1 Introduction

This document illustrates how to configure the Dell EMC™ Networking S4248-ON switch for use with Dell EMC Unity, Dell EMC SC Series, or Dell™ PS Series storage using Dell EMC best practices.

Link aggregation groups (LAGs) for inter-switch connections are mandatory for PS Series, optional for SC Series, and not connected for Dell EMC Unity iSCSI SAN environments. If using inter-switch connections, the switches are interconnected to each other using QSFP28 cables.

Note: For more information on SC Series or PS Series SAN design recommendations, see the [Dell EMC Storage Compatibility Matrix](#). For information on Dell EMC Unity SAN design recommendations, see the Dell EMC Unity [Simple Support Matrix](#).

1.1 Document conventions

Table 1 lists the formatting conventions used in this document.

Table 1 Document conventions

Item	Convention	Example
Code samples	Monospace	System configuration has been modified.
Parameters	Italic	Dell (<i>profile-name</i>) #
Command-line commands	Bold	OS# show version
Command-line user-supplied variables	Bold, italic, brackets	<vlan-id>

1.2 Audience

This switch configuration guide describes an optimal configuration following Dell EMC best practices for a Dell EMC Unity, SC Series, or PS Series iSCSI SAN and is intended for storage or network administrators and deployment personnel.

1.3 Switch details

Table 2 provides an overview of the switch configuration.

Table 2 Switch specifications

Dell EMC Networking S4248-ON	
Switch vendor	Dell EMC
Switch model	S4248-ON (S4248FB-ON or S4248FBL-ON)
Switch operating system	10.4.0 R3 or later

Note: For proper functionality, the switch must be at the switch operating system version shown in Table 2 before proceeding with this configuration. Using previous versions may have unpredictable results.

Note: The latest switch OS updates and documentation can be found at the [Force10 Portal](#).

1.4 Cabling diagram

Refer to one of the following cabling sections that is applicable to your storage system: SC Series (section 1.4.1), Dell EMC Unity (section 1.4.2), or PS Series (section 1.4.3).

1.4.1 SC Series cabling diagram

The cabling diagram in Figure 1 represents the Dell EMC recommended method for deploying servers and SC Series storage arrays.

Figure 1 SC Series cabling diagram

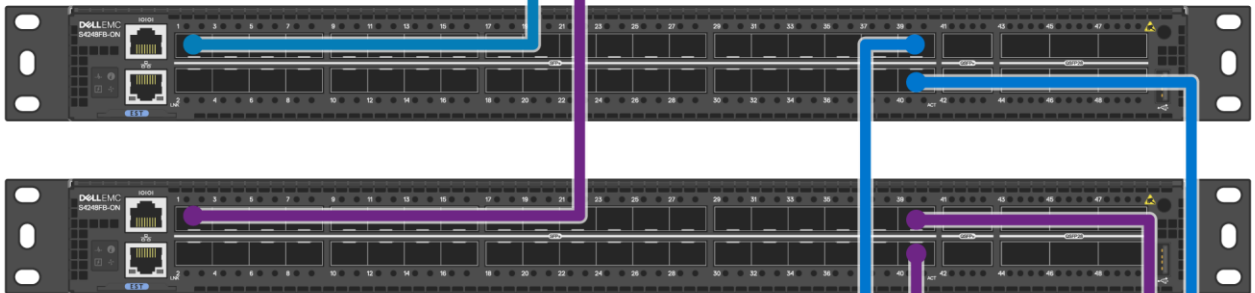

1.4.2 Dell EMC Unity cabling diagram

The cabling diagram in Figure 3 represents the Dell EMC recommended method for deploying servers and Dell EMC Unity storage arrays.

PowerEdge R630

Dell EMC Networking S4248-ON

Dell EMC Unity 300

Figure 2 Dell EMC Unity cabling diagram

1.4.3 PS Series cabling diagram

The cabling diagram in Figure 3 represents the Dell EMC recommended method for deploying servers and PS Series arrays. The two switches are connected to each other using a port-channel interconnect.

Figure 3 PS Series cabling diagram

2 Dell EMC recommended switch configuration

These steps show how to configure two S4248-ON switches with a Link Aggregation Group (LAG). The switches are interconnected using two of the 40GbE Quad Small Form-factor Pluggable (QSFP) ports or 100GbE QSFP28 ports. The LAG is configured for Dynamic Link Aggregation Control Protocol (LACP). This example uses physical ports 47 and 48 (QSFP28) for the switch interconnect (LAG) and the 10GbE SFP ports for host server and storage controller connections.

Note: LAGs for inter-switch connections are mandatory for PS Series, optional for SC Series, and not connected for Dell EMC Unity iSCSI SAN environments.

Note: The factory default user ID/password is **admin/admin**.

2.1 Hardware configuration

Note: Do not connect any server NIC or storage controller cables to the switch before performing the following configuration steps.

1. Power on the two switches.
2. Connect a serial cable to the serial port of the first switch.
3. Using PuTTY or another terminal utility, open a serial connection session to the switch.
4. Open the terminal emulator and configure it to use the serial port (COM1, COM2). Configure serial communications for 115200 N, 8, 1 and no flow control.
5. Perform all CLI steps from section 2 and section 3 (optional) on switch 1. Repeat this process for switch 2.
6. **Required for PS Series (optional for SC Series and not applicable for Dell EMC Unity):** Connect the QSFP28 interconnect cables between the switches by connecting physical port 47 on switch 1 to physical port 47 on switch 2, and physical port 48 on switch 1 to physical port 48 on switch 2. See the interconnect configuration in Figure 3.
7. Connect all server NIC and storage controller cables to the switch.

2.2 Check switch operating system version

```
OS10# show version
```

Note: If the active version displayed here is not 10.4.0 R3 or later, visit the [Force10 Portal](#) and download the latest update for the switches.

2.3 Delete startup configuration

Note: This example assumes a switch is using the default configuration settings. Using the **delete startup-configuration** command will set the startup configuration file to its default settings. Always back up your configuration settings prior to performing any configuration changes.

```
OS10# delete startup-configuration
Proceed to delete startup-config [confirm yes/no(default)]yes
OS10# reload
System configuration has been modified. Save? [yes/no]no
Proceed to reboot the system? [confirm yes/no]yes
```

Note: The switch will reboot.

2.4 Configure out-of-band management port

```
OS10# configure terminal
OS10(config)# interface mgmt 1/1/1
OS10(config-if-mgmt-1/1/1)# no ip address dhcp
OS10(config-if-mgmt-1/1/1)# ip address <ipaddress>/<subnet>
OS10(config-if-mgmt-1/1/1)# exit
```

2.5 Configure login credentials

```
OS10(config)# username admin password <password> role sysadmin
```

2.6 Configure QSFP or QSFP28 ports as breakout port (optional)

Identify the QSFP (40GbE) or QSFP28 (100GbE) port numbers that will be configured as breakout ports.

Note: Breakout cables are required when using breakout interfaces.

QSFP ports 1/1/40 and 1/1/41 have the following breakout capabilities:

- 40g-1x: 1 x 40Gb interface
- 10g-4x: 4 x 10Gb interfaces

QSFP28 ports 1/1/42 to 1/1/48 have the following breakout capabilities:

- 100g-1x: 1 x 100Gb interface
- 50g-2x: 2 x 50Gb interfaces
- 40g-1x: 1 x 40Gb interface
- 25g-4x: 4 x 25Gb interfaces
- 10g-4x: 4 x 10Gb interfaces

Example: Configure a QSFP port as a 4 x 10GbE breakout.

```
OS10(config)# interface breakout 1/1/<port-number> map 10g-4x
```

Example: Configure a QSFP28 port as a 4 x 25GbE breakout.

```
OS10(config)# interface breakout 1/1/<port-number> map 25g-4x
```

Use the following command to check the port interface status:

```
OS10# show interface status
```

2.7 Disable link auto-negotiation (SC Series SAN with T6225 or T62100 adapter)

Note: This section applies only to SC Series iSCSI SANs that use the Chelsio® T6225 or T62100 adapter.

Before connecting the network cable between the Chelsio T6225 (25GbE) or T62100 (100GbE) storage controller adapter and the switch, disable link auto-negotiation on the switch. For example, if the T6225 adapter will be connected to the breakout port eth 1/1/47:1, use the following procedure to disable link auto-negotiation:

```
OS10(config)# interface ethernet 1/1/47:1
OS10(conf-if-eth1/1/47:1)# negotiation off
OS10(conf-if-eth1/1/47:1)# exit
```

2.8 Enable switch ports

By default, switch ports for the S4248-ON switch are enabled and are configured for **switchport mode access**. If choosing to reconfigure the ports, use the following steps.

Option 1: Enable ports individually by entering the port number.

```
OS10# configure terminal
OS10(config)# interface ethernet 1/1/1
OS10(conf-if-eth1/1/1)# switchport mode access
OS10(conf-if-eth1/1/1)# no shutdown
OS10(conf-if-eth1/1/1)# exit
```

Option 2: Enable multiple ports at once using the **range** parameter.

The following command configures 10GbE switch ports (1/1/1 to 1/1/40).

```
OS10# configure terminal
OS10(config)# interface range ethernet 1/1/1-1/1/40
OS10(conf-range-eth1/1/1-1/1/40)# switchport mode access
OS10(conf-range-eth1/1/1-1/1/40)# no shutdown
OS10(conf-range-eth1/1/1-1/1/40)# exit
```

2.9 Enable Jumbo frames and flow control

```
OS10(config)# interface range ethernet 1/1/1-1/1/40
OS10(conf-range-eth1/1/1-1/1/40)# mtu 9216
OS10(conf-range-eth1/1/1-1/1/40)# flowcontrol receive on
OS10(conf-range-eth1/1/1-1/1/40)# flowcontrol transmit off
```

2.10 Configure spanning tree on edge ports

```
OS10(conf-range-eth1/1/1-1/1/40)# spanning-tree port type edge
OS10(conf-range-eth1/1/1-1/1/40)# exit
OS10(config)# no spanning-tree disable
```

2.11 Configure port channel for link aggregation

Note: Configuring for a port channel is mandatory for PS Series, optional for SC Series, and not applicable to Dell EMC Unity SANs.

These commands create a port channel or link aggregation used as an interconnect between two switches.

```
OS10(config)# interface port-channel 1
OS10(conf-if-po-1)#mtu 9216
OS10(conf-if-po-1)#no shutdown
OS10(conf-if-po-1)#exit
```

2.12 Configure port channel member ports

This configuration guide uses ports 1/1/47 and 1/1/48 as port channel member ports, and they are configured using the following commands.

```
OS10(config)# interface range ethernet 1/1/47,1/1/48
OS10(conf-range-eth1/1/47,1/1/48)# no switchport
OS10(conf-range-eth1/1/47,1/1/48)# channel-group 1 mode active
OS10(conf-range-eth1/1/47,1/1/48)# mtu 9216
OS10(conf-range-eth1/1/47,1/1/48)# flowcontrol receive on
OS10(conf-range-eth1/1/47,1/1/48)# flowcontrol transmit off
OS10(conf-range-eth1/1/47,1/1/48)# exit
OS10(config)# exit
```

2.13 Save configuration

```
OS10#copy running-configuration startup-configuration
OS10#reload
System configuration has been modified. Save? [yes/no]: yes
Proceed to reboot the system? [confirm yes/no]:yes
```

2.14 Configure additional switch

Repeat the commands from section 2 to configure the second switch.

Note: The preceding procedure places all switch ports in the default VLAN. If preferring to place ports in a non-default VLAN, refer to the switch documentation.

3 Configure Data Center Bridging (optional)

To enable Data Center Bridging (DCB) mode on the switch, use the commands in this section.

Note: Complete the switch configuration steps in section 2 before configuring the switch for DCB mode.

3.1 Disable iSCSI

```
OS10# configure terminal
OS10(config)# no iscsi enable
OS10(config)# no iscsi session-monitoring enable
```

3.2 Disable 802.3x flowcontrol on all ports

```
OS10(config)# interface range ethernet 1/1/1-1/1/40
OS10(conf-range-eth1/1/1-1/1/40)# no flowcontrol receive
OS10(conf-range-eth1/1/1-1/1/40)# no flowcontrol transmit
OS10(conf-range-eth1/1/1-1/1/40)# exit
```

3.3 Create tagged VLAN for all ports and port-channels

Note: You must supply a VLAN ID. The valid range is 2 to 4093.

The following commands will configure single VLAN ID. If desired, multiple VLAN IDs can be created on the switch and assigned to ports.

```
OS10(config)# interface vlan <vlan-id>
OS10(conf-if-vl-<vlan-id># mtu 9216
OS10(conf-if-vl-<vlan-id># no shutdown
OS10(conf-if-vl-<vlan-id># exit
```

3.4 Create QoS policy map with dot1p values as trusted

Note: This section only applies to switches running OS version 10.4.0. Skip this section if your switch is running OS version 10.4.1 or later.

```
OS10(config)# policy-map type qos <trust-policy-map-name>
OS10(config-pmap-qos)# class class-trust
OS10(config-pmap-c-qos)# trust dot1p
OS10(config-pmap-c-qos)# exit
OS10(config-pmap-qos)# exit
```

3.5 Create Priority Flow Control dot1p traffic class

The following commands configure a network QoS class map and match the iSCSI traffic class.

```
OS10(config)# class-map type network-qos <iSCSI-class-map-name>
OS10(config-cmap-nqos)# match qos-group 4
OS10(config-cmap-nqos)# exit
```

3.6 Configure network QoS policy map

```
OS10(config)# policy-map type network-qos <policy-map-name>
OS10(config-pmap-network-qos)# class <iSCSI-class-map-name>
OS10(config-pmap-c-nqos)# pause
OS10(config-pmap-c-nqos)# pfc-cos 4
OS10(config-pmap-c-nqos)# exit
OS10(config-pmap-network-qos)# exit
OS10(config)# policy-map type application <qos-policy-map-name>
OS10(config-pmap-application)# class class-iscsi
OS10(config-pmap-c-app)# set qos-group 4
OS10(config-pmap-c-app)# set cos 4
OS10(config-pmap-c-app)# exit
OS10(config-pmap-application)# exit
```

3.7 Configure queue to traffic-class mapping

```
OS10(config)# qos-map traffic-class <queue-map-name>
OS10(config-qos-map)# queue 0 qos-group 0-3,5-7
OS10(config-qos-map)# queue 4 qos-group 4
OS10(config-qos-map)# exit
```

3.8 Configure class-map queuing policies

```
OS10(config)# class-map type queuing <LAN-traffic-map-name>
OS10(config-cmap-queuing)# match queue 0
OS10(config-cmap-queuing)# exit
OS10(config)# class-map type queuing <iSCSI-traffic-map-name>
OS10(config-cmap-queuing)# match queue 4
OS10(config-cmap-queuing)# exit
```

3.9 Create ETS policy-map for traffic-class bandwidth allocations

```
OS10(config)# policy-map type queuing <queuing-policy-name>
OS10(config-pmap-queuing)# class <LAN-traffic-map-name>
OS10(config-pmap-c-que)# bandwidth percent <bandwidth-percentage>
OS10(config-pmap-c-que)# exit
OS10(config-pmap-queuing)# class <iSCSI-traffic-map-name>
OS10(config-pmap-c-que)# bandwidth percent <bandwidth-percentage>
OS10(config-pmap-c-que)# exit
OS10(config-pmap-queuing)# exit
```

Note: The sum of the bandwidth-percentages must be equal to 100. Monitor the LAN and SAN performance in your environment to determine optimal bandwidth settings.

3.10 Apply policies and VLAN ID to all switch edge ports (except port channel member ports)

```
OS10(config)# interface range ethernet 1/1/1-1/1/40
OS10(conf-range-eth1/1/1-1/1/40)# switchport mode trunk
OS10(conf-range-eth1/1/1-1/1/40)# switchport trunk allowed vlan <vlan-id>
OS10(conf-range-eth1/1/1-1/1/40)# service-policy input type network-qos <policy-
map-name>
OS10(conf-range-eth1/1/1-1/1/40)# service-policy output type queuing <queuing-
policy-name>
OS10(conf-range-eth1/1/1-1/1/40)# ets mode on
OS10(conf-range-eth1/1/1-1/1/40)# qos-map traffic-class <queue-map-name>
OS10(conf-range-eth1/1/1-1/1/40)# priority-flow-control mode on
OS10(conf-range-eth1/1/1-1/1/40)# exit
```

Note: The **priority-flow-control** setting can be enabled for limited ports on the switch. When breakout ports are configured, the total number of ports on the switch can be exceed this limit and cause the error **Error:QOS: Insufficient hardware resources**. Refer to the release notes for the switch for further details.

3.11 Apply policies and VLAN ID on port channel and its member ports

Note: Configuring for a port channel is mandatory for PS Series, optional for SC Series, and not applicable to Dell EMC Unity SANs.

```
OS10(config)# interface port-channel 1
OS10(conf-if-po-1)# switchport mode trunk
OS10(conf-if-po-1)# switchport trunk allowed vlan <vlan-id>
OS10(conf-if-po-1)# no shutdown
OS10(conf-if-po-1)# exit
```

This configuration guide uses ports 1/1/47 and 1/1/48 as port-channel member ports. They are configured using the following commands.

```
OS10(config)# interface range ethernet 1/1/47,1/1/48
OS10(conf-range-eth1/1/47,1/1/48)# service-policy input type network-qos
<policy-map-name>
OS10(conf-range-eth1/1/47,1/1/48)# service-policy output type queuing <queuing-
policy-name>
OS10(conf-range-eth1/1/47,1/1/48)# ets mode on
OS10(conf-range-eth1/1/47,1/1/48)# qos-map traffic-class <queue-map-name>
OS10(conf-range-eth1/1/47,1/1/48)# priority-flow-control mode on
OS10(conf-range-eth1/1/47,1/1/48)# exit
OS10(config)#
```

3.12 Set system QoS policies

3.12.1 Switch OS 10.3.1 to 10.4.0

Note: Perform these steps if your switch is running OS version 10.3.1 to 10.4.0. If your switch is running OS version 10.4.1 or later, skip this section and perform the steps in section 3.12.2.

```
OS10(config)# system qos
OS10(config-sys-qos)# service-policy input type qos <trust-policy-map-name>
OS10(config-sys-qos)# service-policy type application <qos-policy-map-name>
OS10(config-sys-qos)# ets mode on
OS10(config-sys-qos)# exit
```

3.12.2 Switch OS 10.4.1 or later

Note: Perform these steps if your switch is running OS version 10.4.1 or later. If your switch is running OS version 10.4.0 or earlier, skip this section and perform the steps in section 3.12.1.

```
OS10(config)# system qos
OS10(config-sys-qos)# trust-map dot1p default
OS10(config-sys-qos)# service-policy type application <qos-policy-map-name>
OS10(config-sys-qos)# ets mode on
OS10(config-sys-qos)# exit
```

3.13 Enable DCB

```
OS10(config)# dcbx enable
```

3.14 Save configuration

```
OS10# copy running-configuration startup-configuration
OS10# reload
```

3.15 Show commands to verify DCBx, ETS, and PFC status on individual ports

```
OS10# show lldp dcbx interface ethernet 1/1/<port-number>
OS10# show lldp dcbx interface ethernet 1/1/<port-number> pfc detail
OS10# show lldp dcbx interface ethernet 1/1/<port-number> ets detail
```

3.16 Show commands to verify iSCSI enable status

```
OS10# show iscsi
OS10# show iscsi storage-devices
OS10# show iscsi sessions
```

3.17 Configure additional switches

Repeat the commands from section 3 to configure DCB on additional switches.
