	The requested operation could not be completed because there is an operation pending to change the enclosure configuration mode (Split or Unified). This operation is exclusive because it involves changing the RAID backplane topology.
Recommended Response Action	Do one of the following: 1) Create a job to complete the pending enclosure mode change request operation, allow the job to complete, restart the server, and then retry the operation. 2) Cancel any pending operations on the RAID controller, and then retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR076

Message	Enclosure configuration mode (Split/Unified) cannot be changed because there are already pending operations.
Detailed Description	The requested operation could not be completed because at least one other pending operation was found on the RAID controller. This operation needs exclusivity because it involves changing RAID backplane topology.
Recommended Response Action	Do one of the following: 1) Create a job to complete the pending operations, allow the job to complete, and then retry the operation. 2) Cancel any pending operations on the RAID controller, and then retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR077

Message	Unable to change Patrol Read State since Patrol Read Mode is not set to Manual.
Detailed Description	A Patrol Read State change operation cannot be performed if the Patrol Read Mode is not set to Manual.
Recommended Response Action	Change the Patrol Read Mode to Manual before performing a Patrol Read State change operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR078

Message	The requested operation requires a reboot type that does not match the reboot type required for pending operations.
Detailed Description	The requested operation cannot be performed because it involves server reboot type which is different than the reboot type of pending operations. Combining operations with different reboot types for the same RAID controller is not supported by iDRAC.
Recommended Response Action	Cancel any pending operations on the RAID controller and then retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR079

Message	The device does not support this operation or is in a state that does not allow this operation.
Detailed Description	The requested operation cannot be performed because it is either not supported by the device or the device was not in the right state to perform the operation.
Recommended Response Action	Make sure the device supports the requested operation. If the operation is supported, then make sure the server is turned on and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR081

Message	The job could not be created because the reboot type selected for the job creation and the reboot type required for pending operations do not match.
Detailed Description	The job could not be created because the reboot type selected for the job creation and the reboot type required for pending operations do not match.
Recommended Response Action	Change the reboot type for job creation and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR082

Message	The operation cannot be stopped or cancelled because the operation is not currently running.
Detailed Description	The operation cannot be stopped or canceled because the operation is not currently running.
Recommended Response Action	Make sure the operation is running before attempting to cancel or stop the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR083

Message	The Physical Disk(s) specified are too small to create a Virtual Disk of the requested size.
Detailed Description	The Physical Disk(s) specified are too small to create a Virtual Disk of the requested size.
Recommended Response Action	Specify Physical Disk FGDD IDs of physical disk drive(s) that have a larger disk space, and retry the operation.
Category	Configuration (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR084

Message	Unable to create the job because another job is currently running
Detailed Description	The requested job cannot be run because another job is currently running. Two options for running jobs on multiple storage controllers are: 1) Run the jobs on each controller individually. Wait for each job to complete before starting the configuration and job creation on the next controller. 2) Schedule multiple jobs to run at a later time using the scheduling options.
Recommended Response Action	Make sure that the currently running job is completed, and then retry the operation. If necessary, recreate the configuration and the job. For information about running jobs on multiple storage controllers, see the iDRAC Online Help or iDRAC Users Guide.
Category	Configuration (STOR = Storage)
Severity	Severity 1 (Critical)

Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR089

Message	The storage configuration operation is successfully completed and the change is in pending state.
Detailed Description	The storage configuration operation is successfully completed and the change is in pending state.
Recommended Response Action	To apply the configuration operation immediately, create a configuration job using the --realtime option. To create the necessary real-time job, run the jobqueue command. For more information about jobqueue command, run the racadm help jobqueue command.
Category	Storage (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR090

Message	Unable to create a virtual disk because an invalid combination of span count or number of disks was entered for the RAID level selected.
Detailed Description	Unable to create a virtual disk because an invalid combination of span count or disks passed was entered for the RAID level selected.
Recommended Response Action	Enter a span count value (-sc option) or number of disks (-pdkey option) that is appropriate for the RAID level selected. See the PERC Controller Users Guide for valid span count and number of disks required for a raid level. Retry the operation by running the RACADM storage createvd command with the appropriate options.

STOR092

Message	Unable to run the configuration operation on the controller because foreign configuration import operation is in progress.
Detailed Description	The requested configuration operation cannot be run because a foreign configuration import operation on the controller is already in progress.
Recommended Response Action	Wait for the import process to complete before running any configuration operation.
Category	Storage (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR093

Message	Unable to run the configuration operation because the controller is not available for the import process.
Detailed Description	The configuration operation cannot be performed because the controller is not available for import process.
Recommended Response Action	Make sure an operation is not pending on the controller. If an operation is pending, wait for the operation to complete or cancel the pending operation and then retry the operation. Refer to the storage controller documentation for compatibility information.
Category	Storage (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR094

Message	The storage configuration operation is successfully completed and the change is in pending state.
Detailed Description	The storage configuration operation is successfully completed and the change is in pending state.
Recommended Response Action	To apply the configuration operation immediately, create a configuration job using the --realTime option. To apply the configuration after restarting the server, create a configuration job using the -r option. To create the necessary real-time and restart jobs, run the jobqueue command. For more information about jobqueue command, run the racadm help jobqueue command.

Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR096

Message	Unable to create a virtual disk because the disk space size value entered for the virtual disk is less than the lower limit value (100 MB).
Detailed Description	A virtual disk cannot be created because the disk space size value entered for the virtual disk is less than the lower limit value (100 MB).
Recommended Response Action	Enter a value (the -size option) equal or higher than 100 MB, and then retry the operation.
Category	Storage (STOR = Storage)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR097

Message Unable to complete the operation because the memory size of the physical disk drive is less than the available or entered virtual disk size.

Detailed Description A virtual disk cannot be created because the memory size of the physical disk drive is less than available or entered virtual disk size.

Recommended Response Action Enter the FQDD of a physical disk drive that has a larger disk space, and then retry the operation. To view a list of physical disk drives and associated disk space, run the RACADM command "racadm storage get pdisks -o -p size". To view a list of virtual disks and associated size, run the RACADM command "racadm storage get vdisks -o -p size".

STOR1

Message A device *arg1* is in an unknown state.

Arguments

- ***arg1*** = device name

Detailed Description The controller cannot communicate with a device. The state of the device cannot be determined. There may be a bad or loose cable, or a missing device, or a problem with the driver or firmware.

Recommended Response Action See the storage hardware documentation for information on checking the cables. Check for problems with any enclosures attached to the system. Verify that the controller has a supported version of the driver and firmware. Rebooting the system may resolve this problem.

STOR314

Message	Unable to start the reconfiguration operation on the virtual drive because a reconfiguration operation is either in pending state or already running.
Detailed Description	The reconfiguration operation cannot be started on the virtual drive because a reconfiguration operation is either in pending state or already running.
Recommended Response Action	Do one of the following: 1) Commit and run the pending reconfiguration operation and retry the operation. 2) Cancel the currently running or pending reconfiguration operation and retry the new reconfiguration operation.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR315

Message	Unable to perform the reconfiguration operation because the storage controller does not support reconfiguring a Virtual Disk that has more than one span.
Detailed Description	Certain RAID levels require a Virtual Disk to have more than one span. Reconfiguration operation on these Virtual Disks is not supported by the storage controller.
Recommended Response Action	Make sure that the Virtual Disk has a single span and retry the reconfiguration operation. For information about the RAID levels that have a single span, see the Lifecycle Controller Users Guide available at the support site.
Category	Storage (STOR = Storage)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR316

Message	Unable to perform the reconfiguration operation because the storage controller does not support reconfiguration of a Virtual Disk that is part of a disk group that has multiple Virtual Disks.
Detailed Description	This occurs when a disk group is sliced to create multiple Virtual Disks. Reconfiguration of such sliced Virtual Disks is not supported.
Recommended Response Action	Make sure that the physical disk group has a single Virtual Disk and retry the reconfiguration operation.

Category	Storage (STOR = Storage)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR317

Message	Unable to perform the reconfiguration operation because the number of physical disks specified in the disk group is not as per the permitted range.
Detailed Description	A disk drive group has a limit on the minimum and maximum number of disk drives it can have on the basis of its Virtual Disk RAID level. When a reconfiguration operation is specified with additional physical disks the total number of physical disks should be in the disk groups permissible range.
Recommended Response Action	Enter the correct number of physical disks for the reconfiguration operation and retry the operation. The number of physical disks in a disk group must be within the disk groups permissible range. For information about the minimum and maximum possible physical disks in a disk group, see the Lifecycle Controller Users Guide available at the support site.
Category	Storage (STOR = Storage)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR318

Message	Unable to perform the reconfiguration operation because the Virtual Disk size specified is invalid.
Detailed Description	Expansion of storage capacity of a Virtual Disk is limited by the disk space of its physical disks and the Virtual Disk RAID level. Based on these two values there is a maximum limit on the capacity expansion size of a Virtual Disk.
Recommended Response Action	Make sure that the Virtual Disk size specified for the reconfiguration operation is less than or equal to the maximum possible value. For information about the maximum possible value, see the Lifecycle Controller Users Guide available at the support site.
Category	Storage (STOR = Storage)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR319

Message	Unable to perform the reconfiguration operation because a reconfiguration operation is already in progress for the Virtual Disk.
Detailed Description	The storage controller only allows one reconfiguration operation at a time on a Virtual Disk. A new reconfiguration operation cannot be requested until the currently executing reconfiguration operation is complete or is canceled.

Recommended Response Action	There are two possible actions. 1) Wait for the current reconfiguration operation to complete and then retry the new reconfiguration operation. 2) Cancel the current reconfiguration operation and then start the new reconfiguration operation.
Category	Storage (STOR = Storage)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR320

Message	Unable to start the reconfiguration operation because the requested reconfiguration operation is invalid.
Detailed Description	The storage controller does not support online capacity expansion and RAID level migration of a Virtual Disk at the same time.
Recommended Response Action	There are two Reconfiguration operations possible on a Virtual Disk 1) Online Expansion of the storage capacity 2) RAID level migration . Only one of the above two operations can be specified in a Reconfiguration operation. Make sure that only one of the above two operation types is requested and retry the operation. Also make sure that if provided, the Virtual Disk size is at least 1% of the maximum expansion size possible. Also make sure that if provided, the new Virtual Disk RAID level is different from the existing raid level.
Category	Storage (STOR = Storage)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR321

Message	Unable to complete the operation because one or more physical disk drives selected for the operation are currently used by another operation.
Detailed Description	The operation cannot be completed because one or more physical disk drives selected for the operation is currently used by another operation.
Recommended Response Action	Do one of the following and retry the operation: 1) Wait for the current operation to complete. 2) Select a drive that is free for the operation.
Category	Storage (STOR = Storage)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

STOR322

Message	Unable to complete the operation because the controller does not support replacement operations or its Copyback mode is not set to ON.
----------------	--

Detailed Description	The operation cannot be completed because the controller does not support Replacement operations or its Copyback mode is not set to ON.
Recommended Response Action	Do the following and retry the operation: 1) Make sure that the controller supports the Replacement operation. 2) The Copyback Mode is enabled. To set the Copyback Mode to ON on a 13th Generation PowerEdge server using iDRAC GUI, navigate to Storage > Controllers > Setup > Configure Controller Properties > Copyback Mode > Action > Set to ON and Apply. To set it to ON on a 14th Generation PowerEdge server using iDRAC GUI, navigate to Configuration > Storage Configuration > Select the Controller > Select the Copyback mode > Add to Pending Operations > Apply.

STOR5

Message Redundancy lost. *arg1*

Arguments
· ***arg1*** = VD/Enclosure Name

Detailed Description A virtual disk or enclosure has lost data redundancy. In the case of a virtual disk, one or more physical disks included in the virtual disk have failed. Due to the failed physical disk or disks, the virtual disk is no longer maintaining redundant (mirrored or parity) data. The failure of an additional physical disk will result in lost data. In the case of an enclosure, more than one enclosure component has failed. For example, the enclosure may have suffered the loss of all fans or all power supplies.

Recommended Response Action Identify and replace the failed components. To identify the failed component, select the Storage object and click the Health subtab. The controller status displayed on the Health subtab indicates whether a controller has a failed or degraded component. Click the controller that displays a Warning or Failed status. This action displays the controller Health subtab which displays the status of the individual controller components. Continue clicking the components with a Warning or Failed status until you identify the failed component. See Storage Health for more information. See the enclosure documentation for information on replacing enclosure components and for other diagnostic information.

SUP Event Messages

SUP001

Message	Insufficient parameters provided.
Detailed Description	Insufficient Parameters provided for the WSMAN command.
Recommended Response Action	Make sure the parameters are correct and in the right number and format and retry the action.
Category	Updates (SUP = Firmware Update Job)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SUP002

Message	Job creation failure.
Detailed Description	Could not create a new job because of a network error or an unresponsive iDRAC.
Recommended Response Action	Retry the action. If this fails, reboot the iDRAC.
Category	Updates (SUP = Firmware Update Job)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SUP003

Message	Invalid URI, target or reboot flag.
---------	-------------------------------------

Detailed Description	One of the uniform resource input (URI) string, target or reboot flag parameters is missing or exceeds the prescribed length.
Recommended Response Action	Verify that the URI, target or reboot flag parameter values are correct and retry the action.
Category	Updates (SUP = Firmware Update Job)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SUP005

Message	Invalid reboot value.
Detailed Description	Reboot value specified is not supported.
Recommended Response Action	Verify the reboot value and retry the action. Current options available are 1)Power Cycle 2) Graceful shutdown without forced shutdown 3) Graceful shutdown with forced shutdown (~10 minutes wait time).
Category	Updates (SUP = Firmware Update Job)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SUP006

Message	Update package downloading - Delete failed.
Detailed Description	The DUP is being downloaded and the update cannot be deleted while the download is in progress.
Recommended Response Action	Wait until the update package is downloaded and retry the action. The download can take more than 5 minutes depending on network speed and size of the update package.
Category	Updates (SUP = Firmware Update Job)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SUP007

Message	iDRAC busy - Delete failed.
Detailed Description	The iDRAC communication channel is open and being used by another process; this can be caused by an open session of Lifecycle Controller or Unified Server Configurator locally on the server.
Recommended Response Action	If Lifecycle Controller / Unified Server Configurator (USC) is in use, wait until it has exited and retry the action. Otherwise retry after 30 seconds to check if network connectivity caused this error.

Category	Updates (SUP = Firmware Update Job)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SUP009

Message	Driver pack update in progress - Delete failed.
Detailed Description	Because of the size of the driver pack, the update process removes the older version of the driver pack from the system before installing the newer version. For that reason, the driver pack update cannot be deleted.
Recommended Response Action	Wait for the Driver Pack update to complete. To revert to the previous version of the update, download and update the firmware to the version desired.
Category	Updates (SUP = Firmware Update Job)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SUP0100

Message	Firmware update operation failed.
Detailed Description	The firmware update operation failed.
Recommended Response Action	No response action is required.

SUP0501

Message	Invalid catalog file.
Detailed Description	The catalog file is not in the supported XML format, or the catalog file is corrupted.
Recommended Response Action	Do one of the following: 1) If the catalog file is customized, recreate the file using Repository Manager, and retry the operation. 2) Update the catalog file from the service providers FTP server and retry the operation. 3) Update the catalog file from the System Update Utility media or from the System Build Update Utility media and retry the operation. For more information, see Lifecycle Controller Users Guide.

Message	Unable to collect system inventory.
Detailed Description	iDRAC is unable generate the inventory file or the inventory file received from iDRAC is faulty. For more information about the failure, see Lifecycle Log.

Recommended Response Action Retry the operation. If the problem persists do the following: 1) Turn off the system and disconnect the power cord. 2.) Wait for five seconds. 3.) Reconnect the power cord and turn on the system. 4) Press the <F10> key to re-enter Lifecycle Controller, and retry the operation. If the problem continues to persist, update iDRAC firmware to the latest version, and retry the operation. Else, contact the service provider.

SWC0091

Message Unable to start Lifecycle Controller because of internal issues *arg1* .

Arguments

- ***arg1*** = error code

Detailed Description The Lifecycle Controller cannot be started because of internal issues.

Recommended Response Action Restart the server and start Lifecycle Controller by pressing F10 when the company logo is displayed. If the issue persists, update the iDRAC- and BIOS firmware to the latest recommended version, and then retry the operation. Else, contact your service provider.

Redfish Event Type

No alerts are applicable for this message

SWC0127

Message	Unable to open file for writing.
Detailed Description	The file may be write protected and hence could not be edited.
Recommended Response Action	Check if the file is write protected.
Category	Configuration (SWC = Software Config)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SWC0128

Message	The Common Name (CN) field of the CSR Security group must be configured before a CSR can be generated.
Detailed Description	The Common Name field is necessary for generating a CSR. It is not generated if Common Name is empty.
Recommended Response Action	Configure the Common Name field by using config command.
Category	Configuration (SWC = Software Config)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SWC0129

Message	Unable to send test email. Please make sure that your email alerts have been configured correctly and connectivity to the SMTP server exists.
Detailed Description	Racadm tool was not able to send a test email for the configuration.
Recommended Response Action	Check for the parameters mentioned in the message.
Category	Configuration (SWC = Software Config)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SWC0130

Message	Trap at specified index is not currently enabled.
Detailed Description	The Trap needs to be set for the particular index for the testtrap to go through.
Recommended Response Action	Set cfiglpmiPetAlertEnable in cfiglpmiPet group using config subcommand for the corresponding index.
Category	Configuration (SWC = Software Config)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SWC0131

Message	Trap destination address must be configured.
Detailed Description	The destination Ip address must be configured for the Trap.
Recommended Response Action	Set cfiglpmiPetAlertDestIpAddr in cfiglpmiPet group using config subcommand for the corresponding index.
Category	Configuration (SWC = Software Config)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SWC0132

Message	Unable to send test trap. Please make sure that your trap has been configured correctly and connectivity to the destination endpoint exists.
Detailed Description	Either the destination Ip address is not reachable or the required values are not configured.
Recommended Response Action	Check for the connectivity to the configured Ip address.
Category	Configuration (SWC = Software Config)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SWC0133

Message	Either connect or disconnect must be specified.
----------------	---

Detailed Description	Insufficient information provided.
Recommended Response Action	Specify either the connect or the disconnect option with the subcommand.

SWC4006

Message A firmware or software incompatibility detected between system BIOS in slot *arg1* and CMC/MM.

Arguments
 · ***arg1*** = number

Detailed Description FlexAddress is not implemented in one of the versions of firmware. Please update the firmware.

Recommended Response Action Check firmware versions of BIOS and CMC/MM. Update to latest version.

Category System Health (SWC = Software Config)

SWC4010

Message *arg1 arg2* in Server- *arg3* requires a version of Chassis Management Controller/Management Module (CMC/MM) firmware 5.0 or later for using the NParEP (ARI mode) functions.

Arguments

- ***arg1*** = name
- ***arg2*** = location1
- ***arg3*** = location2

Detailed Description The current CMC/MM firmware does not support the ARI Mode advanced features available in the network device on the server identified in the message.

Recommended Response Action Update the CMC/MM firmware to the latest version and to enable access to the advanced features available in the network device.

Category System Health (SWC = Software Config)

Redfish Event Type

No alerts are applicable for this message

SWC4011

Message A firmware or software incompatibility is automatically corrected between the *arg1 arg2* in Server- *arg3* and the Chassis Management Controller/Management Module (CMC/MM).

Arguments

- ***arg1*** = name
- ***arg2*** = location1
- ***arg3*** = location2

Detailed Description A firmware or software incompatibility was automatically corrected between the network device in the Server identified in the message and the Chassis Management Controller/Management Module (CMC/MM).

Recommended Response Action No response action is required.

Category System Health (SWC = Software Config)

Severity Severity 3 (Informational)

Redfish Event Type

SWC4012

Message A firmware or software incompatibility is detected between *arg1 arg2* and *arg3 arg4* .

- Arguments**
- **arg1** = name1
 - **arg2** = location1
 - **arg3** = name2
 - **arg4** = location2

Detailed Description The system has detected a firmware or software incompatibility between the components identified in the message. A mismatch between component versions may cause the system to not function appropriately.

Recommended Response Action Update the firmware or software of the components identified in the message. For information about the identified components, see the product documentation available at the service provider support site.

SWC5003

Message System Controller (SC) has either stopped functioning or is updating a firmware version.

Detailed Description The System Controller (SC) has either stopped functioning or is updating a firmware version.

Recommended Response Action	Make sure that the System Controller is functioning.
Category	System Health (SWC = Software Config)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SWC5004

Message	System Controller (SC) has restarted functioning.
Detailed Description	System Controller (SC) has started functioning again because either a server health issue is resolved or SC has completed a firmware update process.
Recommended Response Action	No response action required.
Category	System Health (SWC = Software Config)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SWC5005

Message	Unable to update the System Controller (SC) firmware.
Detailed Description	The System Controller (SC) firmware cannot be updated. For information about the causes, see SEL Event Data Byte 2.
Recommended Response Action	Retry the SC firmware update operation. If the issue persists, try updating by using a different firmware update file.
Category	Updates (SWC = Software Config)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SWC5006

Message	System Controller (SC) Firmware Update Successful.
Detailed Description	System Controller (SC) reported a successful Firmware Update.

SWC8526

Message Unable to delete Chassis Group member *arg1* (*arg2*)

Arguments

- ***arg1*** = member id
- ***arg2*** = DNS or IP address of member

Detailed Description Unable to delete Chassis Group member identified in the message. Another user may have deleted the member before the operation or the group may have been disbanded.

Recommended Response Action Make sure the member identified in the message exists as a member of the Chassis Group. Use the CMC web interface to select the lead chassis, select the setup tab, and then select the group administration sub tab and check if the member exists. If the member exists, restart the group leader and retry the operation.

SWC8532

Message Chassis Management Controller is unable to set chassis assigned QuickDeploy IP addresses because the starting IP address cannot accommodate all iDRACs.

Detailed Description The starting IP address specified cannot accommodate all the servers. The starting iDRAC IPv4 Address specifies the static IPv4 address of the iDRAC located in the first slot. The static IPv4 address of each subsequent iDRAC is calculated as a slot number increment of this IPv4 address.

Recommended Response Action Make sure there are enough IPv4 addresses for all the iDRACs and then retry the operation.

SWC8549

Message The status of Media Access Control (MAC) address *arg1* is not valid for Boot Identity profile operations.

Arguments

- **arg1** = mac address

Detailed Description The status of Media Access Control (MAC) address identified in the message is not valid. Possible MAC address status values are unassign, assign and active. The value is "unassigned" if the MAC address is not used in any profile. The value is "assigned" if the MAC address used in a profile. The value is "active" if used in a profile applied to a server. The status must be same for all Virtual MAC addresses if assigned to a profile.

Recommended Response Action Edit the Virtual MAC Address Pool to correct the MAC address status. Possible MAC address status values are unassign, assign and active. The value is "unassigned" if the MAC address is not used in any profile. The value is "assigned" if the MAC address used in a profile. The value is "active" if used in a profile applied to a server. The status must be same for all Virtual MAC addresses if assigned to a profile.

SWC8564

Message Unable to clear the Boot Identity profile from the server in slot *arg1* because there is no response from the server iDRAC.

Arguments

- ***arg1*** = server slot number

Detailed Description The Boot Identity profile from the server identified in the message cannot be cleared because there is no response from the server iDRAC. A MAC Address conflict is possible if the server retains virtual MAC Address values and they are also allocated to another server.

Recommended Response Action Make sure that the server is not used until the Persistence Policy settings are returned to default values and the Virtual MAC Address settings have been cleared. Persistence Policy settings can be reset to default values by resetting the server iDRAC to factory default settings. If the iDRAC cannot be reset to default values, contact your service provider before attempting to use the server.

SWC8603

Message Unable to apply profile to server *arg1* using Quick Deploy feature, because the CSIOR feature on Server *arg2* is disabled.

Arguments

- ***arg1*** = slot number
- ***arg2*** = slot number

Detailed Description The selected profile cannot be applied to the server identified in the message, because the Collect System Inventory On Restart (CSIOR) feature on the server is disabled.

Recommended Response Action Make sure that CSIOR on the server identified in the messages is enabled and retry the operation. For 11th generation servers, to enable CSIOR, restart the server, and select the Ctrl-E setup. Select System Services, and enable CSIOR. For 12th generation and above, to enable CSIOR using Lifecycle Controller GUI, restart the server, click <F2> when the companys logo is displayed. On the iDRAC Settings page, click Lifecycle Controller, and enable CSIOR.

Message Unable to configure the storage array in slot *arg1* , because there is no communication between Chassis Management Controller (CMC) and the storage device.

Arguments

- ***arg1*** = slot number

Detailed Description Unable to configure storage array. This could happen if CMC could not communicate with storage device.

Recommended Response Action

1. Reset iDRAC by using the graphical user interface (GUI): Click Chassis Overview > Troubleshooting > Reset Components. In the Reset Server section, from the Reset drop-down menu, select iDRAC Reset corresponding to the server iDRAC to be reset, and then click Apply Selection. Or, reset iDRAC by running the following command at the command line interface (CLI): `racadm racreset -m server-n.2`. Reset Chassis Management Controller (CMC) by using the GUI: Click Chassis Overview > Troubleshooting > Reset Components, and then click Reset/Failover CMC. Or, reset CMC by running the following command at the CLI: `racadm racreset`. For more information about the syntax and parameters used, see the iDRAC 8/7 v2.30.30.30 RACADM CLI Guide and the Chassis Management Controller Version 5.0 for Dell PowerEdge M1000e RACADM Command Line Reference Guide available on the support site.

SWC9004

Message	The requested SecureBoot Certificate Import operation cannot be completed.
Detailed Description	The SecureBoot Certificate Import operation cannot be completed because of one or more of the following reasons: corrupted input file (Certificate or UEFI Driver/op-ROM/boot loader file), invalid file, invalid file encoding format, input file (Certificate or UEFI Driver/op-ROM/boot loader file) is not found, the policy that is being updated already exists, insufficient space in certificate store and internal error.
Recommended Response Action	Enter valid parameters and retry the operation. If the issue persists, free some space in the certificate store by deleting few certificates, restart iDRAC, and then retry the operation.

Message The requested SecureBoot Certificate Export operation cannot be completed.

Detailed Description The requested operation was not successful because: 1. Operation is not allowed when SecureBoot policy is Standard. 2. Record not found. 3. Destination not reachable. 4. Destination has insufficient access rights. 5. Internal error.

Recommended Response Action Make sure that the destination has enough free space, or is not read-only. Retry the operation with valid input parameters. If the problem persists, reboot the iDRAC and retry the operation.

SYS043

Message	Successfully exported Server Configuration Profile.
Detailed Description	The current configuration of the system components (BIOS, RAID, NIC, iDRAC, and so on) was written to a Server Configuration Profile and successfully copied to the specified location.
Recommended Response Action	No response action is required.
Category	Configuration (SYS = System Info)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS044

Message	Unable to export one or more component configurations.
Detailed Description	Unable to collect the configuration information for one or more components. An internal error occurred while processing component information.
Recommended Response Action	Enable Collect System Inventory On Restart (CSIOR) using Lifecycle Controller and restart the system. Make sure that inventory collection is complete before retrying the operation. For more information, see the Lifecycle Controller Users Guide.
Category	Configuration (SYS = System Info)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS045

Message	Unable to copy the Server Configuration Profile to the network share.
Detailed Description	An error occurred while copying the Server Configuration Profile to the network share.
Recommended Response Action	If the file is being exported to an NFS share, make sure that it is accessible from iDRAC. If the file is being exported to a CIFS share, make sure that it is accessible from iDRAC by using share access credentials with the appropriate privileges. If the share is by using http or https protocol, make sure that you have correctly configured the share and it can be accessible by using iDRAC.
Category	Configuration (SYS = System Info)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS046

Message	Unable to import the Server Configuration Profile from the network share.
Detailed Description	An error occurred while copying the Server Configuration Profile from the network share.
Recommended Response Action	If the file is being copied from an NFS share, make sure that it is accessible from iDRAC. If the file is being copied from a CIFS share, make sure that it is accessible from iDRAC using the share credentials provided. Test the network share access using the Test Network Connection method. For more information, see the Lifecycle Controller Users Guide.

Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS058

Message	Applying configuration changes.
Detailed Description	Running Lifecycle Controller Automated Task Execution application in Unified Extensible Firmware Interface (UEFI) environment to apply configuration changes.
Recommended Response Action	No response action is required.
Category	Configuration (SYS = System Info)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS059

Message	Component configuration successfully changed.
----------------	---

Detailed Description	Configuration changes for the component identified by the Fully Qualified Device Descriptor (FQDD) were successfully applied.
Recommended Response Action	No response action is required. See Lifecycle Log for details.
Category	Configuration (SYS = System Info)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS060

Message	Component configuration completed with errors.
Detailed Description	Some configuration changes for the component identified by the Fully Qualified Device Descriptor (FQDD) in the configuration job results were not successfully applied.
Recommended Response Action	Export the Lifecycle Log and identify the configuration changes that did not complete or retrieve the configuration results using the GetConfigResults() method. Retry those changes that did not complete in a separate import operation.
Category	Configuration (SYS = System Info)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS061

Message	Unable to complete component configuration.
Detailed Description	Some configuration changes for the component identified by the Fully Qualified Device Descriptor (FQDD) in the configuration job results were not successfully applied.
Recommended Response Action	Export the Lifecycle Log and identify the configuration changes that did not complete or retrieve the configuration results using the GetConfigResults() method. Retry those changes that did not complete in a separate import operation.
Category	Configuration (SYS = System Info)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS062

Message	Input file for import configuration operation is invalid. The expected profile root element was not found.
Detailed Description	The input file for the import configuration operation does not contain a valid profile root element.

Recommended Response Action	Open the input file in any Web browser to check for invalid content before the expected root element. Correct the invalid content and make sure that the profile is compliant to the system configuration schema before retrying the operation.
Category	Configuration (SYS = System Info)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS063

Message	Input file for import configuration operation is invalid. The expected root element was not closed.
Detailed Description	The input file for the import configuration operation does not contain a closed root element.
Recommended Response Action	Open the input file in any Web browser to check for invalid content before the expected root element. Correct the invalid content and make sure that the profile is compliant to the system configuration schema before retrying the operation.
Category	Configuration (SYS = System Info)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS064

Message	Input file for import configuration operation is invalid at line <i>arg1</i> .
Arguments	<ul style="list-style-type: none"> • <i>arg1</i> = line
Detailed Description	The input file for the import configuration operation contains invalid XML data at the line specified.
Recommended Response Action	Open the input file in any Web browser to check for invalid content before the expected root element. Correct the invalid content and make sure that the XML file is compliant to the system configuration schema before retrying the operation.
Category	Configuration (SYS = System Info)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS065

Message	Input file for import configuration operation cannot be found or opened.
Detailed Description	An internal error occurred opening the input configuration XML file. An iDRAC reset is required.

Recommended Response Action	Reset iDRAC and retry the operation.
Category	Configuration (SYS = System Info)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS066

Message	No changes detected for iDRAC, System, or Lifecycle Controller configuration.
Detailed Description	No iDRAC, System, or Lifecycle Controller configuration changes were applied. The settings specified in the system configuration XML input file match the current configuration for these components.
Recommended Response Action	No response action is required.
Category	Configuration (SYS = System Info)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS067

Message	Unable to complete application of configuration profile values.
Detailed Description	Some or all configuration actions during the import of configuration profile operation did not complete successfully. The configuration action details are logged into the Lifecycle Log.
Recommended Response Action	Export the Lifecycle Log and identify the configuration changes that did not successfully complete. Resolve any issues with the configuration profile content and retry the import operation.
Category	Configuration (SYS = System Info)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

SYS068

Message	Configuration changes that require system reboot were not applied.
Detailed Description	Some configuration changes that require system reboot were not applied because the values specified in the input XML file are incorrect.
Recommended Response Action	Use the GetConfigResults() method to get the configuration job results or export the Lifecycle Log and review the configuration job results to identify the errors. Make changes to the input XML to correct the errors. Retry the import operation.

Category Configuration (SYS = System Info)

Severity Severity 2 (Warning)

SYS120

Message Unable to complete the operation because the OS Collector is taking too much time. The operation is cancelled.

Detailed Description The OS Collector application did not complete its task within the maximum allowed time and the operation is cancelled. This may be because the server OS is not supported by the OS Collector application and the application is unable to function correctly.

Recommended Response Action Do the following: 1) Make sure that the OS Collector application supports the OS installed on the server. If the OS is not supported, the OS Collector may not function correctly. 2) Reinstall the latest OS Collector on the iDRAC, and then retry the operation. To install the OS Collector using the iDRAC Web UI, get the latest OC Collector update package and then select the Update and Rollback link from the iDRAC Web UI home page and upload the install package. If the issue persists, contact your service provider.

CMC	✓*						

SYS258

Message Unable to transfer a file, *arg1*, because there is a problem with the remote host servers security certificate.

Arguments
· *arg1* = filename

Detailed Description The remote host server certificate was validated against the uploaded certificate and the validation did not succeed. The remote host server certificate does not correspond to the uploaded verification certificate. The certificate subject name, CN part, may not match the domain name used. If the uploaded certificate is correct, the IP address of the remote host server may be incorrect, the certificate may be expired or this error could indicate a Man-In-The-Middle attack in progress.

Recommended Response Action Make sure that the following are correct and retry the operation: a) the file transfer parameters b) the uploaded certificate corresponds to the remote host server c) the certificate subject name, CN part, matches the domain name used.

Redfish Event Type

No alerts are applicable for this message

TMP0302

Message Unable to set Enhanced Cooling Mode because the required power or fan configuration is not available.

Detailed Description The Enhanced Cooling Mode feature cannot be enabled because the necessary power or fan configuration is not available.

Recommended Response Action Do the following: 1) Check the available power and the fan configuration. 2) If the required power for Enhanced Cooling mode is not available, remove other chassis components which are not being used in order to obtain sufficient power. 3) If the fan configuration does not support Enhanced Cooling Mode, replace unsupported fans with supported ones. 4) If the issue persists, contact your service provider.

TMP1000

Message *arg1* exceeded the maximum warning threshold.

Arguments

- ***arg1*** = tempsensor name

Detailed Description The enclosure is too hot. A variety of factors can cause the excessive temperature. For example, a fan may have failed, the thermostat may be set too high, or the room temperature may be too hot.

Recommended Response Action Check for factors that may cause overheating. For example, verify that the enclosure fan is working. You should check the thermostat settings and examine whether the enclosure is located near a heat source. Make sure the enclosure has enough ventilation and that the room temperature is not too hot. Refer to the enclosure documentation for more diagnostic information.

TMP8500

Message I/O Module *arg1* temperature exceeded operating range.

Arguments

- ***arg1*** = iom slot name

Detailed Description The temperature of the I/O Module identified in the message has increased beyond the operational range. Thermal protection shut down the I/O Module. Factors external to the I/O Module may have caused this situation.

Recommended Response Action Check the chassis event log for fan issues and fix any issues present. If no fan issues are detected, check chassis ambient temperature and make sure the temperature is within operating range. Utilize the RACADM command "racadm getsensorinfo" to check the chassis ambient temperature.

TMP8503

Message Temperature of NIC adapter in slot *arg1* is greater than normal operating range possibly due to an issue in the cooling system or a fan that is no longer functioning correctly.

Arguments

- *arg1* = slot number

Detailed Description The NIC adapter in the slot identified in the message may have temperature related issues. The device temperature suggests degraded cooling or possibly a fan not functioning correctly on the adapter card (if adapter card has a fan).

Recommended Response Action The cooling system may have issues. Contact your authorized Customer Service representative for further assistance.

UEFI0029

Message	Unable to initialize iDRAC because of some critical issues.
Detailed Description	iDRAC could not be initialized because of some critical issues. Continuing to boot may result in unexpected power loss because of unknown power inventory and unavailability of features such as remote out of band access, active power management, thermal management, inventory collection, LCD, or system error reporting.
Recommended Response Action	Do one of the following: 1) Remove input power from the system, wait for 30 seconds, and re-apply input power. Turn on the system. 2) Update the iDRAC firmware. 3) Continue to boot. Note: This may result in unexpected power loss because of unknown power inventory and unavailability of features such as remote out of band access, active power management, thermal management, inventory collection, LCD, or system error reporting.

UEFI0072

Message Unable to load the firmware from *arg1* because of the Secure Boot policy.

Arguments

- ***arg1*** = device name

Detailed Description When the Secure Boot feature is enabled, the system BIOS authenticates each UEFI driver against the Secure Boot policy. If a UEFI driver does not meet the policy criteria, the system BIOS does not load or execute the UEFI driver and displays this message at the end of POST. The Secure Boot policy consists of authorized and unauthorized X.509 certificates; signed drivers must chain to an authorized certificate. The policy may also authorize hash values of individual UEFI driver images. Users can configure the Secure Boot feature and the Secure Boot policy in F2 System Setup > System BIOS > Security Settings page.

Recommended Response Action If the Secure Boot feature is not desired, disable it in System Setup > System BIOS > Security Settings page. Otherwise, do the following: 1) Make sure the firmware on the failing device is up-to-date. 2) If subsequent failures occur, review the Secure Boot Policy Summary in System Setup > System BIOS > Security Settings page. The device firmware must be authorized by a public key or hash value in the Authorized Signature Database. The public key or hash value must not be present in the Forbidden Signature Database.

UEFI0073

Message Unable to boot *arg1* because of the Secure Boot policy.

Arguments

- **arg1** = Boot Option name

Detailed Description

When the Secure Boot feature is enabled, the system BIOS authenticates each boot option against the Secure Boot policy. If a boot option does not meet the policy criteria, the system BIOS does not boot to the boot option and displays this message. The Secure Boot policy consists of authorized and unauthorized X.509 certificates; signed boot images must chain to an authorized certificate. The policy may also authorize hash values of individual boot images. Users can configure the Secure Boot feature and the Secure Boot policy in System Setup > System BIOS > Security Settings page.

Recommended Response Action

If the Secure Boot feature is not desired, disable it in System Setup > System BIOS > Security Settings page. Otherwise, do the following: 1) review the Secure Boot Policy Summary in F2 System Setup > System BIOS > Security Settings page. The boot option must be authorized by a public key or hash value in the Authorized Signature Database. 2) If the boot option is not authorized but it can be trusted, enter System Setup > System BIOS > Security Settings page, set Secure Boot Policy to Custom, and add a entry for the boot option in the Authorized Signature Database (System Setup > System BIOS > Security Settings > Custom Policy Settings > Authorized Signature Database > Import Database Entry).

UEFI0074

Message

The Secure Boot policy has been modified since the last time the system was started.

Detailed Description

The system BIOS logs this message after detecting a change in Secure Boot policy settings. Such a change may result from user configuration or a system BIOS update. Changes to the following settings trigger this message: 1) Secure Boot (Enable/Disable) 2) Secure Boot Policy (Standard/Custom) 3) Platform Key 4) Key Exchange Keys 5) Authorized Signature Database (db) 6) Forbidden Signature Database (dbx).

Recommended Response Action

Review the Secure Boot policy settings in System Setup > System BIOS > Security Settings page. If policy changes were expected, no action is necessary. Otherwise, modify the Secure Boot policy settings as needed.

Message

A Quad-Rank (QR) DIMM is installed on memory slot: *arg1*. QR DIMMs should be installed on the first DIMM slot in a channel if there is only one QR DIMM in the channel. QR DIMMs cannot be installed on the third slot of the channel.

Arguments

- **arg1** = slot number

Detailed Description A Quad-Rank (QR) DIMM is installed on the memory slot identified in the message. QR DIMMs should be installed on the first DIMM slot in a channel if there is only one QR DIMM in the channel. QR DIMMs cannot be installed on the third slot of the channel.

Recommended Response Action Install the QR DIMM in the correct channel. For more information, see the platform Owners Manual.

UEFI0170

Message	Unable to configure memory interleaving on DIMM modules on memory slots: <i>arg1</i> .
Arguments	<ul style="list-style-type: none"> · <i>arg1</i> = slot numbers
Detailed Description	Memory could not be interleaved because of an attempt to simultaneously configure incompatible A7 mode and Target Address Decode (TAD) 3-way interleave during memory initialization.
Recommended Response Action	Check the DIMM population and hardware configuration to make sure interleaving can be supported. For more information, see the platform Owners Manual.

Message A Dual Rank DIMM module is installed on memory slot *arg1* after a Single Rank DIMM module.

Arguments

- ***arg1*** = slot number

Detailed Description A memory population violation has been detected on the identified DIMM slot.

Recommended Response Action Dual Rank DIMM modules must be installed before Single Rank DIMM modules on the channel. Populate memory modules in a supported configuration. For more information, see the platform Owners Manual.

Message Unable to boot a boot option because the watchdog timer has expired. System will reset.

Detailed Description The watchdog timer is armed before the BIOS boot manager invokes an UEFI boot option. The watchdog is set to a period of 5 minutes. The Operating System boot loader from the boot option is required to disable the watchdog timer after it is successfully loaded, otherwise the system will reset if the timer expires.

Recommended Response Action Check the boot option image and boot loader. Update them to the latest version if possible.

Message	The system BIOS is not fully secured because the PWD_EN jumper is not installed on the motherboard.
Detailed Description	The system BIOS is not fully secured because the PWD_EN jumper is not installed on the motherboard. Some BIOS security features such as signed BIOS update are enforced based on the PWD_EN jumper presence.
Recommended Response Action	Disconnect the input AC power to the system, install the PWD_EN jumper, connect the AC power, and then turn on the system. If the issue persists, contact your service provider.

UEFI0284

Message	Unable to import Secure Boot policy data because the format of the data is incompatible with the Secure Boot databases.
Detailed Description	The BIOS cannot accept the Secure Boot policy data from the management console because the format of the data is incompatible with the BIOS Secure Boot databases. Secure Boot policy data consists of a Platform Key (PK), Key Exchange Key (KEK) database, Authorized Signature Database (db), and Forbidden Signature Database (dbx). The contents of PK and KEK must follow the Distinguished Encoding Rules (DER) X.509 certificate format. Each entry in db and dbx must follow the DER X.509 certificate format or consist of a hash value generated by a Secure Hash Algorithm (SHA-256, SHA-384, or SHA-512).
Recommended Response Action	Make sure certificates follow the Distinguished Encoding Rules (DER) X.509 certificate format. Hash values in the Secure Boot policy must be 32 bytes, 48 bytes, or 64 bytes in size. Also make sure the data for the Platform Key (PK) and Key Exchange Key (KEK) database contain only certificates, not hash values. If the import operation includes multiple policy objects (certificates or hash values), determine the failing object by retrying the operation with one object at a time.

UEFI0285

Message	Unable to send Secure Boot policy data to iDRAC because of an issue in the iDRAC Shared Memory Architecture (SMA) Intelligent Platform Management Interface (IPMI).
Detailed Description	The BIOS cannot send Secure Boot policy data (certificates and hash values) to iDRAC because of an issue in the iDRAC Shared Memory Architecture (SMA) Intelligent Platform Management Interface (IPMI). This means management consoles will not display the latest Secure Boot policy data because BIOS is not synchronized with iDRAC. Synchronization must occur before using management consoles to configure Secure Boot policy data.
Recommended Response Action	Do one of the following: 1) Remove input power from the system, wait for 30 seconds, and re-apply input power. Turn on the system. 2) Update the iDRAC firmware on the system.

Message The iDRAC firmware is corrupted and unrecoverable.

Detailed Description The iDRAC U-Boot code detected that the iDRAC firmware version is corrupted and is unrecoverable.

Recommended Response Action 1) Turn off the server. 2) Disconnect the input power supply, wait for 30 seconds, and then reconnect the power. 3) Turn on the server. 4) If the issue persists, contact your service provider.

Message	The data in the Persistent Memory DIMM located in memory slot <i>arg1</i> is not accessible because the DIMM is locked and the passphrase is incorrect.
Arguments	<ul style="list-style-type: none"> <i>arg1</i> = slot label
Detailed Description	The data in the Persistent Memory DIMM located in the memory slot identified in the message is not accessible because the DIMM is locked and the passphrase is incorrect. Update the Persistent Memory Passphrase to the correct passphrase, or perform a Secure Erase on the DIMM. Secure erase will erase all persistent data.

Recommended Response Action Update the Persistent Memory Passphrase to the correct passphrase or perform a Secure Erase operation on the Dual in-line Memory Module (DIMM). Secure erase will erase all persistent data.

Message

Logging off the remote VNC session from the IP address *arg1* , because the session timed out.

Arguments

- **arg1** = IP address

Detailed Description

The VNC client is logged off from the IP address identified in the message.

Recommended Response Action

To re-establish the remote VNC session, log in again using the VNC client.

VDR Event Messages

VDR1

Message *arg1* failed.

Arguments

- **arg1** = VD Name

Detailed Description A storage component such as a physical disk or an enclosure has failed. The failed component may have been identified by the controller while performing a task such as a rescan or a check consistency.

Recommended Response Action Replace the failed component. You can identify which component has failed by locating the component that has a red "X" for its status. Perform a rescan after replacing the failed component.

VDR31

Message Controller cache is preserved for missing or offline *arg1* .

Arguments

- ***arg1*** = VD Name

Detailed Description The controller is getting disconnected from its virtual disk, while Input Output (IO) is in-progress.

Recommended Response Action Try importing foreign disks, if any. Check if the enclosure containing the Virtual Disk is disconnected from the controller. Insert any disks that are reported missing or failed. If the enclosure or disks were removed intentionally, the preserved cache can be discarded. See storage hardware documentation for more information on performing these steps.

VDR49

Message *arg1* is permanently degraded.

Arguments

- ***arg1*** = VD Name

Detailed Description A redundant virtual disk has lost redundancy. This may occur when the virtual disk suffers the failure of more than one physical disk. In this case, both the source physical disk and the target disk with redundant data have failed. A rebuild is not possible because there is no longer redundancy.

Recommended Response Action Replace the failed disks and restore from backup.

Category Storage (VDR = Virtual Disk)

VDR50

Message Background Initialization (BGI) completed with uncorrectable errors on *arg1*.

Arguments

- ***arg1*** = virtual disk

Detailed Description The background initialization task encountered errors that cannot be corrected. The virtual disk contains physical disks that have unusable disk space or disk errors that cannot be corrected.

Recommended Response Action Review other messages to identify whether the physical disk that has errors. If the virtual disk is redundant, you can replace the physical disk and continue using the virtual disk. If the virtual disk is non-redundant, you need to recreate the virtual disk after replacing the physical disk. After replacing the physical disk, run a consistency check to verify the data.

VDR52

Message The consistency check found inconsistent parity data on *arg1* .

Arguments

- ***arg1*** = virtual disk

Detailed Description The data on physical disk members of the virtual disk does not match. Redundancy may be lost.

Recommended Response Action Rerun the consistency check task. If you receive this message again, verify the health of the physical disks included in the virtual disk. See the storage hardware documentation for more information. Review messages for significant messages related to the physical disks. If a physical disk has a problem, replace it and restore from a backup copy. Contact technical support if the issue persists.

VDR56

Message Redundancy of *arg1* has been degraded.

Arguments

- ***arg1*** = virtual disk

Detailed Description This message occurs when a physical disk in the disk group was removed or when a physical disk included in a redundant virtual disk fails. Because the virtual disk is redundant (uses mirrored or parity information) and only one physical disk has failed, the virtual disk can be rebuilt. Typically, the virtual disk (E.g. RAID 6) has multiple redundant disks and there is a problem with one of them.

Recommended Response Action Replace the missing or failed physical disk.

VDR57

Message Background Initialization in *arg1* corrected medium error.

Arguments

- ***arg1*** = VD Name

Detailed Description	A disk media error was detected while the controller was completing a background task. A bad disk block was identified. The disk block has been remapped.
Recommended Response Action	Consider replacing the disk. If you receive this alert frequently, ensure to replace the disk. It is recommended to routinely back up your data.

VDR58

Message Bad block medium error is detected at block *arg1* on *arg2* .

Arguments

- **arg1** = args
- **arg2** = VD Name

Detailed Description	Virtual disk bad blocks are due to presence of unrecoverable bad blocks on one or more member physical disks.
Recommended Response Action	Recovering a physical disk bad block depends on the RAID level and state of the virtual disk. If a virtual disk is redundant, the controller can recover a bad block on a physical disk. If a virtual disk is not redundant, then the physical disk bad block results in a virtual disk bad block.

VDR7

Message *arg1* has failed.

Arguments

- **arg1** = virtual disk

Detailed Description One or more physical disks included in the virtual disk have failed. If the virtual disk is non-redundant (does not use mirrored or parity data), then the failure of a single physical disk can cause the virtual disk to fail. If the virtual disk is redundant, then more physical disks have failed than you can rebuild using mirrored or parity information.

Recommended Response Action Create a new virtual disk and restore from a backup.

VDR8

Message *arg1* is degraded either because the physical disk drive in the drive group is removed or the physical disk drive added in a redundant virtual drive has failed.

Arguments

- **arg1** = virtual disk

Detailed Description The virtual drive on the Controller identified in the message is degraded either because the physical disk drive in the drive group is removed or the physical disk drive added in a redundant virtual drive has failed.

Recommended Response Action Do the following and retry the operation: 1) Insert a physical disk drive. After the drive is inserted, the previous data is automatically rebuilt by the system. 2) If not already done, configure a hot-spare for the virtual drive. 3) If a physical disk drive is removed from the disk drive group, either replace the disk or restore the original disk drive.

VDR97

Message Patrol Read corrected a media error on *arg1*.

Arguments

- **arg1** = VD Name

Detailed Description The Patrol Read task has encountered an error such as a bad disk block and remapped data to correct the error.

Recommended Response Action No response action is required.

Category Storage (VDR = Virtual Disk)

Severity Severity 3 (Informational)

Trap/EventID 4355

VDR98

Message *arg1* has switched active controllers. Its active path is now through *arg2* .

Arguments

- ***arg1*** = virtual disk
- ***arg2*** = controller name

Detailed Description The virtual disk identified in the message has changed active paths. This can be because of an attempt to optimize the throughput of the system or it could be because of a controller failover.

Recommended Response Action No response action is required.

VF Event Messages

VF001

Message	Command successful.
Detailed Description	The command was successful.
Recommended Response Action	No response action is required.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF002

Message	General failure.
Detailed Description	The operation did not complete successfully because of an internal issue with the firmware.
Recommended Response Action	Do one of the following: 1) Rerun the command after about 2 minutes 2) Reset iDRAC and rerun the command.
Category	Configuration (VF = vFlash Media)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF003

Message	Missing required parameter: <i>arg1</i>
---------	---

Arguments	<ul style="list-style-type: none"> · <i>arg1</i> = parameter name
Detailed Description	The required input parameter identified in the message is missing.
Recommended Response Action	Refer the iDRAC and Lifecycle Controller User Guides for the required input parameters for this method.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF004

Message	Invalid value for the parameter: <i>arg1</i>
Arguments	<ul style="list-style-type: none"> · <i>arg1</i> = parameter name
Detailed Description	The value of the input parameter identified in the message is not a valid value.
Recommended Response Action	Refer the iDRAC and Lifecycle Controller User Guides for the required input parameters for this method.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF005

Message	Empty partition creation successful
Detailed Description	A partition with no image was created.
Recommended Response Action	No response action is required.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF006

Message	Empty partition creation failed
Detailed Description	Creating a partition without image failed.

Recommended Response Action	Do one of the following: 1) Rerun the command after about 2 minutes 2) Reset iDRAC and rerun the command.
Category	Configuration (VF = vFlash Media)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF0060

Message	Unable to perform the requested operation. Make sure the SD card is inserted and enabled.
Detailed Description	The SD card was not detected. Therefore, the requested operation cannot be completed.
Recommended Response Action	Verify whether the SD card is inserted and enabled, then re-try.
Category	System Health (VF = vFlash Media)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF007

Message	Image partition creation successful
Detailed Description	A partition with an image was created.
Recommended Response Action	No response action is required.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF008

Message	Image partition creation did not complete successfully.
Detailed Description	Creating a partition with an image did not complete successfully.
Recommended Response Action	Do one of the following: 1) Rerun the command after about 2 minutes, 2) Reset iDRAC and rerun the command.
Category	Configuration (VF = vFlash Media)
Severity	Severity 1 (Critical)
Redfish Event Type	

No alerts are applicable for this message

VF009

Message Partition formatting successful

Detailed Description The specified partition was formatted.

Recommended Response Action No response action is required.

Category Configuration (VF = vFlash Media)

Severity Severity 3 (Informational)

Redfish Event Type
No alerts are applicable for this message

VF010

Message Partition formatting did not complete successfully.

Detailed Description Formatting the specified partition did not complete successfully.

Recommended Response Action Do one of the following: 1) Rerun the command after about 2 minutes 2) Reset iDRAC and rerun the command.

Category Configuration (VF = vFlash Media)

Severity Severity 1 (Critical)

Redfish Event Type
No alerts are applicable for this message

VF011

Message Wrong password

Detailed Description The specified password was not correct.

Recommended Response Action Verify the password supplied.

Category Configuration (VF = vFlash Media)

Severity Severity 2 (Warning)

Redfish Event Type
No alerts are applicable for this message

VF012

Message	SD card not present
Detailed Description	There is no SD card detected.
Recommended Response Action	Check the SD card slot.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF013

Message	SD card locked
Detailed Description	The SD card is locked by another operation.
Recommended Response Action	Rerun the command after about 2 minutes.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF014

Message	vFlash not disabled.
Detailed Description	Enabling vFlash was not successful because the vFlash feature is not disabled.
Recommended Response Action	The vFlash is enabled and any attempt to enable it will not be successful.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF015

Message	vFlash not enabled.
----------------	---------------------

Detailed Description	Disabling vFlash was not successful because the vFlash feature is not enabled.
Recommended Response Action	The vFlash is disabled and an attempts to disable it will not be successful.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF016

Message	SD card is read only
Detailed Description	The SD card is not writable.
Recommended Response Action	Check the write-protection tab of the SD card.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF017

Message	SD card not initialized
Detailed Description	The SD card is not initialized.
Recommended Response Action	In order to perform this operation, first initialize the SD Card.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF018

Message	Invalid partition index
Detailed Description	The specified partition index is not valid for the command.
Recommended Response Action	Check that the partition exists.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

VF019

Message	Not enough space on SD card
Detailed Description	The SD card is full.
Recommended Response Action	Check all the partitions, delete the ones that are not necessary and try this operation again.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF020

Message	Exceeded maximum number of partitions
Detailed Description	The number of partitions exceeded the maximum number allowed on a SD card.
Recommended Response Action	This SD card has reached the partition limit. Delete any partitions that are not necessary and try again.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF021

Message	Exceeded maximum partition size of 4GB
Detailed Description	The size specified is greater than the maximum allowed for a partition.
Recommended Response Action	Try a partition size that is smaller than 4GB and the available space on the card.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF022

Message	Partition size below minimum
Detailed Description	The size specified is lower than the minimum allowed for a partition.
Recommended Response Action	Try a larger partition size.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF023

Message	Partition label not unique
Detailed Description	Partition with this label exists. Duplicate labels are not supported.
Recommended Response Action	Try a different partition label.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF024

Message	Partition locked
Detailed Description	The partition is locked by another operation.
Recommended Response Action	Wait for the partition to be unlocked and check the partition status to see if it is attached.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF025

Message	Partition is read only
----------------	------------------------

Detailed Description	Partition is read only.
Recommended Response Action	To perform a write operation on this partition, change its access type to read-write and try this operation again.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF026

Message	Partition index in use
Detailed Description	This partition index has already been used.
Recommended Response Action	This partition index has already been used. Try a different index.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF027

Message	Partition already attached
Detailed Description	This partition is attached and attempts to attach it will fail.
Recommended Response Action	No response action is required.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF028

Message	Partition already detached
Detailed Description	This partition is detached and attempts to detach it will fail.
Recommended Response Action	No response action is required.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

VF029

Message Insufficient permission

Detailed Description The user account credentials provided for this vFlash operation do not have the correct privileges. Virtual Media Access privilege is required to perform vFlash SD Card media operations.

Recommended Response Action Use a different user account the has Virtual Media Access privilege.

Category Configuration (VF = vFlash Media)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

VF030

Message Invalid hash type

Detailed Description The specified hash type is not a valid type.

Recommended Response Action Provide a valid hash type.

Category Configuration (VF = vFlash Media)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

VF031

Message Invalid partition label.

Detailed Description The specified partition label is not a valid label.

Recommended Response Action Try a label that complies with the standards for an OS volume label.

Category Configuration (VF = vFlash Media)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

VF032

Message	Invalid partition type.
Detailed Description	The specified partition type is not a valid type.
Recommended Response Action	Try a partition type that is supported.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF033

Message	Invalid partition format type.
Detailed Description	The specified format type is not a valid type.
Recommended Response Action	Try a format type that is supported.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF034

Message	Invalid partition access type.
Detailed Description	The specified partition access type is not a valid type.
Recommended Response Action	Try a partition access type that is supported.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF035

Message	Invalid image.
----------------	----------------

Detailed Description	The image file is not valid.
Recommended Response Action	Check the image file provided.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF036

Message	Attach partition successful.
Detailed Description	The partition was attached.
Recommended Response Action	No response action is required.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF037

Message	Attach partition operation did not complete successfully.
Detailed Description	The attaching partition operation did not complete successfully.
Recommended Response Action	No response action is required.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF038

Message	Detach partition successful
Detailed Description	The partition was detached.
Recommended Response Action	No response action is required.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

VF039

Message	Detach partition operation did not complete successfully.
Detailed Description	The detaching partition operation did not complete successfully.
Recommended Response Action	No response action is required.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF040

Message	Image hash verification was not successful.
Detailed Description	The downloaded image did not successfully complete the hash verification.
Recommended Response Action	Try the download again. If this issue persists, check the network connectivity.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF041

Message	Remote mount was not successful.
Detailed Description	The remote share could not be mounted.
Recommended Response Action	Try the operation again. If this problem persists, check your login credentials and network.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF042

Message	Remote file missing.
Detailed Description	The remote file could not be found.
Recommended Response Action	Check the mount area.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF043

Message	Remote file too large.
Detailed Description	The file size is too large to be used.
Recommended Response Action	Try a smaller file.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF044

Message	TFTP download operation was not successful.
Detailed Description	File transfer was not successful. This could be because of network problems or an operational problem with the file server.
Recommended Response Action	Try the download again. If the issue persists, validate that the network share is operational.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF045

Message	FTP download operation was not successful.
----------------	--

Detailed Description	File transfer was not successful. This could be because of network problems or an operational problem with the file server.
Recommended Response Action	Try the download again. If the issue persists, validate that the network share is operational.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF046

Message	HTTP download operation was not successful.
Detailed Description	File transfer was not successful. This could be because of network problems or an operational problem with the file server.
Recommended Response Action	Try the download again. If the issue persists, validate that the network share is operational.
Category	Configuration (VF = vFlash Media)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF047

Message	Unsupported SD Card.
Detailed Description	This is not a Dell-licensed VFlash.
Recommended Response Action	This feature requires a Dell SD card.
Category	Configuration (VF = vFlash Media)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VF048

Message	Initialize media successful.
Detailed Description	The SD card was initialized.
Recommended Response Action	No response action is required.

Category Configuration (VF = vFlash Media)
Severity Severity 3 (Informational)
Redfish Event Type
No alerts are applicable for this message

VF049

Message Initialize media operation did not complete successfully.
Detailed Description The initializing SD card operation did not complete successfully.
Recommended Response Action No response action is required.
Category Configuration (VF = vFlash Media)
Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

VF050

Message Export partition successful.
Detailed Description The partition was copied.
Recommended Response Action No response action is required.
Category Configuration (VF = vFlash Media)
Severity Severity 3 (Informational)
Redfish Event Type
No alerts are applicable for this message

VF051

Message Export partition operation did not complete successfully.
Detailed Description The copying partition operation did not complete successfully.
Recommended Response Action No response action is required.
Category Configuration (VF = vFlash Media)

VFL0711

Message	SD card is write-protected and could not be initialized.
Detailed Description	An error occurred while initializing the SD card because the SD card write-protection feature is enabled.
Recommended Response Action	Move the SD card write-protection tab to the disabled position and try again.
Category	Configuration (VFL = vFlash Event)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VFL0712

Message	One or more partitions are busy with another operation; the SD card could not be initialized.
Detailed Description	None.
Recommended Response Action	Retry the task after a few minutes.
Category	Configuration (VFL = vFlash Event)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VFL0713

Message	One or more partitions are currently attached; the SD card could not be initialized.
Detailed Description	None.
Recommended Response Action	Detach the partitions and try again.
Category	Configuration (VFL = vFlash Event)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VFL0714

Message	SD card is not ready and could not be initialized.
----------------	--

Detailed Description	None.
Recommended Response Action	Retry after a few minutes.
Category	Configuration (VFL = vFlash Event)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VFL0715

Message	Error occurred while initializing the SD Card due to insufficient permission.
Detailed Description	None.
Recommended Response Action	Contact the administrator for the required permissions and try again.
Category	Configuration (VFL = vFlash Event)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VFL0716

Message	SD Card is not a vFlash SD Card; the SD card could not be initialized.
Detailed Description	An error has occurred while initializing SD Card because the SD card is not an approved vFlash SD card.
Recommended Response Action	Insert a vFlash SD card and try again.
Category	Configuration (VFL = vFlash Event)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VFL0719

Message	One or more partitions are in use; the SD card could not be initialized.
Detailed Description	The SD card is in use by another process. Initialization requires exclusive access to the SD card to complete the initialization.
Recommended Response Action	The SD card is in use by another process. Retry after a few minutes.
Category	Configuration (VFL = vFlash Event)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

VFL0721

Message Error occurred while initializing the SD Card due to a timeout.

Detailed Description The SD card Initialization did not complete within the maximum process allotted time.

Recommended Response Action Retry after a few minutes.

VLT400

Message The *arg1* sensor has failed with a value *arg2* Volts.

Arguments

- ***arg1*** = sensor name
- ***arg2*** = voltage

Detailed Description A voltage sensor identified in the message may have failed. This condition can cause system performance issues and degradation in the monitoring capability of the system.

Recommended Response Action Do one of the following to resolve the issue: 1) Verify the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. 2) Re-configure the system to a minimum configuration, and verify if the sensor displays a normal value, otherwise replace the system board. 3) If the sensor identified is a processor voltage sensor, remove the processor module and inspect processor socket, and replace if required. If the issue persists, contact your service provider.

VLT401

Message Unable to read *arg1* sensor value.

Arguments
 · ***arg1*** = sensor name

Detailed Description A voltage sensor identified in the message may have failed. This condition can cause system performance issues and degradation in the monitoring capability of the system.

Recommended Response Action Do one of the following to resolve the issue: 1) Verify the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. 2) Re-configure the system to a minimum configuration, and verify if the sensor displays a normal value, otherwise replace the system board. 3) If the sensor identified is a processor voltage sensor, remove the processor module and inspect processor socket, and replace if required. If the issue persists, contact your service provider.

VLT402

Message The *arg1* sensor has returned to a normal state with a value of *arg2* Volts.

- Arguments**
- ***arg1*** = sensor name
 - ***arg2*** = voltage

Detailed Description The voltage sensor identified in the message has returned to a normal state.

Recommended Response Action No response action is required.

VLT403

Message The *arg1* sensor state has changed to a warning state with a value of *arg2* Volts.

- Arguments**
- ***arg1*** = sensor name
 - ***arg2*** = voltage

Detailed Description The voltage sensor identified in the message is faulty, or the voltage exceeds the preset warning threshold. This condition can cause system performance issues and degradation in the monitoring capability of the system.

Recommended Response Action Do one of the following to resolve the issue: 1) Verify the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. 2) Re-configure the system to a minimum configuration, and verify if the sensor displays a normal value, otherwise replace the system board. 3) If the sensor identified is a processor voltage sensor, remove the processor module and inspect processor socket, and replace if required. VLT404

Message The *arg1* sensor detected an error with a value of *arg2* Volts.

Arguments

- ***arg1*** = sensor name
- ***arg2*** = voltage

Detailed Description The voltage sensor identified in the message is faulty, or the voltage exceeds the preset critical threshold. This condition can cause system performance issues and degradation in the monitoring capability of the system.

Recommended Response Action Do one of the following to resolve the issue: 1) Verify the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. 2) Re-configure the system to a minimum configuration, and verify if the sensor displays a normal value, otherwise replace the system board. 3) If the sensor identified is a processor voltage sensor, remove the processor module and inspect processor socket, and replace if required. VLT405

Message The *arg1* sensor has failed with a value of *arg2* Volts.

- Arguments**
- ***arg1*** = sensor name
 - ***arg2*** = voltage

Detailed Description A voltage sensor identified in the message may have failed. This condition can cause system performance issues and degradation in the monitoring capability of the system.

Recommended Response Action Do one of the following to resolve the issue: 1) Verify the Embedded System Management (ESM) Log for any sensor related faults. VRM Event Messages

VRM0009

Message No Virtual Media devices are currently connected.

Detailed Description No virtual media was found to disconnect.

Recommended Response Action No response action is required.

Category System Health (VRM = Virtual Console)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

VRM0010

Message	Unable to disconnect Virtual Media devices.
Detailed Description	The virtual media could not be disconnected. Possible reason is that it might be in use.
Recommended Response Action	No response action is required.
Category	System Health (VRM = Virtual Console)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VRM0011

Message	The Virtual Media image server is not currently connected.
Detailed Description	The Virtual Media server is already disconnected.
Recommended Response Action	No response action is required.
Category	System Health (VRM = Virtual Console)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VRM0012

Message	The Virtual Media image server is already connected.
Detailed Description	The Virtual Media server is already connected.
Recommended Response Action	No response action is required.
Category	System Health (VRM = Virtual Console)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VRM0013

Message	Virtual Media services is currently attached to the USB interface. It must be detached before the image server can be connected.
Detailed Description	Simultaneously connecting Virtual Media and USB interface is not possible.
Recommended Response Action	Detach the USB interface and re-try.
Category	System Health (VRM = Virtual Console)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VRM0014

Message	Unable to determine current state of Virtual Media USB interface.
Detailed Description	Racadm tool was unable to get the status of the USB interface.
Recommended Response Action	No response action is required.
Category	System Health (VRM = Virtual Console)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VRM0015

Message	Virtual Console is ENABLED
Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	Configuration (VRM = Virtual Console)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VRM0016

Message	Virtual Console is DISABLED
----------------	-----------------------------

Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	Configuration (VRM = Virtual Console)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VRM0017

Message	Virtual Media disconnect operation successful
Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	Configuration (VRM = Virtual Console)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VRM0018

Message	Virtual Media image server operation successful
Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	Configuration (VRM = Virtual Console)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

VRM0019

Message	Remote Image is now Configured
Detailed Description	The Remote Image is now configured and ready to use.
Recommended Response Action	No response action is required.
Category	System Health (VRM = Virtual Console)
Severity	Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

VRM0020

Message Unable to determine current Remote Image state.

Detailed Description Racadm tool failed to obtain the data.

Recommended Response Action No response action is required.

Category System Health (VRM = Virtual Console)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

Getting help

Topics:

- [Contacting Dell](#)
- [Documentation feedback](#)
- [Accessing system information by using QRL](#)
- [Locating the Service Tag of your system](#)

Contacting Dell

Dell provides several online and telephone based support and service options. If you do not have an active internet connection, you can find contact information about your purchase invoice, packing slip, bill, or Dell product catalog. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical assistance, or customer service issues:

- 1 Go to Dell.com/support.
- 2 Select your country from the drop-down menu on the lower right corner of the page.
- 3 For customized support:
 - a Enter your system Service Tag in the **Enter your Service Tag** field.
 - b Click **Submit**.The support page that lists the various support categories is displayed.
- 4 For general support:
 - a Select your product category.
 - b Select your product segment.
 - c Select your product.The support page that lists the various support categories is displayed.
- 5 For contact details of Dell Global Technical Support:
 - a Click [Global Technical Support](#).
 - b The **Contact Technical Support** page is displayed with details to call, chat, or e-mail the Dell Global Technical Support team.

Documentation feedback

You can rate the documentation or write your feedback on any of our Dell EMC documentation pages and click **Send Feedback** to send your feedback.

Accessing system information by using QRL

You can use the Quick Resource Locator (QRL) to get immediate access to the information about your system. The QRL is located on the top of the system cover and provides access to generic information about your system. If you want to access information specific to the system service tag, such as configuration and warranty, you can access QR code located on the system Information tag. Ensure that your smart phone or tablet has the QR code scanner installed.

The QRL includes the following information about your system:

- How-to videos
- Reference materials, including the Owner's Manual, LCD diagnostics, and mechanical overview

· A direct link to Dell to contact technical assistance and sales teams

- 1 Go to **Dell.com/QRL** and navigate to your specific product or
- 2 Use your smart phone or tablet to scan the model-specific Quick Resource (QR) code on your PowerEdge system or in the Quick Resource Locator section.

Locating the Service Tag of your system

You can identify your system using the unique Express Service Code and Service Tag. Pull out the information tag in front of the system to view the Express Service Code and Service Tag. Alternatively, the information may be on a sticker on the chassis of the system. The mini Enterprise Service Tag (EST) is found on the back of the system. This information is used by Dell to route support calls to the appropriate personnel.
