

Event and Error Message Reference Guide for 14th Generation Dell EMC PowerEdge Servers

Version 1.90

Notes, cautions, and warnings

 **NOTE:** A NOTE indicates important information that helps you make better use of your product.

 **CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

 **WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.

Introduction

- This Error and Event Message reference guide lists the messages that are displayed on graphical user interface (GUI), command line interface (CLI), and stored in the log files. Messages are displayed or stored as a result of user action, automatic event occurrence, or for data logging purposes.
- Messages are divided into three elements:
 - **Message:** Indicates the actual message, and probable cause, wherever applicable.
 - **Recommended Response Action:** Indicates the remedial tasks to be performed by the user to resolve an issue. Comprehensive information is given about the GUI navigation path (or RACADM and WS-Man commands) that helps is effective and fast resolution.
 - **Detailed Description:** Provides more info about the error or event, where appropriate.
- Messages are classified according to hardware- and software categories in the server and its management applications (such as iDRAC, OMSA, CMC, and Lifecycle Controller). The category and severity of each message is also specified.
- Use this reference guide to understand more about the events and resolve issues associated with your Dell Enterprise systems.
- Messages are prefixed with event type to help easy identification. For example PSU, STOR, and VLT representing power supply unit, storage and voltage respectively. Expansion of acronyms used for classifying error messages is listed in the table here:

Acronym Category

AMP	Amperage
ASR	Auto Sys Reset
BAR	Backup & Restore
BAT	Battery Event
BIOS	BIOS management
BOOT	Boot control
CBL	Cable
CMC	Chassis Management Control
CPU	Processor
CPUA	Proc Absent
CTL	Storage Controller
DH	Certificate Management
DIAG	Diagnostic
DIS	Auto-discovery
DKM	Dell Key Manager
ENC	Storage enclosure
EPP	Extended power performance
FAN	Fan event
FC	Fibre channel
FCD	Feature card
FLDC	Unknown

FSD	Debug
HWC	Hardware configuration
IOID	I/O Identify optimization
IOV	I/o virtualization
IPA	DRAC IP address
ISM	iDRAC Service Module
JCP	Job control
LC	Lifecycle Controller
LIC	Licensing
LNK	Link status
LOG	Log event
MEM	Memory
NIC	NIC configuration
OSD	OS deployment
OSE	OS event
PCI	PCI device
PDR	Physical disk drive
PFM	System performance event
POW	Power usage
PR	Part exchange
PST	BIOS POST
PSU	Power supply unit
PSUA	PSU absent
PWR	Power usage
RAC	RAC event
RDU	Redundancy
RED	FW download
RFL	IDSMD media
RFLA	IDSMD absent
RFM	Flex address SD
RRDU	IDSMD redundancy
RSI	Remote service
SEC	Security event
SEL	System event log
SSD	PCIe SSD
STOR	Storage
SUP	Firmware update job
SWC	Software configuration
SWU	Software change
SYS	System info

TMP	Temperature
TMPS	Temperature statistics
TST	Test alert
UEFI	UEFI event
USR	User tracking
VDR	Virtual drive
VF	vFlash media
VFL	vFlash event
VFLA	vFlash absent
VLТ	Voltage
VME	Virtual media
VRM	Virtual console

Alert category definition

- **System Health:** Represents all the alerts that are related to hardware within the system chassis. For example, temperature errors, voltage errors, and device errors.
- **Storage Health:** Represents alerts that are related to the storage subsystem. For example, controller errors, physical disk drive errors, and virtual drive errors.
- **Configuration:** Represents alerts that are related to hardware, firmware, and software configuration changes. For example, PCI-e card added or removed, RAID configuration changed, and iDRAC license changed.
- **Audit:** Category represents the audit log. Examples include, user login/logout information, Password authentication failures, session info, power states.
- **Update:** Represents alerts that are generated because of firmware or driver upgrades and downgrades. This does not represent firmware inventory.

Intended audience

This Error and Event Message reference guide is intended for system administrators and other users involved in managing and troubleshooting Dell EMC Enterprise systems. For quick and easy reference, this guide is available on mobile devices also.

Organization of topics

Event and Error messages are listed in the alphabetical order of different event messages. For example, BOOT, BIOS, CMC, HWC, LC, STOR, and UEFI.

Documentation resources

This section provides information about the documentation resources for your system.

Table 1. Additional documentation resources for your system

Task	Document	Location
Setting up your system	For information about installing the system into a rack, see the Rack documentation included with your rack solution.	Dell.com/poweredge manuals
	For information about installing the system into a rack, see the Rack documentation included with your rack solution or the <i>Getting Started With Your System</i> document that is shipped with your system.	
	For information about installing the system into a rack, see the Rack documentation included with the <i>Getting Started With Your System</i> document that is shipped with your system.	
	For information about turning on the system and the technical specifications of your system, see the <i>Getting Started With Your System</i> document that is shipped with your system.	Dell.com/poweredge manuals
Configuring your system	For information about iDRAC features, configuring and logging in to iDRAC, and managing your system remotely, see the Integrated Dell Remote Access Controller User's Guide.	Dell.com/idrac manuals
	For information about installing the operating system, see the operating system documentation.	Dell.com/operatingsystem manuals
	For information about understanding Remote Access Controller Admin (RACADM) subcommands and supported RACADM interfaces, see the RACADM Command Line Reference Guide for iDRAC.	Dell.com/idrac manuals
	For information about updating drivers and firmware, see the Methods to download firmware and drivers section in this document.	Dell.com/support/drivers

Task	Document	Location
Managing your system	For information about systems management software offered by Dell, see the Dell OpenManage Systems Management Overview Guide.	Dell.com/openmanagemanuals
	For information about setting up, using, and troubleshooting OpenManage, see the Dell OpenManage Server Administrator User's Guide.	Dell.com/openmanagemanuals
	For information about installing, using, and troubleshooting Dell OpenManage Essentials, see the Dell OpenManage Essentials User's Guide.	Dell.com/openmanagemanuals
	For information about installing and using Dell System E-Support Tool (DSET), see the Dell System E-Support Tool (DSET) User's Guide.	Dell.com/DSET
	For information about installing and using Active System Manager (ASM), see the Active System Manager User's Guide.	Dell.com/asmdocs
	For understanding the features of Dell Lifecycle Controller (LCC), see the Dell Lifecycle Controller User's Guide.	Dell.com/idracmanuals
	For information about partner programs enterprise systems management, see the OpenManage Connections Enterprise Systems Management documents.	Dell.com/omconnectionsenterprisesystemsmanagement
	For information about connections and client systems management, see the OpenManage Connections Client Systems Management documentation.	Dell.com/dellclientcommandsuitemanuals
Working with Dell PowerEdge RAID controllers	For information about viewing inventory, performing configuration and monitoring tasks, remotely turning on or off servers, and enabling alerts for events on servers and components using the Dell Chassis Management Controller (CMC), see the CMC User's Guide.	Dell.com/esmmanuals
Understanding event and error messages	For information about understanding the features of the Dell PowerEdge RAID controllers (PERC) and deploying the PERC cards, see the Storage controller documentation.	Dell.com/storagecontrollermanuals
Fan Control Board firmware update and Set Chassis Type procedure	For information about checking the event and error messages generated by the system firmware and agents that monitor system components, see the Dell Event and Error Messages Reference Guide.	Dell.com/openmanagemanuals > OpenManage software
Fan Control Board firmware update and Set Chassis Type procedure	For information about updating the Fan Control Board firmware and setting the chassis type to accommodate either PowerEdge C6320 or PowerEdge C6320p sleds in the PowerEdge C6300 enclosure, see the Fan Control Board firmware update and Set Chassis Type procedure section in this document.	Dell.com/poweredgemanuals

Dell EMC server troubleshooting information

Detailed information about your system is available in your system-specific documents such as Owner's Manual, RACADM Reference Guide, WS-Man Profile documents, and User's Guide. See Dell.com/poweredge manuals and Dell.com/idrac manuals.

AMP Event Messages

AMP0300

Message The system board *arg1* current is less than the lower warning threshold.

Arguments
· *arg1* = name

Detailed Description None.

Recommended Response Action Review system power policy, check system logs for power related failures, and review system configuration changes.

Category System Health (AMP = Amperage)

Severity Severity 2 (Warning)

Trap/EventID 2178

Redfish Event Type Alert

	Filter Visibility	IPMI Alert	SNMP Alert	Email Alert	Remote System Log	WS Eventing	Redfish Eventing
iDRAC	✓	✓*	✓	✓	✓	✓	✓
CMC	✓		✓*	✓*	✓*		
	LC Log	LCD	OS Log	Power Off	Power Cycle	Reset	Chassis Event Proxy
iDRAC	✓*		✓	✓	✓	✓	
CMC	✓*						✓*

AMP0301

Message The system board *arg1* current is less than the lower critical threshold.

Arguments
· *arg1* = name

Detailed Description None.

Recommended Response Action Review system power policy, check system logs for power related failures, and review system configuration changes.

Category System Health (AMP = Amperage)

Severity Severity 1 (Critical)

Trap/EventID 2177
 LCD Message System board <name> current is outside of range. Contact Support
 Redfish Event Type Alert

	Filter Visibility	IPMI Alert	SNMP Alert	Email Alert	Remote System Log	WS Eventing	Redfish Eventing
iDRAC	✓	✓*	✓	✓	✓	✓	✓
CMC	✓		✓*	✓*	✓*		
	LC Log	LCD	OS Log	Power Off	Power Cycle	Reset	Chassis Event Proxy
iDRAC	✓*		✓	✓	✓	✓	
CMC	✓*						✓*

AMP0302

Message The system board *arg1* current is greater than the upper warning threshold.

Arguments
 · *arg1* = name

Detailed Description Product documentation contains information on correct configuration. The failure could also be caused by a faulty component or related cabling. System performance may be degraded.

Recommended Response Action Review system power policy, check system logs for power related failures, and review system configuration changes.

Category System Health (AMP = Amperage)

Severity Severity 2 (Warning)

Trap/EventID 2178

LCD Message The system board <name> current is outside of range.

Redfish Event Type Alert

	Filter Visibility	IPMI Alert	SNMP Alert	Email Alert	Remote System Log	WS Eventing	Redfish Eventing
iDRAC	✓	✓*	✓	✓	✓	✓	✓
CMC	✓		✓*	✓*	✓*		
	LC Log	LCD	OS Log	Power Off	Power Cycle	Reset	Chassis Event Proxy
iDRAC	✓*		✓	✓	✓	✓	
CMC	✓*						✓*

AMP0303

Message The system board *arg1* current is greater than the upper critical threshold.

Arguments

· **arg1** = name

Detailed Description Product documentation contains information on correct configuration. The failure could also be caused by a faulty component or related cabling. System performance may be degraded.

Recommended Response Action Review system power policy, check system logs for power related failures, and review system configuration changes.

Category System Health (AMP = Amperage)

Severity Severity 1 (Critical)

Trap/EventID 2177

LCD Message System board <name> current is outside of range. Contact Support

Redfish Event Type Alert

	Filter Visibility	IPMI Alert	SNMP Alert	Email Alert	Remote System Log	WS Eventing	Redfish Eventing
iDRAC	✓	✓*	✓	✓	✓	✓	✓

AMP400

Message The *arg1* sensor has failed, and the last recorded value by the sensor was *arg2* A.

Arguments

- ***arg1*** = sensor name
- ***arg2*** = current

Detailed Description The current sensor identified in the message has failed. This condition can cause system performance issues and degradation in the monitoring capability of the system.

Recommended Response Action Check the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. For more information, contact your service provider.

AMP403

Message The *arg1* sensor state has changed to a warning state with a value of *arg2* A.

Arguments

- ***arg1*** = sensor name
- ***arg2*** = current

Detailed Description The current sensor identified in the message is faulty or the current drawn by the system exceeds the warning threshold. This condition can cause system performance issues and degradation in the monitoring capability of the system.

Recommended Response Action Verify the Embedded System Management (ESM) Log for any sensor related faults. If there is a failed sensor, replace the system board. For more information, contact your service provider. Otherwise, change the warning threshold for the current sensor such that it corresponds to the hardware configuration.

BAR111

Message	Server Profile operation timed out.
Detailed Description	The Import or Export job did not complete successfully. The Import or Export operation timed-out while validating or transferring Server Profile data. Possible causes are loss of network connectivity, vFlash SD card access issues, or problems encountered with system power off and on.
Recommended Response Action	If the managed system does not turn off during Import, turn off the system and retry the operation. If the managed system turned off, restart the Remote Access Controller and retry the operation. If the export was to a network share verify the connection and try the operation again. If the export destination was the vFlash media, insert a new SD card and try the operation again.

BAR112

Message The system identifier in the Server Profile file does not match the target system.

Detailed Description Server Profile backup file validation failed because the target system identifier information does not match the value stored in the file. The Server Profile file may be from another system or the iDRAC may need to be restarted to acquire the system identifier information accurately.

Recommended Response Action Obtain a valid Server Profile file for the target system and try the operation again. If the problem reoccurs, restart the iDRAC and try the operation again.

BAT1000

Message	Battery on <i>arg1</i> is missing.
Arguments	<ul style="list-style-type: none"> · <i>arg1</i> = controller name
Detailed Description	The controller cannot communicate with the battery. The battery is absent or improperly connected. A battery with a weak or depleted charge may also cause this message.
Recommended Response Action	Verify that the device is present and then check the cables. See the storage hardware documentation to verify cabling. In addition check the connection to the controller battery and the battery health. A battery with a weak or depleted charge may cause this message.

BAT1004

Message The battery on *arg1* learn cycle has timed out.

Arguments

- ***arg1*** = controller name

Detailed Description The controller battery must be fully charged before the learn cycle can begin. The battery may be unable to maintain a full charge causing the learn cycle to timeout. In addition, the battery must be able to maintain cached data for a specified period of time in the event of a power loss. For example, some batteries maintain cached data for 24 hours. If the battery is unable to maintain cached data for the required period of time, then the Learn cycle will timeout.

Recommended Response Action Replace the battery pack. The battery is unable to maintain a full charge.

BAT1025

Message *arg1* is unable to recover cached data from the Battery Backup Unit (BBU).

Arguments

- ***arg1*** = controller name

Detailed Description The controller was unable to recover data from the cache. This may indicate data loss has occurred.

Recommended Response Action Verify that the battery is charged and in good health. See the hardware documentation for more information. When the battery charge is unacceptably low, the battery cannot maintain cached data. Data loss may also have occurred, restoring data from backups may be needed. Verify whether the battery has met its recharge limit. The battery may need to be recharged. Contact technical support if the issue persists.

BAT1033

Message The battery on *arg1* was removed.

Arguments

- ***arg1*** = controller name

Detailed Description The controller cannot communicate with the battery. Either the battery was removed, or the contact point between the controller and the battery is degraded.

Recommended Response Action Make sure that the battery is present and properly connected. If the battery is present, wait for a few minutes and re-check if the battery is detected. If the contact point between the battery and the controller is degraded, you must replace the battery, the controller, or both. Refer to the storage hardware documentation for information on how to safely access, or remove. Contact technical support if the issue persists.

Message Lifecycle Controller is not enabled, cannot create Configuration job.

Detailed Description For 11G systems: System Services must be enabled to perform the requested operation. System Services has been disabled through the iDRAC configuration utility accessed by pressing CTRL+E on boot up or through a remote operation. For 12G and above generations: Lifecycle Controller must be enabled to perform the requested operation. Lifecycle Controller has been disabled by pressing F2 Setup, selecting iDRAC Configuration, and selecting Lifecycle Controller Settings on boot up or through a remote operation.

Recommended Response Action For 11G systems: Use the iDRAC configuration utility to enable the System Services by pressing on the CTRL+E option on boot up at the targeted system. For 12G and above generations: Use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings, to enable the Lifecycle Controller on boot up of the targeted system.

BOOT003

Message	Method not supported.
Detailed Description	This operation is not supported on the current configuration.
Recommended Response Action	This operation is not supported on the current configuration, check documentation and try again.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT004

Message	Invalid number of Boot Source arguments
Detailed Description	An invalid number of source arguments was passed to the method.
Recommended Response Action	Check documentation and try again (details).
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT005

Message	Missing required parameter.
Detailed Description	One or more of the invoked methods required parameters are missing.
Recommended Response Action	Check documentation for the method in question and try again.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT006

Message	Invalid Boot Source InstanceID
Detailed Description	One or more of the Boot Source instance IDs does not contain valid data.
Recommended Response Action	Verify that all of the Boot Source instance IDs being entered are as they appear in the DCIM_BootSourceSetting enumeration.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT007

Message	Boot Source does not belong to specified Boot Configuration
Detailed Description	One or more of the Boot Source instance IDs does not belong to the affected Boot Configuration.
Recommended Response Action	ChangeBootOrderByInstanceID only accepts Boot Sources from the impacted Boot Configuration. Verify that all source arguments belong to the desired Boot Configuration.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT008

Message	Source argument contains more devices than are present on the system
Detailed Description	More source arguments were provided than are available for the impacted Boot Configuration.
Recommended Response Action	Verify that all of the Boot Source instance IDs being entered are as they appear in the DCIM_BootSourceSetting enumeration.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT009

Message	Boot Sources cannot be found for this Boot Configuration
----------------	--

Detailed Description	No Boot Sources could be found for the desired Boot Configuration.
Recommended Response Action	Verify that Boot Sources for the indicated Boot Configuration are displaying when enumerating DCIM_BootSourceSetting. Power cycle system and reapply firmware packages for Lifecycle Controller and iDRAC.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT010

Message	Could not locate vFlash partition index
Detailed Description	The provided vFlash partition index could not be found on the system.
Recommended Response Action	Verify that a vFlash partition with the desired index exists on the System.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT011

Message	Failed to set vFlash partition for one time boot
Detailed Description	The provided vFlash partition could not be set for one time boot.
Recommended Response Action	Power cycle system and reapply firmware packages for Lifecycle Controller and iDRAC.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT012

Message	Job started to attach and set vFlash SD card partition for OneTime boot.
Detailed Description	A job was created to configure a OneTime boot to the specified vFlash SD card partition. If this partition was not attached to the system, the job attaches it as well.
Recommended Response Action	No response action is required.

Category	Configuration (BOOT = BOOT Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT013

Message	Cannot make changes to non-active boot list.
Detailed Description	The boot list is currently not active. Changes cannot be made to boot list that is not active.
Recommended Response Action	Alter boot mode to set the boot list active and retry the operation.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT014

Message	Virtual media not ready.
Detailed Description	The systems SD card has been removed or is in use.
Recommended Response Action	Verify that the SD card is inserted and that another operation is not in progress, and try again.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT015

Message	Set operation successful for the boot partition.
Detailed Description	The boot partition configuration request was successful. An unattached vFlash partition was configured for one-time boot using the ChangeBootOrderByInstanceID method. The method creates a job (to attach the vFlash partition and set the partition for one-time boot).
Recommended Response Action	No response action is required.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 3 (Informational)
Redfish Event Type	

No alerts are applicable for this message

BOOT016

Message	Input source argument value for the boot device is incorrect or not found among the boot devices on the system.
Detailed Description	The input source argument value referring to the boot device is incorrect or empty. The boot device identifier must match the InstanceID for the Boot Source Setting instance that represents the boot device.
Recommended Response Action	Use the correct source argument value for the boot device and retry the operation.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT017

Message	Source argument does not support enable or disable mode.
Detailed Description	The boot device(s) specified in the source argument used in the operation cannot be enabled or disabled. This behavior applies to BCV devices and one-time boot.
Recommended Response Action	Refer to the documentation on validity of operation for the boot device specified. For more information on the operation, see Lifecycle Controller-Remote Services documentation.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT018

Message	Specified Boot Control List is read-only
Detailed Description	The Boot Control List specified in the operation is read-only and cannot be modified.
Recommended Response Action	Refer to the documentation on validity of operation for the Boot Control List specified. For more information on the operation, see Lifecycle Controller-Remote Services documentation.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT019

Message	Unable to run the ChangeBootOrderByInstanceID command because the BIOS Export operation is in progress.
Detailed Description	The ChangeBootOrderByInstanceID command cannot be run because the BIOS Export operation is in progress.
Recommended Response Action	Wait for the BIOS Export operation to complete and retry the operation.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT020

Message	Unable to run the ChangeBootOrderByInstanceID command because the BIOS Import operation is in progress.
Detailed Description	The ChangeBootOrderByInstanceID command cannot be run because the BIOS Import operation is in progress.
Recommended Response Action	Wait for the BIOS Import operation to complete and retry the operation.
Category	Configuration (BOOT = BOOT Control)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

BOOT8500

Message	Unable to change the BIOS boot order for the Server <i>arg1</i>
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = slot number
Detailed Description	Unable to change the BIOS boot order for the server because of a broken communication between the CMC and iDRAC, or iDRAC is rebooting.
Recommended Response Action	Reset iDRAC or wait until iDRAC reboots, and retry the operation.

Message	The Multi-Chassis Management group lead redundancy is lost because of either network issues or firmware version mismatch.
----------------	---

Detailed Description The Redundancy feature of the Multi-Chassis Management (MCM) group lead chassis is unavailable anymore either because of network issues or difference in the firmware version of lead and backup chassis.

Recommended Response Action Do the following: 1) Check the network cables that connect the management ports between the chassis. 2) Make sure that the firmware version of the lead and backup chassis are same. If the issue persists, unassign the backup chassis and reassign. For information about assigning a backup chassis, see the OpenManage Enterprise-Modular Users Guide available on the support site.

Message The Redundancy feature of the Multi-Chassis Management (MCM) group lead chassis is degraded.

Detailed Description The Redundancy feature of the Multi-Chassis Management (MCM) group lead chassis is degraded.

Recommended Response Action No response action is required. The configuration data of the Multi-Chassis Management (MCM) will be automatically recovered and synchronized. If condition persists, unassign the backup and repeat the assign backup operation.

Message	The Multi-Chassis Management (MCM) lead chassis is unable to communicate with the backup chassis <i>arg1</i> because of network issues.
Arguments	· <i>arg1</i> = service tag
Detailed Description	The Multi-Chassis Management (MCM) lead chassis cannot communicate with the backup chassis identified in the message because of network issues.
Recommended Response Action	Do the following: 1) Check the network cables that connect the management ports between the chassis. 2) If a cable issue is not found, but the lead chassis is still inaccessible by using its management IP, promote the backup chassis as the lead chassis. For information about assigning a lead chassis, see the OpenManage Enterprise-Modular User Guide available on the support site.

CDIS2002

Message	Unable to complete the operation because an invalid credential type provided.
Detailed Description	The operation cannot be completed because the entered credential type is invalid.
Recommended Response Action	Enter a valid credential type and retry the operation.
Category	Configuration (CDIS = Discovery)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CDIS2004

Message	Unable to save credentials because the provided credential is null or the entered ID does not exist.
Detailed Description	The credentials cannot be saved because the provided credential is null or the entered ID does not exist.
Recommended Response Action	Make sure that all credential fields are valid and retry the operation.
Category	Configuration (CDIS = Discovery)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CDIS2006

Message	Unable to update or delete connection profile because the profile ID <i>arg1</i> does not exist.
Arguments	<ul style="list-style-type: none">• <i>arg1</i> = id
Detailed Description	The operation cannot be completed because the connection profile ID identified in the message does not exist.
Recommended Response Action	Enter a valid connection profile ID and retry the operation.
Category	Configuration (CDIS = Discovery)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CDIS2007

Message	Unable to retrieve connection profile information.
Detailed Description	Unable to retrieve connection profiles because an error occurred.
Recommended Response Action	No response action required.
Category	Configuration (CDIS = Discovery)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CDIS4001

Message	Unable to discover the device(s) <i>arg1</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = target
Detailed Description	The specified device(s) cannot be discovered.
Recommended Response Action	Make sure the targets are available and retry the operation.
Category	Configuration (CDIS = Discovery)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CDIS4045

Message	Discovery job with name <i>arg1</i> created successfully.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = job id
Detailed Description	Discovery job successfully created.
Recommended Response Action	No response action required.
Category	Configuration (CDIS = Discovery)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CDIS4046

Message Discovery job with name *arg1* modified successfully.

Arguments

- ***arg1*** = job id

Detailed Description Discovery job successfully modified.

Recommended Response Action No response action required.

CGEN9727

Message The value *arg1* for the property *arg2* is of a different format than the property can accept.

Arguments

- **arg1** = value
- **arg2** = name

Detailed Description Indicates that a property was given the correct value type but the value of that property was not supported. This includes value size/length exceeded.

Recommended Response Action Correct the value for the property in the request body and resubmit the request if the operation failed.

Category Audit (CGEN = Generic)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CGEN9728

Message The value *arg1* for the property *arg2* is not in the list of acceptable values.

Arguments

- **arg1** = value
- **arg2** = name

Detailed Description Indicates that a property was given the correct value type but the value of that property was not supported. This values not in an enumeration.

Recommended Response Action Choose a value from the enumeration list that the implementation can support and resubmit the request if the operation failed.

Category Audit (CGEN = Generic)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CGEN9729

Message The property *arg1* is a read only property and cannot be assigned a value.

Arguments

- ***arg1*** = name

Detailed Description Indicates that a property was given a value in the request body, but the property is a readonly property.

Recommended Response Action Remove the property from the request body and resubmit the request if the operation failed.

Category Audit (CGEN = Generic)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CGEN9730

Message The request body submitted was malformed JSON and could not be parsed by the receiving service.

Detailed Description Indicates that the request body was malformed JSON. Could be duplicate, syntax error, etc.

Recommended Response Action Ensure that the request body is valid JSON and resubmit the request.

Category Audit (CGEN = Generic)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

CGEN9731

Message The action *arg1* is not supported by the resource.

Arguments

- ***arg1*** = action Name

Detailed Description Indicates that the action supplied with the POST operation is not supported by the resource.

Recommended Response Action The action supplied cannot be resubmitted to the implementation. Perhaps the action was invalid, the wrong resource was the target or the implementation documentation may be of assistance.

CGEN9732

Message	The action <i>arg1</i> was submitted with more than one value for the parameter <i>arg2</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = action Name· <i>arg2</i> = parameter Value
Detailed Description	Indicates that the action was supplied with a duplicated parameter in the request body.
Recommended Response Action	Resubmit the action with only one instance of the parameter in the request body if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9733

Message	The value <i>arg1</i> for the parameter <i>arg2</i> in the action <i>arg3</i> is of a different type than the parameter can accept.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = value· <i>arg2</i> = parameter· <i>arg3</i> = action
Detailed Description	Indicates that a parameter was given the wrong value type, such as when a number is supplied for a parameter that requires a string.
Recommended Response Action	Correct the value for the parameter in the request body and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9734

Message	The value <i>arg1</i> for the parameter <i>arg2</i> in the action <i>arg3</i> is of a different format than the parameter can accept.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = value· <i>arg2</i> = parameter· <i>arg3</i> = action

Detailed Description	Indicates that a parameter was given the correct value type but the value of that parameter was not supported. This includes value size/length exceeded.
Recommended Response Action	Correct the value for the parameter in the request body and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9735

Message The parameter *arg1* for the action *arg2* is not supported on the target resource.

Arguments

- ***arg1*** = parameter
- ***arg2*** = action

Detailed Description Indicates that the parameter supplied for the action is not supported on the resource.

Recommended Response Action Remove the parameter supplied and resubmit the request if the operation failed.

Category Audit (CGEN = Generic)

Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9738

Message	The value <i>arg1</i> for the query parameter <i>arg2</i> is out of range <i>arg3</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = value· <i>arg2</i> = parameter· <i>arg3</i> = range
Detailed Description	Indicates that a query parameter was supplied that is out of range for the given resource. This can happen with values that are too low or beyond that possible for the supplied resource, such as when a page is requested that is beyond the last page.
Recommended Response Action	Reduce the value for the query parameter to a value that is within range, such as a start or count value that is within bounds of the number of resources in a collection or a page that is within the range of valid pages.
Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9739

Message	Querying is not supported on the requested resource.
Detailed Description	Indicates that query is not supported on the given resource, such as when a start/count query is attempted on a resource that is not a collection.
Recommended Response Action	Remove the query parameters and resubmit the request if the operation failed.

Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9740

Message	Querying is not supported by the implementation.
Detailed Description	Indicates that query is not supported on the implementation.
Recommended Response Action	Remove the query parameters and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9741

Message	The session establishment failed due to the number of simultaneous sessions exceeding the limit of the implementation.
Detailed Description	Indicates that a session establishment has been requested but the operation failed due to the number of simultaneous sessions exceeding the limit of the implementation.
Recommended Response Action	Reduce the number of other sessions before trying to establish the session or increase the limit of simultaneous sessions (if supported).
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9742

Message	The event subscription failed due to the number of simultaneous subscriptions exceeding the limit of the implementation.
Detailed Description	Indicates that a event subscription establishment has been requested but the operation failed due to the number of simultaneous connection exceeding the limit of the implementation.
Recommended Response Action	Reduce the number of other subscriptions before trying to establish the event subscription or increase the limit of simultaneous subscriptions (if supported).
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

CGEN9743

Message	The delete request failed because the resource requested cannot be deleted.
Detailed Description	Indicates that a delete operation was attempted on a resource that cannot be deleted.
Recommended Response Action	Do not attempt to delete a non-deletable resource.
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9744

Message	The change to the requested resource failed because the resource is in use or in transition.
Detailed Description	Indicates that a change was requested to a resource but the change was rejected due to the resource being in use or transition.
Recommended Response Action	Remove the condition and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9745

Message	The requested resource already exists.
Detailed Description	Indicates that a resource change or creation was attempted but that the operation cannot proceed because the resource already exists.
Recommended Response Action	Do not repeat the create operation as the resource has already been created.
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9747

Message	There is no valid session established with the implementation.
Detailed Description	Indicates that the operation failed because a valid session is required in order to access any resources.
Recommended Response Action	Establish as session before attempting any operations.
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9748

Message	There are insufficient privileges for the account or credentials associated with the current session to perform the requested operation.
Detailed Description	Indicates that the credentials associated with the established session do not have sufficient privileges for the requested operation.
Recommended Response Action	Either abandon the operation or change the associated access rights and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9749

Message	The account was successfully modified.
Detailed Description	Indicates that the account was successfully modified.
Recommended Response Action	No resolution is required.
Category	Audit (CGEN = Generic)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9750

Message	The account modification request failed.
Detailed Description	Indicates that the modification requested for the account was not successful.
Recommended Response Action	The modification may have failed due to permission issues or issues with the request body.
Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9752

Message	The account for the current session has been removed, thus the current session has been removed as well.
Detailed Description	Indicates that the account for the session has been removed, thus the session has been removed as well.
Recommended Response Action	Attempt to connect with a valid account.
Category	Audit (CGEN = Generic)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9753

Message	The object at <i>arg1</i> is invalid.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = question
Detailed Description	Indicates that the object in question is invalid according to the implementation. Examples include a firmware update malformed URI.
Recommended Response Action	Either the object is malformed or the URI is not correct. Correct the condition and resubmit the request if it failed.
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9754

Message	The service detected a malformed request body that it was unable to interpret.
Detailed Description	Indicates that the service encountered an unrecognizable request body that could not even be interpreted as malformed JSON.
Recommended Response Action	Correct the request body and resubmit the request if it failed.
Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9755

Message	The resource at the URI <i>arg1</i> was not found.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = resource
Detailed Description	Indicates that the operation expected an image or other resource at the provided URI but none was found. Examples of this are in requests that require URIs like Firmware Update.
Recommended Response Action	Place a valid resource at the URI or correct the URI and resubmit the request.
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9756

Message	The resource at <i>arg1</i> is in a format not recognized by the service.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = resource
Detailed Description	Indicates that the URI was valid but the resource or image at that URI was in a format not supported by the service.
Recommended Response Action	Place an image or resource or file that is recognized by the service at the URI.
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	

No alerts are applicable for this message

CGEN9757

Message	The create operation failed because the resource has reached the limit of possible resources.
Detailed Description	Indicates that no more resources can be created on the resource as it has reached its create limit.
Recommended Response Action	Either delete resources and resubmit the request if the operation failed or do not resubmit the request.
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9758

Message	The operation failed because the service is shutting down and can no longer take incoming requests.
Detailed Description	Indicates that the operation failed as the service is shutting down, such as when the service reboots.
Recommended Response Action	When the service becomes available, resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9759

Message	The operation failed because the service is in an unknown state and can no longer take incoming requests.
Detailed Description	Indicates that the operation failed because the service is in an unknown state and cannot accept additional requests.
Recommended Response Action	Restart the service and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGEN9760

Message	While accessing the resource at <i>arg1</i> , the service received an authorization error <i>arg2</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = uri· <i>arg2</i> = error
Detailed Description	Indicates that the attempt to access the resource/file/image at the URI was unauthorized.
Recommended Response Action	Ensure that the appropriate access is provided for the service in order for it to access the URI.
Category	Audit (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGRP Event Messages

CGRP1337

Message	Unable to delete the group(s) because one or more entered groups are default groups.
Detailed Description	The group(s) cannot be deleted because one or more default groups are present. Default groups cannot be deleted.
Recommended Response Action	Remove the default group(s) from the request and retry the operation.
Category	Configuration (CGRP = Groups)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CGRP1345

Message	Unable to add or remove the user from the group because the user ID is invalid.
Detailed Description	The user cannot be added or removed from the group because the entered user ID is invalid.
Recommended Response Action	Enter a valid user ID and retry the operation.
Category	Configuration (CGRP = Groups)

Redfish Event Type	

No alerts are applicable for this message

CGRP9000

Message Unable to add or modify group because the request payload cannot be null.

Detailed Description Group cannot be created or modified because the payload is mandatory.

Recommended Response Action Enter a valid payload and retry the operation.

Category Configuration (CGRP = Groups)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CGRP9002

Message Unable to create or update the group because the field *arg1* must be set to 0.

Arguments

- ***arg1*** = fieldName

Detailed Description The group cannot be created or updated because the field identified in the message is not required.

Recommended Response Action Enter the value 0 for the field identified in the message and retry the operation.

Category Configuration (CGRP = Groups)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CGRP9004

Message Unable to create or modify group because the value entered for *arg1* exceeds the maximum allowed length of *arg2* characters.

Arguments

- ***arg1*** = field name
- ***arg2*** = field length

Detailed Description The operation cannot be completed because any request with length greater than the defined value will be rejected.

Recommended Response Action Make sure the value entered in the specified field is valid and retry the operation.

Category Configuration (CGRP = Groups)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CGRP9006

Message Unable to create or modify group because the field(s) *arg1* are not required for the entered payload.

Arguments

- ***arg1*** = field names

Detailed Description The operation cannot be completed because the above mentioned fields needs to be filtered out from the given payload.

Recommended Response Action Remove the unnecessary fields and retry the operation.

Category Configuration (CGRP = Groups)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CGRP9007

Message Unable to update group members because the entered ID(s) [*arg1*] are invalid.

Arguments

- ***arg1*** = ids

Detailed Description The operation cannot be completed because the mentioned ID(s) are invalid.

Recommended Response Action Remove the invalid IDs and retry the operation.

Category Configuration (CGRP = Groups)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CGRP9008

Message Unable to complete the operation because data entered in the field *arg1* is invalid.

Arguments

- ***arg1*** = field name

Detailed Description The operation cannot be completed because invalid data is entered in the field identified in the message.

Recommended Response Action Enter valid data in the field and retry the operation. For information about valid data permitted in a field, see the MSM Users Guide available on the support site.

Category Configuration (CGRP = Groups)

Severity Severity 2 (Warning)

CMC8505

Message Unable to access server: *arg1* because both IPv4 and IPv6 are disabled. NIC Enabled = *arg2* .

Arguments

- ***arg1*** = slot number
- ***arg2*** = state

Detailed Description IPv4 and IPv6 are disabled on the specified server and the CMC is unable to display the link to launch iDRAC web interface.

Recommended Response Action Enable IPv4 or IPv6 for the specified server using the CMC command line or CMC Web GUI interface, so that the link to launch iDRAC is displayed on the CMC Web interface. To enable the NIC for DHCP using RACADM, enter "racadm setniccfg -m server-<slot number> -d" where <slot number> is the server identified in the message. To enable the NIC using the Web interface, click Server Overview > select the identified server, go to Setup > select the Enable IPv4 check box and/or the Enable IPv6 check box.

CMC8508

Message	Unable to synchronize the primary and secondary CMC removable flash media and the Extended Storage feature is not available.
Detailed Description	The Extended Storage feature is not activated if the removable flash media SD Card on the secondary CMC is not functioning properly.
Recommended Response Action	Do the following and retry the operation: 1) In the CMC Web interface, go to Chassis Controller > Flash Media > Configuration, and verify if the SD card on secondary CMC displays errors. 2) If errors are displayed, execute the following racadm command: "racadm cmchangeover". 3) Repair the removable flash media SD Card by selecting the Chassis Controller > Flash Media > Configuration > Repair Active Controller Media in the CMC Web interface. Repairing is only allowed on the SD card of the primary CMC. If the problem persists, replace the card.

CMC8510

Message Unable to activate the extended storage feature on the secondary CMC: *arg1*. The feature will return to single CMC mode.

Arguments
 · **arg1** = cmc number

Detailed Description This happens during promotion of extended storage feature from single CMC to dual CMC. If the media on Standby CMC is not healthy, this message is displayed and the feature returns to single CMC state.

Recommended Response Action Do one of the following, and retry the operation: 1) In the CMC Web interface, go to Chassis Controller > Flash Media > Configuration and verify if the card on the secondary CMC displays some errors. 2) Do a failover and then reprovision the card from the same GUI page. Reprovisioning is only allowed on the card of primary CMC. However, if both the options 1 and 2 fail, the card may be no longer functional.

- ***arg1*** = slot id
- ***arg2*** = event message

Detailed Description CMC cannot log new events to Hardware Log if Hardware Log is full. Therefore, new events are not written to the log unless older events are cleared. This issue also occurs if event logging is disabled.

Recommended Response Action Do the following: 1) Save the Hardware Log if required. 2) Clear the Hardware Log.

CMC8543

Message The CMC *arg1* has reset because the thermal threshold was exceeded.

Arguments

- **arg1** = slot id

Detailed Description The CMC specified in the message has reset because of thermal issues.

Recommended Response Action Do the following: 1) Review the Hardware Log and check if there are fans that are not functioning properly. 2) Replace the fans that are not functioning properly. 3) If all the fans are functioning, check the chassis temperature in the CMC Web Interface or by using RACADM. When the fans are functioning properly and the chassis temperature is too high, the ambient air temperature is too high or the air inlets are not receiving sufficient air.

Message Unable to read because the Field Replaceable Unit (FRU) is not functioning on the sled *arg1*.

Arguments
· *arg1* = sled number

Detailed Description The read operation cannot be done because the Field Replaceable Unit (FRU) is not functioning on the sled identified in the message.

Recommended Response Action Do the following and retry the operation. 1) Reset iDRAC on the sled identified in the message or reseal the sled. 2) Reset Chassis Management Controller (CMC) and wait few minutes. If the issue persists, contact your service provider. Reset iDRAC using `racadm racreset -m server-nReset` CMC using `racadm racreset`. From GUI, navigate to Chassis Overview->Troubleshooting Reset CMC using Reset/Failover CMC. Reset iDRAC using iDRAC reset from dropdown.

CSEC5019

Message	Unable to add or modify the account provider because an invalid Search Timeout value <i>arg1</i> is entered.
Arguments	<ul style="list-style-type: none"> · arg1 = timeout value
Detailed Description	The account provider information cannot be added because an invalid Search Timeout value is entered.
Recommended Response Action	Enter a Search Timeout value between 15 and 300 and retry the operation.
Category	Configuration (CSEC = Security)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CSEC5020

Message	Unable to delete account provider because the entered account provider does not exist.
Detailed Description	The account provider cannot be deleted because the entered account provider does not exist.
Recommended Response Action	Enter a valid account provider and retry the operation. Verify the account provider by going to the User Settings page.
Category	Configuration (CSEC = Security)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CSEC5021

Message	Unable to add or modify the account provider because an invalid Network Timeout value <i>arg1</i> is entered.
---------	---

Arguments	<ul style="list-style-type: none">· arg1 = timeout value
Detailed Description	The account provider cannot be added because an invalid Network Timeout value is entered.
Recommended Response Action	Enter a Network Timeout value between 15 and 300 and retry the operation.
Category	Configuration (CSEC = Security)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CSEC5022

Message	Unable to search AD Group because Group Domain is empty or invalid.
Detailed Description	The Group Domain is empty or invalid.
Recommended Response Action	Provide valid Group Domain and search AD group.
Category	Configuration (CSEC = Security)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CSEC5023

Message	Unable to add the account provider because a maximum of two configurations are allowed for Active Directory services.
Detailed Description	The account provider cannot be added because a maximum of two configurations are allowed for Active Directory directory services.
Recommended Response Action	Delete an existing Active Directory configuration and retry the operation.
Category	Configuration (CSEC = Security)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CSEC5024

Message	Unable to add the account provider because a maximum of two configurations are allowed for LDAP directory services.
---------	---

Detailed Description	The account provider cannot be added because a maximum of two configurations are allowed for LDAP directory services.
Recommended Response Action	Delete an existing LDAP configuration and retry the operation.
Category	Configuration (CSEC = Security)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CSEC5025

Message	Unable to search LDAP Group because Base Distinguished Name is empty or invalid.
Detailed Description	Base Distinguished Name is empty or Invalid. Provide the valid Base Distinguished name and search LDAP Groups again.
Recommended Response Action	Provide valid Base Distinguished Name and search LDAP group.
Category	Configuration (CSEC = Security)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CSEC5026

Message	Unable to connect to the LDAP or AD server because the provided IP Address or Port number is invalid.
Detailed Description	Could not connect to the Lightweight Directory Access Protocol (LDAP) server or Active Directory (AD) server because the server configuration are invalid.
Recommended Response Action	Make sure the Server IP Address and Port Number is valid.
Category	Configuration (CSEC = Security)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CSEC5027

Message	Unable to connect to LDAP server because the provided Attribute of Group membership is invalid.
Detailed Description	Could not connect to the Lightweight Directory Access Protocol (LDAP) server because the Attribute of Group membership is invalid.

Recommended Response Action Provide valid Attribute of Group membership.

Category Configuration (CSEC = Security)

CTL113

Message The controller *arg1* is operating in Degraded Fault Tolerant Mode because of a mismatch between the encryption key setting of the controller and its peer controller.

Arguments

- ***arg1*** = controller name

Detailed Description The controller identified in the message is operating in Degraded Fault Tolerant Mode because of a mismatch between the encryption key setting of controller and its peer controller.

Recommended Response Action Make sure that the encryption key for the peer controllers matches by using controller security operations such as creating a security key, modifying a security key, deleting a security key, and then power-cycle the chassis. Make sure to use same encryption key identifier on two controllers joining cluster.

CTL116

Message	Unable to unlock secure foreign locked drives because already unlocked drives are detected that are neither imported nor deleted.
Detailed Description	The secure foreign locked drives cannot be unlocked because already unlocked drives are detected which have secure locked configuration that are neither imported nor erased.
Recommended Response Action	The unlock command should be followed by an import config command to import a secure foreign locked configuration or by a cryptographic erase command. If the unlocked drives are not imported or erased, then further unlock operations on locked drives will be blocked. To import already unlocked drives on a controller, run the RACADM command at the command line interface (CLI): "racadm raid importconfig:<Controller FQDD>" where <Controller FQDD> is the FQDD identifier of the target controller. In order to erase the data on the unlocked drive, run the command: "racadm raid cryptographicerase:<Drive FQDD>" where <Drive FQDD> is the FQDD identifier of the target drive.

CTL40

Message Multi-bit ECC error on *arg1* DIMM.

Arguments

- ***arg1*** = Controller name

Detailed Description An error involving multiple bits has been encountered during a read or write operation. The error correction algorithm recalculates parity data during read and write operations. If an error involves only a single bit, it may be possible for the error correction algorithm to correct the error and maintain parity data. An error involving multiple bits, however, generally indicates data loss. In some cases, if the multi-bit error occurs during a read operation, then the data on the disk may be ok. If the multi-bit error occurs during a write operation, then data loss has occurred.

Recommended Response Action Replace the Dual In-line Memory Module (DIMM). The DIMM is a part of the controller battery pack. Refer to the storage hardware documentation for information on replacing the DIMM. You may need to restore data from backup.

CTL48

Message A foreign configuration was detected on *arg1*.

Arguments

- **arg1** = controller name

Detailed Description The controller has physical disks that were moved from another controller or have been removed and replaced on the current configuration. These physical disks contain virtual disks that were created on the current or other controller. See the storage hardware documentation for Import Foreign Configuration and Clear Foreign Configuration for more information. Foreign configuration is seen when a controller is replaced.

Recommended Response Action Import or clear the detected foreign configuration using a configuration tool or utility.

CTL49

Message The NVRAM has corrupted data on *arg1* .

Arguments

- ***arg1*** = Controller name

Detailed Description The NVRAM has corrupted data. This may occur after a power surge, a battery failure, or for other reasons. The controller is reinitializing the NVRAM.

Recommended Response Action No response action is required as the controller is taking the required corrective action. However, If this message is generated often (such as during each reboot), then replace the controller.

CUPD3024

Message	Unable to retrieve component information for the provided baseline and device IDs.
Detailed Description	Component information cannot be retrieved for the provided baseline and device IDs.
Recommended Response Action	Make sure the provided baseline and device IDs are valid and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3025

Message	Unable to create or update baseline because the entered target ID is invalid.
Detailed Description	The baseline cannot be created or updated because the entered target ID is invalid.
Recommended Response Action	Enter a valid target ID and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3026

Message	The entered baseline(s) cannot be deleted.
Detailed Description	The baseline(s) cannot be deleted either because the baseline(s) are running or the baseline ID(s) are invalid.
Recommended Response Action	Make sure the entered ID(s) are valid and not currently running and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

CUPD3027

Message	Unable to retrieve catalog information using the entered repository ID.
Detailed Description	Catalog information cannot be retrieved using the entered repository ID.
Recommended Response Action	Make the sure the entered repository ID is valid and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3028

Message	Unable to retrieve baseline information using the entered job ID.
Detailed Description	Baseline information cannot be retrieved using the entered job ID.
Recommended Response Action	Make sure the entered job ID is valid and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3032

Message	Unable to update catalog because the catalog ID entered does not exist.
Detailed Description	The catalog cannot be updated because the catalog ID provided does not exist.
Recommended Response Action	Enter a valid catalog ID and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3033

Message	Unable to create the update job because the baseline ID entered exceeds the maximum allowed length.
Detailed Description	The update job cannot be created because the baseline ID entered exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a baseline ID less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3034

Message	Unable to create the update job because the entered connection profile name exceeds the maximum allowed length.
Detailed Description	The update job cannot be created because the entered connection profile name exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a connection profile name less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3035

Message	Unable to create the update job because the entered repository ID exceeds the maximum allowed length.
Detailed Description	The update job cannot be created because the entered repository ID exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a repository ID less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3036

Message	Unable to create the update job because the entered catalog ID exceeds the maximum allowed length.
Detailed Description	The update job cannot be created because the entered catalog ID exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a catalog ID less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3037

Message	Unable to create the update job because the entered operation name exceeds the maximum allowed length.
Detailed Description	The update job cannot be created because the entered operation name exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter an operation name less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3038

Message	Unable to create the update job because the entered operation name is invalid.
Detailed Description	The update job cannot be created because the entered operation name is invalid.
Recommended Response Action	Enter a valid operation name and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3039

Message	Unable to create the update job because the entered Compliance Update value exceeds the maximum allowed length.
Detailed Description	The update job cannot be created because the entered Compliance Update value exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a Compliance Update value less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3040

Message	Unable to create the update job because the entered Compliance Update value is invalid.
Detailed Description	The update job cannot be created because the entered Compliance Update value is invalid.
Recommended Response Action	Make sure the entered Compliance Update value is true or false and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3041

Message	Unable to create the update job because the entered Sign Verify value exceeds the maximum allowed length.
Detailed Description	The update job cannot be created because the entered Sign Verify value exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a Sign Verify value less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3042

Message	Unable to create the update job because the entered signVerify value is invalid.
Detailed Description	The update job cannot be created because the entered signVerify value is invalid.
Recommended Response Action	Make sure the entered signVerify value is true or false and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3043

Message	Unable to create the update job because the entered Staging value exceeds the maximum allowed length.
Detailed Description	The update job cannot be created because the entered Staging value exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a Staging value less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3044

Message	Unable to create the update job because the entered Staging value is invalid.
Detailed Description	The update job cannot be created because the entered Staging value is invalid.
Recommended Response Action	Make sure the entered Staging value is true or false and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3045

Message	Unable to create the update job because the provided job parameters are empty.
----------------	--

Detailed Description	The update job cannot be created because the entered job parameters are empty.
Recommended Response Action	Enter valid job parameters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3046

Message	Unable to create the update job because the Key attribute is missing from a job parameter.
Detailed Description	The update job cannot be created because the Key attribute is missing from a job parameter.
Recommended Response Action	Make sure all job parameters have the Key attribute and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3047

Message	Unable to create the update job because the Value attribute is missing from a job parameter.
Detailed Description	The update job cannot be created because the Value attribute is missing from a job parameter.
Recommended Response Action	Make sure all job parameters have the Value attribute and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3048

Message	Unable to create or update the catalog because the entered repository name exceeds the maximum allowed length.
Detailed Description	The catalog cannot be created or updated because the entered repository name exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a repository name less than 255 characters and retry the operation.

Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3049

Message	Unable to create or update the catalog because the entered repository description exceeds the maximum allowed length.
Detailed Description	The catalog cannot be created or updated because the entered repository description exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a repository description less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3050

Message	Unable to create or update the catalog because the entered repository username exceeds the maximum allowed length.
Detailed Description	The catalog cannot be created or updated because the entered repository username exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a repository username less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3051

Message	Unable to create or update the catalog because the entered repository domain name exceeds the maximum allowed length.
Detailed Description	The catalog cannot be created or updated because the entered repository domain name exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a repository domain name less than 255 characters and retry the operation.

Category Updates (CUPD = Firmware)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

CUPD3052

Message Unable to create or update the catalog because the entered Check Certificate value is invalid.
Detailed Description The catalog cannot be created or updated because the entered Check Certificate value is invalid.
Recommended Response Action Make sure the entered Check Certificate value is true or false and retry the operation.
Category Updates (CUPD = Firmware)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

CUPD3053

Message Unable to create or update the catalog because the entered repository type is invalid.
Detailed Description The catalog cannot be created or updated because the entered repository type is invalid.
Recommended Response Action Enter a valid repository type and retry the operation.
Category Updates (CUPD = Firmware)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

CUPD3054

Message Unable to create or update the catalog because the repository name is missing.
Detailed Description The catalog cannot be created or updated because there is no value entered for repository name.
Recommended Response Action Enter the repository name and retry the operation.
Category Updates (CUPD = Firmware)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

CUPD3055

Message	Unable to create or update the catalog because the repository type is missing.
Detailed Description	The catalog cannot be created or updated because there is no value entered for repository type.
Recommended Response Action	Enter the repository type and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3056

Message	Unable to create or update the catalog because the repository source is missing.
Detailed Description	The catalog cannot be created or updated because there is no value entered for repository source.
Recommended Response Action	Enter the repository source and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3057

Message	Unable to create or update the baseline because the entered Downgrade Enabled value is invalid.
Detailed Description	The baseline cannot be created or updated because the entered Downgrade Enabled value is invalid.
Recommended Response Action	Make sure the entered Downgrade Enabled value is true or false and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3058

Message	Unable to create or update the catalog because the repository username or password is missing.
----------------	--

Detailed Description	The catalog cannot be created or updated because the repository username or password is missing.
Recommended Response Action	Enter the repository username and password and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3059

Message	Unable to create or update the baseline because the entered baseline name exceeds the maximum allowed length.
Detailed Description	The baseline cannot be created or updated because the entered baseline name exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a baseline name less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3060

Message	Unable to create or update the baseline because the entered baseline description exceeds the maximum allowed length.
Detailed Description	The baseline cannot be created or updated because the entered baseline description exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a baseline description less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3061

Message	Unable to create or update the baseline because the entered Is64Bit value is invalid.
Detailed Description	The baseline cannot be created or updated because the entered Is64Bit value is invalid.
Recommended Response Action	Make sure the entered Is64Bit value is true or false and retry the operation.

Category Updates (CUPD = Firmware)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

CUPD3062

Message Unable to create or update the catalog because the catalog source or file name is missing.
Detailed Description The catalog cannot be created or updated because there is no value entered for catalog source or filename.
Recommended Response Action Enter the catalog source and filename and retry the operation.
Category Updates (CUPD = Firmware)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

CUPD3063

Message Unable to create or update the catalog because an Online Repository already exists.
Detailed Description The catalog cannot be created or updated because an Online Repository already exists.
Recommended Response Action No response action required.
Category Updates (CUPD = Firmware)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

CUPD3064

Message Unable to create or update the catalog because a repository with the same name already exists.
Detailed Description The catalog cannot be created or updated because a repository with the same name already exists.
Recommended Response Action Enter a different name and retry the operation.
Category Updates (CUPD = Firmware)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

CUPD3065

Message	Unable to retrieve the list of associated baselines because no device IDs were provided.
Detailed Description	The list of associated baselines cannot be retrieved because no target IDs were provided.
Recommended Response Action	Enter a valid device ID and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3066

Message	Unable to create or update the catalog because the entered repository password exceeds the maximum allowed length.
Detailed Description	The catalog cannot be created or updated because the entered repository password exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a repository password less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3067

Message	Unable to create or update the catalog or baseline because the entered job type does not exist.
Detailed Description	The catalog or baseline cannot be created or updated because the entered job type does not exist.
Recommended Response Action	Enter a valid job type and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3068

Message	Unable to update the firmware because an exception occurred during the update process.
Detailed Description	The firmware cannot be updated because an exception occurred during the update process.
Recommended Response Action	Make sure the device is available and retry the operation. If the issue persists, contact your system administrator.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3069

Message	Unable to create or update the catalog because the entered filename exceeds the maximum allowed length.
Detailed Description	The catalog cannot be created or updated because the entered filename exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a filename less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3070

Message	Unable to create or update the catalog because the entered catalog source path exceeds the maximum allowed length.
Detailed Description	The catalog cannot be created or updated because the entered catalog source path exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a catalog source path less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3071

Message	Unable to create or update the catalog because the entered repository source exceeds the maximum allowed length.
Detailed Description	The catalog cannot be created or updated because the entered repository source exceeds the maximum limit of 255 characters.
Recommended Response Action	Enter a repository source less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3072

Message	Unable to retrieve rollback information because the entered device ID is empty or invalid.
Detailed Description	Firmware rollback information cannot be retrieved either because the entered device ID is invalid or no device ID is provided in the URI.
Recommended Response Action	Enter a valid device ID and retry the operation. The device ID must be part of the URI in this format: https://<IPAddress>/api/UpdateService/RollbackSoftwares?\$filter=DeviceId eq <deviceid>.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3073

Message	Unable to retrieve rollback information because an exception occurred.
Detailed Description	Firmware rollback information cannot be retrieved because an exception occurred.
Recommended Response Action	Retry the operation. If the issue persists, contact your system administrator.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3074

Message	Unable to retrieve certificate information because the entered URI Path is empty or invalid.
Detailed Description	Certificate information cannot be retrieved because the entered URI Path is empty or invalid.
Recommended Response Action	Enter a valid URI Path and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3075

Message	Unable to display certificate details because the certificate is invalid.
Detailed Description	Certificate details cannot be displayed because the certificate is invalid.
Recommended Response Action	Make sure the device has a valid certificate and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3076

Message	Unable to retrieve Update Package details because the entered file token does not exist.
Detailed Description	Update Package information cannot be retrieved because the entered file token does not exist.
Recommended Response Action	Make sure the correct file token is entered and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3077

Message	Unable to retrieve Update Package details because the information is not available.
----------------	---

Detailed Description	Update Package information cannot be retrieved because the information is not available.
Recommended Response Action	Make sure the requested file is a valid Update Package and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3078

Message	Unable to generate Update Report because the Update File Token is missing.
Detailed Description	The Update Report cannot be generated because there is no value entered for Update File Token.
Recommended Response Action	Enter a valid Update File Token and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3079

Message	Unable to generate Update Report because the entered file token does not exist.
Detailed Description	The Update Report cannot be generated because the entered file token does not exist.
Recommended Response Action	Make sure the correct file token is entered and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3080

Message	Unable to generate Update Report because no targets were entered.
Detailed Description	The Update Report cannot be generated because there are no targets entered.
Recommended Response Action	Enter a valid Update Report target and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

CUPD3081

Message	Unable to generate Update Report because no applicable targets were found.
Detailed Description	The Update Report cannot be generated because no applicable targets were found.
Recommended Response Action	No response action required.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3082

Message	Unable to display certificate details.
Detailed Description	The certificate details cannot be displayed because an exception occurred.
Recommended Response Action	Retry the operation. If the problem persists, contact your system administrator.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3083

Message	Unable to retrieve Package Update details.
Detailed Description	The Update Package information cannot be retrieved because an exception occurred.
Recommended Response Action	Retry the operation. If the problem persists, contact your system administrator.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3084

Message	Unable to generate the Update Report.
Detailed Description	The Update Report cannot be generated because an exception occurred.
Recommended Response Action	Retry the operation. If the problem persists, contact your system administrator.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	

No alerts are applicable for this message

CUPD3086

Message	Unable to view or modify the baseline(s) because the entered ID(s) are invalid.
Detailed Description	The baseline(s) cannot be viewed or modified because the ID(s) entered are invalid.
Recommended Response Action	Provide valid baseline ID(s) and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	

No alerts are applicable for this message

CUPD3087

Message	Unable to display component details because no components were found for the entered baseline and device IDs.
Detailed Description	Component details cannot be displayed because no components were found for the entered baseline and device IDs.
Recommended Response Action	No response action required.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	

No alerts are applicable for this message

CUPD3088

Message	Unable to create an Update Package job because there is currently another Update Package job running.
----------------	---

Detailed Description	The job cannot be created because there is another Update Package job currently running. Only one Update Package job can run at a time.
Recommended Response Action	Wait for the other Update Package job to complete and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3089

Message	Unable to create or update the baseline because the catalog ID entered is invalid.
Detailed Description	The baseline cannot be created or updated because the catalog ID entered is invalid.
Recommended Response Action	Enter a valid catalog ID and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3090

Message	Unable to retrieve baseline list either because the device ID(s) entered are invalid or the ID(s) provided are not associated with a baseline.
Detailed Description	Associated baselines cannot be retrieved either because the device ID(s) entered are invalid or the ID(s) provided are not associated with a baseline.
Recommended Response Action	Make sure the entered device ID(s) are valid and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3091

Message	Unable to delete catalog(s) because there are no catalog ID(s) entered.
Detailed Description	Catalog(s) cannot be deleted because there are no catalog ID(s) provided.
Recommended Response Action	Enter a valid catalog ID and retry the operation.

Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3092

Message	Unable to delete catalog(s) because the entered catalog ID(s) are associated with a baseline.
Detailed Description	Catalog(s) cannot be deleted because the provided catalog ID(s) are associated with a baseline.
Recommended Response Action	Delete any baselines associated with the provided catalog ID(s) and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3093

Message	Unable to update the catalog because the request payload contains null values.
Detailed Description	The catalog cannot be updated because the request payload contains null values.
Recommended Response Action	Make sure all fields have a valid value and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3094

Message	Unable to display the software rollback information because the device ID entered does not have any software rollback information associated with it.
Detailed Description	The software rollback information cannot be displayed because the device ID entered does not have any software rollback information associated with it.
Recommended Response Action	No response action required.
Category	Updates (CUPD = Firmware)
Severity	Severity 2 (Warning)
Redfish Event Type

CUPD3095

Message	Unable to display software rollback information because the rollback ID entered does not have any software rollback information associated with it.
Detailed Description	The software rollback information cannot be displayed because the rollback ID entered does not have any software rollback information associated with it.
Recommended Response Action	No response action is required.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3096

Message	Unable to create or update the baseline because the repository ID is missing or invalid.
Detailed Description	The baseline cannot be created or updated because the repository ID entered is missing or invalid.
Recommended Response Action	Make sure the repository ID entered is valid and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3097

Message	Unable to retrieve supported compliance status because the entered status ID is invalid.
Detailed Description	Supported compliance status cannot be retrieved because the entered status ID is invalid.
Recommended Response Action	Provide a valid Status ID and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3098

Message	Unable to create or update the baseline because a baseline with the same name already exists.
Detailed Description	The baseline cannot be created or updated because a baseline with the same name already exists.
Recommended Response Action	Enter a unique baseline name and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3099

Message	Unable to delete the entered baseline(s) because an associated job is running.
Detailed Description	The entered baseline(s) cannot be removed because an associated job is running.
Recommended Response Action	Make sure that all entered baselines are not currently running and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3100

Message	Unable to delete the entered catalog(s) because an associated job is running.
Detailed Description	The entered catalog(s) cannot be removed because an associated job is running.
Recommended Response Action	Make sure that all entered catalogs are not associated with a running job and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3101

Message	Unable to remove update file because the field(s) <i>arg1</i> cannot be null or empty.
----------------	--

Arguments	· arg1 = field names
Detailed Description	The operation cannot be completed because the mentioned field(s) are mandatory.
Recommended Response Action	Make sure all mandatory fields are provided and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3102

Message	Unable to generate a report for the specified target(s) because the user <i>arg1</i> does not have sufficient privileges to generate a report.
Arguments	· arg1 = current user name
Detailed Description	The report for the specified target(s) cannot be generated because the user identified in the message does not have sufficient privileges to generate the report.
Recommended Response Action	Retry the operation by logging in as a user with sufficient privileges.
Category	Updates (CUPD = Firmware)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUPD3103

Message	Unable to create or update the baseline because the entered name is invalid.
Detailed Description	The baseline cannot be created or updated either because the entered name exceeds the maximum allowed length or there is no name entered.
Recommended Response Action	Enter a baseline name less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)

CUPD3104

Message The catalog ID entered is not associated with any firmware baseline.

Detailed Description The catalog ID entered is not associated with any firmware baseline.

Recommended Response Action No response action required.

Category Updates (CUPD = Firmware)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CUPD3105

Message Unable to update the entered baseline because it is currently being refreshed.

Detailed Description The baseline cannot be updated because a job associated with the baseline is running.

Recommended Response Action Wait until the associated job is complete and retry the operation.

Category Updates (CUPD = Firmware)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CUPD3106

Message Unable to create or update the catalog because an Online Repository already exists.

Detailed Description Unable to create or update the catalog because an Online Repository already exists.

Recommended Response Action Unable to create or update the catalog because an Online Repository already exists.

Category Updates (CUPD = Firmware)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CUPD3107

Message Unable to complete the operation because a Validated Stack Bundle Repository already exists.

Detailed Description The operation cannot be completed because a Validated Stack Bundle Repository already exists.

Recommended Response Action No response action required.

Category Updates (CUPD = Firmware)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

CUPD3108

Message Unable to generate the Update Report because the Update Package file signature is invalid. Error description: *arg1* .

Arguments

- ***arg1*** = error description

Detailed Description The Update Report cannot be generated because the Update Package file signature is invalid. For more information, see the MSM Users Guide on the support site.

Recommended Response Action No response action required.

Category Updates (CUPD = Firmware)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

CUPD3109

Message The Firmware baseline job has been deleted.

Detailed Description The firmware baseline job has been deleted.

Recommended Response Action No response action required.

Category Configuration (CUPD = Firmware)

Severity Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

CUPD4055

Message The baseline or Update Package report cannot be created because the following entered group ID(s) are invalid: *arg1* .

Arguments	· arg1 = group Ids
Detailed Description	Unable to create the baseline or Update Package report because the entered group ID(s) identified in the message are invalid.
Recommended Response Action	Make sure the entered group ID(s) are valid and retry the operation.
Category	Configuration (CUPD = Firmware)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUSR Event Messages

CUSR0001

Message	Successfully logged in from <i>arg1</i> .
Arguments	· arg1 = session type
Detailed Description	The user successfully logged in using the session type identified in the message.
Recommended Response Action	No response action required.
Category	Audit (CUSR = Users)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUSR0003

Message	Successfully logged off from <i>arg1</i> .
Arguments	· arg1 = session type
Detailed Description	The user using the session type identified in the message is logged off.
Recommended Response Action	No response action required.
Category	Audit (CUSR = Users)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUSR0004

Message	The session from <i>arg1</i> has expired.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = session type
Detailed Description	The session of the session type identified in the message has expired.
Recommended Response Action	No response action required.
Category	Audit (CUSR = Users)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUSR0005

Message	The <i>arg1</i> session for <i>arg2</i> from <i>arg3</i> has been terminated.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = session Type· <i>arg2</i> = user name· <i>arg3</i> = ipAddress
Detailed Description	The session of the user identified in the message has been terminated.
Recommended Response Action	No response action required.
Category	Audit (CUSR = Users)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUSR0054

Message	Access from IP <i>arg1</i> is locked out for <i>arg2</i> seconds.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = ipAddress· <i>arg2</i> = seconds
Detailed Description	Lockout Policy enabled by IP Address identified in the message for the time duration identified in the message.
Recommended Response Action	Retry the operation after the time duration identified in the message.

Category Audit (CUSR = Users)
Severity Severity 3 (Informational)
Redfish Event Type
No alerts are applicable for this message

CUSR0055

Message Access from User *arg1* is locked out for *arg2* seconds.

Arguments

- ***arg1*** = username
- ***arg2*** = seconds

Detailed Description Lockout Policy enabled by Username identified in the message for the time duration identified in the message.

Recommended Response Action No response action required.

Category Audit (CUSR = Users)

Redfish Event Type
No alerts are applicable for this message

CUSR1202

Message Unable to delete any of the sessions in the list because they are not active sessions.
Detailed Description None of the sessions in the list were deleted because they are not active sessions.
Recommended Response Action Verify the sessions to be deleted are active (logged in) sessions.
Category Audit (CUSR = Users)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

CUSR1203

Message	Unable to delete some sessions in the list because they are currently not active.
Detailed Description	Some of the sessions in the list failed to be deleted because they are currently not active sessions.
Recommended Response Action	Verify the sessions to be deleted are active sessions.
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUSR1204

Message	Unable to delete user session(s) because the current user session is expired.
Detailed Description	The user session(s) could not be deleted because the current user session is expired.
Recommended Response Action	Retry the operation after logging in .
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUSR1205

Message	Unable to delete sessions because of insufficient privileges.
Detailed Description	The sessions cannot be deleted because of insufficient privileges.
Recommended Response Action	Log in as a user with sufficient privileges to delete other users sessions and try again.
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUSR1206

Message	Unable to perform the operation because the user <i>arg1</i> has been disabled.
----------------	---

Arguments	· arg1 = user
Detailed Description	Unable to perform the operation because the user identified in the message has been disabled.
Recommended Response Action	Please login as an admin user to re-enable the user and try the operation again.
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUSR1207

Message	Unable to authenticate the user because username not provided.
Detailed Description	The user could not be authenticated because a user name is not provided.
Recommended Response Action	Enter a user name and try again.
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUSR1208

Message	Unable to login because a password was not provided.
Detailed Description	Unable to login because a password was not provided.
Recommended Response Action	Enter a valid password and retry the operation.
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

CUSR1209

Message	Unable to create a new session because the maximum number of sessions for this user has been reached.
Detailed Description	Unable to create a new session because the maximum number of sessions for this user has been reached.
Recommended Response Action	Logout of one of this users sessions and retry creating a new session for this user.

Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	
	<i>No alerts are applicable for this message</i>

CUSR1210

Message	Unable to create a new session because the maximum number of sessions has been reached.
Detailed Description	Unable to create a new session because the maximum number of sessions has been reached.
Recommended Response Action	Logout of at least one existing session and retry the operation.
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	
	<i>No alerts are applicable for this message</i>

CUSR1212

Message	Unable to delete session(s) because no sessions selected.
Detailed Description	One or more sessions could not be deleted because no sessions were selected.
Recommended Response Action	Select session(s) to delete and try again.
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	
	<i>No alerts are applicable for this message</i>

CUSR1218

Message	Unable to perform the operation: <i>arg1</i> because the user does not have the required privileges.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = request URI
Detailed Description	The user identified in the message does not have the privileges to perform the operation identified.
Recommended Response Action	Retry the operation with a different user or update the current users privileges.

DH Event Messages

DH001

Message	Resource needed to perform the operation is unavailable.
Detailed Description	Resource temporarily unavailable.
Recommended Response Action	Try again. If the error persists, use RACADM command racreset to clear the issue.
Category	Configuration (DH = Certificate Management)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DH002

Message	Internal I/O failure.
Detailed Description	Internal I/O failure.

Recommended Response Action	Try again. If the error persists, use RACADM command racreset to clear the issue.
Category	Configuration (DH = Certificate Management)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DH003

Message	Service tag could not be read.
Detailed Description	Service Tag Missing.
Recommended Response Action	Try again. If the error persists, use RACADM command racreset to clear the issue.
Category	Configuration (DH = Certificate Management)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DH004

Message	iDRAC does not have sufficient free resources to generate keys.
Detailed Description	Error generation Keys.
Recommended Response Action	Boot the OS. If the error persists, contact technical support.
Category	Configuration (DH = Certificate Management)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DH005

Message	CA Cert is corrupted, expired, or does not have signing privileges.
Detailed Description	Invalid CA Cert.
Recommended Response Action	Close other iDRAC sessions and activities. Try again.
Category	Configuration (DH = Certificate Management)
Severity	Severity 3 (Informational)
Redfish Event Type	

No alerts are applicable for this message

DH006

Message	Not the right passphrase for the private key (need to re-write).
Detailed Description	Invalid Passphrase.
Recommended Response Action	Validate that the certificate parameter matches the certificate contents; the certificate can be validated using OpenSSL tools.
Category	Configuration (DH = Certificate Management)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DH007

Message	The password unlocked the private key but it was the wrong private key.
Detailed Description	CA private key/CA Certificate mismatch.
Recommended Response Action	Check that the private key parameter is correct. The passphrase can be validated against the private key, passphrase, and certificate can be validated using OpenSSL tools.
Category	Configuration (DH = Certificate Management)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DH008

Message	There was a problem saving the certificate to persistent storage.
Detailed Description	Unable to save the provided client certificate to internal persistent storage.
Recommended Response Action	Try again. If the error persists, use RACADM command racresetcfg to clear the issue.
Category	Configuration (DH = Certificate Management)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DH009

Message	The operation did not complete successfully because of an unexpected internal problem.
Detailed Description	An unexpected internal problem has occurred and the operation did not complete successfully.
Recommended Response Action	Remove AC power from the system and re-apply AC power to the system. After the server restarts, retry the operation. If the issue persists, contact your service provider.
Category	Configuration (DH = Certificate Management)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DH010

Message	Reset iDRAC to apply new certificate. Until iDRAC is reset, the old certificate will be active.
Detailed Description	The iDRAC must be reset to apply a new certificate. Until the iDRAC has reset, the old certificate will be active.
Recommended Response Action	Reset the iDRAC. The iDRAC can be reset by pressing the Identify button for 15 seconds. Using the RACADM command line utility, run "racadm racreset".
Category	Configuration (DH = Certificate Management)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG0111

Message CPU *arg1*: *arg2* exception occurred.

Arguments

- ***arg1*** = CPU Number
- ***arg2*** = Exception Type

Detailed Description No detailed description available.

Recommended Response Action Issue is on system board. Recommend flash the latest BIOS and retry the diagnostics.

Category System Health (DIAG = Diagnostics)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

DIAG0112

Message CPU *arg1* - Machine check exception detected.

Arguments

- ***arg1*** = CPU Number

Detailed Description No detailed description available.

Recommended Response Action Issue is on system board. Recommend flash the latest BIOS and retry the diagnostics.

Category System Health (DIAG = Diagnostics)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

DIAG0114

Message Unable to start application processor(s). :OR: CPU *arg1* (ID 0x *arg2*) did not reach test step *arg3* .:OR: CPU *arg4* (ID 0x *arg5*) recorded unknown test result 0x *arg6* .:OR: CPU *arg7* (ID 0x *arg8*) data error at address 0x *arg9* . Expected *arg10* .

Arguments

- ***arg1*** = Decimal
- ***arg2*** = Hex

- **arg3** = Decimal
- **arg4** = Decimal
- **arg5** = Hex
- **arg6** = Hex
- **arg7** = Decimal
- **arg8** = Hex
- **arg9** = Hex
- **arg10** = Hex

Detailed Description Depends on <Error Reason>. If it is "Unable to start" it usually indicates a software problem. "Cache integrity" could signal a processor cache hardware problem. The other CPU messages could result from hardware or from overheating, if for instance, the fans are marginal or airflow is blocked.

Recommended Response Action Check temperatures in System Health tab for abnormally high temperatures and make sure airflow baffles are properly installed in the system, if any. Check fan RPM in System Health tab and verify actual fans are properly installed.

DIAG0131

Message Battery - The battery is not installed.

Detailed Description No detailed description available.

Recommended Response Action	Install the battery but check for debris or damaged contacts.
Category	System Health (DIAG = Diagnostics)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG0132

Message	Battery - The battery is reaching the end of its usable life.
Detailed Description	No detailed description available.
Recommended Response Action	Replace the battery.
Category	System Health (DIAG = Diagnostics)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG0133

Message	Battery - The battery cannot provide sufficient power.
Detailed Description	No detailed description available.
Recommended Response Action	Check battery contacts, plugs and cables. May need to replace battery.
Category	System Health (DIAG = Diagnostics)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG0134

Message	Battery - Charge cycles exceeded maximum limit. :OR: Charger - Charge cycles exceeded maximum limit.
Detailed Description	Message "Charger -" changed to "Battery -" in 2/8/2016.
Recommended Response Action	Battery health data indicates the maximum number of charge cycles has been reached. Replace the battery.
Category	System Health (DIAG = Diagnostics)
Severity	Severity 1 (Critical)
Redfish Event Type	

No alerts are applicable for this message

DIAG0141

Message	Hard Drive - No Hard Drive detected.
Detailed Description	No detailed description available.
Recommended Response Action	Hard drives are not required on all systems so this message is usually a warning. Desktops and Servers: If the system has a hard disk, power down system and check the signal and power connections to it. Rerun the diagnostic. If no error occurs then it was a cable or connector issue.

DIAG0150

Message	Hard Drive - No Hard Drive detected, or disk controller not supported.
Detailed Description	No detailed description available.
Recommended Response Action	Hard drives on desktops should be found if connected to the chipset disk controller but PERC/SCU/SAS Adapters are not supported by legacy ePSA so if the hard drive is connected to these controllers this message is just a warning. If the system has a hard disk connected to the System Board chipset disk controller, power down the system and check the signal and power connections to it. Rerun the diagnostic. If no error occurs then it was a cable or connector issue.

DIAG0620

Message Network *arg1* - *arg2* .

Arguments

- ***arg1*** = Number
- ***arg2*** = Failure Message

Detailed Description UEFI Driver provides a DIAGNOSTIC protocol and this protocol supplies a test that failed. Failure Message may be "Packet loopback test failed" or "Register test failed" or something else. Provided by driver not ePSA.

Recommended Response Action The Network (Ethernet) device may be faulty. Check for bent pins in the Ethernet connector. Make sure that Network device firmware is current. Retry test, if still fails, replace the NIC/NDC/LOM Network device. This may be on the motherboard, or an adapter, or a daughter card, depending on the system.

DIAG0711

Message Thermal - Thermal trip detected.

Detailed Description BIOS error reported through ePSA.

Recommended Response Action System detected repeated thermal trips due to excessive heat. Check for obstructions to the fan and vents. Make sure BIOS is current and rerun diagnostics. If error persists replace thermal heat sink, CPU and motherboard.

Category System Health (DIAG = Diagnostics)

Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

DIAG0712

Message Fan - The fan failed to respond correctly.
Detailed Description BIOS error reported through ePSA.
Recommended Response Action BIOS detected repeated issues when setting the fan speed. The fan may be faulty, check for obstructions to the fan and vents. Make sure the BIOS is current and rerun diagnostics.
Category System Health (DIAG = Diagnostics)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

DIAG0713

Message Sensor - Error accessing thermal sensor.
Detailed Description BIOS error reported through ePSA.
Recommended Response Action BIOS error when reading the systems thermal sensor. Make sure the BIOS is current and rerun diagnostics. If error persists, replace the motherboard.
Category System Health (DIAG = Diagnostics)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

DIAG0714

Message Heat Sink - Heat sink clip not installed.
Detailed Description BIOS error reported through ePSA.
Recommended Response Action BIOS detected that the heat sink clip was not installed. Connect the heat sink clip properly.
Category System Health (DIAG = Diagnostics)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

DIAG0715

Message	Memory - Memory error detect.
Detailed Description	BIOS error reported through ePSA.
Recommended Response Action	BIOS detected an issue configuring the DIMM. Check for latest BIOS. Power down system and reseal DIMMs. Retry test; if no error occurs it was a DIMM connection issue. If error persists, replace the DIMM.
Category	System Health (DIAG = Diagnostics)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG0716

Message	Cables - Check the following cable, <i>arg1</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Cable Name
Detailed Description	BIOS error reported through ePSA.
Recommended Response Action	BIOS detected a cable that was not installed. Connect the cable that is described in the string portion of the message.
Category	System Health (DIAG = Diagnostics)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG0721

Message	Battery - Battery issue detected.
Detailed Description	BIOS error reported through ePSA.
Recommended Response Action	BIOS detected a battery that is not functioning properly. Remove and replace the battery. Rerun the diagnostics on the new battery once it is charged.
Category	System Health (DIAG = Diagnostics)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG0722

Message	Memory - Previous uncorrectable memory error.
Detailed Description	BIOS error reported through ePSA.
Recommended Response Action	BIOS detected an un-correctable memory issue on a prior boot. Update to the latest BIOS. Power down system and reseal DIMMs. Retry test; if no error occurs it was a DIMM connection issue. If error persists, replace the DIMM.
Category	System Health (DIAG = Diagnostics)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG0723

Message	Hard Drive - Drive error detected.
Detailed Description	BIOS error reported through ePSA.
Recommended Response Action	BIOS detected a hard drive issue. Make sure hard drive connection is good, and the drive firmware and system BIOS are current. If error persists, replace the hard drive.
Category	Storage (DIAG = Diagnostics)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG8001

Message	No BIOS support for software interrupt <i>arg1</i> h, function(ah) <i>arg2</i> h.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Hex· <i>arg2</i> = Hex
Detailed Description	No detailed description available.
Recommended Response Action	Should not occur.
Category	System Health (DIAG = Diagnostics)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG8002

Message No BIOS support for SMI interface function(ah) *arg1* h.;Sensor *arg2* exceeded thermal zone *arg3* . Peak zone was *arg4* .

- Arguments**
- ***arg1*** = Hex Function
 - ***arg2*** = Name
 - ***arg3*** = Decimal
 - ***arg4*** = Decimal

Detailed Description No detailed description available.

Recommended Response Action System thermal sensor is indicating a high value. Clear any blockage to internal fans and heat sinks. Make sure that BIOS is current and rerun the diagnostics.

DIAG8335

Message	Video - User indicated that one or more full color screens showed pixel errors.
Detailed Description	ARM-based tablets only.
Recommended Response Action	Verify visually that there are pixels of the wrong color or missing. Replace LCD panel. If all pixels of one color are missing, replace video controller or motherboard.
Category	System Health (DIAG = Diagnostics)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG8336

Message	Video - User indicated that the Grey Scale screen is not properly displayed.
Detailed Description	ARM-based tablets only.
Recommended Response Action	Verify visually that the grey scales are not showing properly. Replace LCD panel.
Category	System Health (DIAG = Diagnostics)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

DIAG8337

Message	Video - User indicated that the Cross Hatch screen is not properly displayed.
Detailed Description	ARM-based tablets only.
Recommended Response Action	Verify visually that the cross hatch pattern has mismatches. Adjust the convergence settings on the LCD panel. Repeat the test. If error continues, replace the LCD panel or video controller.

DIAG8338

Message *arg1* - DriverBinding-Supported() function, Version *arg2* , changed PCI Command Reg of device *arg3* .
Arguments

- ***arg1*** = Module
- ***arg2*** = Hex
- ***arg3*** = Tag

Detailed Description No detailed description available.
Recommended Response Action The initial string indicates the uEFI driver with an issue. Update the BIOS to the latest version.
Category System Health (DIAG = Diagnostics)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

DIAG8415

Message Cables - BIOS reports no testable cable/jumper/connector/sensor.
Detailed Description No detailed description available.
Recommended Response Action Update the BIOS to the latest version.
Category Configuration (DIAG = Diagnostics)
Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

DIAG8611

Message User reported not hearing speaker tone.
Detailed Description No detailed description available.
Recommended Response Action If the beep was not heard, verify the internal speakers are connected properly. On some systems, internal speakers are a purchased option. For a given system, if the speaker is optional, it might not exist on that system. If audio is not heard, make sure to unplug anything plugged into an external headphone jack and rerun the test. External HP jacks can mute the internal speakers at the hardware level.

Arguments

- ***arg1*** = parameter name

Detailed Description The AutoConfig operation cannot be completed because the parameter name identified in the message is not of flag type which is causing a syntax error. The parameter name must always be of flag type.

Recommended Response Action Enter an appropriate parameter of flag type and retry the operation. For example, -u is a flag indicating the username that has access to network share of CIFS type. For a list of recommended flags, see the Zero-Touch Bare Metal Server Provisioning using Dell iDRAC with Lifecycle Controller Auto Config white paper available at Dell TechCenter website.

DIS117

Message Unable to complete the AutoConfig operation because an argument is not entered for the flag *arg1* , which is causing a syntax error.

Arguments

- ***arg1*** = flag name

Detailed Description The AutoConfig operation cannot be completed because an argument is not entered for the flag identified in the message, which is causing a syntax error.

Recommended Response Action Enter an appropriate argument for the flag and retry the operation. For example, -s 0 indicates argument 0 is entered to indicate a share type of NFS. For a list of recommended flags and arguments, see the Zero-Touch Bare Metal Server Provisioning using Dell iDRAC with Lifecycle Controller Auto Config white paper available at Dell TechCenter.

ENC100

Message *arg1* is sending inconsistent responses to the controller.

Arguments

- ***arg1*** = enclosure name

Detailed Description The storage controller is not receiving a consistent response from the enclosure due to a firmware problem or an incorrect cabling configuration. If the cables are longer than the specified maximum length, the signals may be degraded.

Recommended Response Action Turn off all the enclosures attached to the system, check if the cable configurations are correct and reboot the system. If the problem persists, update the enclosure firmware to the latest supported version. Download the latest supported version of the firmware from the service provider. For more information about cable configuration, see storage enclosure documentation.

ENC4

Message *arg1* firmware mismatch.

Arguments

- ***arg1*** = Enclosure Name

Detailed Description The firmware on the EMM modules is not the same version. It is required that both modules have the same version of the firmware. This alert may be caused when you attempt to insert an EMM module that has a different firmware version than an existing module.

Recommended Response Action Download the same version of the firmware to both EMM modules.

ENC40

Message A new enclosure was detected on *arg1*.

Arguments

- ***arg1*** = controller name

Detailed Description The controller detected a new enclosure. This is due either to a hot plug of an enclosure, or a power state change of an enclosure. In addition, this message is generated if the daisy chain order of the enclosures changes.

Recommended Response Action No response action is required.

ENC42

Message The redundant path on the *arg1* is unavailable.

Arguments
· ***arg1*** = enclosure name

Detailed Description	The redundant path on the enclosure identified in the message is unavailable. Even though the storage communication path between the controller and enclosure is currently available, the communication will end if another path fails.
Recommended Response Action	The controller has lost communication with an enclosure. Make sure that the cables are not loose and defective. For information about checking cable status, see the Storage Hardware documentation available on the support site.

ENC44

Message The redundant multipath connection to the enclosure *arg1* is abruptly disconnected because either the EMM is removed, cable is damaged, the cable is removed, a SAS IO Module is powered off, is damaged or is removed.

Arguments

- ***arg1*** = enclosure Name

Detailed Description The redundant multipath connection to the enclosure identified in the message abruptly disconnected because either the EMM is removed, cable is damaged, the cable is removed, a SAS IOM module is powered off, is damaged or is removed.

Recommended Response Action Do one of the following: 1) Make sure that the cables are properly connected to the Controller. 2) If the Enclosure Management Module (EMM) is removed, reinsert the EMM. 3) Check the status of both SAS IO modules (IOM). If a SAS IO module is removed, reinsert the SAS IOM.

ENC5

Message Redundancy on *arg1* is degraded

Arguments

- ***arg1*** = Enclosure Name

Detailed Description One or more of the enclosure components has failed. For example, a fan or power supply may have failed. Although the enclosure is currently operational, the failure of additional components could cause the enclosure to fail.

Recommended Response Action Identify and replace the failed component. To identify the failed component, select the enclosure in the tree view and click the Health subtab. Any failed component will be identified with a red X on the enclosures Health subtab. Alternatively, you can select the Storage object and click the Health subtab. The controller status displayed on the Health subtab indicates whether a controller has a failed or degraded component. See the enclosure documentation for information on replacing enclosure components and for other diagnostic information.

ENC6

Message Communication timeout on *arg1*.

Arguments

- **arg1** = Enclosure Name

Detailed Description

The controller is unable to communicate with an enclosure. There are several reasons for communication loss. For example, there may be a bad or loose cable. An unusual amount of I/O may also interrupt communication with the enclosure. In addition, communication loss may be caused by software, hardware, or firmware problems, bad or failed power supplies, and enclosure shutdown.

Recommended Response Action

Check for problems with the cables. See the Cables attached correctly section for more information on checking the cables. You should also check to see if the enclosure has degraded or failed components. To do this, select the enclosure object in the tree view and click the Health subtab. The Health subtab displays the status of the enclosure components. Verify that the controller has the supported driver and firmware versions installed and that each Enclosure Management Modules (EMMs) are running the same version of supported firmware.

FAN8500

Message Enhanced Cooling Mode is Enabled

Detailed Description Enabling Enhanced Cooling Mode will provide increased airflow capability to the blades by increasing the maximum allowable blower speed at the cost of increased power consumption.

Recommended Response Action No response action is required.

Category Audit (FAN = Fan Event)

Severity Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

FAN8501

Message Enhanced Cooling Mode is Disabled

Detailed Description Disabling Enhanced Cooling Mode allows for reduced power consumption by reducing the maximum speed of the blowers while still providing sufficient blade airflow.

Recommended Response Action No response action is required.

Category Audit (FAN = Fan Event)

Severity Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

FAN8502

Message Unable to detect the blower *arg1* because the blower may not be optimally operating.

Arguments

- ***arg1*** = blower name

Detailed Description The current CMC firmware did not detect the blower identified in the message.

Recommended Response Action Make sure that CMC is using the latest firmware, and then retry the operation.

Category Audit (FAN = Fan Event)

Severity Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

FAN8503

Message The Chassis was turned off because more than two internal fans stopped functioning.

Detailed Description The Chassis was turned off because more than two Chassis internal fans stopped functioning. The fans with issues are identified in the CMC Hardware (System Event Log) and Chassis Logs.

Recommended Response Action Make sure that the Chassis internal fans are functioning. At the command line interface (CLI), enter the following command to identify fans that are not functioning: "racadm getsel". Using the CMC Web GUI, select the chassis, click the Logs tab, and then select Hardware Log. Reinsert or replace fans that are not functioning correctly.

Category Audit (FAN = Fan Event)

FC007

Message A configuration job already exists. Unable to create another configuration job on specified target until existing job is completed or is cancelled.
Detailed Description Configuration job already created on the specified target. No further command is allowed until the existing job succeeded or the job is cancelled.
Recommended Response Action Wait for the existing job to complete or cancel the existing job and retry the operation.
Category Configuration (FC = Fibre Channel)
Severity Severity 2 (Warning)
Redfish Event Type

No alerts are applicable for this message

FC008

Message	No pending data present to create a Configuration job.
Detailed Description	No changes are available between the previous configuration and the current configuration. To create a Configuration job, change at least one attribute.
Recommended Response Action	Change the configuration of one or more attributes and retry creating the Configuration job.
Category	Configuration (FC = Fibre Channel)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

FC009

Message	Lifecycle Controller is currently in use.
Detailed Description	Lifecycle Controller cannot gain access to internal storage due to use by another application or operation.
Recommended Response Action	Wait for Lifecycle Controller to complete the current operation. Make sure that the system is: 1) Not currently in Lifecycle Controller Unified Server Configurator 2) Not waiting for user intervention at F1/F2 POST error 3) Not in any of the device or controller Option ROMs and retry the operation.
Category	Configuration (FC = Fibre Channel)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

FC010

Message	Unable to create Configuration job because Lifecycle Controller is not enabled.
Detailed Description	For 11G systems: System Services must be enabled to perform the requested operation. System Services has been disabled through the iDRAC configuration utility accessed by pressing CTRL+E on boot up or through a remote operation. For 12G and above generations: Lifecycle Controller must be enabled to perform the requested operation. Lifecycle Controller has been disabled by pressing F2 Setup, selecting iDRAC Configuration, and selecting Lifecycle Controller Settings on boot up or through a remote operation.
Recommended Response Action	For 11G systems: Use the iDRAC configuration utility to enable the System Services by pressing the CTRL+E option on boot up at the targeted system. For 12G and above generations: Use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings, to enable the Lifecycle Controller on boot up of the targeted system.

Redfish Event Type	<i>No alerts are applicable for this message</i>

FC013

Message	Invalid AttributeName: <i>arg1</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = parameter name
Detailed Description	An incorrect AttributeName parameter name was provided.
Recommended Response Action	Enter the correct AttributeName available for the component in the system. Identify the correct AttributeName from the attribute enumeration response for the component or refer to the FC HBA Profile specification.
Category	Configuration (FC = Fibre Channel)
Severity	Severity 2 (Warning)
Redfish Event Type	

No alerts are applicable for this message

FC014

Message Invalid AttributeValue parameter content for corresponding AttributeName *arg1* .

Arguments

- ***arg1*** = parameter name

Detailed Description The AttributeValue parameter is invalid due to one of the following: 1) The length of new AttributeValue is not within the minimum length and maximum length range or does not comply with the governing regular expression 2) Value of new AttributeValue is not within the lower bound and upper bound range limits 3) The value is not one of the possible values.

Recommended Response Action For valid attribute values, see the FC HBA Profile specification.

Redfish Event Type

No alerts are applicable for this message

FC016

Message Unable to change the attribute value of the disabled attribute *arg1* .

Arguments

- ***arg1*** = parameter name

Detailed Description A set attribute operation was not successful because the attribute is disabled.

Recommended Response Action No response action is required.

Category	Configuration (FC = Fibre Channel)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

FC017

Message	Unable to perform the operation due to an internal error in iDRAC.
Detailed Description	An internal error occurred in iDRAC and the operation cannot continue. An iDRAC reset is required to recover from the error.
Recommended Response Action	Disconnect the AC power source from the system, reconnect the power source, and retry the operation.
Category	Configuration (FC = Fibre Channel)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

FC018

Message	Unable to start the configuration operation because the System Lockdown mode is enabled.
Detailed Description	The configuration operation cannot be started because the System Lockdown mode is enabled.
Recommended Response Action	Make sure that the Lockdown.1#SystemLockdown attribute is set to Disabled in the DCIM_iDracCardEnumeration class by running the WS-Man get command at the command line interface (CLI), and then retry the operation.
Category	Configuration (FC = Fibre Channel)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

FC102

Message	The <i>arg1</i> port <i>arg2</i> link is not functioning either because the FC cable is not connected or the FC device is not functioning.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = controller ID· <i>arg2</i> = port ID
Detailed Description	The FC controller port link identified in the message is not functioning either because the FC cable is not connected or the FC device is not functioning.

Recommended Response Action Do the following: 1) Make sure that the FC port is enabled. 2) Make sure the Activity/Speed LEDs are lit if the physical port has LEDs. 3) Check the FC cable and FC cable connections for proper installation. 4) Check that the attached FC switch is functioning.

FLDC1021

Message The journal mirror entry with WWN = *arg1* is not accessible.

Arguments

- ***arg1*** = World Wide Name

Detailed Description The device identified in the message having the journal mirror entry with given WWN (World Wide Name) is not accessible. A portion of an SSD is used for journal content. To assure consistency, the journal content is written

into two other SSDs. These copies are journal mirrors. If the journal content cannot be written to any of the journal mirrors, then this event is signaled. It is a warning because the FLDC code will then attempt to choose another SSD to be a journal mirror.

Recommended Response Action No response action is required.

FLDC1023

Message	Fluid Cache is running on an evaluation license and the evaluation license expires in <i>arg1</i> days.
Arguments	· <i>arg1</i> = days
Detailed Description	Fluid Cache is currently running on an evaluation license and the evaluation license expires in the number of days identified in message.
Recommended Response Action	A permanent license for Fluid Cache should be purchased for continued service.

FSD000

Message Debug authorized by customer; debugcaps: *arg1* , was authorized by: *arg2* , at *arg3* for the period: *arg4* to *arg5* .

Arguments
· **arg1** = DebugCaps

- **arg2** = iDRAC User
- **arg3** = unblock time
- **arg4** = start time
- **arg5** = end time

Detailed Description The customer has authorized the specified debug capabilities on this iDRAC. (This should occur in response to a request from Dell tech support.) Each debug capability represents a certain action Dell engineers can perform to debug iDRAC.

Recommended Response Action No response action is required.

Category Audit (FSD = Debug)

FSD002

Message Debug authorization failed; for debugCaps: *arg1* , authorized by iDRAC user: *arg2* , and Dell employee: *arg3* , at *arg4* for the period: *arg5* to *arg6* .

Arguments

- ***arg1*** = DebugCaps
- ***arg2*** = iDRAC user
- ***arg3*** = Dell employee
- ***arg4*** = unblock time
- ***arg5*** = start time
- ***arg6*** = end time

Detailed Description A RACADM Debug command failed. If the RACADM Debug command was executed under the direction of Dell tech support then further assistance from tech support should be requested. Otherwise this command is not intended for customer use.

Recommended Response Action Verify all of the following 1) ensure that the unblock, grant, and invoke/start/stop/resume commands are all executed against the same iDRAC. 2) ensure dat.ini file has not been changed in any way. 3) ensure that current date falls between the start and end times. Note that Dell can further restrict both the set of debugCaps that is authorized and the start and stop times. If an authorized person did not enter a RACADM debug command then an attacker may have entered the command.

Redfish Event Type
No alerts are applicable for this message

GMGR0062

Message Unable to run the job because invalid user credentials are entered.
Detailed Description The job cannot be run because invalid user credentials are entered.
Recommended Response Action Enter valid credentials and retry the operation.
Category Configuration (GMGR = Group Manager)
Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

GMGR0063

Message Unable to complete the requested operation because the iDRAC Group Manager feature is disabled.
Detailed Description The iDRAC Group Manager feature is disabled. iDRAC will no longer be able to create or join or maintain iDRAC local groups. However, all the earlier settings of Group Manager are preserved. To enable the Group Manager, log in to iDRAC. On the Dashboard page, click Enable Group Manager.
Recommended Response Action Enable the iDRAC Group Manager feature and retry the operation. To enable the Group Manager, log in to iDRAC. On the Dashboard page, click Enable Group Manager.
Category Configuration (GMGR = Group Manager)
Severity Severity 2 (Warning)
Redfish Event Type

No alerts are applicable for this message

GMGR0064

Message	Unable to stop the group job because it is not an actively running job.
Detailed Description	The group job cannot be stopped because it is not in the active state. Only a job in running state can be stopped. Scheduled and completed group jobs cannot be stopped.
Recommended Response Action	No response action is required.
Category	Configuration (GMGR = Group Manager)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

GMGR0065

Message	Unable to retry completing the group job because it is not in an error state.
Detailed Description	The group job cannot be retried because it is not in an error state. Only failed or errored group job shall be retried.
Recommended Response Action	No response action is required.
Category	Configuration (GMGR = Group Manager)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

GMGR0066

Message	Unable to start the requested operation on the group job because the operation is not supported.
Detailed Description	The group job cannot be started because an invalid operation is requested.
Recommended Response Action	No response action is required.
Category	Configuration (GMGR = Group Manager)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

GMGR0067

Message	Unable to schedule a group job for the requested operation because the maximum number of group jobs are already created.
Detailed Description	The group job cannot be scheduled for the requested operation because the maximum number of group jobs are already created. A maximum of 50 group jobs of all states are maintained by the Group Manager.
Recommended Response Action	Delete the completed group jobs and retry the operation.
Category	Configuration (GMGR = Group Manager)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

GMGR0068

Message	Unable to complete a system configuration job because a group job is in progress.
Detailed Description	The group job cannot be completed because a group job is in progress.
Recommended Response Action	Wait for the existing group job to get completed and retry the operation.
Category	Configuration (GMGR = Group Manager)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

GMGR0069

Message	Unable to cancel the group job because it is not in the scheduled state.
Detailed Description	The group job cannot be cancelled because it is not in the scheduled state. Active and completed group jobs cannot be cancelled.
Recommended Response Action	No response action is required.
Category	Configuration (GMGR = Group Manager)

HWC2016

Message A fabric mismatch is detected between the server in slot *arg1* and IO Module in slot *arg2*.

Arguments

- ***arg1*** = slot number
- ***arg2*** = slot number

Detailed Description A fabric type mismatch is detected between the server in slot and I/O module as identified in the message.

Recommended Response Action Check the chassis fabric type by using the Manage Module graphic user interface (GUI) and compare against the type of fabric used in the I/O or mezzanine card. To check chassis type on the Manage Module home page, select

the server, and then view the I/O module properties. For more information about the compatible fabric types, see the Manage Module Users Guide available on the support site.

HWC4019

Message Unable to control the fan speed because a sled mismatch or hardware incompatibility is detected.

Detailed Description The fan speed cannot be controlled because a sled mismatch or hardware incompatibility is detected. This results in fans rotating at the maximum allowed speed (RPM).

Recommended Response Action Remove the sled in which a hardware incompatibility is detected and replace with a compatible working sled. For more information about hardware compatibility, see the platform Owners Manual available on the support site.

HWC7014

Message An invalid cable or incorrect cable configuration is detected.

Detailed Description An invalid cable related hardware configuration detected on the system.

Recommended Response Action Make sure the hardware and related cables are installed correctly. For information about configuration and installation procedures, see the systems Owners Manual available at the support site.

Message	The SD card device state has changed to a warning state. SD card location: <i>arg1</i> , SD card device type: <i>arg2</i> , SD card state: <i>arg3</i> .
Arguments	<ul style="list-style-type: none"> · <i>arg1</i> = location · <i>arg2</i> = type · <i>arg3</i> = state
Detailed Description	The SD card device is not functioning correctly, and its state has changed to a warning state.

Recommended Response Action Reinsert the SD card or try a different SD card and retry the operation. If the issue persists, do one of the following to resolve the error: 1) If the SD card sensor is installed on the internal SD module, replace the module. 2) If the SD card sensor is embedded on the system board, replace the system board. . For more information, contact your service provider.

Message	One or more PCIe switch heatsinks are not properly attached.
Detailed Description	The heatsinks are critical for providing cooling to the PCIe switches. If a PCIe switch stops functioning due to improper cooling, the PCIe subsystem may no longer function correctly and data loss may occur.
Recommended Response Action	Immediately turn off the Chassis by pressing the Chassis power button or removing chassis input power. The Chassis can be turned off remotely by running the following RACADM command "racadm chassisaction -m chassis nongraceshutdown". After turning off, contact your service provider.

Message Unable to configure some or all I/O Identity settings based on current persistence policy settings.

Detailed Description The iDRAC has applied I/O Identity Configuration on NIC and FC HBA devices. One or more of the setting configuration operations did not complete successfully.

Recommended Response Action Review the previous log entries and identify the devices that did not successfully complete configuration operations. For the identified devices, do the following and then restart the server: 1) Make sure the device is installed properly. 2) Make sure the device has latest firmware installed. If the issue persists, contact your service provider.

Message Unable to create or allocate the required resources.

Detailed Description CMC could not successfully allocate resources because of the following reasons: 1) The chassis manager is unable to allocate required resources. 2) The chassis manager or chassis infrastructure firmware is rolled back to an earlier version. 3) There is an issue with the internal communications between chassis components.

Recommended Response Action Make sure the firmware for the various chassis components are compatible with each other. If this is the case, do the following: 1) Turn off the chassis, by pressing the chassis Power Button, 2) run the following CMC RACADM command "racadm racresetcfg". If the problem persists, contact your technical service provider.

Message PCIE AUX power cable *arg1* .was disconnected while powered on.

Arguments

- ***arg1*** = cable number

Detailed Description The Chassis Management Controller (CMC) detected a power fault in an PCIE AUX power cable after the adapter was powered on. A power fault may be caused by a loose cable connection to the adapter or between the cable and the AUX cable harness.

Recommended Response Action Make sure AUX power cable identified in the message is fully plugged into the adapter and the AUX cable harness.

Message The PCIe shared adapter in slot *arg1* is not supported because the firmware version of the Chassis Infrastructure Mainboard is not the latest.

- Arguments**
- **arg1** = slot number

Detailed Description The PCIe shared adapter in slot identified in the message is not supported because the firmware version of Chassis Management Controller (CMC) Chassis Infrastructure Mainboard is not the latest.

Recommended Response Action Remove the adapter or update the Chassis Infrastructure firmware and then retry the operation. Using Chassis Management Controller (CMC) RACADM, run the command "racadm fwupdate -g -u -a <TFTP server IP

Address> -d mainboard.bin -m main_board" to upload the latest firmware version to the Chassis Infrastructure Mainboard.

IPA0100

Message	The iDRAC IP Address changed from <i>arg1</i> to <i>arg2</i> .
Arguments	<ul style="list-style-type: none"> · <i>arg1</i> = old IP Address · <i>arg2</i> = new IP Address
Detailed Description	The iDRAC IP Address changed from the earlier IP Address identified in the message to the new IP Address identified in the message. This notification will be generated when the iDRAC network card selection is changed, if the DHCP lease expires and the DHCP server assigns another address, or if iDRAC IP address is manually changed.
Recommended Response Action	Remote management consoles that have cached or stored the iDRAC IP address may have to be updated with the new IP address either through a re-discovery or manual reconfiguration. A response action may not be required if the console receives this SNMP notification and updates the iDRAC IP address accordingly.

ISM Event Messages

ISM0000

Message The iDRAC Service Module is started on the operating system (OS) of server.

Detailed Description The iDRAC Service Module is started on the OS of server.

Recommended Response Action No response action is required.

Category Audit (ISM = iDRAC Service Module)

Severity Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

ISM0001

Message The iDRAC Service Module detected a OS to iDRAC Pass-through in the *arg1* mode. Switch the OS to iDRAC Pass-through to a USB NIC mode.

Arguments

- ***arg1*** = mode

Detailed Description The iDRAC Service Module detected a OS to iDRAC Pass-through mode as identified in the message. iDRAC Service Module will automatically connect to iDRAC after the OS to iDRAC Pass-through is configured to the USB NIC mode.

Recommended Response Action Configure OS to iDRAC Pass-through to the USB NIC mode by running the commands: 1) racadm set idrac.os-bmc.PTMode usb-p2p 2) racadm set idrac.os-bmc.UsbNicIpAddress <ip address> 3) racadm set idrac.os-bmc.adminstate enabled.

Redfish Event Type	<i>No alerts are applicable for this message</i>

ISM0007

Message	The iDRAC Service Module communication with iDRAC has ended.
Detailed Description	The iDRAC Service Module ended communication with iDRAC over the OS to iDRAC Pass-through channel. This is because either iDRAC is being restarted or the OS to iDRAC Pass-through configuration is being changed. The iDRAC Service Module will continue to try connecting to iDRAC.
Recommended Response Action	No response action is required.
Category	Audit (ISM = iDRAC Service Module)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

ISM0008

Message	Some features of iDRAC Service Module will be disabled on this server, because OpenManage Server Administrator is running on the operating system (OS) of this server.
Detailed Description	iDRAC Service Module detected that OpenManage Server Administrator is running on the OS of this server. Therefore, one or more features of iDRAC Service Module will be disabled.
Recommended Response Action	End the OpenManage Server Administrator session. The features will be automatically started by iDRAC Service Module.
Category	Audit (ISM = iDRAC Service Module)
Severity	Severity 2 (Warning)
Redfish Event Type	

No alerts are applicable for this message

ISM0009

Message	The features of iDRAC Service Module that were disabled will be enabled on this server, because OpenManage Server Administrator is not running on the operating system (OS) of this server.
Detailed Description	iDRAC Service Module detected that OpenManage Server Administrator is not running on the OS of this server. Therefore, one or more features of iDRAC Service Module that were earlier disabled are now enabled on this server.
Recommended Response Action	No response action is required.
Category	Audit (ISM = iDRAC Service Module)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

ISM0010

Message	The iDRAC Service Module received a request from the <i>arg1</i> to stop the services of Service Module.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = requesting source name
Detailed Description	The iDRAC Service Module received a request from a source identified in the message to stop the Service Module services. For example, a requesting source can be an OS or iDRAC.
Recommended Response Action	If the requesting source is iDRAC, enable the iDRAC Service Module on the iDRAC before starting this service on the server OS. To enable the Service Module by using iDRAC GUI: Click Network, click OS to iDRAC Pass-through, and then click the USB NIC option. In the OS IP Address box , type an IP address, and then click Apply. To enable the module by using RACADM command, run the following command at the command line interface: racadm set idrac.servicemodule.ServiceModuleEnable enabled.
Category	Audit (ISM = iDRAC Service Module)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

ISM0011

Message	The server operating system (OS) is unable to start the iDRAC Service Module, because it is set to "disabled" in iDRAC.
Detailed Description	The server OS could not start the iDRAC Service Module, because the iDRAC Service Module disabled on iDRAC.
Recommended Response Action	Enable the iDRAC Service Module on the iDRAC before starting this service on the server OS, and then retry the operation. To enable the module by using iDRAC GUI: Click Network, click OS to iDRAC Pass-through, and then click the USB NIC option. In the OS IP Address box , type an IP address, and then click Apply. To enable the

module by using RACADM command, run the following command at the command line interface: racadm set idrac.servicemodule. ServiceModuleEnable enabled.

Message The In-band SNMP Get feature is not functional because an unsupported iDRAC configuration is detected.

Detailed Description The In-band SNMP Get feature is not functional because an unsupported iDRAC configuration is detected.

Recommended Response Action The In-band SNMP Get feature will not be functional in the following scenarios. 1. When System Lockdown mode is enabled in iDRAC. To disable the System Lockdown mode by using the iDRAC GUI, click iDRAC Dashboard -> More Actions -> Turn off the System Lockdown Mode. By using the RACADM Command Line Interface (CLI), run the racadm set idrac.lockdown.Systemlockdown disabled command. 2. When local RACADM configuration is disabled in iDRAC. To enable the local RACADM configuration by using the iDRAC GUI: a) Click iDRAC Settings -> Services -> Local Configuration. b) From the Disable Local Configuration using RACADM drop-down menu, select Disabled. By using the RACADM Command Line Interface (CLI), run the racadm set iDRAC.LocalSecurity.LocalConfig disabled command. 3. When iDRAC SNMP v3 is disabled in iDRAC. To enable the SNMPv3 feature by using the iDRAC GUI: a) Click iDRAC Settings -> Services -> SNMP Agent -> SNMP Protocol. b) From the drop-down menu, select ALL (SNMP V1|V2|V3). By using the RACADM Command Line Interface (CLI), run the racadm set idrac.snmp.SNMPProtocol All command.

Detailed Description Unable to schedule jobs for execution while an iDRAC firmware update job is running.

Recommended Response Action Wait for the running job to complete, and then retry the operation.

Category	Configuration (JCP = Job Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

JCP031

Message	Unable to delete the job because the configuration is still being committed.
Detailed Description	The job ID specified as input to the operation has configuration data that is currently being processed by the iDRAC. The job can be deleted after the processing is done.
Recommended Response Action	Retry the operation. If the issue persists, reset the iDRAC by pressing the System ID button for 15 seconds, wait for the iDRAC to finish restarting, and then retry the operation.
Category	Configuration (JCP = Job Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

JCP032

Message	Unable to create a job because conflicting options are entered.
Detailed Description	The configuration job cannot be created because the -r and --realtime options cannot be used at the same time.
Recommended Response Action	Make sure that only one of either -r or --realtime option is entered. For example, to run a job immediately, enter the --realtime option. To schedule a job that will be run after restarting a server, use the -r option. For more information about options, see the RACADM Command Line Reference Guide available at the support site. If the issue persists, contact your service provider.
Category	Configuration (JCP = Job Control)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

JCP033

Message	New job.
Detailed Description	This job is newly created. This is the default message in a job when it has just been created.
Recommended Response Action	No response action is required.
Category	Updates (JCP = Job Control)

Redfish Event Type

No alerts are applicable for this message

JCP034

Message *arg1* job is successfully created on iDRAC with *arg2* .

Arguments

- ***arg1*** = Job Name
- ***arg2*** = Job ID

Detailed Description A new configuration or update job has been created.

Recommended Response Action No response action is required.

Category Audit (JCP = Job Control)

Severity Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

JCP035

Message Unable to create new jobs because a backup job is currently running.

Detailed Description New jobs cannot be created because a backup job is currently running.

Recommended Response Action Wait for the running job to complete, and then retry the operation. To view a list of the jobs currently running, use the RACADM command "racadm jobqueue view" or using the WSMAN API, enumerate DCIM_LifeCycleJob to view the list of jobs that are currently scheduled.

Category Updates (JCP = Job Control)

Severity Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

JCP036

Message The job *arg1* is successfully deleted.

Arguments

- ***arg1*** = job ID

Detailed Description The job identified in the message is successfully deleted on iDRAC.

Recommended Response Action No response action is required.

LC Event Messages

LC001

Message	Command successful.
Detailed Description	The command completed successfully.
Recommended Response Action	No response action is required.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC002

Message	General failure.
Detailed Description	A general failure occurred while executing the command.
Recommended Response Action	Verify network connectivity. If failure persists, reset the iDRAC to resolve the issue.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC003

Message	Failed to change the firmware update mode.
Detailed Description	An error occurred while trying to set the firmware update mode.
Recommended Response Action	Verify that the firmware version supports this mode. Also confirm that the command and parameters are correct. The parameter choices are: 1) Disable (default) 2) Allow version upgrade only 3) Match firmware of replaced part.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC004

Message	Provisioning Server information is not formatted correctly.
Detailed Description	The Provisioning Server parameter information is not formatted correctly.
Recommended Response Action	Verify the string format. Enter a valid IP address or hostname for the Provisioning Server such as: 1) hostname 2) hostname.domain.com 3) 1.1.1.1 4) hostname:8080 5) hostname.dell.com:8080 6) hostname1:80,hostname2:8080.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC005

Message	Invalid firmware update mode.
Detailed Description	The value provided for the update mode parameter is invalid.
Recommended Response Action	Verify that the correct firmware update mode was entered. The choices are: 1) Disable (default) 2) Allow version upgrade only 3) Match firmware of replaced part.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC006

Message	Invalid Auto-Discovery action.
Detailed Description	The Auto-Discovery action selected is invalid.
Recommended Response Action	Verify that the selected Auto-Discovery action is supported. The supported commands are documented in the Lifecycle Controller User Guide.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC007

Message	Invalid Parameter.
----------------	--------------------

Detailed Description	One of the parameters specified in the method is invalid.
Recommended Response Action	Verify that the parameters specified are correct. For a list of parameters for this method refer to the Lifecycle Controller User Guide.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC008

Message	Unsupported method parameter value.
Detailed Description	The parameter value is not supported.
Recommended Response Action	Confirm that the parameters provided are correct. For a list of parameters for this method refer to the Lifecycle Controller User Guide.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC009

Message	Insufficient method parameters.
Detailed Description	There were insufficient parameters specified for this command.
Recommended Response Action	Confirm that the parameters provided are correct. For a list of parameters for this method refer to the Lifecycle Controller User Guide.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC010

Message	Certificate imported successfully.
Detailed Description	The communications encryption certificate was imported successfully.
Recommended Response Action	No response action is required.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

LC0100

Message	Lifecycle Controller has entered Recovery mode.
Detailed Description	A persistent error has occurred while carrying out a Lifecycle Controller operation. This situation causes Lifecycle Controller to enter Recovery mode. Any remote jobs pending execution were cancelled.
Recommended Response Action	To verify or change Recovery mode, use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings. Updating Lifecycle Controller clears the Recovery mode.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC0101

Message	Lifecycle Controller action was cancelled by a user.
Detailed Description	A user cancelled Lifecycle Controller actions. Any remote jobs pending execution were cancelled.
Recommended Response Action	No response action is required.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC011

Message	Certificate import operation failed.
Detailed Description	There was a general failure in the certificate import process.
Recommended Response Action	Do the following and retry the operation: 1) WS-Man: Rerun the command or reset the iDRAC by invoking the iDRACReset method which is defined in the DCIM_iDRACCardService class. 2) iDRAC GUI: Restart the iDRAC.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC012

Message	Another process is using Lifecycle Controller.
Detailed Description	Lifecycle Controller is in use by another process. Wait for other process to complete before attempting to run another command.
Recommended Response Action	Try one of the following: 1) Rerun the command after about 2 minutes. 2) Make sure that Lifecycle Controller Unified Server Configurator or an Update Package is not currently running on the server 3) Reset iDRAC and rerun the command.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC013

Message	Operation cannot be completed because there are no pending configuration.
Detailed Description	No changes are available between the previous configuration and the current configuration. At least one attribute should be changed to create a configuration job.
Recommended Response Action	Change the configuration of one or more attributes before creating a configuration job.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC014

Message	Maximum comment length is 255 characters.
Detailed Description	Maximum comment length is 255 characters.
Recommended Response Action	Limit the number of characters in the comment to 255 characters.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC015

Message	Invalid Part Configuration Update
Detailed Description	Invalid current attribute value.
Recommended Response Action	Check for correct parameter values: 1) Disabled 2) Apply always 3) Apply only if firmware match.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC016

Message	Missing required parameter, <i>arg1</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = parameter
Detailed Description	A required method argument was missing.
Recommended Response Action	Include all the parameters required for the command. Check Lifecycle Controller Profile documentation and try again.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC017

Message	Invalid value for the parameter, <i>arg1</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = parameter
Detailed Description	A parameter value provided when the method was invoked is not valid.
Recommended Response Action	Verify that parameter values provided to the method are typed as they appear in the enumeration and that the parameter data type matches the Lifecycle Controller Profile documentation.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC018

Message	The server certificate is successfully modified. To make the new certificate effective, reset the iDRAC.
Detailed Description	The server certificate is successfully modified. The current certificate will be active until the iDRAC is reset.
Recommended Response Action	To reset the iDRAC by using the iDRAC Graphical User Interface (GUI), click Maintenance > Diagnostics > Reset iDRAC. To reset by using the Command Line Interface (CLI), enter the RACADM command racadm racreset, or the iDRACReset()WS-Man method at the CLI. For information about updating the iDRAC certificate, see the iDRAC Users Guide available on the support site.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC019

Message	Base64 decode of PKCS12 content was not successful.
Detailed Description	The PKCS12 string could not be decoded from the Base64 encoding into a PKCS12 binary file.
Recommended Response Action	Validate that the contents of the PKCS12 parameter is base64 encoded. OpenSSL can be used to validate the encoding.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC020

Message	PKCS12 decrypt of the certificate could not complete.
Detailed Description	The contents of the PKCS12 parameter was not valid because: 1) not a valid PKCS12 file 2) not a valid pfx file 3) did not contain a certificate that matched the private key in the file.
Recommended Response Action	Validate that the PKCS12 content was Base64 encoded. OpenSSL can be used to create or validate a PKCS12 encoding.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC021

Message	PKCS12 decrypt of private key could not complete.
Detailed Description	The contents of the PKCS12 parameter was not valid because: 1) not a valid PKCS12 file 2) not a valid pfx file 3) did not contain a valid key.
Recommended Response Action	Validate that the PKCS12 file was Base64 encoded. OpenSSL can be used to create or validate a PKCS12 file.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC022

Message	Lifecycle Controller Log Export was successful.
Detailed Description	The Lifecycle Controller Log was successfully exported to the destination specified.
Recommended Response Action	No response action is required.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC023

Message	Cannot access network share.
Detailed Description	Credentials or network share identity information provided did not result in a network connection being established.
Recommended Response Action	Check network share access credentials (IP address, user name, password, share type, and so on). Refer to Lifecycle Controller Profile documentation for more details.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC024

Message	Unable to retrieve Lifecycle Controller Log records.
Detailed Description	Unable to retrieve Lifecycle Controller Log records because of an issue internal to the firmware.
Recommended Response Action	Do one of the following: 1) Try the operation again 2) AC power cycle the system 3) apply the latest firmware update packages for Lifecycle Controller and iDRAC.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC025

Message	Insufficient space on network share.
Detailed Description	Insufficient space on network share.
Recommended Response Action	Make more space available on the network share and try the operation again.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC026

Message	Lifecycle Controller Log Export method is not supported.
Detailed Description	This method is not supported in this version of the iDRAC firmware.
Recommended Response Action	Update the iDRAC firmware to a version that supports the log export.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC027

Message	The Hardware Inventory file export was successful.
----------------	--

Detailed Description	The Hardware Inventory XML file export operation was successful.
Recommended Response Action	No response action is required.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC028

Message	Unable to retrieve Hardware Inventory information.
Detailed Description	Hardware Inventory information is not retrievable due to an internal error.
Recommended Response Action	Try one of the following: 1) Try the operation again 2) AC power cycle system 3) apply the latest firmware update packages for Lifecycle Controller and iDRAC.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC029

Message	Invalid file path specified.
Detailed Description	An invalid File Path was specified in the export operation.
Recommended Response Action	Correct the specified file path and try again.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC030

Message	The file path is to a read-only file system.
Detailed Description	The file path specified for the operation is a read-only file system.
Recommended Response Action	Enable write access to the file path and try again.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

LC031

Message	Internal error occurred while exporting inventory.
Detailed Description	An internal error occurred while exporting the Hardware Inventory XML file.
Recommended Response Action	Reset iDRAC and retry the command.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC032

Message	The Hardware Inventory Export method not supported.
Detailed Description	This method is not supported in the current version of iDRAC firmware.
Recommended Response Action	Update the iDRAC firmware to a version that supports this method.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC033

Message	As-Shipped Hardware Inventory export was successful.
Detailed Description	The Hardware Inventory XML file representing the system configuration as shipped from the factory was successful.
Recommended Response Action	No response action is required.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC034

Message	Unable to retrieve As-Shipped Hardware Inventory from the system.
Detailed Description	The As-Shipped from the factory Hardware Inventory information is not present on the system.
Recommended Response Action	No response action is required.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC035

Message	As-Shipped Hardware Inventory Export method is not supported.
Detailed Description	This method is not supported in this version of Firmware.
Recommended Response Action	Update the iDRAC firmware to a version that supports this method.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC036

Message	Lifecycle Controller is not enabled.
Detailed Description	The Lifecycle Controller has been disabled through the iDRAC configuration utility accessed by pressing CTRL+E or F2 on boot up or through a remote command.
Recommended Response Action	For 11G systems: Use the iDRAC configuration utility to enable the System Services by pressing on the CTRL+E option on boot up at the targeted system. For 12G and above generations : Use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings, to enable the Lifecycle Controller on boot up of the targeted system.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC037

Message	An instance of Lifecycle Controller Log Export is already running.
Detailed Description	Lifecycle Controller is locked by another instance of Lifecycle Controller Log Export operation. Wait for that operation to complete before attempting to run another command.
Recommended Response Action	Do one of the following: 1) Wait approximately 2 minutes and retry the operation. 2) Reset iDRAC and retry the operation.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC038

Message	An instance of Hardware Inventory export is already in progress.
Detailed Description	Lifecycle Controller is locked by another instance of the Hardware Inventory export process. Allow the process to complete before attempting another export operation.
Recommended Response Action	Do one of the following: 1) Rerun the command after about 2 minutes 2) Reset the iDRAC and rerun the command.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC039

Message	An instance of As-Shipped Inventory export is already in progress.
Detailed Description	Lifecycle Controller is locked by another instance of the As-Shipped Inventory export process. Allow the process to complete before attempting another export operation.
Recommended Response Action	Do one of the following: 1) Rerun the command after about 2 minutes 2) Reset iDRAC and rerun the command.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC040

Message	Memory resource allocation failure.
Detailed Description	Unable to allocate required memory to perform the operation.
Recommended Response Action	Power cycle system and retry the operation. If the problem persists, reapply firmware packages for Lifecycle Controller and iDRAC.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC041

Message	Console name configure failed
Detailed Description	The length of the Console name exceeds the maximum length allowed or the file operation error encountered.
Recommended Response Action	Change the name of a console to a name less than 32 characters.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC042

Message	Configure Console name in FlexAddress mode
Detailed Description	Configure Console name while Virtual Address Management is in FlexAddress mode.
Recommended Response Action	Configure the Virtual Address Management to Console mode, and then configure the name of a console.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC043

Message	Work note contains non-printable or reserved characters.
----------------	--

Detailed Description	Work notes cannot include non-printable or reserved characters, such as &, <, >, /.
Recommended Response Action	Do not use non-printable characters or reserved characters such as &, <, >, and /.
Category	Updates (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC044

Message	An instance of Lifecycle Controller system configuration wipe is already running.
Detailed Description	The Lifecycle Controller system configuration wipe operation is currently running. The operation deletes user information from system hardware and resets BIOS, iDRAC and Lifecycle Controller to default settings. The current operation and system restart must complete before the operation can be attempted again.
Recommended Response Action	Wait for the Lifecycle Controller system configuration wipe operation that is currently running to complete before requesting another operation.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC045

Message	An instance of CreateConfigJob is already running.
Detailed Description	The CreateConfigJob operation is currently running. The current operation and system restart must complete before the operation can be attempted again.
Recommended Response Action	Wait for the CreateConfigJob operation that is currently running to complete before requesting another operation.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC046

Message	An instance of DownloadServerPublicKey is already running.
Detailed Description	The DownloadServerPublicKey operation is in progress. The operation may take a few minutes to complete before the operation can be attempted again.

Recommended Response Action	Wait a few minutes before retrying retry the operation.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC047

Message	An instance of DownloadClientCerts is already running.
Detailed Description	The DownloadClientCerts operation is in progress. The operation may take a few minutes to complete before the operation can be attempted again.
Recommended Response Action	Wait a few minutes before retrying retry the operation.
Category	Configuration (LC = Lifecycle Controller)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LC048

Message	Invalid input value for IPChangeNotifyPS.
Detailed Description	The value provided to set the attribute identified in the message is invalid.
Recommended Response Action	For more information on the valid values, see Lifecycle Controller-Remote Services documentation. Retry the operation with a valid value for the IPChangeNotifyPS attribute.

Recommended Response Action	No response action is required.
Category	Audit (LIC = Licensing)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC001

Message	The License Manager command parameter used is invalid.
Detailed Description	The command or command parameters passed to License Manager is invalid. This is an internal error indicative of memory corruption. Under normal circumstances this error should not occur.
Recommended Response Action	Contact technical support. Refer to your product documentation to choose the contact method that is convenient for you.
Category	Audit (LIC = Licensing)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC002

Message	License Manager is unable to allocate the required resources at startup.
Detailed Description	The error may occur when License Manager: 1) Is unable to allocate system resources.2) Determines one or more files is incompatible with the current firmware version. This occurs when an older firmware version has been

uploaded to a system that was previously running a newer firmware version. If this occurs, the current internal License Manager files are deleted and new ones are created, which align with the firmware version. A license reimport may be required. NOTE: All import, delete, export, view license commands are blocked until this issue is resolved.

Recommended Response Action If the firmware has been rolled back to a previous version, this error may occur. All previously installed licenses must be re-imported. If this is not the case, contact technical support.

Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC011

Message	A non-evaluation license cannot be replaced with an evaluation license.
Detailed Description	License Manager does not allow the replacement of a non-evaluation license with an evaluation license.
Recommended Response Action	To replace a non-evaluation license, first delete the non-evaluation license, then import the evaluation license.
Category	Audit (LIC = Licensing)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC012

Message	The license file does not exist.
Detailed Description	This error may occur if: 1) The license was deleted by another user. 2) The license that is being imported may have been deleted from the temporary storage before the import operation completed.3) At start-up, License Manager does not find the license assigned to the device. This may occur if a power outage occurs before a license delete operation completes.
Recommended Response Action	Re-import the license.
Category	Audit (LIC = Licensing)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC013

Message	These license features are not supported by this firmware version.
Detailed Description	The license includes features not supported in this firmware release.
Recommended Response Action	Update the firmware to the latest version.
Category	Audit (LIC = Licensing)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC014

Message	Multiple backup or restore operations have been simultaneously attempted on the License Manager database.
Detailed Description	An attempt to lock the License Manager database for Lifecycle Controller backup or restore occurred when the License Manager database was already locked. This may occur when two or more users attempt to do a backup or restore operation simultaneously.
Recommended Response Action	Repeat the Lifecycle Controller backup or restore operation.
Category	Audit (LIC = Licensing)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC015

Message	The License Manager database restore operation failed.
Detailed Description	This error occurs when the Lifecycle Controller restore operation is interrupted before it completes. This can occur due to a power outage or when a system is rebooted before the operation is completed.
Recommended Response Action	Repeat the Lifecycle Controller restore operation. If the problem persists, contact technical support. Refer to your product documentation to choose the contact method that is convenient for you.
Category	Audit (LIC = Licensing)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC016

Message	The feature dependencies of the license are not met.
Detailed Description	The license includes features that are dependent upon additional licensed features not included in this license. These licensed features are not activated until license(s) with the dependent licensed features are imported to the system.
Recommended Response Action	Import the license(s) that meet the license features dependencies.
Category	Audit (LIC = Licensing)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC017

Message	The license file is corrupted, has not been unzipped, or is not a valid license file.
Detailed Description	This error can occur when the license file: 1) Signature is not valid. 2) Data is not in the correct format. 3) Missing needed data. 4) Contains unknown data.5) Has not been unzipped.
Recommended Response Action	Download the license file, unzip and import the license.
Category	Audit (LIC = Licensing)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC018

Message	The license is already imported.
Detailed Description	The license is already imported on the system and does not need to be reimported.
Recommended Response Action	No response action is required.
Category	Audit (LIC = Licensing)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC019

Message	A leased license may not be imported prior to its start date.
Detailed Description	A leased license may not be imported prior to the actual start date of the license.
Recommended Response Action	Import the license on or after the license start date.
Category	Audit (LIC = Licensing)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC020

Message	Import failed: End User License Agreement (EULA) import upgrade warning.
----------------	--

Detailed Description	Importing an upgrade license without a base license is not allowed, as it may be a violation of the license EULA agreement. If the base license was deleted, the system allows the user to override the warning by invoking the import override option.
Recommended Response Action	If the base license was deleted, override the warning by invoking the import override option.
Category	Audit (LIC = Licensing)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC021

Message	Import failed: The features contained in the evaluation license are already licensed.
Detailed Description	All the features in the evaluation license are currently licensed in the system. The license is not imported as it would duplicate existing and active licensed features.
Recommended Response Action	Remove the license(s) that contain the license set from the evaluation license.
Category	Audit (LIC = Licensing)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC022

Message	License Manager database locked due to ongoing backup and restore operation.
Detailed Description	License Manager database is locked while a backup and restore operation is in progress. License import/export/delete operations are not allowed but a user can view license information.
Recommended Response Action	Wait until the backup or restore operation completes and try again.
Category	Audit (LIC = Licensing)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC023

Message	An unauthorized iDRAC license version is being used.
Detailed Description	An unauthorized iDRAC license version is being used.

Recommended Response Action	Obtain an authorized iDRAC license version. For more information, contact your service provider. Also, see the iDRAC Users Guide available on the support site.
Category	Audit (LIC = Licensing)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC024

Message	License operation did not complete successfully because the device is turned on.
Detailed Description	The License can not be installed, deleted or replaced when the device is on.
Recommended Response Action	Turn off the respective device and retry the License operation.
Category	Audit (LIC = Licensing)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LIC201

Message	License <i>arg1</i> assigned to device <i>arg2</i> expires in <i>arg3</i> days.
Arguments	<ul style="list-style-type: none"> • <i>arg1</i> = entitlement ID • <i>arg2</i> = device name • <i>arg3</i> = number of days
Detailed Description	This license is going to expire. An expired license could result in the loss of functionality that is specific to the features supported by the license.
Recommended Response Action	Purchase a new license to prevent interruption of licensed features.

LOG Event Messages

LOG001

Message	Missing required InstanceID or JobID parameter.
Detailed Description	One or more required parameters needed for the method invoked in the operation are missing.
Recommended Response Action	To provide the correct value for the specified parameter, see Lifecycle Controller-Remote Services documentation.
Category	Configuration (LOG = Log Event)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LOG002

Message	An invalid parameter ID is entered for <i>arg1</i> .
Arguments	<ul style="list-style-type: none"> • <i>arg1</i> = instance ID/job ID
Detailed Description	An invalid parameter ID is entered for the instance ID or job ID identified in the message.
Recommended Response Action	Enter the correct WS-Man parameter for the instance ID or job ID. For information about valid parameters, see the Lifecycle Controller Remote Services Quick Start Guide available on the support site.
Category	Configuration (LOG = Log Event)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

LOG003

Message	ConfigResults not available for log entry specified.
Detailed Description	The log entry with the specified InstanceID does not have any associated configuration results.
Recommended Response Action	Verify the ConfigResults availability for the InstanceID through enumeration of the LogEntry class and retry the operation. Refer to the Lifecycle Controller-Remote Services documentation.
Category	Configuration (LOG = Log Event)

Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

LOG004

Message Resource allocation failure.
Detailed Description The operation did not complete successfully because of lack of memory or file space in iDRAC firmware.
Recommended Response Action Reset iDRAC and retry the operation.
Category Configuration (LOG = Log Event)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

LOG005

Message Cannot perform the operation due to an unknown error in iDRAC.
Detailed Description The operation did not complete successfully because of an unknown error in iDRAC.
Recommended Response Action Retry the operation. If the issue persists, reset the iDRAC.
Category Configuration (LOG = Log Event)
Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

LOG006

Message Test event generated for message ID *arg1* .
Arguments
· ***arg1*** = message ID
Detailed Description This message is generated while performing a Test Event action. Performing a Test Event action logs an event in the Lifecycle Log with the user specified message ID. It may also generate events through SNMP, email, or other event notification sources if they are enabled. The test event does not indicate that there is a hardware or software problem. It provides a mechanism for users to test their event processing applications.
Recommended Response Action No response action is required.

MEM9014

Message A correctable memory error has occurred in Dual In-line Memory Module (DIMM) device *arg1*.

Arguments

- ***arg1*** = location

Detailed Description The memory device identified in the message has encountered a correctable memory error. This may be an early indicator of a possible future uncorrectable error.

Recommended Response Action This is a correctable error. Review log information and if multiple correctable errors have occurred on the DIMM identified in the message, re-install the memory device. If the issue persists, contact your service provider.

Category System Health (MEM = Memory)

Severity Severity 2 (Warning)

LCD Message DIMM <location> has a correctable memory error.

Redfish Event Type

No alerts are applicable for this message

MEM9015

Message Multi-bit memory errors detected on a Dual In-line Memory Module (DIMM) device *arg1*.

Arguments

- ***arg1*** = location

Detailed Description The memory device identified in the message has encountered an uncorrectable error. System performance may be degraded. The operating system and/or applications may fail as a result.

Recommended Response Action Re-install the memory component identified in the message. If the issue persists, contact your service provider. Refer to the product documentation to choose a convenient contact method.

Category System Health (MEM = Memory)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

MEM9016

Message Correctable memory error rate exceeded for Dual In-line Memory Module (DIMM) *arg1* .

Arguments

- ***arg1*** = location

Detailed Description The memory device identified in the message may not be operational. This an early indicator of a possible future uncorrectable error.

Recommended Response Action Re-install the memory component identified in the message. If the issue persists, contact your service provider. Refer to the product documentation to choose a convenient contact method.

Category System Health (MEM = Memory)

Severity Severity 2 (Warning)

LCD Message DIMM <location> exceeded correctable memory error rate.

Redfish Event Type

No alerts are applicable for this message

MEM9020

Message The Non-Volatile Dual In-line Memory Module (NVDIMM) device in the slot *arg1* is about to reach the end of supported life duration.

Arguments

- ***arg1*** = location

Detailed Description The NVDIMM device in the slot, identified in the message, is about to reach the end of supported life duration.

Recommended Response Action During the next scheduled maintenance, replace the Non-Volatile Dual In-line Memory Module (NVDIMM) device. For more information about the usage of NVDIMMs, see the system Owners Manual on the support site.

Category System Health (MEM = Memory)

Severity Severity 2 (Warning)

Trap/EventID 2266

LCD Message The NVDIMM in <location> is approaching the end of supported life.

NFAB Event Messages

NFAB0001

Message The health status of network fabric *arg1* having fabric ID as *arg2* is ok.

Arguments

- **arg1** = fabric name
- **arg2** = fabric ID

Detailed Description The health status of network fabric identified in the message is ok.

Recommended Response Action No response action is required.

Category System Health (NFAB = Fabric)

Severity Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

NFAB0002

Message The health status of network fabric *arg1* having fabric ID as *arg2* is in Warning condition.

Arguments

- ***arg1*** = fabric name
- ***arg2*** = fabric ID

Detailed Description The health status of network fabric identified in the message is in Warning condition.

Recommended Response Action For more information, see the Fabric Health issue list available on the support site.

Category System Health (NFAB = Fabric)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

NFAB0003

Message The health status of network fabric *arg1* having fabric ID as *arg2* is in Critical condition.

Arguments

- ***arg1*** = fabric name
- ***arg2*** = fabric ID

Detailed Description The health status of network fabric identified in the message is in Critical condition.

Recommended Response Action Make sure that the I/O Module, management interface configuration, and physical connection are appropriate for the node. Also, make sure that the maintenance activities on the following are completed before proceeding further: 1) Ongoing MCM Group maintenance 2) Management Module 3) Fabric 4) Node. For more information, see the Fabric Health issue list.

Category System Health (NFAB = Fabric)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

NFAB0004

Message The network fabric *arg1* having fabric ID as *arg2* is valid.

Arguments

- ***arg1*** = fabric name
- ***arg2*** = fabric ID

Detailed Description The network fabric identified in the message is valid. The network fabric validation criteria such as design, fabric node inventory, I/O module placement requirements, and inter-node connectivity are consistent.

Recommended Response Action	No response action is required.
Category	System Health (NFAB = Fabric)

NIC500

Message	The requested object is not allowed to be configured if DHCP is enabled.
Detailed Description	The values of IP Address is not allowed to change if DHCP is enabled.
Recommended Response Action	Disable DHCP and then modify the value.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC501

Message	The requested object is not allowed to be configured if Auto Config is enabled.
Detailed Description	Autoconfig assigns values to the network components.
Recommended Response Action	Disable Autoconfig and then modify the value.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC502

Message	DHCP is required to be enabled on the NIC before DHCP can be enabled for DNS server or domain name objects.
Detailed Description	The value of the specified parameter cannot be changed.
Recommended Response Action	Enable DHCP on the NIC before enabling it for DNS.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC503

Message	The DNS server IP address is not allowed to be configured if DNS server DHCP (cfgDNSServersFromDHCP) is enabled.
Detailed Description	The value of the specified parameter cannot be changed.
Recommended Response Action	Disable the cfgDNSServersFromDHCP object.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC504

Message	The IPv6 DNS Server IP address is not allowed to be configured if IPv6 DNS Server DHCP (cfgIPv6DNSServersFromDHCP6) is enabled.
Detailed Description	The value of the specified parameter cannot be changed.
Recommended Response Action	Disable the cfgIPv6DNSServersFromDHCP6 object.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC505

Message	The DNS domain name is not allowed to be configured if domain name DHCP (cfgDNSDomainNameFromDHCP) is enabled.
Detailed Description	The value of the specified parameter cannot be changed.
Recommended Response Action	Disable the cfgDNSDomainNameFromDHCP object.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC506

Message	The requested object requires DNS registration to be enabled.
Detailed Description	The requested operation requires the DNS registration to be enabled.
Recommended Response Action	Enable the DNS registration.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC507

Message	Unable to determine current NIC state.
Detailed Description	For the requested operation, enable the NIC to get the NIC details.
Recommended Response Action	Check if the NIC is disabled. If disabled, enable the NIC.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC508

Message	NIC teaming info is not currently available.
Detailed Description	None.
Recommended Response Action	No response action is required.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC509

Message	NIC is now ENABLED
----------------	--------------------

Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC510

Message	NIC is now DISABLED
Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC511

Message	NIC is already ENABLED
Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC512

Message	DHCP is already ENABLED
Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

NIC513

Message	DHCP6 is already ENABLED
Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC514

Message	DHCP is now ENABLED
Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC515

Message	DHCP6 is now ENABLED
Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NIC516

Message	Static IP configuration enabled and modified successfully
Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	

No alerts are applicable for this message

NINT Event Messages

NINT0001

Message	The interface <i>arg1</i> is in operational status.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = interface ID
Detailed Description	The interface identified in the message is in operational status.
Recommended Response Action	No response action is required.
Category	Audit (NINT = Interface)
Severity	Severity 3 (Informational)
Redfish Event Type	

No alerts are applicable for this message

NINT0002

Message	The interface <i>arg1</i> is not operational.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = interface ID
Detailed Description	The interface identified in the message is not operational.
Recommended Response Action	Confirm the interface configuration and the associated physical port connectivity to determine the operational status of the interface.
Category	Audit (NINT = Interface)
Severity	Severity 2 (Warning)
Redfish Event Type	

No alerts are applicable for this message

NLIN Event Messages

NLIN0001

Message The link between Source *arg1* and Destination *arg2* is created.

Arguments

- ***arg1*** = source interface ID
- ***arg2*** = destination interface ID

Detailed Description The link between Source and Destination identified in the message is created.

Recommended Response Action No response action is required.

Category Audit (NLIN = Link)

Severity Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

NLIN0002

Message The link *arg1* is successfully deleted.

Arguments

- ***arg1*** = Source Interface ID

Detailed Description The link identified in the message is successfully deleted.

Recommended Response Action No response action is required.

Category Audit (NLIN = Link)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

NNOD Event Messages

NNOD0001

Message The I/O Module *arg1* is operational.

Arguments

- ***arg1*** = Node ID

Detailed Description	The I/O Module identified in the message is operational.
Recommended Response Action	No response action is required.
Category	System Health (NNOD = Node)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NNOD0002

Message	The operational status of I/O Module <i>arg1</i> might have ended.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Node ID
Detailed Description	The operational status of the I/O Module identified in the message has ended. Possible reasons could be that the MCM Group maintenance is in progress or Management Module maintenance is in progress or Fabric maintenance is in progress or Node maintenance is in progress.
Recommended Response Action	Make sure that the I/O Module, management interface configuration and physical connectivity are appropriate for the node. Also ensure that all the ongoing MCM Group maintenance and Management Module maintenance and Fabric maintenance and Node maintenance have completed before proceeding further.
Category	System Health (NNOD = Node)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NNOD0003

Message	The I/O Module <i>arg1</i> is discovered.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Node ID
Detailed Description	The I/O Module identified in the message is discovered.
Recommended Response Action	No response action is required.
Category	Audit (NNOD = Node)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NNOD0004

Message	Unable to detect the I/O Module <i>arg1</i> because of physical connection and operational issues.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Node ID
Detailed Description	The I/O Module identified in the message cannot be detected because of physical connection and operational issues.
Recommended Response Action	Make sure that the physical presence and operations of the I/O Module are correct.
Category	Audit (NNOD = Node)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NNOD0005

Message	The MX7116n Fabric Expander Module <i>arg1</i> is discovered.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = spinner ID
Detailed Description	The MX7116n Fabric Expander Module identified in the message is discovered.
Recommended Response Action	No response action is required.
Category	Audit (NNOD = Node)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NNOD0006

Message	Unable to detect the MX7116n Fabric Expander Module <i>arg1</i> because of physical connection issues.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = spinner ID
Detailed Description	The MX7116n Fabric Expander Module identified in the message cannot be detected because of physical connection issues.
Recommended Response Action	Make sure that the MX7116n Fabric Expander Module is properly connected.
Category	Audit (NNOD = Node)

Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

NNOD0007

Message Unable to perform a simple I/O module swap operation because the replacement I/O module software version *arg1* is different from the fabric software version *arg2* .

Arguments

- ***arg1*** = software version
- ***arg2*** = software version

Detailed Description A simple I/O module swap operation cannot be performed because the replacement I/O module software version is different from the fabric software version as identified in the message.

Recommended Response Action Make sure that the software versions of replacement I/O module and fabric are the same.

Category Audit (NNOD = Node)

Severity Severity 2 (Warning)

Redfish Event Type
No alerts are applicable for this message

NSER Event Messages

NSER0001

Message The server *arg1* is detected.

Arguments

- ***arg1*** = Server ID

Detailed Description The server identified in the message is detected.

Recommended Response Action No response action is required.

Category Audit (NSER = Server)

Severity Severity 3 (Informational)

Redfish Event Type
No alerts are applicable for this message

NSER0002

Message The server *arg1* is not detected.

Arguments	<ul style="list-style-type: none">· arg1 = Server ID
Detailed Description	The server identified in the message is not detected. Possible reasons could be that the fabric node to which the server is connected is operationally down or the server is moved or replaced from the existing slot.
Recommended Response Action	Make sure that the server is physically present and operational. Also ensure that the fabric node that is connected to the server is operational.
Category	Audit (NSER = Server)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NSER0003

Message	The server <i>arg1</i> is onboarded.
Arguments	<ul style="list-style-type: none">· arg1 = server ID
Detailed Description	The configuration of server identified in the message is validated and onboarded.
Recommended Response Action	No response action is required.
Category	Audit (NSER = Server)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NSER0004

Message	The server <i>arg1</i> is offboarded.
Arguments	<ul style="list-style-type: none">· arg1 = Server Id
Detailed Description	The detected server and its configuration is no longer validated.
Recommended Response Action	Make sure that the server is physically present and operational.
Category	Audit (NSER = Server)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NSER0005

Message	The server <i>arg1</i> with Server Interface <i>arg2</i> is onboarded.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = server ID· <i>arg2</i> = server interface ID
Detailed Description	The configuration of server identified in the message is validated and successfully onboarded.
Recommended Response Action	No response action is required.
Category	Audit (NSER = Server)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NSER0006

Message	Server <i>arg1</i> ServerInterface <i>arg2</i> is offboarded.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Server Id· <i>arg2</i> = Server Interface Id
Detailed Description	The detected server interface and its configuration is not validated.
Recommended Response Action	Make sure that the server interface is physically present and operational.
Category	Audit (NSER = Server)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NSER0007

Message	The server <i>arg1</i> having the OnboardInterface <i>arg2</i> and Server Interfaces: <i>arg3</i> , are bonded.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = server ID· <i>arg2</i> = Onboard Interface ID· <i>arg3</i> = server interface IDs
Detailed Description	The server and server interfaces identified in the message are bonded.
Recommended Response Action	No response action is required.

Category Audit (NSER = Server)
Severity Severity 3 (Informational)
Redfish Event Type
No alerts are applicable for this message

NSER0008

Message The server *arg1* having the OnboardInterface *arg2* is unbonded.

Arguments

- ***arg1*** = server ID
- ***arg2*** = OnboardInterface ID

Detailed Description The server and server interfaces identified in the message are unbonded.

Recommended Response Action Make sure the server interfaces configuration are correct.

Category Audit (NSER = Server)
Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

NVCH Event Messages

NVCH0001

Message Unable to retrieve the chassis information because the chassis does not exist.
Detailed Description The chassis information cannot be retrieved because the chassis does not exist.
Recommended Response Action Enter a valid chassis and retry the operation.
Category Configuration (NVCH = Chassis)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVCO Event Messages

NVCO0001

Message Unable to service the request because of an internal system error.
Detailed Description The request failed due to internal system error.

Recommended Response Action	Retry the operation after some time. If the issue persists, contact the administrator.
Category	Configuration (NVCO = Common)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVCO0002

Message	Unable to configure the name because the configured name exceeds the limit of 256 characters in size.
Detailed Description	The name cannot be configured because the configured name exceeds 256 characters in size.
Recommended Response Action	Enter a name within the range of 256 characters and retry the operation.
Category	Configuration (NVCO = Common)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVCO0003

Message	Unable to configure the description because the configured description exceeds the limit of 256 characters in size.
Detailed Description	The description cannot be configured because the configured description exceeds 256 characters in size.
Recommended Response Action	Enter a description within the range of 256 characters and retry the operation.
Category	Configuration (NVCO = Common)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVFA Event Messages

NVFA0001

Message	Unable to configure fabric because the fabric already exists.
Detailed Description	The fabrics cannot be configured because the fabric already exists.
Recommended Response Action	No response action is required.
Category	Configuration (NVFA = Fabric)

Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVFA0002

Message Unable to configure the fabric because the Fabric Node *arg1* does not exist.
Arguments
· ***arg1*** = node ID
Detailed Description The fabric cannot be configured because the fabric node identified in the message is not present.
Recommended Response Action Enter a valid fabric node and retry the operation again.
Category Configuration (NVFA = Fabric)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVFA0003

Message Unable to retrieve fabric because the fabric does not exist.
Detailed Description The fabric cannot be retrieved because the fabric does not exist.
Recommended Response Action Enter a valid fabric and retry the operation.
Category Configuration (NVFA = Fabric)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVFA0004

Message Unable to configure fabric with the given Node *arg1* because the node is already part of another fabric *arg2* .
Arguments
· ***arg1*** = node ID
· ***arg2*** = fabric ID
Detailed Description The fabric cannot be configured because the node mentioned in the message is already part of another fabric.
Recommended Response Action Create the fabric with a different node which is not part of any existing fabric and retry the operation.
Category Configuration (NVFA = Fabric)

Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVFA0005

Message Unable to configure fabric design because the fabric design *arg1* does not exist.
Arguments

- ***arg1*** = fabric design

Detailed Description The fabric cannot be configured because the fabric design identified in the message does not exist.
Recommended Response Action Enter a valid fabric design and retry the operation again.
Category Configuration (NVFA = Fabric)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVFA0006

Message Unable to do configure fabric because the fabric node *arg1* , node type *arg2* does not match with fabric design node *arg3* design node type *arg4* .
Arguments

- ***arg1*** = fabric node
- ***arg2*** = node type
- ***arg3*** = fabric design
- ***arg4*** = design node type

Detailed Description The fabric cannot be configured because the fabric node and fabric design node identified in the message does not match.
Recommended Response Action Enter a valid fabric node, node type and retry the operation again.
Category Configuration (NVFA = Fabric)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVFA0007

Message Unable to configure fabric because the design node *arg1* does not exist in fabric design.

Arguments	<ul style="list-style-type: none">· arg1 = design node
Detailed Description	The fabric cannot be configured because the design node does not exist in the fabric design identified in the message.
Recommended Response Action	Enter a valid design node and retry the operation again.
Category	Configuration (NVFA = Fabric)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVFA0008

Message	Unable to configure fabric because the fabric design node count <i>arg1</i> does not match with fabric node count <i>arg2</i> .
Arguments	<ul style="list-style-type: none">· arg1 = fabric nodes count· arg2 = fabric node count
Detailed Description	The fabric cannot be configured because the fabric node count and fabric design node count identified in the message does not match.
Recommended Response Action	Enter valid nodes matching the fabric design and retry the operation again.
Category	Configuration (NVFA = Fabric)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVFA0009

Message	Updating fabric design map on an existing fabric is not supported.
Detailed Description	Once fabric is created, the design map cannot be changed.
Recommended Response Action	No response action is required.
Category	Configuration (NVFA = Fabric)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVFA0010

Message Updating the fabric design of an existing fabric is not supported.

Detailed Description Once fabric is created, fabric design cannot be updated.

Recommended Response Action No response action is required.

Category Configuration (NVFA = Fabric)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

NVFA0011

Message Updating the nodes of an existing fabric is not supported.

Detailed Description Once the fabric is created, the nodes cannot be added/removed.

Recommended Response Action No response action is required.

Category Configuration (NVFA = Fabric)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

NVFA0012

Message Unable to assign the node *arg1* to a fabric because a Lifecycle operation is in progress on the node and the node state is *arg2* .

Arguments

- ***arg1*** = node ID
- ***arg2*** = current lifecycle state

Detailed Description The node identified in the message cannot be assigned to a fabric because a Lifecycle operation is in progress on the node.

Recommended Response Action Wait for the pending Lifecycle action to complete and retry the operation.

Category Configuration (NVFA = Fabric)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

NVFA0013

Message	Unable to start the Fabric Lifecycle operation because a Lifecycle operation is already in progress on the Fabric.
Detailed Description	The Lifecycle operation cannot be started on the Fabric because a Lifecycle operation is already in progress on the Fabric.
Recommended Response Action	Wait for the pending Lifecycle operation to get completed and retry the operation.
Category	Configuration (NVFA = Fabric)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVFA0014

Message	Unable to delete the fabric because a fabric upgrade operation is in progress on the selected fabric.
Detailed Description	The fabric cannot be deleted because a fabric upgrade operation is in progress on the selected fabric.
Recommended Response Action	Wait for the pending lifecycle operation on the fabric to be completed and retry the operation.
Category	Configuration (NVFA = Fabric)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVFA0015

Message	Unable to apply the Fabric Lifecycle configuration because the lead I/O module <i>arg1</i> lifecycle activity is in progress.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = lead servicetag
Detailed Description	The Fabric Lifecycle operation cannot be applied because the lead I/O modules lifecycle activity is in progress.
Recommended Response Action	Wait for the Lifecycle activity of the lead I/O module to complete and retry the operation.
Category	Configuration (NVFA = Fabric)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF Event Messages

NVIF0001

Message	Unable to configure Maximum Transmission Unit(MTU) because the configured MTU value is greater than the maximum value.
Detailed Description	The Maximum Transmission Unit (MTU) cannot be configured because the value exceeds the limit identified in the message.
Recommended Response Action	Configure a valid MTU less than or equal to the value identified in the message and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0002

Message	Unable to configure the fanout on the interface because the interface fanout type is not HardwareDefault.
Detailed Description	Fanout from non-hardware default to non-hardware default is not allowed.
Recommended Response Action	Configure the interface to HardwareDefault and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0003

Message	Unable to configure the interface because the interface does not exist in the inventory.
Detailed Description	The interface can not be configured because the interface does not exist in the inventory.
Recommended Response Action	No response action required.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0004

Message	Unable to configure autoneg because the interface does not support autoneg.
Detailed Description	The autoneg cannot be configured on the interface because the autoneg capability is not supported for this interface.
Recommended Response Action	No response action is required.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0005

Message	Unable to configure the configured speed for the interface because the entered value is not supported.
Detailed Description	The configured speed cannot be configured because the configured speed identified in the message is not supported.
Recommended Response Action	Enter a valid configured speed and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0006

Message	Unable to configure the Breakout property on the interface <i>arg1</i> because the Breakout Capability validation has failed.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Interface Name
Detailed Description	The Breakout property on the interface identified in the message cannot be configured because the Breakout Capability validation has failed.
Recommended Response Action	Validate the Breakout Capability types for the interface and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0007

Message	Unable to configure the Breakout property on the interface <i>arg1</i> because the requested breakout type is not supported.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Interface Name
Detailed Description	The Breakout property on the interface identified in the message cannot be configured because the interface does not support the requested breakout type.
Recommended Response Action	Validate the Breakout type for the interface and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0008

Message	Unable to configure the Breakout property on the interface <i>arg1</i> because the resource validation has failed.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Interface Name
Detailed Description	The Breakout property on the interface identified on the message cannot be configured because the interface has associated configured resources.
Recommended Response Action	Unconfigure the resources for the interface and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0009

Message	Unable to configure the Breakout property on the interface <i>arg1</i> because the VLAN association validation has failed.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Interface Name
Detailed Description	The Breakout property on the interface identified in the message cannot be configured because the interface member has associated vlan configuration.

Recommended Response Action	Unconfigure VLAN resources for the interface and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0010

Message	Unable to configure the Breakout property on the interface <i>arg1</i> because the FIB-VLAN association validation has failed.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Interface Name
Detailed Description	The Breakout property on the interface identified in the message cannot be configured because the interface member has associated FIB-VLAN configuration.
Recommended Response Action	Unconfigure FIB-VLAN resources for the interface and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0011

Message	Unable to configure the breakout property on the interface <i>arg1</i> because the breakout member is part of an uplink.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Interface Name
Detailed Description	The Breakout property on the interface identified in the message cannot be configured because the member interface is associated with an uplink.
Recommended Response Action	Remove the breakout member from the uplink and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0012

Message	Unable to configure the breakout property on the interface <i>arg1</i> because the breakout member is part of another port channel.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Interface Name
Detailed Description	The Breakout property on the interface identified in the message cannot be configured because the member interface is associated with another port channel.
Recommended Response Action	Remove the breakout member from the port channel member and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0013

Message	Unable to configure the Breakout property on the interface <i>arg1</i> because the MX7116n Fabric Expander Module resource validation has failed.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Interface Name
Detailed Description	The Breakout property on the interface identified on the message cannot be configured because the interface has associated MX7116n Fabric Expander Module resources.
Recommended Response Action	Remove the cable between the MX7116n Fabric Expander Module and port group and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0014

Message	Unable to configure Maximum Transmission Unit(MTU) on interface <i>arg1</i> because the interface is of fibre channel (FC) type.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = interface Name
Detailed Description	The Maximum Transmission Unit (MTU) cannot be configured on the specified interface because it is of Fibre Channel interface type.

Recommended Response Action	Choose a different interface type and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVIF0015

Message	Unable to complete the configuration request on the <i>arg1</i> interface because the interface is an ICL port.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = interface name
Detailed Description	The configuration request on the interface cannot be completed because the interface is an ICL port.
Recommended Response Action	Select another compatible interface and retry the operation.
Category	Configuration (NVIF = Interface)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE Event Messages

NVNE0001

Message	Unable to process the request because the network ID is not entered in the request.
Detailed Description	The request cannot be processed because the network ID is not entered in the request.
Recommended Response Action	Enter a valid network ID and retry the operation.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE0002

Message	Unable to create the network because the network already exists.
Detailed Description	The network identified in the message cannot be created because the network already exists.

Recommended Response Action	Enter a different network name and retry the operation.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE0003

Message	Unable to retrieve network because the network does not exist.
Detailed Description	The network cannot be retrieved because the network identified in the message does not exist.
Recommended Response Action	Enter a valid network name and retry the operation again.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE0004

Message	Unable to configure VLAN because the VLAN minimum and/or VLAN maximum values configured on the Network are not valid.
Detailed Description	The network cannot be created because the VLAN minimum and/or VLAN maximum values configured on the Network are not valid.
Recommended Response Action	Enter a valid VLAN minimum and VLAN maximum value and retry the operation again.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE0005

Message	Unable to configure a network because the VLAN range configured is overlapping with an already defined network.
Detailed Description	The network cannot be created because the VLAN range configured is overlapping with an already defined network.
Recommended Response Action	Enter another set of VLAN maximum and VLAN minimum values and retry the operation again.

Category Configuration (NVNE = Network)
Severity Severity 1 (Critical)
Redfish Event Type

NVNE0006

Message Unable to create or update the network properties because a valid network type is not entered in the request.
Detailed Description The network properties cannot be created or updated because a valid network type is not entered in the request.
Recommended Response Action Enter a valid network type and retry the operation.
Category Configuration (NVNE = Network)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVNE0007

Message Unable to update the network because editing the network type is not permitted on the current network.
Detailed Description The network properties cannot be updated because editing the network type is not permitted on the current network.
Recommended Response Action Delete the current network and create a new network by using the necessary network type.
Category Configuration (NVNE = Network)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVNE0008

Message Unable to configure the network profile because the VLAN range is limited to *arg1* in one network profile.
Arguments
· ***arg1*** = VLAN Number
Detailed Description The network cannot be created or updated because the user can only configure VLANs up to a maximum number identified in the message in one network profile.
Recommended Response Action Enter a valid VLAN range within the maximum range identified in the message and retry the operation.
Category Configuration (NVNE = Network)

Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVNE0009

Message Unable to create or update the network profile because of a mismatched network type configured on the server interface.

Detailed Description The network profile cannot be created or updated because of a mismatched network type configured on the server interface.

Recommended Response Action Remove the conflicting network configuration on the server interface, and retry the operation.

Category Configuration (NVNE = Network)

Severity Severity 2 (Warning)

Redfish Event Type
No alerts are applicable for this message

NVNE0010

Message Unable to create or update the network profile because the VLAN configuration is not allowed on the L3 Routed (Layer3) type of networks.

Detailed Description The network profile cannot be created or updated because the VLAN configuration is not allowed on L3 Routed (Layer3) type of networks.

Recommended Response Action Remove the VLAN configuration and retry the operation.

Category Configuration (NVNE = Network)

Severity Severity 2 (Warning)

Redfish Event Type

NVNE0012

Message Unable to update the network profile because the updating the virtual network attributes is not permitted.
Detailed Description The network profile cannot be updated because the updating the virtual network attributes is not permitted.
Recommended Response Action If the virtual network in a network profile requires an update then delete and recreate the network profile.
Category Configuration (NVNE = Network)
Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

NVNE0013

Message Unable to create or update a network profile because the Ipv6 is configured on the network profile.
Detailed Description The network profile cannot be created or updated because the Ipv6 is configured on the network profile.
Recommended Response Action Remove the Ipv6 configuration on the network profile and retry the operation.
Category Configuration (NVNE = Network)
Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

NVNE1001

Message Unable to retrieve the virtual network data because the virtual network does not exist.
Detailed Description The virtual network data cannot be retrieved because the virtual network does not exist.
Recommended Response Action Enter a valid virtual network name and retry the operation.
Category Configuration (NVNE = Network)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVNE1002

Message	Unable to create or update the virtual network profile because an invalid Virtual Extensible LAN (VXLAN) Virtual Network Id(VNI) is configured.
Detailed Description	The virtual network profile cannot be created or updated because an invalid Virtual Extensible LAN (VXLAN) Virtual Network Id(VNI) is configured.
Recommended Response Action	Modify the Virtual Extensible LAN (VXLAN) Virtual Network Id(VNI) configuration on the virtual network profile and retry the operation.
Category	Configuration (NVNE = Network)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE1003

Message	Unable to update the virtual network profile because updating the Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI) attribute is not permitted.
Detailed Description	The virtual network profile cannot be updated because updating the Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI) attribute is not permitted.
Recommended Response Action	If the virtual network requires an update then delete and recreate the Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI).
Category	Configuration (NVNE = Network)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE1004

Message	Unable to update the virtual network profile because updating the Virtual Link Trunking (VLT) Virtual LAN (VLAN) ID attribute is not permitted.
Detailed Description	The virtual network profile cannot be updated because updating the Virtual Link Trunking (VLT) Virtual LAN (VLAN) ID attribute is not permitted.
Recommended Response Action	If the Virtual Link Trunking (VLT) Virtual LAN (VLAN) virtual network requires an update then delete and recreate the virtual network.
Category	Configuration (NVNE = Network)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE1005

Message	Unable to create or update the network profile because the virtual network name is not entered in the request.
Detailed Description	The network profile cannot be created or updated because the virtual network name is not entered in the request.
Recommended Response Action	Enter a valid virtual network name and retry the operation.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE1006

Message	Unable to retrieve the virtual network because the virtual network does not exist.
Detailed Description	The virtual network cannot be retrieved because the virtual network does not exist.
Recommended Response Action	Enter a valid virtual network name and retry the operation again.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE1007

Message	Unable to create the virtual network because the virtual network already exists.
Detailed Description	The virtual network cannot be created because the virtual network already exists.
Recommended Response Action	Enter a different virtual network name and retry the operation.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE1008

Message	Unable to update the virtual network because changing the virtual network type is not permitted on the current virtual network.
----------------	---

Detailed Description	The virtual network properties cannot be updated because changing the virtual network type is not permitted on the current virtual network.
Recommended Response Action	Delete the current virtual network and create a new virtual network by using the necessary virtual network type.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE1009

Message	Unable to create or update the virtual network properties because a valid virtual network type is not entered in the request.
Detailed Description	The virtual network cannot be created or updated because a valid virtual network type is not entered in the request.
Recommended Response Action	Enter a valid virtual network type and retry the operation.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE1010

Message	Unable to configure the virtual network because the VLT VLAN value configured on the virtual network is not valid.
Detailed Description	The virtual network cannot be created or updated because the VLT VLAN value configured on the virtual network is not valid.
Recommended Response Action	Enter a valid VLT VLAN value and retry the operation.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNE1011

Message	Unable to create or update the virtual network profile because the Ipv6 is configured on the virtual network profile.
----------------	---

Detailed Description	The virtual network profile cannot be created or updated because the Ipv6 is configured on the virtual network profile.
Recommended Response Action	Remove Ipv6 configuration on the virtual network profile and retry the operation.
Category	Configuration (NVNE = Network)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNO Event Messages

NVNO0001

Message	Unable to retrieve the I/O Module because the I/O Module does not exist.
Detailed Description	The I/O Module can not be retrieved because the I/O Module does not exist in the inventory.
Recommended Response Action	Enter a valid I/O Module value and retry the operation.
Category	Configuration (NVNO = Node)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNO0002

Message	Unable to start the I/O Module Lifecycle operation because a Lifecycle operation is already in progress on the I/O Module.
Detailed Description	The Lifecycle operation cannot be started on the I/O Module because a Lifecycle operation is already in progress on the I/O Module.
Recommended Response Action	Wait for the pending Lifecycle operation to completed and retry the operation.
Category	Configuration (NVNO = Node)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNO0003

Message	Unable to start the lifecycle operation on the I/O Module because the I/O Module is offline.
Detailed Description	The lifecycle operation cannot be started on the I/O Module because the I/O Module is offline.

Recommended Response Action	Wait for the I/O Module to come back online and retry the operation.
Category	Configuration (NVNO = Node)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNO0004

Message	Unable to perform upgrade operation because the I/O Module is part of a network fabric.
Detailed Description	The upgrade operation on a I/O Module that is part of a network fabric is not permitted.
Recommended Response Action	Perform fabric upgrade to upgrade the I/O Modules or delete the network fabric and retry the operation again.
Category	Configuration (NVNO = Node)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNO0005

Message	Unable to apply the configuration because the I/O Module is not in fabric mode.
Detailed Description	The configuration cannot be applied because the I/O Module is not in the fabric mode.
Recommended Response Action	Make sure that the I/O Module belongs to a fabric mode by creating a fabric between the I/O Modules and retry the operation.
Category	Configuration (NVNO = Node)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVNO0006

Message	Unable to apply the Node Lifecycle configuration because the lead I/O module <i>arg1</i> Lifecycle activity is in progress.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = lead ServiceTag
Detailed Description	The Node Lifecycle configuration cannot be applied because the lead I/O Modules lifecycle activity is in progress.
Recommended Response Action	Wait for the Lifecycle activity of lead I/O module to complete and retry the operation.
Category	Configuration (NVNO = Node)

NVRE Event Messages

NVRE0001

Message Unable to process the request because the Base Authentication Token is not present in the request.
Detailed Description The request failed because the Base Authentication token is not present in the request header.
Recommended Response Action Enter a Base Authentication Token in the request header and retry the operation.
Category Configuration (NVRE = REST)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVRE0002

Message Unable to process the request because the Authorization Token is not of Basic type.
Detailed Description The request can not be processed because the Authorization Token entered is not of Basic type.
Recommended Response Action Change the Authorization token type to Basic Authentication and retry the operation.
Category Configuration (NVRE = REST)
Severity Severity 1 (Critical)
Redfish Event Type
No alerts are applicable for this message

NVRE0003

Message Unable to process the request because the authorization failed.
Detailed Description The request can not be processed because the username and password provided in the authorization token is not valid.
Recommended Response Action Provide a valid user name and password and retry the operation again.
Category Configuration (NVRE = REST)
Severity Severity 1 (Critical)
Redfish Event Type

No alerts are applicable for this message

NVRE0004

Message	Unable to process the request because the provided URL is not valid.
Detailed Description	The request can not be processed because the given URL is not valid.
Recommended Response Action	Enter a valid URL and retry the operation again.
Category	Configuration (NVRE = REST)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVRE0005

Message	Unable to process the request because the provided image stream is not valid.
Detailed Description	The request can not be processed because the given image stream is not a valid firmware image.
Recommended Response Action	Provide a valid image stream and retry the operation.
Category	Configuration (NVRE = REST)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVRE0006

Message	Unable to process the request because the input JSON payload is invalid. Error information: <i>arg1</i> .
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = details
Detailed Description	The request failed because the payload provided is not of valid JSON format.
Recommended Response Action	Enter a valid JSON payload and retry the operation again.
Category	Configuration (NVRE = REST)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVRE0007

Message	Unable to process the request because the VLAN ID entered is not an integer.
Detailed Description	The request can not be processed because the entered VLAN ID is not an integer.
Recommended Response Action	Enter a valid integer for VLAN ID in the payload and retry the operation again.
Category	Configuration (NVRE = REST)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVRE0008

Message	Unable to process the request because the URL is not valid.
Detailed Description	The request can not be processed because the entered odata URL does not have correct parenthesis.
Recommended Response Action	Enter a valid odata URL, check the correctness of parenthesis and retry the operation again.
Category	Configuration (NVRE = REST)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVRE0009

Message	Unable to process the request because the URL is not valid.
Detailed Description	The request can not be processed because the URL is not valid and the ID provided in the URL is not correct.
Recommended Response Action	Enter a valid URL, check for correctness of odata ID and retry the operation.
Category	Configuration (NVRE = REST)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVRE0010

Message	Unable to process the request because the integer value in the request URL for the key <i>arg1</i> is invalid.
----------------	--

Arguments	<ul style="list-style-type: none">· arg1 = parameter key
Detailed Description	The request can not be processed because the value provided for the key is not an integer.
Recommended Response Action	Enter a valid integer value for the key and retry the operation.
Category	Configuration (NVRE = REST)

Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0003

Message	Unable to create a server profile because the server profile already exists.
Detailed Description	The server profile cannot be created because the server profile already exists.
Recommended Response Action	Enter a new server profile name and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0004

Message	Unable to create a server interface profile because the server interface profile already exists.
Detailed Description	The server interface profile cannot be created because the server interface profile already exists.
Recommended Response Action	Enter a new server interface profile name and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0005

Message	Unable to create or retrieve server profile because the server profile does not exist.
Detailed Description	The server profile cannot be created or retrieved because the server profile does not exist.
Recommended Response Action	Enter a valid server profile name and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0006

Message	Unable to configure or retrieve server interface profile because it does not exist.
Detailed Description	The server interface profile cannot be retrieved or configured because it does not exist.
Recommended Response Action	Enter a valid server interface profile name and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0007

Message	Unable to configure server interface profile because the FCoE bandwidth partition is not matching with the other server interface profiles on this server profile.
----------------	--

Detailed Description	The server interface profile cannot be created because the FCoE bandwidth partition is not matching with the other server interface profiles on this server profile.
Recommended Response Action	Enter a valid FCoE bandwidth partition and retry the operation again.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0008

Message	Unable to configure server interface profile because the native VLAN value configured on the server interface profile is invalid.
Detailed Description	The server interface profile cannot be created because the native VLAN value configured on the server interface profile is invalid.
Recommended Response Action	Enter a valid native VLAN and retry the operation again.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0009

Message	Unable to configure the Server Interface Profile because the Percentage Bandwidth value entered for configuring the Server Interface Profile is invalid.
Detailed Description	The Server Interface Profile cannot be configured because the Percentage Bandwidth value entered for configuring the Server Interface Profile is invalid.
Recommended Response Action	Enter a valid Percentage Bandwidth value and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0010

Message	Unable to create or update the Server Interface Profile because a Storage FCoE type of Network and a Native VLAN is configured on this Server Interface Profile.
----------------	--

Detailed Description	The Server Interface Profile cannot be created or updated because a Storage FCoE type of Network and Native VLAN are both configured on this Server Interface Profile.
Recommended Response Action	Remove the Native VLAN configuration from the Server Interface Profile and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0011

Message	Unable to create or update the server interface profile because of a mismatched network type configured on the server interface.
Detailed Description	The server interface profile cannot be created or updated because of a mismatched network type configured on the server interface.
Recommended Response Action	Remove the conflicting network configuration on the server interface, and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0012

Message	Unable to create or update the server interface profile because there is a Layer3 Routed network configured (as tagged network) on the server interface.
Detailed Description	The server interface profile cannot be created because there is a Layer3 Routed network configured (as tagged network) on the server interface.
Recommended Response Action	Remove the Layer3 Routed network from the tagged network list on the server interface and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0013

Message	Unable to create or update the server interface profile because there are duplicate networks configured.
Detailed Description	The server interface profile cannot be created or updated because there are duplicate network configured.

Recommended Response Action	Remove the duplicate network configuration from the server interface and retry the operation.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSE0014

Message	Unable to update the server interface profile because the network change from tagged network to untagged network or vice-versa is not allowed on the server interface.
Detailed Description	The server interface profile cannot be created or updated because the network change from tagged network to untagged network or vice verser is not allowed on the server interface.
Recommended Response Action	Delete the network configuration, and reconfigure the networks on the server interface to change from tagged to untagged, or from untagged to tagged.
Category	Configuration (NVSE = Server Interface)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSU Event Messages

NVSU0001

Message	Unable to retrieve the subscription, because the subscription does not exist.
Detailed Description	The subscription cannot be retrieved because the subscription identified in the message is not present.
Recommended Response Action	Enter a valid subscription and retry the operation.
Category	Configuration (NVSU = Subscription)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVSU0002

Message	Unable to configure the subscription because the subscription <i>arg1</i> is not entered.
Arguments	<ul style="list-style-type: none">· <i>arg1</i> = Attribute Id
Detailed Description	The subscription cannot be configured because the subscription attribute is not entered.

Recommended Response Action Enter a valid subscription attribute and retry the operation.

Category Configuration (NVSU = Subscription)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

NVSU0003

Message Unable to configure the subscription because the subscription *arg1* is invalid.

Arguments

- ***arg1*** = Attribute Id

Detailed Description The subscription cannot be configured because the subscription attribute is invalid.

Recommended Response Action Enter a valid subscription Attribute and retry the operation.

Category Configuration (NVSU = Subscription)

Severity Severity 1 (Critical)

Redfish Event Type

NVTG Event Messages

NVTG0001

Message Unable to retrieve the topology graph because the topology graph does not exist.

Detailed Description The topology graph can not be retrieved because the topology graph does not exist.

Recommended Response Action Enter a valid topology graph value and retry the operation.

Category Configuration (NVTG = Topology Graph)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

NVTG0002

Message Unable to retrieve the topology graph link because the topology graph link does not exist.

Detailed Description The topology graph link can not be retrieved because the topology graph link does not exist.

Recommended Response Action	Enter a valid topology graph link value and retry the operation.
Category	Configuration (NVTG = Topology Graph)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVTP Event Messages

NVTP0001

Message	Unable to validate the topology because a different type of IOM is found in the slot pair.
Detailed Description	The topology validation failed because of a different type of IOM found in the slot pair in the chassis.
Recommended Response Action	Make sure that the IOMs of the same type occupy the same slot pair in a chassis.
Category	Configuration (NVTP = Topology)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVTP0002

Message	Unable to validate the MX7116n Fabric Expander Module because the slot of the MX7116n Fabric Expander Module and the slot of the Network IOM are different.
Detailed Description	The MX7116n Fabric Expander Module validation failed because the MX7116n Fabric Expander Module slot and the Network IOM slot are different.
Recommended Response Action	Make sure that the slot of the MX7116n Fabric Expander Module and the slot of the Network IOM are the same.
Category	Configuration (NVTP = Topology)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVUP Event Messages

NVUP0001

Message	Unable to configure the uplink because the configured interface <i>arg1</i> does not exist.
----------------	---

Arguments	· arg1 = interface name
Detailed Description	The uplink cannot be configured because the ConfiguredInterface identified in the message is not present.
Recommended Response Action	Enter a valid configuredinterface and retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVUP0002

Message	Unable to configure the ConfiguredInterface <i>arg1</i> as an uplink because it is already being used.
Arguments	· arg1 = interface name
Detailed Description	The configuredinterface mentioned in the message cannot be configured as uplink because it is already being used.
Recommended Response Action	Enter another configuredinterface and retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVUP0003

Message	Unable to configure the ConfiguredInterface <i>arg1</i> as an uplink because it is not of Type Physical.
Arguments	· arg1 = interface-name
Detailed Description	The configuredinterface mentioned in the message, cannot be configured as an uplink because it is not of Type Physical.
Recommended Response Action	Enter a configuredinterface of Type Physical and retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVUP0004

Message	Unable to modify the configured interfaces for FC/FCoE/FCGateway uplink as they cannot be modified.
Detailed Description	The configured interfaces for FC/FCoE/FCGateway uplink cannot be modified or deleted.
Recommended Response Action	To modify the configured interfaces of uplink, please delete the uplink and create the uplink with desired interfaces.
Category	Configuration (NVUP = Uplink)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVUP0005

Message	Unable to configure or update uplink because the Uplink configured with MediaType as fibre channel (FC) must have only one VLAN for the given configured interfaces.
Detailed Description	The uplink cannot be configured because the FC uplink mentioned in the message, can accept only one VLAN.
Recommended Response Action	Provide uplink with only one VLAN and retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVUP0006

Message	Unable to configure uplink because multiple Fiber Channel or storage uplinks are not supported.
Detailed Description	Uplink cannot be configured because only one Uplink of MediaType FiberChannel(FC) or FiberChannelOverEthernet(FCOE) and one uplink of MediaType iSCSI(storage uplink) is supported for the given Fabric.
Recommended Response Action	No response action is required.
Category	Configuration (NVUP = Uplink)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVUP0007

Message	Unable to configure the uplink because the uplink does not exist.
Detailed Description	The uplink cannot be retrieved because the uplink identified in the message does not exist.
Recommended Response Action	Enter a valid uplink and retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVUP0008

Message	Unable to configure or update the uplink because the media type entered is not supported.
Detailed Description	The uplink cannot be configured because the media type entered is not supported.
Recommended Response Action	Enter an uplink with the supported media type and retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

NVUP0009

Message	Unable to configure the uplink because the FCoE Initiation Protocol(FIP) network is already used in this fabric.
Detailed Description	The Uplink cannot be configured because the FCoE Initiation Protocol (FIP) network is already used in this fabric. Two FC uplinks on the same fabric cannot have the same network.
Recommended Response Action	Enter an uplink with a different FIP network and retry the operation.
Category	Configuration (NVUP = Uplink)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD Event Messages

OSD1

Message	The command was successful.
Detailed Description	The command was successful.
Recommended Response Action	No response action is required.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD10

Message	Installation not supported for the selected operating system.
Detailed Description	Installation for the selected operating system is not supported. Make sure that the correct operating system name was entered.
Recommended Response Action	Recheck the operating system name with the output of GetDriverPackInfo().
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD11

Message	Driver Pack does not have drivers for the selected operating system.
Detailed Description	Lifecycle Controller does not have any drivers for the selected operating system. The operating system installation uses the native drivers present on the operating system media.
Recommended Response Action	No response action is required.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD12

Message	Cannot create the USB device needed to copy drivers for the selected operating system.
Detailed Description	iDRAC was unable to create and expose the drivers as a USB device for the OS installation to proceed.
Recommended Response Action	1) Rerun the command. 2) Reset iDRAC and rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD13

Message	Cannot mount the USB device needed to copy drivers for the selected operating system.
Detailed Description	iDRAC was unable to mount the drivers as a USB device for the OS installation to proceed.
Recommended Response Action	1) Rerun the command. 2) Reset iDRAC and rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD14

Message	Unable to expose the USB device that contains the operating system drivers to host system.
Detailed Description	iDRAC was unable to expose the drivers as a USB device for the OS installation to proceed.
Recommended Response Action	1) Rerun the command. 2) Reset iDRAC and rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD15

Message	Mount network share failed - incorrect username or password.
----------------	--

Detailed Description	Unable to mount the network share using the credentials specified in the command because either the username or password is incorrect.
Recommended Response Action	Rerun the command with the correct username and password.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD16

Message	Mount network share failed - incorrect IP address or share name.
Detailed Description	Unable to mount the network share using the parameters specified in the command because either the IP address or share name is incorrect.
Recommended Response Action	Rerun the command with the correct IP address and share name.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD17

Message	Exposing ISO image as internal device to the server failed.
Detailed Description	Unable to expose the ISO image as an internal CD device to the host system because the ISO file is no longer present, network errors are preventing access to the ISO file, or iDRAC may not be responsive.
Recommended Response Action	1) Rerun the command. 2) Reset iDRAC and rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD18

Message	Unable to locate the ISO image on the network share point.
Detailed Description	Unable to find the ISO file specified in the network share. Make sure that the correct ISO file path was entered into the command and that all other user credentials are correct.

Recommended Response Action	Rerun the command with the correct ISO file path.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD19

Message	The fork() command for a child process to perform the task failed.
Detailed Description	Failed to execute fork() system call to perform the task in a child process. iDRAC may be unresponsive.
Recommended Response Action	Reset iDRAC and rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD2

Message	General failure.
Detailed Description	An unknown error occurred.
Recommended Response Action	1) Rerun the command. 2) Reset iDRAC and run the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD20

Message	Unable to get size or label from Driver Pack for selected operating system.
Detailed Description	Unable to get the size or label for selected operating system from the Driver Pack present in Lifecycle Controller. The driver pack may be corrupt.
Recommended Response Action	Update the Driver Pack using Lifecycle Controller GUI / Unified Server Configurator (USC) or DUP and rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

OSD21

Message Unable to boot to ISO image.

Detailed Description Booting to ISO has failed. Either BIOS was unable to boot to the ISO image or the provider did not get a response in 5 minutes from BIOS on successful boot to ISO image.

Recommended Response Action 1) Make sure that a POST error did not result in user interaction (Press F1 to continue or F2 to run BIOS setup). 2) Reset iDRAC and rerun the command.

Category Configuration (OSD = OS Deployment)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

OSD22

Message Unable to detach ISO image from the host.

Detailed Description Unable to detach ISO image from the host because either the image is already detached, or iDRAC may not be operating normally.

Recommended Response Action 1) Rerun the command. 2) Reset iDRAC.

Category Configuration (OSD = OS Deployment)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

OSD23

Message Unable to continue with DetachISOImage - another command is in the process of exposing the ISO Image and booting to it.

Detailed Description Cannot continue with DetachISOImage because another command is in the process of exposing the ISO image and booting to it.

Recommended Response Action See the ConcreteJob status to make sure that the current running process is complete and then run DetachISOImage.

Category Configuration (OSD = OS Deployment)

Severity Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

OSD24

Message	Unable to continue with DetachDrivers - UnPackAndAttach is in progress.
Detailed Description	Unable to continue with DetachDrivers - UnPackAndAttach is in progress.
Recommended Response Action	Wait until UnpackAndAttach finishes and then run DetachDrivers. This can take more than 5 minutes.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD25

Message	Unable to detach USB device containing operating system drivers.
Detailed Description	Detaching the USB device (that contains drivers for the operating system installation) from the host has failed. The device may be detached, or iDRAC may not be operating normally.
Recommended Response Action	Reset iDRAC to detach this device automatically.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD26

Message	Unable to continue with BootToPXE - another command is running.
Detailed Description	Unable to continue with BootToPXE command because another process is using Lifecycle Controller.
Recommended Response Action	See ConcreteJob status to make sure that the running process is complete, and then run BootToPXE.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD27

Message	Copying drivers for selected operating system failed.
----------------	---

Detailed Description	Copying drivers for selected operating system failed. The Driver Pack may be unusable.
Recommended Response Action	Update the Driver Pack using Lifecycle Controller (LC)/Unified Server Configurator (USC) or Dell Update Package (DUP) and then rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD28

Message	Hash verification on the ISO image failed.
Detailed Description	Hash verification on the ISO image has failed. The hash value specified in the command is either incorrect or the ISO image has been changed.
Recommended Response Action	1) Verify that the hash value specified in the command is correct. 2) Make sure that the ISO has not been changed 3) Replace the ISO image on the share and rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD29

Message	Driver Pack configuration file not found in Lifecycle Controller. The Driver Pack might be corrupt.
Detailed Description	Driver Pack configuration file not found in Lifecycle Controller. Driver Pack may be unusable.
Recommended Response Action	Update the Driver Pack using Lifecycle Controller (LC)/Unified Server Configurator (USC) or Dell Update Package (DUP) and then rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD3

Message	Lifecycle Controller is being used by another process.
Detailed Description	Lifecycle Controller is currently locked by another process. Make sure that the process completes before attempting to run another command.
Recommended Response Action	1) After two minutes, rerun the command. 2) Make sure that Lifecycle Controller GUI or Unified Server Configurator or DUP is not currently running on the server. 3) Reset iDRAC and rerun the command.

Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD30

Message	Invalid value for ExposeDuration - must be 60 - 65535 seconds
Detailed Description	The value specified for ExposeDuration is out of range. It must be between 60 and 65535 seconds.
Recommended Response Action	Rerun the command with a ExposeDuration value between 60 and 65535 seconds.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD31

Message	Copying operating system drivers to network share failed
Detailed Description	Copying drivers for the selected operating system to network share failed. The share may be read-only or the Driver Pack present in Lifecycle Controller may be unusable.
Recommended Response Action	1) Make sure that the network share has write permission. 2) Update the Driver Pack using Lifecycle Controller or Unified Server Configurator or DUP and then rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD32

Message	ISO image is not attached
Detailed Description	Cannot continue with DetachISOImage because the system does not have an attached ISO image.
Recommended Response Action	The call to DetachISOImage is unnecessary since the ISO image is not currently attached.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD33

Message	Installed BIOS version does not support this method.
Detailed Description	The system has an older version of BIOS that does not support this method. Install the latest version of BIOS to use this method.
Recommended Response Action	Update the BIOS to version 1.2 or later and then rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD34

Message	Unable to continue with BootToPXE - ISO image is attached to the system.
Detailed Description	Unable to continue with BootToPXE command because the system has an ISO image attached. Detach the ISO image before continuing with BootToPXE.
Recommended Response Action	Run the DetachISOImage command and then run BootToPXE.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD35

Message	Lifecycle Controller is not enabled.
Detailed Description	Lifecycle Controller is disabled on the system, so none of the remote operating system deployment commands will work. Make sure Lifecycle Controller is enabled before running any command.
Recommended Response Action	For 11G systems: Use the iDRAC configuration utility to enable the System Services by pressing on the CTRL+E option on boot up at the targeted system. For 12G and above generations: Use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings, to enable the Lifecycle Controller on boot up of the targeted system.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD36

Message	Boot to ISO Image has been cancelled by using CTRL+E or F2 option on the server.
Detailed Description	User has cancelled system services by using the CTRL+E option (iDRAC configuration utility) or F2 option during POST. This action cancels the WSMAN request to boot to ISO.
Recommended Response Action	To resolve the issue rerun the command. Do not cancel system services using CTRL+E or F2 during POST when system is rebooting to the ISO.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD37

Message	ISO image size too large.
Detailed Description	ISO Image size is bigger than the available size in vFlash.
Recommended Response Action	1) Use a smaller size ISO Image. 2) Format the vFlash using the iDRAC GUI, RACADM, or iDRAC configuration utility and then retry this command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD38

Message	Copying the ISO image from the network failed.
Detailed Description	There was an error while copying the ISO from the network share.
Recommended Response Action	1) Make sure the network connection is functional. 2) Make sure the Dell vFlash does not have hardware issues by accessing it through the iDRAC GUI.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD39

Message	Unable to find the VFlash.
----------------	----------------------------

Detailed Description	Unable to get vFlash information from internal instrumentation.
Recommended Response Action	1) Make sure the Dell vFlash is seated correctly. 2) Make sure a Dell licensed vFlash card is inserted 3) Make sure the Dell vFlash does not have any hardware issues by accessing it through the iDRAC GUI.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD4

Message	Cannot access Lifecycle Controller Driver Pack partition.
Detailed Description	Driver Pack partition in Lifecycle Controller is not accessible. The Lifecycle Controller or the iDRAC might be unresponsive.
Recommended Response Action	Reset the iDRAC and rerun the command. If the command fails again, check if the iDRAC is functional and accessible on the system.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD40

Message	VFlash is not Dell licensed.
Detailed Description	This is not a Dell-licensed vFlash.
Recommended Response Action	Insert a Dell vFlash and then retry this command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD41

Message	ISO Image not found on VFlash.
Detailed Description	vFlash does not contain the ISO Image because either the image was deleted, or it was never copied.
Recommended Response Action	Download the ISO Image to the vFlash again using the DownloadISOToVFlash method.
Category	Configuration (OSD = OS Deployment)

Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

OSD42

Message Downloading ISO File to VFlash failed.
Detailed Description There was an error while copying the ISO image from the network share to the vFlash.
Recommended Response Action 1) Make sure the network connection is working. 2) Make sure the Dell vFlash does not have any hardware issues by accessing it through the iDRAC GUI.
Category Configuration (OSD = OS Deployment)
Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

OSD43

Message VFlash unavailable.
Detailed Description vFlash is not present on the server.
Recommended Response Action Insert a Dell-licensed vFlash and then retry this command.
Category Configuration (OSD = OS Deployment)
Severity Severity 2 (Warning)
Redfish Event Type
No alerts are applicable for this message

OSD44

Message Unable to detach ISO image on VFlash.
Detailed Description The ISO on vFlash is not currently attached, so the DetachISOFromVFlash command could not be executed.
Recommended Response Action Since the ISO image is not attached, the DetachISOFromVFlash command does not have to be run.
Category Configuration (OSD = OS Deployment)
Severity Severity 3 (Informational)
Redfish Event Type
No alerts are applicable for this message

OSD45

Message	Cannot delete ISO image from VFlash.
Detailed Description	The ISO Image present in vFlash is attached to the host system. The ISO Image cannot be deleted from vFlash.
Recommended Response Action	Execute DetachISOFromVFlash() before running DeleteISOFromVFlash().
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD46

Message	VFlash in use.
Detailed Description	Another process (iDRAC GUI /racadm/iDRAC configuration utility) is currently accessing vFlash.
Recommended Response Action	Wait until the access to vFlash is relinquished and then retry this command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD47

Message	Inaccessible network share.
Detailed Description	Unable to access the network share using the credentials specified or the firewall might be enabled and is preventing access to the share.
Recommended Response Action	Make sure that the firewall is disabled, and that the credentials (username, password) are correct.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD48

Message	ISO Images of more than 4GB not supported.
----------------	--

Detailed Description	ISO Images of more than 4GB are not supported and cannot be copied to VFlash.
Recommended Response Action	Use an ISO that is smaller than 4GB.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD49

Message	Disable RIPS mode to access VFlash.
Detailed Description	vFlash cannot be accessed because RIPS mode is enabled.
Recommended Response Action	Disable the RIPS mode from BIOS or from the iDRAC GUI, and then continue executing the method.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD5

Message	Lifecycle Controller Driver Pack not found.
Detailed Description	A Driver Pack was not found on the Lifecycle Controller.
Recommended Response Action	Update the Driver Pack using Lifecycle Controller or Unified Server Configurator (USC) or DUP and then run the command again.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD50

Message	Lifecycle Controller is in field service mode.
Detailed Description	Lifecycle Controller is in field service mode and needs to be updated before proceeding further.
Recommended Response Action	Install the Lifecycle Controller field services package using the iDRAC GUI.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

OSD51

Message	Reboot the system to run pending System Services Tasks.
Detailed Description	There are pending System Services tasks on the host system that are preventing the execution of this method.
Recommended Response Action	Reboot the host system. The system will automatically enter System Services and complete the pending tasks.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD52

Message	vFlash is disabled.
Detailed Description	vFlash is disabled.
Recommended Response Action	Enable the vFlash from the iDRAC GUI or RACADM, and then proceed.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD53

Message	vFlash is write protected.
Detailed Description	vFlash is write protected.
Recommended Response Action	Remove the write protect from the SD card and then proceed.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD54

Message	vFlash already has 16 partitions.
Detailed Description	vFlash allows only 16 partitions to be created.
Recommended Response Action	Make sure that there are less than 16 partitions before creating another partition on vFlash.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD55

Message	ISO Image is attached to host
Detailed Description	Cannot attach the ISO image since it is already attached to the host.
Recommended Response Action	ISO Image is already attached to the host server. Detach the ISO and then rerun the command.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD56

Message	An ISO is already connected using Remote File Share (RFS).
Detailed Description	An ISO is already connected using Remote File Share (RFS). The connection might have been initiated from iDRAC GUI, racadm, or Remote Services API.
Recommended Response Action	Disconnect the Remote File Share (RFS) using iDRAC GUI, racadm, or Remote Services API and then retry the operation to connect the ISO again.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD57

Message	Remote File Share (RFS) is in Auto-Attach mode.
----------------	---

Detailed Description	Remote File Share (RFS) is currently configured to be in auto-attach mode. For Web services to attach an ISO, RFS should be changed to attach mode.
Recommended Response Action	Change the Remote File Share (RFS) mode to Attach using iDRAC GUI or Remote Services API and retry.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD58

Message	Unable to connect an ISO using Remote File Share (RFS).
Detailed Description	The connect ISO operation using Remote File Share (RFS) did not complete successfully.
Recommended Response Action	Verify all the parameters are correct. If the problem persists, then reset iDRAC and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD59

Message	Unable to disconnect from ISO using Remote File Share (RFS).
Detailed Description	Disconnecting ISO using Remote File Share (RFS) operation did not complete successfully.
Recommended Response Action	Reset iDRAC and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD6

Message	Cannot allocate memory.
Detailed Description	Unable to dynamically allocate memory to perform the task.
Recommended Response Action	Reset iDRAC and run the command.
Category	Configuration (OSD = OS Deployment)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

OSD60

Message ISO image is not connected using Remote File Share (RFS).

Detailed Description ISO image is not connected using Remote File Share (RFS).

Recommended Response Action Verify ISO is connected using Remote File Share (RFS) and retry the operation.

Category Configuration (OSD = OS Deployment)

Severity Severity 3 (Informational)

Redfish Event Type

No alerts are applicable for this message

OSD61

Message IP Address format is invalid.

Detailed Description The IP Address format is invalid and cannot be validated. The specified IP address may not be a valid IPv4 or IPv6 address.

Recommended Response Action Verify the IP address format and retry the operation.

Category Configuration (OSD = OS Deployment)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

OSD62

Message Unable to run the command because an invalid firmware image file name is entered.

Detailed Description The command cannot be run because an invalid firmware image file name is entered.

Recommended Response Action Make sure that a valid firmware image file is entered. The file must not contain any file path components such as forward slash (/) or period (.).

Category Configuration (OSD = OS Deployment)

Severity Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

OSD63

Message	Unable to run the DetachDrivers invoke method because the driver files are not attached.
Detailed Description	The DetachDrivers invoke method cannot be run because the driver files are not attached.
Recommended Response Action	No response action required.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD64

Message	Unable to invoke the ConfigurableBootToNetworkISO method by specifying the ResetType parameter as warm reboot because the server is in turned-off state.
Detailed Description	The ConfigurableBootToNetworkISO method cannot be run by specifying the ResetType parameter as warm reboot because the server is in turned-off state.
Recommended Response Action	Make sure that the server is turned on and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD65

Message	The ISO file is successfully attached. The next host reboot is scheduled to boot to the ISO file.
Detailed Description	The ISO file is successfully attached. The next host reboot is scheduled to boot to the ISO file.
Recommended Response Action	No response action required.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD66

Message	Unable to invoke the method because the mandatory input parameter OSName is missing.
Detailed Description	The method cannot be invoked because the mandatory input parameter OSName is missing.
Recommended Response Action	Provide the missing parameter "OSName" in the method invocation and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD67

Message	Unable to invoke the method because the mandatory input parameter IPAddress is missing.
Detailed Description	The method cannot be invoked because the mandatory input parameter IPAddress is missing.
Recommended Response Action	Provide the missing parameter "IPAddress" in the method invocation and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD68

Message	Unable to invoke the method because the mandatory input parameter ShareName is missing.
Detailed Description	The method cannot be invoked because the mandatory input parameter ShareName is missing.
Recommended Response Action	Provide the missing parameter "ShareName" in the method invocation and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD69

Message	Unable to invoke the method because the mandatory input parameter ShareType is missing.
----------------	---

Detailed Description	The method cannot be invoked because the mandatory input parameter ShareType is missing.
Recommended Response Action	Provide the missing parameter "ShareType" in the method invocation and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD7

Message	Unable to retrieve Lifecycle Controller handle.
Detailed Description	Unable to connect to Lifecycle Controller because of an existing open connection or an internal error.
Recommended Response Action	Reset iDRAC, and rerun the command to correct the problem.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD70

Message	Unable to invoke the method because the mandatory input parameter UserName is missing.
Detailed Description	The method cannot be invoked because the mandatory input parameter UserName is missing.
Recommended Response Action	Provide the missing parameter "UserName" in the method invocation and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD71

Message	Unable to invoke the method because the mandatory input parameter Password is missing.
Detailed Description	The method cannot be invoked because the mandatory input parameter Password is missing.
Recommended Response Action	Provide the missing parameter "Password" in the method invocation and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)

Redfish Event Type

No alerts are applicable for this message

OSD72

Message	Unable to invoke the method because the mandatory input parameter ImageName is missing.
Detailed Description	The method cannot be invoked because the mandatory input parameter ImageName is missing.
Recommended Response Action	Provide the missing parameter "ImageName" in the method invocation and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD73

Message	Unable to invoke the method because the mandatory input parameter HashValue is missing.
Detailed Description	The method cannot be invoked because the mandatory input parameter HashValue is missing.
Recommended Response Action	Provide the missing parameter "HashValue" in the method invocation and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD74

Message	Unable to invoke the method because the mandatory input parameter ShareType is invalid.
Detailed Description	The method cannot be invoked because the mandatory input parameter ShareType is invalid.
Recommended Response Action	Check the value provided for input parameter "ShareType" and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD75

Message	Unable to invoke the method because the mandatory input parameter HashType is invalid.
Detailed Description	The method cannot be invoked because the mandatory input parameter HashType is invalid.
Recommended Response Action	Check the value provided for input parameter "HashType" and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD76

Message	Unable to invoke the method because the mandatory input parameter ResetType is invalid.
Detailed Description	The method cannot be invoked because the mandatory input parameter ResetType is invalid.
Recommended Response Action	Check the value provided for input parameter "ResetType" and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD77

Message	Unable to invoke the method because the mandatory input parameter ResetType is missing.
Detailed Description	The method cannot be invoked because the mandatory input parameter ResetType is missing.
Recommended Response Action	Provide the missing parameter "ResetType" in the method invocation and retry the operation.
Category	Configuration (OSD = OS Deployment)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

OSD8

Message	Setting Boot to PXE through IPMI failed.
----------------	--

Detailed Description The BIOS boot order set to PXE using a standard IPMI command has failed.

Recommended Response Action 1) Check BIOS PXE settings. 2) Rerun the command. 3) Reset iDRAC and rerun the command.

Category Configuration (OSD = OS Deployment)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

OSD9

Message Failed to reboot the system using an IPMI command.

Detailed Description Resetting the targeted server using the standard IPMI command has failed.

Recommended Response Action 1) Rerun the command. 2) Reset iDRAC and rerun the command.

PCI1319

Message A high-severity issue is detected in the SSD bay *arg1* , Slot *arg2* .

Arguments

- **arg1** = bay
- **arg2** = number

Detailed Description A high-severity issue was detected in the SSD bay identified in the message.

Recommended Response Action Remove and reinsert the component identified in the message, and then monitor the log for a re-occurrence of the issue. If the issue persists, and occurs during server startup, update the component firmware. If the issue persists and occurs during OS runtime, restart the server and update the OS drivers for the component identified in the message.

Category System Health (PCI = PCI Device)

Severity Severity 1 (Critical)

Redfish Event Type

No alerts are applicable for this message

PCI1320

Message A bus fatal error was detected on a component at bus *arg1* device *arg2* function *arg3* .

Arguments

- **arg1** = bus
- **arg2** = device

- **arg3** = func

Detailed Description	System performance may be degraded, or system may fail to operate.
Recommended Response Action	Update component drivers and power cycle the system. If device is removable, re-install the device.
Category	System Health (PCI = PCI Device)

PCI3018

Message New PCI card(s) have been detected in the system. Fan speeds may have changed to add additional cooling to the cards.

Detailed Description	New PCI card(s) have been detected in the system that may require additional airflow. Fan speeds may have changed to add additional cooling to the cards.
Recommended Response Action	Changing default fan response to PCIe cards should be done with appropriate understanding of the PCIe cooling needs of the cards present in the system. If the automatic cooling response is insufficient, additional cooling can be added by one of the following methods. 1) From iDRAC Web GUI, click Hardware -> Fans -> Setup, then from the fan speed offset drop-down list appropriately select the cooling level needed or set the minimum fan speed to a custom value. 2) From F2 System Setup, select iDRAC Settings -> Thermal, and set a higher fan speed from the fan speed offset or minimum fan speed. 3) For RACADM commands run "racadm help system.thermalsettings". If a lower fan speed is required, contact your service provider for the appropriate IPMI commands to reduce the default fan speed response for new PCIe cards.

- **arg1** = bay
- **arg2** = number

Detailed Description A low-severity issue was detected in the SSD bay identified in the message.

Recommended Response Action Remove and reinsert the component identified in the message, and then monitor the log for a re-occurrence of the issue. If the issue persists, and occurs during server startup, update the component firmware. If the issue persists and occurs during OS runtime, restart the server and update the OS drivers for the component identified in the message.

Category System Health (PCI = PCI Device)

Severity Severity 2 (Warning)

Trap/EventID 2418

LCD Message An issue is detected in the SSD bay <bay id>, Slot <slot id>.

PCI3030

Message	New PCI card(s) have been detected in the system. Fan speeds may have changed to add additional cooling to the cards.
----------------	---

Detailed Description New PCI card(s) have been detected in the system that may require additional airflow. Fan speeds may have changed to add additional cooling to the cards.

Recommended Response Action If the automatic cooling response is insufficient, additional cooling can be added by one of the following methods. 1) From iDRAC Web GUI, click Cooling -> Configure Fans -> PCIe Airflow Settings, then select Custom option for that PCIe slot and define desired LFM value. 2) For RACADM commands run "racadm help system.PcieSlotLFM". If automatic cooling response is above desired levels, this response can be turned off in most cases and/or a different LFM target can be set using PCIe Airflow Settings options in iDRAC GUI or Racadm. See iDRAC User Guide for more details by searching for "cooling". Changing default fan response to PCIe cards should be done in alignment with vendor specification for PCIe cooling needs of the cards present in the system.

PCI5009

Message The PCIe adapter in the PCIe slot *arg1* was removed from the slot while the server *arg2* was turned-on.

Arguments

- **arg1** = PCIe slot number
- **arg2** = server slot number

Detailed Description Chassis Management Controller (CMC) detected that a PCIe adapter was removed from a server which was turned-on. This may cause the server operating system to stop responding or to function in an improper manner.

Recommended Response Action Perform a Power Cycle operation on the associated server. Restarting the operating system will not resolve this issue. Only remove PCIe adapters when the associated server is turned-off.

PDR18

Message Global hot spare unassigned from *arg1*.

Arguments

- **arg1** = PD Name

Detailed Description A physical disk assigned as a hot spare was unassigned and is no longer functioning as a hot spare. The physical disk was unassigned by a user or automatically unassigned by Storage Management. Storage Management unassigns hot spares were used to rebuild data. Once the data is rebuilt onto the hot spare, the hot spare becomes a member of the virtual disk and is no longer assigned as a hot spare. Assign a new hot spare to maintain data protection in this situation.

Recommended Response Action Although this alert is provided for informational purposes, you may need to assign a new hot spare to the virtual disk. See Protecting Your Virtual Disk with a Hot Spare for more information.

PDR19

Message SMART FPT exceeded for *arg1*.

Arguments

- **arg1** = PD Name

Detailed Description A disk on the specified controller has received a SMART alert (predictive failure) indicating that the disk is likely to fail in the near future.

Recommended Response Action Replace the disk that has received the SMART alert. If the physical disk is a member of a non-redundant virtual disk, then back up the data before replacing the disk. Removing a physical disk that is included in a non-redundant virtual disk causes the virtual disk to fail and may cause data loss.

PDR20

Message SMART configuration change for *arg1*.

Arguments

- ***arg1*** = PD Name

Detailed Description A disk has received a SMART alert (predictive failure) after a configuration change. The disk is likely to fail in the near future.

Recommended Response Action Replace the disk that has received the SMART alert. If the physical disk is a member of a non-redundant virtual disk, then back up the data before replacing the disk. Removing a physical disk that is included in a non-redundant virtual disk will cause the virtual disk to fail and may cause data loss.

PDR210

Message Successfully updated configuration data on the *arg1*.

Arguments

- **arg1** = physical disk name

Detailed Description

This event is generated while initializing the drives during reboot. The controller updated the configuration data on the physical disks identified in the message. The drive configuration was updated because the following conditions were present: 1) The spundown drives were used for configuration. Spundown drives are drives that are temporarily powered off because power saving option is enabled. 2) The storage controller was not able to update the Configuration On Disk (COD) records on the drive while they were spundown.

Recommended Response Action

No response action is required.

PDR22

Message SMART warning temperature for *arg1*

Arguments
· ***arg1*** = PD Name

Detailed Description A disk has reached an unacceptable temperature and received a SMART alert (predictive failure). The disk is likely to fail in the near future.

Recommended Response Action Do the following:1) Determine why the physical disk reached an unacceptable temperature. For example, a fan failure, incorrect thermostat settings, or the room temperature may be too hot or cold. 2) Verify that the fans in the server or enclosure are working. 3) If the physical disk is in an enclosure, check the thermostat settings and examine whether the enclosure is located near a heat source. Verify the enclosure has enough ventilation and that the room temperature is not too hot. Refer to the enclosure documentation for more diagnostic information. 4) If you cannot identify why the disk has reached an unacceptable temperature, then replace the disk. If the physical disk is a member of a non-redundant virtual disk, then back up the data before replacing the disk. Removing a physical disk that is included in a non-redundant virtual disk causes the virtual disk to fail and may cause data loss.

PDR28

Message Dedicated hot spare unassigned from *arg1*.

Arguments

· **arg1** = PD Name

Detailed Description A physical disk that was assigned as a hot spare has been unassigned and is no longer functioning as a hot spare. The physical disk was unassigned by a user or automatically unassigned by Storage Management. Storage Management unassigns hot spares that have been used to rebuild data. Once data is rebuilt onto the hot spare, the hot spare becomes a member of the virtual disk and is no longer assigned as a hot spare. Assign a new hot spare to maintain data protection in this situation.

Recommended Response Action Although this alert is provided for informational purposes, you may need to assign a new hot spare to the virtual disk. Refer to product documentation and see the section Protecting Your Virtual Disk with a Hot Spare for more information.

PDR44

Message The clear operation on *arg1* failed.

Arguments

- ***arg1*** = physical disk

Detailed Description	A Clear task was being performed on a physical disk but the task was interrupted and did not complete successfully. The controller may have lost communication with the disk, the disk was removed, or the cables may be loose or defective.
Recommended Response Action	Verify that the disk is present and not in a Failed state. Make sure the cables are attached securely. See the storage hardware documentation for more information on checking the cables. Restart the Clear task.

PDR47

Message A block on *arg1* was punctured by the controller.

Arguments

- ***arg1*** = physical disk

Detailed Description The controller encountered an unrecoverable medium error when attempting to read a block on the physical disk and marked that block as invalid. If the controller encountered the unrecoverable medium error on a source physical disk during a rebuild or reconfigure operation, it punctures the corresponding block on the target physical disk. The invalid block clears on a write operation.

Recommended Response Action Back up the data from the disk. Start disk initialization and wait for it to complete, and then restore the data from a backup copy.

PDR5

Message *arg1* is removed.

Arguments
 · ***arg1*** = PD Name

Detailed Description A physical disk has been removed from the disk group. This alert can also be caused by loose or defective cables or by problems with the enclosure.

Recommended Response Action Do one of the following: 1) If a physical disk was removed from the disk group, either replace the disk or restore the original disk. Identify the disk that was removed by locating the disk that has a red "X" for its status. 2) Perform a rescan after replacing or restoring the disk. 3) If a disk was not removed from the disk group, then check for cable problems. Refer to product documentation for more information on checking the cables. 4) Make sure that the enclosure is powered on. 5) If the problem persists, check the enclosure documentation for further diagnostic information.

PDR51

Message Hot spare *arg1* SMART polling has failed. *arg2*

Arguments

- ***arg1*** = physical disk
- ***arg2*** = args

Detailed Description The controller firmware attempted to do SMART polling on the hot spare but could not complete the SMART polling. The controller may have lost communication with the hot spare.

Recommended Response Action Verify the health of the disk assigned as a hot spare. Replace the disk and reassign the hot spare. Make sure the cables are attached securely. See the storage hardware documentation for more information on checking the cables.

PDR7

Message *arg1* has degraded.

Arguments

- ***arg1*** = physical disk

Detailed Description A physical disk has reported an error condition and may be degraded. The physical disk may have reported the error condition in response to a check consistency or other operation.

Recommended Response Action Replace the degraded physical disk. Identify the disk that is degraded by locating the disk that has a red "X" for its status. Perform a rescan after replacing the disk.

Category Storage (PDR = Physical Disk)

PSU0003

Message The power input for power supply *arg1* is lost.

Arguments

- ***arg1*** = number

Detailed Description The power supply is installed correctly but an input source is not connected or is not functional.

Recommended Response Action Verify the input source is attached to the power supply. Verify the input power is within the operating requirements for the power supply.

Category System Health (PSU = Power Supply)

Severity Severity 1 (Critical)

Trap/EventID 2185

PSU0007

Message Power supply *arg1* is operating at 110 volts, and could cause a circuit breaker fault.

Arguments

- ***arg1*** = number

Detailed Description A power supply that is designed to operate at 220V, but is connected to a 110V power source requires additional current for operation. The additional current may trip circuit-breakers or cause other electrical issues with the input source.

Recommended Response Action Check input power source and cabling. Use recommended input power. Review the product documentation. If the issue persists, contact technical support. Refer to the product documentation to choose a convenient contact method.

PSU0802

Message The power supply redundancy policy on the system has been set to *arg1* .

Arguments

- **arg1** = Enable/Disable

Detailed Description The power supply redundancy policy on the system has been set.

Recommended Response Action No response action is required.

PSU0803

Message	Insufficient power in chassis to power on server.
Detailed Description	Insufficient power in chassis to power on server.
Recommended Response Action	Do one or all of the following the retry the operation: 1) Check all the existing Power Supply Units(PSUs) to ensure that they are providing power.2) Add PSUs if necessary. 3) Turn off the unused components. 4) Use the Chassis Management Controller (CMC) or Management Module web interface to check the available power and server power requirements.

Message	Insufficient power in chassis to power on server.
Detailed Description	Insufficient power in chassis to power on server.
Recommended Response Action	Utilize the Management Module (MM) web interface to check available power and server power requirements. If sufficient power is available, retry the operation.

PSU0904

Message Could not power down 240VA on power unit *arg1* .

Arguments
· ***arg1*** = number

Detailed Description In order to meet service requirements the supply must be shut down.

Recommended Response Action Remove input power at the power supply.

Category System Health (PSU = Power Supply)

PSU0908

Message Power lost on power unit *arg1*.

Arguments

- ***arg1*** = number

Detailed Description The power supply is installed correctly but an input source is not connected or is not functional.

Recommended Response Action Verify the input source is attached to the power supply. Verify the input power is within the operating requirements for the power supply.

PSU0912

Message A failure detected on power unit *arg1*.

Arguments · **arg1** = number

Detailed Description Status from the power supply indicates a power supply exception occurred. The power supply will try to operate in a degraded state. System Performance and power redundancy may be degraded or lost.
