

Release Notes

Dell Repository Manager

Version 1.6.0 Rev.A00

Release Date: April 10, 2013

Previous Version: 1.5.0

Importance

RECOMMENDED: Dell recommends applying this update during your next scheduled update cycle. This version contains some new features, feature enhancements and bug fix.

Platform(s) Affected

N/A

What is Supported

This section provides information about the minimum hardware and software requirements for Installing Repository Manager.

Hardware Requirements

- Processor - 1 GHz Pentium processor or equivalent
- RAM - 1 GB
- Hard Disk - 1 GB or above available space
- Display - 1024 X 768 high color, 32-bit

Software Requirements

- Microsoft .Net framework 4.0 full version

Supported Operating Systems

- Microsoft Windows Server 2012
- Microsoft Windows 8 (32-bit and 64-bit)
- Microsoft Windows Server 2008 (32-bit and 64-bit)
- Microsoft Windows Server 2008 R2
- Microsoft Windows 7 (32-bit and 64-bit)

Note: Installation of Repository Manager on Linux operating systems is not supported.

What's New

This release of Dell Repository Manager (DRM) comprises the following new features:

- Be able to create system bundles for a search result of Search Dell support site (for Data Center version only).
- Add new search results into an existing repository and replace the older version updates in existing bundles
- Enhance the usability of Search Dell support site
- Add a brand selection tab in repository creation wizard and bundle/component filter

- Generate a repository report while saving a repository to a folder.

Known Issues

- **Issue 1:**

Description: If you try to add PE driver maintenance packs, chassis components or BIOS update package of Dell business client systems, such as Latitude, OptiPlex or Precision, to an existing local repository by using DRM, the following error message is displayed:

"Failed to import selected DUP file(s)."

Resolution: This is a known issue. Components in the Dell Update Packages (DUPs) format will Work correctly without errors.

- **Issue 2:**

Description: Encounter unexpected errors while running a DRM output bootable deployment media ISO that contains custom script.

Resolution: If you want to run custom script on RM output bootable ISO, make sure to include next export command before launching any Dell OpenManage Deployment Toolkit utilities:

```
export PATH=$PATH:/opt/dell/toolkit/bin
export LD_LIBRARY_PATH=$PATH:/opt/dell/toolkit/lib:/opt/lsi
```

An example of custom script:

```
#!/bin/bash
export PATH=$PATH:/opt/dell/toolkit/bin
export LD_LIBRARY_PATH=$PATH:/opt/dell/toolkit/lib:/opt/lsi
raidcfg -ctrl
racadm version
```

- **Issue 3:**

Description: Dell Client Manager (DCM) cannot recognize DRM output XML catalog.

Resolution: If you save a local repository to be used by DCM, you must save the catalog by using Cab Files (.cab) type and name it as CatalogPC.cab. The DCM cannot recognize XML catalog files.

- **Issue 4:**

Description: You cannot downgrade to a lower version of DRM using the current DRM installer.

Resolution: To install an earlier version of DRM, first uninstall the newer version manually through Add/Remove Programs in the Windows Control Panel, and then run the installer of the desired version.

- **Issue 5:**

Description: When multiple users use the single user install option to install the product on the same system, uninstallation by one user uninstalls program files and binaries, but leaves shortcuts on other users' desktop.

Resolution: None

- **Issue 6:**

Description: While creating a repository from Dell OpenManage Essentials (OME) v1.0 inventory if the user does not have correct privileges, there will be a popup window with an empty message.

Resolution: Users can click OK on the message box. Then DRM will ask the user to provide the proper credential in order to get inventory from OME. If the user's credential do not have the proper permission, DRM will fail to create the repository.

- **Issue 7:**

Description: Scheduled automatic search task fails to start when a computer is running on battery power. The scheduled automatic search task is created and managed by Windows OS Task Scheduler. By default, a task may be setting to start only when the computer is on AC power. This setting may cause scheduled automatic search task fail when the computer is on battery power.

Resolution: Connect the computer to AC power before a scheduled task starts. And, keep the system on AC power before the task is completed.

- **Issue 8:**

Description: In Data Center version, if user manually creates a new bundle or imports new bundles from other repositories, the "Brand" filter in the Bundles view may not work as expected in filtering the new bundles. In Business Client version, if the user manually imports components or imports components from other repositories, the "Brand" filter may not work as expected in filtering the new components.

Resolution: Close and reopen the repository for the Brand filter to work correctly for the newly added bundles or components.

- **Issue 9:**

Description: If user had saved a "Line of Business" filter or "Form factor" filter using an earlier version of DRM, they may not work correctly after loading them in this version.

Resolution: Delete these old filters and recreate them using the new "Brand" filter.

Installation Prerequisites

For information on installing Repository Manager, see the "Dell Repository Manager - Quick Installation Guide".

Upgrading from previous versions

Before upgrading the existing version of Repository Manager with the latest version, ensure that all screens of the existing versions are closed.

Installation Procedure

Dell Repository Manager uses Open Source software to implement certain functions. Next is a list of the Open Source software used by DRM:

1. Persist the Visual Tree when switching tabs in the WPF TabControl (Optimized) from CodeProject.com
Open Source Software URL:
<http://www.codeproject.com/Articles/362940/Persist-the-Visual-Tree-when-switching-tabs-in-the>

Dell Modifications:

- Bug fix: Running on .NET45 framework over Remote Session causes TabItem state to be lost if RDP is reconnected. Similar behavior was observed even with user switching. Code change: Added a new dependency property "SkipLoad" to determine if a TabControl should be repopulated every time a load happens. Also track the last selection index before unload and use it to set it at next load.

- Bug fix: TabItems containing other TabControl would not allow setting the selected item other than the first element.
- Code change: Populate the inner TabControl as soon as the outer TabControl is bound to a new data source. This ensures the inner TabControl's tree is available to select any element, not just the first one. It works in conjunction with SkipLoad property.
- New: Allow new TabItem to be inserted at any specified index, not just at last position. Code change: Provision AddTabItem method to accept an index position at which new item will be inserted in the TabControl.
- The Dell modified source code can be found at <http://opensource.dell.com/releases/drm/WPFTabControl>

2. WPF Extended Toolkits from CodePlex.com

Contacting Dell

- NOTE: If you do not have an active Internet connection, you can find contact information on your purchase invoice, packing slip, bill, or Dell product catalog.

Dell provides several online and telephone-based support and service options. Availability varies by country and product, and some services may not be available in your area. To contact Dell for sales, technical support, or customer service issues:

1. Visit support.dell.com.
2. Select your support category.
3. If you are not a U.S. customer, select your country code at the bottom of the support.dell.com page, or select **All** to see more choices.
4. Select the appropriate service or support link based on your need.

For information on documentation support, visit www.dell.com/support/manuals.

On the Manuals page, click **Software** ->**Systems Management**. Click on the specific product on the right-side to access the documents.

For information on technical support, visit www.dell.com/contactus.

For information on documentation support, visit support.dell.com/manuals.

On the Manuals page, click **Software** ->**Systems Management**. Click on the specific product on the right - side to access the documents.
