

# Event and Error Message Reference Guide for 14th Generation Dell EMC PowerEdge Servers

Version 1.90

## Notes, cautions, and warnings

 **NOTE:** A NOTE indicates important information that helps you make better use of your product.

 **CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

 **WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.

# Introduction

- This Error and Event Message reference guide lists the messages that are displayed on graphical user interface (GUI), command line interface (CLI), and stored in the log files. Messages are displayed or stored as a result of user action, automatic event occurrence, or for data logging purposes.
- Messages are divided into three elements:
  - **Message:** Indicates the actual message, and probable cause, wherever applicable.
  - **Recommended Response Action:** Indicates the remedial tasks to be performed by the user to resolve an issue. Comprehensive information is given about the GUI navigation path (or RACADM and WS-Man commands) that helps is effective and fast resolution.
  - **Detailed Description:** Provides more info about the error or event, where appropriate.
- Messages are classified according to hardware- and software categories in the server and its management applications (such as iDRAC, OMSA, CMC, and Lifecycle Controller). The category and severity of each message is also specified.
- Use this reference guide to understand more about the events and resolve issues associated with your Dell Enterprise systems.
- Messages are prefixed with event type to help easy identification. For example PSU, STOR, and VLT representing power supply unit, storage and voltage respectively. Expansion of acronyms used for classifying error messages is listed in the table here:

## Acronym Category

AMP	Amperage
ASR	Auto Sys Reset
BAR	Backup & Restore
BAT	Battery Event
BIOS	BIOS management
BOOT	Boot control
CBL	Cable
CMC	Chassis Management Control
CPU	Processor
CPUA	Proc Absent
CTL	Storage Controller
DH	Certificate Management
DIAG	Diagnostic
DIS	Auto-discovery
DKM	Dell Key Manager
ENC	Storage enclosure
EPP	Extended power performance
FAN	Fan event
FC	Fibre channel
FCD	Feature card
FLDC	Unknown

FSD	Debug
HWC	Hardware configuration
IOID	I/O Identify optimization
IOV	I/o virtualization
IPA	DRAC IP address
ISM	iDRAC Service Module
JCP	Job control
LC	Lifecycle Controller
LIC	Licensing
LNK	Link status
LOG	Log event
MEM	Memory
NIC	NIC configuration
OSD	OS deployment
OSE	OS event
PCI	PCI device
PDR	Physical disk drive
PFM	System performance event
POW	Power usage
PR	Part exchange
PST	BIOS POST
PSU	Power supply unit
PSUA	PSU absent
PWR	Power usage
RAC	RAC event
RDU	Redundancy
RED	FW download
RFL	IDSMD media
RFLA	IDSMD absent
RFM	Flex address SD
RRDU	IDSMD redundancy
RSI	Remote service
SEC	Security event
SEL	System event log
SSD	PCIe SSD
STOR	Storage
SUP	Firmware update job
SWC	Software configuration
SWU	Software change
SYS	System info

TMP	Temperature
TMPS	Temperature statistics
TST	Test alert
UEFI	UEFI event
USR	User tracking
VDR	Virtual drive
VF	vFlash media
VFL	vFlash event
VFLA	vFlash absent
VLT	Voltage
VME	Virtual media
VRM	Virtual console

## Alert category definition

- **System Health:** Represents all the alerts that are related to hardware within the system chassis. For example, temperature errors, voltage errors, and device errors.
- **Storage Health:** Represents alerts that are related to the storage subsystem. For example, controller errors, physical disk drive errors, and virtual drive errors.
- **Configuration:** Represents alerts that are related to hardware, firmware, and software configuration changes. For example, PCI-e card added or removed, RAID configuration changed, and iDRAC license changed.
- **Audit:** Category represents the audit log. Examples include, user login/logout information, Password authentication failures, session info, power states.
- **Update:** Represents alerts that are generated because of firmware or driver upgrades and downgrades. This does not represent firmware inventory.

# Intended audience

This Error and Event Message reference guide is intended for system administrators and other users involved in managing and troubleshooting Dell EMC Enterprise systems. For quick and easy reference, this guide is available on mobile devices also.

# Organization of topics

Event and Error messages are listed in the alphabetical order of different event messages. For example, BOOT, BIOS, CMC, HWC, LC, STOR, and UEFI.

# Documentation resources

This section provides information about the documentation resources for your system.

**Table 1. Additional documentation resources for your system**

Task	Document	Location
Setting up your system	For information about installing the system into a rack, see the Rack documentation included with your rack solution.	<a href="http://Dell.com/poweredgemanuals">Dell.com/poweredgemanuals</a>
	For information about installing the system into a rack, see the Rack documentation included with your rack solution or the <i>Getting Started With Your System</i> document that is shipped with your system.	
	For information about installing the system into a rack, see the Rack documentation included with the <i>Getting Started With Your System</i> document that is shipped with your system.	
	For information about turning on the system and the technical specifications of your system, see the <i>Getting Started With Your System</i> document that is shipped with your system.	<a href="http://Dell.com/poweredgemanuals">Dell.com/poweredgemanuals</a>
Configuring your system	For information about iDRAC features, configuring and logging in to iDRAC, and managing your system remotely, see the Integrated Dell Remote Access Controller User's Guide.	<a href="http://Dell.com/idracmanuals">Dell.com/idracmanuals</a>
	For information about installing the operating system, see the operating system documentation.	<a href="http://Dell.com/operatingsystemmanuals">Dell.com/operatingsystemmanuals</a>
	For information about understanding Remote Access Controller Admin (RACADM) subcommands and supported RACADM interfaces, see the RACADM Command Line Reference Guide for iDRAC.	<a href="http://Dell.com/idracmanuals">Dell.com/idracmanuals</a>
	For information about updating drivers and firmware, see the Methods to download firmware and drivers section in this document.	<a href="http://Dell.com/support/drivers">Dell.com/support/drivers</a>

<b>Task</b>	<b>Document</b>	<b>Location</b>
Managing your system	For information about systems management software offered by Dell, see the Dell OpenManage Systems Management Overview Guide.	<a href="http://Dell.com/openmanagemanuals">Dell.com/openmanagemanuals</a>
	For information about setting up, using, and troubleshooting OpenManage, see the Dell OpenManage Server Administrator User's Guide.	<a href="http://Dell.com/openmanagemanuals">Dell.com/openmanagemanuals</a>
	For information about installing, using, and troubleshooting Dell OpenManage Essentials, see the Dell OpenManage Essentials User's Guide.	<a href="http://Dell.com/openmanagemanuals">Dell.com/openmanagemanuals</a>
	For information about installing and using Dell System E-Support Tool (DSET), see the Dell System E-Support Tool (DSET) User's Guide.	<a href="http://Dell.com/DSET">Dell.com/DSET</a>
	For information about installing and using Active System Manager (ASM), see the Active System Manager User's Guide.	<a href="http://Dell.com/asmdocs">Dell.com/asmdocs</a>
	For understanding the features of Dell Lifecycle Controller (LCC), see the Dell Lifecycle Controller User's Guide.	<a href="http://Dell.com/idracmanuals">Dell.com/idracmanuals</a>
	For information about partner programs enterprise systems management, see the OpenManage Connections Enterprise Systems Management documents.	<a href="http://Dell.com/omconnectionsenterprisesystemsmanagement">Dell.com/omconnectionsenterprisesystemsmanagement</a>
	For information about connections and client systems management, see the OpenManage Connections Client Systems Management documentation.	<a href="http://Dell.com/dellclientcommandsuite manuals">Dell.com/dellclientcommandsuite manuals</a>
Working with Dell PowerEdge RAID controllers	For information about viewing inventory, performing configuration and monitoring tasks, remotely turning on or off servers, and enabling alerts for events on servers and components using the Dell Chassis Management Controller (CMC), see the CMC User's Guide.	<a href="http://Dell.com/esmmanuals">Dell.com/esmmanuals</a>
Understanding event and error messages	For information about understanding the features of the Dell PowerEdge RAID controllers (PERC) and deploying the PERC cards, see the Storage controller documentation.	<a href="http://Dell.com/storagecontrollermanuals">Dell.com/storagecontrollermanuals</a>
Fan Control Board firmware update and Set Chassis Type procedure	For information about checking the event and error messages generated by the system firmware and agents that monitor system components, see the Dell Event and Error Messages Reference Guide.	<a href="http://Dell.com/openmanagemanuals">Dell.com/openmanagemanuals</a> > <a href="#">OpenManage software</a>
	For information about updating the Fan Control Board firmware and setting the chassis type to accommodate either PowerEdge C6320 or PowerEdge C6320p sleds in the PowerEdge C6300 enclosure, see the Fan Control Board firmware update and Set Chassis Type procedure section in this document.	<a href="http://Dell.com/poweredgemanuals">Dell.com/poweredgemanuals</a>

# Dell EMC server troubleshooting information

Detailed information about your system is available in your system-specific documents such as Owner's Manual, RACADM Reference Guide, WS-Man Profile documents, and User's Guide. See [Dell.com/poweredge manuals](http://Dell.com/poweredge manuals) and [Dell.com/idrac manuals](http://Dell.com/idrac manuals).

## AMP Event Messages

### AMP0300

**Message** The system board *arg1* current is less than the lower warning threshold.

**Arguments**  
· ***arg1*** = name

**Detailed Description** None.

**Recommended Response Action** Review system power policy, check system logs for power related failures, and review system configuration changes.

**Category** System Health (AMP = Amperage)

**Severity** Severity 2 (Warning)

**Trap/EventID** 2178

**Redfish Event Type** Alert

	Filter Visibility	IPMI Alert	SNMP Alert	Email Alert	Remote System Log	WS Eventing	Redfish Eventing
iDRAC	✓	✓*	✓	✓	✓	✓	✓
CMC	✓		✓*	✓*	✓*		
	LC Log	LCD	OS Log	Power Off	Power Cycle	Reset	Chassis Event Proxy
iDRAC	✓*		✓	✓	✓	✓	
CMC	✓*						✓*

### AMP0301

**Message** The system board *arg1* current is less than the lower critical threshold.

**Arguments**  
· ***arg1*** = name

**Detailed Description** None.

**Recommended Response Action** Review system power policy, check system logs for power related failures, and review system configuration changes.

**Category** System Health (AMP = Amperage)

**Severity** Severity 1 (Critical)

Trap/EventID 2177  
 LCD Message System board <name> current is outside of range. Contact Support  
 Redfish Event Type Alert

	Filter Visibility	IPMI Alert	SNMP Alert	Email Alert	Remote System Log	WS Eventing	Redfish Eventing
iDRAC	✓	✓*	✓	✓	✓	✓	✓
CMC	✓		✓*	✓*	✓*		
	LC Log	LCD	OS Log	Power Off	Power Cycle	Reset	Chassis Event Proxy
iDRAC	✓*		✓	✓	✓	✓	
CMC	✓*						✓*

## AMP0302

Message The system board *arg1* current is greater than the upper warning threshold.

Arguments  
 · *arg1* = name

Detailed Description Product documentation contains information on correct configuration. The failure could also be caused by a faulty component or related cabling. System performance may be degraded.

Recommended Response Action Review system power policy, check system logs for power related failures, and review system configuration changes.

Category System Health (AMP = Amperage)

Severity Severity 2 (Warning)

Trap/EventID 2178

LCD Message The system board <name> current is outside of range.

	LC Log	LCD	OS Log	Power Off	Power Cycle	Reset	Chassis Event Proxy
iDRAC	✓*		✓	✓	✓	✓	
CMC	✓*						✓*

## AMP0307

**Message** Disk drive bay *arg1* current is less than the lower critical threshold.

**Arguments**

- ***arg1*** = name

**Detailed Description** None.

**Recommended Response Action** Review system power policy, check system logs for power related failures, and review system configuration changes.

**Category** System Health (AMP = Amperage)

**Severity** Severity 1 (Critical)

**Trap/EventID** 2177

**LCD Message** Disk drive bay <name> current is outside of range. Contact Support

**Redfish Event Type** Alert

	Filter Visibility	IPMI Alert	SNMP Alert	Email Alert	Remote System Log	WS Eventing	Redfish Eventing
iDRAC	✓	✓*	✓	✓	✓	✓	✓
CMC	✓		✓*	✓*	✓*		
	LC Log	LCD	OS Log	Power Off	Power Cycle	Reset	Chassis Event Proxy
iDRAC	✓*		✓	✓	✓	✓	
CMC	✓*						✓*

## AMP0308

**Message** Disk drive bay *arg1* current is greater than the upper warning threshold.

**Arguments**

- ***arg1*** = name

**Detailed Description** Product documentation contains information on correct configuration. The failure could also be caused by a faulty component or related cabling. System performance may be degraded.

Recommended Response Action	Review system power policy, check system logs for power related failures, and review system configuration changes.
Category	System Health (AMP = Amperage)
Severity	Severity 2 (Warning)
Trap/EventID	2178
Redfish Event Type	Alert

	Filter Visibility	IPMI Alert	SNMP Alert	Email Alert	Remote System Log	WS Eventing	Redfish Eventing
iDRAC	✓	✓*	✓	✓	✓	✓	✓
CMC	✓		✓*	✓*	✓*		
	LC Log	LCD	OS Log	Power Off	Power Cycle	Reset	Chassis Event Proxy
iDRAC	✓*		✓	✓	✓	✓	
CMC	✓*						✓*

## AMP0309

**Message** Disk drive bay *arg1* current is greater than the upper critical threshold.

**Arguments**

- ***arg1*** = name

**Detailed Description** Product documentation contains information on correct configuration. The failure could also be caused by a faulty component or related cabling. System performance may be degraded.

**Recommended Response Action** Review system power policy, check system logs for power related failures, and review system configuration changes.

**Category** System Health (AMP = Amperage)

**Severity** Severity 1 (Critical)

**Trap/EventID** 2177

**LCD Message** Disk drive bay <name> current is outside of range. Contact Support

**Redfish Event Type** Alert

	Filter Visibility	IPMI Alert	SNMP Alert	Email Alert	Remote System Log	WS Eventing	Redfish Eventing
iDRAC	✓	✓*	✓	✓	✓	✓	✓

## BAR012

<b>Message</b>	Unable to collect Lifecycle Controller data.
<b>Detailed Description</b>	Lifecycle Controller data collection and export has failed.
<b>Recommended Response Action</b>	Do the following: 1) Download and apply the Dell Update Package (DUP) for Lifecycle Controller/Unified Server Configurator (USC). 2) Run System Services to update the database if CSIOR is not enabled. 3) Reboot the system and retry. If the issue persists after performing these operations, download the Field Service Repair software and repair the Lifecycle Controller. Download and install all the DUPs for Lifecycle Controller/USC, diagnostics, driver packs, and device firmware of all the devices of the host system.
<b>Category</b>	Configuration (BAR = Backup/Restore)

## BAR052

**Message** Firmware update cannot be performed for Device: *arg1*

**Arguments**

- ***arg1*** = device name

**Detailed Description** The required device firmware was not found, and the update cannot continue. The device firmware is either not present on the firmware storage partition or does not match the version stored in the configuration information database. No response action is required, however obtaining and installing the update package for the device indicated will update the firmware storage partition. A backup of the server profile is recommended after updating.

Recommended Response Action No response action is required.

## BAR054

Message System Reset or Lifecycle Controller Actions Canceled, System Profile Failure Recovery unsuccessful.

**Detailed Description** The attempt to clean up after an unsuccessful Backup/Restore of a system profile operation has not been successful. The Lifecycle Controller/System Services related operations may not execute as expected until the system is properly restored to a functional configuration.

**Recommended Response Action** Enter the iDRAC configuration utility. Select the System Services option in the main selection screen. Choose the Cancel Lifecycle Controller Actions / Cancel System Services operation and follow the directions to ensure this operation is performed. If Cancel Lifecycle Controller Actions / Cancel System Services is not available, remove power from the system, wait 1 minute and reapply power. If the issue persists, contact your technical service provider.

## BAR111

<b>Message</b>	Server Profile operation timed out.
<b>Detailed Description</b>	The Import or Export job did not complete successfully. The Import or Export operation timed-out while validating or transferring Server Profile data. Possible causes are loss of network connectivity, vFlash SD card access issues, or problems encountered with system power off and on.
<b>Recommended Response Action</b>	If the managed system does not turn off during Import, turn off the system and retry the operation. If the managed system turned off, restart the Remote Access Controller and retry the operation. If the export was to a network share verify the connection and try the operation again. If the export destination was the vFlash media, insert a new SD card and try the operation again.

## BAT1004

**Message** The battery on *arg1* learn cycle has timed out.

**Arguments**

- ***arg1*** = controller name

**Detailed Description** The controller battery must be fully charged before the learn cycle can begin. The battery may be unable to maintain a full charge causing the learn cycle to timeout. In addition, the battery must be able to maintain cached data for a specified period of time in the event of a power loss. For example, some batteries maintain cached data for 24 hours. If the battery is unable to maintain cached data for the required period of time, then the Learn cycle will timeout.

**Recommended Response Action** Replace the battery pack. The battery is unable to maintain a full charge.

## BAT1025

**Message** *arg1* is unable to recover cached data from the Battery Backup Unit (BBU).

**Arguments**

- ***arg1*** = controller name

**Detailed Description** The controller was unable to recover data from the cache. This may indicate data loss has occurred.

**Recommended Response Action** Verify that the battery is charged and in good health. See the hardware documentation for more information. When the battery charge is unacceptably low, the battery cannot maintain cached data. Data loss may also have occurred, restoring data from backups may be needed. Verify whether the battery has met its recharge limit. The battery may need to be recharged. Contact technical support if the issue persists.

## BAT1033

**Message** The battery on *arg1* was removed.

**Arguments**

- ***arg1*** = controller name

**Detailed Description** The controller cannot communicate with the battery. Either the battery was removed, or the contact point between the controller and the battery is degraded.

**Recommended Response Action** Make sure that the battery is present and properly connected. If the battery is present, wait for a few minutes and re-check if the battery is detected. If the contact point between the battery and the controller is degraded, you must replace the battery, the controller, or both. Refer to the storage hardware documentation for information on how to safely access, or remove. Contact technical support if the issue persists.

## Redfish Event Type

*No alerts are applicable for this message*

# BIOS021

<b>Message</b>	Cannot authenticate BIOS password.
<b>Detailed Description</b>	The old BIOS password specified in the change BIOS password operation was incorrect.
<b>Recommended Response Action</b>	Retry the operation with correct old BIOS password.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# BIOS022

<b>Message</b>	Cannot set the BIOS password. Password is disabled due to a jumper setting on the motherboard.
<b>Detailed Description</b>	The BIOS password is disabled in the hardware using a jumper and can not be set. See the system owners manual for jumper location.
<b>Recommended Response Action</b>	Change the jumper setting on the system board to enable changing the BIOS password.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# BIOS023

<b>Message</b>	Cannot perform the operation due to an unknown error in iDRAC.
<b>Detailed Description</b>	An unrecoverable error occurred in the operation while communicating with iDRAC.
<b>Recommended Response Action</b>	Retry the operation. If the issue continues, reset the iDRAC.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS024

<b>Message</b>	The set operation did not complete successfully as the attribute is read-only.
<b>Detailed Description</b>	The operation cannot run as the attribute value cannot be modified.
<b>Recommended Response Action</b>	For more information on the attribute, see Lifecycle Controller-Remote Services documentation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS025

<b>Message</b>	Unable set the BIOS password as the BIOS password status is locked.
<b>Detailed Description</b>	The status of the password is Locked in BIOS and must be set to Unlocked for the operation to succeed.
<b>Recommended Response Action</b>	Change BIOS password status in the BIOS setup from Locked to Unlocked and retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS026

<b>Message</b>	Password status cannot be set to locked when a System Password change is pending.
<b>Detailed Description</b>	The status of the Password cannot be set to locked, because currently there is a System Password change is pending.
<b>Recommended Response Action</b>	Wait until the pending System Password change is applied or delete the pending System Password change and retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS027

**Message** Unable to change the BIOS password because the password is currently being configured using plain text. Unable to set the attribute *arg1* .

**Arguments**

- ***arg1*** = attribute name

**Detailed Description** The attribute identified in the message cannot be set, because the password is currently being reset by using plain text. The BIOS password cannot be simultaneously configured by using plain text and a hash.

**Recommended Response Action** Wait until the current password configuration process is completed, and then retry the operation.

**Category** Configuration (BIOS = BIOS Management)

## BIOS028

**Message** Unable to change the BIOS password using plain text because the password is currently being configured using a hash.

**Detailed Description** The BIOS password cannot be simultaneously configured by using plain text and a hash.

**Recommended Response Action** Wait until the current password configuration process is completed and retry the operation.

**Category** Configuration (BIOS = BIOS Management)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## BIOS029

**Message** Unable to change the BIOS password because an Export Server Profile operation is already running.

**Detailed Description** The BIOS password cannot be configured because an Export Server Profile operation is already running.

<b>Recommended Response Action</b>	Wait until the current export operation is completed, and then retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS030

<b>Message</b>	Unable to change the BIOS password because an Import Server Profile operation is already running.
<b>Detailed Description</b>	The BIOS password cannot be configured because an Import Server Profile operation is already running.
<b>Recommended Response Action</b>	Wait until the current import operation is completed, and then retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS031

<b>Message</b>	Unable to start the configuration operation because the System Lockdown mode is enabled.
<b>Detailed Description</b>	The configuration operation cannot be started because the System Lockdown mode is enabled.
<b>Recommended Response Action</b>	Make sure that the Lockdown.1#SystemLockdown attribute is set to Disabled in the DCIM_iDracCardEnumeration class by running the WS-Man get command at the command line interface (CLI), and then retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS032

<b>Message</b>	Unable to access the network share because incorrect network share identify information is entered.
<b>Detailed Description</b>	The network share cannot be accessed because incorrect network share identify information is entered.
<b>Recommended Response Action</b>	Enter correct network share identify information and retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## BIOS033

<b>Message</b>	Unable to write to the network share either because the network share is read-only or sufficient disk space is unavailable for the export operation.
<b>Detailed Description</b>	Data cannot be written to the network share either because the network share is read-only or sufficient disk space is unavailable for the export operation.
<b>Recommended Response Action</b>	Do the following and retry the operation: 1) Make sure that the network share is not read-only. 2) Make sure that there is sufficient disk space on the network share.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS034

<b>Message</b>	Unable to retrieve the record information because the requested record is not available.
<b>Detailed Description</b>	The record operation cannot be retrieved because the requested record is not available.
<b>Recommended Response Action</b>	Make sure that the record data entered is correct and retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS035

<b>Message</b>	Unable to start the operation because invalid hash signature parameter is entered.
<b>Detailed Description</b>	The operation cannot be started because invalid hash signature parameter is entered.
<b>Recommended Response Action</b>	Make sure that correct parameters are entered and retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS036

<b>Message</b>	Unable to start the import operation because the public key (PK) certificate is already available.
<b>Detailed Description</b>	The import operation cannot be started because the public key (PK) certificate is already available.
<b>Recommended Response Action</b>	Delete the existing public key (PK) certificate, enter a new PK, and then retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS037

<b>Message</b>	Unable to start the import operation either because the file name entered : <i>arg1</i> is invalid, file is corrupted, or the file encoding format is incorrect.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = file name</li></ul>
<b>Detailed Description</b>	The import operation cannot be started either because the file name identified in the message is invalid, file is corrupted, or the file encoding format is incorrect.
<b>Recommended Response Action</b>	Make sure that a valid file is used and retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS038

<b>Message</b>	Unable to read the SecureBoot policy because of unknown issues.
<b>Detailed Description</b>	The SecureBoot policy cannot be read because of unknown issues.
<b>Recommended Response Action</b>	Perform the Collect System Inventory on Restart (CSIOR) operation, see the report, and then retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS039

<b>Message</b>	Unable to start the operation because invalid parameters are entered.
<b>Detailed Description</b>	The operation cannot be started because invalid parameters are entered.
<b>Recommended Response Action</b>	Make sure that correct parameters are entered and retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS040

<b>Message</b>	Unable to import the SecureBoot certificate data because of insufficient disk space to store the certificate data.
<b>Detailed Description</b>	The SecureBoot certificate data cannot be imported because of insufficient disk space to store the certificate data.
<b>Recommended Response Action</b>	Delete the current SecureBoot certificate and retry the operation. If the issue, persists, contact service provider.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS041

<b>Message</b>	Operation not allowed because hash signature is not supported in Platform Key (PK) and Key Exchange (KEK).
<b>Detailed Description</b>	The operation cannot be completed because hash signature is not supported in Platform Key (PK) and Key Exchange Key (KEK).
<b>Recommended Response Action</b>	Make sure that hash signature is not used in the input parameter and retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS042

<b>Message</b>	Unable to import the file <i>arg1</i> because the file does not exist in the source directory.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = file name</li></ul>
<b>Detailed Description</b>	The file identified in the message cannot be imported because the file does not exist in the source directory.
<b>Recommended Response Action</b>	Make sure that the file exists in the remote share and retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS043

<b>Message</b>	Unable to complete the operation because the length of input parameter <i>arg1</i> is more than the maximum allowed length <i>arg2</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = parameter name</li><li>· <b><i>arg2</i></b> = parameter length</li></ul>
<b>Detailed Description</b>	The maximum number of characters allowed for the parameter is displayed.
<b>Recommended Response Action</b>	Make sure that the parameter length is equal to or less than the maximum allowed, and then retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BIOS044

<b>Message</b>	Unable to complete the operation because the operation is not allowed when the Secure Boot Policy is in Standard mode.
<b>Detailed Description</b>	The operation cannot be completed because the operation is not allowed when the Secure Boot Policy is in Standard mode.
<b>Recommended Response Action</b>	Make sure that the BIOS.Setup.1-1:SecureBootPolicy is set to Custom in the DCIM_BIOSEnumeration class by running the WS-Man get command at the command line interface (CLI), and then retry the operation.
<b>Category</b>	Configuration (BIOS = BIOS Management)
<b>Severity</b>	Severity 2 (Warning)

## Redfish Event Type

## BOOT Event Messages

### BOOT001

**Message** The command was successful.

**Detailed Description** The command was successful.

**Recommended Response Action** No response action is required.

**Category** Configuration (BOOT = BOOT Control)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

### BOOT002

**Message** Resource allocation error.

**Detailed Description** Unable to allocate required memory to perform the operation.

**Recommended Response Action** Power cycle system and reapply firmware packages for Lifecycle Controller and iDRAC.

**Category** Configuration (BOOT = BOOT Control)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## BOOT003

<b>Message</b>	Method not supported.
<b>Detailed Description</b>	This operation is not supported on the current configuration.
<b>Recommended Response Action</b>	This operation is not supported on the current configuration, check documentation and try again.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT004

<b>Message</b>	Invalid number of Boot Source arguments
<b>Detailed Description</b>	An invalid number of source arguments was passed to the method.
<b>Recommended Response Action</b>	Check documentation and try again (details).
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT005

<b>Message</b>	Missing required parameter.
<b>Detailed Description</b>	One or more of the invoked methods required parameters are missing.
<b>Recommended Response Action</b>	Check documentation for the method in question and try again.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT006

<b>Message</b>	Invalid Boot Source InstanceID
<b>Detailed Description</b>	One or more of the Boot Source instance IDs does not contain valid data.
<b>Recommended Response Action</b>	Verify that all of the Boot Source instance IDs being entered are as they appear in the DCIM_BootSourceSetting enumeration.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT007

<b>Message</b>	Boot Source does not belong to specified Boot Configuration
<b>Detailed Description</b>	One or more of the Boot Source instance IDs does not belong to the affected Boot Configuration.
<b>Recommended Response Action</b>	ChangeBootOrderByInstanceID only accepts Boot Sources from the impacted Boot Configuration. Verify that all source arguments belong to the desired Boot Configuration.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT008

<b>Message</b>	Source argument contains more devices than are present on the system
<b>Detailed Description</b>	More source arguments were provided than are available for the impacted Boot Configuration.
<b>Recommended Response Action</b>	Verify that all of the Boot Source instance IDs being entered are as they appear in the DCIM_BootSourceSetting enumeration.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT009

<b>Message</b>	Boot Sources cannot be found for this Boot Configuration
----------------	--

<b>Detailed Description</b>	No Boot Sources could be found for the desired Boot Configuration.
<b>Recommended Response Action</b>	Verify that Boot Sources for the indicated Boot Configuration are displaying when enumerating DCIM_BootSourceSetting. Power cycle system and reapply firmware packages for Lifecycle Controller and iDRAC.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT010

<b>Message</b>	Could not locate vFlash partition index
<b>Detailed Description</b>	The provided vFlash partition index could not be found on the system.
<b>Recommended Response Action</b>	Verify that a vFlash partition with the desired index exists on the System.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT011

<b>Message</b>	Failed to set vFlash partition for one time boot
<b>Detailed Description</b>	The provided vFlash partition could not be set for one time boot.
<b>Recommended Response Action</b>	Power cycle system and reapply firmware packages for Lifecycle Controller and iDRAC.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT012

<b>Message</b>	Job started to attach and set vFlash SD card partition for OneTime boot.
<b>Detailed Description</b>	A job was created to configure a OneTime boot to the specified vFlash SD card partition. If this partition was not attached to the system, the job attaches it as well.
<b>Recommended Response Action</b>	No response action is required.

<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT013

<b>Message</b>	Cannot make changes to non-active boot list.
<b>Detailed Description</b>	The boot list is currently not active. Changes cannot be made to boot list that is not active.
<b>Recommended Response Action</b>	Alter boot mode to set the boot list active and retry the operation.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT014

<b>Message</b>	Virtual media not ready.
<b>Detailed Description</b>	The systems SD card has been removed or is in use.
<b>Recommended Response Action</b>	Verify that the SD card is inserted and that another operation is not in progress, and try again.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT015

<b>Message</b>	Set operation successful for the boot partition.
<b>Detailed Description</b>	The boot partition configuration request was successful. An unattached vFlash partition was configured for one-time boot using the ChangeBootOrderByInstanceID method. The method creates a job (to attach the vFlash partition and set the partition for one-time boot).
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## BOOT016

<b>Message</b>	Input source argument value for the boot device is incorrect or not found among the boot devices on the system.
<b>Detailed Description</b>	The input source argument value referring to the boot device is incorrect or empty. The boot device identifier must match the InstanceID for the Boot Source Setting instance that represents the boot device.
<b>Recommended Response Action</b>	Use the correct source argument value for the boot device and retry the operation.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT017

<b>Message</b>	Source argument does not support enable or disable mode.
<b>Detailed Description</b>	The boot device(s) specified in the source argument used in the operation cannot be enabled or disabled. This behavior applies to BCV devices and one-time boot.
<b>Recommended Response Action</b>	Refer to the documentation on validity of operation for the boot device specified. For more information on the operation, see Lifecycle Controller-Remote Services documentation.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT018

<b>Message</b>	Specified Boot Control List is read-only
<b>Detailed Description</b>	The Boot Control List specified in the operation is read-only and cannot be modified.
<b>Recommended Response Action</b>	Refer to the documentation on validity of operation for the Boot Control List specified. For more information on the operation, see Lifecycle Controller-Remote Services documentation.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT019

<b>Message</b>	Unable to run the ChangeBootOrderByInstanceID command because the BIOS Export operation is in progress.
<b>Detailed Description</b>	The ChangeBootOrderByInstanceID command cannot be run because the BIOS Export operation is in progress.
<b>Recommended Response Action</b>	Wait for the BIOS Export operation to complete and retry the operation.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT020

<b>Message</b>	Unable to run the ChangeBootOrderByInstanceID command because the BIOS Import operation is in progress.
<b>Detailed Description</b>	The ChangeBootOrderByInstanceID command cannot be run because the BIOS Import operation is in progress.
<b>Recommended Response Action</b>	Wait for the BIOS Import operation to complete and retry the operation.
<b>Category</b>	Configuration (BOOT = BOOT Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## BOOT8500

<b>Message</b>	Unable to change the BIOS boot order for the Server <i>arg1</i>
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = slot number</li></ul>
<b>Detailed Description</b>	Unable to change the BIOS boot order for the server because of a broken communication between the CMC and iDRAC, or iDRAC is rebooting.
<b>Recommended Response Action</b>	Reset iDRAC or wait until iDRAC reboots, and retry the operation.
<b>Category</b>	Configuration (BOOT = BOOT Control)

## CAPP Event Messages

### CAPP0002

**Message** Unable to login from *arg1* .

**Arguments** . *arg1* = session type

**Detailed Description** The user using the session type identified in the message cannot be logged in.

**Recommended Response Action** No response action required.

**Category** Audit (CAPP = Application)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

### CAPP0101

**Message** NTP settings modified.

**Detailed Description** NTP settings modified.

**Recommended Response Action** No response action required.

**Category** Configuration (CAPP = Application)

**Severity** Severity 3 (Informational)

**Redfish Event Type**  
*No alerts are applicable for this message*

### CAPP0102

**Message** SMTP Alert configuration modified.

Detailed Description	SMTP Alert configuration modified.
Recommended Response Action	No response action required.
Category	Configuration (CAPP = Application)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CAPP0103

Message	SNMP Alert configuration modified.
Detailed Description	SNMP Alert configuration modified.
Recommended Response Action	No response action required.
Category	Configuration (CAPP = Application)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CAPP0104

Message	Syslog Alert configuration modified.
Detailed Description	Syslog Alert configuration modified.
Recommended Response Action	No response action required.
Category	Configuration (CAPP = Application)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CAPP0105

Message	Test SNMP trap sent by <i>arg1</i> to <i>arg2</i> from <i>arg3</i> .
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = user name</li><li>· <b><i>arg2</i></b> = target IP</li><li>· <b><i>arg3</i></b> = IP Address</li></ul>
Detailed Description	Test SNMP alert sent by user identified in the message to the target IP address from the source IP address.

Recommended Response Action	No response action required.
Category	Configuration (CAPP = Application)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CAPP0178

Message	Console setting <i>arg1</i> modified.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = setting name</li></ul>
Detailed Description	The console setting identified in the message is updated.
Recommended Response Action	No response action required.
Category	Configuration (CAPP = Application)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CAPP1010

Message	Unable to retrieve the host name.
Detailed Description	The host name cannot be retrieved.
Recommended Response Action	Retry the operation. If the issue persists, contact your system administrator.
Category	Configuration (CAPP = Application)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CAPP1011

Message	Unable to change the host name.
Detailed Description	The host name cannot be changed.
Recommended Response Action	Retry the operation. If the issue persists, contact your system administrator.
Category	Configuration (CAPP = Application)

# CAPP9051

**Message** The task with the following details is started. Job Name: *arg1* . Job ID: *arg2* . Job Type: *arg3* . Job Status: *arg4* . Job Description: *arg5* .

## Arguments

- **arg1** = job Name
- **arg2** = jobID
- **arg3** = job Type
- **arg4** = job Status
- **arg5** = job Description

**Detailed Description** The job identified in the message is started.

**Recommended Response Action** No response action is required.

**Category** Audit (CAPP = Application)

**Severity** Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

# CAPP9052

**Message** The task with the following details is completed. Job Name: *arg1* . Job ID: *arg2* . Job Type: *arg3* . Job Status: *arg4* . Job Description: *arg5* .

## Arguments

- **arg1** = job Name
- **arg2** = job ID
- **arg3** = job Type
- **arg4** = job Status
- **arg5** = job Description

**Detailed Description** The job identified in the message is completed.

Recommended Response Action	No response action is required.

## CBL0004

Message The *arg1* cable is incorrectly connected to backplane *arg2* connector *arg3*.

Arguments

- ***arg1*** = cable name
- ***arg2*** = bay ID

- **arg3** = connector name

**Detailed Description** The cable identified in the message is incorrectly connected to the backplane connector.

**Recommended Response Action** Make sure the cable identified in the message is cabled correctly. If the issue persists, contact your service provider.

## CBL0006

**Message** Unsupported backplane *arg1* configuration: Multiple RAID controllers cannot be connected to the same backplane.

**Arguments**

- ***arg1*** = bay ID

**Detailed Description** Each server model only supports a certain set of backplane configurations. For unified backplanes or split mode capable backplanes that are in unified mode, multiple controllers cannot be connected to the same backplane. In unified backplane situations any controller besides the first will not be operational.

**Recommended Response Action** Make sure that only one RAID controller is connected to the backplane. If the issue persists, contact your service provider.

## CBL8500

**Message** SAS cable *arg1* to expander *arg2* is not connected.

**Arguments**

- **arg1** = cable id
- **arg2** = expander id

**Detailed Description** SAS cables are not connected to the expander correctly.

**Recommended Response Action** Check whether or not the SAS cables are connected to the expander. Reconnect the cables and retry the operation.

**Category** Storage (CBL = Cable)  
**Severity** Severity 1 (Critical)

## CDEV Event Messages

### CDEV0100

**Message** Proxy settings modified.  
**Detailed Description** Proxy settings modified.  
**Recommended Response Action** No response action required.  
**Category** Configuration (CDEV = Devices)  
**Severity** Severity 3 (Informational)  
**Redfish Event Type**  
*No alerts are applicable for this message*

### CDEV0102

**Message** Unable to complete the requested operation because an invalid JSON file is entered.  
**Detailed Description** The requested operation cannot be completed because an invalid JSON file is entered.  
**Recommended Response Action** Enter a valid JSON file name and retry the operation. For more information about supported file types, see the MSM Users Guide available on the support site.  
**Category** Configuration (CDEV = Devices)

**Severity** Severity 3 (Informational)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CDEV0103

**Message** Unable to complete the request to remove the chassis *arg1* from the Multi-chassis Management group *arg2* .

**Arguments**

- ***arg1*** = Chassis Service Tag
- ***arg2*** = groupName

**Detailed Description** The request to remove the chassis from the Multi-chassis Management group identified in the message.

**Recommended Response Action** Retry the operation. If the issue persists, contact your service provider. For more information see the MSM Users Guide available on the support site.

**Category** Configuration (CDEV = Devices)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1114

<b>Message</b>	Unable to add the member chassis to the Multi-chassis Management group because only the lead chassis can approve requests for joining.
<b>Detailed Description</b>	The member chassis cannot be added to the Multi-chassis Management group because only the lead chassis can approve requests for joining.
<b>Recommended Response Action</b>	Retry the operation by using the lead chassis of the Multi-chassis Management group.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1115

<b>Message</b>	Unable to approve the join request from the member chassis.
<b>Detailed Description</b>	The join request from the member chassis could not be approved.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, contact your system administrator.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1116

<b>Message</b>	Unable to broadcast the Multi Chassis Management group creation over mDNS.
<b>Detailed Description</b>	The Multi Chassis Management group creation could not be broadcast over mDNS.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, contact your network administrator.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1117

<b>Message</b>	Unable to join the Multi-chassis Management group.
<b>Detailed Description</b>	Unable to join the Multi-chassis Management group.
<b>Recommended Response Action</b>	Make sure the Multi-chassis Management group is available and retry the operation. If the issue persists, contact your system administrator.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1118

<b>Message</b>	Unable to join the Multi-chassis Management group <i>arg1</i> because the chassis is already a member.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = group UUID</li></ul>
<b>Detailed Description</b>	Unable to join the Multi-chassis Management group identified in the message because the chassis is already a member.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1119

<b>Message</b>	Unable to join the Multi-chassis Management group because discovered groups are unavailable.
<b>Detailed Description</b>	Unable to join the Multi-chassis Management group because discovered groups are unavailable.
<b>Recommended Response Action</b>	Make sure the requested group is available and retry the operation. If the issue persists, contact your network administrator.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1120

<b>Message</b>	Unable to join the Multi-chassis Management group because the entered lead group <i>arg1</i> is unavailable.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = lead group</li></ul>
<b>Detailed Description</b>	The Multi-chassis Management group cannot be joined because the entered lead chassis IP is unavailable.
<b>Recommended Response Action</b>	Make sure the lead group identified in the message is available and retry the operation. If the issue persists, contact your system administrator.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1121

<b>Message</b>	Unable to retrieve the status of requests opened for joining the Multi-chassis Management group.
<b>Detailed Description</b>	The status of requests opened to join the Multi-chassis Management group cannot be retrieved.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, contact your system administrator.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1122

<b>Message</b>	The chassis is unable to complete the network operation <i>arg1</i> because of internal issues. Fabric Manager message: <i>arg2</i> . Internal message ID: <i>arg3</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = operation Name</li><li>· <b><i>arg2</i></b> = message</li><li>· <b><i>arg3</i></b> = error Event Message Code</li></ul>
<b>Detailed Description</b>	The chassis is unable to complete the network operation identified in the message.
<b>Recommended Response Action</b>	Wait for few minutes and retry the operation. If the issue persists, contact your service provider.
<b>Category</b>	Miscellaneous (CDEV = Devices)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1123

<b>Message</b>	Unable to configure the network profile because the fabric manager could not be communicated to.
<b>Detailed Description</b>	The network profile cannot be configured because the fabric manager could not be communicated to.
<b>Recommended Response Action</b>	Make sure of the following and retry the operation: 1) There is at least one advanced I/O Module in power-on mode. For example, MX9116n Ethernet Switch and MX5108n Ethernet Switch. However, if an advanced I/O Module is available in the power-on mode, make sure that the network profile is not set when the fabric manager is in the switch-over mode. 2) If the issue persists, wait for few minutes and retry the operation.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1125

<b>Message</b>	Unable to delete the network <i>arg1</i> because invalid network name is entered. Fabric Manager message: <i>arg2</i> . Internal message ID: <i>arg3</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = network Name</li><li>· <b><i>arg2</i></b> = message</li><li>· <b><i>arg3</i></b> = error Event Message Code</li></ul>
<b>Detailed Description</b>	The chassis is unable to delete the network identified in the message because invalid network name is entered.

<b>Recommended Response Action</b>	Enter valid network name and retry the operation. If the issue persists, contact your service provider.
<b>Category</b>	Miscellaneous (CDEV = Devices)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1126

<b>Message</b>	Unable to complete the operation because the attribute <i>arg1</i> entered for the property <i>arg2</i> is either invalid or of a different type.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = attribute Name</li><li>· <b><i>arg2</i></b> = property Name</li></ul>
<b>Detailed Description</b>	The operation cannot be completed because the attribute entered for the property is either invalid or of a different type as identified in the message.
<b>Recommended Response Action</b>	Enter a valid and correct attribute that is compatible with the identified property, and then retry the operation.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV1127

<b>Message</b>	Unable to complete the operation because the attribute <i>arg1</i> entered for the property <i>arg2</i> is not supported.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = attribute Name</li><li>· <b><i>arg2</i></b> = property Name</li></ul>
<b>Detailed Description</b>	The operation cannot be completed because the attribute entered for the property is not supported as identified in the message.
<b>Recommended Response Action</b>	Enter a valid and correct attribute, and then retry the operation. For example, if the character length of a property is more than the max permitted, reenter the property as recommended. For more information about recommended attributes for properties, see the OpenManage Enterprise-Modular Users Guide available on the support site.

## CDEV4002

<b>Message</b>	The Multi-Chassis Management group lead redundancy is lost because of either network issues or firmware version mismatch.
----------------	---

**Detailed Description** The Redundancy feature of the Multi-Chassis Management (MCM) group lead chassis is unavailable anymore either because of network issues or difference in the firmware version of lead and backup chassis.

**Recommended Response Action** Do the following: 1) Check the network cables that connect the management ports between the chassis. 2) Make sure that the firmware version of the lead and backup chassis are same. If the issue persists, unassign the backup chassis and reassign. For information about assigning a backup chassis, see the OpenManage Enterprise-Modular Users Guide available on the support site.

## CDEV4003

**Message** The Redundancy feature of the Multi-Chassis Management (MCM) group lead chassis is degraded.

**Detailed Description** The Redundancy feature of the Multi-Chassis Management (MCM) group lead chassis is degraded.

**Recommended Response Action** No response action is required. The configuration data of the Multi-Chassis Management (MCM) will be automatically recovered and synchronized. If condition persists, unassign the backup and repeat the assign backup operation.

**Category** System Health (CDEV = Devices)

## CDEV4005

<b>Message</b>	The Multi-Chassis Management (MCM) lead chassis is unable to communicate with the backup chassis <i>arg1</i> because of network issues.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>· <b><i>arg1</i></b> = service tag</li> </ul>
<b>Detailed Description</b>	The Multi-Chassis Management (MCM) lead chassis cannot communicate with the backup chassis identified in the message because of network issues.
<b>Recommended Response Action</b>	Do the following: 1) Check the network cables that connect the management ports between the chassis. 2) If a cable issue is not found, but the lead chassis is still inaccessible by using its management IP, promote the backup chassis as the lead chassis. For information about assigning a lead chassis, see the OpenManage Enterprise-Modular User Guide available on the support site.

## CDEV6078

<b>Message</b>	Unable to retrieve uplink port information because no ports were found.
<b>Detailed Description</b>	Uplink port information cannot be retrieved because no ports were found.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV6079

<b>Message</b>	Unable to retrieve device settings because device settings were not found for the device <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = device ID</li></ul>
<b>Detailed Description</b>	Device settings cannot be retrieved because device settings were not found for the device identified in the message.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV6080

<b>Message</b>	Unable to perform the management task on this device because the device is not onboarded.
<b>Detailed Description</b>	The management operation cannot be performed on this device because the device is not onboarded.
<b>Recommended Response Action</b>	Onboard the device from the All-Devices page and then retry the operation.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV6081

<b>Message</b>	The chassis <i>arg1</i> could not be added because it is already a member of the group <i>arg2</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = service tag</li><li>· <b><i>arg2</i></b> = group name</li></ul>
<b>Detailed Description</b>	The chassis could not be added because it is already a member of the group identified in the message.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV6083

<b>Message</b>	Unable to create or modify the Multi-chassis Management group.
<b>Detailed Description</b>	The Multi-chassis Management group cannot be created or modified.
<b>Recommended Response Action</b>	Make sure the entered group configuration is valid and retry the operation.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV6084

<b>Message</b>	The job <i>arg1</i> is successfully created to join Multi-chassis Management group <i>arg2</i> at <i>arg3</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = job</li><li>· <b><i>arg2</i></b> = arg2</li><li>· <b><i>arg3</i></b> = arg3</li></ul>
<b>Detailed Description</b>	The job is successfully created to join the Multi-chassis Management group identified in the message.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV6085

<b>Message</b>	Unable to join the Multi-chassis Management group <i>arg1</i> at <i>arg2</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = group name</li><li>· <b><i>arg2</i></b> = IP address</li></ul>
<b>Detailed Description</b>	The device cannot be joined to the Multi-chassis Management group identified in the message.
<b>Recommended Response Action</b>	Make sure that the entered IP address is a group lead and retry the operation.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV6086

<b>Message</b>	The job <i>arg1</i> is successfully created to leave the Multi-chassis Management group <i>arg2</i> at <i>arg3</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = job ID</li><li>· <b><i>arg2</i></b> = group Name</li><li>· <b><i>arg3</i></b> = ip Address</li></ul>
<b>Detailed Description</b>	The job is successfully created to leave the Multi-chassis Management group identified in the message.

Recommended Response Action	No response action required.
Category	Configuration (CDEV = Devices)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CDEV6087

Message	Unable to leave the Multi-chassis Management group <i>arg1</i> at <i>arg2</i> .
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = arg1</li><li>· <b><i>arg2</i></b> = arg2</li></ul>
Detailed Description	The device was unable to leave the Multi-chassis Management group.
Recommended Response Action	Retry the operation.
Category	Configuration (CDEV = Devices)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CDEV6088

Message	The job <i>arg1</i> is successfully created to add the chassis <i>arg2</i> to the Multi-chassis Management group <i>arg3</i> .
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = job</li><li>· <b><i>arg2</i></b> = chassis</li><li>· <b><i>arg3</i></b> = group</li></ul>
Detailed Description	The job is successfully created to add the chassis to the Multi-chassis Management group identified in the message.
Recommended Response Action	No response action required.
Category	Configuration (CDEV = Devices)

Redfish Event Type	<i>No alerts are applicable for this message</i>

## CDEV6089

<b>Message</b>	Unable to add the chassis <i>arg1</i> to the Multi-chassis Management group <i>arg2</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = chassis</li><li>· <b><i>arg2</i></b> = group</li></ul>
<b>Detailed Description</b>	The chassis cannot be added to the Multi-chassis Management group identified in the message.
<b>Recommended Response Action</b>	Make sure that the group is available and retry the operation.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV6090

<b>Message</b>	The job <i>arg1</i> is successfully created to remove the chassis <i>arg2</i> from the Multi-chassis Management group <i>arg3</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = job</li><li>· <b><i>arg2</i></b> = chassis name</li><li>· <b><i>arg3</i></b> = group name</li></ul>
<b>Detailed Description</b>	The job is successfully created to remove the chassis from the Multi-chassis Management group identified in the message.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV6092

<b>Message</b>	The job <i>arg1</i> is successfully created to create or modify Multi-chassis Management group <i>arg2</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = job</li><li>· <b><i>arg2</i></b> = group</li></ul>
<b>Detailed Description</b>	The Multi-chassis Management group identified in the message is successfully created or modified.

Recommended Response Action	No response action required.
Category	Configuration (CDEV = Devices)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CDEV6093

Message	The chassis <i>arg1</i> is approved to join the Multi-chassis Management group <i>arg2</i> .
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = chassis</li><li>· <b><i>arg2</i></b> = group</li></ul>
Detailed Description	The chassis is approved to join the Multi-chassis Management group identified in the message.
Recommended Response Action	No response action required.
Category	Configuration (CDEV = Devices)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CDEV6094

Message	The chassis <i>arg1</i> is denied from joining the Multi-chassis Management group <i>arg2</i> .
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = chassis</li><li>· <b><i>arg2</i></b> = group</li></ul>
Detailed Description	The chassis is denied from joining the Multi-chassis Management group identified in the message.
Recommended Response Action	No response action required.
Category	Configuration (CDEV = Devices)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CDEV6095

Message	The request to join the Multi-chassis Management group <i>arg1</i> is approved.
---------	---

Arguments	<ul style="list-style-type: none"> <li>· <b>arg1</b> = group</li> </ul>
Detailed Description	The request is approved to join the Multi-chassis Management group identified in the message.
Recommended Response Action	No response action required.
Category	Configuration (CDEV = Devices)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CDEV6096

Message	Unable to process the confirmation to join the Multi-chassis Management group.
Detailed Description	The confirmation to join the Multi-chassis Management group cannot be processed.
Recommended Response Action	Retry the operation.
Category	Configuration (CDEV = Devices)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CDEV6097

Message	The job <i>arg1</i> is successfully created to delete the member chassis <i>arg2</i> from the Multi-chassis Management group <i>arg3</i> .
Arguments	<ul style="list-style-type: none"> <li>· <b>arg1</b> = job</li> <li>· <b>arg2</b> = chassis</li> <li>· <b>arg3</b> = group</li> </ul>
Detailed Description	The job is successfully created to delete the member chassis from the Multi-chassis Management group identified in the message.
Recommended Response Action	No response action required.
Category	Configuration (CDEV = Devices)

<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV6148

<b>Message</b>	Unable to connect to the network share address because the network connection was refused.
<b>Detailed Description</b>	The network share address provided cannot be connected to because the network connection was refused.
<b>Recommended Response Action</b>	Enter a valid network share address and retry the operation.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV7141

<b>Message</b>	Unable to perform the Server NIC Bonding configuration operation for the <i>arg1</i> server, because the current fabric manager firmware version does not support the configuration feature.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = server Name</li></ul>
<b>Detailed Description</b>	The Server NIC Bonding configuration operation cannot be performed for the server identified in the message, because the current fabric manager firmware version does not support the configuration feature.

<b>Recommended Response Action</b>	Update the firmware of the IOM running the fabric manager, and then retry the operation. For information about the recommended latest IOM version, see the MSM Users Guide available on the support site.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV7142

<b>Message</b>	Unable to perform the Server NIC Bonding configuration operation for the server <i>arg1</i> , because the necessary bonding technology is not provided.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = server Name</li></ul>
<b>Detailed Description</b>	The Server NIC Bonding configuration operation cannot be performed for the server identified in the message, because the necessary bonding technology is not provided.
<b>Recommended Response Action</b>	Provide the necessary bonding technology and NIC Bonded value, and then retry the operation.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV7143

<b>Message</b>	Unable to perform onboarding as the connection to the target could not be created.
<b>Detailed Description</b>	Unable to perform onboarding as the connection to the target could not be created.
<b>Recommended Response Action</b>	Make sure that the device ready and available for onboarding, and then retry the operation.For more information, see the OpenManage Enterprise-Modular Users Guide available on the support site.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV7144

<b>Message</b>	Unable to perform the Fabric LLDP configuration operation for the fabric, because the current fabric manager firmware version does not support the configuration feature.
<b>Detailed Description</b>	The Fabric LLDP configuration operation cannot be performed for the fabric identified in the message, because the current fabric manager firmware version does not support the configuration feature.

<b>Recommended Response Action</b>	Update the firmware of the IOM running the fabric manager, and then retry the operation. For information about the recommended latest IOM version, see the OpenManage Enterprise-Modular Users Guide available on the support site.

<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV7145

<b>Message</b>	Unable to perform the Fabric LLDP configuration operation on the fabric because the necessary OverrideLLDPConfiguration attribute is not entered in the Payload field.
<b>Detailed Description</b>	The Fabric LLDP configuration operation cannot be performed on the fabric because the necessary OverrideLLDPConfiguration attribute is not entered in the Payload field.
<b>Recommended Response Action</b>	Enter the necessary OverrideLLDPConfiguration attribute (enabled or disabled), and then retry the operation.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV7146

<b>Message</b>	Unable to perform the Fabric LLDP configuration operation on the fabric because the necessary OverrideLLDPConfiguration attribute entered in the Payload field is invalid.
<b>Detailed Description</b>	The Fabric LLDP configuration operation cannot be performed on the fabric because the OverrideLLDPConfiguration attribute entered in the Payload field is invalid.
<b>Recommended Response Action</b>	Enter a valid OverrideLLDPConfiguration attribute (enabled or disabled), and then retry the operation.
<b>Category</b>	Configuration (CDEV = Devices)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDEV9028

<b>Message</b>	Unable to attach the profile <i>arg1</i> with the slot or device <i>arg2</i> because: <i>arg3</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = profile Name</li><li>· <b><i>arg2</i></b> = Identifier</li></ul>

- **arg3** = Reason

**Detailed Description** The profile cannot be attached with the slot or device as identified in the message because of the reasons indicated in the message.

**Recommended Response Action** Review the reason and initiate necessary action.

**Category** Configuration (CDEV = Devices)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CDEV9029

**Message** Unable to migrate the profile *arg1* from the slot or device *arg2* to the slot or device *arg3* because: *arg4*.

**Arguments**

- **arg1** = profile Name
- **arg2** = Source Identifier
- **arg3** = Destination Identifier
- **arg4** = reason

**Detailed Description** The profile cannot be migrated from the slot or device to the slot or device as identified in the message because of the reasons indicated in the message.

**Recommended Response Action** Review the reason and initiate necessary action.

**Category** Configuration (CDEV = Devices)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CDEV9030

**Message** The Network Controller group information is successfully updated.

**Detailed Description** The Network Controller group information successfully updated.

**Recommended Response Action** No response action required.

**Category** Audit (CDEV = Devices)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CDEV9031

**Message** MCM Member( *arg1* ) settings sync is failed for SettingIds: *arg2* .

**Arguments**

- ***arg1*** = field1
- ***arg2*** = field2

**Detailed Description** Error during settings sync on Member.

**Recommended Response Action** Check the logs for more details.

**Category** Audit (CDEV = Devices)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## CDEV9032

**Message** MCM Member( *arg1* ) settings are posted for settingsIds: *arg2* .

**Arguments**

- ***arg1*** = field1
- ***arg2*** = field2

**Detailed Description** Member Setting sync is successful.

**Recommended Response Action** No response action required.

**Category** Audit (CDEV = Devices)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CDEV9746

**Message** The create operation failed because the required property *arg1* was missing from the request.

**Arguments**

- ***arg1*** = property Name

**Detailed Description** Indicates that a create was attempted on a resource but that properties that are required for the create operation were missing from the request.

**Recommended Response Action** Correct the body to include the required property with a valid value and resubmit the request if the operation failed.

**Category** Audit (CDEV = Devices)

**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CDEV9998

**Message** Date and time change operation has been initiated.  
**Detailed Description** Date and time change operation has been initiated.  
**Recommended Response Action** No response action required.  
**Category** Configuration (CDEV = Devices)  
**Severity** Severity 3 (Informational)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CDEV9999

**Message** Reset to defaults is not supported on a lead chassis in the MCM group.  
**Detailed Description** The lead group properties cannot be reset.  
**Recommended Response Action** Dissolve the lead group and retry the operation.  
**Category** Configuration (CDEV = Devices)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CDIS Event Messages

### CDIS2001

**Message** Unable to create or update connection profile because an invalid profile type is entered.  
**Detailed Description** The creation or update of the connection profile cannot be done because an invalid profile type is entered.  
**Recommended Response Action** Enter a valid profile type and retry the operation. Profile type should be Inventory or Discovery.  
**Category** Configuration (CDIS = Discovery)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CDIS2002

<b>Message</b>	Unable to complete the operation because an invalid credential type provided.
<b>Detailed Description</b>	The operation cannot be completed because the entered credential type is invalid.
<b>Recommended Response Action</b>	Enter a valid credential type and retry the operation.
<b>Category</b>	Configuration (CDIS = Discovery)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDIS2004

<b>Message</b>	Unable to save credentials because the provided credential is null or the entered ID does not exist.
<b>Detailed Description</b>	The credentials cannot be saved because the provided credential is null or the entered ID does not exist.
<b>Recommended Response Action</b>	Make sure that all credential fields are valid and retry the operation.
<b>Category</b>	Configuration (CDIS = Discovery)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDIS2006

<b>Message</b>	Unable to update or delete connection profile because the profile ID <i>arg1</i> does not exist.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = id</li></ul>
<b>Detailed Description</b>	The operation cannot be completed because the connection profile ID identified in the message does not exist.
<b>Recommended Response Action</b>	Enter a valid connection profile ID and retry the operation.
<b>Category</b>	Configuration (CDIS = Discovery)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDIS2007

<b>Message</b>	Unable to retrieve connection profile information.
<b>Detailed Description</b>	Unable to retrieve connection profiles because an error occurred.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CDIS = Discovery)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDIS4001

<b>Message</b>	Unable to discover the device(s) <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = target</li></ul>
<b>Detailed Description</b>	The specified device(s) cannot be discovered.
<b>Recommended Response Action</b>	Make sure the targets are available and retry the operation.
<b>Category</b>	Configuration (CDIS = Discovery)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDIS4045

<b>Message</b>	Discovery job with name <i>arg1</i> created successfully.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = job id</li></ul>
<b>Detailed Description</b>	Discovery job successfully created.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CDIS = Discovery)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CDIS4046

**Message** Discovery job with name *arg1* modified successfully.

**Arguments**

- ***arg1*** = job id

**Detailed Description** Discovery job successfully modified.

**Recommended Response Action** No response action required.

**Category** Configuration (CDIS = Discovery)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CDIS4047

**Message** Discovery job with name *arg1* deleted successfully.

**Arguments**

- ***arg1*** = job id

**Detailed Description** Discovery job successfully deleted.

**Recommended Response Action** No response action required.

**Category** Configuration (CDIS = Discovery)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CDIS4048

**Message** Unable to group component switches with the chassis ID *arg1* because the Service Tag of the chassis cannot be obtained.

**Arguments**

- ***arg1*** = chassis Id

**Detailed Description** The switches cannot be grouped with the chassis because the Service Tag of the chassis cannot be obtained. The discovery operation uses the Service Tag of a chassis to associate switches to the chassis.

**Recommended Response Action** No response action required.

**Category** Configuration (CDIS = Discovery)

**Severity** Severity 3 (Informational)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CDIS4049

**Message** Unable to complete the discovery operation because the address range is more than the maximum *arg1* permitted per discovery task.

**Arguments**  
· ***arg1*** = count

**Detailed Description** Unable to discover the device because the address range is more than the maximum permitted per discovery task identified in the message.

**Recommended Response Action** Enter a discovery range value that is less than the maximum permitted per task. For more information about maximum devices that can be discovered per task, see the MSM Users Guide available on the support site.

**Category** Configuration (CDIS = Discovery)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## CDIS4050

**Message** Unable to associate an IP address to a hostname during the device discovery operation.

**Detailed Description** The IP address cannot be associated to a hostname during the device discovery operation.

**Recommended Response Action** Enter a valid IP address or hostname and retry the operation.

**Category** Configuration (CDIS = Discovery)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## CGEN Event Messages

### CGEN1001

**Message** Unable to complete the operation because the user is not authenticated.

**Detailed Description** The operation cannot be completed because the user is not authenticated.

**Recommended Response Action** Log in with valid credentials and retry the operation.

**Category** Configuration (CGEN = Generic)

**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CGEN1002

**Message** Unable to complete the operation because the requested URI is invalid.  
**Detailed Description** The operation cannot be completed because the requested URI is invalid.  
**Recommended Response Action** Enter a valid URI and retry the operation.  
**Category** Configuration (CGEN = Generic)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CGEN1003

**Message** Unable to complete the operation because an empty payload is not allowed for this request.  
**Detailed Description** The operation cannot be completed because an empty payload is not allowed for this request.  
**Recommended Response Action** Enter a valid payload and retry the operation.  
**Category** Configuration (CGEN = Generic)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CGEN1004

**Message** Unable to complete the operation because an invalid value is entered for *arg1* .  
**Arguments**  
· **arg1** = property  
**Detailed Description** The operation cannot be completed because an invalid value is entered for the property identified in the message.  
**Recommended Response Action** Enter a valid value for the property identified in the message and retry the operation.  
**Category** Configuration (CGEN = Generic)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CGEN1005

<b>Message</b>	Unable to complete the requested action because the logged in user is not authorized to perform this operation.
<b>Detailed Description</b>	The operation cannot be completed because the logged in user is not authorized to perform this action.
<b>Recommended Response Action</b>	Log in with a user that has the correct permissions for this action and retry the operation.
<b>Category</b>	Configuration (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN1006

<b>Message</b>	Unable to complete the operation because the requested URI does not exist or the requested Method is not implemented for the URI.
<b>Detailed Description</b>	The operation cannot be completed because the requested URI does not exist or the requested Method is not implemented for the URI.
<b>Recommended Response Action</b>	Enter a valid URI and retry the operation.
<b>Category</b>	Configuration (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN1007

<b>Message</b>	Unable to complete the requested action because the value for <i>arg1</i> in the <i>arg2</i> entity is invalid.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = property</li><li>· <b><i>arg2</i></b> = entity</li></ul>
<b>Detailed Description</b>	The operation cannot be completed because the property identified in the message is invalid.
<b>Recommended Response Action</b>	Enter a valid value for the property identified in the message and retry the operation.
<b>Category</b>	Configuration (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN1008

<b>Message</b>	Unable to process the request because an error occurred.
<b>Detailed Description</b>	The operation cannot be completed because an error occurred.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, contact your system administrator.
<b>Category</b>	Configuration (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## CGEN1009

<b>Message</b>	Unable to perform the requested action because the device management endpoint authentication over <i>arg1</i> failed.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = protocol</li></ul>

<b>Detailed Description</b>	The operation cannot be completed because the connection with the target device is not authenticated.
<b>Recommended Response Action</b>	Make sure the credentials associated with the device management endpoint are valid and retry the operation.
<b>Category</b>	Configuration (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## CGEN1010

<b>Message</b>	Unable to perform the requested action because a connection timeout occurred with device management endpoint over <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = protocol</li></ul>

<b>Detailed Description</b>	The operation cannot be completed because a device connection timeout occurred.
<b>Recommended Response Action</b>	Make sure the device is available and retry the operation.
<b>Category</b>	Configuration (CGEN = Generic)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## CGEN1011

**Message** Unable to perform the requested action because the service is unavailable over *arg1*.

**Arguments**

- **arg1** = protocol

**Detailed Description** The operation cannot be completed because the requested service is unavailable.

**Recommended Response Action** Make sure the requested service is available and retry the operation.

**Category** Configuration (CGEN = Generic)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGEN1013

**Message** Unable to connect to the device over *arg1* because a connection error occurred.

**Arguments**

- **arg1** = protocol

**Detailed Description** The operation cannot be completed because a connection error occurred while trying to connect to the device.

**Recommended Response Action** Make sure that the target device is available and retry the operation.

**Category** Configuration (CGEN = Generic)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGEN1014

**Message** Unable to complete the operation because an invalid value is entered for the property *arg1*.

**Arguments**

- **arg1** = payload error information

**Detailed Description** The operation cannot be completed because an invalid value is entered for the property identified in the message.

**Recommended Response Action** Enter a valid value for the property and retry the operation. For more information about valid values, see the MSM Users Guide available on the support site.

**Category** Configuration (CGEN = Generic)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGEN1015

Message	Unable to complete the operation because of an invalid property <i>arg1</i> .
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = property</li></ul>
Detailed Description	The operation cannot be completed because an invalid property is entered in the payload.
Recommended Response Action	Verify the identified property is valid in the message and retry the operation with valid payload.
Category	Configuration (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CGEN1028

Message	Unable to process the request because the entered device ID <i>arg1</i> is invalid.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = device Id</li></ul>
Detailed Description	The operation cannot be completed because the entered device ID is invalid.
Recommended Response Action	Enter a valid device ID and retry the operation.
Category	Configuration (CGEN = Generic)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CGEN1103

Message	Unable to process the request because <i>arg1</i> is empty or missing.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = parameter</li></ul>
Detailed Description	Unable to process the request because a parameter identified in the message is missing.
Recommended Response Action	Enter the missing value identified in the message and retry the operation.
Category	Configuration (CGEN = Generic)
Severity	Severity 1 (Critical)

## Redfish Event Type

*No alerts are applicable for this message*

# CGEN4017

**Message** Unable to process the request because the mandatory field *arg1* is null or empty.

**Arguments**

- ***arg1*** = field name

**Detailed Description** The operation cannot be completed because the mentioned field is mandatory for processing the request.

**Recommended Response Action** Make sure that the field is not null or empty and then retry the operation.

**Category** Configuration (CGEN = Generic)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# CGEN4018

**Message** Unable to process the request because the value entered in the field *arg1* exceeds the maximum length of *arg2* characters.

**Arguments**

- ***arg1*** = fieldName
- ***arg2*** = maxLength

**Detailed Description** The operation cannot be completed because the value entered in the mentioned field exceeds the allowed character limit.

**Recommended Response Action** Enter a value less than the specified character limit and retry the operation.

**Category** Configuration (CGEN = Generic)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# CGEN4036

**Message** Unable to process the request because the payload cannot be null.

**Detailed Description** The operation cannot be completed because the entered payload is null.

**Recommended Response Action** Enter a valid payload and retry the operation.

**Category** Configuration (CGEN = Generic)

**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CGEN6001

**Message** Unable to process the request because an error occurred: *arg1* .  
**Arguments**  
· ***arg1*** = error message  
**Detailed Description** The operation cannot be completed because of the error identified in the message.  
**Recommended Response Action** Retry the operation. If the issue persists, contact your system administrator.  
**Category** Configuration (CGEN = Generic)  
**Severity** Severity 1 (Critical)

## CGEN9120

<b>Message</b>	A general error has occurred. See ExtendedInfo for more information.
<b>Detailed Description</b>	Indicates that a general error has occurred.
<b>Recommended Response Action</b>	See ExtendedInfo for more information.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)

## Redfish Event Type

*No alerts are applicable for this message*

# CGEN9121

**Message** The property *arg1* is a required property and must be included in the request.

## Arguments

- ***arg1*** = Name

**Detailed Description** Indicates that a required property was not supplied as part of the request.

**Recommended Response Action** Ensure that the property is in the request body and has a valid value and resubmit the request if the operation failed.

**Category** Audit (CGEN = Generic)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# CGEN9122

**Message** The action *arg1* requires the parameter *arg2* to be present in the request body.

## Arguments

- ***arg1*** = operation Name
- ***arg2*** = resource Block Id

**Detailed Description** Indicates that the action requested was missing a parameter that is required to process the action.

**Recommended Response Action** Supply the action with the required parameter in the request body when the request is resubmitted.

**Category** Audit (CGEN = Generic)

**Severity** Severity 1 (Critical)

## Redfish Event Type

*No alerts are applicable for this message*

# CGEN9123

**Message** The action *arg1* was submitted with with the invalid parameter *arg2* .

## Arguments

- ***arg1*** = Resource Block Id
- ***arg2*** = Resource Block Value

**Detailed Description** Indicates that an action was submitted but a parameter supplied did not match any of the known parameters.

Recommended Response Action	Correct the invalid parameter and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CGEN9724

Message	The property <i>arg1</i> was duplicated in the request.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = property Name</li></ul>
Detailed Description	Indicates that a duplicate property was included in the request body.
Recommended Response Action	Remove the duplicate property from the request body and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CGEN9725

Message	The property <i>arg1</i> is not in the list of valid properties for the resource.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = propertyName</li></ul>
Detailed Description	Indicates that an unknown property was included in the request body.
Recommended Response Action	Remove the unknown property from the request body and resubmit the request if the operation failed.
Category	Audit (CGEN = Generic)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CGEN9726

Message	The value <i>arg1</i> for the property <i>arg2</i> is of a different type than the property can accept.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = value</li></ul>

- **arg2** = name

**Detailed Description** Indicates that a property was given the wrong value type, such as when a number is supplied for a property that requires a string.

**Recommended Response Action** Correct the value for the property in the request body and resubmit the request if the operation failed.

**Category** Audit (CGEN = Generic)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGEN9727

**Message** The value *arg1* for the property *arg2* is of a different format than the property can accept.

**Arguments**

- **arg1** = value
- **arg2** = name

**Detailed Description** Indicates that a property was given the correct value type but the value of that property was not supported. This includes value size/length exceeded.

**Recommended Response Action** Correct the value for the property in the request body and resubmit the request if the operation failed.

**Category** Audit (CGEN = Generic)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGEN9728

**Message** The value *arg1* for the property *arg2* is not in the list of acceptable values.

**Arguments**

- **arg1** = value
- **arg2** = name

**Detailed Description** Indicates that a property was given the correct value type but the value of that property was not supported. This values not in an enumeration.

**Recommended Response Action** Choose a value from the enumeration list that the implementation can support and resubmit the request if the operation failed.

**Category** Audit (CGEN = Generic)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGEN9729

**Message** The property *arg1* is a read only property and cannot be assigned a value.

**Arguments**

- ***arg1*** = name

**Detailed Description** Indicates that a property was given a value in the request body, but the property is a readonly property.

**Recommended Response Action** Remove the property from the request body and resubmit the request if the operation failed.

**Category** Audit (CGEN = Generic)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGEN9730

**Message** The request body submitted was malformed JSON and could not be parsed by the receiving service.

**Detailed Description** Indicates that the request body was malformed JSON. Could be duplicate, syntax error, etc.

**Recommended Response Action** Ensure that the request body is valid JSON and resubmit the request.

**Category** Audit (CGEN = Generic)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGEN9731

**Message** The action *arg1* is not supported by the resource.

**Arguments**

- ***arg1*** = action Name

**Detailed Description** Indicates that the action supplied with the POST operation is not supported by the resource.

**Recommended Response Action** The action supplied cannot be resubmitted to the implementation. Perhaps the action was invalid, the wrong resource was the target or the implementation documentation may be of assistance.

**Category** Audit (CGEN = Generic)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGEN9732

<b>Message</b>	The action <i>arg1</i> was submitted with more than one value for the parameter <i>arg2</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = action Name</li><li>· <b><i>arg2</i></b> = parameter Value</li></ul>
<b>Detailed Description</b>	Indicates that the action was supplied with a duplicated parameter in the request body.
<b>Recommended Response Action</b>	Resubmit the action with only one instance of the parameter in the request body if the operation failed.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9733

<b>Message</b>	The value <i>arg1</i> for the parameter <i>arg2</i> in the action <i>arg3</i> is of a different type than the parameter can accept.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = value</li><li>· <b><i>arg2</i></b> = parameter</li><li>· <b><i>arg3</i></b> = action</li></ul>
<b>Detailed Description</b>	Indicates that a parameter was given the wrong value type, such as when a number is supplied for a parameter that requires a string.
<b>Recommended Response Action</b>	Correct the value for the parameter in the request body and resubmit the request if the operation failed.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9734

<b>Message</b>	The value <i>arg1</i> for the parameter <i>arg2</i> in the action <i>arg3</i> is of a different format than the parameter can accept.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = value</li><li>· <b><i>arg2</i></b> = parameter</li><li>· <b><i>arg3</i></b> = action</li></ul>

<b>Detailed Description</b>	Indicates that a parameter was given the correct value type but the value of that parameter was not supported. This includes value size/length exceeded.
<b>Recommended Response Action</b>	Correct the value for the parameter in the request body and resubmit the request if the operation failed.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9735

**Message** The parameter *arg1* for the action *arg2* is not supported on the target resource.

**Arguments**

- ***arg1*** = parameter
- ***arg2*** = action

**Detailed Description** Indicates that the parameter supplied for the action is not supported on the resource.

**Recommended Response Action** Remove the parameter supplied and resubmit the request if the operation failed.

**Category** Audit (CGEN = Generic)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## CGEN9736

**Message** The value *arg1* for the query parameter *arg2* is of a different type than the parameter can accept.

**Arguments**

- ***arg1*** = value
- ***arg2*** = parameter

**Detailed Description** Indicates that a query parameter was given the wrong value type, such as when a number is supplied for a query parameter that requires a string.

**Recommended Response Action** Correct the value for the query parameter in the request and resubmit the request if the operation failed.

**Category** Audit (CGEN = Generic)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## CGEN9737

<b>Message</b>	The value <i>arg1</i> for the parameter <i>arg2</i> is of a different format than the parameter can accept.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = value</li><li>· <b><i>arg2</i></b> = parameter</li></ul>
<b>Detailed Description</b>	Indicates that a query parameter was given the correct value type but the value of that parameter was not supported. This includes value size/length exceeded.
<b>Recommended Response Action</b>	Correct the value for the query parameter in the request and resubmit the request if the operation failed.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9738

<b>Message</b>	The value <i>arg1</i> for the query parameter <i>arg2</i> is out of range <i>arg3</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = value</li><li>· <b><i>arg2</i></b> = parameter</li><li>· <b><i>arg3</i></b> = range</li></ul>
<b>Detailed Description</b>	Indicates that a query parameter was supplied that is out of range for the given resource. This can happen with values that are too low or beyond that possible for the supplied resource, such as when a page is requested that is beyond the last page.
<b>Recommended Response Action</b>	Reduce the value for the query parameter to a value that is within range, such as a start or count value that is within bounds of the number of resources in a collection or a page that is within the range of valid pages.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9739

<b>Message</b>	Querying is not supported on the requested resource.
<b>Detailed Description</b>	Indicates that query is not supported on the given resource, such as when a start/count query is attempted on a resource that is not a collection.
<b>Recommended Response Action</b>	Remove the query parameters and resubmit the request if the operation failed.

<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9740

<b>Message</b>	Querying is not supported by the implementation.
<b>Detailed Description</b>	Indicates that query is not supported on the implementation.
<b>Recommended Response Action</b>	Remove the query parameters and resubmit the request if the operation failed.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9741

<b>Message</b>	The session establishment failed due to the number of simultaneous sessions exceeding the limit of the implementation.
<b>Detailed Description</b>	Indicates that a session establishment has been requested but the operation failed due to the number of simultaneous sessions exceeding the limit of the implementation.
<b>Recommended Response Action</b>	Reduce the number of other sessions before trying to establish the session or increase the limit of simultaneous sessions (if supported).
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9742

<b>Message</b>	The event subscription failed due to the number of simultaneous subscriptions exceeding the limit of the implementation.
<b>Detailed Description</b>	Indicates that a event subscription establishment has been requested but the operation failed due to the number of simultaneous connection exceeding the limit of the implementation.
<b>Recommended Response Action</b>	Reduce the number of other subscriptions before trying to establish the event subscription or increase the limit of simultaneous subscriptions (if supported).
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)

## Redfish Event Type

*No alerts are applicable for this message*

# CGEN9743

<b>Message</b>	The delete request failed because the resource requested cannot be deleted.
<b>Detailed Description</b>	Indicates that a delete operation was attempted on a resource that cannot be deleted.
<b>Recommended Response Action</b>	Do not attempt to delete a non-deletable resource.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# CGEN9744

<b>Message</b>	The change to the requested resource failed because the resource is in use or in transition.
<b>Detailed Description</b>	Indicates that a change was requested to a resource but the change was rejected due to the resource being in use or transition.
<b>Recommended Response Action</b>	Remove the condition and resubmit the request if the operation failed.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# CGEN9745

<b>Message</b>	The requested resource already exists.
<b>Detailed Description</b>	Indicates that a resource change or creation was attempted but that the operation cannot proceed because the resource already exists.
<b>Recommended Response Action</b>	Do not repeat the create operation as the resource has already been created.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9747

<b>Message</b>	There is no valid session established with the implementation.
<b>Detailed Description</b>	Indicates that the operation failed because a valid session is required in order to access any resources.
<b>Recommended Response Action</b>	Establish as session before attempting any operations.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9748

<b>Message</b>	There are insufficient privileges for the account or credentials associated with the current session to perform the requested operation.
<b>Detailed Description</b>	Indicates that the credentials associated with the established session do not have sufficient privileges for the requested operation.
<b>Recommended Response Action</b>	Either abandon the operation or change the associated access rights and resubmit the request if the operation failed.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9749

<b>Message</b>	The account was successfully modified.
<b>Detailed Description</b>	Indicates that the account was successfully modified.
<b>Recommended Response Action</b>	No resolution is required.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9750

<b>Message</b>	The account modification request failed.
<b>Detailed Description</b>	Indicates that the modification requested for the account was not successful.
<b>Recommended Response Action</b>	The modification may have failed due to permission issues or issues with the request body.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9752

<b>Message</b>	The account for the current session has been removed, thus the current session has been removed as well.
<b>Detailed Description</b>	Indicates that the account for the session has been removed, thus the session has been removed as well.
<b>Recommended Response Action</b>	Attempt to connect with a valid account.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9753

<b>Message</b>	The object at <i>arg1</i> is invalid.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = question</li></ul>
<b>Detailed Description</b>	Indicates that the object in question is invalid according to the implementation. Examples include a firmware update malformed URI.
<b>Recommended Response Action</b>	Either the object is malformed or the URI is not correct. Correct the condition and resubmit the request if it failed.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9754

<b>Message</b>	The service detected a malformed request body that it was unable to interpret.
<b>Detailed Description</b>	Indicates that the service encountered an unrecognizable request body that could not even be interpreted as malformed JSON.
<b>Recommended Response Action</b>	Correct the request body and resubmit the request if it failed.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9755

<b>Message</b>	The resource at the URI <i>arg1</i> was not found.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = resource</li></ul>
<b>Detailed Description</b>	Indicates that the operation expected an image or other resource at the provided URI but none was found. Examples of this are in requests that require URIs like Firmware Update.
<b>Recommended Response Action</b>	Place a valid resource at the URI or correct the URI and resubmit the request.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9756

<b>Message</b>	The resource at <i>arg1</i> is in a format not recognized by the service.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = resource</li></ul>
<b>Detailed Description</b>	Indicates that the URI was valid but the resource or image at that URI was in a format not supported by the service.
<b>Recommended Response Action</b>	Place an image or resource or file that is recognized by the service at the URI.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## CGEN9757

<b>Message</b>	The create operation failed because the resource has reached the limit of possible resources.
<b>Detailed Description</b>	Indicates that no more resources can be created on the resource as it has reached its create limit.
<b>Recommended Response Action</b>	Either delete resources and resubmit the request if the operation failed or do not resubmit the request.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9758

<b>Message</b>	The operation failed because the service is shutting down and can no longer take incoming requests.
<b>Detailed Description</b>	Indicates that the operation failed as the service is shutting down, such as when the service reboots.
<b>Recommended Response Action</b>	When the service becomes available, resubmit the request if the operation failed.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9759

<b>Message</b>	The operation failed because the service is in an unknown state and can no longer take incoming requests.
<b>Detailed Description</b>	Indicates that the operation failed because the service is in an unknown state and cannot accept additional requests.
<b>Recommended Response Action</b>	Restart the service and resubmit the request if the operation failed.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGEN9760

<b>Message</b>	While accessing the resource at <i>arg1</i> , the service received an authorization error <i>arg2</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = uri</li><li>· <b><i>arg2</i></b> = error</li></ul>
<b>Detailed Description</b>	Indicates that the attempt to access the resource/file/image at the URI was unauthorized.
<b>Recommended Response Action</b>	Ensure that the appropriate access is provided for the service in order for it to access the URI.
<b>Category</b>	Audit (CGEN = Generic)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGRP Event Messages

### CGRP1337

<b>Message</b>	Unable to delete the group(s) because one or more entered groups are default groups.
<b>Detailed Description</b>	The group(s) cannot be deleted because one or more default groups are present. Default groups cannot be deleted.
<b>Recommended Response Action</b>	Remove the default group(s) from the request and retry the operation.
<b>Category</b>	Configuration (CGRP = Groups)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

### CGRP1345

<b>Message</b>	Unable to add or remove the user from the group because the user ID is invalid.
<b>Detailed Description</b>	The user cannot be added or removed from the group because the entered user ID is invalid.
<b>Recommended Response Action</b>	Enter a valid user ID and retry the operation.
<b>Category</b>	Configuration (CGRP = Groups)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## CGRP9000

**Message** Unable to add or modify group because the request payload cannot be null.

**Detailed Description** Group cannot be created or modified because the payload is mandatory.

**Recommended Response Action** Enter a valid payload and retry the operation.

**Category** Configuration (CGRP = Groups)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGRP9002

**Message** Unable to create or update the group because the field *arg1* must be set to 0.

**Arguments**

- ***arg1*** = fieldName

**Detailed Description** The group cannot be created or updated because the field identified in the message is not required.

**Recommended Response Action** Enter the value 0 for the field identified in the message and retry the operation.

**Category** Configuration (CGRP = Groups)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGRP9004

**Message** Unable to create or modify group because the value entered for *arg1* exceeds the maximum allowed length of *arg2* characters.

**Arguments**

- ***arg1*** = field name
- ***arg2*** = field length

**Detailed Description** The operation cannot be completed because any request with length greater than the defined value will be rejected.

**Recommended Response Action** Make sure the value entered in the specified field is valid and retry the operation.

**Category** Configuration (CGRP = Groups)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# CGRP9006

**Message** Unable to create or modify group because the field(s) *arg1* are not required for the entered payload.

**Arguments**

- ***arg1*** = field names

**Detailed Description** The operation cannot be completed because the above mentioned fields needs to be filtered out from the given payload.

**Recommended Response Action** Remove the unnecessary fields and retry the operation.

**Category** Configuration (CGRP = Groups)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# CGRP9007

**Message** Unable to update group members because the entered ID(s) [ *arg1* ] are invalid.

**Arguments**

- ***arg1*** = ids

**Detailed Description** The operation cannot be completed because the mentioned ID(s) are invalid.

**Recommended Response Action** Remove the invalid IDs and retry the operation.

**Category** Configuration (CGRP = Groups)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# CGRP9008

**Message** Unable to complete the operation because data entered in the field *arg1* is invalid.

**Arguments**

- ***arg1*** = field name

**Detailed Description** The operation cannot be completed because invalid data is entered in the field identified in the message.

**Recommended Response Action** Enter valid data in the field and retry the operation. For information about valid data permitted in a field, see the MSM Users Guide available on the support site.

**Category** Configuration (CGRP = Groups)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGRP9009

**Message** Unable to delete the subgroup because an invalid relationship is found between the group *arg1* and subgroup *arg2* .

**Arguments**

- ***arg1*** = group Id
- ***arg2*** = subgroup Id

**Detailed Description** The subgroup cannot be deleted because an invalid relationship is found between the group and subgroup entered.

**Recommended Response Action** Enter the correct subgroup and group name and retry the operation. For more information, see the MSM Users Guide available on the support site.

**Category** Configuration (CGRP = Groups)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGRP9010

**Message** Unable to create or modify group because the provided name already exists.

**Detailed Description** The operation cannot be completed because the provided group name already exists.

**Recommended Response Action** Enter a unique name and retry the operation.

**Category** Configuration (CGRP = Groups)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CGRP9011

**Message** Unable to create or modify group because the provided name is empty.

**Detailed Description** The operation cannot be completed because group name is a mandatory field.

**Recommended Response Action** Enter a group name and retry the operation.

Category	Configuration (CGRP = Groups)
Severity	Severity 2 (Warning)
Redfish Event Type	
	<i>No alerts are applicable for this message</i>

## CGRP9012

Message	Unable to create or update the group because the group cannot be the parent of itself.
Detailed Description	The group cannot be created or modified because the group cannot be the parent of itself.
Recommended Response Action	Make sure the group ID and subgroup ID are not the same and retry the operation.
Category	Configuration (CGRP = Groups)
Severity	Severity 2 (Warning)
Redfish Event Type	
	<i>No alerts are applicable for this message</i>

## CGRP9013

Message	Unable to update group <i>arg1</i> with the provided parent <i>arg2</i> because a group/parent relationship already exists.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = group</li><li>· <b><i>arg2</i></b> = parent</li></ul>
Detailed Description	The operation cannot be completed because a group cannot have a bidirectional parent relationship with another group.
Recommended Response Action	Make sure the entered parent ID does not create a bidirectional relationship and retry the operation.
Category	Configuration (CGRP = Groups)
Severity	Severity 2 (Warning)
Redfish Event Type	
	<i>No alerts are applicable for this message</i>

## CGRP9014

Message	Group cannot be updated because the provided ID <i>arg1</i> is invalid or does not exist.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = group Id</li></ul>
Detailed Description	The operation cannot be completed because group ID is mandatory for an update request.

<b>Recommended Response Action</b>	Enter a valid group ID and retry the operation.
<b>Category</b>	Configuration (CGRP = Groups)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGRP9015

<b>Message</b>	Unable to retrieve group types because the entered group type ID does not exist.
<b>Detailed Description</b>	The operation cannot be completed because no record exists for the given group type ID.
<b>Recommended Response Action</b>	Enter a valid group type ID and retry the operation.
<b>Category</b>	Configuration (CGRP = Groups)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CGRP9016

<b>Message</b>	Unable to retrieve membership type because the entered membership type ID does not exist.
<b>Detailed Description</b>	The operation cannot be completed because no record exists for the given membership type ID.
<b>Recommended Response Action</b>	Enter a valid membership type ID and retry the operation.
<b>Category</b>	Configuration (CGRP = Groups)

## CGRP9018

Message	The group <i>arg1</i> is successfully created.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = GroupName</li></ul>
Detailed Description	The group identified in the message is successfully created.
Recommended Response Action	No response action is required.
Category	Configuration (CGRP = Groups)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CGRP9019

Message	The properties of group <i>arg1</i> is successfully updated.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = GroupName</li></ul>
Detailed Description	The properties of group identified in the message is successfully updated.
Recommended Response Action	No response action is required.
Category	Configuration (CGRP = Groups)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CGRP9020

Message	The group <i>arg1</i> is successfully deleted.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = GroupName</li></ul>
Detailed Description	The group identified in the message is successfully deleted.
Recommended Response Action	No response action is required.
Category	Configuration (CGRP = Groups)
Severity	Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

# CGRP9021

**Message** The group *arg1* is successfully fetched.

**Arguments**

- ***arg1*** = GroupName

**Detailed Description** The group identified in the message is successfully fetched.

**Recommended Response Action** No response action is required.

**Category** Configuration (CGRP = Groups)

**Severity** Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

# CGRP9022

**Message** The group *arg1* is successfully cloned to create a new group: *arg2* .

**Arguments**

- ***arg1*** = GroupName
- ***arg2*** = New Group

**Detailed Description** The group is successfully cloned to create a new group identified in the message.

**Recommended Response Action** No response action is required.

**Category** Configuration (CGRP = Groups)

**Severity** Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

# CINV Event Messages

## CINV0004

**Message** Unable to retrieve the inventory type *arg1* because is not available for the device *arg2* .

**Arguments**

- ***arg1*** = inventory Type
- ***arg2*** = device id

Detailed Description	The inventory type identified in the message is not available for the requested device.
Recommended Response Action	No response action required.
Category	Configuration (CINV = Inventory)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CINV0005

Message	Unable to retrieve inventory information for the device.
Detailed Description	Inventory information is not available for the requested device.
Recommended Response Action	Please retry inventory operation.
Category	Configuration (CINV = Inventory)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CINV4025

Message	Unable to create or update the warranty job because the specified target(s) are invalid for the parameters <i>arg1</i> .
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = parameters</li></ul>
Detailed Description	The warranty job cannot be created or updated because a warranty job request for the parameters identified in the message can only be run against the all device group.
Recommended Response Action	Make sure the job only targets the ALL-DEVICES group and retry the operation.
Category	Configuration (CINV = Inventory)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CINV4026

Message	Unable to create or update the warranty job because one of the values <i>arg1</i> is required but not present for the parameter key <i>arg2</i> .
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = parameter Values</li></ul>

- **arg2** = type

<b>Detailed Description</b>	The warranty job cannot be created or updated because the request can only have the parameter values identified in the message.
<b>Recommended Response Action</b>	Enter one of the specified values for the key identified in the message and retry the operation.
<b>Category</b>	Configuration (CINV = Inventory)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CINV4028

<b>Message</b>	Unable to retrieve inventory data because of an unknown issue.
<b>Detailed Description</b>	The inventory data cannot be retrieved because of an unknown issue.
<b>Recommended Response Action</b>	Check the log data and retry the operation. For information about checking log data, see the OpenManage Enterprise-Modular Users Guide available on the support site.
<b>Category</b>	Configuration (CINV = Inventory)

<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CJOB Event Messages

### CJOB0150

<b>Message</b>	The job <i>arg1</i> with id <i>arg2</i> of type <i>arg3</i> has been created.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b>arg1</b> = job name</li><li>· <b>arg2</b> = id</li><li>· <b>arg3</b> = task type</li></ul>
<b>Detailed Description</b>	A new job has been created as identified in the message.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CJOB = Job)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CJOB0151

**Message** The job *arg1* with id *arg2* of type *arg3* is modified successfully.

**Arguments**

- ***arg1*** = job name
- ***arg2*** = id
- ***arg3*** = job type

**Detailed Description** The job identified in the message is modified successfully.

**Recommended Response Action** No response action required.

**Category** Configuration (CJOB = Job)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CJOB0152

**Message** The job *arg1* with id *arg2* of type *arg3* has been deleted.

**Arguments**

- ***arg1*** = job name
- ***arg2*** = id
- ***arg3*** = job type

**Detailed Description** The job identified in the message has been deleted.

**Recommended Response Action** No response action required.

**Category** Configuration (CJOB = Job)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CJOB0153

**Message** The job *arg1* with id *arg2* of type *arg3* has been scheduled.

**Arguments**

- ***arg1*** = job name
- ***arg2*** = id
- ***arg3*** = job type

**Detailed Description** The job identified in the message has been scheduled.

Recommended Response Action	No response action required.
Category	Configuration (CJOB = Job)

## CJOB4020

Message Unable to create or update the job because the field *arg1* cannot be empty or null.  
Arguments

- ***arg1*** = field name

Detailed Description The job cannot be created or updated because the field identified in the message is mandatory.

Recommended Response Action	Enter a valid value for the mentioned field and retry the operation.
Category	Configuration (CJOB = Job)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CJOB4021

Message	Unable to create or update the job because the field <i>arg1</i> is missing for the job parameters.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = field name</li></ul>
Detailed Description	The job cannot be created or updated because the field identified in the message is missing.
Recommended Response Action	Enter a value for the missing field and retry the operation.
Category	Configuration (CJOB = Job)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CJOB4022

Message	Unable to update the job because the job type <i>arg1</i> is invalid for the Listener Job.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = jobType</li></ul>
Detailed Description	The job cannot be updated because the entered job type is invalid for the Listener Job.
Recommended Response Action	Enter a job type valid for the Listener Job and retry the operation.
Category	Configuration (CJOB = Job)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CJOB4023

Message	Unable to create or update the job because a target is not required for the job type <i>arg1</i> .
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = jobType</li></ul>

<b>Detailed Description</b>	The job cannot be created or updated because the target must not be entered. This is a special job category that does not require a target to run against.
<b>Recommended Response Action</b>	Remove any job targets and retry the operation.
<b>Category</b>	Configuration (CJOB = Job)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CJOB4024

<b>Message</b>	The job <i>arg1</i> cannot run the command <i>arg2</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = job Id</li><li>· <b><i>arg2</i></b> = command</li></ul>
<b>Detailed Description</b>	The command identified in the message cannot be run.
<b>Recommended Response Action</b>	Make sure the command is valid or the job is not a built-in and retry the operation.
<b>Category</b>	Configuration (CJOB = Job)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CJOB4028

<b>Message</b>	Unable to retrieve execution history details because the query parameter <i>arg1</i> must not be empty or null.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = parameter</li></ul>
<b>Detailed Description</b>	The execution history details cannot be retrieved because the query parameter identified in the message must not be empty or null.
<b>Recommended Response Action</b>	Enter a valid value for the query parameter identified in the message and retry the operation.
<b>Category</b>	Configuration (CJOB = Job)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CJOB4029

<b>Message</b>	Unable to complete the operation because the entered target ID(s) <i>arg1</i> are invalid.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Ids</li></ul>
<b>Detailed Description</b>	The operation cannot be completed either because the specified target ID is invalid or does not exist.
<b>Recommended Response Action</b>	Enter a valid target ID and retry the operation.
<b>Category</b>	Configuration (CJOB = Job)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CJOB4030

<b>Message</b>	Unable to update the job because the entered job ID <i>arg1</i> is invalid or does not exist.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = id</li></ul>
<b>Detailed Description</b>	The job cannot be updated because the entered job ID is invalid or does not exist.
<b>Recommended Response Action</b>	Enter a valid jobID and retry the operation.
<b>Category</b>	Configuration (CJOB = Job)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CJOB4032

<b>Message</b>	Unable to create or modify the job because the user <i>arg1</i> does not have the necessary privileges.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = current user</li></ul>
<b>Detailed Description</b>	The job cannot be created or modified because the current user does not have the necessary privileges to perform the operation.
<b>Recommended Response Action</b>	Log in with a user that has the required privileges and retry the operation. For information about role-based access control, see the Users Guide on the support site.
<b>Category</b>	Configuration (CJOB = Job)

## CMC8510

Message Unable to activate the extended storage feature on the secondary CMC: *arg1*. The feature will return to single CMC mode.

Arguments

- ***arg1*** = cmc number

Detailed Description This happens during promotion of extended storage feature from single CMC to dual CMC. If the media on Standby CMC is not healthy, this message is displayed and the feature returns to single CMC state.

Recommended Response Action Do one of the following, and retry the operation: 1) In the CMC Web interface, go to Chassis Controller > Flash Media > Configuration and verify if the card on the secondary CMC displays some errors. 2) Do a failover and then reprovision the card from the same GUI page. Reprovisioning is only allowed on the card of primary CMC. However, if both the options 1 and 2 fail, the card may be no longer functional.

## CMC8511

<b>Message</b>	Unable to synchronize the data in the Extended Storage removable flash media in the primary and secondary CMCs/MMMs.
<b>Detailed Description</b>	The data on the Extended Storage removable flash media SD cards is not synchronized when the CMC is unable to determine which card has the latest data.
<b>Recommended Response Action</b>	Disable and then enable the Extended Storage feature. Using racadm, execute the following commands: "racadm feature -d -c Extended Storage" to disable and then "racadm -a -c Extended Storage" to enable the feature. NOTE: All the data on the removable flash media SD card is erased when the feature is disabled.

## CMC8512

<b>Message</b>	The Extended Storage feature activation timed out. The feature is not active.
<b>Detailed Description</b>	The Extended Storage feature is not activated if the removable flash media SD card on the secondary CMC does not respond within 90 seconds after activation is initiated.
<b>Recommended Response Action</b>	Do the following and retry the operation: 1) In the CMC Web interface, go to Chassis Controller > Flash Media > Configuration, and verify if the SD card on secondary CMC displays errors. 2) If errors are displayed, execute the following racadm command: "racadm cmchangeover". 3) Repair the removable flash media SD Card by selecting the Chassis Controller > Flash Media > Configuration > Repair Active Controller Media in the CMC Web interface. Repairing is only allowed on the SD card of the primary CMC. If the problem persists, replace the card.

## CMC8514

<b>Message</b>	Fabric mismatch is detected in the I/O Module <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"> <li><i>arg1</i> = iom slot name</li> </ul>
<b>Detailed Description</b>	This error may occur due to any of the following conditions: 1) Invalid I/O Module and mezzanine card configuration, where a newly installed I/O Modules fabric type and the resident mezzanine cards fabric types do

not match or are incompatible. 2) Invalid I/O Module and I/O Module configuration, where a newly installed I/O Module has a different or incompatible fabric type from an I/O Module already installed in the fabric.

**Recommended Response Action** Refer to Chassis Management Controller Users Guide for additional information.

## Arguments

- **arg1** = slot id

**Detailed Description** The CMC specified in the message has reset because of thermal issues.

**Recommended Response Action** Do the following: 1) Review the Hardware Log and check if there are fans that are not functioning properly. 2) Replace the fans that are not functioning properly. 3) If all the fans are functioning, check the chassis temperature in the CMC Web Interface or by using RACADM. When the fans are functioning properly and the chassis temperature is too high, the ambient air temperature is too high or the air inlets are not receiving sufficient air.

**Message** Detected a missing process failover condition detected. Process = *arg1*.

## Arguments

- **arg1** = process name

**Detailed Description** A firmware error has occurred causing a CMC failover. The process identified in the message was not detected. The CMC will restart automatically.

**Recommended Response Action** No response action is required. If multiple failovers occur, contact your service provider.

**Message** Issues identified with Process *arg1* . Failover condition detected.

**Arguments**

- ***arg1*** = process name

**Detailed Description** A firmware error has occurred in the internal firmware process identified in the message. This condition will cause a CMC/MM failover to occur. If the issue persists, contact your service provider.

**Recommended Response Action** No response action is required. A failover may result from this condition. If multiple failovers occur, contact your service provider.

## CMC8607

**Message** Unable to retrieve information about the firmware on server in slot *arg1* , because there is no communication between Chassis Management Controller (CMC) and iDRAC.

**Arguments**

- **arg1** = slot number

**Detailed Description** Information about the firmware on server in slot identified in the message cannot be retrieved because there is no communication between Chassis Management Controller (CMC) and iDRAC.

**Recommended Response Action** 1.Reset iDRAC by using the graphical user interface (GUI): Click Chassis Overview > Troubleshooting > Reset Components. In the Reset Server section, from the Reset drop-down menu, select iDRAC Reset corresponding to the server iDRAC to be reset, and then click Apply Selection. Or, reset iDRAC by running the following command at the command line interface (CLI): racadm racreset -m server-n.2.Reset Chassis Management Controller (CMC) by using the GUI: Click Chassis Overview > Troubleshooting > Reset Components, and then click Reset/Failover CMC. Or, reset CMC by running the following command at the CLI: racadm racreset.For more information about the syntax and parameters used, see the iDRAC 8/7 v2.30.30.30 RACADM CLI Guide and the Chassis Management Controller Version 5.0 for Dell PowerEdge M1000e RACADM Command Line Reference Guide available on the support site.

<b>Message</b>	Unable to read the Complex Programmable Logical Device (CPLD) version number of sleeve <i>arg1</i> because the CPLD version is very old, or the Chassis Management Controller (CMC) is unable to identify the version.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>· <b><i>arg1</i></b> = sleeve number</li> </ul>
<b>Detailed Description</b>	The version number of Complex Programmable Logical Device (CPLD) on the sleeve identified in the message cannot be read because the CPLD version is very old, or the Chassis Management Controller (CMC) is unable to identify the version.
<b>Recommended Response Action</b>	Update the CPLD version of sleeve and retry the operation. For more information about the recommended CPLD versions, see the Chassis Management Controller Users Guide available at the support site.

**Message** Unable to read because the Field Replaceable Unit (FRU) is not functioning on the sled *arg1*.

**Arguments**  
· *arg1* = sled number

**Detailed Description** The read operation cannot be done because the Field Replaceable Unit (FRU) is not functioning on the sled identified in the message.

**Recommended Response Action** Do the following and retry the operation. 1) Reset iDRAC on the sled identified in the message or reseal the sled. 2) Reset Chassis Management Controller (CMC) and wait few minutes. If the issue persists, contact your service provider. Reset iDRAC using `racadm racreset -m server-nReset` CMC using `racadm racreset`. From GUI, navigate to Chassis Overview->Troubleshooting Reset CMC using Reset/Failover CMC. Reset iDRAC using iDRAC reset from dropdown.

## CMON0169

**Message** The alert policy *arg1* is enabled.

**Arguments**

- ***arg1*** = policy Name

**Detailed Description** The alert policy identified in the message is enabled.

**Recommended Response Action** No response action required.

**Category** Configuration (CMON = Monitoring)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CMON0170

**Message** The alert policy *arg1* is disabled.

Arguments	<ul style="list-style-type: none"> <li>· <b>arg1</b> = policy Name</li> </ul>
Detailed Description	The alert policy identified in the message is disabled.
Recommended Response Action	No response action required.
Category	Configuration (CMON = Monitoring)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CMON0173

Message	The number of alerts has exceeded the threshold value <i>arg1</i> . Previous alerts are automatically deleted from the logs when the total number of alerts reaches <i>arg2</i> .
Arguments	<ul style="list-style-type: none"> <li>· <b>arg1</b> = warningSizeLimit</li> <li>· <b>arg2</b> = maxSizeLimit</li> </ul>
Detailed Description	The number of alerts has exceeded the warning threshold value identified in the message. Previous alerts are automatically deleted from the logs when the total number of alerts reaches the maximum threshold value.
Recommended Response Action	No response action required.
Category	Configuration (CMON = Monitoring)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CMON0174

Message	<i>arg1</i> alerts are exported to the file <i>arg2</i> . The exported alerts can be downloaded from the Archived Alerts page.
Arguments	<ul style="list-style-type: none"> <li>· <b>arg1</b> = Number</li> <li>· <b>arg2</b> = fileName</li> </ul>
Detailed Description	Alerts are exported to the file as identified in the message. The exported alerts can be downloaded from the Archived Alerts page.
Recommended Response Action	No response action required.
Category	Configuration (CMON = Monitoring)
Severity	Severity 3 (Informational)
Redfish Event Type	

*No alerts are applicable for this message*

## CMON0175

**Message** The status for alert(s) with ID(s) *arg1* has been updated to the status *arg2* .

**Arguments**

- ***arg1*** = IDs
- ***arg2*** = status

**Detailed Description** The status of alert(s) is updated to the status as identified in the message.

**Recommended Response Action** No response action required.

**Category** Configuration (CMON = Monitoring)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CMON0176

**Message** The alert(s) with ID(s) *arg1* are deleted.

**Arguments**

- ***arg1*** = id

**Detailed Description** The alert(s) identified in the message are deleted.

**Recommended Response Action** No response action required.

**Category** Configuration (CMON = Monitoring)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CMON1030

**Message** Unable to modify the alert policy *arg1* because the alert policy is a default policy.

**Arguments**

- ***arg1*** = policy Id

**Detailed Description** The alert policy identified in the message cannot be modified because the alert policy is a default policy. Default policies cannot be modified. For a list of default policies provided, see the MSM Users Guide. Also, click the F1 key to view the Online Help on the MSM Graphical User Interface (GUI).

**Recommended Response Action** No response action required.

**Category** Configuration (CMON = Monitoring)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CMON1031

**Message** Unable to delete the alert policies because the list contains one or more default policies.  
**Detailed Description** The alert policies cannot be deleted because the list contains one or more default policies.  
**Recommended Response Action** Remove the default policy and retry the operation. For a list of default policies provided, see the MSM Users Guide. Also, click the F1 key to view the Online Help on the MSM Graphical User Interface (GUI).  
**Category** Configuration (CMON = Monitoring)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CMON1222

**Message** Unable to retrieve alert information because no record exists for the entered Event ID.  
**Detailed Description** Alert details cannot be retrieved because no record exists for the entered Event ID.  
**Recommended Response Action** Enter a valid Event ID and retry the operation.  
**Category** Configuration (CMON = Monitoring)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CMON1224

**Message** Unable to retrieve alert severity details because no record exists for the entered Event Severity ID.  
**Detailed Description** Alert severity details cannot be retrieved because no record exists for the entered Event Severity ID.  
**Recommended Response Action** Enter a valid Event Severity ID and retry the operation.  
**Category** Configuration (CMON = Monitoring)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CMON1225

<b>Message</b>	Unable to retrieve alert status details because no record exists for the entered Event Status ID.
<b>Detailed Description</b>	Alert status details cannot be retrieved because no record exists for the entered Event Status ID.
<b>Recommended Response Action</b>	Enter a valid Event Status ID and retry the operation.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON1226

<b>Message</b>	Unable to retrieve the event catalog because the given Event Catalog ID does not exist.
<b>Detailed Description</b>	The operation cannot be completed because no record exists for the given Event Catalog ID.
<b>Recommended Response Action</b>	Enter a valid Event Catalog ID and retry the operation.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON1228

<b>Message</b>	Unable to retrieve alert category information because no event category or subcategory information exists for the catalog name entered.
<b>Detailed Description</b>	Alert category information cannot be retrieved because no event category or subcategory information exists for the entered catalog name.
<b>Recommended Response Action</b>	Enter a valid catalog name and retry the operation.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON1229

<b>Message</b>	Unable to import the uploaded MIB file because it is a default MIB file and cannot be imported or edited.
<b>Detailed Description</b>	The uploaded MIB file cannot be imported because it is a default MIB file and cannot be imported or edited.
<b>Recommended Response Action</b>	Upload a MIB file that not a built-in file and retry the operation.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON1330

<b>Message</b>	Unable to delete the default <i>arg1</i> because the operation is not allowed.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = entity name</li></ul>
<b>Detailed Description</b>	The default value identified in the message cannot be deleted.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON1332

<b>Message</b>	The new event catalog <i>arg1</i> is added.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = name</li></ul>
<b>Detailed Description</b>	The new event catalog identified in the message is added.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON1348

<b>Message</b>	The event catalog <i>arg1</i> is updated.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = event catalog</li></ul>
<b>Detailed Description</b>	The event catalog identified in the message is updated.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON1349

<b>Message</b>	The event catalog <i>arg1</i> is deleted.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = event catalog</li></ul>
<b>Detailed Description</b>	The event catalog identified in the message is deleted.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON7001

<b>Message</b>	Unable to create or modify the alert policy because the entered payload is null.
<b>Detailed Description</b>	The alert policy cannot be created or modified because the entered payload is null.
<b>Recommended Response Action</b>	Enter a valid payload and retry the operation.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON7003

**Message** Unable to create the alert policy because the field *arg1* must not have a non-zero value.

**Arguments**

- ***arg1*** = fieldName

**Detailed Description** The alert policy cannot be created because the field identified in the message is not required.

**Recommended Response Action** Set the value for the field mentioned in the message to 0 and retry the operation.

**Category** Configuration (CMON = Monitoring)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CMON7004

**Message** Unable to create or update the alert policy because the field *arg1* cannot be null or empty.

**Arguments**

- ***arg1*** = fieldName

**Detailed Description** The alert policy cannot be created or updated because the field identified in the message cannot be null or empty.

**Recommended Response Action** Enter a valid value for the field identified in the message and retry the operation.

**Category** Configuration (CMON = Monitoring)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CMON7006

**Message** Unable to process the create or update request because Action Templates are not available in the system.

**Detailed Description** The request cannot be processed because Action Templates are not available in the system.

**Recommended Response Action** Initialize the system with set of Action Templates and retry the operation.

**Category** Configuration (CMON = Monitoring)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CMON7007

<b>Message</b>	Unable to create or update the alert policy because the entered value for <i>arg1</i> is invalid.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = fieldName</li></ul>
<b>Detailed Description</b>	The alert policy cannot be created or updated because an invalid value is entered for the field identified in the message.
<b>Recommended Response Action</b>	Please select a valid value for the field identified in the message and retry the operation.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON7008

<b>Message</b>	Unable to create or update the alert policy because the action <i>arg1</i> cannot be combined with any other actions.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = action template name</li></ul>
<b>Detailed Description</b>	The alert policy cannot be created or updated because the action identified in the message cannot be combined with any other action.
<b>Recommended Response Action</b>	Remove either the action identified in the message or all other actions and retry the operation.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON7009

<b>Message</b>	Unable to update the alert policy because the entered Policy ID <i>arg1</i> is invalid or does not exist in the system.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = policy Id</li></ul>
<b>Detailed Description</b>	The alert policy cannot be updated because the Policy ID identified in the message is invalid or does not exist in the system.
<b>Recommended Response Action</b>	Enter a valid Policy ID and retry the operation.
<b>Category</b>	Configuration (CMON = Monitoring)

**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CMON7010

**Message** Unable to create or modify the alert policy because the fields *arg1* contain the invalid values *arg2* .

**Arguments**

- ***arg1*** = field names
- ***arg2*** = field values

**Detailed Description** The alert policy cannot be created or modified because invalid values are entered in the fields as identified in the message.

**Recommended Response Action** Enter valid values in the fields identified in the message and retry the operation.

**Category** Configuration (CMON = Monitoring)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## CMON7011

**Message** Unable to create or modify the alert policy because an invalid value *arg1* is entered for the action *arg2* .

**Arguments**

- ***arg1*** = field Name
- ***arg2*** = action Name

**Detailed Description** The alert policy cannot be created or modified because an invalid value is entered in the field for the action as identified in the message.

**Recommended Response Action** Enter a valid value for the action identified in the message and retry the operation.

**Category** Configuration (CMON = Monitoring)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## CMON7012

**Message** Unable to create or modify the alert policy because an alert policy already exists with the same name.

**Detailed Description** The alert policy cannot be created or updated because an alert policy already exists with the same name.

<b>Recommended Response Action</b>	Enter a unique alert policy name and retry the operation.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON7013

<b>Message</b>	Unable to create or modify the alert policy because the sub-categories <i>arg1</i> are invalid for the categories <i>arg2</i> entered.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = subCategories</li><li>· <b><i>arg2</i></b> = categories</li></ul>
<b>Detailed Description</b>	The alert policy cannot be created or updated because the sub-category entered is invalid for the category entered as identified in the message.
<b>Recommended Response Action</b>	Enter a valid sub-category for the entered category and retry the operation.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON7014

<b>Message</b>	Unable to create or modify the alert policy because the number of entered sub-categories does not match the number of provided categories.
<b>Detailed Description</b>	The alert policy cannot be created or modified because the number of sub-categories does not match the number of categories entered.
<b>Recommended Response Action</b>	Make sure the number of categories and sub-categories is same and retry the operation.
<b>Category</b>	Configuration (CMON = Monitoring)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CMON7015

<b>Message</b>	Unable to create or modify the alert policy because one or more of the entered devices does not exist.
----------------	--

<b>Detailed Description</b>	The alert policy cannot be created or updated because one or more of the entered devices does not exist.
<b>Recommended Response Action</b>	Make sure that the entered device ID(s) are valid and retry the operation.

## CPU0002

Message CPU *arg1* has failed the built-in self-test (BIST).

Arguments  
 · ***arg1*** = number

Detailed Description None.

Recommended Response Action 1) Turn system off and remove input power for one minute. Re-apply input power and turn system on. 2) Make sure the processor is inserted correctly, if the processor is removable. 3) If the issue still persists, contact technical support. Refer to the product documentation to choose a convenient contact method.

## CPU0003

**Message** CPU *arg1* is stuck in POST.

**Arguments**  
 · ***arg1*** = number

**Detailed Description** None.

**Recommended Response Action** 1) Turn off the server and disconnect input power for one minute. Re-apply input power and turn system on. 2) Reduce system configuration to minimum memory and remove all PCI devices. If system completes POST, update system BIOS. Re-install memory and PCI one component at a time to meet the original configuration. 3) If the issue still persists, contact technical support. Refer to the product documentation to choose a convenient contact method.

## CREP Event Messages

### CREP0179

**Message** A report with the name *arg1* has been *arg2* .

**Arguments**

- ***arg1*** = report name
- ***arg2*** = operation name

**Detailed Description** A report identified in the message has been modified.

**Recommended Response Action** No response action required.

**Category** Configuration (CREP = Reports)

**Severity** Severity 3 (Informational)

**Redfish Event Type**  
*No alerts are applicable for this message*

### CREP0180

**Message** Unable to complete the operation *arg1* because a built-in report type is selected.

**Arguments**

- ***arg1*** = action name

**Detailed Description** The operation identified in the message cannot be completed because a built-in report type is selected.

**Recommended Response Action** Select a custom type report ID and retry the operation. Built-in reports cannot be edited. For more information about the built-in report types, see the Online Help by pressing F1 or see the MSM Users Guide on the support site.

# CSEC Event Messages

## CSEC0051

Message	New local user <i>arg1</i> created.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = user name</li></ul>
Detailed Description	New local user created.
Recommended Response Action	No response action required.
Category	Configuration (CSEC = Security)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CSEC0052

Message	Local User <i>arg1</i> configuration <i>arg2</i> modified.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = user name</li><li>· <b><i>arg2</i></b> = configuration</li></ul>
Detailed Description	Local user updated.
Recommended Response Action	No response action required.
Category	Configuration (CSEC = Security)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CSEC0053

Message	Local user <i>arg1</i> deleted.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = user name</li></ul>
Detailed Description	Local user deleted.
Recommended Response Action	No response action required.

**Category** Configuration (CSEC = Security)  
**Severity** Severity 3 (Informational)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CSEC0056

**Message** The Directory Group *arg1* is deleted.  
**Arguments**  
· ***arg1*** = user name 1  
**Detailed Description** The Directory Group identified in the message is deleted.  
**Recommended Response Action** No response action required.  
**Category** Configuration (CSEC = Security)  
**Severity** Severity 3 (Informational)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CSEC0057

**Message** The Directory Group configuration of user *arg1* is successfully modified.  
**Arguments**  
· ***arg1*** = userName  
**Detailed Description** The Directory Group configuration of the user identified in the message is successfully modified.  
**Recommended Response Action** No response action required.  
**Category** Configuration (CSEC = Security)  
**Severity** Severity 3 (Informational)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CSEC1002

**Message** Unable to change the password because an invalid password is entered.  
**Detailed Description** The password cannot be changed because an invalid password is entered.  
**Recommended Response Action** Enter a valid password and retry the operation.  
**Category** Configuration (CSEC = Security)

Severity Severity 1 (Critical)  
Redfish Event Type  
*No alerts are applicable for this message*

## CSEC1006

Message Unable to set the password because the entered password matches one of *arg1* previously used passwords.  
Arguments

- ***arg1*** = arg1

Detailed Description The password cannot be set because the entered password matches one of the previously used passwords.  
Recommended Response Action Enter a password that has not been previously used and retry the operation.  
Category Configuration (CSEC = Security)  
Severity Severity 2 (Warning)  
Redfish Event Type  
*No alerts are applicable for this message*

## CSEC1007

Message Unable to set the password because the entered password contains the word *arg1* .  
Arguments

- ***arg1*** = word

Detailed Description The password cannot be set because the entered password contains the word identified in the message.  
Recommended Response Action Enter a password that does not contain a dictionary word and retry the operation.  
Category Configuration (CSEC = Security)  
Severity Severity 2 (Warning)  
Redfish Event Type  
*No alerts are applicable for this message*

## CSEC1008

Message Unable to set the password because the entered password contains the reversed word *arg1* .  
Arguments

- ***arg1*** = word

Detailed Description The password cannot be set because the entered password contains the reversed word identified in the message.  
Recommended Response Action Enter a password that does not contain a reversed dictionary word and retry the operation.

**Category** Configuration (CSEC = Security)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CSEC1009

**Message** Unable to set the password because the entered password contains an invalid pattern *arg1* .  
**Arguments**  
· ***arg1*** = pattern  
**Detailed Description** The password cannot be set because the entered password contains an invalid pattern as identified in the message.  
**Recommended Response Action** Enter a password that does not contain the invalid pattern and retry the operation.  
**Category** Configuration (CSEC = Security)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CSEC1010

**Message** Unable to set the password because the entered password does not match the pattern *arg1* .  
**Arguments**  
· ***arg1*** = pattern  
**Detailed Description** The password cannot be set because the entered password does not match the specified pattern identified in the message.  
**Recommended Response Action** Enter a password that matches the specified pattern and retry the operation.  
**Category** Configuration (CSEC = Security)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CSEC1011

**Message** Unable to set the password because the entered password contains the invalid character *arg1* .  
**Arguments**  
· ***arg1*** = character

<b>Detailed Description</b>	The password cannot be set because the entered password contains the invalid character identified in the message.
<b>Recommended Response Action</b>	Enter a password without an invalid character and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1014

<b>Message</b>	Unable to set the password because the entered password contains the invalid alphabetical sequence <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = sequence</li></ul>

<b>Detailed Description</b>	The password cannot be set because the entered password contains the invalid alphabetical sequence identified in the message.
<b>Recommended Response Action</b>	Enter a password without an invalid alphabetical sequence and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1015

<b>Message</b>	Unable to set the password because the entered password contains the invalid numerical sequence <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = sequence</li></ul>

<b>Detailed Description</b>	The password cannot be set because the entered password contains the invalid numerical sequence identified in the message.
<b>Recommended Response Action</b>	Enter a password without an invalid numerical sequence and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1016

<b>Message</b>	Unable to set the password because the entered password contains the user ID <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = user ID</li></ul>
<b>Detailed Description</b>	The password cannot be set because the entered password contains the user ID identified in the message.
<b>Recommended Response Action</b>	Enter a password without the user ID and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1017

<b>Message</b>	Unable to set the password because the entered password contains the user ID <i>arg1</i> in reverse.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = user ID</li></ul>
<b>Detailed Description</b>	The password cannot be set because the entered password contains the user ID in reverse as identified in the message.
<b>Recommended Response Action</b>	Enter a password without the user ID in reverse and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1018

<b>Message</b>	Unable to set the password because the entered password cannot contain whitespace characters.
<b>Detailed Description</b>	The password cannot be set because the entered password contains whitespace characters.
<b>Recommended Response Action</b>	Enter a password without whitespace characters and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1019

<b>Message</b>	Unable to set the password because the entered password must contain at least <i>arg1</i> uppercase letters.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = number</li></ul>
<b>Detailed Description</b>	The password cannot be set because the password must contain uppercase letters as identified in the message.
<b>Recommended Response Action</b>	Enter a password that contains at least the specified number of uppercase letters and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1020

<b>Message</b>	Unable to set the password because the entered password must contain at least <i>arg1</i> lowercase letters.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = arg1</li></ul>
<b>Detailed Description</b>	The password cannot be set because the password must contain lowercase letters as identified in the message.
<b>Recommended Response Action</b>	Enter a password that contains at least the specified number of lowercase letters and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1021

<b>Message</b>	Unable to set the password because the password must contain at least <i>arg1</i> alphabetical characters.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = number</li></ul>
<b>Detailed Description</b>	The password cannot be set because the entered password does not contain the required number of alphabetical characters as identified in the message.
<b>Recommended Response Action</b>	Enter a password that contains at least the specified number of alphabetical characters and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# CSEC1022

**Message** Unable to set the password because the entered password must contain at least *arg1* numerical characters.

**Arguments**

- ***arg1*** = number

**Detailed Description** The password cannot be set because the entered password does not contain the required number of numerical characters as identified in the message.

**Recommended Response Action** Enter a password that contains at least the specified number of numerical characters and retry the operation.

**Category** Configuration (CSEC = Security)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# CSEC1023

**Message** Unable to set the password because the entered password must contain at least *arg1* special characters.

**Arguments**

- ***arg1*** = number

**Detailed Description** The password cannot be set because the entered password does not contain the required number of special characters as identified in the message.

**Recommended Response Action** Enter a password that contains at least the specified number of special characters and retry the operation.

**Category** Configuration (CSEC = Security)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# CSEC1024

**Message** Unable to set the password because the entered password matches only *arg1* of *arg2* character rules. A total number of *arg3* character rules must match.

**Arguments**

- ***arg1*** = number 2
- ***arg2*** = number 3
- ***arg3*** = number 1

<b>Detailed Description</b>	The password cannot be set because the entered password does not match the total number of character rules identified in the message.
<b>Recommended Response Action</b>	Enter a password that matches the specified number of character rules and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1025

<b>Message</b>	Unable to set the password because the entered password cannot be the same as your <i>arg1</i> password.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = arg1</li></ul>
<b>Detailed Description</b>	The password cannot be set because the entered password must not be the same password as identified in the message.
<b>Recommended Response Action</b>	Enter a different password and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1026

<b>Message</b>	Unable to set the password because the entered password must not be more than <i>arg1</i> characters.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = number</li></ul>
<b>Detailed Description</b>	The password cannot be set because the password length must not be more than the character length identified in the message.
<b>Recommended Response Action</b>	Enter a password that is not more than the specified character length and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1027

<b>Message</b>	Unable to set the password because the entered password length must not be less than <i>arg1</i> characters.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = number</li></ul>
<b>Detailed Description</b>	The password cannot be set because the entered password length must not be less than the character length identified in the message.
<b>Recommended Response Action</b>	Enter a password that is not less than the specified character length and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1028

<b>Message</b>	Unable to set the password because the entered password is insecure.
<b>Detailed Description</b>	The password cannot be set because the entered password is insecure.
<b>Recommended Response Action</b>	Enter a secure password and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1029

<b>Message</b>	Unable to set the password because the entered password contains an invalid sequence <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = sequence</li></ul>
<b>Detailed Description</b>	The password cannot be set because the entered password contains an invalid sequence as identified in the message.
<b>Recommended Response Action</b>	Enter a password that does not contain an invalid sequence and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## CSEC1030

<b>Message</b>	Unable to set the password because the entered password contains the invalid character <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = character</li></ul>
<b>Detailed Description</b>	The password cannot be set because the entered password contains the invalid character identified in the message.
<b>Recommended Response Action</b>	Enter a password without an invalid character and retry the operation.
<b>Category</b>	Configuration (CSEC = Security)

## CSEC1517

**Message** Unable to add or modify the account provider because the entered DNS Server is invalid.  
**Detailed Description** Only FQDN should be provided as the DNS Server.  
**Recommended Response Action** Only FQDN should be provided as the DNS Server.  
**Category** Configuration (CSEC = Security)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CSEC1518

**Message** Unable to add or modify the account provider because Maximum Server Address allowed is 3.  
**Detailed Description** Only 3 Server Address is allowed to Directory Server.  
**Recommended Response Action** Limit the Server Address to 3.  
**Category** Configuration (CSEC = Security)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CSEC1519

**Message** Unable to add or modify the account provider because the entered Group Domain is invalid.  
**Detailed Description** Provide valid Group Domain to search Group for the account provider.  
**Recommended Response Action** Provide valid Group Domain to search Group for the account provider.  
**Category** Configuration (CSEC = Security)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CSEC1520

**Message** Unable to perform Test Connection because the mandatory payload field *arg1* is missing or invalid.

**Arguments**

- ***arg1*** = fieldName

**Detailed Description** Provided value in the Test connection is invalid.

**Recommended Response Action** Provided value in the Test connection is invalid.

**Category** Configuration (CSEC = Security)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## CSEC1521

**Message** Unable to add or modify the account provider because the DNS server is missing or invalid for Server type DNS.

**Detailed Description** Provided DNS value is invalid or empty for Server Type DNS.

**Recommended Response Action** Provided DNS value is invalid or empty for Server Type DNS.

**Category** Configuration (CSEC = Security)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## CSEC1522

**Message** Unable to add or modify the account provider because an invalid ID is entered in the payload.

**Detailed Description** Provided ID value in the payload should be zero or remove this field as it is not mandatory.

**Recommended Response Action** Provided ID value in the payload should be zero or remove this field as it is not mandatory.

**Category** Configuration (CSEC = Security)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## CSEC1523

<b>Message</b>	Unable to add or modify the account provider because Maximum DNS Address allowed is 1.
<b>Detailed Description</b>	Only one DSN Address is allowed.
<b>Recommended Response Action</b>	Limit the DNS Address to 1.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1524

<b>Message</b>	Unable to add account provider because Server Name should be empty when Server Type is DNS.
<b>Detailed Description</b>	Server Name should be empty when Server Type is DNS.
<b>Recommended Response Action</b>	Server Name should be empty when Server Type is DNS.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1525

<b>Message</b>	Unable to modify the account provider because directory name cannot be changed.
<b>Detailed Description</b>	Directory Name cannot be modified on edit of the directory server.
<b>Recommended Response Action</b>	Directory Name cannot be modified on edit of the directory server.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1526

<b>Message</b>	Unable to Import Directory User because password field is not empty or null.
----------------	--

<b>Detailed Description</b>	Import Directory User password field should be empty or null.
<b>Recommended Response Action</b>	Import Directory User password field should be empty or null.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1527

<b>Message</b>	Could not connect to the server because the uploaded certificate is invalid.
<b>Detailed Description</b>	Please upload a valid certificate and perform the operation.
<b>Recommended Response Action</b>	Upload a valid certificate and perform the operation.
<b>Category</b>	Configuration (CSEC = Security)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CSEC1534

<b>Message</b>	Unable to view or modify account properties because an invalid account ID is entered.
<b>Detailed Description</b>	The operation cannot be completed because an invalid account ID is entered.
<b>Recommended Response Action</b>	Enter a valid account ID and retry the operation.

Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CSEC5019

Message	Unable to add or modify the account provider because an invalid Search Timeout value <i>arg1</i> is entered.
Arguments	<ul style="list-style-type: none"><li>· <b>arg1</b> = timeout value</li></ul>
Detailed Description	The account provider information cannot be added because an invalid Search Timeout value is entered.
Recommended Response Action	Enter a Search Timeout value between 15 and 300 and retry the operation.
Category	Configuration (CSEC = Security)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CSEC5020

Message	Unable to delete account provider because the entered account provider does not exist.
Detailed Description	The account provider cannot be deleted because the entered account provider does not exist.
Recommended Response Action	Enter a valid account provider and retry the operation. Verify the account provider by going to the User Settings page.
Category	Configuration (CSEC = Security)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CSEC5021

Message	Unable to add or modify the account provider because an invalid Network Timeout value <i>arg1</i> is entered.
---------	---

Arguments	<ul style="list-style-type: none"><li>· <b>arg1</b> = timeout value</li></ul>
Detailed Description	The account provider cannot be added because an invalid Network Timeout value is entered.
Recommended Response Action	Enter a Network Timeout value between 15 and 300 and retry the operation.
Category	Configuration (CSEC = Security)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CSEC5022

Message	Unable to search AD Group because Group Domain is empty or invalid.
Detailed Description	The Group Domain is empty or invalid.
Recommended Response Action	Provide valid Group Domain and search AD group.
Category	Configuration (CSEC = Security)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CSEC5023

Message	Unable to add the account provider because a maximum of two configurations are allowed for Active Directory services.
Detailed Description	The account provider cannot be added because a maximum of two configurations are allowed for Active Directory directory services.
Recommended Response Action	Delete an existing Active Directory configuration and retry the operation.
Category	Configuration (CSEC = Security)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CSEC5024

Message	Unable to add the account provider because a maximum of two configurations are allowed for LDAP directory services.
---------	---

<b>Detailed Description</b>	The account provider cannot be added because a maximum of two configurations are allowed for LDAP directory services.
<b>Recommended Response Action</b>	Delete an existing LDAP configuration and retry the operation.

## CTEM9041

<b>Message</b>	Unable to create or update the Identity Pool because the CIDR in IP range entered is invalid.
<b>Detailed Description</b>	The Identity Pool cannot be created or updated because because the CIDR in IP range entered is invalid.
<b>Recommended Response Action</b>	Enter a valid IP address range in the following format and retry the operation: <ip-address>/<CIDR>. Ranges must be in the format: <ip-address-1>-<ip-address-2>.
<b>Category</b>	Configuration (CTEM = Templates)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CTEM9042

<b>Message</b>	Unable to create or update Identity Pool because the second IP address in range precedes the first IP address in the range.
<b>Detailed Description</b>	The Identity Pool cannot be created or updated because the second IP address in range precedes the first IP address in the range.
<b>Recommended Response Action</b>	Enter the IP address in the correct order and retry the operation.
<b>Category</b>	Configuration (CTEM = Templates)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CTEM9043

<b>Message</b>	Unable to create or update the Identity Pool because the IP address range entered exceeds 64,000 addresses.
<b>Detailed Description</b>	The Identity Pool cannot be created or updated because because the IP address range entered exceeds 64,000 addresses.
<b>Recommended Response Action</b>	Enter an IP address range that does not contain more than 64,000 addresses, and then retry the operation.
<b>Category</b>	Configuration (CTEM = Templates)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CTEM9044

<b>Message</b>	The iSCSI IP pool identities cannot be enabled because an IP address range must be entered.
<b>Detailed Description</b>	The iSCSI IP pool identities cannot be enabled because an IP address range must be entered.
<b>Recommended Response Action</b>	Enter an IP address range and retry the operation.
<b>Category</b>	Configuration (CTEM = Templates)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CTEM9045

<b>Message</b>	Unable to delete Identity Pool <i>arg1</i> because it contains reserved and/or deployed identities.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = pool Name</li></ul>
<b>Detailed Description</b>	The specified identity pool cannot be deleted because identities are currently reserved or deployed from it.
<b>Recommended Response Action</b>	Enter the ID for an Identity Pool that does not have any reserved or deployed identities and retry the operation.
<b>Category</b>	Configuration (CTEM = Templates)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CTEM9046

**Message** Unable to process the request because the Identity Pool ID *arg1* provided is invalid.

**Arguments**

- ***arg1*** = ID

**Detailed Description** The request cannot be processed because the Identity Pool ID provided is invalid.

**Recommended Response Action** Enter a valid Identity Pool ID and retry the operation.

**Category** Configuration (CTEM = Templates)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CTEM9047

**Message** The range for *arg1* identities cannot be changed as requested because it does not include all the identities that are currently reserved or deployed from the pool.

**Arguments**

- ***arg1*** = Identity Type

**Detailed Description** Some identities of the type identified in the message are currently reserved or deployed from the pool. If the identity range is changed, it must include all currently reserved and deployed identities.

**Recommended Response Action** Specify a range for the specified identity type that includes all the identities that have already been reserved or deployed and retry the operation.

**Category** Configuration (CTEM = Templates)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CTEM9048

**Message** The range for *arg1* identities cannot be changed as requested because it does not include all the identities that are currently reserved or deployed from the pool.

**Arguments**

- ***arg1*** = Identity Type

**Detailed Description** Some identities of the type identified in the message are currently reserved or deployed from the pool. If the identity range is changed, it must include all currently reserved and deployed identities.

**Recommended Response Action** Specify a range for the specified identity type that includes all the identities that have already been reserved or deployed and retry the operation.

**Category** Configuration (CTEM = Templates)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CTEM9049

**Message** Unable to create or update the Identity Pool because the MAC address entered for the *arg1* Identities is invalid.

**Arguments**

· ***arg1*** = protocol

**Detailed Description** The create or update operation cannot be completed because the MAC address entered for the Identities identified in the message is invalid.

**Recommended Response Action** Enter a valid MAC address that contains 6 octets, and does not contain all 00 or ff.

**Category** Configuration (CTEM = Templates)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CTEM9050

**Message** Unable to create or update the Identity Pool because the WWN address entered for the *arg1* Identities is invalid.

**Arguments**

· ***arg1*** = protocol

**Detailed Description** The create or update operation cannot be completed because the WWN address entered for the Identities identified in the message is invalid.

**Recommended Response Action** Enter a valid WWN address that contains 8 octets, and does not contain all 00 or ff.

**Category** Configuration (CTEM = Templates)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## CTEM9051

**Message** Unable to create or update the Identity Pool because the when the iSCSI Initiator configuration is enabled, the IQN prefix must be non-empty and must not contain white spaces.

**Detailed Description** The create or update operation cannot be completed because the when the iSCSI Initiator configuration is enabled, the IQN prefix must be no-empty and must not contain white spaces.

Recommended Response Action	Enter a non-empty IQN without white space. See the MSM Users Guide available on the support site.

## CTEM9054

Message	The Configuration Compliance baseline <i>arg1</i> is successfully deleted.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = name</li></ul>

<b>Detailed Description</b>	The Configuration Compliance baseline identified in the message is successfully deleted.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (CTEM = Templates)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CTEM9055

<b>Message</b>	Unable to create or update an Identify Pool because the address range entered for <i>arg1</i> identities overlaps with another range in this or another Identity Pool.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = protocol</li></ul>
<b>Detailed Description</b>	The Identify pool cannot be created or updated because the address range entered for the specified protocol identities overlaps with another range in this or another Identity Pool.
<b>Recommended Response Action</b>	Enter an address range that does not overlap with another range in this or another Identity Pool.
<b>Category</b>	Configuration (CTEM = Templates)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CTEM9056

<b>Message</b>	Unable to create or update the Identity Pool because the address range specified for <i>arg1</i> identities does not include all the identities that have already been assigned or deployed from this Identity Pool.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Protocol</li></ul>
<b>Detailed Description</b>	The Identity Pool cannot be created or updated because the address range specified for the identities indicated in the message does not include all the identities that have already been assigned or deployed from this Identity Pool.
<b>Recommended Response Action</b>	Enter a range that includes all identities already assigned or deployed from this pool, and then retry the operation.
<b>Category</b>	Configuration (CTEM = Templates)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CTEM9057

**Message** Unable to process the request because the Identity State ID *arg1* provided is invalid.

**Arguments**

- ***arg1*** = ID

**Detailed Description** The request cannot be processed because the Identity State ID provided is invalid.

**Recommended Response Action** Enter a valid Identity State ID and retry the operation.

**Category** Configuration (CTEM = Templates)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CTEM9058

**Message** Unable to create or update an Identify Pool because the address range entered for *arg1* has one or more multicast addresses.

**Arguments**

- ***arg1*** = protocol

**Detailed Description** The Identify Pool cannot be created or updated because the address range has one or more multicast addresses.

**Recommended Response Action** Enter an address range that does not include any multicast MAC addresses.

**Category** Configuration (CTEM = Templates)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CTEM9059

**Message** Unable to create or update an Identify Pool because the address range entered for *arg1* identities overlaps with the FCoE address range specified in this or another Identity Pool.

**Arguments**

- ***arg1*** = protocol

**Detailed Description** An Identify Pool cannot be created or updated because the address range entered for identities overlaps with the FCoE address range specified in this or another Identity Pool.

**Recommended Response Action** Enter an address range that does not overlap with the FCoE address range specified in this or another Identity Pool, and then retry the operation.

**Category** Configuration (CTEM = Templates)

**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CTEM9060

**Message** Unable to create or update an Identify Pool because the address range entered for *arg1* identities overlaps with the FC WWN address range specified in this or another Identity Pool.

**Arguments**

- **arg1** = protocol

**Detailed Description** An Identify Pool cannot be created or updated because the address range entered for identities overlaps with the FC WWN address range specified in this or another Identity Pool. Values 0x2000 and 0x2001 are prepended to FCoE MAC addresses to create WWN addresses for FC.

**Recommended Response Action** Enter an address range that does not overlap with the FC WWN address range specified in this or another Identity Pool, and then retry the operation.

**Category** Configuration (CTEM = Templates)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## CTEM9061

**Message** Unable to create or update an Identify Pool because the FCoE and FC address ranges overlap and generate the same FC addresses.

**Detailed Description** An Identify Pool cannot be created or updated because the FCoE and FC address ranges overlap and generate the same FC addresses.

**Recommended Response Action** Enter FCoE and FC address ranges that do not overlap each other, and then retry the operation.

**Category** Configuration (CTEM = Templates)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## CTEM9062

**Message** Unable to create or update an Identify Pool because the FC WWNN address ranges overlap and generate the same FC addresses.

**Detailed Description** An Identify Pool cannot be created or updated because the FC WWNN address ranges overlap and generate the same FC addresses.

Recommended Response Action	Enter FC WWNN and WWPN address ranges that do not overlap each other, and then retry the operation.

## CTL116

**Message** Unable to unlock secure foreign locked drives because already unlocked drives are detected that are neither imported nor deleted.

**Detailed Description** The secure foreign locked drives cannot be unlocked because already unlocked drives are detected which have secure locked configuration that are neither imported nor erased.

**Recommended Response Action** The unlock command should be followed by an import config command to import a secure foreign locked configuration or by a cryptographic erase command. If the unlocked drives are not imported or erased, then further unlock operations on locked drives will be blocked. To import already unlocked drives on a controller, run the RACADM command at the command line interface (CLI): "racadm raid importconfig:<Controller FQDD>" where <Controller FQDD> is the FQDD identifier of the target controller. In order to erase the data on the unlocked drive, run the command: "racadm raid cryptographicerase:<Drive FQDD>" where <Drive FQDD> is the FQDD identifier of the target drive.

## CTL215

**Message** Redundant path disconnected on *arg1* .

**Arguments**

- ***arg1*** = Controller Name

**Detailed Description** The controller identified in the message has two connectors that are connected to the same enclosure. The communication path on one connector has lost connection with the enclosure. The communication path on the other connector is reporting this loss.

**Recommended Response Action** Make sure both the cables are securely attached to the enclosure and controller. For more information about connecting the cables to the enclosure, see the Cables Attached Correctly section in the PERC Users Guide. Also, make sure both Enclosure Management Modules (EMMs) are healthy.

## CTL40

**Message** Multi-bit ECC error on *arg1* DIMM.

**Arguments**

- ***arg1*** = Controller name

**Detailed Description** An error involving multiple bits has been encountered during a read or write operation. The error correction algorithm recalculates parity data during read and write operations. If an error involves only a single bit, it may be possible for the error correction algorithm to correct the error and maintain parity data. An error involving multiple bits, however, generally indicates data loss. In some cases, if the multi-bit error occurs during a read operation, then the data on the disk may be ok. If the multi-bit error occurs during a write operation, then data loss has occurred.

**Recommended Response Action** Replace the Dual In-line Memory Module (DIMM). The DIMM is a part of the controller battery pack. Refer to the storage hardware documentation for information on replacing the DIMM. You may need to restore data from backup.

**Category** Storage (CTL = Storage Controller)

## CTL48

**Message** A foreign configuration was detected on *arg1*.

## Arguments

- **arg1** = controller name

**Detailed Description** The controller has physical disks that were moved from another controller or have been removed and replaced on the current configuration. These physical disks contain virtual disks that were created on the current or other controller. See the storage hardware documentation for Import Foreign Configuration and Clear Foreign Configuration for more information. Foreign configuration is seen when a controller is replaced.

**Recommended Response Action** Import or clear the detected foreign configuration using a configuration tool or utility.

## CTL49

**Message** The NVRAM has corrupted data on *arg1* .

**Arguments**

- ***arg1*** = Controller name

**Detailed Description** The NVRAM has corrupted data. This may occur after a power surge, a battery failure, or for other reasons. The controller is reinitializing the NVRAM.

**Recommended Response Action** No response action is required as the controller is taking the required corrective action. However, If this message is generated often (such as during each reboot), then replace the controller.

## CTL58

**Message** *arg1* SAS SMP communications error *arg2*

**Arguments**

- ***arg1*** = Controller name
- ***arg2*** = args

**Detailed Description** The text for this alert is generated by the firmware and can vary depending on the situation. The reference to SMP in this text refers to SAS Management Protocol.

**Recommended Response Action** There may be a SAS topology error. See the hardware documentation for information on correct SAS topology configurations. There may be problems with the cables such as a loose connection or an invalid cabling configuration. See the Cables Attached Correctly section for more information on checking the cables. See the hardware documentation for information on correct cabling configurations. Verify that the firmware version is supported.

## CTL83

**Message** Communication with *arg1* has been lost.

**Arguments**

- ***arg1*** = controller name

**Detailed Description** The management controller is not communicating with the storage controller identified in the message. This may be because of any one of the following: 1) PCIe subsystem is has stopped functioning 2) An issue in the storage controller 3) An issue in the management controller.

**Recommended Response Action** Restart the server. If the issue persists, contact your service provider.

**Category** Storage (CTL = Storage Controller)

## CTL85

Message *arg1* is operating at less than optimal bandwidth.

Arguments  
· ***arg1*** = controller name

Detailed Description The controller identified in the message experienced a PCIe training error and is operating at less than full bandwidth. Until this issue is resolved, a reduction in the storage performance is expected.

Recommended Response Action Perform a Powercycle operation on the Chassis. If the issue persists, contact your service provider.

# CUPD Event Messages

## CUPD0201

**Message** Unable to update catalog because the repository type cannot be changed to another repository type.

**Detailed Description** The catalog cannot be updated because the repository type cannot be changed to another repository type.

**Recommended Response Action** Make sure the entered repository type matches the existing repository type and retry the operation.

**Category** Updates (CUPD = Firmware)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## CUPD3010

**Message** Unable to download the catalog file.

<b>Detailed Description</b>	The catalog file cannot be downloaded because an error occurred.
<b>Recommended Response Action</b>	Make sure the remote repository is available and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3013

<b>Message</b>	Unable to retrieve catalogs from the database.
<b>Detailed Description</b>	Catalog data cannot be retrieved because an error occurred.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, contact your system administrator.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3014

<b>Message</b>	Unable to create or update baseline.
<b>Detailed Description</b>	The baseline cannot be created or updated because an error occurred.
<b>Recommended Response Action</b>	Make sure the entered baseline information is valid and retry the operation. If the issue persists, contact your system administrator.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3015

<b>Message</b>	Unable to create the repository.
<b>Detailed Description</b>	The repository cannot be created because an error occurred.
<b>Recommended Response Action</b>	Make sure the entered repository information is valid and retry the operation. If the issue persists, contact your system administrator.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)

<b>Message</b>	Unable to create the update job because the entered repository ID exceeds the maximum allowed length.
<b>Detailed Description</b>	The update job cannot be created because the entered repository ID exceeds the maximum limit of 255 characters.
<b>Recommended Response Action</b>	Enter a repository ID less than 255 characters and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3036

<b>Message</b>	Unable to create the update job because the entered catalog ID exceeds the maximum allowed length.
<b>Detailed Description</b>	The update job cannot be created because the entered catalog ID exceeds the maximum limit of 255 characters.
<b>Recommended Response Action</b>	Enter a catalog ID less than 255 characters and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3037

<b>Message</b>	Unable to create the update job because the entered operation name exceeds the maximum allowed length.
<b>Detailed Description</b>	The update job cannot be created because the entered operation name exceeds the maximum limit of 255 characters.
<b>Recommended Response Action</b>	Enter an operation name less than 255 characters and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3038

<b>Message</b>	Unable to create the update job because the entered operation name is invalid.
<b>Detailed Description</b>	The update job cannot be created because the entered operation name is invalid.
<b>Recommended Response Action</b>	Enter a valid operation name and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3039

<b>Message</b>	Unable to create the update job because the entered Compliance Update value exceeds the maximum allowed length.
<b>Detailed Description</b>	The update job cannot be created because the entered Compliance Update value exceeds the maximum limit of 255 characters.
<b>Recommended Response Action</b>	Enter a Compliance Update value less than 255 characters and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3040

<b>Message</b>	Unable to create the update job because the entered Compliance Update value is invalid.
<b>Detailed Description</b>	The update job cannot be created because the entered Compliance Update value is invalid.
<b>Recommended Response Action</b>	Make sure the entered Compliance Update value is true or false and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3041

<b>Message</b>	Unable to create the update job because the entered Sign Verify value exceeds the maximum allowed length.
<b>Detailed Description</b>	The update job cannot be created because the entered Sign Verify value exceeds the maximum limit of 255 characters.
<b>Recommended Response Action</b>	Enter a Sign Verify value less than 255 characters and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3042

<b>Message</b>	Unable to create the update job because the entered signVerify value is invalid.
<b>Detailed Description</b>	The update job cannot be created because the entered signVerify value is invalid.
<b>Recommended Response Action</b>	Make sure the entered signVerify value is true or false and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3043

<b>Message</b>	Unable to create the update job because the entered Staging value exceeds the maximum allowed length.
<b>Detailed Description</b>	The update job cannot be created because the entered Staging value exceeds the maximum limit of 255 characters.
<b>Recommended Response Action</b>	Enter a Staging value less than 255 characters and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3044

<b>Message</b>	Unable to create the update job because the entered Staging value is invalid.
<b>Detailed Description</b>	The update job cannot be created because the entered Staging value is invalid.
<b>Recommended Response Action</b>	Make sure the entered Staging value is true or false and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3045

<b>Message</b>	Unable to create the update job because the provided job parameters are empty.
----------------	--

<b>Detailed Description</b>	The update job cannot be created because the entered job parameters are empty.
<b>Recommended Response Action</b>	Enter valid job parameters and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3046

<b>Message</b>	Unable to create the update job because the Key attribute is missing from a job parameter.
<b>Detailed Description</b>	The update job cannot be created because the Key attribute is missing from a job parameter.
<b>Recommended Response Action</b>	Make sure all job parameters have the Key attribute and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3047

<b>Message</b>	Unable to create the update job because the Value attribute is missing from a job parameter.
<b>Detailed Description</b>	The update job cannot be created because the Value attribute is missing from a job parameter.
<b>Recommended Response Action</b>	Make sure all job parameters have the Value attribute and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3048

<b>Message</b>	Unable to create or update the catalog because the entered repository name exceeds the maximum allowed length.
<b>Detailed Description</b>	The catalog cannot be created or updated because the entered repository name exceeds the maximum limit of 255 characters.
<b>Recommended Response Action</b>	Enter a repository name less than 255 characters and retry the operation.

<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3049

<b>Message</b>	Unable to create or update the catalog because the entered repository description exceeds the maximum allowed length.
<b>Detailed Description</b>	The catalog cannot be created or updated because the entered repository description exceeds the maximum limit of 255 characters.
<b>Recommended Response Action</b>	Enter a repository description less than 255 characters and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3050

<b>Message</b>	Unable to create or update the catalog because the entered repository username exceeds the maximum allowed length.
<b>Detailed Description</b>	The catalog cannot be created or updated because the entered repository username exceeds the maximum limit of 255 characters.
<b>Recommended Response Action</b>	Enter a repository username less than 255 characters and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3051

<b>Message</b>	Unable to create or update the catalog because the entered repository domain name exceeds the maximum allowed length.
<b>Detailed Description</b>	The catalog cannot be created or updated because the entered repository domain name exceeds the maximum limit of 255 characters.
<b>Recommended Response Action</b>	Enter a repository domain name less than 255 characters and retry the operation.

# CUPD3083

<b>Message</b>	Unable to retrieve Package Update details.
<b>Detailed Description</b>	The Update Package information cannot be retrieved because an exception occurred.
<b>Recommended Response Action</b>	Retry the operation. If the problem persists, contact your system administrator.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3084

<b>Message</b>	Unable to generate the Update Report.
<b>Detailed Description</b>	The Update Report cannot be generated because an exception occurred.
<b>Recommended Response Action</b>	Retry the operation. If the problem persists, contact your system administrator.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3086

<b>Message</b>	Unable to view or modify the baseline(s) because the entered ID(s) are invalid.
<b>Detailed Description</b>	The baseline(s) cannot be viewed or modified because the ID(s) entered are invalid.
<b>Recommended Response Action</b>	Provide valid baseline ID(s) and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3087

<b>Message</b>	Unable to display component details because no components were found for the entered baseline and device IDs.
<b>Detailed Description</b>	Component details cannot be displayed because no components were found for the entered baseline and device IDs.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3088

<b>Message</b>	Unable to create an Update Package job because there is currently another Update Package job running.
----------------	---

<b>Detailed Description</b>	The job cannot be created because there is another Update Package job currently running. Only one Update Package job can run at a time.
<b>Recommended Response Action</b>	Wait for the other Update Package job to complete and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3089

<b>Message</b>	Unable to create or update the baseline because the catalog ID entered is invalid.
<b>Detailed Description</b>	The baseline cannot be created or updated because the catalog ID entered is invalid.
<b>Recommended Response Action</b>	Enter a valid catalog ID and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3090

<b>Message</b>	Unable to retrieve baseline list either because the device ID(s) entered are invalid or the ID(s) provided are not associated with a baseline.
<b>Detailed Description</b>	Associated baselines cannot be retrieved either because the device ID(s) entered are invalid or the ID(s) provided are not associated with a baseline.
<b>Recommended Response Action</b>	Make sure the entered device ID(s) are valid and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3091

<b>Message</b>	Unable to delete catalog(s) because there are no catalog ID(s) entered.
<b>Detailed Description</b>	Catalog(s) cannot be deleted because there are no catalog ID(s) provided.
<b>Recommended Response Action</b>	Enter a valid catalog ID and retry the operation.

<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3092

<b>Message</b>	Unable to delete catalog(s) because the entered catalog ID(s) are associated with a baseline.
<b>Detailed Description</b>	Catalog(s) cannot be deleted because the provided catalog ID(s) are associated with a baseline.
<b>Recommended Response Action</b>	Delete any baselines associated with the provided catalog ID(s) and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3093

<b>Message</b>	Unable to update the catalog because the request payload contains null values.
<b>Detailed Description</b>	The catalog cannot be updated because the request payload contains null values.
<b>Recommended Response Action</b>	Make sure all fields have a valid value and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3094

<b>Message</b>	Unable to display the software rollback information because the device ID entered does not have any software rollback information associated with it.
<b>Detailed Description</b>	The software rollback information cannot be displayed because the device ID entered does not have any software rollback information associated with it.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## CUPD3095

<b>Message</b>	Unable to display software rollback information because the rollback ID entered does not have any software rollback information associated with it.
<b>Detailed Description</b>	The software rollback information cannot be displayed because the rollback ID entered does not have any software rollback information associated with it.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3096

<b>Message</b>	Unable to create or update the baseline because the repository ID is missing or invalid.
<b>Detailed Description</b>	The baseline cannot be created or updated because the repository ID entered is missing or invalid.
<b>Recommended Response Action</b>	Make sure the repository ID entered is valid and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3097

<b>Message</b>	Unable to retrieve supported compliance status because the entered status ID is invalid.
<b>Detailed Description</b>	Supported compliance status cannot be retrieved because the entered status ID is invalid.
<b>Recommended Response Action</b>	Provide a valid Status ID and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3098

<b>Message</b>	Unable to create or update the baseline because a baseline with the same name already exists.
<b>Detailed Description</b>	The baseline cannot be created or updated because a baseline with the same name already exists.
<b>Recommended Response Action</b>	Enter a unique baseline name and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3099

<b>Message</b>	Unable to delete the entered baseline(s) because an associated job is running.
<b>Detailed Description</b>	The entered baseline(s) cannot be removed because an associated job is running.
<b>Recommended Response Action</b>	Make sure that all entered baselines are not currently running and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3100

<b>Message</b>	Unable to delete the entered catalog(s) because an associated job is running.
<b>Detailed Description</b>	The entered catalog(s) cannot be removed because an associated job is running.
<b>Recommended Response Action</b>	Make sure that all entered catalogs are not associated with a running job and retry the operation.
<b>Category</b>	Updates (CUPD = Firmware)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUPD3101

<b>Message</b>	Unable to remove update file because the field(s) <i>arg1</i> cannot be null or empty.
----------------	--

Arguments	<ul style="list-style-type: none"><li>· <b>arg1</b> = field names</li></ul>
Detailed Description	The operation cannot be completed because the mentioned field(s) are mandatory.
Recommended Response Action	Make sure all mandatory fields are provided and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUPD3102

Message	Unable to generate a report for the specified target(s) because the user <i>arg1</i> does not have sufficient privileges to generate a report.
Arguments	<ul style="list-style-type: none"><li>· <b>arg1</b> = current user name</li></ul>
Detailed Description	The report for the specified target(s) cannot be generated because the user identified in the message does not have sufficient privileges to generate the report.
Recommended Response Action	Retry the operation by logging in as a user with sufficient privileges.
Category	Updates (CUPD = Firmware)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUPD3103

Message	Unable to create or update the baseline because the entered name is invalid.
Detailed Description	The baseline cannot be created or updated either because the entered name exceeds the maximum allowed length or there is no name entered.
Recommended Response Action	Enter a baseline name less than 255 characters and retry the operation.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUPD3104

**Message** The catalog ID entered is not associated with any firmware baseline.

**Detailed Description** The catalog ID entered is not associated with any firmware baseline.

**Recommended Response Action** No response action required.

**Category** Updates (CUPD = Firmware)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CUPD3105

**Message** Unable to update the entered baseline because it is currently being refreshed.

**Detailed Description** The baseline cannot be updated because a job associated with the baseline is running.

**Recommended Response Action** Wait until the associated job is complete and retry the operation.

**Category** Updates (CUPD = Firmware)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CUPD3106

**Message** Unable to create or update the catalog because an Online Repository already exists.

**Detailed Description** Unable to create or update the catalog because an Online Repository already exists.

**Recommended Response Action** Unable to create or update the catalog because an Online Repository already exists.

**Category** Updates (CUPD = Firmware)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CUPD3107

**Message** Unable to complete the operation because a Validated Stack Bundle Repository already exists.

Detailed Description	The operation cannot be completed because a Validated Stack Bundle Repository already exists.
Recommended Response Action	No response action required.
Category	Updates (CUPD = Firmware)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUPD3108

Message	Unable to generate the Update Report because the Update Package file signature is invalid. Error description: <i>arg1</i> .
Arguments	<ul style="list-style-type: none"><li>· <b>arg1</b> = error description</li></ul>
Detailed Description	The Update Report cannot be generated because the Update Package file signature is invalid. For more information, see the MSM Users Guide on the support site.
Recommended Response Action	No response action required.
Category	Updates (CUPD = Firmware)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUPD3109

Message	The Firmware baseline job has been deleted.
Detailed Description	The firmware baseline job has been deleted.
Recommended Response Action	No response action required.
Category	Configuration (CUPD = Firmware)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUPD4055

Message	The baseline or Update Package report cannot be created because the following entered group ID(s) are invalid: <i>arg1</i> .
---------	--

Arguments	· <b>arg1</b> = group Ids
Detailed Description	Unable to create the baseline or Update Package report because the entered group ID(s) identified in the message are invalid.
Recommended Response Action	Make sure the entered group ID(s) are valid and retry the operation.
Category	Configuration (CUPD = Firmware)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUSR Event Messages

### CUSR0001

Message	Successfully logged in from <i>arg1</i> .
Arguments	· <b>arg1</b> = session type
Detailed Description	The user successfully logged in using the session type identified in the message.
Recommended Response Action	No response action required.
Category	Audit (CUSR = Users)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

### CUSR0003

Message	Successfully logged off from <i>arg1</i> .
Arguments	· <b>arg1</b> = session type
Detailed Description	The user using the session type identified in the message is logged off.
Recommended Response Action	No response action required.
Category	Audit (CUSR = Users)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUSR0004

Message	The session from <i>arg1</i> has expired.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = session type</li></ul>
Detailed Description	The session of the session type identified in the message has expired.
Recommended Response Action	No response action required.
Category	Audit (CUSR = Users)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUSR0005

Message	The <i>arg1</i> session for <i>arg2</i> from <i>arg3</i> has been terminated.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = session Type</li><li>· <b><i>arg2</i></b> = user name</li><li>· <b><i>arg3</i></b> = ipAddress</li></ul>
Detailed Description	The session of the user identified in the message has been terminated.
Recommended Response Action	No response action required.
Category	Audit (CUSR = Users)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUSR0054

Message	Access from IP <i>arg1</i> is locked out for <i>arg2</i> seconds.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = ipAddress</li><li>· <b><i>arg2</i></b> = seconds</li></ul>
Detailed Description	Lockout Policy enabled by IP Address identified in the message for the time duration identified in the message.
Recommended Response Action	Retry the operation after the time duration identified in the message.

**Category** Audit (CUSR = Users)  
**Severity** Severity 3 (Informational)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CUSR0055

**Message** Access from User *arg1* is locked out for *arg2* seconds.

**Arguments**

- ***arg1*** = username
- ***arg2*** = seconds

**Detailed Description** Lockout Policy enabled by Username identified in the message for the time duration identified in the message.

**Recommended Response Action** No response action required.

**Category** Audit (CUSR = Users)  
**Severity** Severity 3 (Informational)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CUSR1001

**Message** Unable to change the password because an invalid password is entered.

**Detailed Description** The password cannot be changed because an invalid password is entered.

**Recommended Response Action** Enter a valid password and retry the operation.

**Category** Audit (CUSR = Users)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CUSR1032

**Message** Unable to perform the operation because the user *arg1* does not have valid privileges.

**Arguments**

- ***arg1*** = username

**Detailed Description** The user identified in the message does not have sufficient privileges to perform the operation.

**Recommended Response Action** Retry the operation with a user name having sufficient privileges.

**Category** Audit (CUSR = Users)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CUSR1200

**Message** Unable to perform the operation because the Session ID input is invalid.  
**Detailed Description** The operation could not be performed because the Session ID input is invalid.  
**Recommended Response Action** Please select a valid session and try again.  
**Category** Audit (CUSR = Users)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CUSR1201

**Message** An unknown session service error has occurred.  
**Detailed Description** An unknown session service error has occurred.  
**Recommended Response Action** No response action required.  
**Category** Audit (CUSR = Users)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CUSR1202

**Message** Unable to delete any of the sessions in the list because they are not active sessions.  
**Detailed Description** None of the sessions in the list were deleted because they are not active sessions.  
**Recommended Response Action** Verify the sessions to be deleted are active (logged in) sessions.  
**Category** Audit (CUSR = Users)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CUSR1203

<b>Message</b>	Unable to delete some sessions in the list because they are currently not active.
<b>Detailed Description</b>	Some of the sessions in the list failed to be deleted because they are currently not active sessions.
<b>Recommended Response Action</b>	Verify the sessions to be deleted are active sessions.
<b>Category</b>	Audit (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1204

<b>Message</b>	Unable to delete user session(s) because the current user session is expired.
<b>Detailed Description</b>	The user session(s) could not be deleted because the current user session is expired.
<b>Recommended Response Action</b>	Retry the operation after logging in .
<b>Category</b>	Audit (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1205

<b>Message</b>	Unable to delete sessions because of insufficient privileges.
<b>Detailed Description</b>	The sessions cannot be deleted because of insufficient privileges.
<b>Recommended Response Action</b>	Log in as a user with sufficient privileges to delete other users sessions and try again.
<b>Category</b>	Audit (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1206

<b>Message</b>	Unable to perform the operation because the user <i>arg1</i> has been disabled.
----------------	---

Arguments	<ul style="list-style-type: none"><li>· <b>arg1</b> = user</li></ul>
Detailed Description	Unable to perform the operation because the user identified in the message has been disabled.
Recommended Response Action	Please login as an admin user to re-enable the user and try the operation again.
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUSR1207

Message	Unable to authenticate the user because username not provided.
Detailed Description	The user could not be authenticated because a user name is not provided.
Recommended Response Action	Enter a user name and try again.
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUSR1208

Message	Unable to login because a password was not provided.
Detailed Description	Unable to login because a password was not provided.
Recommended Response Action	Enter a valid password and retry the operation.
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUSR1209

Message	Unable to create a new session because the maximum number of sessions for this user has been reached.
Detailed Description	Unable to create a new session because the maximum number of sessions for this user has been reached.
Recommended Response Action	Logout of one of this users sessions and retry creating a new session for this user.

**Category** Audit (CUSR = Users)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CUSR1210

**Message** Unable to create a new session because the maximum number of sessions has been reached.  
**Detailed Description** Unable to create a new session because the maximum number of sessions has been reached.  
**Recommended Response Action** Logout of at least one existing session and retry the operation.  
**Category** Audit (CUSR = Users)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CUSR1212

**Message** Unable to delete session(s) because no sessions selected.  
**Detailed Description** One or more sessions could not be deleted because no sessions were selected.  
**Recommended Response Action** Select session(s) to delete and try again.  
**Category** Audit (CUSR = Users)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## CUSR1218

**Message** Unable to perform the operation: *arg1* because the user does not have the required privileges.  
**Arguments**  
· ***arg1*** = request URI  
**Detailed Description** The user identified in the message does not have the privileges to perform the operation identified.  
**Recommended Response Action** Retry the operation with a different user or update the current users privileges.  
**Category** Audit (CUSR = Users)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**

*No alerts are applicable for this message*

## CUSR1219

**Message** Unable to log in because the provided username or credentials are invalid.

**Detailed Description** Unable to log in because the provided username or credentials are invalid.

**Recommended Response Action** Use valid username and credentials and retry the operation.

**Category** Audit (CUSR = Users)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## CUSR1220

**Message** Unable to close the specified user session(s) because the selected sessions are not active.

**Detailed Description** The specified user session(s) could not be closed because the selected sessions are not active.

**Recommended Response Action** Verify that the desired session(s) to close are active and retry the operation.

**Category** Audit (CUSR = Users)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## CUSR1226

**Message** Login with unauthorized user is not permitted.

**Detailed Description** Login with unauthorized user is not permitted.

**Recommended Response Action** Verify that the user is correct and try again.

**Category** Audit (CUSR = Users)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## CUSR1227

<b>Message</b>	Invalid session type.
<b>Detailed Description</b>	An invalid session type as identified in the message was used.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Audit (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1229

<b>Message</b>	The session time-out values are successfully set.
<b>Detailed Description</b>	The session time-out values are successfully set.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (CUSR = Users)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1230

<b>Message</b>	Unable to set the session time-out data for some session types because the database is unresponsive.
<b>Detailed Description</b>	The session time-out data cannot be set for some session types because the database is unresponsive.
<b>Recommended Response Action</b>	Retry the operation.
<b>Category</b>	Audit (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1231

<b>Message</b>	Unable to retrieve the universal session time-out data because the database is unresponsive.
----------------	--

Detailed Description	The universal session time-out cannot be retrieved for some session types because the database is unresponsive.
Recommended Response Action	Retry the operation.
Category	Audit (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUSR1232

Message	The number of allowed concurrent sessions for <i>arg1</i> is not configurable.
Arguments	<ul style="list-style-type: none"><li>· <b>arg1</b> = arg1</li></ul>
Detailed Description	The number of concurrent sessions is not configurable.
Recommended Response Action	No response action is required.
Category	Configuration (CUSR = Users)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUSR1233

Message	The number of allowed concurrent sessions for <i>arg1</i> must be between <i>arg2</i> and <i>arg3</i> sessions.
Arguments	<ul style="list-style-type: none"><li>· <b>arg1</b> = arg1</li><li>· <b>arg2</b> = arg2</li><li>· <b>arg3</b> = arg3</li></ul>
Detailed Description	Number of concurrent sessions must be in range.
Recommended Response Action	Enter values in the correct range and retry the operation.
Category	Configuration (CUSR = Users)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUSR1234

<b>Message</b>	The session timeout for <i>arg1</i> is not configurable.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = arg1</li></ul>
<b>Detailed Description</b>	The session timeout range cannot be set because the value entered is invalid.
<b>Recommended Response Action</b>	Enter a session timeout range between 1 and 1,440 minutes, and then retry the operation.
<b>Category</b>	Configuration (CUSR = Users)

<b>Category</b>	Audit (CUSR = Users)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1351

<b>Message</b>	This operation can be performed only on MCM group lead.
<b>Detailed Description</b>	The user is not allowed to perform this on a chassis not designated as the lead.
<b>Recommended Response Action</b>	Perform this operation on the lead chassis.
<b>Category</b>	Configuration (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1352

<b>Message</b>	A job is already in progress for this operation.
<b>Detailed Description</b>	The user is not allowed to issue an operation if there is an instance currently in progress on the same target.
<b>Recommended Response Action</b>	Allow the current running job to complete or if the current job is stuck, stop the job and retry the assign operation.
<b>Category</b>	Configuration (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1353

<b>Message</b>	Unable to complete the operation since more than one backup is not allowed at this time.
<b>Detailed Description</b>	The user is not allowed to issue this operation if multiple backup lead exists.
<b>Recommended Response Action</b>	Review the error message and take necessary action.
<b>Category</b>	Configuration (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1354

<b>Message</b>	This operation cannot be performed since the targets <i>arg1</i> are not configured as Backup for the Lead Chassis.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = target domain ID</li></ul>
<b>Detailed Description</b>	The user is not allowed to issue operation on target as it has not been designated as backup lead chassis.
<b>Recommended Response Action</b>	Review the error message and take necessary action.
<b>Category</b>	Configuration (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1355

<b>Message</b>	This operation is not allowed while the current Lead is active and the configuration data sync is in progress.
<b>Detailed Description</b>	The user is not allowed to issue this operation while the current lead is active and configuration data sync is in progress.
<b>Recommended Response Action</b>	Use the Retire workflow from the MCM group lead to perform this operation.
<b>Category</b>	Configuration (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1356

<b>Message</b>	This operation can only be performed on the backup lead chassis.
<b>Detailed Description</b>	The user is only allowed to issue this operation on a backup lead chassis.
<b>Recommended Response Action</b>	Perform this operation on the backup lead chassis.
<b>Category</b>	Configuration (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1357

<b>Message</b>	This operation is not allowed at this time, wait for other configuration jobs to complete before retrying.
<b>Detailed Description</b>	Prevent user from running this operation.
<b>Recommended Response Action</b>	Please wait for other configuration jobs to complete before retrying.
<b>Category</b>	Configuration (CUSR = Users)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## CUSR1360

<b>Message</b>	The job <i>arg1</i> is successfully created to assign member <i>arg2</i> as backup to Multi-chassis Management group lead.
----------------	--

Arguments	<ul style="list-style-type: none"> <li>· <b>arg1</b> = job</li> <li>· <b>arg2</b> = svctag</li> </ul>
Detailed Description	Notification of backup lead assignment to Multi-Chassis Management group.
Recommended Response Action	A job has been created to designate a member as the backup leader.
Category	Configuration (CUSR = Users)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## CUSR1361

Message	The job <i>arg1</i> is successfully created to unassign member <i>arg2</i> as backup to Multi-chassis Management group lead.
Arguments	<ul style="list-style-type: none"> <li>· <b>arg1</b> = job</li> <li>· <b>arg2</b> = svctag</li> </ul>
Detailed Description	A job has been created to remove the designation of a member as the backup leader.

## DIAG0111

**Message** CPU *arg1*: *arg2* exception occurred.

**Arguments**

- ***arg1*** = CPU Number
- ***arg2*** = Exception Type

**Detailed Description** No detailed description available.

**Recommended Response Action** Issue is on system board. Recommend flash the latest BIOS and retry the diagnostics.

**Category** System Health (DIAG = Diagnostics)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## DIAG0112

**Message** CPU *arg1* - Machine check exception detected.

**Arguments**

- ***arg1*** = CPU Number

**Detailed Description** No detailed description available.

**Recommended Response Action** Issue is on system board. Recommend flash the latest BIOS and retry the diagnostics.

**Category** System Health (DIAG = Diagnostics)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## DIAG0114

**Message** Unable to start application processor(s). :OR: CPU *arg1* (ID 0x *arg2* ) did not reach test step *arg3* .:OR: CPU *arg4* (ID 0x *arg5* ) recorded unknown test result 0x *arg6* .:OR: CPU *arg7* (ID 0x *arg8* ) data error at address 0x *arg9* . Expected *arg10* .

**Arguments**

- ***arg1*** = Decimal
- ***arg2*** = Hex

- **arg3** = Decimal
- **arg4** = Decimal
- **arg5** = Hex
- **arg6** = Hex
- **arg7** = Decimal
- **arg8** = Hex
- **arg9** = Hex
- **arg10** = Hex

**Detailed Description** Depends on <Error Reason>. If it is "Unable to start" it usually indicates a software problem. "Cache integrity" could signal a processor cache hardware problem. The other CPU messages could result from hardware or from overheating, if for instance, the fans are marginal or airflow is blocked.

**Recommended Response Action** Check temperatures in System Health tab for abnormally high temperatures and make sure airflow baffles are properly installed in the system, if any. Check fan RPM in System Health tab and verify actual fans are properly installed.

## DIAG0142

Message	Hard Drive <i>arg1</i> - S/N <i>arg2</i> , <i>arg3</i> self test unsuccessful <i>arg4</i> .
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Drive Location</li><li>· <b><i>arg2</i></b> = Serial Number</li><li>· <b><i>arg3</i></b> = DST Short, DST Long</li><li>· <b><i>arg4</i></b> = Error Reason</li></ul>
Detailed Description	No detailed description available.
Recommended Response Action	If <Error Reason> is "terminated" then the disk controller terminated the test so a retry of the test is advisable. Otherwise the hard drive should be replaced. {In the factory, this test type may also be DEFT, in addition to DST Short and DST Long. The "terminated" case should not occur in the field, only in development due to software issues}.

## DIAG0143

**Message** Hard Drive *arg1* - SMART read command unsuccessful.

**Arguments**

- ***arg1*** = Drive Location

**Detailed Description** Mainly seen with very old hard drives.

**Recommended Response Action** No response action is required.

**Category** Storage (DIAG = Diagnostics)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## DIAG0144

**Message** Hard Drive *arg1* - self test not supported.

**Arguments**

- ***arg1*** = Drive Location

**Detailed Description** Mainly seen with very old hard drives.

**Recommended Response Action** No response action is required.

**Category** Storage (DIAG = Diagnostics)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## DIAG0145

**Message** Hard Drive *arg1* - S/N *arg2* , self test did not complete.

#### Arguments

- **arg1** = Drive Location
- **arg2** = Serial Number

**Detailed Description** No detailed description available.

**Recommended Response Action** Desktops and Servers: Power down the system and check the signal and power connections to the hard drive. Rerun the diagnostic. If no error occurs then it was a cable or connector issue.

**Category** Storage (DIAG = Diagnostics)

**Severity** Severity 1 (Critical)

## DIAG0146

**Message** Hard Drive *arg1* - S/N *arg2* , self test log contains previous error(s).

#### Arguments

- **arg1** = Drive Location
- **arg2** = Serial Number

**Detailed Description** Prior failure checking removed, is now obsolete.

**Recommended Response Action** No response action is required.

**Category** Storage (DIAG = Diagnostics)

**Severity** Severity 3 (Informational)

#### Redfish Event Type

*No alerts are applicable for this message*

## DIAG0147

**Message** Optical Drive *arg1* - Self test: *arg2* .

#### Arguments

- **arg1** = Nth Drive
- **arg2** = Error Reason

**Detailed Description** No detailed description available.

**Recommended Response Action** This typically is a user error since these drives can be disconnected from the system. If disconnected, reconnect the optical drive to system board. Check BIOS setup to make sure the SATA port the drive is connected and has not been disabled. Rerun the diagnostic. If errors persist the optical drive is defective.

## DIAG0148

**Message** Hard/Optical Drive *arg1* - incorrect status: *arg2 arg3* .

- Arguments**
- ***arg1*** = Nth Drive
  - ***arg2*** = Hex
  - ***arg3*** = Error Reason

**Detailed Description** No detailed description available.

**Recommended Response Action** No response action is required.

**Category** Storage (DIAG = Diagnostics)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## DIAG0149

**Message** Optical Drive - no drive detected.

**Detailed Description** No detailed description available.

**Recommended Response Action** No response action is required.

**Category** Storage (DIAG = Diagnostics)

**Severity** Severity 3 (Informational)

## Redfish Event Type

No alerts are applicable for this message

# DIAG0150

<b>Message</b>	Hard Drive - No Hard Drive detected, or disk controller not supported.
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	Hard drives on desktops should be found if connected to the chipset disk controller but PERC/SCU/SAS Adapters are not supported by legacy ePSA so if the hard drive is connected to these controllers this message is just a warning. If the system has a hard disk connected to the System Board chipset disk controller, power down the system and check the signal and power connections to it. Rerun the diagnostic. If no error occurs then it was a cable or connector issue.
<b>Category</b>	Storage (DIAG = Diagnostics)

# DIAG0151

<b>Message</b>	Hard Drive <i>arg1</i> - S/N <i>arg2</i> , incorrect status = <i>arg3</i> \n <i>arg4</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Drive Location</li><li>· <b><i>arg2</i></b> = Serial Number</li><li>· <b><i>arg3</i></b> = 80000000000000??</li><li>· <b><i>arg4</i></b> = Error Reason</li></ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	SMART Predictive Failure indicates the hard drive has failed SMART and maybe nearing the end of its life. Other types of <Error Reason> in this category may indicate an intermittent or firmware problem, rerun the test again. Desktops, servers: Check the hard disk drive cables and connections. All systems: If error persists, make sure that hard disk drive firmware and BIOS are current. The <80000000000000??> value is an EFI error code returned by the driver.
<b>Category</b>	Storage (DIAG = Diagnostics)
<b>Severity</b>	Severity 1 (Critical)

## DIAG0711

**Message** Thermal - Thermal trip detected.

**Detailed Description** BIOS error reported through ePSA.

**Recommended Response Action** System detected repeated thermal trips due to excessive heat. Check for obstructions to the fan and vents. Make sure BIOS is current and rerun diagnostics. If error persists replace thermal heat sink, CPU and motherboard.

**Category** System Health (DIAG = Diagnostics)

**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## DIAG0712

**Message** Fan - The fan failed to respond correctly.  
**Detailed Description** BIOS error reported through ePSA.  
**Recommended Response Action** BIOS detected repeated issues when setting the fan speed. The fan may be faulty, check for obstructions to the fan and vents. Make sure the BIOS is current and rerun diagnostics.  
**Category** System Health (DIAG = Diagnostics)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## DIAG0713

**Message** Sensor - Error accessing thermal sensor.  
**Detailed Description** BIOS error reported through ePSA.  
**Recommended Response Action** BIOS error when reading the systems thermal sensor. Make sure the BIOS is current and rerun diagnostics. If error persists, replace the motherboard.  
**Category** System Health (DIAG = Diagnostics)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## DIAG0714

**Message** Heat Sink - Heat sink clip not installed.  
**Detailed Description** BIOS error reported through ePSA.  
**Recommended Response Action** BIOS detected that the heat sink clip was not installed. Connect the heat sink clip properly.  
**Category** System Health (DIAG = Diagnostics)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## DIAG0715

<b>Message</b>	Memory - Memory error detect.
<b>Detailed Description</b>	BIOS error reported through ePSA.
<b>Recommended Response Action</b>	BIOS detected an issue configuring the DIMM. Check for latest BIOS. Power down system and reseal DIMMs. Retry test; if no error occurs it was a DIMM connection issue. If error persists, replace the DIMM.
<b>Category</b>	System Health (DIAG = Diagnostics)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## DIAG0716

<b>Message</b>	Cables - Check the following cable, <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Cable Name</li></ul>
<b>Detailed Description</b>	BIOS error reported through ePSA.
<b>Recommended Response Action</b>	BIOS detected a cable that was not installed. Connect the cable that is described in the string portion of the message.
<b>Category</b>	System Health (DIAG = Diagnostics)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## DIAG0721

<b>Message</b>	Battery - Battery issue detected.
<b>Detailed Description</b>	BIOS error reported through ePSA.
<b>Recommended Response Action</b>	BIOS detected a battery that is not functioning properly. Remove and replace the battery. Rerun the diagnostics on the new battery once it is charged.
<b>Category</b>	System Health (DIAG = Diagnostics)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## DIAG0722

<b>Message</b>	Memory - Previous uncorrectable memory error.
<b>Detailed Description</b>	BIOS error reported through ePSA.
<b>Recommended Response Action</b>	BIOS detected an un-correctable memory issue on a prior boot. Update to the latest BIOS. Power down system and reseal DIMMs. Retry test; if no error occurs it was a DIMM connection issue. If error persists, replace the DIMM.
<b>Category</b>	System Health (DIAG = Diagnostics)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## DIAG0723

<b>Message</b>	Hard Drive - Drive error detected.
<b>Detailed Description</b>	BIOS error reported through ePSA.
<b>Recommended Response Action</b>	BIOS detected a hard drive issue. Make sure hard drive connection is good, and the drive firmware and system BIOS are current. If error persists, replace the hard drive.
<b>Category</b>	Storage (DIAG = Diagnostics)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## DIAG8001

<b>Message</b>	No BIOS support for software interrupt <i>arg1</i> h, function(ah) <i>arg2</i> h.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Hex</li><li>· <b><i>arg2</i></b> = Hex</li></ul>
<b>Detailed Description</b>	No detailed description available.
<b>Recommended Response Action</b>	Should not occur.
<b>Category</b>	System Health (DIAG = Diagnostics)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## DIAG8002

**Message** No BIOS support for SMI interface function(ah) *arg1* h.;Sensor *arg2* exceeded thermal zone *arg3* . Peak zone was *arg4* .

- Arguments**
- ***arg1*** = Hex Function
  - ***arg2*** = Name
  - ***arg3*** = Decimal
  - ***arg4*** = Decimal

**Detailed Description** No detailed description available.

**Recommended Response Action** System thermal sensor is indicating a high value. Clear any blockage to internal fans and heat sinks. Make sure that BIOS is current and rerun the diagnostics.

**Category** System Health (DIAG = Diagnostics)

## DIS004

<b>Message</b>	Auto Discovery 24-hour timeout occurred. Stopping Auto Discovery process.
<b>Detailed Description</b>	The Auto Discovery process has timed out and stopped. The Auto Discovery process runs for 24 hours from the initial system power on or re-initialization request. Every 90 seconds the Auto Discovery client will attempt to identify and contact the Provisioning Server during this period.
<b>Recommended Response Action</b>	Check for previous messages in the Lifecycle Controller Log that provide more specific information why the timeout occurred.

## ENC100

**Message** *arg1* is sending inconsistent responses to the controller.

**Arguments**

- ***arg1*** = enclosure name

**Detailed Description** The storage controller is not receiving a consistent response from the enclosure due to a firmware problem or an incorrect cabling configuration. If the cables are longer than the specified maximum length, the signals may be degraded.

**Recommended Response Action** Turn off all the enclosures attached to the system, check if the cable configurations are correct and reboot the system. If the problem persists, update the enclosure firmware to the latest supported version. Download the latest supported version of the firmware from the service provider. For more information about cable configuration, see storage enclosure documentation.

## ENC14

**Message** The number of enclosures connected on *arg1* has exceeded the maximum limit supported by the controller.

**Arguments**

- ***arg1*** = controller name

**Detailed Description** There are too many enclosures attached to the controller port. When the enclosure limit is exceeded, the controller loses contact with all enclosures attached to the port. This is an unsupported configuration.

**Recommended Response Action** Remove the extra enclosures. Refer to the storage hardware documentation for maximum number of enclosures that can be connected.

## ENC24

**Message** Communication with *arg1* is intermittent.

**Arguments**

- ***arg1*** = enclosure name

**Detailed Description** The controller is not receiving a consistent response from the enclosure. There could be a firmware problem or an invalid cabling configuration. If the cables are too long, they degrade the signal.

**Recommended Response Action** Power down all enclosures attached to the system and reboot . If the problem persists, upgrade the firmware to the latest supported version. Verify the cable configuration is valid. See the storage hardware documentation for valid cabling configurations.

## ENC3

**Message** *arg1* is shutdown.

**Arguments**

- ***arg1*** = Enclosure Name

**Detailed Description** The physical disk enclosure is either hotter or cooler than the maximum or minimum allowable temperature range.

**Recommended Response Action** Check for factors that may cause overheating or excessive cooling. For example, verify that the enclosure fan is working. You should also check the thermostat settings and examine whether the enclosure is located near a heat source. Make sure the enclosure has enough ventilation and that the room temperature is not too hot or too cold. Refer to the enclosure documentation for more diagnostic information.

## ENC33

Message Redundancy on *arg1* is normal.

Arguments  
 · **arg1** = Enclosure Name

Detailed Description Data redundancy has been restored to an enclosure that previously suffered a loss of redundancy.

Recommended Response Action This alert is provided for informational purposes.

## ENC4

**Message** *arg1* firmware mismatch.

**Arguments**

- ***arg1*** = Enclosure Name

**Detailed Description** The firmware on the EMM modules is not the same version. It is required that both modules have the same version of the firmware. This alert may be caused when you attempt to insert an EMM module that has a different firmware version than an existing module.

**Recommended Response Action** Download the same version of the firmware to both EMM modules.

## ENC40

**Message** A new enclosure was detected on *arg1*.

**Arguments**

- ***arg1*** = controller name

**Detailed Description** The controller detected a new enclosure. This is due either to a hot plug of an enclosure, or a power state change of an enclosure. In addition, this message is generated if the daisy chain order of the enclosures changes.

**Recommended Response Action** No response action is required.

## ENC42

Message The redundant path on the *arg1* is unavailable.

Arguments

- ***arg1*** = enclosure name

**Detailed Description** The redundant path on the enclosure identified in the message is unavailable. Even though the storage communication path between the controller and enclosure is currently available, the communication will end if another path fails.

**Recommended Response Action** The controller has lost communication with an enclosure. Make sure that the cables are not loose and defective. For information about checking cable status, see the Storage Hardware documentation available on the support site.

## ENC43

**Message** The Enclosure Management Module (EMM) *arg1* installed in sled that is available in slot *arg2* has failed.

**Arguments**

- ***arg1*** = EMM name
- ***arg2*** = slot number

**Detailed Description** The Enclosure Management Module (EMM) installed in sled that is available in slot identified in the message has failed either because 1)Power loss to the Expander Module. 2) The Expander self-test may also have identified a failure. 3) A firmware issue. 4) Multi- bit error.

**Recommended Response Action** Reset the Expander Module. For information about resetting or replacing the Expander Module , see the Storage hardware documentation available on the support site. If the issue persists, contact your service provider.

## ENC44

**Message** The redundant multipath connection to the enclosure *arg1* is abruptly disconnected because either the EMM is removed, cable is damaged, the cable is removed, a SAS IO Module is powered off, is damaged or is removed.

**Arguments**

- ***arg1*** = enclosure Name

**Detailed Description** The redundant multipath connection to the enclosure identified in the message abruptly disconnected because either the EMM is removed, cable is damaged, the cable is removed, a SAS IOM module is powered off, is damaged or is removed.

**Recommended Response Action** Do one of the following: 1) Make sure that the cables are properly connected to the Controller. 2) If the Enclosure Management Module (EMM) is removed, reinsert the EMM. 3) Check the status of both SAS IO modules (IOM). If a SAS IO module is removed, reinsert the SAS IOM.

## ENC5

**Message** Redundancy on *arg1* is degraded

**Arguments**

- ***arg1*** = Enclosure Name

**Detailed Description** One or more of the enclosure components has failed. For example, a fan or power supply may have failed. Although the enclosure is currently operational, the failure of additional components could cause the enclosure to fail.

**Recommended Response Action** Identify and replace the failed component. To identify the failed component, select the enclosure in the tree view and click the Health subtab. Any failed component will be identified with a red X on the enclosures Health subtab. Alternatively, you can select the Storage object and click the Health subtab. The controller status displayed on the Health subtab indicates whether a controller has a failed or degraded component. See the enclosure documentation for information on replacing enclosure components and for other diagnostic information.

## ENC6

**Message** Communication timeout on *arg1*.

## Arguments

- **arg1** = Enclosure Name

## Detailed Description

The controller is unable to communicate with an enclosure. There are several reasons for communication loss. For example, there may be a bad or loose cable. An unusual amount of I/O may also interrupt communication with the enclosure. In addition, communication loss may be caused by software, hardware, or firmware problems, bad or failed power supplies, and enclosure shutdown.

## Recommended Response Action

Check for problems with the cables. See the Cables attached correctly section for more information on checking the cables. You should also check to see if the enclosure has degraded or failed components. To do this, select the enclosure object in the tree view and click the Health subtab. The Health subtab displays the status of the enclosure components. Verify that the controller has the supported driver and firmware versions installed and that each Enclosure Management Modules (EMMs) are running the same version of supported firmware.

## EPP Event Messages

### EPP001

**Message** Unable to use the Extended Power Performance (EPP) feature on chassis.

**Detailed Description** The Extended Power Performance cannot be used unless chassis has six EPP capable PSUs, Configure the Power Redundancy Policy to Grid Redundancy & MPCM, DPSE, SBPM and Fresh Air features should be disabled.

**Recommended Response Action** Make sure that chassis has six EPP capable PSUs, Configure the Power Redundancy Policy to Grid Redundancy & MPCM, DPSE, SBPM and Fresh Air features should be disabled. Then enable the EPP feature.

**Category** System Health (EPP = Extended Power Performance)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

### EPP002

**Message** Unable to use the Extended Power Performance (EPP) feature because the Maximum Power Conservation Mode is enabled.

**Detailed Description** The Extended Power Performance cannot be used because the Maximum Power Conservation Mode is enabled.

**Recommended Response Action** Disable the Maximum Power Conservation Mode and then retry to enable the EPP feature.

**Category** System Health (EPP = Extended Power Performance)

**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## EPP003

**Message** Unable to use the Extended Power Performance (EPP) feature because the Dynamic Power Supply Engagement mode is enabled.  
**Detailed Description** The Extended Power Performance cannot be used because the Dynamic Power Supply Engagement mode is enabled.  
**Recommended Response Action** Disable the Dynamic Power Supply Engagement mode and then retry to enable the EPP feature.  
**Category** System Health (EPP = Extended Power Performance)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## EPP004

**Message** Unable to use the Extended Power Performance (EPP) feature because the Server Performance Over Power Redundancy mode is enabled.  
**Detailed Description** The Extended Power Performance cannot be used because the Server Performance Over Power Redundancy mode is enabled.  
**Recommended Response Action** Disable the Server Performance Over Power Redundancy mode and then retry to enable the EPP feature.  
**Category** System Health (EPP = Extended Power Performance)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## EPP005

**Message** Unable to set the Extended Power Performance (EPP) feature because the Server Based Power Management mode is enabled.  
**Detailed Description** The Extended Power Performance cannot be used because the Server Based Power Management mode is enabled.  
**Recommended Response Action** Disable the Server Based Power Management mode and then retry to enable the EPP feature.  
**Category** System Health (EPP = Extended Power Performance)

**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## EPP006

**Message** Unable to set the Extended Power Performance (EPP) feature because the Fresh Air Configuration mode is enabled.  
**Detailed Description** The Extended Power Performance cannot be enabled because the Fresh Air Configuration mode is enabled.  
**Recommended Response Action** Disable the Fresh Air Configuration mode and then retry to enable the EPP feature.  
**Category** System Health (EPP = Extended Power Performance)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## EPP007

**Message** Unable to use the Extended Power Performance (EPP) feature because the Chassis Management Controller (CMC) firmware update is in progress.  
**Detailed Description** The Extended Power Performance cannot be used because the Chassis Management Controller (CMC) firmware update is in progress.  
**Recommended Response Action** Wait for the firmware update to complete, and then retry to enable the EPP feature.  
**Category** System Health (EPP = Extended Power Performance)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## EPP008

**Message** Unable to use the Extended Power Performance (EPP) feature because the Chassis Management Controller (CMC) failover process is in progress.  
**Detailed Description** The Extended Power Performance is cannot be used because the Chassis Management Controller (CMC) failover process is in progress.  
**Recommended Response Action** Wait for the failover process to complete, and then retry to enable the EPP feature.  
**Category** System Health (EPP = Extended Power Performance)  
**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# EPP009

**Message** Unable to use the Extended Power Performance (EPP) feature because the Grid Redundancy feature is not available.

**Detailed Description** The Extended Power Performance cannot be used because the Grid Redundancy feature is not available.

**Recommended Response Action** Resolve the Grid Redundancy feature-related issue, and then retry to enable the EPP feature. For more information on the Grid Redundancy feature see Chassis Management Controller (CMC) User Guide.

**Category** System Health (EPP = Extended Power Performance)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# EPP010

**Message** Unable to use the Extended Power Performance (EPP) feature because the power supply unit (PSU) slot - *arg1* is empty.

**Arguments**

- ***arg1*** = slot number

**Detailed Description** The Extended Power Performance cannot be used because the power supply unit (PSU) slot identified in the message is empty.

**Recommended Response Action** Install an EPP-capable PSU in the empty slot, and then retry to enable the EPP feature.

**Category** System Health (EPP = Extended Power Performance)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# EPP011

**Message** Unable to use the Extended Power Performance (EPP) feature because the power supply unit (PSU) slot - *arg1* has no input power.

**Arguments**

- ***arg1*** = slot number

**Detailed Description** The Extended Power Performance cannot be used because the power supply unit (PSU) slot identified in the message has no power supply.

<b>Recommended Response Action</b>	Make sure that the PSU in the PSU slot has input power, and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## EPP012

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the power supply unit (PSU) slot - <i>arg1</i> has no output power.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = slot number</li></ul>
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the power supply unit (PSU) slot identified in the message has no output power.
<b>Recommended Response Action</b>	Make sure that the PSU in the PSU slot has no issue in the output power, and then retry to enable the EPP feature. To check the health status of the PSU identified in the message using the RACADM CLI utility, enter the following command: "racadm getpbinfo". If the PSU identified in the message is showing no output power, contact your service provider.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## EPP013

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the power rating of power supply unit (PSU) slot - <i>arg1</i> is less than 3000W.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = slot number</li></ul>
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the power rating of PSU identified in the slot is less than 3000W.
<b>Recommended Response Action</b>	Make sure that there are at least six PSUs in the chassis and each PSU must be of 3000W capacity, and then retry to enable the EPP feature.
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## EPP014

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the Redundancy Policy is not set to Grid Redundancy.
<b>Detailed Description</b>	The Extended Power Performance is cannot be used because the Redundancy Policy is not set to Grid Redundancy.
<b>Recommended Response Action</b>	Configure the Power Redundancy Policy to Grid Redundancy and retry to enable the EPP feature. To configure the Power Redundancy Policy using the RACADM CLI utility, enter the following command: "racadm config -g cfgChassisPower -o cfgChassisRedundancyPolicy 1".
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## EPP015

<b>Message</b>	Unable to use the Extended Power Performance (EPP) feature because the System Input Power Cap is set to less than or equal to 13300W (45381 BTU/h).
<b>Detailed Description</b>	The Extended Power Performance cannot be used because the System Input Power Cap is set to less than or equal to 13300W (45381 BTU/h).
<b>Recommended Response Action</b>	Set the Chassis Power Cap to greater than 13300W (45381 BTU/h), and then retry to use the EPP feature. To set the Chassis Power Cap using the RACADM CLI utility, enter the following command: "racadm config -g cfgChassisPower -o cfgChassisDefaultPowerCapUpperBound 13301".
<b>Category</b>	System Health (EPP = Extended Power Performance)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FAN Event Messages

### FAN0000

<b>Message</b>	Fan <i>arg1</i> RPM is less than the lower warning threshold.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = number</li></ul>
<b>Detailed Description</b>	The fan is not performing optimally. The fan may be installed improperly or may be failing.
<b>Recommended Response Action</b>	Remove and re-install the fan at the next scheduled service window. If the issue persists, contact technical support. Refer to the product documentation to choose a convenient contact method.

## FAN8500

**Message** Enhanced Cooling Mode is Enabled

**Detailed Description** Enabling Enhanced Cooling Mode will provide increased airflow capability to the blades by increasing the maximum allowable blower speed at the cost of increased power consumption.

**Recommended Response Action** No response action is required.

**Category** Audit (FAN = Fan Event)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## FAN8501

**Message** Enhanced Cooling Mode is Disabled

**Detailed Description** Disabling Enhanced Cooling Mode allows for reduced power consumption by reducing the maximum speed of the blowers while still providing sufficient blade airflow.

**Recommended Response Action** No response action is required.

**Category** Audit (FAN = Fan Event)

**Severity** Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

# FAN8502

**Message** Unable to detect the blower *arg1* because the blower may not be optimally operating.

**Arguments**

- ***arg1*** = blower name

**Detailed Description** The current CMC firmware did not detect the blower identified in the message.

**Recommended Response Action** Make sure that CMC is using the latest firmware, and then retry the operation.

**Category** Audit (FAN = Fan Event)

**Severity** Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

# FAN8503

**Message** The Chassis was turned off because more than two internal fans stopped functioning.

**Detailed Description** The Chassis was turned off because more than two Chassis internal fans stopped functioning. The fans with issues are identified in the CMC Hardware (System Event Log) and Chassis Logs.

**Recommended Response Action** Make sure that the Chassis internal fans are functioning. At the command line interface (CLI), enter the following command to identify fans that are not functioning: "racadm getsel". Using the CMC Web GUI, select the chassis, click the Logs tab, and then select Hardware Log. Reinsert or replace fans that are not functioning correctly.

**Category** Audit (FAN = Fan Event)

**Severity** Severity 1 (Critical)

## Redfish Event Type

*No alerts are applicable for this message*

# FAN900

**Message** The Enhanced Cooling Mode is successfully enabled.

**Detailed Description** The Enhanced Cooling Mode is successfully enabled.

**Recommended Response Action** No response action required.

**Category** Configuration (FAN = Fan Event)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

## FAN901

**Message** The Enhanced Cooling Mode is successfully disabled.

**Detailed Description** The Enhanced Cooling Mode is successfully disabled.

**Recommended Response Action** No response action required.

**Category** Configuration (FAN = Fan Event)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## FAN902

**Message** Cannot enable the Enhanced Cooling Mode because sufficient power is not available.

**Detailed Description** The Enhanced Cooling Mode cannot be set because required power is not available.

**Recommended Response Action** Add PSUs with higher power capability or remove Chassis components such as I/O Modules or servers until the power requirements have been lowered enough to enable the Enhanced Cooling Mode, and then retry the operation.

**Category** Configuration (FAN = Fan Event)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## FAN903

**Message** Cannot enable the Enhanced Cooling Mode because an unsupported fan is inserted in the Chassis.

**Detailed Description** The Enhanced Cooling Mode cannot be enabled because an unsupported fan is present in the Chassis.

**Recommended Response Action** Insert a fan that is supported by the Chassis, and then retry the operation. For a list of fans that are supported by Chassis, see the Chassis Management Controller Users Guide.

**Category** Configuration (FAN = Fan Event)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## FAN904

<b>Message</b>	Cannot enable the Enhanced Cooling Mode because the Maximum Power Conservation Mode is enabled.
<b>Detailed Description</b>	The Enhanced Cooling Mode cannot be enabled because the Maximum Power Conservation Mode is enabled.
<b>Recommended Response Action</b>	Disable the Maximum Power Conservation Mode, and then retry the operation. To disable the mode by using CMC Web interface, click Chassis Overview > Power > Configuration. To disable the mode using the RACADM utility, run the command "racadm config -g cfgThermal -o cfgThermalEnhancedCoolingMode 0".
<b>Category</b>	Configuration (FAN = Fan Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FAN905

<b>Message</b>	Applying fan configuration settings. This may take several seconds.
<b>Detailed Description</b>	Applying fan configuration settings. This may take several seconds.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (FAN = Fan Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FAN906

<b>Message</b>	Changes are not made to the current settings.
<b>Detailed Description</b>	Changes are not made to the current settings.
<b>Recommended Response Action</b>	Make sure that changes are made to the settings and retry the operation.
<b>Category</b>	Configuration (FAN = Fan Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FAN907

<b>Message</b>	The Enhanced Cooling Mode feature is already enabled.
----------------	---

<b>Detailed Description</b>	The Enhanced Cooling Mode feature is already enabled.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (FAN = Fan Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FAN908

<b>Message</b>	The Enhanced Cooling Mode feature is already disabled.
<b>Detailed Description</b>	The Enhanced Cooling Mode feature is already disabled.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (FAN = Fan Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FAN911

<b>Message</b>	The attempt to enable the Enhanced Cooling Mode was not successful.
<b>Detailed Description</b>	The attempt to enable the Enhanced Cooling Mode (ECM) was not successful because ECM is already enabled or Gen3 fans are not present in the Chassis.
<b>Recommended Response Action</b>	Check whether or not the Enhanced Cooling Mode (ECM) is already enabled. Make sure there are Gen3 fans in the Chassis and retry the operation.
<b>Category</b>	Configuration (FAN = Fan Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FC Event Messages

### FC001

<b>Message</b>	The command was successful.
<b>Detailed Description</b>	The command was successful.

<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FC002

<b>Message</b>	Unable to allocate memory.
<b>Detailed Description</b>	Unable to allocate memory required to perform the operation.
<b>Recommended Response Action</b>	Perform an AC power cycle and retry Lifecycle Controller and iDRAC firmware update.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FC003

<b>Message</b>	Missing required parameter.
<b>Detailed Description</b>	An invalid number of arguments was provided to the method.
<b>Recommended Response Action</b>	Enter required input parameters and retry. For more information, see Lifecycle Controller Users Guide or the FC HBA Profile specification.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FC004

<b>Message</b>	Invalid parameter value for <i>arg1</i>
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = parameter value</li></ul>
<b>Detailed Description</b>	The value for the specified parameter is invalid.
<b>Recommended Response Action</b>	Make sure that the input parameter values that are provided to the method match the parameter data type and possible values defined in the FC HBA Profile specification.
<b>Category</b>	Configuration (FC = Fibre Channel)

<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FC005

<b>Message</b>	The number of AttributeName array elements does not match the AttributeValue array element count.
<b>Detailed Description</b>	The number of AttributeName and AttributeValue array elements are not equal.
<b>Recommended Response Action</b>	Provide equal number of array elements for AttributeName and AttributeValue parameters. For more information about input parameters, see FC HBA Profile specification.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FC006

<b>Message</b>	Configuration job already created, cannot set attribute on specified target until existing job is completed or is cancelled.
<b>Detailed Description</b>	A configuration job already exists for the specified target. No further configuration operations are allowed until the existing job is completed or the job is cancelled.
<b>Recommended Response Action</b>	Wait until the existing configuration job for the targeted component is complete or cancel the existing job before retrying the operation.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FC007

<b>Message</b>	A configuration job already exists. Unable to create another configuration job on specified target until existing job is completed or is cancelled.
<b>Detailed Description</b>	Configuration job already created on the specified target. No further command is allowed until the existing job succeeded or the job is cancelled.
<b>Recommended Response Action</b>	Wait for the existing job to complete or cancel the existing job and retry the operation.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## FC008

<b>Message</b>	No pending data present to create a Configuration job.
<b>Detailed Description</b>	No changes are available between the previous configuration and the current configuration. To create a Configuration job, change at least one attribute.
<b>Recommended Response Action</b>	Change the configuration of one or more attributes and retry creating the Configuration job.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FC009

<b>Message</b>	Lifecycle Controller is currently in use.
<b>Detailed Description</b>	Lifecycle Controller cannot gain access to internal storage due to use by another application or operation.
<b>Recommended Response Action</b>	Wait for Lifecycle Controller to complete the current operation. Make sure that the system is: 1) Not currently in Lifecycle Controller Unified Server Configurator 2) Not waiting for user intervention at F1/F2 POST error 3) Not in any of the device or controller Option ROMs and retry the operation.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## FC010

<b>Message</b>	Unable to create Configuration job because Lifecycle Controller is not enabled.
<b>Detailed Description</b>	For 11G systems: System Services must be enabled to perform the requested operation. System Services has been disabled through the iDRAC configuration utility accessed by pressing CTRL+E on boot up or through a remote operation. For 12G and above generations: Lifecycle Controller must be enabled to perform the requested operation. Lifecycle Controller has been disabled by pressing F2 Setup, selecting iDRAC Configuration, and selecting Lifecycle Controller Settings on boot up or through a remote operation.
<b>Recommended Response Action</b>	For 11G systems: Use the iDRAC configuration utility to enable the System Services by pressing the CTRL+E option on boot up at the targeted system. For 12G and above generations: Use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings, to enable the Lifecycle Controller on boot up of the targeted system.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 2 (Warning)

## Redfish Event Type

# FC011

<b>Message</b>	Configuration job already created, pending data cannot be deleted.
<b>Detailed Description</b>	Configuration job already created on the specified target. No further command is allowed until the existing job is completed.
<b>Recommended Response Action</b>	Cancel the configuration job or wait for the job to complete. Refer to documentation on job cancellation.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# FC012

<b>Message</b>	No pending data to delete.
<b>Detailed Description</b>	No changes to component attribute data are available between the previous configuration and the current configuration.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# FC013

<b>Message</b>	Invalid AttributeName: <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = parameter name</li></ul>
<b>Detailed Description</b>	An incorrect AttributeName parameter name was provided.
<b>Recommended Response Action</b>	Enter the correct AttributeName available for the component in the system. Identify the correct AttributeName from the attribute enumeration response for the component or refer to the FC HBA Profile specification.
<b>Category</b>	Configuration (FC = Fibre Channel)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## FC014

**Message** Invalid AttributeValue parameter content for corresponding AttributeName *arg1* .

**Arguments**

- ***arg1*** = parameter name

**Detailed Description** The AttributeValue parameter is invalid due to one of the following: 1) The length of new AttributeValue is not within the minimum length and maximum length range or does not comply with the governing regular expression 2) Value of new AttributeValue is not within the lower bound and upper bound range limits 3) The value is not one of the possible values.

**Recommended Response Action** For valid attribute values, see the FC HBA Profile specification.

**Category** Configuration (FC = Fibre Channel)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## FC015

**Message** Unable to change read-only attribute *arg1* .

**Arguments**

- ***arg1*** = parameter name

**Detailed Description** A set attribute operation was not successful because the attribute is read-only.

**Recommended Response Action** No response action is required.

**Category** Configuration (FC = Fibre Channel)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## FC016

**Message** Unable to change the attribute value of the disabled attribute *arg1* .

**Arguments**

- ***arg1*** = parameter name

**Detailed Description** A set attribute operation was not successful because the attribute is disabled.

**Recommended Response Action** No response action is required.

Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## FC017

Message	Unable to perform the operation due to an internal error in iDRAC.
Detailed Description	An internal error occurred in iDRAC and the operation cannot continue. An iDRAC reset is required to recover from the error.
Recommended Response Action	Disconnect the AC power source from the system, reconnect the power source, and retry the operation.
Category	Configuration (FC = Fibre Channel)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## FC018

Message	Unable to start the configuration operation because the System Lockdown mode is enabled.
Detailed Description	The configuration operation cannot be started because the System Lockdown mode is enabled.
Recommended Response Action	Make sure that the Lockdown.1#SystemLockdown attribute is set to Disabled in the DCIM_iDracCardEnumeration class by running the WS-Man get command at the command line interface (CLI), and then retry the operation.
Category	Configuration (FC = Fibre Channel)
Severity	Severity 3 (Informational)

## FC102

Message	The <i>arg1</i> port <i>arg2</i> link is not functioning either because the FC cable is not connected or the FC device is not functioning.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = controller ID</li><li>· <b><i>arg2</i></b> = port ID</li></ul>
Detailed Description	The FC controller port link identified in the message is not functioning either because the FC cable is not connected or the FC device is not functioning.

**Recommended Response Action** Do the following: 1) Make sure that the FC port is enabled. 2) Make sure the Activity/Speed LEDs are lit if the physical port has LEDs. 3) Check the FC cable and FC cable connections for proper installation. 4) Check that the attached FC switch is functioning.

# FCD Event Messages

## FCD8500

Message	Unable to apply the <i>arg1</i> configuration. The affected servers (slot <i>arg2</i> ) are not turned off.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = configuration name</li><li>· <b><i>arg2</i></b> = slot number</li></ul>
Detailed Description	The server specified in the message must be turned off or the server slot must be empty before changing the FlexAddress configuration.
Recommended Response Action	Turn off the server and retry the operation.
Category	Audit (FCD = Feature Card)

## FCD8505

Message	The features cannot be deactivated when the chassis is turned on.
Detailed Description	Features cannot be deactivated when the chassis is turned on.
Recommended Response Action	Turn off the chassis via the Web interface or RACADM command line interface before deactivating the feature. To turn off the chassis using Racadm type "racadm chassisaction -m chassis powerdown". To deactivate the feature using RACADM, type "racadm <feature> -d" where <feature> is the name of the feature to be deactivated.

## FLDC1021

**Message** The journal mirror entry with WWN = *arg1* is not accessible.

**Arguments**

- ***arg1*** = World Wide Name

**Detailed Description** The device identified in the message having the journal mirror entry with given WWN (World Wide Name) is not accessible. A portion of an SSD is used for journal content. To assure consistency, the journal content is written

into two other SSDs. These copies are journal mirrors. If the journal content cannot be written to any of the journal mirrors, then this event is signaled. It is a warning because the FLDC code will then attempt to choose another SSD to be a journal mirror.

**Recommended Response Action** No response action is required.

## FSD Event Messages

### FSD000

**Message** Debug authorized by customer; debugcaps: *arg1* , was authorized by: *arg2* , at *arg3* for the period: *arg4* to *arg5* .

**Arguments**

- ***arg1*** = DebugCaps

- **arg2** = iDRAC User
- **arg3** = unblock time
- **arg4** = start time
- **arg5** = end time

**Detailed Description** The customer has authorized the specified debug capabilities on this iDRAC. (This should occur in response to a request from Dell tech support.) Each debug capability represents a certain action Dell engineers can perform to debug iDRAC.

**Recommended Response Action** No response action is required.

**Category** Audit (FSD = Debug)

**Severity** Severity 3 (Informational)

**Trap/EventID** 8595

## FSD002

**Message** Debug authorization failed; for debugCaps: *arg1* , authorized by iDRAC user: *arg2* , and Dell employee: *arg3* , at *arg4* for the period: *arg5* to *arg6* .

### Arguments

- ***arg1*** = DebugCaps
- ***arg2*** = iDRAC user
- ***arg3*** = Dell employee
- ***arg4*** = unblock time
- ***arg5*** = start time
- ***arg6*** = end time

**Detailed Description** A RACADM Debug command failed. If the RACADM Debug command was executed under the direction of Dell tech support then further assistance from tech support should be requested. Otherwise this command is not intended for customer use.

**Recommended Response Action** Verify all of the following 1) ensure that the unblock, grant, and invoke/start/stop/resume commands are all executed against the same iDRAC. 2) ensure dat.ini file has not been changed in any way. 3) ensure that current date falls between the start and end times. Note that Dell can further restrict both the set of debugCaps that is authorized and the start and stop times. If an authorized person did not enter a RACADM debug command then an attacker may have entered the command.

## HWC0008

Message Unable to communicate with iDRAC.

Detailed Description An internal error occurred while communicating with iDRAC.

Recommended Response Action Exit the wizard and retry the operation. If the problem persists:1) Turn off the system and disconnect the power cord.2) Wait for five seconds.3) Reconnect the power cord, turn on the system, and retry the operation.

## HWC1207

Message The health of sled in the sled slot *arg1* is in Warning state.

Arguments

- **arg1** = slot number

Detailed Description The health of sled in the sled slot identified in the message is in Warning state.

Recommended Response Action In the Chassis Subsystem under the overview page of the Management Module graphical user interface (GUI), look for the System.Modular subsystem with the slot number provided in the message to get more details. For more information, see the Users Guide available on the support site.

**Message** The sled in the sled slot *arg1* is not supported by the Manage Module.

**Arguments**

- ***arg1*** = slot number

**Detailed Description** The sled in the sled slot identified in the message is not supported by the Manage Module.

**Recommended Response Action** Update the firmware version of the sled to match the version of the Manage Module. For more information, see the Users Guide available on the support site. If the issue, persists, replace the sled.

## HWC1210

Message	The sled in the sled slot <i>arg1</i> cannot communicate to the Chassis because of internal issues.
Arguments	<ul style="list-style-type: none"> <li><b><i>arg1</i></b> = slot number</li> </ul>
Detailed Description	The sled in the sled slot identified in the message cannot communicate to the Chassis because of internal issues.
Recommended Response Action	Do any one of the following: 1) Wait for the iDRAC network to start and retry the operation. 2) Turn off the sled, wait for five seconds, and then turn on the sled. 3) If the issue persists, remove the sled, wait for five seconds, and then reinsert the sled.

## HWC2016

**Message** A fabric mismatch is detected between the server in slot *arg1* and IO Module in slot *arg2*.

**Arguments**

- ***arg1*** = slot number
- ***arg2*** = slot number

**Detailed Description** A fabric type mismatch is detected between the server in slot and I/O module as identified in the message.

**Recommended Response Action** Check the chassis fabric type by using the Manage Module graphic user interface (GUI) and compare against the type of fabric used in the I/O or mezzanine card. To check chassis type on the Manage Module home page, select

the server, and then view the I/O module properties. For more information about the compatible fabric types, see the Manage Module Users Guide available on the support site.

## HWC3006

**Message** Unable to QuickDeploy server in slot *arg1* .

**Arguments** . ***arg1*** = number

**Detailed Description** There are not enough IPv4 addresses reserved for the servers in this chassis. Therefore the newly inserted server could not be configured with the QuickDeploy feature.

**Recommended Response Action** Do the following: 1) Check the number of reserved IPv4 addresses for QuickDeploy. 2) Modify it such that the newly inserted blade will obtain an IP address for QuickDeploy. 3) Reseat the server to retry the QuickDeploy operation or manually configure the network parameters for the server. (Note that some chassis models may require a response at the LCD panel).

## HWC5002

Message A fabric mismatch detected on *arg1* .

Arguments  
 · *arg1* = name

Detailed Description The fabric type for the IOM and mezzanine cards must match. Once an IOM or mezzanine card is inserted into the chassis, the fabric type is then set for the CMC/MM and the CMC/MM will ensure that all subsequent IOMs and mezzanine cards match.

Recommended Response Action Check chassis fabric type in CMC/MM GUI and compare to the type of IOM or mezzanine card.

## HWC5038

**Message** The CMC/MM is unable to turn on the I/O module *arg1*.

**Arguments**

- ***arg1*** = I/O module identifier

**Detailed Description** The I/O module identified in the message cannot be turned on by the CMC/MM.

**Recommended Response Action** Do one of the following: 1) Perform a Powercycle operation on the I/O module identified in the message. A Powercycle operation can be performed using the RACADM command line utility by typing "racadm chassisaction

-m switch-N powercycle (where N is the switch number)". 2)Reseat the I/O module identified in the message. If the issue persists, contact your service provider.

**Arguments** . ***arg1*** = slot number

**Detailed Description** The IO Module identified in the message has exceeded temperature threshold.

**Recommended Response Action** 1) Make sure fans are installed and working correctly. 2) Check the temperature sensor status for the chassis and make sure it is within the chassis operating temperature range. 3) Reseat the I/O module to clear the over-temperature condition. If the problem persists, contact the service provider.

## HWC8509

<b>Message</b>	One or more PCIe switch heatsinks are not properly attached.
<b>Detailed Description</b>	The heatsinks are critical for providing cooling to the PCIe switches. If a PCIe switch stops functioning due to improper cooling, the PCIe subsystem may no longer function correctly and data loss may occur.
<b>Recommended Response Action</b>	Immediately turn off the Chassis by pressing the Chassis power button or removing chassis input power. The Chassis can be turned off remotely by running the following RACADM command "racadm chassisaction -m chassis nongraceshutdown". After turning off, contact your service provider.

# IOV Event Messages

## IOV000

**Message** Successfully completed the operation.

**Detailed Description** This operation was successful.

**Recommended Response Action** No response action is required.

**Category** Configuration (IOV = IO Virtualization)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

	Filter Visibility	IPMI Alert	SNMP Alert	Email Alert	Remote System Log	WS Eventing	Redfish Eventing

## IOV001

**Message**                    The operation contains an invalid request or argument.

**Detailed Description**    The operation or operation parameter sent to the Chassis Manager is invalid or not supported.

**Recommended Response Action**    Contact technical support. Refer to Chassis Manager product documentation to determine the contact method for the service provider.

**Category**                    Configuration (IOV = IO Virtualization)

**Severity**                    Severity 2 (Warning)

## IOV002

**Message**                    Unable to create or allocate the required resources.

**Detailed Description**    CMC could not successfully allocate resources because of the following reasons: 1) The chassis manager is unable to allocate required resources. 2) The chassis manager or chassis infrastructure firmware is rolled back to an earlier version. 3) There is an issue with the internal communications between chassis components.

**Recommended Response Action**    Make sure the firmware for the various chassis components are compatible with each other. If this is the case, do the following: 1) Turn off the chassis, by pressing the chassis Power Button, 2) run the following CMC RACADM command "racadm racresetcfg". If the problem persists, contact your technical service provider.

## IOV003

**Message** Unable to manage the device located in the PCIe slot specified in the operation.

**Detailed Description** A PCIe device error was detected that does not allow the assignment, unassignment, or the turning off of the device. The errors can be caused by incorrect PCIe device installation or installation of an unsupported PCIe adapter card. For a list of supported PCIe adapter cards contact your service provider.

**Recommended Response Action** Make sure that supported adapters are used and installed correctly in the PCIe slots.

**Category** Configuration (IOV = IO Virtualization)

## IOV004

**Message** Unable to turn on PCIe adapter.

**Detailed Description** The chassis manager is unable to turn on the PCIe device because of one of the following reasons: 1) PCIe device is not supported, 2) The device is not properly inserted in the slot, 3) The device is not functioning properly, or 4) The device power requirements exceed the power available for the slot.

**Recommended Response Action** Make sure a supported PCIe device is used and that it is properly inserted in the PCIe slot. For a list of supported devices, contact the service provider.

## IOV007

**Message** Chassis Management Controller (CMC) is unable to allocate power to one or more PCIe adapters in the Chassis Infrastructure component.

**Detailed Description** For each adapter assigned to a server, power is allocated when the server is turned on. If the available power is less than the required power, the Chassis Management Controller (CMC) will not power on the adapters associated with the server.

**Recommended Response Action** To release the required power, turn off one or more servers by pressing the Power Button on the individual server units.

## IOV1001

<b>Message</b>	The requested operation was successfully executed.
<b>Detailed Description</b>	The requested operation was successfully executed.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (IOV = IO Virtualization)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## IOV1002

<b>Message</b>	The operation was not successful.
<b>Detailed Description</b>	The operation did not complete successfully due to an exception from the instrumentation layer.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, reset CMC and retry the operation when the CMC has completed restarting. The CMC may take 2 to 3 minutes to complete restarting.
<b>Category</b>	Configuration (IOV = IO Virtualization)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## IOV1003

<b>Message</b>	Missing required parameter <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"> <li>· <b><i>arg1</i></b> = parameter name</li> </ul>
<b>Detailed Description</b>	One or more parameters identified in the message required for the method are missing.

<b>Recommended Response Action</b>	Refer to the DCIM Chassis PCI Management Profile document and provide the required parameter.
<b>Category</b>	Configuration (IOV = IO Virtualization)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## IOV1004

<b>Message</b>	Too many slots provided as parameters to Assign and UnAssign Servers methods.
<b>Detailed Description</b>	The parameters for the method identified in the message are not passed correctly.
<b>Recommended Response Action</b>	Refer to the DCIM Chassis PCI Management Profile document and provide the required parameters.
<b>Category</b>	Configuration (IOV = IO Virtualization)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## IOV1005

<b>Message</b>	Invalid slot FQDD <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = FQDD value</li></ul>
<b>Detailed Description</b>	The FQDD (Fully Qualified Device Descriptor) entered for the operation does not map to any instance of the DCIM_ChassisPCISlot class.
<b>Recommended Response Action</b>	Perform the Enumerate operation on the DCIM_ChassisPCISlot class to determine the correct FQDD value for the required slot. Retry the operation with the correct FQDD value.
<b>Category</b>	Configuration (IOV = IO Virtualization)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## IOV1006

<b>Message</b>	Invalid PCI slot or Server slot.
<b>Detailed Description</b>	The PCI slot or Server slot FQDD (Fully Qualified Device Descriptor) values entered for the operation are not valid.
<b>Recommended Response Action</b>	Perform the Enumerate operation on the DCIM_ChassisPCISlot class and DCIM_BladeServerView class to get the correct FQDD values for the PCIe slot and Server slot. Retry the operation with the correct FQDD values.

Category	Configuration (IOV = IO Virtualization)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## IOV1007

Message	Unable to assign a PCIe slot.
Detailed Description	The IOV slot management subsystem detected an error which may prevent the physical assignment/unassignment or turning off of a PCIe slot. The errors can be caused by PCIe training timeouts, false hot plug signals, or installation of an unsupported PCIe adapter card. For a list of supported PCIe adapter cards contact your service provider.
Recommended Response Action	Insert only supported adapter cards into system PCIe slots and make sure they are fully inserted. Retry the operation.
Category	Configuration (IOV = IO Virtualization)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## IOV1008

Message	Invalid Virtual Adapter FQDD <i>arg1</i> .
Arguments	<ul style="list-style-type: none"> <li>• <b><i>arg1</i></b> = FQDD value</li> </ul>
Detailed Description	The FQDD (Fully Qualified Device Descriptor) value entered for the operation does not map to any DCIM_ChassisVAView class instance representing Virtual Adapters.
Recommended Response Action	Perform an Enumerate operation on the DCIM_ChassisVAView class to get the correct FQDD for the Virtual Adapter. Retry the operation with the correct FQDD value.
Category	Configuration (IOV = IO Virtualization)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## IOV1009

Message	Mismatch in Slot or Virtual Adapter FQDD and Server Slot FQDD count.
Detailed Description	The FQDD pairs identified in the messages do not match in the required method input parameters.
Recommended Response Action	Provide a valid pair of FQDDs. Please refer to the DCIM Chassis PCI Management Profile document for the required parameter definitions.

Category Configuration (IOV = IO Virtualization)  
 Severity Severity 2 (Warning)  
 Redfish Event Type  
*No alerts are applicable for this message*

## IOV101

Message A PCIe adapter *arg1* is inserted in *arg2 arg3* .

Arguments

- **arg1** = device name
- **arg2** = slot type
- **arg3** = slot number

Detailed Description The Chassis Management Controller (CMC) detected the insertion of an adapter in the slot identified in the message.

Recommended Response Action If the adapter in slot identified in the message is mapped to a server, the server must be turned off then back on before server can access adapter. If the adapter in slot is a shared adapter and any server is on then the entire chassis must be turned off and turned on for the server(s) to gain access to the installed shared adapter.

## IOV106

Message Unable to power on PCIe adapter *arg1* in *arg2 arg3* .

### Arguments

- **arg1** = device name
- **arg2** = slot type
- **arg3** = slot number

**Detailed Description** The Chassis Management Controller (CMC) is unable to power on adapter. Possible reasons for power failures are: 1) Adapter not an approved adapter. 2) Adapter not fully inserted in the slot 3) Auxiliary power cable not connected (applicable to slot 1 - 3 only). 4) Adapter is damaged.

**Recommended Response Action** Make sure a supported PCIe device is used and that it is properly inserted in the PCIe slot. For a list of supported devices, contact the service provider.

## IOV112

<b>Message</b>	Chassis Infrastructure firmware is not valid.
<b>Detailed Description</b>	Chassis infrastructure firmware is not valid and must be reinstalled.
<b>Recommended Response Action</b>	Update the Chassis Infrastructure firmware. Using Chassis Management Controller (CMC) RACADM, run the command "racadm fwupdate -g -u -a <TFTP server IP Address> -d mainboard.bin -m main_board" to upload the latest firmware version to the Chassis Infrastructure Mainboard.

## IOV115

Message Unable to allocate *arg1* WATTS for discovery of PCIE adapters.

Arguments  
 · ***arg1*** = number of watts

Detailed Description The discovery process for PCIE adapters was unable to allocate the power required to power on the PCIE adapters.

Recommended Response Action Using the Chassis Management Controller (CMC) RACADM command line interface, run the command "racadm config -g cfgChassisPower -o cfgChassisPowerCap <Power cap>" to increase the power cap or add an additional power supply.

## IOV116

**Message** PCIE AUX power cable *arg1* .was disconnected while powered on.

**Arguments**

- ***arg1*** = cable number

**Detailed Description** The Chassis Management Controller (CMC) detected a power fault in an PCIE AUX power cable after the adapter was powered on. A power fault may be caused by a loose cable connection to the adapter or between the cable and the AUX cable harness.

**Recommended Response Action** Make sure AUX power cable identified in the message is fully plugged into the adapter and the AUX cable harness.

## IOV124

**Message** The PCIe shared adapter in slot *arg1* is not supported because the firmware version of the Chassis Infrastructure Mainboard is not the latest.

- Arguments**
- ***arg1*** = slot number

**Detailed Description** The PCIe shared adapter in slot identified in the message is not supported because the firmware version of Chassis Management Controller (CMC) Chassis Infrastructure Mainboard is not the latest.

**Recommended Response Action** Remove the adapter or update the Chassis Infrastructure firmware and then retry the operation. Using Chassis Management Controller (CMC) RACADM, run the command "racadm fwupdate -g -u -a <TFTP server IP

Address> -d mainboard.bin -m main\_board" to upload the latest firmware version to the Chassis Infrastructure Mainboard.

## IOV2008

Message The Chassis Management Controller (CMC) is unable to communicate with the PCIe subsystem.

Detailed Description The Chassis Management Controller (CMC) could not successfully connect to the PCIe subsystem.

Recommended Response Action Do the following: 1) Perform an AC Power Cycle operation on the Chassis by disconnecting the chassis from AC power, wait for 30 seconds, and then reconnect AC power. 2) Turn on at least one server. Using the Chassis Management Controller (CMC) web interface, select Server Overview->Power->Control and select the Power On Server option. If the issue persists, contact your service provider.

# IPA Event Messages

## IPA0001

<b>Message</b>	Invalid NIC IP address parameter specified.
<b>Detailed Description</b>	Invalid parameters passed to the function.
<b>Recommended Response Action</b>	Enter the valid IP Address.
<b>Category</b>	Audit (IPA = IP Address)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## IPA0002

<b>Message</b>	Invalid IP address specified.
<b>Detailed Description</b>	Invalid parameters passed to the function.
<b>Recommended Response Action</b>	Enter a valid IP Address.
<b>Category</b>	Audit (IPA = IP Address)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## IPA0003

<b>Message</b>	Invalid subnet mask specified.
<b>Detailed Description</b>	Invalid parameters passed to the function.
<b>Recommended Response Action</b>	Enter the appropriate subnet mask.
<b>Category</b>	Audit (IPA = IP Address)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## IPA0004

<b>Message</b>	Invalid gateway address specified.
<b>Detailed Description</b>	Invalid parameters passed to the function.
<b>Recommended Response Action</b>	Enter the appropriate gateway.
<b>Category</b>	Audit (IPA = IP Address)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## IPA0100

<b>Message</b>	The iDRAC IP Address changed from <i>arg1</i> to <i>arg2</i> .
<b>Arguments</b>	<ul style="list-style-type: none"> <li>· <b><i>arg1</i></b> = old IP Address</li> <li>· <b><i>arg2</i></b> = new IP Address</li> </ul>
<b>Detailed Description</b>	The iDRAC IP Address changed from the earlier IP Address identified in the message to the new IP Address identified in the message. This notification will be generated when the iDRAC network card selection is changed, if the DHCP lease expires and the DHCP server assigns another address, or if iDRAC IP address is manually changed.
<b>Recommended Response Action</b>	Remote management consoles that have cached or stored the iDRAC IP address may have to be updated with the new IP address either through a re-discovery or manual reconfiguration. A response action may not be required if the console receives this SNMP notification and updates the iDRAC IP address accordingly.

# ISM Event Messages

## ISM0000

**Message** The iDRAC Service Module is started on the operating system (OS) of server.

**Detailed Description** The iDRAC Service Module is started on the OS of server.

**Recommended Response Action** No response action is required.

**Category** Audit (ISM = iDRAC Service Module)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## ISM0001

**Message** The iDRAC Service Module detected a OS to iDRAC Pass-through in the *arg1* mode. Switch the OS to iDRAC Pass-through to a USB NIC mode.

**Arguments**

- ***arg1*** = mode

**Detailed Description** The iDRAC Service Module detected a OS to iDRAC Pass-through mode as identified in the message. iDRAC Service Module will automatically connect to iDRAC after the OS to iDRAC Pass-through is configured to the USB NIC mode.

**Recommended Response Action** Configure OS to iDRAC Pass-through to the USB NIC mode by running the commands: 1) racadm set idrac.os-bmc.PTMode usb-p2p 2) racadm set idrac.os-bmc.UsbNicIpAddress <ip address> 3) racadm set idrac.os-bmc.adminstate enabled.

**Category** Audit (ISM = iDRAC Service Module)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## ISM0002

**Message** The OS to iDRAC Pass-through is disabled. The iDRAC Service Module is currently enabling the OS to iDRAC Pass-through in the USB NIC mode.

**Detailed Description** The OS to iDRAC Pass-through mode is disabled. The iDRAC Service Module is currently enabling the OS to iDRAC Pass-through mode in the USB NIC mode. This operation is done only for the first run of iDRAC Service Module. If OS to iDRAC Pass-through is disabled after this point of time, iDRAC Service Module will not be able to connect to iDRAC until user enables the OS-iDRAC Pass-through in the USB mode.

**Recommended Response Action** No response action is required.

<b>Category</b>	Audit (ISM = iDRAC Service Module)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## ISM0003

<b>Message</b>	The iDRAC Service Module is unable to discover iDRAC from the operating system of the server.
<b>Detailed Description</b>	The iDRAC Service Module could not successfully discover iDRAC from the server OS. However, the iDRAC Service Module will continue the discovery operation. Make sure that the IPMI drivers are enabled on the server operating system.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (ISM = iDRAC Service Module)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## ISM0004

<b>Message</b>	The iDRAC Service Module has successfully started communication with iDRAC.
<b>Detailed Description</b>	The iDRAC Service Module has successfully started communication with iDRAC.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (ISM = iDRAC Service Module)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## ISM0005

<b>Message</b>	The iDRAC Service Module has successfully restarted communication with iDRAC.
<b>Detailed Description</b>	The iDRAC Service Module has successfully restarted communication with iDRAC.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (ISM = iDRAC Service Module)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## ISM0006

<b>Message</b>	The iDRAC Service Module is unable to communicate with iDRAC using the OS to iDRAC Pass-through channel.
<b>Detailed Description</b>	The iDRAC Service Module could not successfully communicate with iDRAC, because the OS to iDRAC Pass-through channel is not configured in the USB-NIC mode.
<b>Recommended Response Action</b>	Make sure that the OS to iDRAC Pass-through channel is configured only in the USB-NIC mode, and then retry the operation. To enable the OS-to-iDRAC Pass-through channel, run the following command in the order they are listed: 1) racadm set idrac.os-bmc.PTMode usb-p2p 2) racadm set idrac.os-bmc.UsbNicIpAddress <ip address> 3) racadm set idrac.os-bmc.adminstate enabled.
<b>Category</b>	Audit (ISM = iDRAC Service Module)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## ISM0007

<b>Message</b>	The iDRAC Service Module communication with iDRAC has ended.
<b>Detailed Description</b>	The iDRAC Service Module ended communication with iDRAC over the OS to iDRAC Pass-through channel. This is because either iDRAC is being restarted or the OS to iDRAC Pass-through configuration is being changed. The iDRAC Service Module will continue to try connecting to iDRAC.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (ISM = iDRAC Service Module)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## ISM0008

<b>Message</b>	Some features of iDRAC Service Module will be disabled on this server, because OpenManage Server Administrator is running on the operating system (OS) of this server.
<b>Detailed Description</b>	iDRAC Service Module detected that OpenManage Server Administrator is running on the OS of this server. Therefore, one or more features of iDRAC Service Module will be disabled.
<b>Recommended Response Action</b>	End the OpenManage Server Administrator session. The features will be automatically started by iDRAC Service Module.
<b>Category</b>	Audit (ISM = iDRAC Service Module)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## ISM0009

<b>Message</b>	The features of iDRAC Service Module that were disabled will be enabled on this server, because OpenManage Server Administrator is not running on the operating system (OS) of this server.
<b>Detailed Description</b>	iDRAC Service Module detected that OpenManage Server Administrator is not running on the OS of this server. Therefore, one or more features of iDRAC Service Module that were earlier disabled are now enabled on this server.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (ISM = iDRAC Service Module)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## ISM0010

<b>Message</b>	The iDRAC Service Module received a request from the <i>arg1</i> to stop the services of Service Module.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = requesting source name</li></ul>
<b>Detailed Description</b>	The iDRAC Service Module received a request from a source identified in the message to stop the Service Module services. For example, a requesting source can be an OS or iDRAC.
<b>Recommended Response Action</b>	If the requesting source is iDRAC, enable the iDRAC Service Module on the iDRAC before starting this service on the server OS. To enable the Service Module by using iDRAC GUI: Click Network, click OS to iDRAC Pass-through, and then click the USB NIC option. In the OS IP Address box , type an IP address, and then click Apply. To enable the module by using RACADM command, run the following command at the command line interface: racadm set idrac.servicemodule.ServiceModuleEnable enabled.
<b>Category</b>	Audit (ISM = iDRAC Service Module)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## ISM0011

<b>Message</b>	The server operating system (OS) is unable to start the iDRAC Service Module, because it is set to "disabled" in iDRAC.
<b>Detailed Description</b>	The server OS could not start the iDRAC Service Module, because the iDRAC Service Module disabled on iDRAC.
<b>Recommended Response Action</b>	Enable the iDRAC Service Module on the iDRAC before starting this service on the server OS, and then retry the operation. To enable the module by using iDRAC GUI: Click Network, click OS to iDRAC Pass-through, and then click the USB NIC option. In the OS IP Address box , type an IP address, and then click Apply. To enable the

module by using RACADM command, run the following command at the command line interface: racadm set idrac.servicemodule. ServiceModuleEnable enabled.

**Category** Audit (ISM = iDRAC Service Module)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## ISM0012

**Message** The iDRAC Service Module is successfully ended on the server operating system (OS).

**Detailed Description** The iDRAC Service Module is successfully ended on the server OS.

**Recommended Response Action** No response action is required.

**Category** Audit (ISM = iDRAC Service Module)

## ISM0039

<b>Message</b>	The In-band SNMP Get feature is not functional because an unsupported iDRAC configuration is detected.
<b>Detailed Description</b>	The In-band SNMP Get feature is not functional because an unsupported iDRAC configuration is detected.
<b>Recommended Response Action</b>	The In-band SNMP Get feature will not be functional in the following scenarios. 1. When System Lockdown mode is enabled in iDRAC. To disable the System Lockdown mode by using the iDRAC GUI, click iDRAC Dashboard -> More Actions -> Turn off the System Lockdown Mode. By using the RACADM Command Line Interface (CLI), run the racadm set idrac.lockdown.Systemlockdown disabled command. 2. When local RACADM configuration is disabled in iDRAC. To enable the local RACADM configuration by using the iDRAC GUI: a) Click iDRAC Settings -> Services -> Local Configuration. b) From the Disable Local Configuration using RACADM drop-down menu, select Disabled. By using the RACADM Command Line Interface (CLI), run the racadm set iDRAC.LocalSecurity.LocalConfig disabled command. 3. When iDRAC SNMP v3 is disabled in iDRAC. To enable the SNMPv3 feature by using the iDRAC GUI: a) Click iDRAC Settings -> Services -> SNMP Agent -> SNMP Protocol. b) From the drop-down menu, select ALL (SNMP V1 V2 V3). By using the RACADM Command Line Interface (CLI), run the racadm set idrac.snmp.SNMPProtocol All command.

## JCP011

<b>Message</b>	Invalid parameter value for <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"> <li>· <b><i>arg1</i></b> = parameter</li> </ul>

<b>Detailed Description</b>	The value provided for the specified parameter is invalid and must be corrected for the invoked method to complete successfully.
<b>Recommended Response Action</b>	To provide the correct value for the specified parameter, see Lifecycle Controller-Remote Services documentation. Retry the operation requested with corrected value.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP012

<b>Message</b>	The operation failed due to an internal iDRAC error.
<b>Detailed Description</b>	The requested operation requires memory or file space allocation. The operation failed due to lack of memory or file space in the iDRAC.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, reset iDRAC and retry the operation.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP013

<b>Message</b>	Missing parameter(s) <i>arg1</i>
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• <b><i>arg1</i></b> = parameters</li> </ul>
<b>Detailed Description</b>	One or more required input parameters needed for the operation are missing.
<b>Recommended Response Action</b>	Refer to the documentation for the operation being attempted and provide valid values for the identified parameters.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP014

<b>Message</b>	Maximum jobs per queue exceeded.
----------------	----------------------------------

<b>Detailed Description</b>	The number of jobs specified in the SetupJobQueue request combined with the existing job count contains more jobs IDs than the maximum number of jobs supported by the system (256). Completed jobs are automatically deleted if they are older than the delete on completion timeout setting.
<b>Recommended Response Action</b>	Reduce the number of jobs specified in the operation or reduce the existing job count before retrying the operation. Perform one of the following to reduce the job count: 1) Delete one or more jobs and retry the operation. 2) Wait until existing jobs have an elapsed time since completion that is greater than the delete on completion timeout setting and are automatically deleted. 3) Change the delete on completion timeout setting to a smaller value so that completed jobs are automatically deleted sooner.
<b>Category</b>	Configuration (JCP = Job Control)

<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP015

<b>Message</b>	A running job cannot be deleted.
<b>Detailed Description</b>	The job is currently executing and cannot be deleted. The job needs to finish running, whether successful or not, before it can be deleted.
<b>Recommended Response Action</b>	Wait for the job to have a completed job status. Retry the operation.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP016

<b>Message</b>	Invalid UntilTime value. A minimum of 5 minutes is required.
<b>Detailed Description</b>	The UntilTime input parameter for the job or job queue creation must be at least 5 minutes after the value specified in the StartTime parameter.
<b>Recommended Response Action</b>	Set the UntilTime at least 5 minutes after StartTime and retry the operation.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP017

<b>Message</b>	Job creation request unsuccessful. Maximum number of jobs reached.
----------------	--

<b>Detailed Description</b>	The current job count has reached the maximum value supported. No more jobs are created until the number of jobs on the system is reduced. Completed jobs are automatically deleted if they are older than the DeleteOnCompletionTimeout setting.
<b>Recommended Response Action</b>	Do one of the following to reduce the job count: 1) Delete one or more jobs and retry the operation. 2) Wait until existing jobs have an elapsed time since completion that is greater than the delete on completion timeout setting and are automatically deleted. 3) change the DeleteOnCompletionTimeout setting using the WSMAN API to a smaller value so that completed jobs are automatically deleted sooner.

<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP018

<b>Message</b>	Cannot create new jobs until the existing Export job is completed or the job is cancelled.
<b>Detailed Description</b>	A new job cannot be created until the existing Export job is completed or the job is deleted. There can only be one Export Server Profile job running at a time.
<b>Recommended Response Action</b>	Do one of the following: 1) Retry the operation after the Export Server Profile job is completed. 2) Delete the scheduled Export job and retry the operation.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP019

<b>Message</b>	Cannot create new jobs until the existing Import System Profile job is completed or cancelled.
<b>Detailed Description</b>	A new job cannot be created until the existing Import Server Profile job is complete or deleted. Only one Import Server Profile job can be running at any given time.
<b>Recommended Response Action</b>	Do one of the following: 1) Retry the operation after the Import Server Profile job is complete. 2) Delete the scheduled Import Server Profile job and retry the operation.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP020

<b>Message</b>	Cannot schedule jobs while export or import operations are running.
----------------	---

<b>Detailed Description</b>	Existing jobs cannot be scheduled while an Export Server Profile or Import Server Profile job is running.
<b>Recommended Response Action</b>	Retry the job scheduling operation after the export or import operation is completed.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP021

<b>Message</b>	The operation failed due to an internal iDRAC error.
<b>Detailed Description</b>	The operation did not complete successfully because of lack of an unknown error in the iDRAC.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, reset the iDRAC.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP022

<b>Message</b>	Invalid Job ID <i>arg1</i> for scheduling or deletion operation.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>· <b><i>arg1</i></b> = jobid number</li> </ul>
<b>Detailed Description</b>	An invalid Job ID was provided as input for a scheduling or deletion operation. The Job ID indicated in the message does not match an existing Job on the target system.
<b>Recommended Response Action</b>	Verify the job ID value by enumerating job instances and validating that the Job ID value is correct for the job being scheduled or deleted. Retry the operation with the correct Job ID value.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP023

<b>Message</b>	Duplicate Job ID <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"> <li>· <b><i>arg1</i></b> = jobid number</li> </ul>

<b>Detailed Description</b>	One of the job ID values specified as input to the operation is a duplicate. The duplicated Job ID is indicated in the message.
<b>Recommended Response Action</b>	Use the correct job ID and retry. Use the GetAllJobs method to retrieve all open jobs.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP024

<b>Message</b>	Lifecycle Controller is in use. This job starts when Lifecycle Controller is available.
<b>Detailed Description</b>	Lifecycle Controller cannot gain access to internal storage due to use by another application or operation. This job starts when Lifecycle Controller is available.
<b>Recommended Response Action</b>	Wait for current Lifecycle Controller operation to complete. Verify that the system is: 1) Not currently in Lifecycle Controller Unified Server Configurator 2) Not waiting for user intervention at F1/F2 POST error 3) Not in any of the device or controller Option ROMs.
<b>Category</b>	Configuration (JCP = Job Control)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## JCP025

<b>Message</b>	Lifecycle Controller is not enabled.
<b>Detailed Description</b>	Lifecycle Controller must be enabled to perform the requested operation. Lifecycle Controller can be enabled in the F2 Setup application or through a remote operation.
<b>Recommended Response Action</b>	If Lifecycle Controller is in Recovery mode a firmware update of Lifecycle Controller may be required. To change the Lifecycle Controller mode, do the following: 1) Restart the system and press F2 to launch the System Setup application 2) Select iDRAC Configuration 3) Select Lifecycle Controller Settings to enable Lifecycle Controller.

# LC Event Messages

## LC001

<b>Message</b>	Command successful.
<b>Detailed Description</b>	The command completed successfully.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC002

<b>Message</b>	General failure.
<b>Detailed Description</b>	A general failure occurred while executing the command.
<b>Recommended Response Action</b>	Verify network connectivity. If failure persists, reset the iDRAC to resolve the issue.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC003

<b>Message</b>	Failed to change the firmware update mode.
<b>Detailed Description</b>	An error occurred while trying to set the firmware update mode.
<b>Recommended Response Action</b>	Verify that the firmware version supports this mode. Also confirm that the command and parameters are correct. The parameter choices are: 1) Disable (default) 2) Allow version upgrade only 3) Match firmware of replaced part.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC004

<b>Message</b>	Provisioning Server information is not formatted correctly.
<b>Detailed Description</b>	The Provisioning Server parameter information is not formatted correctly.
<b>Recommended Response Action</b>	Verify the string format. Enter a valid IP address or hostname for the Provisioning Server such as: 1) hostname 2) hostname.domain.com 3) 1.1.1.1 4) hostname:8080 5) hostname.dell.com:8080 6) hostname1:80,hostname2:8080.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC005

<b>Message</b>	Invalid firmware update mode.
<b>Detailed Description</b>	The value provided for the update mode parameter is invalid.
<b>Recommended Response Action</b>	Verify that the correct firmware update mode was entered. The choices are: 1) Disable (default) 2) Allow version upgrade only 3) Match firmware of replaced part.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC006

<b>Message</b>	Invalid Auto-Discovery action.
<b>Detailed Description</b>	The Auto-Discovery action selected is invalid.
<b>Recommended Response Action</b>	Verify that the selected Auto-Discovery action is supported. The supported commands are documented in the Lifecycle Controller User Guide.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC007

<b>Message</b>	Invalid Parameter.
----------------	--------------------

<b>Detailed Description</b>	One of the parameters specified in the method is invalid.
<b>Recommended Response Action</b>	Verify that the parameters specified are correct. For a list of parameters for this method refer to the Lifecycle Controller User Guide.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC008

<b>Message</b>	Unsupported method parameter value.
<b>Detailed Description</b>	The parameter value is not supported.
<b>Recommended Response Action</b>	Confirm that the parameters provided are correct. For a list of parameters for this method refer to the Lifecycle Controller User Guide.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC009

<b>Message</b>	Insufficient method parameters.
<b>Detailed Description</b>	There were insufficient parameters specified for this command.
<b>Recommended Response Action</b>	Confirm that the parameters provided are correct. For a list of parameters for this method refer to the Lifecycle Controller User Guide.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC010

<b>Message</b>	Certificate imported successfully.
<b>Detailed Description</b>	The communications encryption certificate was imported successfully.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

# LC0100

<b>Message</b>	Lifecycle Controller has entered Recovery mode.
<b>Detailed Description</b>	A persistent error has occurred while carrying out a Lifecycle Controller operation. This situation causes Lifecycle Controller to enter Recovery mode. Any remote jobs pending execution were cancelled.
<b>Recommended Response Action</b>	To verify or change Recovery mode, use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings. Updating Lifecycle Controller clears the Recovery mode.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# LC0101

<b>Message</b>	Lifecycle Controller action was cancelled by a user.
<b>Detailed Description</b>	A user cancelled Lifecycle Controller actions. Any remote jobs pending execution were cancelled.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# LC011

<b>Message</b>	Certificate import operation failed.
<b>Detailed Description</b>	There was a general failure in the certificate import process.
<b>Recommended Response Action</b>	Do the following and retry the operation: 1) WS-Man: Rerun the command or reset the iDRAC by invoking the iDRACReset method which is defined in the DCIM_iDRACCardService class. 2) iDRAC GUI: Restart the iDRAC.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC012

<b>Message</b>	Another process is using Lifecycle Controller.
<b>Detailed Description</b>	Lifecycle Controller is in use by another process. Wait for other process to complete before attempting to run another command.
<b>Recommended Response Action</b>	Try one of the following: 1) Rerun the command after about 2 minutes. 2) Make sure that Lifecycle Controller Unified Server Configurator or an Update Package is not currently running on the server 3) Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC013

<b>Message</b>	Operation cannot be completed because there are no pending configuration.
<b>Detailed Description</b>	No changes are available between the previous configuration and the current configuration. At least one attribute should be changed to create a configuration job.
<b>Recommended Response Action</b>	Change the configuration of one or more attributes before creating a configuration job.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC014

<b>Message</b>	Maximum comment length is 255 characters.
<b>Detailed Description</b>	Maximum comment length is 255 characters.
<b>Recommended Response Action</b>	Limit the number of characters in the comment to 255 characters.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC015

<b>Message</b>	Invalid Part Configuration Update
<b>Detailed Description</b>	Invalid current attribute value.
<b>Recommended Response Action</b>	Check for correct parameter values: 1) Disabled 2) Apply always 3) Apply only if firmware match.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC016

<b>Message</b>	Missing required parameter, <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = parameter</li></ul>
<b>Detailed Description</b>	A required method argument was missing.
<b>Recommended Response Action</b>	Include all the parameters required for the command. Check Lifecycle Controller Profile documentation and try again.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC017

<b>Message</b>	Invalid value for the parameter, <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = parameter</li></ul>
<b>Detailed Description</b>	A parameter value provided when the method was invoked is not valid.
<b>Recommended Response Action</b>	Verify that parameter values provided to the method are typed as they appear in the enumeration and that the parameter data type matches the Lifecycle Controller Profile documentation.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC018

<b>Message</b>	The server certificate is successfully modified. To make the new certificate effective, reset the iDRAC.
<b>Detailed Description</b>	The server certificate is successfully modified. The current certificate will be active until the iDRAC is reset.
<b>Recommended Response Action</b>	To reset the iDRAC by using the iDRAC Graphical User Interface (GUI), click Maintenance > Diagnostics > Reset iDRAC. To reset by using the Command Line Interface (CLI), enter the RACADM command racadm racreset, or the iDRACReset()WS-Man method at the CLI. For information about updating the iDRAC certificate, see the iDRAC Users Guide available on the support site.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC019

<b>Message</b>	Base64 decode of PKCS12 content was not successful.
<b>Detailed Description</b>	The PKCS12 string could not be decoded from the Base64 encoding into a PKCS12 binary file.
<b>Recommended Response Action</b>	Validate that the contents of the PKCS12 parameter is base64 encoded. OpenSSL can be used to validate the encoding.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC020

<b>Message</b>	PKCS12 decrypt of the certificate could not complete.
<b>Detailed Description</b>	The contents of the PKCS12 parameter was not valid because: 1) not a valid PKCS12 file 2) not a valid pfx file 3) did not contain a certificate that matched the private key in the file.
<b>Recommended Response Action</b>	Validate that the PKCS12 content was Base64 encoded. OpenSSL can be used to create or validate a PKCS12 encoding.
<b>Category</b>	Configuration (LC = Lifecycle Controller)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LC021

<b>Message</b>	PKCS12 decrypt of private key could not complete.
<b>Detailed Description</b>	The contents of the PKCS12 parameter was not valid because: 1) not a valid PKCS12 file 2) not a valid pfx file 3) did not contain a valid key.
<b>Recommended Response Action</b>	Validate that the PKCS12 file was Base64 encoded. OpenSSL can be used to create or validate a PKCS12 file.

## LIC Event Messages

### LIC000

<b>Message</b>	The License Manager action succeeded.
<b>Detailed Description</b>	This command was successful.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

### LIC001

<b>Message</b>	The License Manager command parameter used is invalid.
<b>Detailed Description</b>	The command or command parameters passed to License Manager is invalid. This is an internal error indicative of memory corruption. Under normal circumstances this error should not occur.
<b>Recommended Response Action</b>	Contact technical support. Refer to your product documentation to choose the contact method that is convenient for you.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

### LIC002

<b>Message</b>	License Manager is unable to allocate the required resources at startup.
<b>Detailed Description</b>	The error may occur when License Manager: 1) Is unable to allocate system resources.2) Determines one or more files is incompatible with the current firmware version. This occurs when an older firmware version has been

uploaded to a system that was previously running a newer firmware version. If this occurs, the current internal License Manager files are deleted and new ones are created, which align with the firmware version. A license reimport may be required. NOTE: All import, delete, export, view license commands are blocked until this issue is resolved.

**Recommended Response Action** If the firmware has been rolled back to a previous version, this error may occur. All previously installed licenses must be re-imported. If this is not the case, contact technical support.

**Category** Audit (LIC = Licensing)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## LIC003

**Message** License Manager was unable to create and/or allocate the required resources.

**Detailed Description** System resources may be unavailable at the time command is issued.

**Recommended Response Action** Re-issue the command. If the issue persists, contact technical support. Refer to your product documentation to choose the contact method that is convenient for you.

**Category** Audit (LIC = Licensing)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## LIC004

**Message** An internal system error has occurred.

**Detailed Description** This error condition is reported when one of the following conditions occur: 1) Operating system detected a file error (for example, bad CRC, bad sector) when reading/writing a license manager file. The error could indicate bad or corrupt FLASH device. 2) License Manager detected an internal memory data corruption.3) The command or command parameters passed to License Manager is invalid. This is an internal error showing memory corruption. Under normal circumstances this error should not occur.4) When exporting a license file, License Manager was unable to allocate the temporary space required for the transfer of the file.

**Recommended Response Action** Contact technical support. Refer to your product documentation to choose the contact method that is convenient for you.

**Category** Audit (LIC = Licensing)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## LIC005

<b>Message</b>	Import failed: The maximum number of licenses are installed.
<b>Detailed Description</b>	The maximum number of installed licenses has been reached.
<b>Recommended Response Action</b>	Delete one of the currently installed licenses and retry the import.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## LIC006

<b>Message</b>	The license has expired.
<b>Detailed Description</b>	The license end date has been reached.
<b>Recommended Response Action</b>	Obtain a replacement license and import it.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## LIC007

<b>Message</b>	Invalid entry: Object does not exist or cannot be found.
<b>Detailed Description</b>	Each License Manager object has a unique identifier by which it may be accessed. If the user supplied identifier is outside the acceptable range or the object no longer exists in the system, then this error is returned. Most common identifiers are the license entitlement identifier, the device Fully Qualified Device Descriptor, or the import transaction identifier assigned to a license when imported.
<b>Recommended Response Action</b>	Re-issue this command with correct License Manager object identifier.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## LIC008

<b>Message</b>	The license binding ID does not match the device unique identifier.
<b>Detailed Description</b>	All bound perpetual licenses contain the unique identifier of a specific device. The unique identifier binds a license to the device. For example, iDRACs unique identifier is the service tag.
<b>Recommended Response Action</b>	Obtain a new license file with the correct unique identifier for the device. To use this license, import to the device with the correct unique identifier.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC009

<b>Message</b>	The license upgrade was unsuccessful.
<b>Detailed Description</b>	An upgrade license carries specific information about the license it is replacing. If that information does not match, then the license import is aborted.
<b>Recommended Response Action</b>	Obtain a new license file with the correct upgrade information.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC010

<b>Message</b>	Import failed: This license is not for the specified device.
<b>Detailed Description</b>	A license is not imported to the iDRAC when one of the following conditions exists:1) The license is not for the iDRAC.2) The target system may not be upgraded to the product class specified by the license (for example, user may not upgrade from an express product class to an enterprise product class).
<b>Recommended Response Action</b>	Verify this system may be upgraded to the product class specified by the license. If this system cannot be upgraded to the product class specified, obtain a new license file.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC011

<b>Message</b>	A non-evaluation license cannot be replaced with an evaluation license.
<b>Detailed Description</b>	License Manager does not allow the replacement of a non-evaluation license with an evaluation license.
<b>Recommended Response Action</b>	To replace a non-evaluation license, first delete the non-evaluation license, then import the evaluation license.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC012

<b>Message</b>	The license file does not exist.
<b>Detailed Description</b>	This error may occur if: 1) The license was deleted by another user. 2) The license that is being imported may have been deleted from the temporary storage before the import operation completed.3) At start-up, License Manager does not find the license assigned to the device. This may occur if a power outage occurs before a license delete operation completes.
<b>Recommended Response Action</b>	Re-import the license.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC013

<b>Message</b>	These license features are not supported by this firmware version.
<b>Detailed Description</b>	The license includes features not supported in this firmware release.
<b>Recommended Response Action</b>	Update the firmware to the latest version.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC014

<b>Message</b>	Multiple backup or restore operations have been simultaneously attempted on the License Manager database.
<b>Detailed Description</b>	An attempt to lock the License Manager database for Lifecycle Controller backup or restore occurred when the License Manager database was already locked. This may occur when two or more users attempt to do a backup or restore operation simultaneously.
<b>Recommended Response Action</b>	Repeat the Lifecycle Controller backup or restore operation.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC015

<b>Message</b>	The License Manager database restore operation failed.
<b>Detailed Description</b>	This error occurs when the Lifecycle Controller restore operation is interrupted before it completes. This can occur due to a power outage or when a system is rebooted before the operation is completed.
<b>Recommended Response Action</b>	Repeat the Lifecycle Controller restore operation. If the problem persists, contact technical support. Refer to your product documentation to choose the contact method that is convenient for you.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC016

<b>Message</b>	The feature dependencies of the license are not met.
<b>Detailed Description</b>	The license includes features that are dependent upon additional licensed features not included in this license. These licensed features are not activated until license(s) with the dependent licensed features are imported to the system.
<b>Recommended Response Action</b>	Import the license(s) that meet the license features dependencies.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC017

<b>Message</b>	The license file is corrupted, has not been unzipped, or is not a valid license file.
<b>Detailed Description</b>	This error can occur when the license file: 1) Signature is not valid. 2) Data is not in the correct format. 3) Missing needed data. 4) Contains unknown data.5) Has not been unzipped.
<b>Recommended Response Action</b>	Download the license file, unzip and import the license.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC018

<b>Message</b>	The license is already imported.
<b>Detailed Description</b>	The license is already imported on the system and does not need to be reimported.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC019

<b>Message</b>	A leased license may not be imported prior to its start date.
<b>Detailed Description</b>	A leased license may not be imported prior to the actual start date of the license.
<b>Recommended Response Action</b>	Import the license on or after the license start date.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC020

<b>Message</b>	Import failed: End User License Agreement (EULA) import upgrade warning.
----------------	--

<b>Detailed Description</b>	Importing an upgrade license without a base license is not allowed, as it may be a violation of the license EULA agreement. If the base license was deleted, the system allows the user to override the warning by invoking the import override option.
<b>Recommended Response Action</b>	If the base license was deleted, override the warning by invoking the import override option.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC021

<b>Message</b>	Import failed: The features contained in the evaluation license are already licensed.
<b>Detailed Description</b>	All the features in the evaluation license are currently licensed in the system. The license is not imported as it would duplicate existing and active licensed features.
<b>Recommended Response Action</b>	Remove the license(s) that contain the license set from the evaluation license.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC022

<b>Message</b>	License Manager database locked due to ongoing backup and restore operation.
<b>Detailed Description</b>	License Manager database is locked while a backup and restore operation is in progress. License import/export/delete operations are not allowed but a user can view license information.
<b>Recommended Response Action</b>	Wait until the backup or restore operation completes and try again.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC023

<b>Message</b>	An unauthorized iDRAC license version is being used.
<b>Detailed Description</b>	An unauthorized iDRAC license version is being used.

<b>Recommended Response Action</b>	Obtain an authorized iDRAC license version. For more information, contact your service provider. Also, see the iDRAC Users Guide available on the support site.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC024

<b>Message</b>	License operation did not complete successfully because the device is turned on.
<b>Detailed Description</b>	The License can not be installed, deleted or replaced when the device is on.
<b>Recommended Response Action</b>	Turn off the respective device and retry the License operation.
<b>Category</b>	Audit (LIC = Licensing)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LIC201

<b>Message</b>	License <i>arg1</i> assigned to device <i>arg2</i> expires in <i>arg3</i> days.
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• <b><i>arg1</i></b> = entitlement ID</li> <li>• <b><i>arg2</i></b> = device name</li> <li>• <b><i>arg3</i></b> = number of days</li> </ul>
<b>Detailed Description</b>	This license is going to expire. An expired license could result in the loss of functionality that is specific to the features supported by the license.
<b>Recommended Response Action</b>	Purchase a new license to prevent interruption of licensed features.

**Arguments**

- ***arg1*** = entitlement ID
- ***arg2*** = device name

**Detailed Description** The license has expired. This could result in the loss of functionality that is specific to the features supported by the license.

Recommended Response Action Obtain and import a replacement license.

## LOG Event Messages

### LOG001

<b>Message</b>	Missing required InstanceID or JobID parameter.
<b>Detailed Description</b>	One or more required parameters needed for the method invoked in the operation are missing.
<b>Recommended Response Action</b>	To provide the correct value for the specified parameter, see Lifecycle Controller-Remote Services documentation.
<b>Category</b>	Configuration (LOG = Log Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

### LOG002

<b>Message</b>	An invalid parameter ID is entered for <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"> <li>• <b><i>arg1</i></b> = instance ID/job ID</li> </ul>
<b>Detailed Description</b>	An invalid parameter ID is entered for the instance ID or job ID identified in the message.
<b>Recommended Response Action</b>	Enter the correct WS-Man parameter for the instance ID or job ID. For information about valid parameters, see the Lifecycle Controller Remote Services Quick Start Guide available on the support site.
<b>Category</b>	Configuration (LOG = Log Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

### LOG003

<b>Message</b>	ConfigResults not available for log entry specified.
<b>Detailed Description</b>	The log entry with the specified InstanceID does not have any associated configuration results.
<b>Recommended Response Action</b>	Verify the ConfigResults availability for the InstanceID through enumeration of the LogEntry class and retry the operation. Refer to the Lifecycle Controller-Remote Services documentation.

## LOG006

**Message** Test event generated for message ID *arg1* .  
**Arguments**  
· ***arg1*** = message ID  
**Detailed Description** This message is generated while performing a Test Event action. Performing a Test Event action logs an event in the Lifecycle Log with the user specified message ID. It may also generate events through SNMP, email, or other event notification sources if they are enabled. The test event does not indicate that there is a hardware or software problem. It provides a mechanism for users to test their event processing applications.  
**Recommended Response Action** No response action is required.

## LOG326

<b>Message</b>	The Alert Log was cleared.
<b>Detailed Description</b>	The Alert Log was cleared.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (LOG = Log Event)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LOG327

<b>Message</b>	An Alert Log backup was created.
<b>Detailed Description</b>	An Alert Log backup was created.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (LOG = Log Event)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LOG328

<b>Message</b>	The Server Based Management Mode is enabled.
<b>Detailed Description</b>	The Server Based Management Mode is enabled. Chassis based PSUs, fans, and sensor information can be displayed from server based system management tools.
<b>Recommended Response Action</b>	No response action is required.

Category	Audit (LOG = Log Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## LOG329

Message	The Server Based Management Mode is disabled.
Detailed Description	The Server Based Management Mode is disabled. Chassis based PSUs, fans, and sensor information will not be displayed from server based system management tools.
Recommended Response Action	No response action is required.
Category	Audit (LOG = Log Event)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## LOG501

Message	Unable to run the command because of a general issue.
Detailed Description	The command cannot be run because a general issue occurred.
Recommended Response Action	Retry the operation. If the issue persists, reset the CMC, and then retry the operation.
Category	Configuration (LOG = Log Event)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## LOG502

Message	Unable to run the command because the method parameter <i>arg1</i> is missing.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = parameter</li></ul>
Detailed Description	The command cannot be run because the method parameter identified in the message is missing.
Recommended Response Action	Enter all the parameters required in the command, and then retry the operation. For more information, see the Chassis Record Log Profile.
Category	Configuration (LOG = Log Event)
Severity	Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# LOG503

**Message** Unable to run the method because the parameter *arg1* is not valid.

**Arguments**

- ***arg1*** = parameter

**Detailed Description** The command cannot be run because the value of the parameter identified in the message is not valid.

**Recommended Response Action** Enter all the parameters required in the command as per the enumeration, and then retry the operation. For more information, see the Chassis Record Log Profile.

**Category** Configuration (LOG = Log Event)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# LOG504

**Message** Chassis Log Export was successful.

**Detailed Description** The Chassis Log was successfully exported to the destination specified.

**Recommended Response Action** No response action is required.

**Category** Configuration (LOG = Log Event)

**Severity** Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

# LOG505

**Message** Unable to access the network share.

**Detailed Description** The network share access cannot be accessed.

**Recommended Response Action** Make sure that correct network share access credentials are entered (such as IP address, username, password, and share type). For more information, see the Chassis Record Log Profile.

**Category** Configuration (LOG = Log Event)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

## LOG506

<b>Message</b>	Unable to start the requested operation because the ExportChassisLog operation is already running.
<b>Detailed Description</b>	The requested operation cannot be started because the ExportChassisLog operation is already running.
<b>Recommended Response Action</b>	Wait for the current ExportChassisLog operation to complete and then retry the operation. If the issue persists, contact your service provider.
<b>Category</b>	Configuration (LOG = Log Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LOG507

<b>Message</b>	Unable to allocated required CMC resources.
<b>Detailed Description</b>	The operation did not complete successfully because of lack of memory or file space in the CMC.
<b>Recommended Response Action</b>	Reset the CMC and retry the operation.
<b>Category</b>	Configuration (LOG = Log Event)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LOG508

<b>Message</b>	Unable to write to the network share.
<b>Detailed Description</b>	The network share may be read-only or it may not have sufficient space for the export operation.
<b>Recommended Response Action</b>	Verify the network share is not read-only and has sufficient space for exporting, then retry the operation.
<b>Category</b>	Configuration (LOG = Log Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LOG509

<b>Message</b>	Unable to run the command because the parameter value of <i>arg1</i> exceeds the maximum allowed number of <i>arg2</i> characters.
----------------	--

<b>Arguments</b>	<ul style="list-style-type: none"> <li>· <b>arg1</b> = parameter name</li> <li>· <b>arg2</b> = max parameter length</li> </ul>
<b>Detailed Description</b>	The command cannot be run because the value of the parameter identified in the message exceeds the maximum length identified in the message.
<b>Recommended Response Action</b>	Enter a value for the parameter identified in the message that is equal to or less than the maximum allowed characters.
<b>Category</b>	Configuration (LOG = Log Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LOG510

<b>Message</b>	Unable to complete the operation because of an unknown issue in the CMC.
<b>Detailed Description</b>	The operation cannot be completed because of an unknown issue.
<b>Recommended Response Action</b>	Retry the operation. If the issue persists, reset CMC and then retry the operation.
<b>Category</b>	Configuration (LOG = Log Event)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## LOG908

<b>Message</b>	Unable to assign the IP address because iDRAC detected that this IP address is already used by another device on the network: <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"> <li>· <b>arg1</b> = IP Address</li> </ul>
<b>Detailed Description</b>	The IP address cannot be assigned because iDRAC detected that this IP address is already used by another device on the network.
<b>Recommended Response Action</b>	Enter a unique IP address to iDRAC and retry the operation.

## MEM9014

**Message** A correctable memory error has occurred in Dual In-line Memory Module (DIMM) device *arg1*.

**Arguments**

- ***arg1*** = location

**Detailed Description** The memory device identified in the message has encountered a correctable memory error. This may be an early indicator of a possible future uncorrectable error.

**Recommended Response Action** This is a correctable error. Review log information and if multiple correctable errors have occurred on the DIMM identified in the message, re-install the memory device. If the issue persists, contact your service provider.

**Category** System Health (MEM = Memory)

**Severity** Severity 2 (Warning)

**LCD Message** DIMM <location> has a correctable memory error.

**Redfish Event Type**

*No alerts are applicable for this message*

## MEM9015

**Message** Multi-bit memory errors detected on a Dual In-line Memory Module (DIMM) device *arg1*.

**Arguments**

- ***arg1*** = location

**Detailed Description** The memory device identified in the message has encountered an uncorrectable error. System performance may be degraded. The operating system and/or applications may fail as a result.

**Recommended Response Action** Re-install the memory component identified in the message. If the issue persists, contact your service provider. Refer to the product documentation to choose a convenient contact method.

**Category** System Health (MEM = Memory)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## MEM9016

**Message** Correctable memory error rate exceeded for Dual In-line Memory Module (DIMM) *arg1* .

**Arguments**

- ***arg1*** = location

**Detailed Description** The memory device identified in the message may not be operational. This an early indicator of a possible future uncorrectable error.

**Recommended Response Action** Re-install the memory component identified in the message. If the issue persists, contact your service provider. Refer to the product documentation to choose a convenient contact method.

**Category** System Health (MEM = Memory)

**Severity** Severity 2 (Warning)

**LCD Message** DIMM <location> exceeded correctable memory error rate.

**Redfish Event Type**

*No alerts are applicable for this message*

## MEM9020

**Message** The Non-Volatile Dual In-line Memory Module (NVDIMM) device in the slot *arg1* is about to reach the end of supported life duration.

**Arguments**

- ***arg1*** = location

**Detailed Description** The NVDIMM device in the slot, identified in the message, is about to reach the end of supported life duration.

**Recommended Response Action** During the next scheduled maintenance, replace the Non-Volatile Dual In-line Memory Module (NVDIMM) device. For more information about the usage of NVDIMMs, see the system Owners Manual on the support site.

## MEM9038

<b>Message</b>	The Non-Volatile Dual In-line Memory Module (NVDIMM) device in the slot <i>arg1</i> has lost persistency and is placed in write-protect mode.
<b>Arguments</b>	· <b><i>arg1</i></b> = location
<b>Detailed Description</b>	The NVDIMM device in the slot identified in the message has lost persistency and is placed in write-protect mode.
<b>Recommended Response Action</b>	Remove and reinstall the Non-Volatile Dual In-line Memory Module (NVDIMM) device. If the issue persists, contact the service provider. For information about removing and reinstalling the NVDIMM, see the system Owners Manual on the support site.

## MEM9040

**Message** A Critical event was detected on the Non-Volatile Dual In-line Memory Module (NVDIMM) device in the slot *arg1*.

**Arguments**  
· *arg1* = location

**Detailed Description** The NVDIMM device in the slot identified in the message has encountered a critical error. System performance may be degraded. The operating system and/or applications may fail as a result.

**Recommended Response Action** Remove and reinstall the Non-Volatile Dual In-line Memory Module (NVDIMM) device. If the issue persists, contact the service provider. For information about removing and reinstalling the NVDIMM, see the system Owners Manual on the support site.

**Category** System Health (MEM = Memory)

# NFAB Event Messages

## NFAB0001

**Message** The health status of network fabric *arg1* having fabric ID as *arg2* is ok.

## Arguments

- **arg1** = fabric name
- **arg2** = fabric ID

**Detailed Description** The health status of network fabric identified in the message is ok.

**Recommended Response Action** No response action is required.

**Category** System Health (NFAB = Fabric)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

## NFAB0002

**Message** The health status of network fabric *arg1* having fabric ID as *arg2* is in Warning condition.

**Arguments**

- ***arg1*** = fabric name
- ***arg2*** = fabric ID

**Detailed Description** The health status of network fabric identified in the message is in Warning condition.

**Recommended Response Action** For more information, see the Fabric Health issue list available on the support site.

**Category** System Health (NFAB = Fabric)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## NFAB0003

**Message** The health status of network fabric *arg1* having fabric ID as *arg2* is in Critical condition.

**Arguments**

- ***arg1*** = fabric name
- ***arg2*** = fabric ID

**Detailed Description** The health status of network fabric identified in the message is in Critical condition.

**Recommended Response Action** Make sure that the I/O Module, management interface configuration, and physical connection are appropriate for the node. Also, make sure that the maintenance activities on the following are completed before proceeding further: 1) Ongoing MCM Group maintenance 2) Management Module 3) Fabric 4) Node. For more information, see the Fabric Health issue list.

**Category** System Health (NFAB = Fabric)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## NFAB0004

**Message** The network fabric *arg1* having fabric ID as *arg2* is valid.

**Arguments**

- ***arg1*** = fabric name
- ***arg2*** = fabric ID

**Detailed Description** The network fabric identified in the message is valid. The network fabric validation criteria such as design, fabric node inventory, I/O module placement requirements, and inter-node connectivity are consistent.

<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NFAB = Fabric)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NFAB0005

<b>Message</b>	The network fabric <i>arg1</i> having fabric ID as <i>arg2</i> is invalid.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = fabric Name</li><li>· <b><i>arg2</i></b> = fabric ID</li></ul>
<b>Detailed Description</b>	The network fabric identified in the message is invalid. The network fabric validation criteria such as design, fabric node inventory, I/O module placement requirements, and inter-node connectivity are inconsistent.
<b>Recommended Response Action</b>	For more information about the configuration, inventory, and placement requirements, see the predefined System Architecture documentation available on the support site.
<b>Category</b>	System Health (NFAB = Fabric)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NFAB0006

<b>Message</b>	Unable to complete the fabric validation operation because the I/O Module information is not available.
<b>Detailed Description</b>	The fabric validation can not be completed because the I/O Module information is not available.
<b>Recommended Response Action</b>	Make sure that all the I/O Modules are in the chassis.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NFAB0007

<b>Message</b>	Unable to validate the network fabric because the I/O Modules are in different banks.
<b>Detailed Description</b>	The fabric cannot be validated because the I/O Modules are in different banks.

<b>Recommended Response Action</b>	Make sure that the I/O Modules are in the same bank.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NFAB0008

<b>Message</b>	Unable to validate the network fabric because the I/O Modules are in the same slot.
<b>Detailed Description</b>	The fabric cannot be validated because the I/O Modules are in the same slot.
<b>Recommended Response Action</b>	Make sure that the I/O Modules are in different slots.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NFAB0009

<b>Message</b>	Unable to validate the network fabric because the MX9116n Fabric Engines are in the same chassis.
<b>Detailed Description</b>	The fabric cannot be validated because the MX9116n Fabric Engines are in the same chassis.
<b>Recommended Response Action</b>	Make sure that the MX9116n Fabric Engines are in different chassis.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NFAB0010

<b>Message</b>	Unable to validate the network fabric because the MX5108n Ethernet Switches are in different chassis.
<b>Detailed Description</b>	The fabric cannot be validated because the MX5108n Ethernet Switches are in different chassis.
<b>Recommended Response Action</b>	Make sure that the MX5108n Ethernet Switches are in the same chassis.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## NFAB0011

<b>Message</b>	Unable to validate the network fabric because the I/O Modules are of different type.
<b>Detailed Description</b>	The network fabric cannot be validated because the I/O Modules are of different type.
<b>Recommended Response Action</b>	Make sure that all the I/O Modules are of same type and retry the operation.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NFAB0012

<b>Message</b>	Unable to validate the fabric because the design link <i>arg1</i> is not connected as per design <i>arg2</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Design Link</li><li>· <b><i>arg2</i></b> = Design</li></ul>
<b>Detailed Description</b>	The fabric cannot be validated because the design link is not connected as per the design.
<b>Recommended Response Action</b>	Make sure that the links are connected as per the design.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NFAB0013

<b>Message</b>	Unable to validate the fabric because the design <i>arg1</i> is unavailable.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Design</li></ul>
<b>Detailed Description</b>	The fabric cannot be validated because the design is unavailable.
<b>Recommended Response Action</b>	Make sure that the correct design information is provided and retry the operation.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## NFAB0014

<b>Message</b>	The network fabric is not healthy because the I/O Module <i>arg1</i> is not healthy.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Node ID</li></ul>
<b>Detailed Description</b>	The network fabric is not healthy because the I/O Module identified in the message is not healthy.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NFAB0015

<b>Message</b>	The network fabric is not healthy because the I/O Module <i>arg1</i> is offline or can not be communicated.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Node Id</li></ul>
<b>Detailed Description</b>	The network fabric is not healthy because the I/O Module identified in the message is offline or can not be communicated.
<b>Recommended Response Action</b>	Make sure that the I/O Module is online.
<b>Category</b>	Audit (NFAB = Fabric)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NFAB0016

<b>Message</b>	The network fabric is not healthy because the uplink <i>arg1</i> interface <i>arg2</i> is not in operational status.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Uplink Id</li><li>· <b><i>arg2</i></b> = Interface Name</li></ul>
<b>Detailed Description</b>	The network fabric is not healthy because the uplink interface mentioned in the message is not in operational status.
<b>Recommended Response Action</b>	Make sure that all the uplink interfaces are in operational status.

**Category** Audit (NFAB = Fabric)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NFAB0017

**Message** The network fabric is not healthy because ISLs are not connected.  
**Detailed Description** The network fabric is not healthy because the ISLs are not connected.  
**Recommended Response Action** Make sure that all the ISLs are connected as per the specification.  
**Category** Audit (NFAB = Fabric)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NFAB0018

**Message** The network fabric is not healthy because uplinks are not configured.  
**Detailed Description** The network fabric is not healthy because uplinks are not configured.  
**Recommended Response Action** Make sure at least one uplink is configured to the fabric.  
**Category** Audit (NFAB = Fabric)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NFAB0019

**Message** The network fabric is not healthy because the uplink *arg1* interface *arg2* is not bonded.  
**Arguments**

- ***arg1*** = Uplink Id
- ***arg2*** = Interface Id

**Detailed Description** The network fabric is not healthy because one or more of the uplink interfaces are not bonded.  
**Recommended Response Action** Make sure that the Link Aggregation Control Protocol (LACP) is enabled on the remote node to which the uplink ports are connected.  
**Category** Audit (NFAB = Fabric)  
**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# NFAB0020

**Message** The network fabric is not healthy because the uplink *arg1* configuration across the fabric nodes are asymmetric.

**Arguments**

- ***arg1*** = Uplink Id

**Detailed Description** The network fabric is not healthy because the configuration of uplink identified in the message is not symmetric across the fabric nodes.

**Recommended Response Action** Make sure the configuration for uplink across the nodes are symmetric.

**Category** Audit (NFAB = Fabric)

**Severity** Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# NIC Event Messages

## NIC001

**Message** The command was successful.

**Detailed Description** The command was successful.

**Recommended Response Action** No response action is required.

**Category** Configuration (NIC = NIC Configuration)

**Severity** Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

## NIC002

**Message** Resource allocation failure

**Detailed Description** Unable to allocate required memory to perform the operation.

**Recommended Response Action** Power cycle system and reapply firmware packages for Lifecycle Controller and iDRAC.

**Category** Configuration (NIC = NIC Configuration)

**Severity** Severity 1 (Critical)

## Redfish Event Type

*No alerts are applicable for this message*

# NIC003

Message	Missing required parameter
Detailed Description	An invalid number of arguments was passed to the method.
Recommended Response Action	Enter all the required command parameters. Check documentation and try again.
Category	Configuration (NIC = NIC Configuration)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

# NIC004

Message	Invalid parameter value for <i>arg1</i>
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = attribute name</li></ul>
Detailed Description	The value for the specified parameter is invalid.
Recommended Response Action	Verify that parameter values passed to the method are entered as they appear in the enumeration and parameter data type matches the documentation.
Category	Configuration (NIC = NIC Configuration)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

# NIC005

Message	Mismatch in AttributeName and AttributeValue count
Detailed Description	The number of AttributeName and AttributeValue parameters do not match.
Recommended Response Action	Pass the same number of parameters for AttributeName and AttributeValue. Refer to documentation for method input parameter details.
Category	Configuration (NIC = NIC Configuration)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NIC006

<b>Message</b>	A configuration job already exists, Cannot set attribute on specified target until existing job is completed or is cancelled
<b>Detailed Description</b>	A configuration job already exists for the specified target. No further configuration operation is allowed until the existing job completes or the job is cancelled.
<b>Recommended Response Action</b>	Do one of the following: 1) Wait for the existing configuration job to complete and retry the operation, 2) To continue with a configuration change, cancel the existing job and retry the operation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC007

<b>Message</b>	A configuration job already exists, Cannot create another configuration job on specified target until existing job is completed or is cancelled
<b>Detailed Description</b>	A configuration job already exists for the specified target. No further configuration operation is allowed until the existing job completes or the job is cancelled.
<b>Recommended Response Action</b>	Do one of the following: 1) Wait for the existing configuration job to complete and retry the operation, 2) To continue with a configuration change, cancel the existing job and retry the operation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC008

<b>Message</b>	No pending data present to create a Configuration job
<b>Detailed Description</b>	No changes are available between the previous configuration and the current configuration. To create a Configuration job, at least one attribute should be changed.
<b>Recommended Response Action</b>	Change the configuration of one or more attributes and then create a configuration job.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC009

<b>Message</b>	Lifecycle Controller is currently in use.
<b>Detailed Description</b>	Lifecycle Controller cannot gain access to internal storage because it is use by another application or operation.
<b>Recommended Response Action</b>	Wait for the current Lifecycle Controller operation to complete. Verify that the system is 1) Not currently in Lifecycle Controller Unified Server Configurator utility 2) Not waiting for user intervention at F1/F2 POST error 3) Not in any of the device or controller Option ROMs and retry the operation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC010

<b>Message</b>	Lifecycle Controller is not enabled, cannot create Configuration job.
<b>Detailed Description</b>	For 11G systems: System Services must be enabled to perform the requested operation. System Services has been disabled through the iDRAC configuration utility accessed by pressing CTRL+E on boot up or through a remote operation. For 12G and above generations: Lifecycle Controller must be enabled to perform the requested operation. Lifecycle Controller has been disabled by pressing F2 Setup, selecting iDRAC Configuration, and selecting Lifecycle Controller Settings on boot up or through a remote operation.
<b>Recommended Response Action</b>	For 11G systems: Use the iDRAC configuration utility to enable the System Services by pressing on the CTRL+E option on boot up at the targeted system. For 12G and above generations: Use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings, to enable the Lifecycle Controller on boot up of the targeted system.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC011

<b>Message</b>	Configuration job already created, pending data cannot be deleted
<b>Detailed Description</b>	Configuration job already created on the specified target. No further command is allowed until the existing job is completed.
<b>Recommended Response Action</b>	Cancel the configuration job or wait for the job to complete. Refer to documentation on job cancellation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## NIC012

<b>Message</b>	No pending data to delete.
<b>Detailed Description</b>	No changes to BIOS attribute data are available between the previous configuration and the current configuration.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC013

<b>Message</b>	Invalid AttributeName: <i>arg1</i>
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = attribute name</li></ul>
<b>Detailed Description</b>	An unknown AttributeName was entered for the operation.
<b>Recommended Response Action</b>	Enter the correct AttributeName available in the system. Refer to the enumeration response for desired attribute.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC014

<b>Message</b>	Invalid AttributeValue for AttributeName <i>arg1</i>
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = attribute name</li></ul>
<b>Detailed Description</b>	AttributeValue may be invalid because of the following causes: 1) Length of new AttributeValue is not within minLength and maxLength 2) Value of new AttributeValue is not within LowerBound and UpperBound 3) Value of new AttributeValue is not one of the possible values.
<b>Recommended Response Action</b>	Refer to the documentation on valid attribute values.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# NIC015

**Message** AttributeValue cannot be changed to read only AttributeName *arg1* .

**Arguments**

- ***arg1*** = attribute name

**Detailed Description** A set attribute operation was attempted on a read only attribute.

**Recommended Response Action** No response action is required.

**Category** Configuration (NIC = NIC Configuration)

**Severity** Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

# NIC016

**Message** AttributeValue cannot be changed for disabled AttributeName *arg1* .

**Arguments**

- ***arg1*** = attribute name

**Detailed Description** A set attribute operation was attempted on a disabled attribute.

**Recommended Response Action** No response action is required.

**Category** Configuration (NIC = NIC Configuration)

**Severity** Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

# NIC017

**Message** Unable to delete vFlash pending one-time boot configuration

**Detailed Description** Unable to delete vFlash pending one-time boot configuration.

**Recommended Response Action** Remove AC power from system and after restoring AC power, retry the operation.

**Category** Configuration (NIC = NIC Configuration)

**Severity** Severity 1 (Critical)

## Redfish Event Type

*No alerts are applicable for this message*

## NIC018

<b>Message</b>	Invalid BIOS password.
<b>Detailed Description</b>	The input BIOS password used in the operation is invalid.
<b>Recommended Response Action</b>	Use a valid BIOS password and retry.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC021

<b>Message</b>	Cannot authenticate specified BIOS password.
<b>Detailed Description</b>	The old BIOS password used to change the password is incorrect.
<b>Recommended Response Action</b>	Enter the correct old password for the BIOS and retry the operation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC022

<b>Message</b>	Unable to set the BIOS password because of a jumper setting on the motherboard.
<b>Detailed Description</b>	The current BIOS password jumper setting prevents the BIOS password from being changed.
<b>Recommended Response Action</b>	Change the jumper setting to enable setting the BIOS password.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC023

<b>Message</b>	Cannot perform the operation due to an unknown error in iDRAC.
<b>Detailed Description</b>	The operation did not complete successfully because of an unknown error in iDRAC.
<b>Recommended Response Action</b>	Retry the action. If the issue persists, reset the iDRAC.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC024

<b>Message</b>	The set operation did not complete successfully as the attribute is read-only.
<b>Detailed Description</b>	The attribute specified in the operation is currently read only and the value cannot be modified.
<b>Recommended Response Action</b>	For more information on the attribute, see Lifecycle Controller-Remote Services documentation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC025

<b>Message</b>	Unable to start the configuration operation because the System Lockdown mode is enabled.
<b>Detailed Description</b>	The configuration operation cannot be started because the System Lockdown mode is enabled.
<b>Recommended Response Action</b>	Make sure that the Lockdown.1#SystemLockdown attribute is set to Disabled in the DCIM_iDracCardEnumeration class by running the WS-Man get command at the command line interface (CLI), and then retry the operation.
<b>Category</b>	Configuration (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC100

<b>Message</b>	The <i>arg1</i> Port <i>arg2</i> network link is down.
----------------	--

## Arguments

- **arg1** = Controller
- **arg2** = Port

**Detailed Description** The network link is down. Either the network cable is not connected or the network device is not working.

**Recommended Response Action** Verify that the network port is enabled and if the port has Activity/Speed LEDs, that they are lit. Check the network cable, network cable connections, and the attached network switch.

**Category** System Health (NIC = NIC Configuration)

**Severity** Severity 2 (Warning)

**Trap/EventID** 2090

## NIC101

**Message** The *arg1* Port *arg2* network link is started.

## Arguments

- **arg1** = controller ID
- **arg2** = port ID

**Detailed Description** The transition from network link not started (down) to network link started (up) has been detected on the NIC controller port identified in the message.

**Recommended Response Action** No response action is required.

**Category** System Health (NIC = NIC Configuration)

**Severity** Severity 3 (Informational)

**Trap/EventID** 2091

## NIC500

<b>Message</b>	The requested object is not allowed to be configured if DHCP is enabled.
<b>Detailed Description</b>	The values of IP Address is not allowed to change if DHCP is enabled.
<b>Recommended Response Action</b>	Disable DHCP and then modify the value.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC501

<b>Message</b>	The requested object is not allowed to be configured if Auto Config is enabled.
<b>Detailed Description</b>	Autoconfig assigns values to the network components.
<b>Recommended Response Action</b>	Disable Autoconfig and then modify the value.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC502

<b>Message</b>	DHCP is required to be enabled on the NIC before DHCP can be enabled for DNS server or domain name objects.
<b>Detailed Description</b>	The value of the specified parameter cannot be changed.
<b>Recommended Response Action</b>	Enable DHCP on the NIC before enabling it for DNS.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC503

<b>Message</b>	The DNS server IP address is not allowed to be configured if DNS server DHCP (cfgDNSServersFromDHCP) is enabled.
<b>Detailed Description</b>	The value of the specified parameter cannot be changed.
<b>Recommended Response Action</b>	Disable the cfgDNSServersFromDHCP object.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC504

<b>Message</b>	The IPv6 DNS Server IP address is not allowed to be configured if IPv6 DNS Server DHCP (cfgIPv6DNSServersFromDHCP6) is enabled.
<b>Detailed Description</b>	The value of the specified parameter cannot be changed.
<b>Recommended Response Action</b>	Disable the cfgIPv6DNSServersFromDHCP6 object.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC505

<b>Message</b>	The DNS domain name is not allowed to be configured if domain name DHCP (cfgDNSDomainNameFromDHCP) is enabled.
<b>Detailed Description</b>	The value of the specified parameter cannot be changed.
<b>Recommended Response Action</b>	Disable the cfgDNSDomainNameFromDHCP object.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC506

<b>Message</b>	The requested object requires DNS registration to be enabled.
<b>Detailed Description</b>	The requested operation requires the DNS registration to be enabled.
<b>Recommended Response Action</b>	Enable the DNS registration.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC507

<b>Message</b>	Unable to determine current NIC state.
<b>Detailed Description</b>	For the requested operation, enable the NIC to get the NIC details.
<b>Recommended Response Action</b>	Check if the NIC is disabled. If disabled, enable the NIC.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC508

<b>Message</b>	NIC teaming info is not currently available.
<b>Detailed Description</b>	None.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC509

<b>Message</b>	NIC is now ENABLED
----------------	--------------------

<b>Detailed Description</b>	Success message.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC510

<b>Message</b>	NIC is now DISABLED
<b>Detailed Description</b>	Success message.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC511

<b>Message</b>	NIC is already ENABLED
<b>Detailed Description</b>	Success message.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC512

<b>Message</b>	DHCP is already ENABLED
<b>Detailed Description</b>	Success message.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)

## Redfish Event Type

*No alerts are applicable for this message*

# NIC513

<b>Message</b>	DHCP6 is already ENABLED
<b>Detailed Description</b>	Success message.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# NIC514

<b>Message</b>	DHCP is now ENABLED
<b>Detailed Description</b>	Success message.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# NIC515

<b>Message</b>	DHCP6 is now ENABLED
<b>Detailed Description</b>	Success message.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	System Health (NIC = NIC Configuration)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NIC516

Message	Static IP configuration enabled and modified successfully
Detailed Description	Success message.
Recommended Response Action	No response action is required.
Category	System Health (NIC = NIC Configuration)
Severity	Severity 3 (Informational)
Redfish Event Type	

*No alerts are applicable for this message*

## NINT Event Messages

### NINT0001

Message	The interface <i>arg1</i> is in operational status.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = interface ID</li></ul>
Detailed Description	The interface identified in the message is in operational status.
Recommended Response Action	No response action is required.
Category	Audit (NINT = Interface)
Severity	Severity 3 (Informational)
Redfish Event Type	

*No alerts are applicable for this message*

### NINT0002

Message	The interface <i>arg1</i> is not operational.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = interface ID</li></ul>
Detailed Description	The interface identified in the message is not operational.
Recommended Response Action	Confirm the interface configuration and the associated physical port connectivity to determine the operational status of the interface.
Category	Audit (NINT = Interface)
Severity	Severity 2 (Warning)
Redfish Event Type	

*No alerts are applicable for this message*

## NLIN Event Messages

### NLIN0001

**Message** The link between Source *arg1* and Destination *arg2* is created.

**Arguments**

- ***arg1*** = source interface ID
- ***arg2*** = destination interface ID

**Detailed Description** The link between Source and Destination identified in the message is created.

**Recommended Response Action** No response action is required.

**Category** Audit (NLIN = Link)

**Severity** Severity 3 (Informational)

**Redfish Event Type**

*No alerts are applicable for this message*

### NLIN0002

**Message** The link *arg1* is successfully deleted.

**Arguments**

- ***arg1*** = Source Interface ID

**Detailed Description** The link identified in the message is successfully deleted.

**Recommended Response Action** No response action is required.

**Category** Audit (NLIN = Link)

**Severity** Severity 2 (Warning)

**Redfish Event Type**

*No alerts are applicable for this message*

## NNOD Event Messages

### NNOD0001

**Message** The I/O Module *arg1* is operational.

**Arguments**

- ***arg1*** = Node ID

Detailed Description	The I/O Module identified in the message is operational.
Recommended Response Action	No response action is required.
Category	System Health (NNOD = Node)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NNOD0002

Message	The operational status of I/O Module <i>arg1</i> might have ended.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Node ID</li></ul>
Detailed Description	The operational status of the I/O Module identified in the message has ended. Possible reasons could be that the MCM Group maintenance is in progress or Management Module maintenance is in progress or Fabric maintenance is in progress or Node maintenance is in progress.
Recommended Response Action	Make sure that the I/O Module, management interface configuration and physical connectivity are appropriate for the node. Also ensure that all the ongoing MCM Group maintenance and Management Module maintenance and Fabric maintenance and Node maintenance have completed before proceeding further.
Category	System Health (NNOD = Node)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NNOD0003

Message	The I/O Module <i>arg1</i> is discovered.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Node ID</li></ul>
Detailed Description	The I/O Module identified in the message is discovered.
Recommended Response Action	No response action is required.
Category	Audit (NNOD = Node)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NNOD0004

<b>Message</b>	Unable to detect the I/O Module <i>arg1</i> because of physical connection and operational issues.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Node ID</li></ul>
<b>Detailed Description</b>	The I/O Module identified in the message cannot be detected because of physical connection and operational issues.
<b>Recommended Response Action</b>	Make sure that the physical presence and operations of the I/O Module are correct.
<b>Category</b>	Audit (NNOD = Node)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NNOD0005

<b>Message</b>	The MX7116n Fabric Expander Module <i>arg1</i> is discovered.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = spinner ID</li></ul>
<b>Detailed Description</b>	The MX7116n Fabric Expander Module identified in the message is discovered.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NNOD = Node)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NNOD0006

<b>Message</b>	Unable to detect the MX7116n Fabric Expander Module <i>arg1</i> because of physical connection issues.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = spinner ID</li></ul>
<b>Detailed Description</b>	The MX7116n Fabric Expander Module identified in the message cannot be detected because of physical connection issues.
<b>Recommended Response Action</b>	Make sure that the MX7116n Fabric Expander Module is properly connected.
<b>Category</b>	Audit (NNOD = Node)

**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NNOD0007

**Message** Unable to perform a simple I/O module swap operation because the replacement I/O module software version *arg1* is different from the fabric software version *arg2* .

**Arguments**

- ***arg1*** = software version
- ***arg2*** = software version

**Detailed Description** A simple I/O module swap operation cannot be performed because the replacement I/O module software version is different from the fabric software version as identified in the message.

**Recommended Response Action** Make sure that the software versions of replacement I/O module and fabric are the same.

**Category** Audit (NNOD = Node)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## NSER Event Messages

### NSER0001

**Message** The server *arg1* is detected.

**Arguments**

- ***arg1*** = Server ID

**Detailed Description** The server identified in the message is detected.

**Recommended Response Action** No response action is required.

**Category** Audit (NSER = Server)

**Severity** Severity 3 (Informational)

**Redfish Event Type**  
*No alerts are applicable for this message*

### NSER0002

**Message** The server *arg1* is not detected.

Arguments	· <b>arg1</b> = Server ID
Detailed Description	The server identified in the message is not detected. Possible reasons could be that the fabric node to which the server is connected is operationally down or the server is moved or replaced from the existing slot.
Recommended Response Action	Make sure that the server is physically present and operational. Also ensure that the fabric node that is connected to the server is operational.
Category	Audit (NSER = Server)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NSER0003

Message	The server <i>arg1</i> is onboarded.
Arguments	· <b>arg1</b> = server ID
Detailed Description	The configuration of server identified in the message is validated and onboarded.
Recommended Response Action	No response action is required.
Category	Audit (NSER = Server)
Severity	Severity 3 (Informational)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NSER0004

Message	The server <i>arg1</i> is offboarded.
Arguments	· <b>arg1</b> = Server Id
Detailed Description	The detected server and its configuration is no longer validated.
Recommended Response Action	Make sure that the server is physically present and operational.
Category	Audit (NSER = Server)
Severity	Severity 2 (Warning)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NSER0005

<b>Message</b>	The server <i>arg1</i> with Server Interface <i>arg2</i> is onboarded.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = server ID</li><li>· <b><i>arg2</i></b> = server interface ID</li></ul>
<b>Detailed Description</b>	The configuration of server identified in the message is validated and successfully onboarded.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Audit (NSER = Server)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NSER0006

<b>Message</b>	Server <i>arg1</i> ServerInterface <i>arg2</i> is offboarded.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Server Id</li><li>· <b><i>arg2</i></b> = Server Interface Id</li></ul>
<b>Detailed Description</b>	The detected server interface and its configuration is not validated.
<b>Recommended Response Action</b>	Make sure that the server interface is physically present and operational.
<b>Category</b>	Audit (NSER = Server)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NSER0007

<b>Message</b>	The server <i>arg1</i> having the OnboardInterface <i>arg2</i> and Server Interfaces: <i>arg3</i> , are bonded.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = server ID</li><li>· <b><i>arg2</i></b> = Onboard Interface ID</li><li>· <b><i>arg3</i></b> = server interface IDs</li></ul>
<b>Detailed Description</b>	The server and server interfaces identified in the message are bonded.
<b>Recommended Response Action</b>	No response action is required.

**Category** Audit (NSER = Server)  
**Severity** Severity 3 (Informational)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NSER0008

**Message** The server *arg1* having the OnboardInterface *arg2* is unbonded.

**Arguments**

- ***arg1*** = server ID
- ***arg2*** = OnboardInterface ID

**Detailed Description** The server and server interfaces identified in the message are unbonded.

**Recommended Response Action** Make sure the server interfaces configuration are correct.

**Category** Audit (NSER = Server)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVCH Event Messages

### NVCH0001

**Message** Unable to retrieve the chassis information because the chassis does not exist.  
**Detailed Description** The chassis information cannot be retrieved because the chassis does not exist.  
**Recommended Response Action** Enter a valid chassis and retry the operation.  
**Category** Configuration (NVCH = Chassis)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVCO Event Messages

### NVCO0001

**Message** Unable to service the request because of an internal system error.  
**Detailed Description** The request failed due to internal system error.

<b>Recommended Response Action</b>	Retry the operation after some time. If the issue persists, contact the administrator.
<b>Category</b>	Configuration (NVCO = Common)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVCO0002

<b>Message</b>	Unable to configure the name because the configured name exceeds the limit of 256 characters in size.
<b>Detailed Description</b>	The name cannot be configured because the configured name exceeds 256 characters in size.
<b>Recommended Response Action</b>	Enter a name within the range of 256 characters and retry the operation.
<b>Category</b>	Configuration (NVCO = Common)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVCO0003

<b>Message</b>	Unable to configure the description because the configured description exceeds the limit of 256 characters in size.
<b>Detailed Description</b>	The description cannot be configured because the configured description exceeds 256 characters in size.
<b>Recommended Response Action</b>	Enter a description within the range of 256 characters and retry the operation.
<b>Category</b>	Configuration (NVCO = Common)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVFA Event Messages

### NVFA0001

<b>Message</b>	Unable to configure fabric because the fabric already exists.
<b>Detailed Description</b>	The fabrics cannot be configured because the fabric already exists.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NVFA = Fabric)

**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVFA0002

**Message** Unable to configure the fabric because the Fabric Node *arg1* does not exist.  
**Arguments**  
· ***arg1*** = node ID  
**Detailed Description** The fabric cannot be configured because the fabric node identified in the message is not present.  
**Recommended Response Action** Enter a valid fabric node and retry the operation again.  
**Category** Configuration (NVFA = Fabric)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVFA0003

**Message** Unable to retrieve fabric because the fabric does not exist.  
**Detailed Description** The fabric cannot be retrieved because the fabric does not exist.  
**Recommended Response Action** Enter a valid fabric and retry the operation.  
**Category** Configuration (NVFA = Fabric)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVFA0004

**Message** Unable to configure fabric with the given Node *arg1* because the node is already part of another fabric *arg2* .  
**Arguments**  
· ***arg1*** = node ID  
· ***arg2*** = fabric ID  
**Detailed Description** The fabric cannot be configured because the node mentioned in the message is already part of another fabric.  
**Recommended Response Action** Create the fabric with a different node which is not part of any existing fabric and retry the operation.  
**Category** Configuration (NVFA = Fabric)

**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVFA0005

**Message** Unable to configure fabric design because the fabric design *arg1* does not exist.  
**Arguments**

- ***arg1*** = fabric design

**Detailed Description** The fabric cannot be configured because the fabric design identified in the message does not exist.  
**Recommended Response Action** Enter a valid fabric design and retry the operation again.  
**Category** Configuration (NVFA = Fabric)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVFA0006

**Message** Unable to do configure fabric because the fabric node *arg1* , node type *arg2* does not match with fabric design node *arg3* design node type *arg4* .  
**Arguments**

- ***arg1*** = fabric node
- ***arg2*** = node type
- ***arg3*** = fabric design
- ***arg4*** = design node type

**Detailed Description** The fabric cannot be configured because the fabric node and fabric design node identified in the message does not match.  
**Recommended Response Action** Enter a valid fabric node, node type and retry the operation again.  
**Category** Configuration (NVFA = Fabric)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVFA0007

**Message** Unable to configure fabric because the design node *arg1* does not exist in fabric design.

Arguments	<ul style="list-style-type: none"> <li>· <b>arg1</b> = design node</li> </ul>
Detailed Description	The fabric cannot be configured because the design node does not exist in the fabric design identified in the message.
Recommended Response Action	Enter a valid design node and retry the operation again.
Category	Configuration (NVFA = Fabric)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NVFA0008

Message	Unable to configure fabric because the fabric design node count <i>arg1</i> does not match with fabric node count <i>arg2</i> .
Arguments	<ul style="list-style-type: none"> <li>· <b>arg1</b> = fabric nodes count</li> <li>· <b>arg2</b> = fabric node count</li> </ul>
Detailed Description	The fabric cannot be configured because the fabric node count and fabric design node count identified in the message does not match.
Recommended Response Action	Enter valid nodes matching the fabric design and retry the operation again.
Category	Configuration (NVFA = Fabric)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NVFA0009

Message	Updating fabric design map on an existing fabric is not supported.
Detailed Description	Once fabric is created, the design map cannot be changed.
Recommended Response Action	No response action is required.
Category	Configuration (NVFA = Fabric)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NVFA0010

**Message** Updating the fabric design of an existing fabric is not supported.

**Detailed Description** Once fabric is created, fabric design cannot be updated.

**Recommended Response Action** No response action is required.

**Category** Configuration (NVFA = Fabric)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## NVFA0011

**Message** Updating the nodes of an existing fabric is not supported.

**Detailed Description** Once the fabric is created, the nodes cannot be added/removed.

**Recommended Response Action** No response action is required.

**Category** Configuration (NVFA = Fabric)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## NVFA0012

**Message** Unable to assign the node *arg1* to a fabric because a Lifecycle operation is in progress on the node and the node state is *arg2* .

**Arguments**

- ***arg1*** = node ID
- ***arg2*** = current lifecycle state

**Detailed Description** The node identified in the message cannot be assigned to a fabric because a Lifecycle operation is in progress on the node.

**Recommended Response Action** Wait for the pending Lifecycle action to complete and retry the operation.

**Category** Configuration (NVFA = Fabric)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## NVFA0013

<b>Message</b>	Unable to start the Fabric Lifecycle operation because a Lifecycle operation is already in progress on the Fabric.
<b>Detailed Description</b>	The Lifecycle operation cannot be started on the Fabric because a Lifecycle operation is already in progress on the Fabric.
<b>Recommended Response Action</b>	Wait for the pending Lifecycle operation to get completed and retry the operation.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVFA0014

<b>Message</b>	Unable to delete the fabric because a fabric upgrade operation is in progress on the selected fabric.
<b>Detailed Description</b>	The fabric cannot be deleted because a fabric upgrade operation is in progress on the selected fabric.
<b>Recommended Response Action</b>	Wait for the pending lifecycle operation on the fabric to be completed and retry the operation.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVFA0015

<b>Message</b>	Unable to apply the Fabric Lifecycle configuration because the lead I/O module <i>arg1</i> lifecycle activity is in progress.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = lead servicetag</li></ul>
<b>Detailed Description</b>	The Fabric Lifecycle operation cannot be applied because the lead I/O modules lifecycle activity is in progress.
<b>Recommended Response Action</b>	Wait for the Lifecycle activity of the lead I/O module to complete and retry the operation.
<b>Category</b>	Configuration (NVFA = Fabric)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# NVIF Event Messages

## NVIF0001

<b>Message</b>	Unable to configure Maximum Transmission Unit(MTU) because the configured MTU value is greater than the maximum value.
<b>Detailed Description</b>	The Maximum Transmission Unit (MTU) cannot be configured because the value exceeds the limit identified in the message.
<b>Recommended Response Action</b>	Configure a valid MTU less than or equal to the value identified in the message and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0002

<b>Message</b>	Unable to configure the fanout on the interface because the interface fanout type is not HardwareDefault.
<b>Detailed Description</b>	Fanout from non-hardware default to non-hardware default is not allowed.
<b>Recommended Response Action</b>	Configure the interface to HardwareDefault and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0003

<b>Message</b>	Unable to configure the interface because the interface does not exist in the inventory.
<b>Detailed Description</b>	The interface can not be configured because the interface does not exist in the inventory.
<b>Recommended Response Action</b>	No response action required.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0004

<b>Message</b>	Unable to configure autoneg because the interface does not support autoneg.
<b>Detailed Description</b>	The autoneg cannot be configured on the interface because the autoneg capability is not supported for this interface.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0005

<b>Message</b>	Unable to configure the configured speed for the interface because the entered value is not supported.
<b>Detailed Description</b>	The configured speed cannot be configured because the configured speed identified in the message is not supported.
<b>Recommended Response Action</b>	Enter a valid configured speed and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0006

<b>Message</b>	Unable to configure the Breakout property on the interface <i>arg1</i> because the Breakout Capability validation has failed.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Interface Name</li></ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the Breakout Capability validation has failed.
<b>Recommended Response Action</b>	Validate the Breakout Capability types for the interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0007

<b>Message</b>	Unable to configure the Breakout property on the interface <i>arg1</i> because the requested breakout type is not supported.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Interface Name</li></ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the interface does not support the requested breakout type.
<b>Recommended Response Action</b>	Validate the Breakout type for the interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0008

<b>Message</b>	Unable to configure the Breakout property on the interface <i>arg1</i> because the resource validation has failed.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Interface Name</li></ul>
<b>Detailed Description</b>	The Breakout property on the interface identified on the message cannot be configured because the interface has associated configured resources.
<b>Recommended Response Action</b>	Unconfigure the resources for the interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0009

<b>Message</b>	Unable to configure the Breakout property on the interface <i>arg1</i> because the VLAN association validation has failed.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Interface Name</li></ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the interface member has associated vlan configuration.

<b>Recommended Response Action</b>	Unconfigure VLAN resources for the interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0010

<b>Message</b>	Unable to configure the Breakout property on the interface <i>arg1</i> because the FIB-VLAN association validation has failed.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Interface Name</li></ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the interface member has associated FIB-VLAN configuration.
<b>Recommended Response Action</b>	Unconfigure FIB-VLAN resources for the interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0011

<b>Message</b>	Unable to configure the breakout property on the interface <i>arg1</i> because the breakout member is part of an uplink.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Interface Name</li></ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the member interface is associated with an uplink.
<b>Recommended Response Action</b>	Remove the breakout member from the uplink and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0012

<b>Message</b>	Unable to configure the breakout property on the interface <i>arg1</i> because the breakout member is part of another port channel.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Interface Name</li></ul>
<b>Detailed Description</b>	The Breakout property on the interface identified in the message cannot be configured because the member interface is associated with another port channel.
<b>Recommended Response Action</b>	Remove the breakout member from the port channel member and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0013

<b>Message</b>	Unable to configure the Breakout property on the interface <i>arg1</i> because the MX7116n Fabric Expander Module resource validation has failed.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Interface Name</li></ul>
<b>Detailed Description</b>	The Breakout property on the interface identified on the message cannot be configured because the interface has associated MX7116n Fabric Expander Module resources.
<b>Recommended Response Action</b>	Remove the cable between the MX7116n Fabric Expander Module and port group and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0014

<b>Message</b>	Unable to configure Maximum Transmission Unit(MTU) on interface <i>arg1</i> because the interface is of fibre channel (FC) type.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = interface Name</li></ul>
<b>Detailed Description</b>	The Maximum Transmission Unit (MTU) cannot be configured on the specified interface because it is of Fibre Channel interface type.

<b>Recommended Response Action</b>	Choose a different interface type and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVIF0015

<b>Message</b>	Unable to complete the configuration request on the <i>arg1</i> interface because the interface is an ICL port.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = interface name</li></ul>
<b>Detailed Description</b>	The configuration request on the interface cannot be completed because the interface is an ICL port.
<b>Recommended Response Action</b>	Select another compatible interface and retry the operation.
<b>Category</b>	Configuration (NVIF = Interface)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNE Event Messages

### NVNE0001

<b>Message</b>	Unable to process the request because the network ID is not entered in the request.
<b>Detailed Description</b>	The request cannot be processed because the network ID is not entered in the request.
<b>Recommended Response Action</b>	Enter a valid network ID and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

### NVNE0002

<b>Message</b>	Unable to create the network because the network already exists.
<b>Detailed Description</b>	The network identified in the message cannot be created because the network already exists.

**Recommended Response Action** Enter a different network name and retry the operation.

**Category** Configuration (NVNE = Network)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## NVNE0003

**Message** Unable to retrieve network because the network does not exist.

**Detailed Description** The network cannot be retrieved because the network identified in the message does not exist.

**Recommended Response Action** Enter a valid network name and retry the operation again.

**Category** Configuration (NVNE = Network)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## NVNE0004

**Message** Unable to configure VLAN because the VLAN minimum and/or VLAN maximum values configured on the Network are not valid.

**Detailed Description** The network cannot be created because the VLAN minimum and/or VLAN maximum values configured on the Network are not valid.

**Recommended Response Action** Enter a valid VLAN minimum and VLAN maximum value and retry the operation again.

**Category** Configuration (NVNE = Network)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## NVNE0005

**Message** Unable to configure a network because the VLAN range configured is overlapping with an already defined network.

**Detailed Description** The network cannot be created because the VLAN range configured is overlapping with an already defined network.

**Recommended Response Action** Enter another set of VLAN maximum and VLAN minimum values and retry the operation again.

Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NVNE0006

Message	Unable to create or update the network properties because a valid network type is not entered in the request.
Detailed Description	The network properties cannot be created or updated because a valid network type is not entered in the request.
Recommended Response Action	Enter a valid network type and retry the operation.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NVNE0007

Message	Unable to update the network because editing the network type is not permitted on the current network.
Detailed Description	The network properties cannot be updated because editing the network type is not permitted on the current network.
Recommended Response Action	Delete the current network and create a new network by using the necessary network type.
Category	Configuration (NVNE = Network)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NVNE0008

Message	Unable to configure the network profile because the VLAN range is limited to <i>arg1</i> in one network profile.
Arguments	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = VLAN Number</li></ul>
Detailed Description	The network cannot be created or updated because the user can only configure VLANs up to a maximum number identified in the message in one network profile.
Recommended Response Action	Enter a valid VLAN range within the maximum range identified in the message and retry the operation.
Category	Configuration (NVNE = Network)

**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVNE0009

**Message** Unable to create or update the network profile because of a mismatched network type configured on the server interface.

**Detailed Description** The network profile cannot be created or updated because of a mismatched network type configured on the server interface.

**Recommended Response Action** Remove the conflicting network configuration on the server interface, and retry the operation.

**Category** Configuration (NVNE = Network)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## NVNE0010

**Message** Unable to create or update the network profile because the VLAN configuration is not allowed on the L3 Routed (Layer3) type of networks.

**Detailed Description** The network profile cannot be created or updated because the VLAN configuration is not allowed on L3 Routed (Layer3) type of networks.

**Recommended Response Action** Remove the VLAN configuration and retry the operation.

**Category** Configuration (NVNE = Network)

**Severity** Severity 2 (Warning)

**Redfish Event Type**  
*No alerts are applicable for this message*

## NVNE0011

**Message** Unable to create or update the network profile because the Layer3 Routed network is configured as tagged network on the server interface.

**Detailed Description** The network profile cannot be created or updated because the Layer3 Routed network is configured as a tagged network on the server interface.

**Recommended Response Action** Remove the Layer3 Routed type of network from the tagged network list on the server interface and retry the operation.

**Category** Configuration (NVNE = Network)

**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVNE0012

**Message** Unable to update the network profile because the updating the virtual network attributes is not permitted.  
**Detailed Description** The network profile cannot be updated because the updating the virtual network attributes is not permitted.  
**Recommended Response Action** If the virtual network in a network profile requires an update then delete and recreate the network profile.  
**Category** Configuration (NVNE = Network)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVNE0013

**Message** Unable to create or update a network profile because the Ipv6 is configured on the network profile.  
**Detailed Description** The network profile cannot be created or updated because the Ipv6 is configured on the network profile.  
**Recommended Response Action** Remove the Ipv6 configuration on the network profile and retry the operation.  
**Category** Configuration (NVNE = Network)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVNE1001

**Message** Unable to retrieve the virtual network data because the virtual network does not exist.  
**Detailed Description** The virtual network data cannot be retrieved because the virtual network does not exist.  
**Recommended Response Action** Enter a valid virtual network name and retry the operation.  
**Category** Configuration (NVNE = Network)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVNE1002

<b>Message</b>	Unable to create or update the virtual network profile because an invalid Virtual Extensible LAN (VXLAN) Virtual Network Id(VNI) is configured.
<b>Detailed Description</b>	The virtual network profile cannot be created or updated because an invalid Virtual Extensible LAN (VXLAN) Virtual Network Id(VNI) is configured.
<b>Recommended Response Action</b>	Modify the Virtual Extensible LAN (VXLAN) Virtual Network Id(VNI) configuration on the virtual network profile and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNE1003

<b>Message</b>	Unable to update the virtual network profile because updating the Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI) attribute is not permitted.
<b>Detailed Description</b>	The virtual network profile cannot be updated because updating the Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI) attribute is not permitted.
<b>Recommended Response Action</b>	If the virtual network requires an update then delete and recreate the Virtual Extensible LAN (VXLAN) Virtual Network ID (VNI).
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNE1004

<b>Message</b>	Unable to update the virtual network profile because updating the Virtual Link Trunking (VLT) Virtual LAN (VLAN) ID attribute is not permitted.
<b>Detailed Description</b>	The virtual network profile cannot be updated because updating the Virtual Link Trunking (VLT) Virtual LAN (VLAN) ID attribute is not permitted.
<b>Recommended Response Action</b>	If the Virtual Link Trunking (VLT) Virtual LAN (VLAN) virtual network requires an update then delete and recreate the virtual network.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNE1005

<b>Message</b>	Unable to create or update the network profile because the virtual network name is not entered in the request.
<b>Detailed Description</b>	The network profile cannot be created or updated because the virtual network name is not entered in the request.
<b>Recommended Response Action</b>	Enter a valid virtual network name and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNE1006

<b>Message</b>	Unable to retrieve the virtual network because the virtual network does not exist.
<b>Detailed Description</b>	The virtual network cannot be retrieved because the virtual network does not exist.
<b>Recommended Response Action</b>	Enter a valid virtual network name and retry the operation again.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNE1007

<b>Message</b>	Unable to create the virtual network because the virtual network already exists.
<b>Detailed Description</b>	The virtual network cannot be created because the virtual network already exists.
<b>Recommended Response Action</b>	Enter a different virtual network name and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNE1008

<b>Message</b>	Unable to update the virtual network because changing the virtual network type is not permitted on the current virtual network.
----------------	---

<b>Detailed Description</b>	The virtual network properties cannot be updated because changing the virtual network type is not permitted on the current virtual network.
<b>Recommended Response Action</b>	Delete the current virtual network and create a new virtual network by using the necessary virtual network type.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNE1009

<b>Message</b>	Unable to create or update the virtual network properties because a valid virtual network type is not entered in the request.
<b>Detailed Description</b>	The virtual network cannot be created or updated because a valid virtual network type is not entered in the request.
<b>Recommended Response Action</b>	Enter a valid virtual network type and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNE1010

<b>Message</b>	Unable to configure the virtual network because the VLT VLAN value configured on the virtual network is not valid.
<b>Detailed Description</b>	The virtual network cannot be created or updated because the VLT VLAN value configured on the virtual network is not valid.
<b>Recommended Response Action</b>	Enter a valid VLT VLAN value and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNE1011

<b>Message</b>	Unable to create or update the virtual network profile because the Ipv6 is configured on the virtual network profile.
----------------	---

<b>Detailed Description</b>	The virtual network profile cannot be created or updated because the Ipv6 is configured on the virtual network profile.
<b>Recommended Response Action</b>	Remove Ipv6 configuration on the virtual network profile and retry the operation.
<b>Category</b>	Configuration (NVNE = Network)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNO Event Messages

### NVNO0001

<b>Message</b>	Unable to retrieve the I/O Module because the I/O Module does not exist.
<b>Detailed Description</b>	The I/O Module can not be retrieved because the I/O Module does not exist in the inventory.
<b>Recommended Response Action</b>	Enter a valid I/O Module value and retry the operation.
<b>Category</b>	Configuration (NVNO = Node)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

### NVNO0002

<b>Message</b>	Unable to start the I/O Module Lifecycle operation because a Lifecycle operation is already in progress on the I/O Module.
<b>Detailed Description</b>	The Lifecycle operation cannot be started on the I/O Module because a Lifecycle operation is already in progress on the I/O Module.
<b>Recommended Response Action</b>	Wait for the pending Lifecycle operation to completed and retry the operation.
<b>Category</b>	Configuration (NVNO = Node)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

### NVNO0003

<b>Message</b>	Unable to start the lifecycle operation on the I/O Module because the I/O Module is offline.
<b>Detailed Description</b>	The lifecycle operation cannot be started on the I/O Module because the I/O Module is offline.

<b>Recommended Response Action</b>	Wait for the I/O Module to come back online and retry the operation.
<b>Category</b>	Configuration (NVNO = Node)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNO0004

<b>Message</b>	Unable to perform upgrade operation because the I/O Module is part of a network fabric.
<b>Detailed Description</b>	The upgrade operation on a I/O Module that is part of a network fabric is not permitted.
<b>Recommended Response Action</b>	Perform fabric upgrade to upgrade the I/O Modules or delete the network fabric and retry the operation again.
<b>Category</b>	Configuration (NVNO = Node)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNO0005

<b>Message</b>	Unable to apply the configuration because the I/O Module is not in fabric mode.
<b>Detailed Description</b>	The configuration cannot be applied because the I/O Module is not in the fabric mode.
<b>Recommended Response Action</b>	Make sure that the I/O Module belongs to a fabric mode by creating a fabric between the I/O Modules and retry the operation.
<b>Category</b>	Configuration (NVNO = Node)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVNO0006

<b>Message</b>	Unable to apply the Node Lifecycle configuration because the lead I/O module <i>arg1</i> Lifecycle activity is in progress.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = lead ServiceTag</li></ul>
<b>Detailed Description</b>	The Node Lifecycle configuration cannot be applied because the lead I/O Modules lifecycle activity is in progress.
<b>Recommended Response Action</b>	Wait for the Lifecycle activity of lead I/O module to complete and retry the operation.
<b>Category</b>	Configuration (NVNO = Node)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## NVRE Event Messages

### NVRE0001

**Message** Unable to process the request because the Base Authentication Token is not present in the request.

**Detailed Description** The request failed because the Base Authentication token is not present in the request header.

**Recommended Response Action** Enter a Base Authentication Token in the request header and retry the operation.

**Category** Configuration (NVRE = REST)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

### NVRE0002

**Message** Unable to process the request because the Authorization Token is not of Basic type.

**Detailed Description** The request can not be processed because the Authorization Token entered is not of Basic type.

**Recommended Response Action** Change the Authorization token type to Basic Authentication and retry the operation.

**Category** Configuration (NVRE = REST)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

### NVRE0003

**Message** Unable to process the request because the authorization failed.

**Detailed Description** The request can not be processed because the username and password provided in the authorization token is not valid.

**Recommended Response Action** Provide a valid user name and password and retry the operation again.

**Category** Configuration (NVRE = REST)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## NVRE0004

<b>Message</b>	Unable to process the request because the provided URL is not valid.
<b>Detailed Description</b>	The request can not be processed because the given URL is not valid.
<b>Recommended Response Action</b>	Enter a valid URL and retry the operation again.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVRE0005

<b>Message</b>	Unable to process the request because the provided image stream is not valid.
<b>Detailed Description</b>	The request can not be processed because the given image stream is not a valid firmware image.
<b>Recommended Response Action</b>	Provide a valid image stream and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVRE0006

<b>Message</b>	Unable to process the request because the input JSON payload is invalid. Error information: <i>arg1</i> .
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = details</li></ul>
<b>Detailed Description</b>	The request failed because the payload provided is not of valid JSON format.
<b>Recommended Response Action</b>	Enter a valid JSON payload and retry the operation again.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVRE0007

<b>Message</b>	Unable to process the request because the VLAN ID entered is not an integer.
<b>Detailed Description</b>	The request can not be processed because the entered VLAN ID is not an integer.
<b>Recommended Response Action</b>	Enter a valid integer for VLAN ID in the payload and retry the operation again.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVRE0008

<b>Message</b>	Unable to process the request because the URL is not valid.
<b>Detailed Description</b>	The request can not be processed because the entered odata URL does not have correct parenthesis.
<b>Recommended Response Action</b>	Enter a valid odata URL, check the correctness of parenthesis and retry the operation again.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVRE0009

<b>Message</b>	Unable to process the request because the URL is not valid.
<b>Detailed Description</b>	The request can not be processed because the URL is not valid and the ID provided in the URL is not correct.
<b>Recommended Response Action</b>	Enter a valid URL, check for correctness of odata ID and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVRE0010

<b>Message</b>	Unable to process the request because the integer value in the request URL for the key <i>arg1</i> is invalid.
----------------	--

Arguments	<ul style="list-style-type: none"><li>· <b>arg1</b> = parameter key</li></ul>
Detailed Description	The request can not be processed because the value provided for the key is not an integer.
Recommended Response Action	Enter a valid integer value for the key and retry the operation.
Category	Configuration (NVRE = REST)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NVRE0011

Message	Unable to process the request because the validation error does not exist.
Detailed Description	The request can not be processed because the given validation error ID is not present.
Recommended Response Action	Enter a valid validation error ID and retry the operation.
Category	Configuration (NVRE = REST)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NVRE0012

Message	Unable to process the request because the fabric validation error does not exist.
Detailed Description	The request can not be processed because the given fabric validation error id is not present.
Recommended Response Action	Enter a valid fabric validation error id and retry the operation.
Category	Configuration (NVRE = REST)
Severity	Severity 1 (Critical)
Redfish Event Type	<i>No alerts are applicable for this message</i>

## NVRE0013

Message	Unable to process the request because the link does not exist.
Detailed Description	The request can not be processed because the given link ID is not present.
Recommended Response Action	Enter a valid link ID and retry the operation.

**Category** Configuration (NVRE = REST)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVRE0014

**Message** Unable to process the request because the given HTTP method *arg1* is not allowed for the given URL.  
**Arguments**  
· ***arg1*** = method name  
**Detailed Description** The request can not be processed because the given HTTP method is not allowed for the given URL.  
**Recommended Response Action** Provide a valid HTTP method and retry the operation.  
**Category** Configuration (NVRE = REST)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVRE0015

**Message** Unable to process the request because the fabric design does not exist.  
**Detailed Description** The request can not be processed because the given fabric design ID is not present.  
**Recommended Response Action** Enter a valid fabric design ID and retry the operation.  
**Category** Configuration (NVRE = REST)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## NVRE0016

**Message** Unable to process the request because the discovered server does not exist.  
**Detailed Description** The request can not be processed because the given discovered server ID is not present.  
**Recommended Response Action** Enter a valid discovered server ID and retry the operation.  
**Category** Configuration (NVRE = REST)  
**Severity** Severity 1 (Critical)  
**Redfish Event Type**

*No alerts are applicable for this message*

## NVRE0017

<b>Message</b>	Unable to process the request because the discovered server interface does not exist.
<b>Detailed Description</b>	The request can not be processed because the given discovered server interface ID is not present.
<b>Recommended Response Action</b>	Enter a valid discovered server interface ID and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVRE0018

<b>Message</b>	Unable to process the request because the server interface bond does not exist.
<b>Detailed Description</b>	The request can not be processed because the given server interface bond id is not present.
<b>Recommended Response Action</b>	Enter a valid server interface bond id and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVRE0019

<b>Message</b>	Unable to process the request because the VLAN does not exist.
<b>Detailed Description</b>	The request can not be processed because the given VLAN ID is not present.
<b>Recommended Response Action</b>	Enter a valid VLAN ID and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVRE0020

<b>Message</b>	Unable to save the image file because necessary disk space is unavailable.
<b>Detailed Description</b>	The image file cannot be processed because necessary disk space is unavailable.
<b>Recommended Response Action</b>	Delete the current image file from /var/os10-image location and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## NVRE0021

<b>Message</b>	Unable to process the request because the user <i>arg1</i> does not have the privilege to change the password.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = user name</li></ul>

<b>Detailed Description</b>	The password cannot be changed because the user identified in the message does not have the privilege to change the password.
<b>Recommended Response Action</b>	Enter a valid REST user name which has the privilege to change the password and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## NVRE0022

<b>Message</b>	Unable to process the request because the service is not ready yet.
<b>Detailed Description</b>	The request can not be processed because the module to handle the request is not ready yet.
<b>Recommended Response Action</b>	Retry the operation after some time. If the issue persists, contact the administrator.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	

*No alerts are applicable for this message*

## NVRE0023

<b>Message</b>	Unable to start the lifecycle operation on the I/O Module because the I/O Module <i>arg1</i> is offline.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = node Id</li></ul>
<b>Detailed Description</b>	The lifecycle operation on the I/O Module cannot be started because the I/O Module identified in the message is offline.
<b>Recommended Response Action</b>	Wait for the I/O Module to be available online and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVRE0024

<b>Message</b>	Unable to create or update the fabric because the I/O Module <i>arg1</i> is offline.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = node Id</li></ul>
<b>Detailed Description</b>	The fabric cannot be created or updated because the I/O Module identified in the message is offline.
<b>Recommended Response Action</b>	Wait for the I/O Module to be available online and retry the operation.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVRE0100

<b>Message</b>	Unable to service the request because of internal server error.
<b>Detailed Description</b>	The request could not be serviced due to internal server error.
<b>Recommended Response Action</b>	Retry the operation after some time. If the issue persists, contact the administrator.
<b>Category</b>	Configuration (NVRE = REST)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# NVSE Event Messages

## NVSE0001

<b>Message</b>	Unable to process the request because the Server ID is not entered in the input.
<b>Detailed Description</b>	The request cannot be processed because the Server ID is not entered in the input.
<b>Recommended Response Action</b>	Enter a valid Server ID and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0002

<b>Message</b>	Unable to process the request because the ServerInterfaceID is missing in the input.
<b>Detailed Description</b>	The request cannot be processed because the ServerInterfaceID is missing in the input.
<b>Recommended Response Action</b>	Enter a valid ServerInterfaceID and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0003

<b>Message</b>	Unable to create a server profile because the server profile already exists.
<b>Detailed Description</b>	The server profile cannot be created because the server profile already exists.
<b>Recommended Response Action</b>	Enter a new server profile name and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0004

<b>Message</b>	Unable to create a server interface profile because the server interface profile already exists.
<b>Detailed Description</b>	The server interface profile cannot be created because the server interface profile already exists.
<b>Recommended Response Action</b>	Enter a new server interface profile name and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0005

<b>Message</b>	Unable to create or retrieve server profile because the server profile does not exist.
<b>Detailed Description</b>	The server profile cannot be created or retrieved because the server profile does not exist.
<b>Recommended Response Action</b>	Enter a valid server profile name and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0006

<b>Message</b>	Unable to configure or retrieve server interface profile because it does not exist.
<b>Detailed Description</b>	The server interface profile cannot be retrieved or configured because it does not exist.
<b>Recommended Response Action</b>	Enter a valid server interface profile name and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0007

<b>Message</b>	Unable to configure server interface profile because the FCoE bandwidth partition is not matching with the other server interface profiles on this server profile.
----------------	--

<b>Detailed Description</b>	The server interface profile cannot be created because the FCoE bandwidth partition is not matching with the other server interface profiles on this server profile.
<b>Recommended Response Action</b>	Enter a valid FCoE bandwidth partition and retry the operation again.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0008

<b>Message</b>	Unable to configure server interface profile because the native VLAN value configured on the server interface profile is invalid.
<b>Detailed Description</b>	The server interface profile cannot be created because the native VLAN value configured on the server interface profile is invalid.
<b>Recommended Response Action</b>	Enter a valid native VLAN and retry the operation again.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0009

<b>Message</b>	Unable to configure the Server Interface Profile because the Percentage Bandwidth value entered for configuring the Server Interface Profile is invalid.
<b>Detailed Description</b>	The Server Interface Profile cannot be configured because the Percentage Bandwidth value entered for configuring the Server Interface Profile is invalid.
<b>Recommended Response Action</b>	Enter a valid Percentage Bandwidth value and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0010

<b>Message</b>	Unable to create or update the Server Interface Profile because a Storage FCoE type of Network and a Native VLAN is configured on this Server Interface Profile.
----------------	--

<b>Detailed Description</b>	The Server Interface Profile cannot be created or updated because a Storage FCoE type of Network and Native VLAN are both configured on this Server Interface Profile.
<b>Recommended Response Action</b>	Remove the Native VLAN configuration from the Server Interface Profile and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0011

<b>Message</b>	Unable to create or update the server interface profile because of a mismatched network type configured on the server interface.
<b>Detailed Description</b>	The server interface profile cannot be created or updated because of a mismatched network type configured on the server interface.
<b>Recommended Response Action</b>	Remove the conflicting network configuration on the server interface, and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0012

<b>Message</b>	Unable to create or update the server interface profile because there is a Layer3 Routed network configured (as tagged network) on the server interface.
<b>Detailed Description</b>	The server interface profile cannot be created because there is a Layer3 Routed network configured (as tagged network) on the server interface.
<b>Recommended Response Action</b>	Remove the Layer3 Routed network from the tagged network list on the server interface and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0013

<b>Message</b>	Unable to create or update the server interface profile because there are duplicate networks configured.
<b>Detailed Description</b>	The server interface profile cannot be created or updated because there are duplicate network configured.

<b>Recommended Response Action</b>	Remove the duplicate network configuration from the server interface and retry the operation.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSE0014

<b>Message</b>	Unable to update the server interface profile because the network change from tagged network to untagged network or vice-versa is not allowed on the server interface.
<b>Detailed Description</b>	The server interface profile cannot be created or updated because the network change from tagged network to untagged network or vice verser is not allowed on the server interface.
<b>Recommended Response Action</b>	Delete the network configuration, and reconfigure the networks on the server interface to change from tagged to untagged, or from untagged to tagged.
<b>Category</b>	Configuration (NVSE = Server Interface)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVSU Event Messages

### NVSU0001

<b>Message</b>	Unable to retrieve the subscription, because the subscription does not exist.
<b>Detailed Description</b>	The subscription cannot be retrieved because the subscription identified in the message is not present.
<b>Recommended Response Action</b>	Enter a valid subscription and retry the operation.
<b>Category</b>	Configuration (NVSU = Subscription)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

### NVSU0002

<b>Message</b>	Unable to configure the subscription because the subscription <i>arg1</i> is not entered.
<b>Arguments</b>	<ul style="list-style-type: none"><li>· <b><i>arg1</i></b> = Attribute Id</li></ul>
<b>Detailed Description</b>	The subscription cannot be configured because the subscription attribute is not entered.

**Recommended Response Action** Enter a valid subscription attribute and retry the operation.

**Category** Configuration (NVSU = Subscription)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## NVSU0003

**Message** Unable to configure the subscription because the subscription *arg1* is invalid.

**Arguments**

- ***arg1*** = Attribute Id

**Detailed Description** The subscription cannot be configured because the subscription attribute is invalid.

**Recommended Response Action** Enter a valid subscription Attribute and retry the operation.

**Category** Configuration (NVSU = Subscription)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## NVTG Event Messages

### NVTG0001

**Message** Unable to retrieve the topology graph because the topology graph does not exist.

**Detailed Description** The topology graph can not be retrieved because the topology graph does not exist.

**Recommended Response Action** Enter a valid topology graph value and retry the operation.

**Category** Configuration (NVTG = Topology Graph)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

### NVTG0002

**Message** Unable to retrieve the topology graph link because the topology graph link does not exist.

**Detailed Description** The topology graph link can not be retrieved because the topology graph link does not exist.

<b>Recommended Response Action</b>	Enter a valid topology graph link value and retry the operation.
<b>Category</b>	Configuration (NVTG = Topology Graph)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVTP Event Messages

### NVTP0001

<b>Message</b>	Unable to validate the topology because a different type of IOM is found in the slot pair.
<b>Detailed Description</b>	The topology validation failed because of a different type of IOM found in the slot pair in the chassis.
<b>Recommended Response Action</b>	Make sure that the IOMs of the same type occupy the same slot pair in a chassis.
<b>Category</b>	Configuration (NVTP = Topology)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

### NVTP0002

<b>Message</b>	Unable to validate the MX7116n Fabric Expander Module because the slot of the MX7116n Fabric Expander Module and the slot of the Network IOM are different.
<b>Detailed Description</b>	The MX7116n Fabric Expander Module validation failed because the MX7116n Fabric Expander Module slot and the Network IOM slot are different.
<b>Recommended Response Action</b>	Make sure that the slot of the MX7116n Fabric Expander Module and the slot of the Network IOM are the same.
<b>Category</b>	Configuration (NVTP = Topology)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVUP Event Messages

### NVUP0001

<b>Message</b>	Unable to configure the uplink because the configured interface <i>arg1</i> does not exist.
----------------	---

<b>Arguments</b>	· <b>arg1</b> = interface name
<b>Detailed Description</b>	The uplink cannot be configured because the ConfiguredInterface identified in the message is not present.
<b>Recommended Response Action</b>	Enter a valid configuredinterface and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVUP0002

<b>Message</b>	Unable to configure the ConfiguredInterface <i>arg1</i> as an uplink because it is already being used.
<b>Arguments</b>	· <b>arg1</b> = interface name
<b>Detailed Description</b>	The configuredinterface mentioned in the message cannot be configured as uplink because it is already being used.
<b>Recommended Response Action</b>	Enter another configuredinterface and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVUP0003

<b>Message</b>	Unable to configure the ConfiguredInterface <i>arg1</i> as an uplink because it is not of Type Physical.
<b>Arguments</b>	· <b>arg1</b> = interface-name
<b>Detailed Description</b>	The configuredinterface mentioned in the message, cannot be configured as an uplink because it is not of Type Physical.
<b>Recommended Response Action</b>	Enter a configuredinterface of Type Physical and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVUP0004

<b>Message</b>	Unable to modify the configured interfaces for FC/FCoE/FCGateway uplink as they cannot be modified.
<b>Detailed Description</b>	The configured interfaces for FC/FCoE/FCGateway uplink cannot be modified or deleted.
<b>Recommended Response Action</b>	To modify the configured interfaces of uplink, please delete the uplink and create the uplink with desired interfaces.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVUP0005

<b>Message</b>	Unable to configure or update uplink because the Uplink configured with MediaType as fibre channel (FC) must have only one VLAN for the given configured interfaces.
<b>Detailed Description</b>	The uplink cannot be configured because the FC uplink mentioned in the message, can accept only one VLAN.
<b>Recommended Response Action</b>	Provide uplink with only one VLAN and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVUP0006

<b>Message</b>	Unable to configure uplink because multiple Fiber Channel or storage uplinks are not supported.
<b>Detailed Description</b>	Uplink cannot be configured because only one Uplink of MediaType FiberChannel(FC) or FiberChannelOverEthernet(FCOE) and one uplink of MediaType iSCSI(storage uplink) is supported for the given Fabric.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVUP0007

<b>Message</b>	Unable to configure the uplink because the uplink does not exist.
<b>Detailed Description</b>	The uplink cannot be retrieved because the uplink identified in the message does not exist.
<b>Recommended Response Action</b>	Enter a valid uplink and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVUP0008

<b>Message</b>	Unable to configure or update the uplink because the media type entered is not supported.
<b>Detailed Description</b>	The uplink cannot be configured because the media type entered is not supported.
<b>Recommended Response Action</b>	Enter an uplink with the supported media type and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## NVUP0009

<b>Message</b>	Unable to configure the uplink because the FCoE Initiation Protocol(FIP) network is already used in this fabric.
<b>Detailed Description</b>	The Uplink cannot be configured because the FCoE Initiation Protocol (FIP) network is already used in this fabric. Two FC uplinks on the same fabric cannot have the same network.
<b>Recommended Response Action</b>	Enter an uplink with a different FIP network and retry the operation.
<b>Category</b>	Configuration (NVUP = Uplink)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# OSD Event Messages

## OSD062

**Message** The process of installing an operating system or hypervisor is started and is in progress.

**Detailed Description** The process of installing an operating system or hypervisor is started and is in progress.

**Recommended Response Action** No response action is required.

## OSD1

<b>Message</b>	The command was successful.
<b>Detailed Description</b>	The command was successful.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD10

<b>Message</b>	Installation not supported for the selected operating system.
<b>Detailed Description</b>	Installation for the selected operating system is not supported. Make sure that the correct operating system name was entered.
<b>Recommended Response Action</b>	Recheck the operating system name with the output of GetDriverPackInfo().
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD11

<b>Message</b>	Driver Pack does not have drivers for the selected operating system.
<b>Detailed Description</b>	Lifecycle Controller does not have any drivers for the selected operating system. The operating system installation uses the native drivers present on the operating system media.
<b>Recommended Response Action</b>	No response action is required.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD12

<b>Message</b>	Cannot create the USB device needed to copy drivers for the selected operating system.
<b>Detailed Description</b>	iDRAC was unable to create and expose the drivers as a USB device for the OS installation to proceed.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD13

<b>Message</b>	Cannot mount the USB device needed to copy drivers for the selected operating system.
<b>Detailed Description</b>	iDRAC was unable to mount the drivers as a USB device for the OS installation to proceed.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD14

<b>Message</b>	Unable to expose the USB device that contains the operating system drivers to host system.
<b>Detailed Description</b>	iDRAC was unable to expose the drivers as a USB device for the OS installation to proceed.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD15

<b>Message</b>	Mount network share failed - incorrect username or password.
----------------	--

<b>Detailed Description</b>	Unable to mount the network share using the credentials specified in the command because either the username or password is incorrect.
<b>Recommended Response Action</b>	Rerun the command with the correct username and password.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD16

<b>Message</b>	Mount network share failed - incorrect IP address or share name.
<b>Detailed Description</b>	Unable to mount the network share using the parameters specified in the command because either the IP address or share name is incorrect.
<b>Recommended Response Action</b>	Rerun the command with the correct IP address and share name.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD17

<b>Message</b>	Exposing ISO image as internal device to the server failed.
<b>Detailed Description</b>	Unable to expose the ISO image as an internal CD device to the host system because the ISO file is no longer present, network errors are preventing access to the ISO file, or iDRAC may not be responsive.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD18

<b>Message</b>	Unable to locate the ISO image on the network share point.
<b>Detailed Description</b>	Unable to find the ISO file specified in the network share. Make sure that the correct ISO file path was entered into the command and that all other user credentials are correct.

<b>Recommended Response Action</b>	Rerun the command with the correct ISO file path.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD19

<b>Message</b>	The fork() command for a child process to perform the task failed.
<b>Detailed Description</b>	Failed to execute fork() system call to perform the task in a child process. iDRAC may be unresponsive.
<b>Recommended Response Action</b>	Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD2

<b>Message</b>	General failure.
<b>Detailed Description</b>	An unknown error occurred.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC and run the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD20

<b>Message</b>	Unable to get size or label from Driver Pack for selected operating system.
<b>Detailed Description</b>	Unable to get the size or label for selected operating system from the Driver Pack present in Lifecycle Controller. The driver pack may be corrupt.
<b>Recommended Response Action</b>	Update the Driver Pack using Lifecycle Controller GUI / Unified Server Configurator (USC) or DUP and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)

## Redfish Event Type

*No alerts are applicable for this message*

# OSD21

<b>Message</b>	Unable to boot to ISO image.
<b>Detailed Description</b>	Bootting to ISO has failed. Either BIOS was unable to boot to the ISO image or the provider did not get a response in 5 minutes from BIOS on successful boot to ISO image.
<b>Recommended Response Action</b>	1) Make sure that a POST error did not result in user interaction (Press F1 to continue or F2 to run BIOS setup). 2) Reset iDRAC and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# OSD22

<b>Message</b>	Unable to detach ISO image from the host.
<b>Detailed Description</b>	Unable to detach ISO image from the host because either the image is already detached, or iDRAC may not be operating normally.
<b>Recommended Response Action</b>	1) Rerun the command. 2) Reset iDRAC.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# OSD23

<b>Message</b>	Unable to continue with DetachISOImage - another command is in the process of exposing the ISO Image and booting to it.
<b>Detailed Description</b>	Cannot continue with DetachISOImage because another command is in the process of exposing the ISO image and booting to it.
<b>Recommended Response Action</b>	See the ConcreteJob status to make sure that the current running process is complete and then run DetachISOImage.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD24

<b>Message</b>	Unable to continue with DetachDrivers - UnPackAndAttach is in progress.
<b>Detailed Description</b>	Unable to continue with DetachDrivers - UnPackAndAttach is in progress.
<b>Recommended Response Action</b>	Wait until UnpackAndAttach finishes and then run DetachDrivers. This can take more than 5 minutes.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD25

<b>Message</b>	Unable to detach USB device containing operating system drivers.
<b>Detailed Description</b>	Detaching the USB device (that contains drivers for the operating system installation) from the host has failed. The device may be detached, or iDRAC may not be operating normally.
<b>Recommended Response Action</b>	Reset iDRAC to detach this device automatically.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD26

<b>Message</b>	Unable to continue with BootToPXE - another command is running.
<b>Detailed Description</b>	Unable to continue with BootToPXE command because another process is using Lifecycle Controller.
<b>Recommended Response Action</b>	See ConcreteJob status to make sure that the running process is complete, and then run BootToPXE.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD27

<b>Message</b>	Copying drivers for selected operating system failed.
----------------	---

<b>Detailed Description</b>	Copying drivers for selected operating system failed. The Driver Pack may be unusable.
<b>Recommended Response Action</b>	Update the Driver Pack using Lifecycle Controller (LC)/Unified Server Configurator (USC) or Dell Update Package (DUP) and then rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD28

<b>Message</b>	Hash verification on the ISO image failed.
<b>Detailed Description</b>	Hash verification on the ISO image has failed. The hash value specified in the command is either incorrect or the ISO image has been changed.
<b>Recommended Response Action</b>	1) Verify that the hash value specified in the command is correct. 2) Make sure that the ISO has not been changed 3) Replace the ISO image on the share and rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD29

<b>Message</b>	Driver Pack configuration file not found in Lifecycle Controller. The Driver Pack might be corrupt.
<b>Detailed Description</b>	Driver Pack configuration file not found in Lifecycle Controller. Driver Pack may be unusable.
<b>Recommended Response Action</b>	Update the Driver Pack using Lifecycle Controller (LC)/Unified Server Configurator (USC) or Dell Update Package (DUP) and then rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD3

<b>Message</b>	Lifecycle Controller is being used by another process.
<b>Detailed Description</b>	Lifecycle Controller is currently locked by another process. Make sure that the process completes before attempting to run another command.
<b>Recommended Response Action</b>	1) After two minutes, rerun the command. 2) Make sure that Lifecycle Controller GUI or Unified Server Configurator or DUP is not currently running on the server. 3) Reset iDRAC and rerun the command.

<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD30

<b>Message</b>	Invalid value for ExposeDuration - must be 60 - 65535 seconds
<b>Detailed Description</b>	The value specified for ExposeDuration is out of range. It must be between 60 and 65535 seconds.
<b>Recommended Response Action</b>	Rerun the command with a ExposeDuration value between 60 and 65535 seconds.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD31

<b>Message</b>	Copying operating system drivers to network share failed
<b>Detailed Description</b>	Copying drivers for the selected operating system to network share failed. The share may be read-only or the Driver Pack present in Lifecycle Controller may be unusable.
<b>Recommended Response Action</b>	1) Make sure that the network share has write permission. 2) Update the Driver Pack using Lifecycle Controller or Unified Server Configurator or DUP and then rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD32

<b>Message</b>	ISO image is not attached
<b>Detailed Description</b>	Cannot continue with DetachISOImage because the system does not have an attached ISO image.
<b>Recommended Response Action</b>	The call to DetachISOImage is unnecessary since the ISO image is not currently attached.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD33

<b>Message</b>	Installed BIOS version does not support this method.
<b>Detailed Description</b>	The system has an older version of BIOS that does not support this method. Install the latest version of BIOS to use this method.
<b>Recommended Response Action</b>	Update the BIOS to version 1.2 or later and then rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD34

<b>Message</b>	Unable to continue with BootToPXE - ISO image is attached to the system.
<b>Detailed Description</b>	Unable to continue with BootToPXE command because the system has an ISO image attached. Detach the ISO image before continuing with BootToPXE.
<b>Recommended Response Action</b>	Run the DetachISOImage command and then run BootToPXE.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD35

<b>Message</b>	Lifecycle Controller is not enabled.
<b>Detailed Description</b>	Lifecycle Controller is disabled on the system, so none of the remote operating system deployment commands will work. Make sure Lifecycle Controller is enabled before running any command.
<b>Recommended Response Action</b>	For 11G systems: Use the iDRAC configuration utility to enable the System Services by pressing on the CTRL+E option on boot up at the targeted system. For 12G and above generations: Use F2 Setup, select iDRAC Configuration, and select Lifecycle Controller Settings, to enable the Lifecycle Controller on boot up of the targeted system.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD36

<b>Message</b>	Boot to ISO Image has been cancelled by using CTRL+E or F2 option on the server.
<b>Detailed Description</b>	User has cancelled system services by using the CTRL+E option (iDRAC configuration utility) or F2 option during POST. This action cancels the WSMAN request to boot to ISO.
<b>Recommended Response Action</b>	To resolve the issue rerun the command. Do not cancel system services using CTRL+E or F2 during POST when system is rebooting to the ISO.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD37

<b>Message</b>	ISO image size too large.
<b>Detailed Description</b>	ISO Image size is bigger than the available size in vFlash.
<b>Recommended Response Action</b>	1) Use a smaller size ISO Image. 2) Format the vFlash using the iDRAC GUI, RACADM, or iDRAC configuration utility and then retry this command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD38

<b>Message</b>	Copying the ISO image from the network failed.
<b>Detailed Description</b>	There was an error while copying the ISO from the network share.
<b>Recommended Response Action</b>	1) Make sure the network connection is functional. 2) Make sure the Dell vFlash does not have hardware issues by accessing it through the iDRAC GUI.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD39

<b>Message</b>	Unable to find the VFlash.
----------------	----------------------------

<b>Detailed Description</b>	Unable to get vFlash information from internal instrumentation.
<b>Recommended Response Action</b>	1) Make sure the Dell vFlash is seated correctly. 2) Make sure a Dell licensed vFlash card is inserted 3) Make sure the Dell vFlash does not have any hardware issues by accessing it through the iDRAC GUI.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD4

<b>Message</b>	Cannot access Lifecycle Controller Driver Pack partition.
<b>Detailed Description</b>	Driver Pack partition in Lifecycle Controller is not accessible. The Lifecycle Controller or the iDRAC might be unresponsive.
<b>Recommended Response Action</b>	Reset the iDRAC and rerun the command. If the command fails again, check if the iDRAC is functional and accessible on the system.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 1 (Critical)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD40

<b>Message</b>	VFlash is not Dell licensed.
<b>Detailed Description</b>	This is not a Dell-licensed vFlash.
<b>Recommended Response Action</b>	Insert a Dell vFlash and then retry this command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD41

<b>Message</b>	ISO Image not found on VFlash.
<b>Detailed Description</b>	vFlash does not contain the ISO Image because either the image was deleted, or it was never copied.
<b>Recommended Response Action</b>	Download the ISO Image to the vFlash again using the DownloadISOToVFlash method.
<b>Category</b>	Configuration (OSD = OS Deployment)

**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## OSD42

**Message** Downloading ISO File to VFlash failed.  
**Detailed Description** There was an error while copying the ISO image from the network share to the vFlash.  
**Recommended Response Action** 1) Make sure the network connection is working. 2) Make sure the Dell vFlash does not have any hardware issues by accessing it through the iDRAC GUI.  
**Category** Configuration (OSD = OS Deployment)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## OSD43

**Message** VFlash unavailable.  
**Detailed Description** vFlash is not present on the server.  
**Recommended Response Action** Insert a Dell-licensed vFlash and then retry this command.  
**Category** Configuration (OSD = OS Deployment)  
**Severity** Severity 2 (Warning)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## OSD44

**Message** Unable to detach ISO image on VFlash.  
**Detailed Description** The ISO on vFlash is not currently attached, so the DetachISOFromVFlash command could not be executed.  
**Recommended Response Action** Since the ISO image is not attached, the DetachISOFromVFlash command does not have to be run.  
**Category** Configuration (OSD = OS Deployment)  
**Severity** Severity 3 (Informational)  
**Redfish Event Type**  
*No alerts are applicable for this message*

## OSD45

<b>Message</b>	Cannot delete ISO image from VFlash.
<b>Detailed Description</b>	The ISO Image present in vFlash is attached to the host system. The ISO Image cannot be deleted from vFlash.
<b>Recommended Response Action</b>	Execute DetachISOFromVFlash() before running DeleteISOFromVFlash().
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD46

<b>Message</b>	VFlash in use.
<b>Detailed Description</b>	Another process (iDRAC GUI /racadm/iDRAC configuration utility) is currently accessing vFlash.
<b>Recommended Response Action</b>	Wait until the access to vFlash is relinquished and then retry this command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD47

<b>Message</b>	Inaccessible network share.
<b>Detailed Description</b>	Unable to access the network share using the credentials specified or the firewall might be enabled and is preventing access to the share.
<b>Recommended Response Action</b>	Make sure that the firewall is disabled, and that the credentials (username, password) are correct.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD48

<b>Message</b>	ISO Images of more than 4GB not supported.
----------------	--

<b>Detailed Description</b>	ISO Images of more than 4GB are not supported and cannot be copied to VFlash.
<b>Recommended Response Action</b>	Use an ISO that is smaller than 4GB.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD49

<b>Message</b>	Disable RIPS mode to access VFlash.
<b>Detailed Description</b>	vFlash cannot be accessed because RIPS mode is enabled.
<b>Recommended Response Action</b>	Disable the RIPS mode from BIOS or from the iDRAC GUI, and then continue executing the method.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD5

<b>Message</b>	Lifecycle Controller Driver Pack not found.
<b>Detailed Description</b>	A Driver Pack was not found on the Lifecycle Controller.
<b>Recommended Response Action</b>	Update the Driver Pack using Lifecycle Controller or Unified Server Configurator (USC) or DUP and then run the command again.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD50

<b>Message</b>	Lifecycle Controller is in field service mode.
<b>Detailed Description</b>	Lifecycle Controller is in field service mode and needs to be updated before proceeding further.
<b>Recommended Response Action</b>	Install the Lifecycle Controller field services package using the iDRAC GUI.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)

## Redfish Event Type

# OSD51

<b>Message</b>	Reboot the system to run pending System Services Tasks.
<b>Detailed Description</b>	There are pending System Services tasks on the host system that are preventing the execution of this method.
<b>Recommended Response Action</b>	Reboot the host system. The system will automatically enter System Services and complete the pending tasks.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# OSD52

<b>Message</b>	vFlash is disabled.
<b>Detailed Description</b>	vFlash is disabled.
<b>Recommended Response Action</b>	Enable the vFlash from the iDRAC GUI or RACADM, and then proceed.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

# OSD53

<b>Message</b>	vFlash is write protected.
<b>Detailed Description</b>	vFlash is write protected.
<b>Recommended Response Action</b>	Remove the write protect from the SD card and then proceed.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD54

<b>Message</b>	vFlash already has 16 partitions.
<b>Detailed Description</b>	vFlash allows only 16 partitions to be created.
<b>Recommended Response Action</b>	Make sure that there are less than 16 partitions before creating another partition on vFlash.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD55

<b>Message</b>	ISO Image is attached to host
<b>Detailed Description</b>	Cannot attach the ISO image since it is already attached to the host.
<b>Recommended Response Action</b>	ISO Image is already attached to the host server. Detach the ISO and then rerun the command.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD56

<b>Message</b>	An ISO is already connected using Remote File Share (RFS).
<b>Detailed Description</b>	An ISO is already connected using Remote File Share (RFS). The connection might have been initiated from iDRAC GUI, racadm, or Remote Services API.
<b>Recommended Response Action</b>	Disconnect the Remote File Share (RFS) using iDRAC GUI, racadm, or Remote Services API and then retry the operation to connect the ISO again.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 3 (Informational)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD57

<b>Message</b>	Remote File Share (RFS) is in Auto-Attach mode.
----------------	---

<b>Detailed Description</b>	Remote File Share (RFS) is currently configured to be in auto-attach mode. For Web services to attach an ISO, RFS should be changed to attach mode.
<b>Recommended Response Action</b>	Change the Remote File Share (RFS) mode to Attach using iDRAC GUI or Remote Services API and retry.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD58

<b>Message</b>	Unable to connect an ISO using Remote File Share (RFS).
<b>Detailed Description</b>	The connect ISO operation using Remote File Share (RFS) did not complete successfully.
<b>Recommended Response Action</b>	Verify all the parameters are correct. If the problem persists, then reset iDRAC and retry the operation.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD59

<b>Message</b>	Unable to disconnect from ISO using Remote File Share (RFS).
<b>Detailed Description</b>	Disconnecting ISO using Remote File Share (RFS) operation did not complete successfully.
<b>Recommended Response Action</b>	Reset iDRAC and retry the operation.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD6

<b>Message</b>	Cannot allocate memory.
<b>Detailed Description</b>	Unable to dynamically allocate memory to perform the task.
<b>Recommended Response Action</b>	Reset iDRAC and run the command.
<b>Category</b>	Configuration (OSD = OS Deployment)

<b>Message</b>	Unable to invoke the method because the mandatory input parameter ResetType is invalid.
<b>Detailed Description</b>	The method cannot be invoked because the mandatory input parameter ResetType is invalid.
<b>Recommended Response Action</b>	Check the value provided for input parameter "ResetType" and retry the operation.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD77

<b>Message</b>	Unable to invoke the method because the mandatory input parameter ResetType is missing.
<b>Detailed Description</b>	The method cannot be invoked because the mandatory input parameter ResetType is missing.
<b>Recommended Response Action</b>	Provide the missing parameter "ResetType" in the method invocation and retry the operation.
<b>Category</b>	Configuration (OSD = OS Deployment)
<b>Severity</b>	Severity 2 (Warning)
<b>Redfish Event Type</b>	<i>No alerts are applicable for this message</i>

## OSD8

<b>Message</b>	Setting Boot to PXE through IPMI failed.
----------------	--

**Detailed Description** The BIOS boot order set to PXE using a standard IPMI command has failed.

**Recommended Response Action** 1) Check BIOS PXE settings. 2) Rerun the command. 3) Reset iDRAC and rerun the command.

**Category** Configuration (OSD = OS Deployment)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## OSD9

**Message** Failed to reboot the system using an IPMI command.

**Detailed Description** Resetting the targeted server using the standard IPMI command has failed.

**Recommended Response Action** 1) Rerun the command. 2) Reset iDRAC and rerun the command.

**Category** Configuration (OSD = OS Deployment)

**Severity** Severity 1 (Critical)

**Redfish Event Type**

*No alerts are applicable for this message*

## OSE Event Messages

### OSE0000

**Message** A critical stop occurred during OS load.

**Detailed Description** The system halted due to an exception during operating system load or operating system initialization.

**Recommended Response Action** Review operating system logs and system video for additional information.

## PCI3018

**Message** New PCI card(s) have been detected in the system. Fan speeds may have changed to add additional cooling to the cards.

Detailed Description	New PCI card(s) have been detected in the system that may require additional airflow. Fan speeds may have changed to add additional cooling to the cards.
Recommended Response Action	Changing default fan response to PCIe cards should be done with appropriate understanding of the PCIe cooling needs of the cards present in the system. If the automatic cooling response is insufficient, additional cooling can be added by one of the following methods. 1) From iDRAC Web GUI, click Hardware -> Fans -> Setup, then from the fan speed offset drop-down list appropriately select the cooling level needed or set the minimum fan speed to a custom value. 2) From F2 System Setup, select iDRAC Settings -> Thermal, and set a higher fan speed from the fan speed offset or minimum fan speed. 3) For RACADM commands run "racadm help system.thermalsettings". If a lower fan speed is required, contact your service provider for the appropriate IPMI commands to reduce the default fan speed response for new PCIe cards.

## PCI3030

<b>Message</b>	New PCI card(s) have been detected in the system. Fan speeds may have changed to add additional cooling to the cards.
----------------	---

**Detailed Description** New PCI card(s) have been detected in the system that may require additional airflow. Fan speeds may have changed to add additional cooling to the cards.

**Recommended Response Action** If the automatic cooling response is insufficient, additional cooling can be added by one of the following methods. 1) From iDRAC Web GUI, click Cooling -> Configure Fans -> PCIe Airflow Settings, then select Custom option for that PCIe slot and define desired LFM value. 2) For RACADM commands run "racadm help system.PcieSlotLFM". If automatic cooling response is above desired levels, this response can be turned off in most cases and/or a different LFM target can be set using PCIe Airflow Settings options in iDRAC GUI or Racadm. See iDRAC User Guide for more details by searching for "cooling". Changing default fan response to PCIe cards should be done in alignment with vendor specification for PCIe cooling needs of the cards present in the system.

## PCI5001

**Message** A PCIe card carrier containing a PCIe card is inserted in PCIe slot *arg1*.

**Arguments**

- **arg1** = slot number

**Detailed Description** A PCIe card carrier containing a PCIe card is present in the slot identified in the message. This PCIe card will be enabled when the associated server is turned on or power cycled.

**Recommended Response Action** Turn on or power cycle the associated server to enable the PCIe card.

## PCI5004

**Message** A power fault issue is detected in the PCIe adapter that was turned on in PCIe slot *arg1* .

**Arguments**

- **arg1** = slot number

**Detailed Description** The Chassis Management Controller (CMC) detected an issue in the PCIe adapter that was turned on in the slot identified in the message.

**Recommended Response Action** Make sure that: 1) The PCIe adapter used is supported by the Chassis Management Controller (CMC). For a list of supported adapters, contact your service provider. 2) The adapter is not damaged. 3) The power requirement of adapter is not more than the power allocated to the slot. 4) The adapter is properly inserted in the slot.

## PCI5008

<b>Message</b>	The Chassis Management Controller (CMC) is unable to communicate with the PCIe switch board.
<b>Detailed Description</b>	The Chassis Management Controller (CMC) could not successfully connect to the PCIe switch board.
<b>Recommended Response Action</b>	Do the following: 1) Perform an AC Power Cycle operation on the Chassis by disconnecting the chassis from AC power, waiting for 30 seconds, and then reconnecting AC power. 2) Power on at least one server. Using the Chassis Management Controller (CMC) web interface, select Server Overview->Power->Control and then click the Operation field and select the Power On Server operation. If the issue persists, contact your service provider.

## PCI5009

**Message** The PCIe adapter in the PCIe slot *arg1* was removed from the slot while the server *arg2* was turned-on.

**Arguments**

- ***arg1*** = PCIe slot number
- ***arg2*** = server slot number

**Detailed Description** Chassis Management Controller (CMC) detected that a PCIe adapter was removed from a server which was turned-on. This may cause the server operating system to stop responding or to function in an improper manner.

**Recommended Response Action** Perform a Power Cycle operation on the associated server. Restarting the operating system will not resolve this issue. Only remove PCIe adapters when the associated server is turned-off.

## PDR100

**Message** Dedicated Hot Spare *arg1* no longer useful for all arrays.

**Arguments**

- ***arg1*** = PD Name

**Detailed Description** The controller is not able to communicate with a disk that is assigned as a dedicated hot spare. The disk may have been removed. There may also be a bad or loose cable.

**Recommended Response Action** Verify that the disk is healthy and that it has not been removed. Check the cables. See the Cables Attached Correctly section for more information on checking the cables. If necessary, replace the disk and reassign the dedicated hot spare.

## PDR106

Message	The physical disk drive <i>arg1</i> is unassigned as a dedicated hot-spare.
Arguments	<ul style="list-style-type: none"><li><b><i>arg1</i></b> = physical disk drive name</li></ul>
Detailed Description	A physical disk identified in the hot-spare that was assigned as a hot spare has been un-assigned and is no longer functioning as a hot spare. The physical disk was unassigned by a user or automatically by the storage management software. When one of the disks in a virtual disk fails, data is rebuilt onto the hot spare. The hot spare becomes a member of the virtual disk and is no longer assigned as a hot spare. In this situation, assigning a new hot spare to maintain data protection is recommended.
Recommended Response Action	No response action is required. Assigning a new dedicated hot spare to the virtual disk is recommended.

## PDR18

**Message** Global hot spare unassigned from *arg1* .

**Arguments** . ***arg1*** = PD Name

**Detailed Description** A physical disk assigned as a hot spare was unassigned and is no longer functioning as a hot spare. The physical disk was unassigned by a user or automatically unassigned by Storage Management. Storage Management unassigns hot spares were used to rebuild data. Once the data is rebuilt onto the hot spare, the hot spare becomes a member of the virtual disk and is no longer assigned as a hot spare. Assign a new hot spare to maintain data protection in this situation.

**Recommended Response Action** Although this alert is provided for informational purposes, you may need to assign a new hot spare to the virtual disk. See Protecting Your Virtual Disk with a Hot Spare for more information.

## PDR19

**Message** SMART FPT exceeded for *arg1* .

**Arguments** . ***arg1*** = PD Name

**Detailed Description** A disk on the specified controller has received a SMART alert (predictive failure) indicating that the disk is likely to fail in the near future.

**Recommended Response Action** Replace the disk that has received the SMART alert. If the physical disk is a member of a non-redundant virtual disk, then back up the data before replacing the disk. Removing a physical disk that is included in a non-redundant virtual disk causes the virtual disk to fail and may cause data loss.

## PDR20

**Message** SMART configuration change for *arg1*.

**Arguments**

- ***arg1*** = PD Name

**Detailed Description** A disk has received a SMART alert (predictive failure) after a configuration change. The disk is likely to fail in the near future.

**Recommended Response Action** Replace the disk that has received the SMART alert. If the physical disk is a member of a non-redundant virtual disk, then back up the data before replacing the disk. Removing a physical disk that is included in a non-redundant virtual disk will cause the virtual disk to fail and may cause data loss.

Message Unable to assign *arg1* as a dedicated hot spare.

Arguments  
 · **arg1** = physical disk name

Detailed Description Unable to assign the physical disk as a dedicated hot spare because the selected disk size does not meet the size requirements of the target Virtual Disk.

Recommended Response Action Select a physical disk that matches the size required for the disks used in the target Virtual Disk, and retry the operation.

Category Storage (PDR = Physical Disk)

## PDR210

**Message** Successfully updated configuration data on the *arg1*.

## Arguments

- **arg1** = physical disk name

## Detailed Description

This event is generated while initializing the drives during reboot. The controller updated the configuration data on the physical disks identified in the message. The drive configuration was updated because the following conditions were present: 1) The spundown drives were used for configuration. Spundown drives are drives that are temporarily powered off because power saving option is enabled. 2) The storage controller was not able to update the Configuration On Disk (COD) records on the drive while they were spundown.

## Recommended Response Action

No response action is required.

**Message** SMART warning temperature for *arg1*

**Arguments** · **arg1** = PD Name

**Detailed Description** A disk has reached an unacceptable temperature and received a SMART alert (predictive failure). The disk is likely to fail in the near future.

**Recommended Response Action** Do the following:1) Determine why the physical disk reached an unacceptable temperature. For example, a fan failure, incorrect thermostat settings, or the room temperature may be too hot or cold. 2) Verify that the fans in the server or enclosure are working. 3) If the physical disk is in an enclosure, check the thermostat settings and examine whether the enclosure is located near a heat source. Verify the enclosure has enough ventilation and that the room temperature is not too hot. Refer to the enclosure documentation for more diagnostic information. 4) If you cannot identify why the disk has reached an unacceptable temperature, then replace the disk. If the physical disk is a member of a non-redundant virtual disk, then back up the data before replacing the disk. Removing a physical disk that is included in a non-redundant virtual disk causes the virtual disk to fail and may cause data loss.

## PDR28

**Message** Dedicated hot spare unassigned from *arg1*.

## Arguments

· **arg1** = PD Name

**Detailed Description** A physical disk that was assigned as a hot spare has been unassigned and is no longer functioning as a hot spare. The physical disk was unassigned by a user or automatically unassigned by Storage Management. Storage Management unassigns hot spares that have been used to rebuild data. Once data is rebuilt onto the hot spare, the hot spare becomes a member of the virtual disk and is no longer assigned as a hot spare. Assign a new hot spare to maintain data protection in this situation.

**Recommended Response Action** Although this alert is provided for informational purposes, you may need to assign a new hot spare to the virtual disk. Refer to product documentation and see the section Protecting Your Virtual Disk with a Hot Spare for more information.

## PDR35

**Message** The only hot spare available is a SATA disk *arg1*.

**Arguments**

- ***arg1*** = PD Name

**Detailed Description** The only physical disk available to be assigned as a hot spare is using SATA technology. The physical disks in the virtual disk are using SAS technology. Because of this difference in technology, the hot spare cannot rebuild data if one of the physical disks in the virtual disk fails.

**Recommended Response Action** Add a SAS disk that is large enough to be used as the hot spare and assign the new disk as a hot spare.

## PDR44

**Message** The clear operation on *arg1* failed.

**Arguments**

- ***arg1*** = physical disk

<b>Detailed Description</b>	A Clear task was being performed on a physical disk but the task was interrupted and did not complete successfully. The controller may have lost communication with the disk, the disk was removed, or the cables may be loose or defective.
<b>Recommended Response Action</b>	Verify that the disk is present and not in a Failed state. Make sure the cables are attached securely. See the storage hardware documentation for more information on checking the cables. Restart the Clear task.

## PDR47

**Message** A block on *arg1* was punctured by the controller.

**Arguments**

- ***arg1*** = physical disk

**Detailed Description** The controller encountered an unrecoverable medium error when attempting to read a block on the physical disk and marked that block as invalid. If the controller encountered the unrecoverable medium error on a source physical disk during a rebuild or reconfigure operation, it punctures the corresponding block on the target physical disk. The invalid block clears on a write operation.

**Recommended Response Action** Back up the data from the disk. Start disk initialization and wait for it to complete, and then restore the data from a backup copy.

## PDR5

**Message** *arg1* is removed.

**Arguments**

- ***arg1*** = PD Name

**Detailed Description** A physical disk has been removed from the disk group. This alert can also be caused by loose or defective cables or by problems with the enclosure.

**Recommended Response Action** Do one of the following: 1) If a physical disk was removed from the disk group, either replace the disk or restore the original disk. Identify the disk that was removed by locating the disk that has a red "X" for its status. 2) Perform a rescan after replacing or restoring the disk. 3) If a disk was not removed from the disk group, then check for cable problems. Refer to product documentation for more information on checking the cables. 4) Make sure that the enclosure is powered on. 5) If the problem persists, check the enclosure documentation for further diagnostic information.

## PDR51

Message Hot spare *arg1* SMART polling has failed. *arg2*

### Arguments

- ***arg1*** = physical disk
- ***arg2*** = args

Detailed Description The controller firmware attempted to do SMART polling on the hot spare but could not complete the SMART polling. The controller may have lost communication with the hot spare.

Recommended Response Action Verify the health of the disk assigned as a hot spare. Replace the disk and reassign the hot spare. Make sure the cables are attached securely. See the storage hardware documentation for more information on checking the cables.
