7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.

Version	Description
6.1.1.0	Introduced on the E-Series.

Related Commands

[show ip interface](#) — displays the interface routing status and configuration.

ip route

Assign a static route to the switch.

C9000 Series

Syntax

```
ip route {destination mask {ip-address | interface [slot/port] | [tunnel
tunnel-id] [distance] [name description] [permanent] | tag tag-value}}[vrf
vrf-name ]
```

To delete a specific static route, use the `no ip route destination mask` command.

To delete all routes matching a certain route, use the `no ip route destination mask` command.

Parameters

<i>destination</i>	Enter the IP address in dotted decimal format of the destination device.
<i>mask</i>	Enter the mask in the slash prefix format (/x) of the destination IP address.
<i>ip-address</i>	Enter the IP address of the forwarding router in dotted decimal format.
<i>interface</i> <i>interface</i>	Enter one of the following keywords and slot/port or number information: - For a null interface, enter the keyword <code>null</code> then the slot/port information. The Null interface number is 0. - For a Management Ethernet interface, enter the keyword <code>managementethernet</code> then the slot/port information. - For a Loopback interface, enter the keyword <code>loopback</code> then the slot/port information. The range is from 0 to 16383. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a Tunnel interface, enter the keyword <code>tunnel</code> then the tunnel ID. The range is from 1 to 16383. - For a VLAN interface, enter the keyword <code>vlan</code> then the slot/port information. The range is from 1 to 4094. - For a port extender (PE) Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is 0–255; the <i>stack-unit number</i> range is 0–7; and the <i>port-id</i> range is 1–48. - For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the <i>stack-unit unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE. If you configure a static IPv6 route using an egress interface and enter the ping command to reach the destination IPv6 address, the ping operation may not work. Configure the IPv6 route using a next-hop IPv6 address in order for the ping command to detect the destination address.
<i>interface ip-address</i>	Enter the keyword <code>interface</code> then the IP address.
<i>name description</i>	(OPTIONAL) Enter the keyword <code>name</code> and the description for the IPv4 static route configuration.

<i>distance</i>	(OPTIONAL) Enter the value of the distance metric assigned to the route. The range is from 1 to 255.
<i>permanent</i>	(OPTIONAL) Enter the keyword <code>permanent</code> to specify that the route must not be removed even if the interface assigned to that route goes down. The route must be currently active to be installed in the routing table. If you disable the interface, the route is removed from the routing table.
<i>tag tag-value</i>	(OPTIONAL) Enter the keyword <code>tag</code> then a number to assign to the route. The range is from 1 to 4294967295.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> followed by the name of the VRF. Use this VRF option after the next hop to specify which VRF the next hop belongs to. This setting is used in route leaking cases. Refer to the Route Leaking VRFs section in the Virtual Routing and Forwarding (VRF) chapter of the Configuration guide.
<i>weight weight-value</i>	Enter the keyword <code>weight</code> followed by a weight value. The range is from 0 to 255.  NOTE: Weight for a static route can be added only for the destination address and not for the route pointing to destination a interface.

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.14(1.2)	Added the keyword <code>name</code> for static routes.
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.7(0.1)	Introduced on the S3048-ON.
9.7(0.1)	Introduced on the S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.7(0.0)	Included the <code>weighted</code> parameter to support weighted ECMP feature.
9.4.(0.0)	Added support for VRF.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
9.2.(0.0)	Added support for tunnel interface type.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
8.2.1.0	Added support for 4094 VLANs on the E-Series ExaScale (the prior limit was 2094).
8.1.1.0	Introduced on the E-Series ExaScale.
7.9.1.0	Introduced VRF on the E-Series.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.1.1.0	Introduced on the E-Series.

Usage Information

Using the following example of a static route: `ip route 33.33.33.0 /24 tengigabitethernet 1/1 172.31.5.43`

- The software installs a next hop that is not on the directly connected subnet but which recursively resolves to a next hop on the interface's configured subnet. In the example, if `tengig 1/1` has an ip address on subnet 2.2.2.0 and if 172.31.5.43 recursively resolves to 2.2.2.0, Dell Networking OS installs the static route.
- When the interface goes down, Dell Networking OS withdraws the route.
- When the interface comes up, Dell Networking OS re-installs the route.
- When recursive resolution is "broken," Dell Networking OS withdraws the route.
- When recursive resolution is satisfied, Dell Networking OS re-installs the route.

You can specify a weight for an IPv4 or IPv6 static route. If the weight value of a path is 0, then that path is not used for forwarding when weighted ECMP is in effect. Also, if a path corresponding to a static route (destination) has a non-zero weight assigned to it and other paths do not have any weight configured, then regular ECMP is used for forwarding.

You can specify the weight value only to destination address and not on the egress port.

A route is considered for weighted ECMP calculations only if each path corresponding to that route is configured with a weight.

You cannot use the VRF attribute of this command to configure routes in a management VRF. When a specific VRF is deleted, all the configured static routes corresponding to that VRF are automatically removed.

Example

```
Dell(config)#ip route 1.1.1.0/24 4.4.4.2 weight 100
Dell(config)#ip route 1.1.1.0/24 6.6.6.2 weight 200
Dell(config)#do show running-config | grep route ip route 1.1.1.0/24
4.4.4.2 weight 100 ip route 1.1.1.0/24 6.6.6.2 weight 200
Dell(config)#ip route vrf test 1.1.1.0/24 4.4.4.2 weight 100
Dell(config)#ip route vrf test 1.1.1.0/24 6.6.6.2 weight 200
Dell(config)#
Dell(config)#do show running-config | grep route ip route vrf test
1.1.1.0/24 4.4.4.2 weight 100 ip route vrf test 1.1.1.0/24 6.6.6.2
weight 200
```

Related Commands

[show ip route](#) — views the switch routing table.

ip source-route

Enable the system to forward IP packets with source route information in the header.

C9000 Series

Syntax

`ip source-route`

To drop packets with source route information, use the `no ip route-source` command.

Defaults

Enabled.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.

Version	Description
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.0	Introduced on the E-Series.

ip unreachable

Enable the generation of internet control message protocol (ICMP) unreachable messages.

C9000 Series

Syntax	<code>ip unreachable</code> To disable the generation of ICMP messages, use the <code>no ip unreachable</code> command.
Defaults	Disabled.
Command Modes	INTERFACE
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.0	Introduced on the E-Series.

ipv4 unicast-host-route

Enable the storage of IPv4 route prefixes in the L3 host table.

C9000 Series

Syntax	<code>[no] ipv4 unicast-host-route</code>
Defaults	Disabled; by default, all IPv4 route prefixes are stored installed only in the Longest Prefix Match (LPM) table.

Command Modes CONFIGURATION

Command History	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.5(0.1)	Introduced on the Z9500.
	9.3(0.1)	Introduced on the S6000.

Usage Information

Route prefixes stored in the L3 host table are managed using ECMP next-hop forwarding.

A warning message is displayed after you enter the command stating that this setting takes effect for existing routes only when IPv4 route prefixes are cleared from the LPM routing table (RTM). To enable storage of IPv4 route prefixes in the LPM table, disable this setting by entering the `no ipv4 unicast-host-route` command.

Example

```
Dell(conf)#ipv4 unicast-host-route
Warning: Command will take effect for existing routes only when IPv4
route prefixes are cleared from RTM
Dell(conf)#no ipv4 unicast-host-route
```

load-balance

By default, the system uses an IP 4-tuple (IP SA, IP DA, Source Port, and Destination Port) to distribute IP traffic over members of a Port Channel as well as equal-cost paths. To designate another method to balance traffic over Port Channel members, use the `load-balance` command.

C9000 Series

Syntax

```
load-balance {ip-selection [dest-ip | source-ip]} | {mac [dest-mac |
source-dest-mac | source-mac]} | {tcp-udp | ingress-port [enable]}
```

To return to the default setting (IP 4-tuple), use the `no load-balance {ip-selection [dest-ip | source-ip]} | {mac [dest-mac | source-dest-mac | source-mac]} | {tcp-udp | ingress-port [enable]}` command.

Parameters

ip-selection {dest-ip source-ip}	Enter the keywords to distribute IP traffic based on the following criteria: • dest-ip — Uses destination IP address and destination port fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded. • source-ip — Uses source IP address and source port fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.
mac {dest-mac source-dest-mac source-mac}	Enter the keywords to distribute MAC traffic based on the following criteria: • dest-mac — Uses the destination MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded. • source-dest-mac — Uses the destination and source MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded. • source-mac — Uses the source MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.
tcp-udp enable	Enter the keywords to distribute traffic based on the following: • enable — Takes the TCP/UDP source and destination ports into consideration when doing hash computations. This option is enabled by default.

ingress-port enable Enter the keywords to distribute traffic based on the following:

- **enable** — Takes the source port into consideration when doing hash computations. This option is disabled by default.

Defaults IP 4-tuple (IP SA, IP DA, Source Port, Destination Port)

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.10.0	Added the <code>ingress-port</code> parameter for the S4810.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.

Usage Information By default, the system distributes incoming traffic based on a hash algorithm using the following criteria:

- IP source address
- IP destination address
- TCP/UDP source port
- TCP/UDP destination port

Related Commands [hash-algorithm ecmp](#) — changes the hash algorithm across an ECMP.

management route

Configure a static route that points to the Management interface or a forwarding router.

C9000 Series

Syntax

```
management route {{ip-address mask | {ipv6-address prefix-length}}
{forwarding-router-address | managementethernet | fortyGigE | vlan |
gigabitethernet | tengigabitethernet}}
```

To remove a static route, use the `no management route{{ip-address mask | {ipv6-address prefix-length}}{forwarding-router-address | managementethernet | fortyGigE | vlan | gigabitethernet | tengigabitethernet}}` command.

Parameters

ip-address mask Enter an IP address (dotted decimal format) and mask (/prefix format) of the destination subnet.

ipv6-address prefix-length Enter an IPv6 address (x:x:x:x:x format) and mask (/prefix format) of the destination subnet. Enter the IPv6 address in the x:x:x:x:x format followed by the prefix length in the /x format.

The range is from /0 to /128.

 **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

<i>forwarding-router-address</i>	Enter an IP address (dotted decimal format) or an IPv6 address (x:x:x:x::x format) of a forwarding router.
managementethernet	Enter the keyword <code>managementethernet</code> for the Management interface on the Primary RPM.
fortyGigE	Enter the keyword <code>fortyGigE</code> to specify a forty Gigabit Ethernet interface.
vlan	Enter the keyword <code>vlan</code> to specify a vlan interface.
gigabitethernet	Enter the keyword <code>gigabitethernet</code> to specify a one Gigabit Ethernet interface.
tengigabitethernet	Enter the keyword <code>tengigabitethernet</code> to specify a ten Gigabit Ethernet interface.

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.7(0.1)	Introduced on the S3048-ON.
9.7(0.1)	Introduced on the S4048-ON.
9.7(0.0)	Added support for forty gigabit, vlan, and tengigabit ethernet interfaces. Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
9.0.0.0	Introduced on the Z9000 and added support for IPv6.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.5.1.0	Introduced on the C-Series.
pre-6.1.1.0	Introduced on the E-Series.

Usage Information When a static route (or a protocol route) overlaps with Management static route, the static route (or a protocol route) is preferred over the Management Static route. Also, Management static routes and the Management Connected prefix are not reflected in the hardware routing tables. Separate routing tables are maintained for IPv4 and IPv6 management routes. This command manages both tables.

Related Commands [interface ManagementEthernet](#) — configures the Management port on the system (either the Primary or Standby RPM).
[speed \(Management interface\)](#) — sets the speed for the Management interface.

show arp

Display the ARP table entries learned on a switch CPU.

C9000 Series

Syntax	<pre>show arp [cpu [cp rp]] [interface <i>interface</i> ip <i>ip-address</i> [<i>mask</i>] macaddress <i>mac-address mask</i>] [static dynamic] [summary]</pre>	
Parameters	cpu cp	(OPTIONAL) Enter the keywords <code>cpu cp</code> to display the ARP entries learned on the Control Processor.
	cpu rp	(OPTIONAL) Enter the keyword <code>cpu rp</code> to display the ARP entries learned on the Route Processor.
	interface <i>interface</i>	To specify an interface, enter one of the following interface types and slot/port or number information: • For Loopback interfaces, enter the keyword <code>loopback</code> then a number from zero (0) to 16383. • For a Port Channel interface, enter the keyword <code>port-channel</code> then a number. The range is from 1 to 4096. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094. • For a tunnel interface, enter the keyword <code>tunnel</code>. • For a port extender (PE) Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id</i> / stack-unit <i>unit number</i> /port-ID information. • For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id</i> / stack-unit / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE.
	linecard <i>slot-id</i>	(OPTIONAL) Enter the interface <i>port-type slot/port</i> parameters to display the ARP entries learned on a Z9500 port. The range of slot IDs is from 0 to 2.
	ip <i>ip-address mask</i>	(OPTIONAL) Enter the keyword <code>ip</code> with an IP address in the dotted decimal format to display the ARP entries learned with this IP address. Enter the optional IP address mask in the slash prefix format (<i>/ x</i>).
	macaddress <i>mac-address mask</i>	(OPTIONAL) Enter the keyword <code>macaddress</code> with a MAC address in <code>nn:nn:nn:nn:nn:nn</code> format to display the ARP entries learned with this MAC address. Enter the optional MAC address mask in <code>nn:nn:nn:nn:nn:nn</code> format also.
	static	(OPTIONAL) Enter the keyword <code>static</code> to display manually-entered ARP entries.
	dynamic	(OPTIONAL) Enter the keyword <code>dynamic</code> to display dynamically-learned ARP entries.
	summary	(OPTIONAL) Enter the keyword <code>summary</code> to view a summary of ARP entries.
	Default	Display only the ARP entries learned on the Control Processor.
	Command Modes	EXEC Privilege
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.13.0.1P1	Introduced peTenGigE interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
8.2.1.0	Added support for 4094 VLANs on the E-Series ExaScale (the prior limit was 2094).
8.1.1.0	Introduced on the E-Series ExaScale.
7.9.1.0	Introduced VRF on the E-Series.
7.8.1.0	Augmented to display local ARP entries learned from private VLANs (PVLANS).
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.0	Introduced on the E-Series.

Usage Information

Use the `show arp` command to display the ARP entries learned on the Control Processor and Route Processor.

The following example shows two VLANs that are associated with a private VLAN (PVLAN) (refer to [Private VLAN \(PVLAN\)](#)).

The following describes the `show arp` command shown in the following example.

Field	Description
Protocol	Displays the protocol type.
Address	Displays the IP address of the ARP entry.
Age(min)	Displays the age (in minutes) of the ARP entry.
Hardware Address	Displays the MAC address associated with the ARP entry.
Interface	Displays the first two letters of the interfaces type and the slot/port associated with the ARP entry.
VLAN	Displays the VLAN ID, if any, associated with the ARP entry.
CPU	Lists which CPU the entries are stored on.

Example

```
Dell>show arp
```

Protocol	Address	Age(min)	Hardware Address	Interface	VLAN	CPU
Internet	192.2.1.254	1	00:00:c0:02:01:02	Te 0/13	-	CP
Internet	192.2.1.253	1	00:00:c0:02:01:02	Te 0/13	-	CP
Internet	192.2.1.252	1	00:00:c0:02:01:02	Te 0/13	-	CP
Internet	192.2.1.251	1	00:00:c0:02:01:02	Te 0/13	-	CP
Internet	192.2.1.250	1	00:00:c0:02:01:02	Te 0/13	-	CP
Internet	192.2.1.251	1	00:00:c0:02:01:02	Te 0/13	-	CP
Internet	192.2.1.250	1	00:00:c0:02:01:02	Te 0/13	-	CP
Internet	192.2.1.249	1	00:00:c0:02:01:02	Te 0/13	-	CP
Internet	192.2.1.248	1	00:00:c0:02:01:02	Te 0/13	-	CP
Internet	192.2.1.247	1	00:00:c0:02:01:02	Te 0/13	-	CP
Internet	192.2.1.246	1	00:00:c0:02:01:02	Te 0/13	-	CP
Internet	192.2.1.245	1	00:00:c0:02:01:02	Te 0/13	-	CP

Example (Private VLAN)

NOTE: In this example, Line 1 shows community VLAN 200 (in primary VLAN 10) in a PVLAN. Line 2 shows primary VLAN 10.

```
Dell#show arp
Protocol Address      Age(min)  Hardware Address  Interface VLAN  CPU
-----
Internet 5.5.5.1          -    00:01:e8:43:96:5e -      Vl 10 pv 200 CP
Internet 5.5.5.10       -    00:01:e8:44:99:55 -      Vl 10      CP
Internet 10.1.2.4        1    00:01:e8:d5:9e:e2 Ma 0/0 -      CP
Internet 10.10.10.4    1    00:01:e8:d5:9e:e2 Ma 0/0 -      CP
Internet 10.16.127.53  1    00:01:e8:d5:9e:e2 Ma 0/0 -      CP
Internet 10.16.134.254 20   00:01:e8:d5:9e:e2 Ma 0/0 -      CP
Internet 133.33.33.4   1    00:01:e8:d5:9e:e2 Ma 0/0 -      CP
```

Usage Information

The following describes the `show arp summary` command shown in the following example.

Field	Description
Total Entries	Lists the total number of ARP entries in the ARP table.
Static Entries	Lists the total number of configured or static ARP entries.
Dynamic Entries	Lists the total number of learned or dynamic ARP entries.
CPU	Lists which CPU the entries are stored on.

Example (Summary)

```
#show arp summary

TotalEntries Static Entries Dynamic Entries CPU
-----
83              0              83          CP
Dell
```

Related Commands

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.0.0.0	Added support for IPv6 addresses.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.1.1.0	Introduced on the E-Series ExaScale.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.0	Introduced on the E-Series.

**Usage
Information**

The following describes the `show hosts` command in the following example.

Field	Description
Default domain...	Displays the domain name (if configured).
Name/address lookup...	States if DNS is enabled on the system. • If DNS is enabled, the Name/Address lookup is domain service. • If DNS is not enabled, the Name/Address lookup is static mapping
Name servers are...	Lists the name servers, if configured.
Host	Displays the host name assigned to the IP address.
Flags	Classifies the entry as one of the following: • perm — the entry was manually configured and will not time out • temp — the entry was learned and will time out after 72 hours of inactivity. Also included in the flag is an indication of the validity of the route: • ok — the entry is valid. • ex — the entry expired. • ?? — the entry is suspect.
TTL	Displays the amount of time until the entry ages out of the cache. For dynamically learned entries only.
Type	Displays IP as the type of entry.

Field	Description
Address	Displays the IP addresses assigned to the host.

Example

```
Dell#show hosts
Default domain is not set
Name/address lookup uses static mappings
Name servers are not set
Host      Flags      TTL      Type      Address
-----
ks        (perm, OK) -      IP      2.2.2.2
4200-1    (perm, OK) -      IP      192.68.69.2
1230-3    (perm, OK) -      IP      192.68.99.2
ZZr       (perm, OK) -      IP      192.71.18.2
Z10-3     (perm, OK) -      IP      192.71.23.1
Dell#
```

Related Commands

[traceroute](#) — views the DNS resolution.

[ip host](#) — configures a host.

show ip cam linecard

View CAM entries for a port pipe on a line card..

C9000 Series

Syntax `show ip cam linecard number port-set pipe-number [ip-address mask [longer-prefixes] | index index-number | summary | vrf vrf instance]`

Parameters	<i>number</i>	Enter the number of the line card.
	<i>pipe-number</i>	Enter the number of the line card's port-pipe. The range is from 0 to 1.
	<i>ip-address mask [longer-prefix]</i>	(OPTIONAL) Enter the IP address and mask of a route to CAM entries for that route only. Enter the keyword <code>longer-prefixes</code> to view routes with a common prefix.
	<i>index index-number</i>	(OPTIONAL) Enter the keyword <code>index</code> then the CAM index number. The range depends on CAM size.
	<i>summary</i>	(OPTIONAL) Enter the keyword <code>summary</code> to view a table listing route prefixes and the total number of routes that can be entered into the CAM.
	<i>vrf instance</i>	(OPTIONAL) E-Series Only: Enter the keyword <code>vrf</code> then the VRF instance name to show CAM information as it applies to that VRF instance.

- Command Modes**
- EXEC
 - EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.

Version	Description
8.1.1.2	Introduced on the E-Series ExaScale E600i.
8.1.1.0	Introduced on the E-Series ExaScale.
7.9.1.0	Introduced VRF on the E-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.0	Introduced on the E-Series.

Usage Information

The following describes the `show ip cam` command shown in the following example.

Field	Description
Index	Displays the CAM index number of the entry.
Destination	Displays the destination route of the index.
EC	Displays the number of equal cost multipaths (ECMP) available for the default route for non-Jumbo line cards. For Jumbo line cards, displays 0,1 when ECMP is more than eight.
CG	Displays 0.
V	Displays a 1 if the entry is valid and a 0 if the entry is for a line card with Catalog number beginning with LC-EF.
C	Displays the CPU bit. 1 indicates that a packet hitting this entry is forwarded to the CP or RP2, depending on Egress port.
Next-Hop	Displays the next hop IP address of the entry.
VId	Displays the VLAN ID. If the entry is 0, the entry is not part of a VLAN.
Mac Addr	Displays the next-hop router's MAC address.
Port	Displays the egress interface. Use the second half of the entry to determine the interface. For example, in the entry 17cl CP, the CP is the pertinent portion. • CP = control processor • RP2 = route processor 2 • Gi = Gigabit Ethernet interface • So = SONET interface • Te = 10-Gigabit Ethernet interface

Example

```
Dell#show ip cam linecard 0 port-set 0
Destination EC C VId Mac-Addr Port
-----
1.1.32.140/32 0 0 200 00:00:00:00:1f:8a PeGigE <PE-ID>/<Slot>/<Port>
```

show ip fib linecard

View all forwarding information base (FIB) entries.

C9000 Series

Syntax `show ip fib linecard linecard id {vrf <vrf-id>/<A.B.C.D>/summary}`

Parameters	linecard	Displays the fib entries for the mentioned linecard id.
	vrf	Displays the fib entries for the mentioned <i>vrf-id</i> . Otherwise, <i>vrf</i> displays the default <i>vrf</i> entries.
	A.B.C.D.	Displays the fib entry for the mentioned prefix.

summary Displays the fib summary.

Command Modes EXEC

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.9.1.0	Introduced VRF on the E-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.0	Introduced on the E-Series.

Example

```
Dell>show ip fib linecard 2
Destination      Gateway      First-Hop
Mac-Addr        Port      VId      EC
-----
1.1.32.140/32 via 1.1.32.140, PeGigE PE-ID/Slot/Port 1.1.32.140
00:00:00:00:1f:8a PeGigE PE-ID/Slot/Port 200 0
```

show ip flow

Show how a Layer 3 packet is forwarded when it arrives at a particular interface.

C9000 Series

Syntax `show ip flow interface interface {source-ip address destination-ip address} {protocol number [tcp | udp]} {src-port number destination-port number}`

Parameters	interface <i>interface</i>	Enter the keyword <i>interface</i> then one of the following interface keywords. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.
	source-ip <i>address</i>	Enter the keywords <i>source-ip</i> then the IP source address in IP address format.
	destination-ip <i>address</i>	Enter the keywords <i>destination-ip</i> then the IP destination address in IP address format.
	protocol <i>number</i> [tcp udp]	Enter the keyword <i>protocol</i> then one of the protocol type keywords: <code>tcp</code> , <code>udp</code> , or <i>protocol number</i> . The protocol number range is from 0 to 255. .
	src-port <i>number</i>	Enter the keywords <i>src-port</i> then the source port number.
	destination-port <i>number</i>	Enter the keywords <i>destination-port</i> then the destination port number.

Command Modes EXEC

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.10.0	Introduced on the S4810.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.1.1.0	Introduced on the E-Series ExaScale.
7.9.1.0	Introduced VRF on the E-Series.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.0	Introduced on the E-Series.

Usage Information

This command provides egress port information for a given IP flow. This information is useful in identifying which interface the packet follows in the case of Port-channel and Equal Cost Multi Paths. Use this command for routed packets only. For switched packets, use the `show port-channel-flow` command.

The `show ip flow` command does not compute the egress port information when `load-balance mac hashing` is also configured due to insufficient information (the egress MAC is not available).

S-Series produces the following error message: `%Error: Unable to read IP route table.`

Example

```
Dell#show ip flow interface Te 1/8 189.1.1.1 63.0.0.1 protocol tcp
source-port 7898 destination-port 8
```

```
flow: 189.1.1.1 63.0.0.1 protocol 6 7868 8976
```

```
Ingress interface:Te 1/20
```

```
Egress interface:Te 1/14 to 1.7.1.2[CAM hit 103710] unfragmented packet
                  Te 1/10 to 1.2.1.2[CAM hit 103710] fragmented packet
```

show ip interface

View IP-related information on all interfaces.

C9000 Series

Syntax

```
show ip interface [interface | brief] [linecard slot-id] [configured]
```

Parameters

interface

(OPTIONAL) Enter the following keywords and slot/port or number information:

- For a Loopback interface, enter the keyword `Loopback` then a number from 0 to 16383.
- For the Management interface, enter the keyword `ManagementEthernet` then zero (0).
- For the Null interface, enter the keyword `null` then zero (0).
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a tunnel interface, enter the keyword `tunnel` then the tunnel interface number. The range is from 1 to 16383.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

linecard *slot-id* Enter the `linecard slot-id` parameters to specify the switch ports on a line card. The range of slot IDs is from 0 to 2.

brief (OPTIONAL) Enter the keyword `brief` to view a brief summary of the interfaces and whether an IP address is assigned.

configured (OPTIONAL) Enter the keyword `configured` to display the physical interfaces with non-default configurations only.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.11(0.0)	Updated the command output to include the unicast reverse path forwarding (uRPF) status.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
8.1.1.2	Supported on the E-Series ExaScale E600i.
8.1.1.0	Introduced on the E-Series ExaScale.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.0	Introduced on the E-Series.

Usage Information The following describes the `show ip interface` command shown in the following example.

Lines	Description
TenGigabitEthernet 0/0...	Displays the interface's type, slot/port, and physical and line protocol status.
Internet address...	States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.
IP MTU is...	Displays IP MTU value.
Inbound access...	Displays the name of the configured incoming access list. If none is configured, the phrase "not set" is displayed.
Proxy ARP...	States whether proxy ARP is enabled on the interface.
Split horizon...	States whether split horizon for RIP is enabled on the interface.
Poison Reverse...	States whether poison for RIP is enabled on the interface.

Lines	Description
ICMP redirects...	States if ICMP redirects are sent.
ICMP unreachable...	States if ICMP unreachable messages are sent.

Example

```
Dell# show ip interface tengigabitethernet 2
TenGigabitEthernet 2/0 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Directed broadcast forwarding is disabled
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachables are not sent
IP unicast RPF check is not supported

TenGigabitEthernet 2/1 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Directed broadcast forwarding is disabled
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachables are not sent
IP unicast RPF check is not supported

TenGigabitEthernet 2/2 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Directed broadcast forwarding is disabled
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachables are not sent
IP unicast RPF check is not supported

TenGigabitEthernet 2/3 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Directed broadcast forwarding is disabled
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachables are not sent
IP unicast RPF check is not supported
--More--
```

```
Dell# show ip interface brief
Interface          IP-Address      OK  Method Status
Protocol
TenGigabitEthernet 0/0      unassigned      NO  Manual administratively
down down
TenGigabitEthernet 0/1      10.10.10.1      NO  Manual administratively
down down
TenGigabitEthernet 0/2      unassigned      NO  Manual administratively
down down
TenGigabitEthernet 0/3      unassigned      NO  Manual administratively
down down
fortyGigE 0/4          unassigned      NO  Manual administratively
down down
fortyGigE 0/8          unassigned      NO  Manual administratively
```

```
down down
--More--
```

```
Dell# show ip interface configured
TenGigabitEthernet 0/0 is down, line protocol is down
Internet address is not set
IP MTU is 1500 bytes
Directed broadcast forwarding is disabled
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachable are not sent
IP unicast RPF check is not supported

TenGigabitEthernet 0/1 is down, line protocol is down
Internet address is 10.10.10.1/24
Broadcast address is 10.10.10.255
Address determined by config file
IP MTU is 1500 bytes
Directed broadcast forwarding is disabled
Proxy ARP is enabled
Split Horizon is enabled
Poison Reverse is disabled
ICMP redirects are not sent
ICMP unreachable are not sent
IP unicast RPF check is not supported
--More--
```

Usage Information

The following describes the `show ip interface brief` command shown in the following example.

Fields	Description
Interface	Displays type of interface and the associated slot and port number.
IP-Address	Displays the IP address for the interface, if configured.
Ok?	Indicates if the hardware is functioning properly.
Method	Displays "Manual" if the configuration is read from the saved configuration.
Status	States whether the interface is enabled (up) or disabled (administratively down).
Protocol	States whether IP is enabled (up) or disabled (down) on the interface.

Example (Brief)

```
Dell#show ip int brief
Interface      IP-Address  OK? Method  Status
Protocol
TenGigabitEthernet 1/0  unassigned NO  Manual  administratively down
down
TenGigabitEthernet 1/1  unassigned NO  Manual  administratively down
down
TenGigabitEthernet 1/2  unassigned YES Manual  up
TenGigabitEthernet 1/3  unassigned YES Manual  up
TenGigabitEthernet 1/4  unassigned YES Manual  up
TenGigabitEthernet 1/5  10.10.10.1 YES Manual  up
TenGigabitEthernet 1/6  unassigned NO  Manual  administratively down
down
```

show ip management-route

View the IP addresses assigned to the Management interface.

C9000 Series

Syntax	show ip management-route [all connected summary static]																				
Parameters	all	(OPTIONAL) Enter the keyword all to view all IP addresses assigned to all Management interfaces on the switch.																			
	connected	(OPTIONAL) Enter the keyword connected to view only routes directly connected to the Management interface.																			
	summary	(OPTIONAL) Enter the keyword summary to view a table listing the number of active and non-active routes and their sources.																			
	static	(OPTIONAL) Enter the keyword static to view non-active routes also.																			
Command Modes	- EXEC - EXEC Privilege																				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. - EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.6.1.0	Regular evaluation optimization enabled/disabled added to display output.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.0	Introduced on the E-Series.

Example

```
Dell#show ip protocols
Routing Protocol is "bgp 1"
  Cluster Id is set to 20.20.20.3
  Router Id is set to 20.20.20.3
  Fast-external-fallover enabled
  Regular expression evaluation optimization enabled
  Capable of ROUTE_REFRESH
  For Address Family IPv4 Unicast
    BGP table version is 0, main routing table version 0
    Distance: external 20 internal 200 local 200
  Neighbor(s):
    Address : 20.20.20.2
    Filter-list in : foo
    Route-map in : foo
    Weight : 0
    Address : 5::6
    Weight : 0
Dell#
```

show ip route

View information, including how they were learned, about the IP routes on the switch.

C9000 Series

Syntax	<code>show ip route <i>hostname</i> <i>ip-address</i> [<i>mask</i>] [<i>longer-prefixes</i>] list <i>prefix-list</i> protocol [<i>process-id</i> <i>routing-tag</i>] all connected static summary] [<i>vrf vrf-name</i>]</code>	
Parameters	<i>vrf vrf-name</i>	(OPTIONAL) Enter the keyword <code>vrf</code> and then the VRF name to list the routes in the route table of a specific VRF.
	<i>ip-address</i>	(OPTIONAL) Specify a name of a device or the IP address of the device to view more detailed information about the route.
	<i>mask</i>	(OPTIONAL) Specify the network mask of the route. Use this parameter with the IP address parameter.
	<i>longer-prefixes</i>	(OPTIONAL) Enter the keywords <code>longer-prefixes</code> to view all routes with a common prefix.
	<i>list prefix-list</i>	(OPTIONAL) Enter the keyword <code>list</code> and the name of a configured prefix list. For more information, refer to the show ip route list command.

<i>protocol</i>	(OPTIONAL) Enter the name of a routing protocol (<i>bgp</i> , <i>isis</i> , <i>ospf</i> , <i>rip</i>) or the keywords <i>connected</i> or <i>static</i> .  NOTE: <i>bgp</i> , <i>isis</i> , <i>ospf</i> , and <i>rip</i> . • If you enter <i>bgp</i>, you can include the BGP <i>as-number</i>. • If you enter <i>isis</i>, you can include the ISIS <i>routing-tag</i>. • If you enter <i>ospf</i>, you can include the OSPF <i>process-id</i>.
<i>process-id</i>	(OPTIONAL) Specify that only OSPF routes with a certain process ID must be displayed.
<i>routing-tag</i>	(OPTIONAL) Specify that only ISIS routes with a certain routing tag must be displayed.
<i>connected</i>	(OPTIONAL) Enter the keyword <i>connected</i> to view only the directly connected routes.
<i>all</i>	(OPTIONAL) Enter the keyword <i>all</i> to view both active and non-active routes.
<i>static</i>	(OPTIONAL) Enter the keyword <i>static</i> to view only routes the <i>ip route</i> command configures.
<i>summary</i>	(OPTIONAL) Enter the keyword <i>summary</i> . For more information, refer to the show ip route summary command.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.7(0.1)	Introduced on the S3048-ON.
9.7(0.1)	Introduced on the S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.4.(0.0)	Added support for VRF.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.9.1.0	Introduced VRF on the E-Series.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.1.1.0	Introduced on the E-Series.

Example

```
Dell#show ip route all

Codes:C- connected, S - static, R - RIP

Example (Summary)

```
Dell#show ip route summary
```

Route Source	Active Routes	Non-active Routes
connected	2	0
static	1	0
Total	3	0

Total 3 active route(s) using 612 bytes

```
Dell#show ip route static
```

Destination	Gateway	Dist/Metric	Last Change
*S 0.0.0.0/0	via 10.10.91.9, Te 1/2	1/0	3d2h

show ip route list

Display IP routes in an IP prefix list.

C9000 Series

Syntax `show ip route list prefix-list`

Parameters *prefix-list* Enter the name of a configured prefix list.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.

Version	Description
6.1.1.0	Introduced on the E-Series.

Example

```
Dell#show ip route list test

Codes:C- connected, S - static, R - RIP,
      B- BGP, IN - internal BGP, EX - external BGP, LO - Locally
      Originated,
      O- OSPF, IA - OSPF inter area, N1 - OSPF NSSA external type 1,
      N2- OSPF NSSA external type 2, E1 - OSPF external type 1,
      E2- OSPF external type 2, i - IS-IS, L1 - IS-IS level-1,
      L2- IS-IS level-2, IA - IS-IS inter area, * - candidate default,
      >- non-active route, + - summary route

Gateway of last resort is not set

      Destination      Gateway      Dist/Metric  Last Change
      -----
R    2.1.0.0/24        via 2.1.4.1, Te 2/43    120/2        3d0h

```

Related Commands

[ip prefix-list](#) — enters CONFIGURATION-IP PREFIX-LIST mode and configures a prefix list.

[show ip prefix-list summary](#) — displays a summary of the configured prefix lists.

show ip route summary

View a table summarizing the IP routes in the switch.

C9000 Series

Syntax `show ip route summary`

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.0	Introduced on the E-Series.

Usage Information

The following describes the `show ip route summary` shown in the following example.

Column Heading	Description
Route Source	Identifies how the route is configured in the system.
Active Routes	Identifies the best route if a route is learned from two protocol sources.
Non-active Routes	Identifies the back-up routes when a route is learned by two different protocols. If the best route or active route goes down, the non-active route becomes the best route.
ospf 100	If routing protocols (OSPF, RIP) are configured and routes are advertised, then information on those routes is displayed.
Total 1388 active...	Displays the number of active and non-active routes and the memory usage of those routes. If there are no routes configured in the system, this line does not appear.

Example

```
Dell>show ip route summary

Route Source      Active Routes      Non-active Routes
connected         17                  0
static            3                  0
ospf 100          1368               2
Intra-area: 762  Inter-area: 1  External-1: 600  External-2: 5
Total             1388               2
Total 1388 active route(s) using 222440 bytes
Total 2 non-active route(s) using 128 bytes
Dell>
```

Related Commands

[show ip route](#) — displays information about the routes found in the switch.

show ip traffic

View IP traffic statistics related to switch CPUs, including ICMP, UDP, TCP and ARP counters.

C9000 Series

Syntax

show ip traffic {all | cp | rp}

Parameters

all

(OPTIONAL) Enter the keyword `all` to view IP traffic statistics from all processors.

cp

(OPTIONAL) Enter the keyword `cp` to view only IP traffic statistics from the Control Processor.

rp

(OPTIONAL) Enter the keyword `rp` to view only IP traffic statistics from the Route Processor.

Default

View IP traffic statistics from all processors.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Version	Description
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.0	Introduced on the E-Series.

Usage Information

The following describes the `show ip traffic` summary shown in the following example.

Keyword	Definition
unknown protocol...	No receiver for these packets. Counts packets whose protocol type field is not recognized by the system.
not a gateway...	Packets can not be routed; the host/network is unreachable.
security failures...	Counts the number of received unicast/multicast packets that could not be forwarded due to: - route not found for unicast/multicast; ingress interfaces do not belong to the destination multicast group - destination IP address belongs to reserved prefixes; the host/network is unreachable
bad options...	Unrecognized IP option on a received packet.
Frgs:	IP fragments received.
...reassembled	Number of IP fragments that were reassembled.
...timeouts	Number of times a timer expired on a reassembled queue.
...too big	Number of invalid IP fragments received.
...couldn't fragment	Number of packets that could not be fragmented and forwarded.
...encapsulation failed	Counts packets which could not be forwarded due to ARP resolution failure. The system sends an ARP request prior to forwarding an IP packet. If a reply is not received, the system repeats the request three times. These packets are counted in encapsulation failed.
Rcvd:	Total number of packets received from specified protocol.
...short packets	The number of bytes in the packet are too small.
...bad length	The length of the packet was not correct.
...no port broadcasts	The incoming broadcast/multicast packet did not have any listener.
...socket full	The applications buffer is full and the incoming packet are dropped.

The F10 Monitoring MIB provides access to the following statistics.

- **IP Statistics: Bcast: Received:** Object = f10BcastPktRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.1
- **IP Statistics: Bcast: Sent:** Object = f10BcastPktSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.2
- **IP Statistics: Mcast: Received:** Object = f10McastPktRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.3
- **IP Statistics: Mcast: Sent:** Object = f10McastPktSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.4
- **ARP Statistics: Rcvd: Request:** Object = f10ArpReqRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.1
- **ARP Statistics: Rcvd: Replies:** Object = f10ArpReplyRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.3
- **ARP Statistics: Sent: Request:** Object = f10ArpReqSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.2
- **ARP Statistics: Sent: Replies:** Object = f10ArpReplySent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.4

- **ARP Statistics: Sent: Proxy:** Object = f10ArpProxySent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.5

Example

```
Dell#show ip traffic
Control Processor IP Traffic:

IP statistics:
  Rcvd: 23857 total, 23829 local destination
    0 format errors, 0 checksum errors, 0 bad hop count
    0 unknown protocol, 0 not a gateway
    0 security failures, 0 bad options
  Frags: 0 reassembled, 0 timeouts, 0 too big
    0 fragmented, 0 couldn't fragment
  Bcast: 28 received, 0 sent; Mcast: 0 received, 0 sent
  Sent: 16048 generated, 0 forwarded
    21 encapsulation failed, 0 no route
ICMP statistics:
  Rcvd: 0 format errors, 0 checksum errors, 0 redirects, 0 unreachable
    0 echo, 0 echo reply, 0 mask requests, 0 mask replies, 0 quench
    0 parameter, 0 timestamp, 0 info request, 0 other
  Sent: 0 redirects, 0 unreachable, 0 echo, 0 echo reply
    0 mask requests, 0 mask replies, 0 quench, 0 timestamp
    0 info reply, 0 time exceeded, 0 parameter problem
UDP statistics:
  Rcvd: 0 total, 0 checksum errors, 0 no port
    0 short packets, 0 bad length, 0 no port broadcasts, 0 socket full
  Sent: 0 total, 0 forwarded broadcasts
TCP statistics:
  Rcvd: 23829 total, 0 checksum errors, 0 no port
  Sent: 16048 total
ARP statistics:
  Rcvd: 156 requests, 11 replies
  Sent: 21 requests, 10 replies (0 proxy)
```

Related Commands

[clear ip traffic](#) — clears IP traffic statistics.

show tcp statistics

Display statistical information about TCP traffic transmitted on Z9500 CPUs.

C9000 Series

Syntax `show tcp statistics {all | cp | rp}`

Parameters

all	Enter the keyword <code>all</code> to view all TCP statistics on the switch CPUs.
cp	Enter the keyword <code>cp</code> to view TCP statistics only from the Control Processor.
rp	Enter the keyword <code>rp1</code> to view TCP statistics only from the Route Processor.

Command Modes EXEC Privilege

Default Display TCP information from all processors.

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.

Version	Description
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
6.4.1.0	Introduced

Usage Information

The following describes the `show tcp statistics cp` command shown in the following example.

Field	Description
Rcvd:	Displays the number and types of TCP packets received by the switch. • Total = total packets received • no port = number of packets received with no designated port
0 checksum error...	Displays the number of packets received with the following: • checksum errors • bad offset to data • too short
329 packets...	Displays the number of packets and bytes received in sequence.
17 dup...	Displays the number of duplicate packets and bytes received.
0 partially...	Displays the number of partially duplicated packets and bytes received.
7 out-of-order...	Displays the number of packets and bytes received out of order.
0 packets with data after window	Displays the number of packets and bytes received that exceed the switch's window size.
0 packets after close	Displays the number of packet received after the TCP connection was closed.
0 window probe packets...	Displays the number of window probe and update packets received.
41 dup ack...	Displays the number of duplicate acknowledgement packets and acknowledgement packets with data received.
10184 ack...	Displays the number of acknowledgement packets and bytes received.
Sent:	Displays the total number of TCP packets sent and the number of urgent packets sent.
25 control packets...	Displays the number of control packets sent and the number retransmitted.
11603 data packets...	Displays the number of data packets sent.
24 data packets retransmitted	Displays the number of data packets resent.
355 ack..	Displays the number of acknowledgement packets sent and the number of packet delayed.
0 window probe...	Displays the number of window probe and update packets sent.
7 Connections initiated...	Displays the number of TCP connections initiated, accepted, and established.
14 Connections closed...	Displays the number of TCP connections closed, dropped.
20 Total rxmt...	Displays the number of times the switch tried to re-send data and the number of connections dropped during the TCP retransmit timeout period.

Field	Description
0 Keepalive....	Lists the number of keepalive packets in timeout, the number keepalive probes and the number of TCP connections dropped during keepalive.

Example

```
Dell#show tcp statistics cp

Control Processor TCP:
Rcvd: 10585 Total, 0 no port
    0 checksum error, 0 bad offset, 0 too short
    329 packets (1263 bytes) in sequence
    17 dup packets (6 bytes)
    0 partially dup packets (0 bytes)
    7 out-of-order packets (0 bytes)
    0 packets ( 0 bytes) with data after window
    0 packets after close
    0 window probe packets, 41 window update packets
    41 dup ack packets, 0 ack packets with unsend data
    10184 ack packets (12439508 bytes)
Sent: 12007 Total, 0 urgent packets
    25 control packets (including 24 retransmitted)
    11603 data packets (12439677 bytes)
    24 data packets (7638 bytes) retransmitted
    355 ack only packets (41 delayed)
    0 window probe packets, 0 window update packets
    7 Connections initiated, 8 connections accepted, 15 connections
    established
    14 Connections closed (including 0 dropped, 0 embryonic dropped)
    20 Total rxmt timeout, 0 connections dropped in rxmt timeout
    0 Keepalive timeout, 0 keepalive probe, 0 Connections dropped in
    keepalive
Dell#
```

Related Commands

[clear tcp statistics](#) — clears TCP traffic statistics.

IPv6 Access Control Lists (IPv6 ACLs)

IPv6 ACLs and IPv6 Route Map commands are supported on Dell Networking operating system.

 **NOTE:** For IPv4 ACL commands, refer to the [Access Control Lists \(ACL\)](#) chapter.

Important Points to Remember

- Certain platforms require manual CAM usage space allotment. For more information, see the [cam-acl](#) command.
- Egress IPv6 ACL and IPv6 ACL on the Loopback interface is not supported.
- Reference to an empty ACL permits any traffic.
- ACLs are not applied to self-originated traffic (for example, Control Protocol traffic not affected by IPv6 ACL because the routed bit is not set for Control Protocol traffic and for egress ACLs the routed bit must be set).
- You can use the same access list name for both IPv4 and IPv6 ACLs.
- You can apply both IPv4 and IPv6 ACLs on an interface at the same time.
- You can apply IPv6 ACLs on physical interfaces and a logical interfaces (Port-channel/VLAN).
- Non-contiguous masks are not supported in source or destination addresses in IPv6 ACL entries.
- Because the prefix mask is specified in /x format in IPv6 ACLs, inverse mask is not supported.

Topics:

- [cam-acl](#)
- [cam-acl-egress](#)
- [clear counters ipv6 access-group](#)
- [deny](#) (for IPv6 ACLs)
- [deny icmp](#) (for Extended IPv6 ACLs)

cam-acl

Allocate content addressable memory (CAM) for IPv4 and IPv6 ACLs.

C9000 Series

Syntax

```
cam-acl {default | l2acl number { ipv4acl number ipv6acl number ipv4qos
number l2qos number l2pt number ipmacacl number vman-qos | vman-dual-qos
number ecfmacacl number [ openflow number fcoeacl number | fedgovacl number ]
```

```
nlbclusteracl number | ipv4pbr number | iscsiopaclnumber | openflow number
| vrfv4ac number1 ]}}
```

Parameters

default	Use the default CAM profile settings and set the CAM as follows: • L3 ACL (ipv4acl): 4 • L2 ACL(l2acl): 5 • IPv6 L3 ACL (ipv6acl): 0 • L3 QoS (ipv4qos): 2 • L2 QoS (l2qos): 1 • OpenFlow: 0 (disabled) • FCoE (fcoeacl): 0 (disabled) • iSCSI Optimization (iscsiopacl): 0 (disabled) • L2 PT : 0 • IP-MAC ACL : 0 • Vman QoS : 0 • ECFM ACL: 0 • IPv4 PBR : 0 • VRFv4 ACL : 0 • FedGov ACL : 0 • NLB Cluster ACL : 0
l2acl number	Allocate space to each CAM region. Enter the CAM profile name then the amount for CAM space allocation. The total space allocated must be equal to 12. The IPv6 ACL range must be a factor of 2. Enter <i>l2acl</i> and the FP block <i>number</i> for L2 ACL. The FP block number range is from 1 to 8. • 4: Creates 242 entries for use by the OpenFlow controller (256 total entries minus the 14 entries reserved for internal functionality) • 8: Creates 498 entries for use by the OpenFlow controller (512 total entries minus the 14 entries reserved for internal functionality)
ipv4acl number	Enter <i>ipv4acl</i> and the FP block <i>number</i> for IPv4. The FP block number range is from 0 to 8.
ipv6acl number	Enter <i>ipv6acl</i> and the FP block <i>number</i> for IPv6. The FP block number range is from 0 to 4 (multiples of 2).
ipv4qos number	Enter <i>ipv4qos</i> and the FP block <i>number</i> for IPv4–QoS. The FP block number range is from 0 to 8.
l2qos number	Enter <i>l2qos</i> and the FP block <i>number</i> for L2–QoS. The FP block number range is from 1 to 8.
l2pt number	Enter <i>l2pt</i> and the FP block <i>number</i> for L2–Protocol tunneling. The FP block number range is from 0 to 1.
ipmacacl number	Enter <i>ipmacacl</i> and the FP block <i>number</i> for IP-MAC ACL. The FP block number range is from 0 to 6.
vman-qos number	Enter <i>vman-qos</i> and the FP block <i>number</i> for Vman QoS. The FP block number range is from 0 to 6.
ecfmacl number	Enter <i>ecfmacl</i> and the FP block <i>number</i> for ECFM ACL. The FP block number range is from 0 to 5.
fcoeacl number	Enter <i>fcoeacl</i> and the FP block <i>number</i> for FCoE ACL. The FP block number range is 0 to 6.

fedgovacl number	Enter <code>fedgovacl</code> and the FP block <i>number</i> for Fed Gov ACL. The FP block number range is 0 to .
nlbclusteracl number	Enter <code>nlbclusteracl</code> and the FP block <i>number</i> for NLB Cluster ACL. The FP block number range is 0 to 6.
ipv4pbr number	Enter <code>ipv4pbr</code> and the FP block <i>number</i> for IPv4 PBR ACL. The FP block number range is 0 to 6.
iscsiopacl number	Enter <code>iscsiopacl</code> and the FP block <i>number</i> for iSCSI optimization ACL. The FP block number range is 0 to 6.
openflow number	Enter <code>openflow</code> and the FP block <i>number</i> for OpenFlow ACL. The FP block number range is 0 to 6.
vrfv4acl number	Enter <code>vrfv4acl</code> and the FP block <i>number</i> for VRF ACL. The FP block number range is 0 to 6.

Command Modes CONFIGURATION

CONFIGURATION TERMINAL BATCH

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.2(0.0)	Added support for the <code>fcoe</code> parameter on the S4810 and S4820T.
9.1.(0.0)	Added support for OpenFlow on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Added the keywords <code>fcoeacl</code> and <code>iscsiopacl</code> on the S4810.
8.3.11.1	Introduced on the Z9000.
8.3.1.0	Added the keywords <code>ecfmacl</code> , <code>vman-qos</code> , and <code>vman-dual-qos</code> .
8.2.1.0	Introduced on the S-Series.
7.8.1.0	Introduced on the C-Series.

Usage Information For the new settings to take effect, save the new CAM settings to the startup-config (`write-mem` or `copy run start`) then reload the system.

The total amount of space allowed is 16 FP Blocks. System flow requires four blocks and these blocks cannot be reallocated. The total number of blocks must be equal to 12. The `ipv4acl` profile range is from 0 to 8.

When configuring space for IPv6 ACLs, the total number of Blocks must equal 12.

Ranges for the CAM profiles are from 1 to 10, except for the `ipv6acl` profile which is from 0 to 10. The `ipv6acl` allocation must be a factor of 2 (2, 4, 6, 8, 10).

If you enabled BMP 3.0, to perform a reload on the chassis to upgrade any configuration changes that have changed the NVRAM content, use the `reload conditional nvram-cfg-change` command.

You can use the `cam-acl default` command in Configuration Terminal Batch mode to reset ACL CAM entries to default settings in a dual-homing setup.

cam-acl-egress

Allocate space for IPv6 egress ACLs.

C9000 Series

Syntax	cam-acl-egress {default l2acl 1-3 ipv4acl 1-3 ipv6acl 0-2}		
Parameters	default	Use the default CAM profile settings, and set the CAM as follows: • L2 ACL(l2acl): 1 • L3 ACL (ipv4acl): 1 • IPv6 L3 ACL (ipv6acl): 2	
	l2acl 1-3 ipv4acl 1-3 ipv6acl 0-2	Allocate space to support IPv6 ACLs. Enter all of the profiles and a range. Enter the CAM profile name then the allocation amount. The ipv6acl range must be a factor of 2.

Usage Information	For the new settings to take effect, save the new CAM settings to the startup-config (write-mem or copy run start), then reload the system.		
	You can use the cam-acl-egress command in Configuration Terminal Batch mode to allocate space for egress ACLs in a dual-homing setup.		

Example	<pre>Dell# Dell#configure Dell(conf)#cam-acl-egress ? default Reset Egress CAM ACL entries to default setting l2acl Set L2-ACL entries Dell(conf)#cam-acl-egress l2acl ? <1-3> Number of FP blocks for l2acl Dell(conf)#cam-acl-egress l2acl 1 ? ipv4acl Set IPV4-ACL entries Dell(conf)#cam-acl-egress l2acl 1 ipv4acl 1 ? ipv6acl Set IPV6-ACL entries Dell(conf)#cam-acl-egress l2acl 1 ipv4acl 1 ipv6acl ? <0-2> Number of FP blocks for IPV6 (multiples of 2) Dell(conf)#cam-acl-egress l2acl 1 ipv4acl 1 ipv6acl 2</pre>

clear counters ipv6 access-group

Erase all counters maintained for the IPv6 access lists.

C9000 Series

Syntax	<code>clear counters ipv6 access-group [access-list-name]</code>	
Parameters	<i>access-list-name</i>	(OPTIONAL) Enter the name of a configured access-list, up to 140 characters.
Command Modes	- EXEC - EXEC Privilege	
Command History	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.0.2.0	Introduced on the S6000.
	8.3.19.0	Introduced on the S4820T.
	8.3.11.1	Introduced on the Z9000.
	8.3.7.0	Introduced on the S4810.
	8.4.2.1	Introduced on the S-Series.
	8.2.1.0	Introduced on the E-Series TeraScale.
	7.8.1.0	Introduced on the C-Series.
	7.4.1.0	Introduced on the E-Series TeraScale Added the <code>monitor</code> option.

deny (for IPv6 ACLs)

Configure a filter that drops IPv6 packets matching the filter criteria.

C9000 Series

Syntax	<code>deny {ipv6-protocol-number icmp ipv6 tcp udp} [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]]</code> To remove this filter, you have two choices: - Use the <code>no seq sequence-number</code> command syntax if you know the filter's sequence number - Use the <code>no deny {ipv6-protocol-number icmp ipv6 tcp udp}</code> command	
Parameters	log	(OPTIONAL) Enter the keyword <code>log</code> to enable the triggering of ACL log messages.
	threshold-in msgs count	(OPTIONAL) Enter the <code>threshold-in-msgs</code> keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. with the <code>seq</code> , <code>permit</code> , or <code>deny</code> commands. The threshold range is from 1 to 100.
	interval minutes	(OPTIONAL) Enter the keyword <code>interval</code> followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
	monitor	(OPTIONAL) Enter the keyword <code>monitor</code> when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults	By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.	
Command Modes	ACCESS-LIST	
Command History	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.5(0.1)	Introduced on the Z9500.
	9.4(0.0)	Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
	9.3(0.0)	Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.
Usage Information	When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval. If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces. You can activate flow-based monitoring for a monitoring session by entering the flow-based <code>enable</code> command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).	

deny icmp (for Extended IPv6 ACLs)

Configure a filter to drop all or specific ICMP messages.

C9000 Series

NOTE: Only the options that have been newly introduced in Release 9.3(0.0) and Release 9.4(0.0) are described here. For a complete description on all of the keywords and variables that are available with this command, refer the topic of this command discussed earlier in this guide.

Syntax	<pre>deny icmp {source address mask any host ipv6-address} {destination address any host ipv6-address} [message-type] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]]</pre> To remove this filter, you have two choices: - Use the <code>no seq sequence-number</code> command syntax if you know the filter's sequence number - Use the <code>no deny icmp {source address mask any host ipv6-address} {destination address any host ipv6-address}</code> command	
Parameters	log	(OPTIONAL) Enter the keyword <code>log</code> to enable the triggering of ACL log messages.
	threshold-in-msgs count	(OPTIONAL) Enter the <code>threshold-in-msgs</code> keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which

the generation of ACL logs is terminated. with the seq, permit, or deny commands. You can enter a threshold in the range of 1-100.

- interval *minutes*** (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. You can enter an interval in the range of 1-10 minutes.
- monitor** (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is 5 minutes. By default, flow-based monitoring is not enabled.

Command Modes ACCESS-LIST

Command History

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
9.4(0.0)	Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
9.3.0.0	Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

deny tcp (for IPv6 ACLs)

Configure a filter that drops TCP packets that match the filter criteria.

C9000 Series

Syntax

```
deny tcp {source address mask | any | host ipv6-address} [operator port  
[port]] {destination address | any | host ipv6-address} [bit] [operator  
port [port]] [count [byte]] [log [interval minutes] [threshold-in-msgs  
[count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command syntax if you know the filter's sequence number

- Use the `no deny tcp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address}` command

Parameters	log	(OPTIONAL) Enter the keyword <code>log</code> to enable the triggering of ACL log messages.
	threshold-in msgs count	(OPTIONAL) Enter the <code>threshold-in-msgs</code> keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. with the <code>seq</code> , <code>permit</code> , or <code>deny</code> commands. The threshold range is from 1 to 100..
	interval minutes	(OPTIONAL) Enter the keyword <code>interval</code> followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
	monitor	(OPTIONAL) Enter the keyword <code>monitor</code> when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes ACCESS-LIST

Command History	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.5(0.1)	Introduced on the Z9500.
	9.4(0.0)	Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
	9.3(0.0)	Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

deny udp (for IPv6 ACLs)

Configure a filter to drop user datagram protocol (UDP) packets meeting the filter criteria.

C9000 Series

Syntax `deny udp {source address mask | any | host ipv6-address} [operator port [port]] {destination address | any | host ipv6-address} [operator port`

```
[port]] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]]
[monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command syntax if you know the filter's sequence number
- Use the `no deny udp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address}` command

Parameters	log	(OPTIONAL) Enter the keyword <code>log</code> to enable the triggering of ACL log messages.
	threshold-in msgs <i>count</i>	(OPTIONAL) Enter the <code>threshold-in-msgs</code> keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. with the <code>seq</code> , <code>permit</code> , or <code>deny</code> commands. The threshold range is from 1 to 100.
	interval <i>minutes</i>	(OPTIONAL) Enter the keyword <code>interval</code> followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.
	monitor	(OPTIONAL) Enter the keyword <code>monitor</code> when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Command Modes ACCESS-LIST

Command History	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.5(0.1)	Introduced on the Z9500.
	9.4(0.0)	Added support for flow-based monitoring on the S4810, S4820T, S6000, Z9000, and MXL 10/40GbE Switch IO Module platforms.
	9.3(0.0)	Added support for logging of ACLs on the S4810, S4820T, Z9000, and MXL 10/40GbE Switch IO Module platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs.

You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based `enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

ipv6 access-list

Configure an access list based on IPv6 addresses or protocols.

C9000 Series

Syntax	<code>ipv6 access-list access-list-name</code> To delete an access list, use the <code>no ipv6 access-list access-list-name</code> command.																				
Parameters	access-list-name Enter the access list name as a string, up to 140 characters.																				
Defaults	All access lists contain an implicit “deny any”; that is, if no match occurs, the packet is dropped.																				
Command Modes	CONFIGURATION CONFIGURATION TERMINAL BATCH																				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. Usage Information	The number of entries allowed per ACL is hardware-dependent. For detailed specification on entries allowed per ACL, refer to your line card documentation. Use this command in Configuration Terminal Batch mode to configure the access list in a dual-homing setup.																				
Related Commands	show config — views the current configuration.																				

ipv6 control-plane egress-filter

Enable egress Layer 3 ACL lookup for IPv6 CPU traffic.

C9000 Series

Syntax	<code>ipv6 control-plane egress-filter</code>
Defaults	Not enabled.
Command Modes	EXEC Privilege

CONFIGURATION TERMINAL BATCH

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.0.0.0	Introduced on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.10.0	Introduced on the S4810.

permit (for IPv6 ACLs)

Configure a filter that matches the filter criteria, select an IPv6 protocol number, ICMP, IPv6, TCP, or UDP.

C9000 Series

Syntax

```
permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp} [count [byte]]  
[dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs  
[count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command syntax if you know the filter's sequence number
- Use the `no permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp}` command

Parameters

log	(OPTIONAL) Enter the keyword <code>log</code> to enable the triggering of ACL log messages.
threshold-in-msgs count	(OPTIONAL) Enter the <code>threshold-in-msgs</code> keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the <code>seq</code> , <code>permit</code> , or <code>deny</code> commands. The threshold range is from 1 to 100.
interval minutes	(OPTIONAL) Enter the keyword <code>interval</code> followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
monitor	(OPTIONAL) Enter the keyword <code>monitor</code> when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes

ACCESS-LIST

Command History

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
9.4(0.0)	Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.

Version	Description
9.3(0.0)	Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

permit icmp (for IPv6 ACLs)

Allow filtering of all or specific internet control message protocol (ICMP) messages

C9000 Series

Syntax

```
permit icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} [message-type] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address}` command.

Parameters	log	(OPTIONAL) Enter the keyword <code>log</code> to enable the triggering of ACL log messages.
	threshold-in msgs <i>count</i>	(OPTIONAL) Enter the <code>threshold-in-msgs</code> keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the <code>seq</code> , <code>permit</code> , or <code>deny</code> commands. The threshold range is from 1 to 100.
	interval <i>minutes</i>	(OPTIONAL) Enter the keyword <code>interval</code> followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
	monitor	(OPTIONAL) Enter the keyword <code>monitor</code> when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes ACCESS-LIST

Command History	Version	Description

You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces. You can activate flow-based monitoring for a monitoring session by entering the <code>flow-based enable</code> command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).	
Related Commands	permit (for Standard IPv6 ACLs) – configures a filter to forward IPv6 packets.	

permit udp (for IPv6 ACLs)

Configure a filter to pass UDP packets meeting the filter criteria.

C9000 Series

Syntax	<pre>permit udp {source address mask any host ipv6-address} [operator port [port]] {destination address any host ipv6-address} [operator port [port]] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]</pre> To remove this filter, you have two choices: • Use the <code>no seq sequence-number</code> command if you know the filter's sequence number. • Use the <code>no permit udp {source address mask any host ipv6-address} {destination address any host ipv6-address}</code> command.	
Parameters	log	(OPTIONAL) Enter the keyword <code>log</code> to enable the triggering of ACL log messages.
	threshold-in-msgs count	(OPTIONAL) Enter the <code>threshold-in-msgs</code> keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the <code>seq</code> , <code>permit</code> , or <code>deny</code> commands. The threshold range is from 1 to 100.

interval <i>minutes</i>	(OPTIONAL) Enter the keyword <code>interval</code> followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
monitor	(OPTIONAL) Enter the keyword <code>monitor</code> when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Command Modes ACCESS-LIST

Command History

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
9.4(0.0)	Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
9.3.0.0	Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands

[permit \(for Standard IPv6 ACLs\)](#) – configures a filter to forward IPv6 packets.

seq (for IPv6 ACLs)

Assign a sequence number to a deny or permit the filter in an IPv6 access list while creating the filter.

C9000 Series

Syntax

```
seq sequence-number {deny | permit} {ipv6-protocol-number | icmp | ip |
tcp | udp} {source address mask | any | host ipv6-address} {destination
address | any | host ipv6-address} [operator port [port]] [count [byte]]
[log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To delete a filter, use the `no seq sequence-number` command.

Parameters

log	(OPTIONAL) Enter the keyword <code>log</code> to enable the triggering of ACL log messages.
threshold-in-msgs <i>count</i>	(OPTIONAL) Enter the <code>threshold-in-msgs</code> keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminate with the <code>seq</code> , <code>permit</code> , or <code>deny</code> commands. The threshold range is from 1 to 100.

interval <i>minutes</i>	(OPTIONAL) Enter the keyword <code>interval</code> followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
monitor	(OPTIONAL) Enter the keyword <code>monitor</code> when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes ACCESS-LIST

Related Commands [permit \(for Standard IPv6 ACLs\)](#) – configures a filter to forward IPv6 packets.

show cam-usage

Display the amount of memory space used and available in each CAM partition (including Layer 2 ACL, Layer 3 ACL, and IPv4Flow).

Syntax `show cam-usage [acl | router | switch]`

Parameters	acl	(OPTIONAL) Enter the keyword <code>acl</code> to display Layer 2 and Layer 3 ACL CAM usage.
	router	(OPTIONAL) Enter the keyword <code>router</code> to display Layer 3 CAM usage.
	switch	(OPTIONAL) Enter the keyword <code>switch</code> to display Layer 2 CAM usage.

Command Modes EXEC

EXEC Privilege

Command History

Version	Description
9.11.0.0	The <code>show cam-usage</code> command is updated to display ECMP group count information.
9.5.(0.0)	Introduced on the Z9500.
9.3.(0.0)	Introduced on the S4810, S4820T, Z9000 and MXL.

Usage Information

The following regions must be provided in the `show cam-usage` output:

- L3AclCam
- L2AclCam
- V6AclCam

The following table describes the output fields of the `show cam-usage` command.

Table 5. Output fields of the show cam-usage command

Field	Description
LineCard	Number of the line card that contains information on ACL VLAN groups
Portpipe	The hardware path that packets follow through a system for ACL optimization
CAM-Region	Type of area in the CAM block that is used for ACL VLAN groups
Total CAM space	Total amount of space in the CAM block
Used CAM	Amount of CAM space that is currently in use
Available CAM	Amount of CAM space that is free and remaining to be allocated for ACLs

Example 1: Output of the show cam-usage Command

```
Stackunit|Portpipe| CAM Partition  | Total CAM  | Used CAM  |
Available CAM
=====|=====|=====|=====|=====|

router Command

Example 4:
Output of the
show cam-usage
switch Command

show ipv6 access-list

Display IPv6 access-list information.

C9000 Series

Syntax `show ipv6 access-list { [name] | interface } { in | out | interface }`

Parameters

access-list	Enter the keywords <code>access-list</code> to display information for all ipv6 access-lists.
acl_name	Enter the keywords <code>acl_name</code> to display information for a specified ipv6 access-list.
in	Enter the keyword <code>in</code> to display information for an ipv6 ingress access-list attached to an interface.

out	Enter the keyword <code>out</code> to display information for an ipv6 egress access-list attached to an interface.				
interface	Enter the keyword <code>interface</code> to display information for an ipv6 access-list for a specific interface.				
Defaults	None				
Command Modes	EXEC				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></table>	Version	Description	9.9(0.0)	Introduced on the C9010.
Version	Description				
9.9(0.0)	Introduced on the C9010.				
Usage Information	No output displays If you do not attach an ingress or egress access-list to an interface and you return to the <code>DELL#</code> prompt.				
Example	<pre>Dell#show ipv6 access-list V6-ACL in Ingress IPV6 access list V6-ACL seq 5 permit tcp any any count (0 packets) seq 10 permit udp any any count (0 packets) Dell#</pre>				

show ipv6 accounting access-list

View the IPv6 access-list and the sequence of filters.

C9000 Series

Syntax	<code>show ipv6 accounting {access-list <i>access-list-name</i> <i>cam_count</i>} interface <i>interface</i></code>					
Parameters	<i>access-list-name</i>	Enter the name of the ACL that you want to display. The ACL name size is limited to 140 characters.				
	<i>cam_count</i>	List the count of the CAM rules for this ACL.				
	<i>interface</i> <i>interface</i>	Enter the keyword <code>interface</code> and the interface type and slot/port or number information: - For a Port Channel interface, enter the keywords <code>port-channel</code> a port channel number.The range is from 1 to 128. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> and the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> and the slot/port information.				
Command Modes	- EXEC - EXEC Privilege					
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.
Version	Description					
9.9(0.0)	Introduced on the C9010.					

Version	Description
9.0.2.0	Introduced on the S6000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.4.2.1	Introduced on the S-Series.
8.2.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series. Increased the name string to accept up to 140 characters. Prior to version 7.8.1.0, names are up to 16 characters long.
7.4.1.0	Introduced on the E-Series TeraScale.

Usage Information

Field	Description
"Ingress IPv6..."	Displays the name of the IPv6 ACL, in this Example "AcList1".
"seq 10..."	Displays the filter. If the keywords <code>count</code> or <code>byte</code> were configured in the filter, the number of packets or bytes processed by the filter is displayed at the end of the line.

Example

```
Dell#show ipv6 accounting access-list
!
Ingress IPv6 access list V6-ACL on TenGigabitEthernet 10/1
Total cam count 2
  seq 5 permit tcp any any count (0 packets)
  seq 10 permit udp any any count (0 packets)
```

show running-config

Display the ACL running configurations.

C9000 Series

Syntax	<code>show running-config {acl [ip mac ipv6]}</code>
Parameters	acl Enter the keyword <code>acl</code> to display all access-lists and <code>acl</code> sub commands. ip Enter the keyword <code>ip</code> to display all ip access-list and the <code>ip</code> sub commands. ipv6 Enter the keyword <code>ipv6</code> to display all ipv6 access-lists and <code>ipv6</code> sub commands. mac Enter the keyword <code>mac</code> to display all L2 access-lists and sub commands.
Defaults	None
Command Modes	EXEC
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Example

```
Dell# show running-config acl ip

ip access-list standard five
seq 5 permit any
```

```
!  
ip access-list standard four  
  seq 5 permit any count bytes  
  seq 10 deny any count  
  
  seq 20 deny host 2.2.2.2 log threshold-in-msgs 10 interval 5  
!  
show running-config acl mac  
  
mac access-list standard mac  
  seq 5 permit 11:22:33:44:55:66 count  
  seq 10 deny any log threshold-in-msgs 10 interval 5 order 1  
  seq 15 permit any order 2 monitor  
!
```

IPv6 Basics

IPv6 basic commands are supported on the Dell Networking operating system.

NOTE: For information about the Dell Networking operating software version and platform that supports IPv6 in each software feature, refer to the *IPv6 Addressing* chapter of the *Dell Networking OS Configuration Guide*.

cam-ipv6 extended-prefix

Enable LPM CAM partitioning to support the storage of extended IPv6 (/65 to /128) route prefixes in LPM partition 1.

C9000 Series

Syntax

```
cam-ipv6 extended-prefix max-ipv6-prefixes
```

To remove LPM partitioning configuration, use no `cam-ipv6 extended-prefix`.

Parameters

max-ipv6-prefixes

Maximum number of extended IPv6 prefixes with the mask length of /65 to /128 that are supported in the LPM partition. The possible values are 1024, 2048, and 3072.

Defaults	LPM CAM is not partitioned with Partition 1. IPv6 /65 to /128 prefixes are not converted to /64 prefixes and saved in the LPM table. All the packets for extended IPv6 route prefixes are transmitted using the default route path.								
Command Modes	CONFIGURATION								
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide. The following is a list of the Dell Networking OS version history for this command. <table> <tr> <th>Version</th><th>Description</th></tr> <tr> <td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr> <tr> <td>9.5(0.1)</td><td>Introduced on the Z9500.</td></tr> <tr> <td>9.3(0.1)</td><td>Introduced on the S6000.</td></tr> </table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.5(0.1)	Introduced on the Z9500.	9.3(0.1)	Introduced on the S6000.
Version	Description								
9.9(0.0)	Introduced on the C9010.								
9.5(0.1)	Introduced on the Z9500.								
9.3(0.1)	Introduced on the S6000.								
Usage Information	You can partition the LPM table to store extended IPv6 route prefixes with /65 to /128 mask lengths. LPM CAM partitioning requires a switch reload to take effect. To disable LPM CAM partitioning and return the number of the IPv6 /65-/128 route prefixes stored in Partition 1 to 0, enter the <code>no cam-ipv6 extended-prefix</code> command.								

clear ipv6 fib

Clear (refresh) all forwarding information base (FIB) entries on a line card.

C9000 Series

Syntax	<code>clear ipv6 fib {linecard slot-id } vrf vrf-name</code>																					
Parameters	vrf <i>vrf-name</i>	(Optional) Enter the keyword vrf followed by the name of the VRF to clear the neighbor corresponding to that VRF.  NOTE: If you do not specify this option, neighbors corresponding to the default VRF are cleared.																				
	linecard <i>slot</i>	Enter the slot number to clear the FIB for a linecard. Range is 0 to 11.																				
Command Modes	EXEC Privilege

clear ipv6 mld_host

Clear the IPv6 MLD host counters and reset the elapsed time.

C9000 Series

Syntax	<code>clear ipv6 mld_host</code>
Command Modes	EXEC
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.

clear ipv6 neighbors

Delete all entries in the IPv6 neighbor discovery cache or neighbors of a specific interface. Static entries are not removed using this command.

C9000 Series

Syntax	<code>clear ipv6 neighbors [ipv6 address] interface interface vrf vrf name]</code>	
Parameters	ipv6-address	Enter the IPv6 address of the neighbor in the x:x:x:x:x format to remove a specific IPv6 neighbor.  NOTE: The :: notation specifies successive hexadecimal fields of zero.
	vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to clear the neighbor corresponding to that VRF.  NOTE: If you do not specify this option, the neighbors in the default VRF are cleared.
	interface interface	To remove all neighbor entries learned on a specific interface, enter the keyword <code>interface</code> then the interface type and slot/port or number information of the interface: Enter one of the following keywords with slot/port or number to clear information about the IPv6 neighbors learned on the specified interface: For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the slot/port information

- For a 10-Gigabit Ethernet interface, enter the keyword `tengigabitethernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port-channel interface, enter the keyword `port-channel` with a port-channel number. The range of port-channel numbers is from 1 to 4096.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- For a tunnel interface, enter the keyword `tunnel`.

Command Modes • EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.7(0.0)	Added support for VRF.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.

ipv6 address

Configure an IPv6 address to an interface.

C9000 Series

Syntax

`ipv6 address {ipv6-address prefix-length}`

To remove the IPv6 address, use the `no ipv6 address {ipv6-address prefix-length}` command.

Parameters

***ipv6-address
prefix-length***

Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

 **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

Defaults

none

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1(0.0)	Updated Usage Information.

Version	Description
9.0.0.0	Introduced on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
8.4.1.0	Added support on the management Ethernet port.
8.2.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series and S-Series.
7.4.1.0	Introduced on the E-Series TeraScale.

Usage Information

- If two addresses are configured, delete an existing address before configuring a new address.
- If the last manually-configured global IPv6 address is removed using the “no” form of the command, the link-local IPv6 address is removed automatically.
- IPv6 addresses on a single management interface cannot be members of the same subnet.
- IPv6 secondary addresses on management interfaces across platform must be members of the same subnet.
- IPv6 secondary addresses on management interfaces should not match the virtual IP address and should not be in the same subnet as the virtual IP.

 **NOTE:** Do not use the /128 prefix length on physical or port channel interfaces. You can use the /128 prefix length on loopback interfaces.

Example

```
Dell(conf)#interface tengigabitethernet 1/0
Dell(conf-if-te-1/0)#ipv6 address ?
X:X:X:X::X IPv6 address
Dell(conf-if-te-1/0)#ipv6 address 2002:1:2::3 ?
<0-128> Prefix length in bits
Dell(conf-if-te-1/0)#ipv6 address 2002:1:2::3 /96 ?
<cr>
Dell(conf-if-te-1/0)#ipv6 address 2002:1:2::3 /96
Dell(conf-if-te-1/0)#show config
!
interface TenGigabitEthernet 1/0
  no ip address
  ipv6 address 2002:1:2::3 /96
  no shutdown
Dell(conf-if-te-1/0)#
```

ipv6 address autoconfig

Configure IPv6 address auto-configuration for the management interface.

C9000 Series

Syntax	<pre>ipv6 address autoconfig</pre> To disable the address autoconfig operation on the management interface, use the <code>no ipv6 address autoconfig</code> command.
Default	Disabled
Command Modes	INTERFACE (management interface only)
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.7(0.1)	Introduced on the S3048-ON.
9.7(0.1)	Introduced on the S4048-ON.
9.1.(0.0)	Updated Usage Information section.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.

- Usage Information**
- SAA can configure up to two addresses. If any preferred prefix or valid timers time out, the corresponding address are deprecated or removed. If an address is removed due to a time-out, an address from the current unused prefix is used to create a new address. If there are no remaining prefixes, the software waits to receive a new prefix from the RA.
 - If auto-configuration is enabled, all IPv6 addresses on that management interface are auto-configured. Manual and auto-configurations are not supported on a single management interface.
 - Removing auto-configuration removes all auto-configured IPv6 addresses and the link-local IPv6 address from that management interface.
 - IPv6 addresses on a single management interface cannot be members of the same subnet.
 - IPv6 secondary addresses on management interfaces across a platform must be members of the same subnet.
 - IPv6 secondary addresses on management interfaces should not match the virtual IP address and should not be in the same subnet as the virtual IP.

ipv6 address eui64

Configure IPv6 EUI64 address configuration on the interface.

C9000 Series

Syntax	<code>ipv6 address {<i>ipv6-address prefix-length</i>} eui64</code> To disable IPv6 EUI64 address autoconfiguration, use the <code>no ipv6 address {<i>ipv6-address prefix-length</i>} eui64</code> command.							
Parameters	<i>ipv6-address</i> <i>prefix-length</i>  NOTE: The :: notation specifies successive hexadecimal fields of zeros.	Enter the IPv6 prefix in the x:x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.						
Defaults	none							
Command Modes	CONFIGURATION							
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.
Version	Description							
9.9(0.0)	Introduced on the C9010.							
9.2(1.0)	Introduced on the Z9500.							

Version	Description
9.2(0.0)	Introduced.

Usage Information

This command allows you to create an EUI64 address based on the specified prefix and MAC address only. Prefixes may be configured on the interface using the `ipv6 nd prefix` command without creating an EUI64 address.

Example

```
Dell(conf)#int ten 0/4
Dell(conf-if-te-0/4)#ipv6 address 200:1::/64 eui64
Dell(conf)#int ten 0/6
Dell(conf-if-te-0/6)#ipv6 address 801:10::/64 eui64
```

ipv6 control-plane icmp error-rate-limit

Configure the maximum number of ICMP error packets generated and sent in one second.

C9000 Series

Syntax

`ipv6 control-plane icmp error-rate-limit {1-200}`

To restore the default value, use the `no ipv6 control-plane icmp error-rate-limit` command.

Parameters

pps Enter the maximum number of error packets generated per second. The range is from 1 to 200.

Default

100 pps

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

ipv6 flowlabel-zero

Configure system to set the flow label field in the packets to zero.

C9000 Series

Syntax

`ipv6 flowlabel-zero`

To remove 0 from the flow label field and allow the protocol operations to fill the field, use the `no ipv6 flowlabel-zero` command.

Default	Disabled												
Command Modes	CONFIGURATION												
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table> <tr> <th>Version</th><th>Description</th></tr> <tr> <td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr> <tr> <td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr> <tr> <td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr> <tr> <td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr> <tr> <td>8.3.7.0</td><td>Introduced on the S4810.</td></tr> </table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.
Version	Description												
9.9(0.0)	Introduced on the C9010.												
9.2(1.0)	Introduced on the Z9500.												
8.3.19.0	Introduced on the S4820T.												
8.3.11.1	Introduced on the Z9000.												
8.3.7.0	Introduced on the S4810.												
Usage Information	If the flowlabel value is already set for BGP or SSH, the system defaults to the already configured value. All packets on the same connection are considered part of the same flow by the system. For new connections, set the new flowlabel to zero.												

ipv6 host

Assign a name and IPv6 address for the host-to-IPv6 address mapping table.

C9000 Series

Syntax

ipv6 host name *ipv6-address*

To remove an IP host, use the no `ipv6 host name {ipv6-address}`.

Parameters

name

Enter a text string to associate with one IP address.

ipv6-address

Enter the IPv6 address (X:X:X:X::X) to be mapped to the name.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.0.0.0	Introduced on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
8.4.2.1	Introduced on the C-Series and S-Series.
8.4.1.0	Introduced on the E-Series TeraScale.

ipv6 name-server

Enter up to six IPv6 addresses of name servers. The order you enter the addresses determines the order of their use.

C9000 Series

Syntax	<code>ipv6 name-server ipv6-address [ipv6-address2... ipv6-address6]</code> To remove a name server, use the <code>no ipv6 name-server ipv6-address</code> command.																	
Parameters	ipv6-address	Enter the IPv6 address (X:X:X::X) of the name server to be used. Note: The :: notation specifies successive hexadecimal fields of zeros.																
	ipv6-address2... ipv6-address6	(OPTIONAL) Enter up to five more IPv6 addresses, in the x:x:x:x format, of name servers to be used. Separate the IPv6 addresses with a space.																
Defaults	none																	
Command Modes	CONFIGURATION																	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. 8.3.7.0	Introduced on the S4810.																	
8.4.2.1	Introduced on the C-Series and S-Series.																	
8.4.1.0	Introduced on the E-Series TeraScale.																	
Usage Information	You can separately configure both IPv4 and IPv6 domain name servers.																	

ipv6 nd dad attempts

Configure the number of neighbor solicitation messages that are sent to perform duplicate address detection (DAD) on the interface.

C9000 Series

Syntax	<pre>ipv6 nd dad attempts {number of attempts}</pre> To restore the default value, use the <code>no ipv6 nd dad attempts</code> command.	
Parameters	number of attempts	Enter the number of attempts to be made to detect a duplicate address. The range is from 0 to 15. Setting the value to 0 disables DAD on the interface.
Default	3 attempts	
Command Modes	INTERFACE	

INTERFACE (BATCH MODE)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

ipv6 nd disable-reachable-timer

Keep the learnt neighbor discovery entries stateless so that the entries do not time out.

Syntax `ipv6 nd disable-reachable-timer`
To restore to default, use the `no ipv6 nd disable-reachable-timer` command.

Default Disabled

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

Version	Description
9.11.0.1	Introduced on the S3100 series, S3048-ON, S4048-ON, S4048T-ON, S4810, S4820, S5000, S6000, S6010-ON, S6000-ON, S6100-ON, Z9100-ON, C9010, Z9500, MXL, and FN IOM.

ipv6 nd dns-server

Configure Recursive DNS Server (RDNSS) addresses for distribution via IPv6 router advertisements to an IPv6 device.

C9000 Series

Syntax `ipv6 nd dns-server {ipv6-RDNSS-address} {lifetime | infinite}`
To remove the IPv6 RDSS configuration, use `no ipv6 nd dns-server {ipv6-RDNSS-address} {lifetime | infinite}`

Parameters

<i>ipv6-RDNSS-address</i>	Enter the IPv6 Recursive DNS Server's (RDNSS) address. You can specify up to 4 IPv6 RDNSS server addresses.
<i>lifetime</i>	Enter the lifetime in seconds. The amount of time the IPv6 host can use the IPv6 RDNSS address for name resolution. The range is 0 to 4294967295 seconds. When you specify the maximum lifetime value of 4294967295 or <i>infinite</i> , the lifetime does not expire. A value of 0 indicates to the host that the RDNSS address should not be used. You must specify a lifetime using the <i>lifetime</i> or <i>infinite</i> parameter.

	infinite	Enter the keyword <i>infinite</i> to specify that the RDNSS lifetime does not expire.							
Defaults	Not Configured								
Command Modes	INTERFACE								
	INTERFACE (BATCH MODE)								
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.								
	The following is a list of the Dell Networking OS version history for this command.								
	<table><tr><th>Version</th><th>Description</th></tr><tr><td>9.10(0.0)</td><td>Introduced the Configuration Terminal Batch mode on C9010.</td></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.5(0.0)</td><td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td></tr></table>	Version	Description	9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.	9.9(0.0)	Introduced on the C9010.	9.5(0.0)	Introduced on the Z9000, S6000, S4820T, S4810, and MXL.
Version	Description								
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.								
9.9(0.0)	Introduced on the C9010.								
9.5(0.0)	Introduced on the Z9000, S6000, S4820T, S4810, and MXL.								
Usage Information	Use the <code>ipv6 nd dns-server</code> command to add, edit, or delete an IPv6 RDNSS address and lifetime value. You can configure up to four IPv6 RDNSS addresses. You must specify a lifetime using the <code>lifetime</code> or <code>infinite</code> parameter. In the Configuration Terminal Batch mode, you can use this command to configure the IPv6 addresses in a dual-homing setup.								
Example	<code>Dell(conf-if-te-0/1)#ipv6 nd dns-server 1000::1 1</code>								

ipv6 nd prefix

Specify which IPv6 prefixes are included in Neighbor Advertisements.

C9000 Series

Syntax	<code>ipv6 nd prefix {<i>ipv6-prefix</i> <i>prefix-length</i> default} [no-advertise] [no-autoconfig] [no-rtr-address] [off-link] [lifetime {<i>valid</i> infinite} {<i>preferred</i> infinite}]</code>	
Parameters	<i>ipv6-prefix</i>	Enter an IPv6 prefix.
	<i>prefix-length</i>	Enter the prefix then the prefix length. The length range is from 0 to 128.
	default	Enter the keyword <code>default</code> to set default parameters for all prefixes.
	no-advertise	Enter the keyword <code>no-advertise</code> to prevent the specified prefix from being advertised.
	no-autoconfig	Enter the keywords <code>no-autoconfig</code> to disable Stateless Address Autoconfiguration.
	no-rtr-address	Enter the keyword <code>no-rtr-address</code> to exclude the full router address from router advertisements (the R bit is not set).
	off-link	Enter the keywords <code>off-link</code> to advertise the prefix without stating to recipients that the prefix is either on-link or off-link.
	<i>valid-lifetime</i> infinite	Enter the amount of time that the prefix is advertised, or enter <code>infinite</code> for an unlimited amount of time. The range is from 0 to 4294967295. The default is 2592000 . The maximum value means that the preferred lifetime does not expire for the valid-life time parameter.
	<i>preferred-lifetime</i> infinite	Enter the amount of time that the prefix is preferred, or enter <code>infinite</code> for an unlimited amount of time. The range is from 0 to 4294967295. The default is 604800 . The maximum value means that the preferred lifetime and does not expire.

Command Modes	INTERFACE INTERFACE (BATCH MODE)																
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table> <tr> <th>Version</th><th>Description</th></tr> <tr> <td>9.10(0.0)</td><td>Introduced the Configuration Terminal Batch mode on C9010.</td></tr> <tr> <td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr> <tr> <td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr> <tr> <td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr> <tr> <td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr> <tr> <td>8.3.7.0</td><td>Introduced on the S4810.</td></tr> <tr> <td>8.3.2.0</td><td>Introduced on the E-Series TeraScale, C-Series, and S-Series.</td></tr> </table>	Version	Description	9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	8.3.2.0	Introduced on the E-Series TeraScale, C-Series, and S-Series.
Version	Description																
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.																
9.9(0.0)	Introduced on the C9010.																
9.2(1.0)	Introduced on the Z9500.																
8.3.19.0	Introduced on the S4820T.																
8.3.11.1	Introduced on the Z9000.																
8.3.7.0	Introduced on the S4810.																
8.3.2.0	Introduced on the E-Series TeraScale, C-Series, and S-Series.																
Usage Information	By default, all prefixes configured as addresses on the interface are advertised. This command allows control over the individual parameters per prefix; you can use the <code>default</code> keyword to use the default parameters for all prefixes. If a prefix has been configured with lifetime parameter values, the default values cannot be applied using the <code>ipv6 nd prefix default no-autoconfig</code> command. Use this command in the Configuration Terminal Batch mode to advertise in a dual-homing setup.																

ipv6 neighbor

Configure a static entry in the IPv6 neighbor discovery.

C9000 Series

Syntax	<pre>ipv6 neighbor{ipv6-address} {interface interface} {hardware_address}[vrf vrf-name]</pre> To remove a static IPv6 entry from the IPv6 neighbor discovery, use the <code>no ipv6 neighboripv6-address{interface interface</code>	
Parameters	ipv6-address  NOTE: The :: notation specifies successive hexadecimal fields of zero. interface intehardware_rface	Enter the IPv6 address of the neighbor in the x:x:x::x format. Enter the keyword <code>interface</code> then the interface type and slot/port or number information: • For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the slot/port information. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port/subport information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. • For a port channel interface, enter the keywords <code>port-channel</code> then a number. • For a Null interface, enter the keyword <code>null</code> then the Null interface number. • For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094. • For a tunnel interface, enter the keyword <code>tunnel</code> then the tunnel interface number. The range is from 1 to 16383.

- For a port extender Gigabit Ethernet interface, enter the keyword `peGigE` then the `pe-id / stack-unit / port-id` information. The `pe-id` range is from 0 to 255; the stack-unit `unit-number` range is from 0 to 7; and the `port-id` range is from 1 to 48
- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the `pe-id / stack-unit / port-id` information. The `pe-id` range is from 0 to 255; the stack-unit `unit-number` range is from 0 to 7; and the `port-id` range is 25 to 28 or 49 to 52 depending on the PE.

hardware_addresses Enter a 48-bit hardware MAC address in nn:nn:nn:nn:nn:nn format.

vrf vrf-name (Optional) Enter the keyword `vrf` and the name of the VRF to install IPv6 routes in that VRF.

Defaults none

Command Modes CONFIGURATION
CONFIGURATION TERMINAL BATCH

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.

Usage Information Neighbor Discovery Protocol for IPv6 is defined in RFC 2461 as part of the Stateless Address Autoconfiguration protocol. It replaces the Address Resolution Protocol used with IPv4. It defines mechanisms for solving problems, such as:

- Router discovery: Hosts can locate routers residing on a link
- Prefix discovery: Hosts can discover address prefixes for the link.
- Parameter discovery
- Address autoconfiguration — configuration of addresses for an interface
- Address resolution — mapping from IP address to link-layer address
- Next-hop determination· Neighbor Unreachability Detection (NUD): Determine that a neighbor is no longer reachable on the link
- Duplicate Address Detection (DAD): Allow a node to check whether a proposed address is already in use.
- Redirect: The router can inform a node about a better first-hop.

Use the `ipv6 neighbor` command to manually configure the IPv6 address of a neighbor to be discovered by the switch.

 **NOTE:** The parameters `vrf`, `mac-address`, `interface` are not supported in the batch mode.

ipv6 route

Establish a static IPv6 route.

C9000 Series

Syntax

```
ipv6 route ipv6-address prefix-length {ipv6-address | interface | interface ipv6-address} [distance] [tag value] [permanent][weight weight-value [vrf vrf-name]
```

To remove the IPv6 route, use the `no ipv6 route ipv6-address prefix-length {ipv6-address | interface | interface ipv6-address} [distance] [tag value] [permanent][weight weight-value [vrf vrf-name]` command.

Parameters

ipv6-address
prefix-length

Enter the IPv6 address in the x:x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128.

 **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

interface

(OPTIONAL) Enter the following keywords and slot/port or number information:

- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a tunnel interface, enter the keyword `tunnel` then the tunnel interface number. The range is from 1 to 16383.
- For a VLAN interface, enter the keyword `VLAN` then the vlan number. The range is from 1 to 4094.

If you configure a static IPv6 route using an egress interface and enter the `ping` command to reach the destination IPv6 address, the ping operation may not work. Configure the IPv6 route using a next-hop IPv6 address in order for the `ping` command to detect the destination address.

ipv6-address

Enter the forwarding router IPv6 address in the x:x:x:x:x format.

 **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

distance

(OPTIONAL) Enter a number as the metric distance assigned to the route. The range is from 1 to 255.

tag value

(OPTIONAL) Enter the keyword `tag` then a tag value number. The range is from 1 to 4294967295.

permanent

(OPTIONAL) Enter the keyword `permanent` to specify that the route is not to be removed, even if the interface assigned to that route goes down.

 **NOTE:** If you disable the interface with an IPv6 address associated with the keyword `permanent`, the route disappears from the routing table.

weight weight-value

Enter the keyword `weight` followed by a weight value. The range is from 0 to 255.

 **NOTE:** Weight for a static route can be added only for the destination address and not for the route pointing to destination a interface.

vrf vrf-name

(Optional) Enter the keyword `vrf` followed by the name of the VRF to install IPv6 routes in that VRF.

Defaults

none

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.7(0.1)	Introduced on the S3048-ON.
9.7(0.1)	Introduced on the S4048-ON.
9.7(0.0)	Added support for VRF. Also included the <code>weight</code> parameter to support weighted ECMP feature. Introduced on the S6000-ON.
9.0.0.0	Introduced on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.2.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series and S-Series.
7.4.1.0	Introduced on the E-Series TeraScale.

Usage Information When the interface goes down, Dell Networking OS withdraws the route. The route is re-installed, by Dell Networking OS, when the interface comes back up. When a recursive resolution is “broken,” Dell Networking OS withdraws the route. The route is re-installed, by Dell Networking OS, when the recursive resolution is satisfied.

After an IPv6 static route interface is created, if an IP address is not assigned to a peer interface, the peer must be manually pinged to resolve the neighbor information.

You can specify a weight for an IPv4 or IPv6 static route. If the weight value of a path is 0, then that path is not used for forwarding when weighted ECMP is in effect. Also, if a path corresponding to a static route (destination) has a non-zero weight assigned to it and other paths do not have any weight configured, then regular ECMP is used for forwarding.

You can specify the weight value only to destination address and not on the egress port.

A route is considered for weighted ECMP calculations only if each paths corresponding to that route is configured with a weight.

Example

```
Dell(conf)#ipv6 route 44::/64 33::1 weight 100
Dell(conf)#ipv6 route 44::/64 33::2 weight 200
Dell(conf)#do show running-config | grep ipv6 route
Dell(conf)#ipv6 route vrf vrf_test 44::/64 33::1 weight 100
Dell(conf)#ipv6 route vrf vrf_test 44::/64 33::2 weight 200
Dell(conf)#do show running-config | grep ipv6 route vrf
```

Related Commands [show ipv6 route](#) — views the IPv6 configured routes.

ipv6 unicast-host-route

Enable the storage of extended IPv6 route prefixes (/65 to /128) in the L3 host table.

C9000 Series

Syntax `[no] ipv6 unicast-host-route`

Defaults	Enabled; by default, extended IPv6 route prefixes are stored only in the L3 host table.	
Command Modes	CONFIGURATION	
Command History	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.5(0.1)	Introduced on the Z9500.
	9.3(0.1)	Introduced on the S6000.
Usage Information	Use this command to enable programming of extended IPv6 (/65 to /128) route prefixes in the L3 host table. A warning message is displayed after you enter the command stating that this setting takes effect for existing routes only when IPv6 route prefixes are cleared from the LPM routing table (RTM). To enable storage of extended IPv6 route prefixes in the LPM table, disable this setting by entering the <code>no ipv6 unicast-host-route</code> command.	

Example

```
Dell(conf)# ipv6 unicast-host-route
Warning: Command will take effect for existing routes only when IPv6
route prefixes are cleared from RTM
Dell(conf)#no ipv6 unicast-host-route
Warning: Command will take effect for existing routes only when IPv6
route prefixes are cleared from RTM
Dell(conf)#
```

ipv6 unicast-routing

Enable IPv6 Unicast routing.

C9000 Series

Syntax	<code>ipv6 unicast-routing</code> To disable unicast routing, use the <code>no ipv6 unicast-routing</code> command.	
Defaults	Enabled	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.2(1.0)	Introduced on the Z9500.
	9.0.0.0	Introduced on the Z9000.
	8.3.19.0	Introduced on the S4820T.
	8.3.7.0	Introduced on the S4810.
	8.4.2.1	Introduced on the S-Series.
	8.2.1.0	Introduced on the E-Series ExaScale.
	7.8.1.0	Introduced on the C-Series.
	7.4.1.0	Introduced on the E-Series TeraScale.
Usage Information	Because this command is enabled by default, it does not appear in the running configuration. When you disable unicast routing, the <code>no ipv6 unicast-routing</code> command is included in the running	

configuration. Whenever unicast routing is disabled or re-enabled, the system generates a syslog message indicating the action.

Disabling unicast routing on an E-Series chassis causes the following behavior:

- static and protocol learned routes are removed from RTM and from the CAM; packet forwarding to these routes is terminated
- connected routes and resolved neighbors remain in the CAM and new IPv6 neighbors are still discoverable
- additional protocol adjacencies (OSPFv3 and BGP4) are brought down and no new adjacencies are formed
- the IPv6 address family configuration (under router bgp) is deleted
- IPv6 Multicast traffic continues to flow unhindered

show cam-ipv6 extended-prefix

Display the currently configured and next-boot settings for extended IPv6 prefixes (/65 to /128) in LPM CAM.

C9000 Series

Syntax `show cam-ipv6 extended-prefix`

Defaults None

Command Modes EXEC
EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
9.3(0.1)	Introduced on the S6000.

Usage Information You can use this command to view the maximum number of extended IPv6 prefix entries supported in LPM CAM. The output displays the current value and the new value applicable after a switch reload.

Example

```
Dell#show cam-ipv6 extended-prefix
Cam-Ipv6-LPM Extended Prefix
-----
Current Settings
cam-ipv6-max-/65-to-/128-Prefix : 2048
Dell(conf)#
```

show ipv6 cam linecard

Display the IPv6 CAM entries for the specified line card.

C9000 Series

Syntax `show ipv6 cam linecard slot id port-set number [vrf vrf-name] [X:X:X:X::X | summary]`

Parameters	slot-id	Displays the cam entries for the mentioned linecard id.
	port-set	Enter the keyword <code>port-set</code> and specify the port-set number. The port-set number value is 0.
	vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed and the name of the VRF to display IPv6 CAM entries corresponding to that VRF.  NOTE: If you do not specify this option, IPv6 CAM entries corresponding to the default VRF are displayed.
	X:X:X:X::X	(OPTIONAL) Enter the network address or host name.
	summary	(OPTIONAL) Enter the keyword <code>summary</code> to display a table listing network prefixes and the total number prefixes which can be entered into the IPv6 CAM.

Defaults none

Command Modes EXEC

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.0.0.0	Introduced on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.7.1	Introduced on the S4810.
8.4.2.1	Introduced on the S-Series.

Example

```
Dell#show ipv6 cam linecard 10 port-set 0
```

Neighbor	Mac-Addr	Port	Vid	EC
fe80::2ff:eff:fe3f:a1	00:00:00:00:00:00	CP	0	0
2::3	00:00:00:00:00:00	CP	0	0

refix	Mac-Addr	Port	Vid	EC
2::/64	00:00:00:00:00:00	CP	0	0
fe80::/10	00:00:00:00:00:00	NuP	0	0
::/0	00:00:00:00:00:00	CP	0	

show ipv6 control-plane icmp

Displays the status of the icmp control-plane setting for the error eate limit setting.

C9000 Series

Syntax `show ipv6 control-plane icmp`

Default 100

Command Modes EXEC

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

Example

show ipv6 fib linecard

Display all forwarding information base (FIB) entries for a line card.

C9000 Series

Syntax	<code>show ipv6 fib linecard slot-id port-set number [vrf vrf-name] [summary ipv6-address]</code>	
Parameters	slot-id	Enter the linecard <i>slot-id</i> . The range is from 0 to 11.
	port-set number	Enter the keyword <code>port-set</code> and the port-set number value. The number value is 0.
	vrf vrf-name	(Optional) Enter the keyword <i>vrf</i> followed by the name of the VRF to display neighbors corresponding to that VRF.
	summary	(OPTIONAL) Enter the keyword <code>summary</code> to view a summary of entries in IPv6 cam.
	ipv6-address	Enter the IPv6 address in the x:x:x::x/n format to display networks that have more specific prefixes. The range is from /0 to /128.
	 NOTE: The :: notation specifies successive hexadecimal fields of zeros.	

Command Modes EXEC

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.0.0.0	Introduced on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
8.4.2.1	Introduced on the S-Series.

Example

```
Dell#show ipv6 fib linecard 10

Prefix          Next-Hop      Mac-Addr      Port      VId
EC
-----
```

::/0	-	00:00:00:00:00:00	CP	0	0
2::/64	::, Te 10/1	00:00:00:00:00:00	CP	0	0
2::3/128	::1	00:00:00:00:00:00	CP	0	0

fe80::2ff:eff:fe3f:a1/128	::1	00:00:00:00:00:00	CP	0	0

show ipv6 flowlabel-zero

Display the flow label zero setting.

C9000 Series

Syntax	<code>show ipv6 flowlabel-zero</code>
Default	Disabled
Command Modes	EXEC
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

Related Commands	ipv6 nd dad attempts — Configure system to set the flow label field in the packets to zero.

show ipv6 interface

Display the status of interfaces configured for IPv6.

C9000 Series

Syntax	<code>show ipv6 interface <i>interface</i> [<i>linecard slot-id</i>] [<i>brief</i>] [<i>configured</i>] [<i>loopback interface-number</i>] [<i>managementethernet slot/port</i>] [<i>port-channel number</i>] [<i>tengigabitethernet slot slot/port</i>] [<i>fortyGigE slot slot/port</i>] [<i>tunnel tunnel-id</i>] [<i>vlan vlan-id</i>]</code>

Parameters	<i>interface</i> (OPTIONAL) Enter the following keywords and slot/port or number information: - For a Loopback interface, enter the keyword <code>Loopback</code> then a number from 0 to 16383. - For the Null interface, enter the keyword <code>null</code> then zero (0). - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.

- For a tunnel interface, enter the keyword `tunnel` then the tunnel ID.
- For a VLAN interface, enter the keyword `VLAN`.
- For a port channel interface, enter the keywords `port-channel`.
- For a port extender Gigabit Ethernet interface, enter the keyword `peGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is from 1 to 48.
- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

linecard <i>slot-id</i>	Enter the <code>linecard slot-id</code> parameters to specify the switch ports on a line card. The range of slot IDs is from 0 to 2.
brief	(OPTIONAL) View a summary of IPv6 interfaces.
configured	(OPTIONAL) View information on all IPv6 configured interfaces.
managementethernet <i>slot/port</i>	(OPTIONAL) View information on an IPv6 Management port. Enter the slot number (0-1) and port number zero (0).
loopback	(OPTIONAL) View information for IPv6 Loopback interfaces.
port-channel	(OPTIONAL) View information for IPv6 port channels.
tengigabitethernet	(OPTIONAL) View information for an IPv6 tengigabitethernet interface.
fortyGigE	(OPTIONAL) View information for an IPv6 fortygigabitethernet interface.
tunnel <i>tunnel-id</i>	(OPTIONAL) View information for a tunnel interface.
vlan	(OPTIONAL) View information for IPv6 VLANs.

Defaults none

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.11(0.0)	Updated the command output to include the unicast reverse path forwarding (uRPF) status.
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Added support for IPv6 recursive DNS addresses.
9.2(1.0)	Introduced on the Z9500.
9.2.(0.0)	Added support for tunnel interface.
9.0.0.0	Introduced on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.4.2.1	Introduced on the S-Series.
8.2.1.0	Introduced on the E-Series ExaScale. Added support for the <code>managementethernet slot/port</code> parameter.

Version	Description
7.8.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series TeraScale.

Usage Information

The Management port is enabled by default (no shutdown). If necessary, use the `ipv6 address` command to assign an IPv6 address to the Management port.

Example

```
Dell# show ipv6 interface linecard 0
TenGigabitEthernet 0/2 is down, line protocol is down
  IPV6 is enabled
  Link Local address: fe80::7686:7aff:feff:6f08
  Global Unicast address(es):
    10:10:10:1::8, subnet is 10:10:10::/48 (MANUAL)
    Remaining lifetime: infinite
  Global Anycast address(es):
  Joined Group address(es):
    ff02::1
    ff02::2
    ff02::1:ff00:8
    ff02::1:ffff:6f08
  ND MTU is 0
  ICMP redirects are not sent
  DAD is enabled, number of DAD attempts: 3
  ND reachable time is 27000 milliseconds
  ND base reachable time is 30000 milliseconds
  ND advertised reachable time is 0 milliseconds
  ND advertised retransmit interval is 0 milliseconds
  ND router advertisements are sent every 200 to 600 seconds
  ND router advertisements live for 1800 seconds
  ND advertised hop limit is 64
  IPv6 hop limit for originated packets is 64
  IPv6 unicast RPF check is not supported
```

```
Dell# show ipv6 interface linecard 0 configured
TenGigabitEthernet 0/2 is down, line protocol is down
  IPV6 is enabled
  Link Local address: fe80::7686:7aff:feff:6f08
  Global Unicast address(es):
    10:10:10:1::8, subnet is 10:10:10::/48 (MANUAL)
    Remaining lifetime: infinite
  Global Anycast address(es):

```

show ipv6 mld_host

Display the IPv6 MLD host counters.

C9000 Series

Syntax `show ipv6 mld_host`

Command Modes EXEC

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

Usage Information The following describes the `show ipv6 mld-host` command shown in the following example.

Field	Description
Valid MLD Packets	The total number of packets received and sent from the last time the elapsed time was cleared.
Reports	The total number of reports (queries and unsolicited reports generated from joins or leaves) that have been received or sent.

Field	Description
Leaves	The number of Multicast leaves that have been sent.
MLDv1 queries	The number of MLDv1 queries that have been received.
MLDv2 queries	The number of MLDv2 queries that have been received.
Malformed Packets	The number of MLDv1 and MLDv2 packets that do not match the requirement for a valid MLD packet.

Example

```
MLD Host Traffic Counters
Elapsed time since counters cleared: 0028:33:52
Received Sent
Valid MLD Packets 97962 18036
Reports 79962 18034
Leaves ---- 0
MLDv2 Queries 18000 ----
MLDv1 Queries 0 ----
Errors:
Malformed Packets: 4510
```

show ipv6 neighbors

Display information about the IPv6 neighbors discovered on the switch CPUs.

C9000 Series

Syntax

```
show ipv6 neighbors [cpu rp] [ipv6-address] {ipv6-address} [interface
interface [vrf vrf-name]
```

Parameters

vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to display the neighbors corresponding to that VRF.  NOTE: If you do not specify this option, neighbors corresponding to the default VRF are displayed.
cpu rp	Enter the keywords <code>cpu rp</code> to display information about IPv6 neighbors learned only on the Route Processor.
ipv6-address	Enter the IPv6 address of a neighbor to display information about the specified device.
ipv6-address	Enter the IPv6 address of the neighbor in the x:x:x:x::x format.  NOTE: The :: notation specifies successive hexadecimal fields of zero.
interface interface	Enter the keyword <code>interface</code> then the interface type and slot/port or number information:

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Version	Description
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.0.0	Introduced on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.

Usage Information

When you issue the `show ipv6 neighbors` without specifying any options, it will display all IPv6 neighbor addresses stored on the control processor (CP).

Example

```
Dell#show ipv6 neighbors
```

```
*      - Active session role
Ad Dn - Admin Down
B      - BGP
C      - CLI
I      - ISIS
O      - OSPF
R      - Static Route (RTM)
```

	LocalAddr	RemoteAddr	Interface	State	Rx-int	Tx-int	Mult	Clients
*	10.1.3.2	10.1.3.1	Te 1/3	Up	300	250	3	C

```
Dell#show ipv6 neighbors detail
```

```
Session Discriminator: 1
Neighbor Discriminator: 1
Local Addr: 10.1.3.2
Local MAC Addr: 00:01:e8:02:15:0e
Remote Addr: 10.1.3.1
Remote MAC Addr: 00:01:e8:27:2b:f1
Int: TenGigabitEthernet 1/3
State: Up
Configured parameters:
  TX: 100ms, RX: 100ms, Multiplier: 3
Neighbor parameters:
  TX: 250ms, RX: 300ms, Multiplier: 4
Actual parameters:
  TX: 300ms, RX: 250ms, Multiplier: 3
Role: Active
Delete session on Down: False
Client Registered: CLI
Uptime: 00:02:04
Statistics:
  Number of packets received from neighbor: 376
  Number of packets sent to neighbor: 314
  Number of state changes: 2
  Number of messages from IFA about port state change: 0
  Number of messages communicated b/w Manager and Agent: 6
Dell#
```

show ipv6 route

Displays the IPv6 routes.

C9000 Series

Syntax	show ipv6 route [ipv6-address prefix-length] [hostname] [all] [bgp as number] [connected] [isis tag] [list prefix-list name] [ospf process-id] [vrf vrf-name] [rip] [static] [summary]	
Parameters	ipv6-address prefix-length	(OPTIONAL) Enter the IPv6 address in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128. NOTE: The :: notation specifies successive hexadecimal fields of zeros.
	hostname	(OPTIONAL) View information for this IPv6 routes with Host Name.
	all	(OPTIONAL) View information for all IPv6 routes.
	bgp	(OPTIONAL) View information for all IPv6 BGP routes.
	connected	(OPTIONAL) View only the directly connected IPv6 routes.
	isis	(OPTIONAL) View information for all IPv6 IS-IS routes.
	list	(OPTIONAL) View the IPv6 prefix list.
	ospf	(OPTIONAL) View information for all IPv6 OSPF routes.
	vrf vrf-name	(Optional) Enter the keyword vrf and the name of the VRF to display IPv6 routes corresponding to that VRF. NOTE: If you do not specify this option, routes corresponding to the default VRF are displayed.
	rip	(OPTIONAL for E-Series only) View information for all IPv6 RIP routes.
	static	(OPTIONAL) View only routes configured by the ipv6 route command.
	summary	(OPTIONAL) View a brief list of the configured IPv6 routes.
Defaults	none	
Command Modes	- EXEC - EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.7(0.1)	Introduced on the S3048-ON.
9.7(0.1)	Introduced on the S4048-ON.
9.7(0.0)	Added support for VRF. Introduced on S6000–ON
9.2(1.0)	Introduced on the Z9500.
9.0.0.0	Introduced on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
8.2.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series and S-Series.

Version	Description
7.4.1.0	Introduced on the E-Series TeraScale.

**Usage
Information**

The following describes the `show ipv6 route` command shown in the following examples.

Field	Description
(undefined)	Identifies the type of route: • L = Local • C = connected • S = static • R = RIP • B = BGP • IN = internal BGP • EX = external BGP • LO = Locally Originated • O = OSPF • IA = OSPF inter-area • N1 = OSPF NSSA external type 1 • N2 = OSPF NSSA external type 2 • E1 = OSPF external type 1 • E2 = OSPF external type 2 • i = IS-IS • L1 = IS-IS level-1 • L2 = IS-IS level-2 • IA = IS-IS inter-area • * = candidate default • > = non-active route • + = summary routes
Destination	Identifies the route's destination IPv6 address.
Gateway	Identifies whether the route is directly connected and on which interface the route is configured.
Dist/Metric	Identifies if the route has a specified distance or metric.
Last Change	Identifies when the route was last changed or configured.

Example

```
Dell#show ipv6 route

Codes: C - connected, L - local, S - static, R - RIP,
       B - BGP, IN - internal BGP, EX - external BGP, LO - Locally
Originated,
       O - OSPF, IA - OSPF inter area, N1 - OSPF NSSA external type 1,
       N2 - OSPF NSSA external type 2, E1 - OSPF external type 1,
       E2 - OSPF external type 2, i - IS-IS, L1 - IS-IS level-1,
       L2 - IS-IS level-2, IA - IS-IS inter area, * - candidate default,
Gateway of last resort is not set

      Destination   Dist/Metric,      Gateway,    Last Change
      -----
C      2::/64 [0/0]
      Direct, Te 10/1, 00:01:53
L      fe80::/10 [0/0]
      Direct, Nu 0, 00:01:53
```

**Example
(Summary)**

```
Dell#show ipv6 route summary

Route Source   Active Routes   Non-active Routes
connected      5                0
static         0                0
```

```
Total          5          0
Total 5 active route(s) using 952 bytes
```

iSCSI Optimization

Internet small computer system interface (iSCSI) optimization enables quality-of-service (QoS) treatment for iSCSI storage traffic on a switch.

To configure and verify the iSCSI optimization feature, use the following Dell Networking OS commands.

Topics:

- [advertise dcbx-app-tlv](#)
- [iscsi aging time](#)
- [iscsi cos](#)
- [iscsi enable](#)
- [iscsi priority-bits](#)
- [iscsi profile-compellant](#)
- [iscsi target port](#)
- [show iscsi](#)
- [show iscsi session](#)
- [show iscsi session detailed](#)
- [show run iscsi](#)

advertise dcbx-app-tlv

Configure DCBX to send iSCSI TLV advertisements.

C9000 Series

Syntax	<pre>advertise dcbx-app-tlv iscsi</pre> To disable DCBX iSCSI TLV advertisements, use the <code>no advertise dcbx-app-tlv iscsi</code> command.						
Defaults	Disabled.						
Command Modes	PROTOCOL LLDP						
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is the Dell Networking OS version history for this command. <table> <thead> <tr> <th>Version</th><th>Description</th></tr> </thead> <tbody> <tr> <td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr> <tr> <td>9.6(0.0)</td><td>Introduced on the Z9500.</td></tr> </tbody> </table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.6(0.0)	Introduced on the Z9500.
Version	Description						
9.9(0.0)	Introduced on the C9010.						
9.6(0.0)	Introduced on the Z9500.						
Usage Information	You can configure iSCSI TLVs to send either globally or on a specified interface. The interface configuration takes priority over global configuration.  NOTE: The <code>advertise dcbx-app-tlv iscsi</code> command is not supported on cascade interfaces or extended ports.						

iscsi aging time

Set the aging time for iSCSI sessions.

C9000 Series

Syntax	<code>iscsi aging time time</code> To remove the iSCSI session aging time, use the <code>no iscsi aging time</code> command.	
Parameters	time	Enter the aging time for the iSCSI session. The range is from 5 to 43,200 minutes.
Defaults	10 minutes	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is the Dell Networking OS version history for this command.	
	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.6(0.0)	Introduced on the Z9500.

iscsi cos

Set the QoS policy that is applied to the iSCSI flows.

C9000 Series

Syntax	<code>iscsi cos {enable disable dot1p vlan-priority-value [remark] dscp dscp-value [remark]}</code> To disable the QoS policy, use the <code>no iscsi cos</code> command.	
Parameters	enable	Enter the keyword <code>enable</code> to allow the application of preferential QoS treatment to iSCSI traffic so that the iSCSI packets are scheduled in the switch with a dot1p priority 4 regardless of the VLAN priority tag in the packet. The default is: the iSCSI packets are handled with dotp1 priority 4 without remark.
	disable	Enter the keyword <code>disable</code> to disable the application of preferential QoS treatment to iSCSI frames.
	dot1p vlan-priority-value	Enter the dot1p value of the VLAN priority tag assigned to the incoming packets in an iSCSI session. The range is from 0 to 7. The default is the dot1p value in ingress iSCSI frames is not changed and is the same priority is used in iSCSI TLV advertisements if you did not enter the <code>iscsi priority-bits</code> command.
	dscp dscp-value	Enter the DSCP value assigned to the incoming packets in an iSCSI session. The valid range is from 0 to 63. The default is: the DSCP value in ingress packets is not changed.
	remark	Marks the incoming iSCSI packets with the configured dot1p or DSCP value when they egress to the switch. The default is: the dot1and DSCP values in egress packets are not changed.
Defaults	Disabled.	
Command Modes	CONFIGURATION	

Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is the Dell Networking OS version history for this command. <table> <tr> <th>Version</th><th>Description</th></tr> <tr> <td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr> <tr> <td>9.6(0.0)</td><td>Introduced on the Z9500.</td></tr> </table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.6(0.0)	Introduced on the Z9500.
Version	Description						
9.9(0.0)	Introduced on the C9010.						
9.6(0.0)	Introduced on the Z9500.						
Usage Information	By default, iSCSI flows are assigned to dot1p priority 4.						

iscsi enable

Globally enable iSCSI optimization.

C9000 Series

Syntax	<pre>iscsi enable</pre> To disable iSCSI optimization, use the <code>no iscsi enable</code> command.						
Parameters	<i>enable</i> Enter the keyword <code>enable</code> to enable the iSCSI optimization feature.						
Defaults	Disabled.						
Command Modes	CONFIGURATION						
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table> <tr> <th>Version</th><th>Description</th></tr> <tr> <td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr> <tr> <td>9.6(0.0)</td><td>Introduced on the Z9500.</td></tr> </table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.6(0.0)	Introduced on the Z9500.
Version	Description						
9.9(0.0)	Introduced on the C9010.						
9.6(0.0)	Introduced on the Z9500.						

iscsi priority-bits

Configure the priority bitmap that advertises in the iSCSI application TLVs.

C9000 Series

Syntax	<pre>iscsi priority-bits</pre> To remove the configured priority bitmap, use the <code>no iscsi priority-bits</code> command.
Defaults	4 (0x10 in the bitmap)
Command Modes	PROTOCOL LLDP (only on the global, not on the interface)
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.6(0.0)	Introduced on the Z9500.

iscsi profile-compellent

Configure the auto-detection of Dell Compellent arrays on a port.

C9000 Series

Syntax	<code>iscsi profile-compellent</code>
Defaults	Dell Compellent disk arrays are not detected.
Command Modes	INTERFACE
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.6.(0.0)	Introduced on the Z9500.

iscsi target port

Configure the iSCSI target ports and optionally, the IP addresses on which iSCSI communication is monitored.

C9000 Series

Syntax	<code>iscsi target port [tcp-port-2...tcp-port-16]ip-address [ip-address]</code> To remove the configured iSCSI target ports or IP addresses, use the <code>no iscsi target port</code> command.					
Parameters	<i>tcp-port-2...tcpport-16</i>	Enter the tcp-port number of the iSCSI target ports. The <code>tcp-port-n</code> is the TCP port number or a list of TCP port numbers on which the iSCSI target listens to requests. Separate port numbers with a comma. The default is 860, 3260 .				
	ip-address (Optional)	Enter the ip-address that the iSCSI monitors. The ip-address specifies the IP address of the iSCSI target.				
Defaults	860, 3260					
Command Modes	CONFIGURATION					
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.
Version	Description					
9.9(0.0)	Introduced on the C9010.					

Version	Description
9.6(0.0)	Introduced on the Z9500.

Usage Information

You can configure up to 16 target TCP ports on the switch in one command or multiple commands.

When you use the `no iscsi target port` command and the TCP port you want to delete is one bound to a specific IP address, the IP address value must be included in the command.

show iscsi

Display the currently configured iSCSI settings.

C9000 Series

Syntax `show iscsi`

- Command Modes**
- EXEC
 - EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.6(0.0)	Introduced on the Z9500.

Example

```
Dell#show iscsi
iSCSI is enabled
iSCSI session monitoring is disabled
iSCSI COS : dot1p is 4 no-remark
Session aging time: 10
Maximum number of connections is 256
-----
iSCSI Targets and TCP Ports:
-----
TCP Port Target IP Address
3260
860
```

- Related Commands**
- [show iscsi session](#)— displays information about active iSCSI sessions on the switch.
 - [show iscsi session detailed](#)— displays detailed information about active iSCSI sessions on the switch.
 - [show run iscsi](#)— shows `run iscsi`.

show iscsi session

Display information about active iSCSI sessions on the switch.

C9000 Series

Syntax `show iscsi session`

- Command Modes**
- EXEC
 - EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.6(0.0)	Introduced on the Z9500.

Example

```
Dell# show iscsi session
Session 0:
-----
Target:  iqn.2001-05.com.equallogic:0-8a0906-0e70c2002-10a0018426a48c94-
iom010
Initiator:  iqn.1991-05.com.microsoft:win-x918v27yajg
ISID: 400001370000

Session 1:
-----
Target:  iqn.2001-05.com.equallogic:0-8a0906-0f60c2002-0360018428d48c94-
iom011
Initiator:  iqn.1991-05.com.microsoft:win-x918v27yajg
ISID: 400001370000.
```

Usage Information

The switch learns only the active sessions which it observes; sessions flowing through an adjacent switch are not learned.

After you reload the switch, session information exchanged during the initial handshake is not available. If the switch picks up session communication after reloading, it detects iSCSI sessions in progress but sometimes cannot obtain complete session information. Incomplete information about active iSCSI sessions is not displayed in `show iscsi session` command output.

In a VLT configuration, `show iscsi session` output is not accurate unless there are iSCSI traffic flows on VLT LAGs on both the target and the initiator side of the VLT domain.

Related Commands

- [show iscsi](#) — displays the currently configured iSCSI settings.
- [show iscsi session detailed](#) — displays detailed information about active iSCSI sessions on the switch.
- [show run iscsi](#) — shows `run iscsi`.

show iscsi session detailed

Display detailed information on active iSCSI sessions on the switch.

C9000 Series

Syntax

```
show iscsi session detailed [session isid]
```

Parameters

isid Enter the session's iSCSi ID to display detailed information about the specified iSCSi session.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Version	Description
9.6(0.0)	Introduced on the Z9500.

Example

```
Dell# show iscsi session detailed
Session 0 :
-----
Target:iqn.2010-11.com.ixia:ixload:iscsi-TG1
Initiator:iqn.2010-11.com.ixia.ixload:initiator-iscsi-2c

- Related Commands**
- [show iscsi](#)— displays the currently configured iSCSI settings.
 - [show iscsi session](#)— displays information about active iSCSI sessions on the switch.
 - [show run iscsi](#) — shows `run iscsi`.

show run iscsi

Display all globally configured non-default iSCSI settings in the current Dell Networking OS session.

C9000 Series

Syntax	<code>show run iscsi</code>
Command Modes	EXEC Privilege
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.6(0.0)	Introduced on the Z9500.

- Related Commands**
- [show iscsi](#)— displays the currently configured iSCSI settings.
 - [show iscsi session](#)— displays detailed information about active iSCSI sessions on the switch.

Layer 2

This chapter describes commands to configure Layer 2 features.

This chapter contains the following sections:

- [MAC Addressing Commands](#)
- [Virtual LAN \(VLAN\) Commands](#)
- [Far-End Failure Detection \(FEFD\)](#)

Topics:

- [MAC Addressing Commands](#)
- [Virtual LAN \(VLAN\) Commands](#)
- [Far-End Failure Detection \(FEFD\)](#)

MAC Addressing Commands

The following commands are related to configuring, managing, and viewing MAC addresses.

clear mac-address-table

Clear the MAC address table of all MAC address learned dynamically.

C9000 Series

Syntax	<pre>clear mac-address-table {dynamic sticky }{address mac-address all interface interface vlan vlan-id}</pre>	
Parameters	dynamic	Enter the keyword <code>dynamic</code> to specify dynamically-learned MAC addresses.
	sticky	Enter the keyword <code>sticky</code> to specify sticky MAC addresses.
	address <i>mac-address</i>	Enter the keyword <code>address</code> then a MAC address in <code>nn:nn:nn:nn:nn:nn</code> format.
	all	Enter the keyword <code>all</code> to delete all MAC address entries in the MAC address table.
	interface <i>interface</i>	Enter the following keywords and slot/port or number information: • For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a port extender Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the <i>stack-unit unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is from 1 to 48. • For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the <i>stack-unit unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE.

vlan *vlan-id* Enter the keyword `vlan` then a VLAN ID number from 1 to 4094.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Added support for sticky MAC addresses.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

mac-address-table aging-time

Specify an aging time for MAC addresses to remove from the MAC address table.

C9000 Series

Syntax `mac-address-table aging-time seconds`

Parameters ***seconds*** Enter either zero (0) or a number as the number of seconds before MAC addresses are relearned. To disable aging of the MAC address table, enter 0. The range is from 10 to 1000000. The default is **1800 seconds**.

Defaults **1800 seconds**

Command Modes CONFIGURATION
CONFIGURATION TERMINAL BATCH

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

Version	Description
8.3.1.0	On the E-Series, available in INTERFACE VLAN context, reduced the minimum aging time in the INTERFACE VLAN context from 10 seconds to 1 second.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Related Commands [mac learning-limit](#) — sets the MAC address learning limits for a selected interface.
[show mac-address-table aging-time](#) — displays the MAC aging time.

mac-address-table disable-learning

Disable MAC address learning from LACP or LLDP BPDUs.

Syntax `mac-address-table disable-learning [lacp | lldp]`

Parameters

lacp	Enter lacp to disable MAC address learning from LACP BPDUs.
lldp	Enter LLDP to disable MAC address learning from LLDP BPDUs.

Defaults Disabled

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.0)	Introduced on the S3048-ON, S3100 series, S4048-ON, S4810, S4820T, S5000, S6000, S6000-ON, Z9100-ON, and Z9500.

Usage Information If you use the `mac-address-table disable-learning` command without specifying any option, the system does not learn source MAC addresses from LACP or LLDP BPDUs.

mac-address-table static

Associate specific MAC or hardware addresses to an interface and VLANs.

C9000 Series

Syntax `mac-address-table static mac-address {multicast vlan vlan-id output-range interface}{output interface vlan vlan-id}`

To remove a MAC address, use the `no mac-address-table static mac-address output interface vlan vlan-id` command.

Parameters

mac-address	Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.
multicast	Enter a vlan port to where L2 multicast MAC traffic is forwarded.  NOTE: Use this option if you want multicast functionality in an L2 VLAN without IGMP protocols.
output interface	For a unicast MAC address, enter the keyword <code>output</code> then one of the following interfaces for which traffic is forwarded:

- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**output-range
interface**

For a multicast MAC address, enter the keyword `output-range` then one of the following interfaces to indicate a range of ports for which traffic is forwarded:

- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

vlan *vlan-id*

Enter the keyword `vlan` then a VLAN ID number from 1 to 4094.

Defaults

Not configured.

Command Modes

CONFIGURATION

CONFIGURATION TERMINAL BATCH

**Command
History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1(0.0)	Added support for output range parameter for S4810 and Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

**Example
(Unicast)**

```
mac-address-table static 00:01:00:00:00:01 {output Te 0/2 vlan 2}
```

**Example
(Multicast)**

```
mac-address-table static 01:00:5E:01:00:01 {multicast vlan 2 output-range  
Te 0/2,Te 0/3}
```

**Related
Commands**

[show mac-address-table](#) — displays the MAC address table.

mac-address-table station-move refresh-arp

Ensure that address resolution protocol (ARP) refreshes the egress interface when a station move occurs due to a topology change.

C9000 Series

Syntax	<code>[no] mac-address-table station-move refresh-arp</code>																				
Defaults	Enabled.																				
Command Modes	CONFIGURATION CONFIGURATION TERMINAL BATCH																				
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>9.10(0.0)</td><td>Introduced the Configuration Terminal Batch mode on C9010.</td></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr><tr><td>8.3.7.0</td><td>Introduced on the S4810.</td></tr><tr><td>7.7.1.0</td><td>Introduced on the S-Series.</td></tr><tr><td>7.6.1.0</td><td>Introduced on the C-Series.</td></tr><tr><td>7.4.1.0</td><td>Introduced on the E-Series.</td></tr></tbody></table>	Version	Description	9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	7.7.1.0	Introduced on the S-Series.	7.6.1.0	Introduced on the C-Series.	7.4.1.0	Introduced on the E-Series.
Version	Description																				
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.																				
9.9(0.0)	Introduced on the C9010.																				
9.2(1.0)	Introduced on the Z9500.																				
8.3.19.0	Introduced on the S4820T.																				
8.3.11.1	Introduced on the Z9000.																				
8.3.7.0	Introduced on the S4810.																				
7.7.1.0	Introduced on the S-Series.																				
7.6.1.0	Introduced on the C-Series.																				
7.4.1.0	Introduced on the E-Series.																				
Usage Information	For details about using this command, see the “NIC Teaming” section of the Layer 2 chapter in the <i>Dell Networking OS Configuration Guide</i>. To disable the ARP refresh feature, use the <code>no mac-address-table station-move refresh-arp</code> command. Use this command in Configuration Terminal Batch mode to refresh the egress interface in a dual-homing setup.																				

mac-address-table station-move threshold

Specify the threshold and time interval for the maximum number of station moves on PE ports. When the number of station moves for a specified MAC address exceeds the configured threshold in the configured time, a loop is detected on PE ports. The loop is prevented by bringing down the line protocol on all active ports in the learned path, except for the port with the lowest interface index (ifIndex).

C9000 Series

Syntax	<code>[no] mac-address-table station-move threshold <i>number</i> interval <i>seconds</i></code>
Parameters	threshold <i>number</i> Enter the keyword <code>threshold</code> with the maximum number of times a MAC-address station move is detected within the configured interval. The range is from 5 to 50.

interval seconds Enter the keyword *interval* with the interval (in seconds). The range is from 1 to 60.

Defaults Not configured.

Command Modes CONFIGURATION
CONFIGURATION TERMINAL BATCH

Command History The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C1048P.

Usage Information As xSTP protocols are not supported on PEs, use this command to detect possible loops on PE ports. Use this command in Configuration Terminal Batch mode to detect the possible loops in a dual-homing setup.

If a station move for a MAC address is detected above the configured threshold and within the specified time, a syslog message is triggered with the port information. All ports on which the station move was detected are shut down, except for the port with the lowest interface index. Only the port with the lowest ifIndex remains active. For example:

```
Jun 18 09:55:35: %RPM0-P:RP %MACMGR-1-PE LOOP DETECTION: Loop occurred
on PE interfaces:oldInterface: peGigE 0/2/47, newInterface: peGigE
0/1/20,vlanId: 3902, macAddr: 00:aa:00:00:00:
```

To display the PE ports that are shut down due to loop detection, enter the `show mac learning-limit violate-action` command.

```
Dell# show mac learning-limit violate-action
Interface      Violation-Type  Violate-Action  Status
PeGi 0/2/47    Pe-Loop        Shutdown        PElloop-disable
PeGi 100/0/20  Pe-Loop        Shutdown        PElloop-disable
PeGi 255/0/47  Pe-Loop        Shutdown        PElloop-disable
Po 1           Pe-Loop        Shutdown        PElloop-disable
Po 100         Pe-Loop        Shutdown        PElloop-disable
```

To display the reason why the line protocol is down on a PE port or port channel, enter the `show interface` command.

```
Dell(conf-if-po-1)#do show interface port-channel 1
Port-channel 1 is up, line protocol is down(Pe Loop Detection)
```

When a PE interface is shut down due to a PE loop violation, you must manually reset it. To reset the interface, shut it down by entering the `shutdown` command and then re-enable it by entering the `no shutdown` command.

mac learning-limit

Limit the maximum number of MAC addresses (static + dynamic) learned on a selected interface.

C9000 Series

Syntax `mac learning-limit address_limit [vlan vlan-id] [station-move-violation [dynamic]] [dynamic [no-station-move| station-move]]`

Parameters **address_limit** Enter the maximum number of MAC addresses that can be learned on the interface. The range is from 1 to 1000000.

vlan <i>vlan-id</i>	E-Series only: Enter the keyword then the VLAN ID. The range is from 1 to 4094.
dynamic	(OPTIONAL) Enter the keyword <code>dynamic</code> to allow aging of MACs even though a learning limit is configured.
station-move-violation	(OPTIONAL) Enter the keywords <code>station-move</code> to allow a station move on learned MAC addresses.

Defaults

- On S-Series, the default behavior is dynamic.

NOTE: “Static” means manually entered addresses, which do not age.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Deprecated the <code>no-station-move</code> command (replaced by the <code>mac-learning-limit mac-address-sticky</code> command).
8.3.7.0	Introduced on the S4810.
8.3.1.0	Added the <code>vlan</code> option on the E-Series.
8.2.1.0	Introduced on the S-Series.
7.7.1.0	Introduced on the C-Series. Added the <code>station-move</code> option.
6.5.1.0	Added support for MAC Learning-Limit on the LAG.

Usage Information

This command and its options are supported on physical interfaces, static LAGs, LACP LAGs, and VLANs.

If you do not specify the `vlan` option, the MAC address counters are not VLAN-based. That is, the sum of the addresses learned on all VLANs (not having any learning limit configuration) is counted against the MAC learning limit.

MAC Learning Limit violation logs and actions are not available on a per-VLAN basis.

With the keyword `no-station-move` option, MAC addresses learned through this feature on the selected interface persist on a per-VLAN basis, even if received on another interface. Enabling or disabling this option has no effect on already learned MAC addresses.

After the MAC address learning limit is reached, the MAC addresses do not age out unless you add the `dynamic` option. To clear statistics on MAC address learning, use the `clear counters` command with the `learning-limit` parameter.

NOTE: If you configure this command on an interface in a routed VLAN, and after the MAC addresses learned reaches the limit set in the `mac learning-limit` command, IP protocols are affected. For example, VRRP sets multiple VRRP Masters and OSPF may not come up.

When a channel member is added to a port-channel and there is not enough ACL CAM space, the MAC limit functionality on that port-channel is undefined. When this occurs, un-configure the existing configuration first and then reapply the limit with a lower value.

Related Commands

- [clear counters](#) — Clear counters used in the `show interface` command.
- [clear mac-address-table](#) — clears the MAC address table of all MAC address learned dynamically.
- [mac learning-limit mac-address-sticky](#) — Replaces deprecated `no-station-move` parameter.
- [show mac learning-limit](#) — displays MAC learning-limit configuration.

mac learning-limit learn-limit-violation

Configure an action for a MAC address learning-limit violation.

C9000 Series

Syntax	mac learning-limit learn-limit-violation {log shutdown}																			
	To return to the default, use the no mac learning-limit learn-limit-violation {log shutdown} command.																			
Parameters	log	Enter the keyword log to generate a syslog message on a learning-limit violation.																		
	shutdown	Enter the keyword shutdown to shut down the port on a learning-limit violation.																		
Defaults	none																			
Command Modes	INTERFACE (conf-if-interface-slot/port)

7.5.1.0	Introduced on the E-Series.																			
Usage Information	This command is supported on physical interfaces, static LAGs, and LACP LAGs.																			
Related Commands	show mac learning-limit — displays details of the mac learning-limit.																			

mac learning-limit mac-address-sticky

Maintain the dynamically learned mac addresses as sticky MAC addresses on the selected port.

C9000 Series

Syntax	<pre>mac learning-limit mac-address-sticky</pre> To convert the sticky MAC addresses to dynamic MAC addresses, use the <code>no mac learning-limit</code> command.	
Parameters	mac-address-sticky	Configures the dynamic MAC addresses as sticky on an interface.
Defaults	none	
Command Modes	INTERFACE	

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.

Usage Information

If you configure `mac-learning-limit` and the sticky MAC feature is enabled, dynamically learned MAC addresses are converted to sticky for that port. Any new MAC address that is learned also becomes sticky for that port.

Related Commands

[show mac learning-limit](#) — displays the details of the mac learning-limit.

mac learning-limit station-move-violation

Specify the actions for a station move violation.

C9000 Series

Syntax

```
mac learning-limit station-move-violation {log | shutdown-both | shutdown-offending | shutdown-original}
```

To disable a configuration, use the `no mac learning-limit station-move-violation` command, then the configured keyword.

Parameters

log	Enter the keyword <code>log</code> to generate a syslog message on a station move violation.
shutdown-both	Enter the keyword <code>shutdown</code> to shut down both the original and offending interface and generate a syslog message.
shutdown-offending	Enter the keywords <code>shutdown-offending</code> to shut down the offending interface and generate a syslog message.
shutdown-original	Enter the keywords <code>shutdown-original</code> to shut down the original interface and generate a syslog message.

Defaults

none

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.2.1.0	Introduced on the S-Series.

Version	Description
7.8.1.0	Introduced on the C-Series.
7.5.1.0	Introduced on the E-Series.

Usage Information This command is supported on physical interfaces, static LAGs, and LACP LAGs.

Related Commands [show mac learning-limit](#) — displays details of the mac learning-limit.

mac learning-limit reset

Reset the MAC address learning-limit error-disabled state.

C9000 Series

Syntax `mac learning-limit reset`

Defaults none

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.2.1.0	Introduced on the S-Series.
7.7.1.0	Introduced on the C-Series.
7.5.1.0	Introduced on the E-Series.

mac port-security

Enable or disable the port security feature globally in the system.

Syntax `mac port-security`

To disable the port security, use the `no mac port-security` command.

Defaults Enabled

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.14(1.0)	Introduced on the C9010, MXL, FN IOM, S3100 series, S4810, S4820T, S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, and Z9500.

Usage Information

Only if you enable the port security, you will be able to configure MAC address learning limit configurations on the interface level.

When you disable the port security, all the interface level configurations are reset. Also, all dynamically learnt MAC addresses on the interfaces configured with MAC address learning limit are cleared.

show cam mac linecard (dynamic or static)

Display the CAM size and the portions allocated for MAC addresses and for MAC ACLs.

C9000 Series

Syntax

```
show cam mac linecard slot-id port-set port-pipe [address mac_addr |
dynamic | interface interface | static | vlan vlan-id]
```

Parameters

linecard slot-id	(REQUIRED) Enter the keyword <code>linecard</code> then a slot number to select the linecard for which to gather information. The range of C9000 slot IDs are from 0 to 11.
port-set port-pipe	(REQUIRED) Enter the keywords <code>port-set</code> then a port-pipe number to specify the port pipe for which to gather information. The range of port pipe numbers is from 0 to 0.
address mac-addr	(OPTIONAL) Enter the keyword <code>address</code> then a MAC address in the nn:nn:nn:nn:nn:nn format to display information on that MAC address.
dynamic	(OPTIONAL) Enter the keyword <code>dynamic</code> to display only those MAC addresses the switch dynamically learns.
interface interface	(OPTIONAL) Enter the keyword <code>interface</code> then the interface type, slot and port information: - For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a port extender Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is from 1 to 48. - For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE.
static	(OPTIONAL) Enter the keyword <code>static</code> to display only those MAC addresses specifically configured on the switch.
vlan vlan-id	(OPTIONAL) Enter the keyword <code>vlan</code> then the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced peTenGigE interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Example

```
Dell# show cam mac linecard 1 port-set 0
PVlanId      Mac Address      Region      Interface
1            00:01:02:03:04:09 DYNAMIC     Fo 2/0
0            74:86:7a:ff:6f:1c LOCAL_DA    00001
1            00:11:22:33:44:55 STATIC      Fo 2/8
1            00:01:02:03:04:07 DYNAMIC     Fo 2/0
1            00:01:02:03:04:08 DYNAMIC     Fo 2/0
0            ff:ff:ff:ff:ff:ff STATIC      00001
1            00:01:02:03:04:05 DYNAMIC     Fo 2/0
1            00:01:02:03:04:06 DYNAMIC     Fo 2/0
```

show mac-address-table

Display the MAC address table.

C9000 Series

Syntax

```
show mac-address-table [address mac-address | interface interface | vlan
vlan-id] [aging-time] [dynamic | static] [count [vlan vlan-id] [interface
interface-type [slot [/port]]]]
```

Parameters

address <i>mac-address</i>	(OPTIONAL) Enter the keyword <i>address</i> then a MAC address in the nn:nn:nn:nn:nn:nn format to display information on that MAC address.
dynamic	(OPTIONAL) Enter the keyword <i>dynamic</i> to display only those MAC addresses the switch dynamically learns. Optionally, you can also add one of these combinations: <i>address/mac-address</i> , <i>interface/interface</i> , or <i>vlan vlan-id</i> .
static	(OPTIONAL) Enter the keyword <i>static</i> to display only those MAC addresses specifically configured on the switch. Optionally, you can also add one of these combinations: <i>address/mac-address</i> , <i>interface/interface</i> , or <i>vlan vlan-id</i> .
aging-time	Enter the keyword <i>aging-time</i> to display only aging-time information.
interface <i>interface</i>	(OPTIONAL) Enter the keyword <i>interface</i> then the interface type, slot and port information: - For a Port Channel interface, enter the keywords <i>port-channel</i> then a number. The range is from 1 to 128. - For a 10-Gigabit Ethernet interface, enter the keyword <i>TenGigabitEthernet</i> then the slot/port information.

- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port extender Gigabit Ethernet interface, enter the keyword `peGigE` then the *pe-id* / *stack-unit* / *port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is from 1 to 48.
- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id* / *stack-unit* / *port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

interface interface-type	(OPTIONAL) Instead of entering the keyword <code>interface</code> then the interface type, slot and port information, as above, you can enter the interface type, then just a slot number.
vlan vlan-id	(OPTIONAL) Enter the keyword <code>vlan</code> then the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.
count	(OPTIONAL) Enter the keyword <code>count</code> , then optionally, by an interface or VLAN ID, to display total or interface-specific static addresses, dynamic addresses, and MAC addresses in use.

- Command Modes**
- EXEC
 - EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Updated the output.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Usage Information The following describes the `show mac-address-table` command shown in the following example.

Column Heading	Description
VlanId	Displays the VLAN ID number.
Mac Address	Displays the MAC address in nn:nn:nn:nn:nn:nn format.
Type	Lists whether the MAC address was manually configured (Static), learned dynamically (Dynamic), or associated with a specific port (Sticky).
Interface	Displays the interface type and slot/port information. The following abbreviations describe the interface types: • po — Port Channel then a number. The range is from 1 to 255 for TeraScale. • te — 10-Gigabit Ethernet then a slot/port.

Column Heading	Description
	fo — 40-Gigabit Ethernet then a slot/port.
State	Lists if the MAC address is in use (Active) or not in use (Inactive).

Example

```
Dell(conf)#do show mac-address-table
Codes: *N - VLT Peer Synced MAC
VlanId      Mac Address      Type      Interface      State
2           00:00:00:00:00:01      Dynamic (N) Po 128         Active
2           00:00:00:00:00:02      Dynamic (N) Po 10          Active
2           00:00:00:00:00:03      Dynamic      Po 100         Active
2           00:00:00:00:00:04      Dynamic      Po 10          Active
```

Usage Information

The following describes the `show mac-address-table` command shown in the following example.

Column Heading	Description
VlanId	Displays the VLAN ID number.
Mac Address	Displays the MAC address in nn:nn:nn:nn:nn:nn format.
Type	Lists whether the MAC address was manually configured (Static), learned (Dynamic), or associated with a specific port (Sticky). An (N) indicates that the specified MAC address has been learnt by a neighbor and is synced to the node.
Interface	Displays the interface type and slot/port information. The following abbreviations describe the interface types: - po — Port Channel followed by a number. Range for Terascale is from 1 to 255. - te — 10-Gigabit Ethernet followed by a slot/port. - fo — 40-Gigabit Ethernet then a slot/port.
State	Lists if the MAC address is in use (Active) or not in use (Inactive).

The following describes the `show mac-address-table count` command shown in the following example.

Line Beginning With	Description
MAC Entries...	Displays the number of MAC entries learned per VLAN.
Dynamic Address...	Lists the number of dynamically learned MAC addresses.
Static Address...	Lists the number of user-defined MAC addresses.
Total MAC...	Lists the total number of MAC addresses the switch uses.

Example (Count)

```
Dell# show mac-address-table count
MAC Entries for all vlans :
Dynamic Address Count :      110
Static Address (User-defined) Count : 0
Sticky Address Count :      0
Total Synced Mac from Peer(N): 100
Total MAC Addresses in Use:  110
Dell#
```

Related Commands

`show mac-address-table aging-time` — displays MAC aging time.

show mac-address-table aging-time

Display the aging times assigned to the MAC addresses on the switch.

C9000 Series

Syntax	<code>show mac-address-table aging-time [vlan <i>vlan-id</i>]</code>	
Parameters	vlan <i>vlan-id</i>	(OPTIONAL) Enter the keyword <code>vlan</code> then the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.
Command Modes	- EXEC - EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.3.1.0	Added the <code>vlan</code> option on the E-Series.
7.7.1.0	Introduced on the C-Series and S-Series.
6.2.1.1	Introduced on the E-Series.

Example

```
Dell#show mac-address-table aging-time
Mac-address-table aging time : 1800

Dell#
```

Related Commands [show mac-address-table](#) — displays the current MAC address configuration.

show mac learning-limit

Display MAC address learning limits set for various interfaces.

C9000 Series

Syntax	<code>show mac learning-limit [violate-action] [detail] [interface <i>interface</i>]</code>	
Parameters	violate-action	(OPTIONAL) Enter the keywords <code>violate-action</code> to display the MAC learning limit violation status.
	detail	(OPTIONAL) Enter the keyword <code>detail</code> to display the MAC learning limit in detail.
	interface <i>interface</i>	(OPTIONAL) Enter the keyword <code>interface</code> with the following keywords and slot/port or number information: For a Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the <i>slot/port</i> information.

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a port extender Gigabit Ethernet interface, enter the keyword `peGigE` then the *pe-id* / *stack-unit* / *port-id* information. The *pe-id* range is from 0 to 255; the *stack-unit unit-number* range is from 0 to 7; and the *port-id* range is from 1 to 48.
- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id* / *stack-unit* / *port-id* information. The *pe-id* range is from 0 to 255; the *stack-unit unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
8.3.1.0	Added the <code>vlan</code> option on the E-Series.
7.7.1.0	Introduced on the C-Series.
7.5.1.0	Added support for the <code>violate-action</code> and <code>detail</code> options.
6.5.1.0	Added support for Port Channel.

Example

```
Dell#show mac learning-limit
Interface Learning Dynamic Static Unknown SA
Slot/port Limit MAC count MAC count Drops
Te 1/0 10 0 0 0
Te 1/1 5 0 0 0

Dell#show mac learning-limit interface gigabitethernet 1/0
Interface Learning Dynamic Static Unknown SA
Slot/port Limit MAC count MAC count Drops
Te 1/0 10 0 0 0
```

Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual LANs (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address and Layer 3 protocols on a VLAN called Inter-VLAN routing. FTP, TFTP, ACLs and SNMP are not supported on a VLAN.

Occasionally, while sending broadcast traffic over multiple Layer 3 VLANs, the VRRP state of a VLAN interface may continually switch between Master and Backup.

NOTE: For more information, refer to [VLAN Stacking](#) and VLAN-related commands, such as [portmode hybrid](#) in the [Interfaces](#) chapter.

default vlan-id

Specify a VLAN as the Default VLAN.

C9000 Series

Syntax	<pre>default vlan-id <i>vlan-id</i></pre> To remove the default VLAN status from a VLAN and VLAN 1 does not exist, use the <code>no default vlan-id <i>vlan-id</i></code> syntax.																					
Parameters	<i>vlan-id</i>	Enter the VLAN ID number of the VLAN to become the new Default VLAN. The range is from 1 to 4094. The default is 1 .																				
Defaults	The Default VLAN is VLAN 1 .																					
Command Modes	CONFIGURATION CONFIGURATION TERMINAL BATCH																					
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.10(0.0)</td><td>Introduced the Configuration Terminal Batch mode on C9010.</td></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr><tr><td>8.3.7.0</td><td>Introduced on the S4810.</td></tr><tr><td>7.6.1.0</td><td>Introduced on the S-Series.</td></tr><tr><td>7.5.1.0</td><td>Introduced on the C-Series.</td></tr><tr><td>6.2.1.1</td><td>Introduced on the E-Series.</td></tr></table>		Version	Description	9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	7.6.1.0	Introduced on the S-Series.	7.5.1.0	Introduced on the C-Series.	6.2.1.1	Introduced on the E-Series.
Version	Description																					
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.																					
9.9(0.0)	Introduced on the C9010.																					
9.2(1.0)	Introduced on the Z9500.																					
8.3.19.0	Introduced on the S4820T.																					
8.3.11.1	Introduced on the Z9000.																					
8.3.7.0	Introduced on the S4810.																					
7.6.1.0	Introduced on the S-Series.																					
7.5.1.0	Introduced on the C-Series.																					
6.2.1.1	Introduced on the E-Series.																					
Usage Information	To return VLAN 1 as the Default VLAN, use this command syntax (<code>default-vlan-id 1</code>). The Default VLAN contains only untagged interfaces. Use this command in Configuration Terminal Batch mode to specify a default VLAN in a dual-homing setup.																					
Related Commands	interface vlan — configures a VLAN.																					

default-vlan disable

Disable the default VLAN so that all switchports are placed in the Null VLAN until they are explicitly configured as a member of another VLAN.

C9000 Series

Defaults	Enabled																
Command Modes	CONFIGURATION CONFIGURATION TERMINAL BATCH

1/80)

T Po20 (Te 1/81)
T Fo 2/0
```

Related Commands

[interface vlan](#) — configures a VLAN.

tagged

Add a Layer 2 interface to a VLAN as a tagged interface.

C9000 Series

Syntax

```
tagged interface
```

To remove a tagged interface from a VLAN, use the `no tagged interface` command.

Parameters

interface

Enter the following keywords and slot/port or number information:

- For a Gigabit Ethernet interface, enter the keyword `GigabitEthernet` then the *slot/port* information.
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port extender Gigabit Ethernet interface, enter the keyword `peGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is from 1 to 48.
- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range

is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

Defaults All interfaces in Layer 2 mode are untagged.

Command Modes INTERFACE VLAN

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced peTenGigE interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Usage Information When you use the `no tagged` command, the interface is automatically placed in the Default VLAN as an untagged interface unless the interface is a member of another VLAN. If the interface belongs to several VLANs, remove it from all VLANs to change it to an untagged interface.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

Related Commands [interface vlan](#) — configures a VLAN.
[untagged](#) — specifies which interfaces in a VLAN are untagged.

track ip

Track the Layer 3 operational state of a Layer 3 VLAN, using a subset of the VLAN member interfaces.

C9000 Series

Syntax `track ip interface`

To remove the tracking feature from the VLAN, use the `no track ip interface` command.

Parameters *interface* Enter the following keywords and slot/port or number information:

- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults Not configured.

Command Modes INTERFACE VLAN

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Usage Information

When this command is configured, the VLAN is operationally UP if any of the interfaces specified in the `track ip` command are operationally UP, and the VLAN is operationally DOWN if none of the tracking interfaces are operationally UP.

If the `track ip` command is not configured, the VLAN's Layer 3 operational state depends on all the members of the VLAN.

The Layer 2 state of the VLAN, and hence the Layer 2 traffic, is not affected by the `track ip` command configuration.

Related Commands

[interface vlan](#) — configures a VLAN.

[tagged](#) — specifies which interfaces in a VLAN are tagged.

untagged

Add a Layer 2 interface to a VLAN as an untagged interface.

C9000 Series

Syntax

`untagged interface`

To remove an untagged interface from a VLAN, use the `no untagged interface` command.

Parameters

interface

Enter the following keywords and slot/port or number information:

- For a Gigabit Ethernet interface, enter the keyword `GigabitEthernet` then the *slot/port* information.
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port extender Gigabit Ethernet interface, enter the keyword `peGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is from 1 to 48.
- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range

is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

Defaults All interfaces in Layer 2 mode are untagged.

Command Modes INTERFACE VLAN

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced peTenGigE interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Usage Information Untagged interfaces can only belong to one VLAN.
In the Default VLAN, you cannot use the `no untagged interface` command. To remove an untagged interface from all VLANs, including the Default VLAN, enter INTERFACE mode and use the `no switchport` command.

Related Commands

- [interface vlan](#) — configures a VLAN.
- [tagged](#) — specifies which interfaces in a VLAN are tagged.

Far-End Failure Detection (FEFD)

The Dell Networking operating software supports far-end failure detection (FEFD) on the Ethernet interfaces.

The FEFD feature detects and reports far-end link failures.

- FEFD is not supported on the Management interface.
- During an RPM failover, FEFD is operationally disabled for approximately 8 to 10 seconds.
- By default, FEFD is disabled.

debug fefd

Enable debugging of FEFD.

C9000 Series

Syntax `debug fefd {events | packets} [interface]`
To disable debugging of FEFD, use the `no debug fefd {events | packets} [interface]` command.

Parameters

events	Enter the keyword <code>events</code> to enable debugging of FEFD state changes.

packets	Enter the keyword <code>packets</code> to enable debugging of FEFD to view information on packets sent and received.
<i>interface</i>	(OPTIONAL) Enter the following keywords and slot/port or number information: - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/ port information.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.

Related Commands

- `fefd` — enables far-end failure detection on an interface.
- `fefd reset` — enables FEFD globally on the system.

fefd

Enable Far-End Failure Detection on an interface, set the FEFD interval, or select the FEFD mode.

C9000 Series

Syntax `fefd {disable|interval|mode {aggressive|normal}}`

Parameters

disable	Enter the keyword disable to disable FEFD for the specified interface.
interval	Enter the keyword interval , followed by a value to specify the FEFD interval in seconds. Range is from 3 to 300. Default is 15.
mode	Enter the keyword mode followed by the mode type to specify the FEFD mode. normal: Change the link state to “unknown” when a far-end failure is detected by the software on that interface. When the interface is placed in an “unknown” state, the software brings down the line protocol. aggressive: Change the link state to “error-disabled” when a far-end failure is detected by the software on that interface. When an interface is placed in an “error-disabled” state, you must enter the <code>fefd reset</code> command to reset the interface state. Range is normal or aggressive. Default is normal.

Defaults Disabled.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Version	Description
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.

Usage Information

When you enter `no fefd` for an interface and `fefd-global`, FEFD is enabled on the interface because the `no fefd` command is not retained in the configuration file. To keep the interface FEFD disabled when the global configuration changes, use the `fefd reset` command.

Related Commands

- [fefd disable](#) — disables far-end failure detection on an interface.
- [fefd reset](#) — enables FEFD globally on the system.
- [fefd mode](#) — changes FEFD mode on an interface.

fefd disable

Disable FEFD on an interface only. This command overrides the `fefd reset` command for the interface.

C9000 Series

Syntax

`fefd disable`

To re-enable FEFD on an interface, use the `no fefd disable` command.

Defaults

Not configured.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

Usage Information

When you enter `no fefd` for an interface and `fefd-global`, FEFD is enabled on the interface because the `no fefd` command is not retained in the configuration file. To keep the interface FEFD disabled when the global configuration changes, use the `fefd reset` command.

Related Commands

- [fefd reset](#) — enables FEFD globally on the system.
- [fefd mode](#) — changes FEFD mode on an interface.

fefd interval

Set an interval between control packets.

C9000 Series

Syntax

`fefd interval seconds`

To return to the default value, use the `no fefd interval` command.

Parameters	<i>seconds</i>	Enter a number as the time between FEFD control packets. The range is from 3 to 255 seconds. The default is 15 seconds .
Defaults	15 seconds	
Command Modes	INTERFACE	
Command History	The following is the Dell Networking OS version history for this command.	
	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.2(1.0)	Introduced on the Z9500.
	8.3.19.0	Introduced on the S4820T.
	8.3.11.1	Introduced on the Z9000.
	8.3.7.0	Introduced on the S4810.
Related Commands	• fefd — enables far-end failure detection.	

fefd mode

Change the FEFD mode on an interface.

C9000 Series

Syntax	<code>fefd mode {normal aggressive}</code>	
	To return the FEFD mode to the default of normal, use the <code>no fefd mode</code> command.	
Parameters	normal	(OPTIONAL) Enter the keyword <code>normal</code> to change the link state to “unknown” when a far-end failure the software detects on that interface. When the interface is placed in “unknown” state, the software brings down the line protocol.
	aggressive	(OPTIONAL) Enter the keyword <code>aggressive</code> to change the link state to “error-disabled” when a far-end failure the software detects on that interface. When an interface is placed in “error-disabled” state, enter the <code>fefd reset</code> command to reset the interface state.
Defaults	normal	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	
	The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.2(1.0)	Introduced on the Z9500.
	8.3.19.0	Introduced on the S4820T.
	8.3.11.1	Introduced on the Z9000.
	8.3.7.0	Introduced on the S4810.

Related Commands

- [fefd](#) — enables far-end failure detection.

fefd reset

Reset all interfaces or a single interface that was in “error-disabled” mode.

C9000 Series

Syntax `fefd reset [interface]`

Parameters ***interface*** (OPTIONAL) Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/ port information.

Defaults Not configured.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.

Related Commands

- [fefd](#) — enables far-end failure detection.

fefd-global interval

Configure an interval between FEFD control packets.

C9000 Series

Syntax `fefd-global interval seconds`

To return to the default value, use the `no fefd-global interval` command.

Parameters ***seconds*** Enter a number as the time between FEFD control packets. The range is from 3 to 300 seconds. The default is **15 seconds**.

Defaults **15 seconds**

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

- Related Commands**
- [fehd](#) — enables far-end failure detection.
 - [fehd-global](#) — enables FEFD globally on the system.

fehd-global

Enable FEFD globally on the system.

C9000 Series

Syntax	<pre>fehd-global [interval seconds][mode {normal aggressive}]</pre> To disable FEFD globally, use the <code>no fehd-global [mode {normal aggressive}]</code> command.	
Parameters	interval <i>seconds</i>	Enter the keyword <code>interval</code> followed by the number of seconds to wait between FEFD control packets. Range is from 3 to 300 seconds. Default is 15 seconds.
	normal	(OPTIONAL) Enter the keywords <code>mode normal</code> to change the link state to “unknown” when a far-end failure the software detects on that interface. When the interface is placed in “unknown” state, the software brings down the line protocol. The default is Normal mode .
	aggressive	(OPTIONAL) Enter the keywords <code>mode aggressive</code> to change the link state to “error-disabled” when a far-end failure the software detects on that interface. When an interface is placed in “error-disabled” state, t enter the <code>fehd reset</code> command to reset the interface state.
Defaults	Disabled.	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.

Usage Information	If you enter only the <code>fehd-global</code> syntax, the mode is normal and the default interval is 15 seconds. If you disable FEFD globally (<code>no fehd-global</code>), the system does not remove the FEFD interface configuration.

- Related Commands**
- [fehd](#) — enables far-end failure detection.
 - [fehd-global interval](#) — configures an interval between FEFD control packets.
 - [show fehd](#) — shows the FEFD command output.

show fefd

View FEFD status globally or on a specific interface.

C9000 Series

Syntax	show fefd [<i>interface</i>]		
Parameters	<i>interface</i>	(OPTIONAL) Enter the following keywords and slot/port or number information: - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/ port information.	
Command Modes	- EXEC - EXEC Privilege		
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.		

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.

Usage Information	The following describes the <code>show fefd</code> command shown in the following example.		
	Field	Description	
	Interface	Displays the interfaces type and number.	
	Mode	Displays the mode (aggressive or normal) or NA if the interface contains <code>fefd reset</code> in its configuration.	
	Interval	Displays the interval between FEFD packets.	
	State	Displays the state of the interface and can be one of the following: - bi-directional (interface is up, connected and hearing neighbor's echoes). - err-disabled (only found when FEFD mode is aggressive and when the interface has not hearing its neighbor's echoes for three times the message interval. To reset an interface in this state, use the <code>fefd reset</code> command.) - unknown (only found when FEFD mode is normal. - locally disabled (interface contains the <code>fefd reset</code> command in its configuration). - Admin Shutdown (interface is disabled with the <code>shutdown</code> command).	

Example	<pre>Dell#sh fefd FEFD is globally 'ON', interval is 10 seconds, mode is 'Aggressive'. INTERFACE MODE INTERVAL STATE (second) Te 1/0 Aggressive 10 Admin Shutdown Te 1/1 Aggressive 10 Admin Shutdown Te 1/2 Aggressive 10 Admin Shutdown Te 1/3 Aggressive 10 Admin Shutdown Te 1/4 Aggressive 10 Admin Shutdown</pre>		

```

Te 1/5    Aggressive  10      Admin Shutdown
Te 1/6    Aggressive  10      Admin Shutdown
Te 1/7    Aggressive  10      Admin Shutdown
Te 1/8    Aggressive  10      Admin Shutdown
Te 1/9    Aggressive  10      Admin Shutdown
Te 1/10   NA          NA      Locally disabled
Te 1/11   Aggressive  10      Err-disabled
Dell#

```

Related Commands

- [fehd](#) — enables far-end failure detection.

- [fehd-global](#) — enables FEFD globally on the system.
- [fehd reset](#) — resets all interfaces or a single interface that was in “error-disabled” mode.

Link Aggregation Control Protocol (LACP)

This chapter contains commands for Dell Networks's implementation of the link aggregation control protocol (LACP) for creating dynamic link aggregation groups (LAGs) — known as “port-channels” in the Dell Networking operating software.

NOTE: For static LAG commands, refer to [Port Channel Commands](#) in the [Interfaces](#) chapter), based on the standards specified in the IEEE 802.3 Carrier sense multiple access with collision detection (CSMA/CD) access method and physical layer specifications.

Topics:

- [clear lacp counters](#)
- [debug lacp](#)
- [lacp long-timeout](#)
- [lacp port-priority](#)
- [lacp system-priority](#)
- [port-channel mode](#)
- [port-channel-protocol lacp](#)
- [show lacp](#)

clear lacp counters

Clear port channel counters.

C9000 Series

Syntax	<code>clear lacp <i>port-channel-number</i> counters</code>	
Parameters	<i>port-channel-number</i>	Enter a port-channel number. The range is from 1 to 128.
Defaults	Without a Port Channel specified, the command clears all Port Channel counters.	
Command Modes	• EXEC • EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Related
Commands

`show lacp` — displays the LACP configuration.

debug lacp

Debug LACP (configuration, events, and so on).

C9000 Series

Syntax	<pre>debug lacp {config events pdu [interface-type [in out]]}</pre> To disable LACP debugging, use the <code>no debug {config events pdu [interface-type [in out]]}</code> command.								
Parameters	<table><tr><td>config</td><td>(OPTIONAL) Enter the keyword <code>config</code> to debug the LACP configuration.</td></tr><tr><td>events</td><td>(OPTIONAL) Enter the keyword <code>events</code> to debug the LACP event information.</td></tr><tr><td>pdu</td><td>(OPTIONAL) Enter the keyword <code>pdu</code> to debug the LACP Protocol Data Unit information.</td></tr><tr><td>interface-type in out</td><td> (OPTIONAL) Enter the following keywords and slot/port or number information: - For a Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the <i>slot/port</i> information. - For a Ten-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a port extender Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id / stack-unit / port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is from 1 to 48. - For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id / stack-unit / port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE. Optionally, enter an <code>in</code> or <code>out</code> parameter: - Receive enter <code>in</code> - Transmit enter <code>out</code> </td></tr></table>	config	(OPTIONAL) Enter the keyword <code>config</code> to debug the LACP configuration.	events	(OPTIONAL) Enter the keyword <code>events</code> to debug the LACP event information.	pdu	(OPTIONAL) Enter the keyword <code>pdu</code> to debug the LACP Protocol Data Unit information.	interface-type in out	(OPTIONAL) Enter the following keywords and slot/port or number information: - For a Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the <i>slot/port</i> information. - For a Ten-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a port extender Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id / stack-unit / port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is from 1 to 48. - For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id / stack-unit / port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE. Optionally, enter an <code>in</code> or <code>out</code> parameter: - Receive enter <code>in</code> - Transmit enter <code>out</code>
config	(OPTIONAL) Enter the keyword <code>config</code> to debug the LACP configuration.								
events	(OPTIONAL) Enter the keyword <code>events</code> to debug the LACP event information.								
pdu	(OPTIONAL) Enter the keyword <code>pdu</code> to debug the LACP Protocol Data Unit information.								
interface-type in out	(OPTIONAL) Enter the following keywords and slot/port or number information: - For a Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the <i>slot/port</i> information. - For a Ten-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a port extender Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id / stack-unit / port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is from 1 to 48. - For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id / stack-unit / port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE. Optionally, enter an <code>in</code> or <code>out</code> parameter: - Receive enter <code>in</code> - Transmit enter <code>out</code>								
Defaults	none								
Command Modes	- EXEC - EXEC Privilege								
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.								

Version	Description
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.

Version	Description
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

lacp long-timeout

Configure a long timeout period (30 seconds) for an LACP session.

C9000 Series

Syntax	<pre>lacp long-timeout</pre> To reset the timeout period to a short timeout (1 second), use the <code>no lacp long-timeout</code> command.
Defaults	1 second
Command Modes	INTERFACE (conf-if-po-number)
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

7.5.1.0	Introduced on the C-Series.															
6.2.1.1	Introduced on the E-Series.															
Usage Information	LACP Modes															
	Mode	Function														
	active	An interface is in an active negotiating state in this mode. LACP runs on any link configured in the active state and also automatically initiates negotiation with other ports by initiating LACP packets.														
	passive	An interface is not in an active negotiating state in this mode. LACP runs on any link configured in the passive state. Ports in a passive state respond to negotiation requests from other ports that are in active states. Ports in a passive state respond to LACP packets														
	off	An interface cannot be part of a dynamic port channel in off mode. LACP does not run on a port configured in off mode.														

port-channel-protocol lacp

Enable LACP on any LAN port.

C9000 Series

Syntax	<code>port-channel-protocol lacp</code> To disable LACP on a LAN port, use the <code>no port-channel-protocol lacp</code> command.														
Command Modes	INTERFACE														
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. Related Commands	• <code>show lacp</code> — displays the LACP information. • <code>show interfaces port-channel</code> — displays information on configured Port Channel groups.														

show lacp

Display the LACP matrix.

C9000 Series

Syntax	<code>show lacp port-channel-number [sys-id counters]</code>						
Parameters	<table><tr><td><i>port-channel-number</i></td><td>Enter a port-channel number. The range is from 1 to 128.</td></tr><tr><td>sys-id</td><td>(OPTIONAL) Enter the keywords <code>sys-id</code> and the value that identifies a system.</td></tr><tr><td>counters</td><td>(OPTIONAL) Enter the keyword <code>counters</code> to display the LACP counters.</td></tr></table>	<i>port-channel-number</i>	Enter a port-channel number. The range is from 1 to 128.	sys-id	(OPTIONAL) Enter the keywords <code>sys-id</code> and the value that identifies a system.	counters	(OPTIONAL) Enter the keyword <code>counters</code> to display the LACP counters.
<i>port-channel-number</i>	Enter a port-channel number. The range is from 1 to 128.						
sys-id	(OPTIONAL) Enter the keywords <code>sys-id</code> and the value that identifies a system.						
counters	(OPTIONAL) Enter the keyword <code>counters</code> to display the LACP counters.						
Defaults	Without a Port Channel specified, the command clears all Port Channel counters.						
Command Modes	• EXEC • EXEC Privilege						
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></tbody></table>	Version	Description	9.9(0.0)	Introduced on the C9010.		
Version	Description

9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

**Example
(Port-Channel-
Number)**

```
Dell#show lacp 1
Port-channel 1 admin up, oper up, mode lacp
Actor   System ID:Priority 32768, Address 0001.e800.a12b
Partner System ID:Priority 32768, Address 0001.e801.45a5
        Actor Admin Key 1, Oper Key 1, Partner Oper Key 1
        LACP LAG 1 is an aggregatable link

A-Active LACP, B-Passive LACP, C-Short Timeout, D-Long Timeout
E-Aggregatable Link, F-Individual Link, G-IN_SYNC, H-OUT_OF_SYNC
I-Collection enabled, J-Collection disabled, K-Distribution enabled L-
Distribution disabled,
M-Partner Defaulted, N-Partner Non-defaulted, O-Receiver is in expired
state,
P-Receiver is not in expired state

Port Te 1/6 is enabled, LACP is enabled and mode is lacp
  Actor   Admin: State ACEHJLMP Key 1   Priority 128
          Oper: State ACEGIKNP Key 1   Priority 128
  Partner Admin: State BDFHJLMP Key 0   Priority 0
          Oper: State BCEGIKNP Key 1   Priority 128
Dell#
```

Example (Sys-id)

```
Dell#show lacp 1 sys-id
Actor   System ID: Priority 32768, Address 0001.e800.a12b
Partner System ID: Priority 32768, Address 0001.e801.45a5

Dell#
```

**Example
(Counter)**

```
Dell#show lacp 1 counters
-----
Port          LACP PDU      Marker PDU      Unknown      Illegal
              Xmit Recv      Xmit Recv      Pkts Rx      Pkts Rx
-----
Te 1/6        200   200        0     0           0           0
Dell#
```

**Related
Commands**

- [clear lacp counters](#) — clears the LACP counters.
- [show interfaces port-channel](#) — displays information on configured Port Channel groups.

Link Layer Discovery Protocol (LLDP)

Link layer discovery protocol (LLDP) advertises connectivity and management from the local station to the adjacent stations on an IEEE 802 LAN.

This chapter contains the following sections:

- [LLPD Commands](#)
- [LLDP-MED Commands](#)

LLDP facilitates multi-vendor interoperability by using standard management tools to discover and make available a physical topology for network management. The Dell Networking operating system implementation of LLDP is based on IEEE standard 801.1ab.

The starting point for using LLDP is invoking LLDP with the `protocol lldp` command in either CONFIGURATION or INTERFACE mode.

The information LLDP distributes is stored by its recipients in a standard management information base (MIB). You can access the information by a network management system through a management protocol such as simple network management protocol (SNMP).

Topics:

- [LLPD Commands](#)
- [snmp-notification-interval](#)
- [LLDP-MED Commands](#)

LLPD Commands

The following are LLDP commands.

advertise dot1-tlv

Advertise dot1 TLVs (Type, Length, Value).

C9000 Series

Syntax	<pre>advertise dot1-tlv {port-protocol-vlan-id port-vlan-id vlan-name}</pre> To remove advertised dot1-tlv, use the <code>no advertise dot1-tlv {port-protocol-vlan-id port-vlan-id vlan-name}</code> command.	
Parameters	port-protocol-vlan-id	Enter the keywords <code>port-protocol-vlan-id</code> to advertise the port protocol VLAN identification TLV.
	port-vlan-id	Enter the keywords <code>port-vlan-id</code> to advertise the port VLAN identification TLV.
	vlan-name	Enter the keywords <code>vlan-name</code> to advertise the vlan-name TLV. This keyword is only supported on the C-Series and S-Series.
Defaults	Disabled.	
Command Modes	CONFIGURATION (<code>conf-lldp</code>) and INTERFACE (<code>conf-if-interface-lldp</code>)	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series. Added the <code>vlan-name</code> option.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

**Related
Commands**

[protocol lldp \(Configuration\)](#) — enables LLDP globally.
[debug lldp interface](#) — debugs LLDP.
[show lldp neighbors](#) — displays the LLDP neighbors.
[show running-config lldp](#) — displays the LLDP running configuration.

advertise dot3-tlv

Advertise dot3 TLVs (Type, Length, Value).

C9000 Series

Syntax	<code>advertise dot3-tlv {max-frame-size}</code> To remove advertised dot3-tlv, use the <code>no advertise dot3-tlv {max-frame-size}</code> command.
Parameters	max-frame-size Enter the keywords <code>max-frame-size</code> to advertise the dot3 maximum frame size.
Defaults	none
Command Modes	CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

advertise interface-port-desc

Advertise port descriptor.

Syntax	<code>advertise interface-port-desc {description port-id}</code> To remove the advertised port descriptor, use the <code>no advertise interface-port-desc {description port-id}</code> command.		
Parameters	description	Enter the keyword <code>description</code> then the interface description.	
	port-id	Enter the keyword <code>port-id</code> then the port-id. The range is from 0 to 7.	
Defaults	None		
Command Modes	CONFIGURATION (conf-lldp)		
	INTERFACE (conf-if- <i>interface</i> -lldp)		
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> .		
	Version	Description	
	9.11(2.0P2)	Introduced the <code>description</code> and <code>port-id</code> options.	
Usage Information	If you do not specify the option, by default the port-id takes higher precedence and sends the port-id in the LLDP packets.		

advertise dot3-tlv

Configure the system or an interface to advertise IEEE 802.3at extended power-via-mdi.

C9000 Series

Syntax	advertise dot3-tlv power-via-mdi To remove the advertised dot3-tlv, use the no advertise dot3-tlv power-via-mdi command						
Parameters	power-via-mdi	Enter the keyword power-via-mdi to advertise IEEE 802.3at power-via-mdi TLV.					
Defaults	Disabled						
Command Modes	- LLDP CONFIGURATION (conf-lldp) - INTERFACE LLDP CONFIGURATION (conf-if-interface-lldp)						
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></table>			Version	Description	9.9(0.0)	Introduced on the C9010.
Version	Description						
9.9(0.0)	Introduced on the C9010.						
Usage Information	The advertise dot3-tlv power-via-mdi command enables the system to advertise IEEE 802.3at power-via-mdi TLV to advertise its power negotiation capabilities with the powered devices via Link Layer Discovery Protocol (LLDP). You can configure this command either on a specific interface or globally.						
Example	<pre>Dell(conf)#interface peGigE 0/0/0 Dell(conf-if-pegig-0/0/0)#protocol lldp</pre>						

```
Dell (conf-if-peg1-0/0/0-lldp) #advertise dot3-tlv power-via-mdi
Dell (conf-if-peg1-0/0/0-lldp) #
```

advertise management-tlv

Advertise management TLVs (Type, Length, Value).

C9000 Series

Syntax	<pre>advertise management-tlv {management-address system-capabilities system-description system-name}</pre> To remove advertised management TLVs, use the <code>no advertise management-tlv {management-address system-capabilities system-description system-name}</code> command.																					
Parameters	management-address	Enter the keyword <code>management-address</code> to advertise the management IP address TLVs to the LLDP peer.																				
	system-capabilities	Enter the keywords <code>system-capabilities</code> to advertise the system capabilities TLVs to the LLDP peer.																				
	system-description	Enter the keywords <code>system-description</code> to advertise the system description TLVs to the LLDP peer.																				
	system-name	Enter the keywords <code>system-name</code> to advertise the system name TLVs to the LLDP peer.																				
Defaults	none																					
Command Modes	CONFIGURATION (conf-lldp)																					
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>9.1.(0.0)</td><td>Modified to support management-address parameter.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr><tr><td>8.3.7.0</td><td>Introduced on the S4810.</td></tr><tr><td>7.7.1.0</td><td>Introduced on the S-Series.</td></tr><tr><td>7.6.1.0</td><td>Introduced on the C-Series.</td></tr><tr><td>7.4.1.0</td><td>Introduced on the E-Series.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	9.1.(0.0)	Modified to support management-address parameter.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	7.7.1.0	Introduced on the S-Series.	7.6.1.0	Introduced on the C-Series.	7.4.1.0	Introduced on the E-Series.
Version	Description																					
9.9(0.0)	Introduced on the C9010.																					
9.2(1.0)	Introduced on the Z9500.																					
9.1.(0.0)	Modified to support management-address parameter.																					
8.3.19.0	Introduced on the S4820T.																					
8.3.11.1	Introduced on the Z9000.																					
8.3.7.0	Introduced on the S4810.																					
7.7.1.0	Introduced on the S-Series.																					
7.6.1.0	Introduced on the C-Series.																					
7.4.1.0	Introduced on the E-Series.																					
Usage Information	The command options <code>management-address</code>, <code>system-capabilities</code>, <code>system-description</code>, and <code>system-name</code> can be invoked individually or together, in any sequence.																					

advertise management-tlv (Interface)

Advertise management type, length, values (TLVs) to the specified interface.

C9000 Series

Syntax	<pre>advertise management-tlv {management-address system-capabilities system-description system-name}</pre> To remove advertised management TLVs, use the <code>no advertise management-tlv {management-address system-capabilities system-description system-name}</code> command.											
Parameters	management-address	Enter the keywords <code>management-address</code> to advertise the management IP address TLVs to the specified interface.										
	system-capabilities	Enter the keywords <code>system-capabilities</code> to advertise the system capabilities TLVs to the specified interface.										
	system-description	Enter the keywords <code>system-description</code> to advertise the system description TLVs to the specified interface.										
	system-name	Enter the keywords <code>system-name</code> to advertise the system name TLVs to the specified interface.										
Defaults	none											
Command Modes	INTERFACE (conf- <i>interface</i> -lldp)											
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>9.1.(0.0)</td><td>Introduced on the Z9000 and S4810.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	9.1.(0.0)	Introduced on the Z9000 and S4810.	8.3.19.0	Introduced on the S4820T.
Version	Description											
9.9(0.0)	Introduced on the C9010.											
9.2(1.0)	Introduced on the Z9500.											
9.1.(0.0)	Introduced on the Z9000 and S4810.											
8.3.19.0	Introduced on the S4820T.											

clear lldp counters

Clear LLDP transmitting and receiving counters for all physical interfaces or a specific physical interface.

C9000 Series

Syntax	<pre>clear lldp counters interface</pre>	
Parameters	interface	Enter the following keywords and slot/port or number information: - For a Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the <i>slot/port</i> information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a Management Ethernet interface, enter the keyword <code>managementethernet</code> then the slot/port information. - For a 10-Gigabit Ethernet interface, enter the keyword <code>tenGigabitEthernet</code> then the slot/port information.

- For a port extender Gigabit Ethernet interface, enter the keyword `peGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is from 1 to 48.
- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

Defaults none

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

clear lldp neighbors

Clear LLDP neighbor information for all interfaces or a specific interface.

C9000 Series

Syntax `clear lldp neighbors {interface}`

Parameters ***interface*** Enter the following keywords and slot/port or number information:

- For a 1-Gigabit Ethernet interface, enter the keyword `gigabitethernet` then the slot/ port information.
- For a 10-Gigabit Ethernet interface, enter the keyword `tenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Management Ethernet interface, enter the keyword `managementethernet` then the slot/port information.
- For a port extender (PE) Gigabit Ethernet interface, enter the keyword `peGigE` then the *pe-id / stack-unit / port-id* information.
- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

Defaults	none
Command Modes	EXEC Privilege
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced peTenGigE interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

debug lldp interface

To display timer events, neighbor additions or deletions, and other information about incoming and outgoing packets, enable LLDP debugging.

Syntax	<pre>debug lldp interface {interface all}{events packet {brief detail} {tx rx both}}</pre> To disable debugging, use the <code>no debug lldp [interface {interface all}{events} {packet {brief detail} {tx rx both}}]</code> command.

Parameters	interface <i>interface</i>	Enter the following keywords and slot/port or number information: - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.
	all	Enter the keyword <code>all</code> to display information on all interfaces.
	events	Enter the keyword <code>events</code> to display major events such as timer events.
	packet	Enter the keyword <code>packet</code> to display information regarding packets coming in or going out.
	brief	Enter the keyword <code>brief</code> to display brief packet information.
	detail	Enter the keyword <code>detail</code> to display detailed packet information.
	tx	Enter the keyword <code>tx</code> to display transmit-only packet information.
	rx	Enter the keyword <code>rx</code> to display receive-only packet information.
	both	Enter the keyword <code>both</code> to display both receive and transmit packet information.

Defaults	None
Command Modes	EXEC Privilege
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i>.

Version	Description
9.13.0.0	Enhanced to display organizational specific unrecognized LLDP TLVs.
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Example

```

```

disable

Enable or disable LLDP.

C9000 Series

Syntax `disable`

To enable LLDP, use the `no disable` command.

Defaults Enabled, that is no disable.

Command Modes CONFIGURATION (`conf-ldp`) and INTERFACE (`conf-if-interface-ldp`)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Related Commands

[protocol lldp \(Configuration\)](#) — enables LLDP globally.

[debug lldp interface](#) — debugs LLDP.

[show lldp neighbors](#) — displays the LLDP neighbors.

[show running-config lldp](#) — displays the LLDP running configuration.

hello

Configure the rate at which the LLDP control packets are sent to its peer.

C9000 Series

Syntax

`hello seconds`

To revert to the default, use the `no hello seconds` command.

Parameters

seconds Enter the rate, in seconds, at which the control packets are sent to its peer. The rate is from 5 to 180 seconds. The default is **30 seconds**.

Defaults

30 seconds

Command Modes

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

management-interface

Enable and configure LLDP protocol parameters on the management interface.

C9000 Series

Syntax	<code>management-interface</code> To remove LLDP configuration on a management interface, use the <code>no management-interface</code> command.								
Command Modes	LLDP (conf-lldp)								
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>9.2(0.0)</td><td>Introduced on the Z9000 and S4810.</td></tr></tbody></table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	9.2(0.0)	Introduced on the Z9000 and S4810.

9.2(1.0)	Introduced on the Z9500.								
9.2(0.0)	Introduced on the Z9000 and S4810.								
Usage Information	To enable LLDP on the management interface, use the <code>no disable</code> command in LLDP-MANAGEMENT-INTERFACE mode (conf-lldp-mgmtIf).								

mode

To receive or transmit, set LLDP.

C9000 Series

Syntax	<code>mode {tx rx}</code> To return to the default, use the <code>no mode {tx rx}</code> command.														
Parameters	<table><tr><td>tx</td><td>Enter the keyword <code>tx</code> to set the mode to transmit.</td></tr><tr><td>rx</td><td>Enter the keyword <code>rx</code> to set the mode to receive.</td></tr></table>	tx	Enter the keyword <code>tx</code> to set the mode to transmit.	rx	Enter the keyword <code>rx</code> to set the mode to receive.										
tx	Enter the keyword <code>tx</code> to set the mode to transmit.														
rx	Enter the keyword <code>rx</code> to set the mode to receive.														
Defaults	Both transmit and receive .														
Command Modes	CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)														
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. 7.7.1.0	Introduced on the S-Series.														

Version	Description
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Related Commands [protocol lldp \(Configuration\)](#) — enables LLDP globally.
[show lldp neighbors](#) — displays the LLDP neighbors.

multiplier

Set the number of consecutive misses before LLDP declares the interface dead.

C9000 Series

Syntax	<code>multiplier integer</code> To return to the default, use the <code>no multiplier integer</code> command.	
Parameters	<i>integer</i>	Enter the number of consecutive misses before the LLDP declares the interface dead. The range is from 2 to 10.
Defaults	4 x hello	
Command Modes	CONFIGURATION (conf-lldp) and INTERFACE (conf-if- <i>interface</i> -lldp)	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

pe-lldp-multiplier

Configure the port extender (PE) LLDP multiplier value.

Syntax	<code>pe-lldp-multiplier number</code> To return to the default multiplier value, use the <code>no pe-lldp-multiplier</code> command.	
Parameters	<i>number</i>	Modify the number to change the PE LLDP multiplier value. The range is from 3 to 10.
Defaults	3	
Command Modes	CONFIGURATION	

CONFIGURATION TERMINAL BATCH

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version

Description

9.14(1.6)

Introduced on the C9010.

Usage Information

PE LLDP timeout is based on the hello interval and multiplier value (for example: Default Hello interval: 3 seconds * multiplier: 3 seconds). This command allows you to change the multiplier value only.

Example (configure the PE LLDP multiplier)

```
DellEMC(conf)#pe-lldp-multiplier ?
<3-10>                Multiplier value (default = 3)
DellEMC(conf)#pe-lldp-multiplier 5
DellEMC(conf)#
DellEMC(conf)#do show running-config | grep pe-
pe-lldp-multiplier 5
DellEMC(conf)#
```

Example (unconfigure the PE LLDP multiplier)

```
DellEMC(conf)#no pe-lldp-multiplier
DellEMC(conf)#
DellEMC(conf)#do show running-config | grep pe-
DellEMC(conf)#
```

protocol lldp (Configuration)

Enable the LLDP globally on the switch.

C9000 Series

Syntax

`protocol lldp`

To disable LLDP globally on the chassis, use the `no protocol lldp` command.

Defaults

Enabled.

Command Modes

CONFIGURATION(conf-lldp)

CONFIGURATION TERMINAL BATCH

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version

Description

9.10(0.0)

Introduced the Configuration Terminal Batch mode on C9010.

9.9(0.0)

Introduced on the C9010.

9.2(1.0)

Introduced on the Z9500.

8.3.19.0

Introduced on the S4820T.

8.3.11.1

Introduced on the Z9000.

8.3.7.0

Introduced on the S4810.

7.7.1.0

Introduced on the S-Series.

7.6.1.0

Introduced on the C-Series.

7.4.1.0

Introduced on the E-Series.

protocol lldp (Interface)

Enter the LLDP protocol in INTERFACE mode.

C9000 Series

Syntax	<code>[no] protocol lldp</code> To return to the global LLDP configuration mode, use the <code>no protocol lldp</code> command from Interface mode.
Defaults	LLDP is not enabled on the interface.
Command Modes	INTERFACE (<i>conf-if-interface-lldp</i>)
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Usage Information	Before LLDP can be configured on an interface, it must be enabled globally from CONFIGURATION mode. This command places you in LLDP mode on the interface; it does not enable the protocol. When you enter the LLDP protocol in the Interface context, it overrides global configurations. When you execute the <code>no protocol lldp</code> from INTERFACE mode, interfaces begin to inherit the configuration from global LLDP CONFIGURATION mode.

show lldp neighbors

Display LLDP neighbor information for all interfaces or a specified interface.

Syntax	<code>show lldp neighbors [interface interface] [detail]</code>		
Parameters	<table><tr><td>interface <i>interface</i></td><td>(OPTIONAL) Enter the following keywords and the interface information: - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a port extender Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is from 1 to 48. - For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE. </td></tr></table>	interface <i>interface</i>	(OPTIONAL) Enter the following keywords and the interface information: - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a port extender Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is from 1 to 48. - For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE.
interface <i>interface</i>	(OPTIONAL) Enter the following keywords and the interface information: - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a port extender Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is from 1 to 48. - For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE.		

detail (OPTIONAL) Enter the keyword `detail` to display all the TLV information, remote management IP addresses, timers, and LLDP tx and rx counters.

Defaults None

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.13.0.0	Enhanced to display organizational specific unrecognized LLDP TLVs.
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
9.1.(0.0)	Modified output of <code>detail</code> parameter to display remote management IP addresses.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on the E-Series.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Usage Information Omitting the keyword `detail` displays only the remote chassis ID, Port ID, and Dead Interval.

Example

```
DellEMC(conf-if-te-1/31)# do show lldp neighbors
Loc PortID Rem  Host Name          Rem      Port Id Rem Chassis Id
-----
Te   1/21   R2   TenGigabitEthernet  2/11    00:01:e8:06:95:3e
Te   1/31   R3   TenGigabitEthernet  3/11    00:01:e8:09:c2:4a
```

Example (Detail)

```

show lldp statistics

Display the LLDP statistical information.

C9000 Series

Syntax `show lldp statistics`

Defaults none

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Example

```
Dell#show lldp statistics
Total number of neighbors: 300
Last table change time   : Mon Oct 02 16:00:52 2006
Number of Table Inserts  : 1621
Number of Table Deletes  : 200
Number of Table Drops    : 0
Number of Table Age Outs : 400
Dell#
```

show management-interface

Display LLDP management interface configuration information.

C9000 Series

Syntax `show management-interface`

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.2.(0.0)	Introduced on the Z9000 and S4810.

show running-config lldp

Display the current global LLDP configuration.

C9000 Series

Syntax	show running-config lldp
Defaults	none
Command Modes	EXEC Privilege
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S8420T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Example	<pre>Dell#show running-config lldp ! protocol lldp advertise dot1-tlv port-protocol-vlan-id port-vlan-id advertise dot3-tlv max-frame-size advertise management-tlv system-capabilities system-description hello 15 multiplier 3 no disable Dell#</pre>

snmp-notification-interval

Used to configure the value for the lldp notification interval, to throttle lldp notification messages.

Syntax	[no] snmp-notification-interval [seconds]		
	To disable this feature, use the no snmp-notification-interval command.		
Parameters	<table><tr><td>seconds</td><td>Enter a value from 5 to 3600 seconds.</td></tr></table>	seconds	Enter a value from 5 to 3600 seconds.
seconds	Enter a value from 5 to 3600 seconds.		
Defaults	5 seconds		
Command Modes	CONFIGURATION		
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i>.		

Version	Description
9.11(2.5)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S6010-ON and Z9100-ON

Usage Information

SNMP notification for the changes in the lldp remote entry table is throttled by 5 seconds (default), or the configured time set using this command. If more than one notification message is generated within the configured time, only the first one will be sent and the remaining messages are suppressed.

LLDP-MED Commands

The following are the LLDP-MED (Media Endpoint Discovery) commands.

The Dell Networking OS LLDP-MED commands are an extension of the set of LLDP TLV advertisement commands. The C-Series and S-Series support all commands.

The E-Series generally supports the commands. However, LLDP-MED commands are more useful on the C-Series and the S50V model of the S-Series, because they support Power over Ethernet (PoE) devices.

As defined by ANSI/TIA-1057, LLDP-MED provides organizationally specific TLVs (Type Length Value), so that endpoint devices and network connectivity devices can advertise their characteristics and configuration information. The Organizational Unique Identifier (OUI) for the Telecommunications Industry Association (TIA) is 00-12-BB.

- LLDP-MED Endpoint Device — any device that is on an IEEE 802 LAN network edge, can communicate using IP, and uses the LLDP-MED framework.
- LLDP-MED Network Connectivity Device — any device that provides access to an IEEE 802 LAN to an LLDP-MED endpoint device, and supports IEEE 802.1AB (LLDP) and TIA-1057 (LLDP-MED). The Dell Networking system is an LLDP-MED network connectivity device.

Regarding connected endpoint devices, LLDP-MED provides network connectivity devices with the ability to:

- manage inventory
- manage Power over Ethernet (POE)
- identify physical location
- identify network policy

advertise med guest-voice

To advertise a separate limited voice service for a guest user with their own IP telephony handset or other appliances that support interactive voice services, configure the system.

C9000 Series

Syntax

```
advertise med guest-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}
```

To return to the default, use the `no advertise med guest-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters

<i>vlan-id</i>	Enter the VLAN ID. The range is from 1 to 4094.
<i>layer2_priority</i>	Enter the Layer 2 priority. The range is from 0 to 7.
<i>DSCP_value</i>	Enter the DSCP value. The range is from 0 to 63.
<i>priority-tagged number</i>	Enter the keywords <code>priority-tagged</code> followed the Layer 2 priority. The range is from 0 to 7.

Defaults

Unconfigured.

Command Modes

CONFIGURATION (conf-lldp)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series and E-Series.

Related Commands

[protocol lldp \(Configuration\)](#) — enables LLDP globally.

[debug lldp interface](#) — debugs LLDP.

[show lldp neighbors](#) — displays the LLDP neighbors.

[show running-config lldp](#) — displays the LLDP running configuration.

advertise med guest-voice-signaling

To advertise a separate limited voice service for a guest user when the guest voice control packets use a separate network policy than the voice data, configure the system.

C9000 Series

Syntax

```
advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}
```

To return to the default, use the `no advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters

<i>vlan-id</i>	Enter the VLAN ID. The range is from 1 to 4094.
<i>layer2_priority</i>	Enter the Layer 2 priority. The range is from 0 to 7.
<i>DSCP_value</i>	Enter the DSCP value. The range is from 0 to 63.
<i>priority-tagged number</i>	Enter the keywords <code>priority-tagged</code> then the Layer 2 priority. The range is from 0 to 7.

Defaults

unconfigured.

Command Modes

CONFIGURATION (conf-lldp)

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series and E-Series.

Related Commands

[debug lldp interface](#) — debugs LLDP.

[show lldp neighbors](#) — displays the LLDP neighbors.

[show running-config lldp](#) — displays the LLDP running configuration.

advertise med location-identification

To advertise a location identifier, configure the system.

C9000 Series

Syntax

```
advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value}
```

To return to the default, use the `no advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value}` command.

Parameters

coordinate-based value	Enter the keywords <code>coordinate-based</code> then the coordinated based location in hexadecimal value of 16 bytes.
civic-based value	Enter the keywords <code>civic-based</code> then the civic based location in hexadecimal format. The range is from 6 to 255 bytes.
ecs-elin value	Enter the keywords <code>ecs-elin</code> then the Emergency Call Service (ecs) Emergency Location Identification Number (elin) numeric location string. The range is from 10 to 25 characters.

Defaults unconfigured.

Command Modes CONFIGURATION (conf-lldp)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the S-Series.
7.6.1.0	Introduced on the C-Series and E-Series.

Usage Information

- ECS — Emergency call service such as defined by TIA or the national emergency numbering association (NENA)
- ELIN — Emergency location identification number, a valid North America Numbering Plan format telephone number supplied for ECS purposes.

Related Commands

[debug lldp interface](#) — debugs LLDP.

[show lldp neighbors](#) — displays the LLDP neighbors.

[show running-config lldp](#) — displays the LLDP running configuration.

advertise med power-via-mdi

Configure the system to advertise the IEEE 802.1ab extended power via MDI TLV.

C9000 Series

Syntax	<pre>[no] advertise med power-via-mdi</pre> To return to the default, use the <code>no advertise med power-via-mdi</code> command.																
Defaults	unconfigured.																
Command Modes	• LLDP CONFIGURATION (<code>conf-lldp</code>) • INTERFACE LLDP CONFIGURATION (<code>conf-if-interface-lldp</code>)																
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr><tr><td>8.3.7.0</td><td>Introduced on the S4810.</td></tr><tr><td>7.7.1.0</td><td>Introduced on the S-Series.</td></tr><tr><td>7.6.1.0</td><td>Introduced on the C-Series.</td></tr></tbody></table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	7.7.1.0	Introduced on the S-Series.	7.6.1.0	Introduced on the C-Series.
Version	Description																
9.9(0.0)	Introduced on the C9010.																
9.2(1.0)	Introduced on the Z9500.																
8.3.19.0	Introduced on the S4820T.																
8.3.11.1	Introduced on the Z9000.																
8.3.7.0	Introduced on the S4810.																
7.7.1.0	Introduced on the S-Series.																
7.6.1.0	Introduced on the C-Series.																
Usage Information	Advertise extended power via MDI TLVs to all ports that are connected to the 802.1ab powered endpoint devices. When the <code>advertise med power-via-mdi</code> command is enabled in CONFIGURATION mode, advertisement is enabled for all the interfaces in a system. To enable advertisement for a specific interface, configure the command in INTERFACE configuration mode. Port extender (PE) processes and advertises LLDP power-via-MDI TLVs when the LLDP advertisement of the TLV is enabled on the PE in class power management mode. Incoming LLDP messages are processed only when the PE is in class power management mode.																
Related Commands	debug lldp interface — debugs LLDP. show lldp neighbors — displays the LLDP neighbors. show running-config lldp — displays the LLDP running configuration.																

advertise med softphone-voice

To advertise softphone to enable IP telephony on a computer so that the computer can be used as a phone, configure the system.

C9000 Series

Syntax	<pre>advertise med softphone-voice {vlan-id layer2_priority DSCP_value} {priority-tagged number}</pre> To return to the default, use the <code>no advertise med softphone-voice {vlan-id layer2_priority DSCP_value} {priority-tagged number}</code> command.

Parameters	<i>vlan-id</i>	Enter the VLAN ID. The range is from 1 to 4094.																
	<i>layer2_priority</i>	Enter the Layer 2 priority (C-Series and E-Series only). The range is from 0 to 7.																
	<i>DSCP_value</i>	Enter the DSCP value (C-Series and E-Series only). The range is from 0 to 63.																
	<i>priority-tagged number</i>	Enter the keywords <code>priority-tagged</code> then the Layer 2 priority. The range is from 0 to 7.

advertise med video-conferencing

To advertise dedicated video conferencing and other similar appliances that support real-time interactive video, configure the system.

C9000 Series

Syntax

```
advertise med video-conferencing {vlan-id layer2_priority DSCP_value} |  
{priority-tagged number}
```

To return to the default, use the `no advertise med video-conferencing {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters

<i>vlan-id</i>	Enter the VLAN ID. The range is from 1 to 4094.
<i>layer2_priority</i>	Enter the Layer 2 priority (C-Series and E-Series only). The range is from 0 to 7.
<i>DSCP_value</i>	Enter the DSCP value (C-Series and E-Series only). The range is from 0 to 63.
<i>priority-tagged number</i>	Enter the keywords <code>priority-tagged</code> then the Layer 2 priority. The range is from 0 to 7.

Defaults

unconfigured.

[show lldp neighbors](#) — displays the LLDP neighbors.

[show running-config lldp](#) — displays the LLDP running configuration.

advertise med voice

To advertise a dedicated IP telephony handset or other appliances supporting interactive voice services, configure the system.

C9000 Series

Syntax `advertise med voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}`

To return to the default, use the `no advertise med voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters

<i>vlan-id</i>	Enter the VLAN ID. The range is from 1 to 4094.
<i>layer2_priority</i>	Enter the Layer 2 priority (C-Series and E-Series only). The range is from 0 to 7.
<i>DSCP_value</i>	Enter the DSCP value (C-Series and E-Series only). The range is from 0 to 63.
<i>priority-tagged number</i>	Enter the keywords <code>priority-tagged</code> then the Layer 2 priority. The range is from 0 to 7.

Defaults unconfigured.

Command Modes CONFIGURATION (conf-lldp)

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

advertise med voice-signaling

To advertise when voice control packets use a separate network policy than voice data, configure the system.

C9000 Series

Syntax `advertise med voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}`

To return to the default, use the `no advertise med voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

Parameters

<i>vlan-id</i>	Enter the VLAN ID. The range is from 1 to 4094.

<i>layer2_priority</i>	Enter the Layer 2 priority (C-Series and E-Series only). The range is from 0 to 7.
<i>DSCP_value</i>	Enter the DSCP value (C-Series and E-Series only). The range is from 0 to 63.
<i>priority-tagged number</i>	Enter the keywords <i>priority-tagged</i> then the Layer 2 priority. The range is from 0 to 7.

Defaults unconfigured.

Multicast

The multicast commands are supported by Dell Networking operating system.

This chapter contains the following sections:

- [IPv4 Multicast Commands](#)

 **NOTE:** Dell Networking OS supports Multicast routing only on default VRFs .

Topics:

- [IPv4 Multicast Commands](#)
- [IPv6 Multicast Commands](#)

IPv4 Multicast Commands

The following section contains the IPv4 multicast commands.

clear ip mroute

Clear learned multicast routes on the multicast forwarding table. To clear the protocol-independent multicast (PIM) tree information base, use the `clear ip pim tib` command.

C9000 Series

Syntax	<code>clear ip mroute {<i>group-address</i> [<i>source-address</i>] * snooping}</code>	
Parameters	<i>group-address</i>	Enter the multicast group address and source address (if desired), in dotted decimal format, to clear information on a specific group.
	[<i>source-address</i>]	
	*	Enter * to clear all multicast routes.
	snooping	Enter the keyword <code>snooping</code> to delete multicast snooping route table entries.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2.(0.0)	Added support for keyword <code>snooping</code> on the Z9000, S4810, and S4820T.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced on the C-Series.
E-Series legacy command	

Related
Commands

`show ip pim tib` — shows the PIM tree information base.

mtrace

Trace a multicast route from the source to the receiver.

Syntax

mtrace [vrf vrf-name] {source-address/hostname} [destination-address/hostname] [group-address/hostname]

Parameters

vrf vrf-name

Enter the keyword `vrf` followed by the name of the VRF. If VRF name is not mentioned, the default VRF will be used. Mtrace is not supported for management VRF.

source-address/hostname

Enter the source IP address in dotted decimal format (A.B.C.D). This is a unicast address of the beginning of the path to be traced.

destination-address/hostname

Enter the destination (receiver) IP address in dotted decimal format (A.B.C.D). If omitted, the mtrace starts from the system at which the command is typed.

group-address/hostname

Enter the multicast group address in dotted decimal format (A.B.C.D). If group address is not given then software shall invokes a weak mtrace. A weak mtrace is one that follows the RPF path to the source, regardless of whether any router along the path has multicast routing table state

Command Modes

EXEC Privilege

Command History

Version

Description

9.11.0.0

Re-introduced the mtrace command on the Dell Networking OS.

7.5.1.0

Expanded to support originator.

7.4.1.0

Expanded to support the intermediate (transit) router.

Usage Information

Mtrace is an IGMP based protocol that provides a multicast trace route facility and is implemented according to the IETF draft “A *trace route* facility for IP Multicast” (draft-fenner-traceroute-ipm-01.txt). Dell Networking OS supports the Mtrace client and transit functionality.

As an Mtrace client, Dell Networking OS transmits Mtrace queries, receives, parses, and prints out the details in the response packet received.

A transit or intermediate router, forwards mtrace requests to the RPF neighbor after appending its response block to the packet. In case it is the first hop router, it sends a response.

As an Mtrace transit or intermediate router, Dell Networking OS returns the response to Mtrace queries. After receiving the Mtrace request, Dell Networking OS computes the RPF neighbor for the source, fills in the request and the forwards the request to the RPF neighbor.

Example

```
R1>mtrace 103.103.103.3 1.1.1.1 226.0.0.3
Type Ctrl-C to abort.

Querying reverse path for source 103.103.103.3 to destination 1.1.1.1
via group 226.0.0.3
From source (?) to destination (?)

-----
|Hop|      OIF IP      |Proto| Forwarding Code |Source Network/Mask|
-----
  0  1.1.1.1          -->   Destination
 -1  1.1.1.1          PIM   Reached RP/Core   103.103.103.0/24
 -2  101.101.101.102  PIM   -                  103.103.103.0/24
 -3  2.2.2.1          PIM   -                  103.103.103.0/24
 -4  103.103.103.3    -->   Source
-----
```

The mtrace command traverses the path of the response data block in the reverse direction of the multicast data traffic. The mtrace command traverses the reverse path to the source from the destination. As a result, the tabular output of the mtrace command displays the destination details in the first row, followed by the RPF router details along the path in the consequent rows, and finally the source details in the last row. The tabular output contains the following columns:

- Hop — a hop number(counted negatively to indicate reverse-path)
- OIF IP — outgoing interface address
- Proto — multicast routing protocol
- Forwarding code — error code as present in the response blocks
- Source Network/Mask — source mask

ip mroute

Assign a static mroute.

C9000 Series

Syntax

```
ip mroute destination mask {ip-address | null 0| {{bgp| ospf} process-id |
isis | rip | static} {ip-address | tag | null 0}} [distance]
```

To delete a specific static mroute, use the `no ip mroute destination mask {ip-address | null 0| {{bgp| ospf} process-id | isis | rip | static} {ip-address | tag | null 0}} [distance]` command.

To delete all mroutes matching a certain mroute, use the `no ip mroute destination mask` command.

Parameters

destination	Enter the IP address in dotted decimal format of the destination device.
mask	Enter the mask in slash prefix formation (/x) or in dotted decimal format.
null 0	(OPTIONAL) Enter the keyword <code>null</code> then zero (0).
[protocol [process-id tag] ip-address]	(OPTIONAL) Enter one of the routing protocols: • Enter the BGP as-number then the IP address in dotted decimal format of the reverse path forwarding (RPF) neighbor. The range is from 1 to 65535. • Enter the OSPF process identification number then the IP address in dotted decimal format of the RPF neighbor. the range is from 1 to 65535. • Enter the IS-IS alphanumeric tag string then the IP address in dotted decimal format of the RPF neighbor. • Enter the RIP IP address in dotted decimal format of the RPF neighbor.
static ip-address	(OPTIONAL) Enter the Static IP address in dotted decimal format of the RPF neighbor.
ip-address	(OPTIONAL) Enter the IP address in dotted decimal format of the RPF neighbor.
distance	(OPTIONAL) Enter a number as the distance metric assigned to the mroute. The range is from 0 to 255.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.0.2.0	Introduced on the S6000.

Version	Description
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
E-Series legacy command	

Related Commands [show ip mroute](#) — displays the routing table.

ip multicast-limit

To limit the number of multicast entries on the system, use this feature.

C9000 Series

Syntax	<code>ip multicast-limit [vrf vrf-name] limit</code>	
Parameters	<i>limit</i>	Enter the desired maximum number of multicast entries on the system. The range is from 1 to 16000.
Defaults	The default is 4000 .	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced on the C-Series.
7.6.1.0	Introduced on the E-Series.

Usage Information This feature allows you to limit the number of multicast entries on the system. This number is the total of all the multicast entries on all line cards in the system. On each line card, the multicast module only installs the maximum number of entries, depending on the configured CAM profile.

To store multicast routes, use the IN-L3-McastFib CAM partition. It is a separate hardware limit that exists per port-pipe. This hardware space limitation can supersede any software-configured limit. The opposite is also true, the CAM partition might not be exhausted at the time the system-wide route limit set by the `ip multicast-limit` command is reached.

Related Commands [show ip igmp groups](#) — shows the IGMP groups.

ip multicast-routing

Enable IP multicast forwarding.

C9000 Series

Syntax	<code>ip multicast-routing</code> To disable multicast forwarding, use the <code>no ip multicast-routing</code> command.												
Defaults	Disabled.												
Command Modes	CONFIGURATION												
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. Te 0/11,
```

show ip mroute

View the multicast routing table.

C9000 Series

Syntax

```
show ip mroute [static | group-address [source-address] | count | snooping
[vlan vlan-id] [group-address [source-address]] | summary | vlt [group-
address [source-address] | count]
```

Parameters

static	(OPTIONAL) Enter the keyword <code>static</code> to view static multicast routes.
group-address [source-address]	(OPTIONAL) Enter the multicast group-address to view only routes associated with that group. Enter the source-address to view routes with that group-address and source-address.
count	(OPTIONAL) Enter the keyword <code>count</code> to view the number of multicast routes and packets.
snooping [vlan vlan-id] [group-address [source-address]]	Enter the keyword <code>snooping</code> to display information on the multicast routes PIM-SM snooping discovers. Enter a VLAN ID to limit the information displayed to the multicast routes PIM-SM snooping discovers on a specified VLAN. The VLAN ID range is from 1 to 4094. Enter a multicast group address and, optionally, a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes PIM-SM snooping discovers for a specified multicast group and source.
summary	(OPTIONAL) Enter the keyword <code>summary</code> to view a summary of all routes.

vlt (OPTIONAL) Enter the keyword `vlt` to view multicast routes with a spanned incoming interface. Enter a multicast group address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes for a specified multicast group and optionally a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed for a specified multicast source. Enter the keyword `count` to display the total number of multicast routes with the spanned IIF.

- EXEC
 - EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.)	Introduced on the C9010.
9.0.2.0	Introduced on the S6000.
9.2.(0.0)	Added support for keyword <code>vlt</code> to the Z9000, S4810, and S4820T.
8.4.1.1	Support for the keyword <code>snooping</code> and the optional <code>vlan vlan-id</code> , <code>group-address</code> , and <code>source-address</code> parameters were added on E-Series ExaScale.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.

E-Series legacy command

Example (Static)

```
Dell#show ip mroute static

Mroute: 23.23.23.0/24, interface: Lo 2
Protocol: static, distance: 0, route-map: none, last change: 00:00:23
```

Example (Snooping)

```
Dell#show ip mroute snooping

IPv4 Multicast Snooping Table

(*, 224.0.0.0), uptime 17:46:23
  Incoming vlan: Vlan 2
  Outgoing interface list:
    GigabitEthernet 4/13

(*, 225.1.2.1), uptime 00:04:16
  Incoming vlan: Vlan 2
  Outgoing interface list:
    GigabitEthernet 4/11
    GigabitEthernet 4/13

(165.87.1.7, 225.1.2.1), uptime 00:03:17
  Incoming vlan: Vlan 2
  Outgoing interface list:
    GigabitEthernet 4/11
    GigabitEthernet 4/13
    GigabitEthernet 4/20
```

Example (VLT)

```
Dell#show ip mroute vlt
IP Multicast Routing Table
Flags: S - Synced
```

```
(*, 225.1.1.1), uptime 00:39:33 flags: S
Incoming interface: Vlan 10
Spanned outgoing interface list:
  Vlan 20 (S)
  Vlan 30

(50.1.1.2, 225.1.1.1), uptime 00:39:33 flags: S
Incoming interface: Vlan 10
Spanned outgoing interface list:
  Vlan 20 (S)
```

Usage Information

The following describes the `show ip mroute` command shown in the following example.

Field	Description
(S, G)	Displays the forwarding entry in the multicast route table.
uptime	Displays the amount of time the entry has been in the multicast forwarding table.
Incoming interface	Displays the reverse path forwarding (RPF) information towards the source for (S,G) entries and the RP for (*,G) entries.
Outgoing interface list:	Lists the interfaces that meet one of the following: • a directly connected member of the Group • statically configured member of the Group • received a (*,G) or (S,G) Join message

Example

show ip rpf

View reverse path forwarding.

C9000 Series

Syntax

```
show ip rpf
```

- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.)	Introduced on the C9010.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.

E-Series legacy command

Usage Information

Network administrators use static mroutes to control the reach-ability of the multicast sources. If a PIM-registered multicast source is reachable using static mroute as well as unicast route, the distance of each route is examined and the route with shorter distance is the one the PIM selects for reach-ability.

 **NOTE:** The default distance of mroutes is zero (0) and is CLI configurable on a per route basis.

Example

```
Dell#show ip rpf
RPF information for 10.10.10.9
  RPF interface: Gi 3/4
  RPF neighbor: 165.87.31.4
  RPF route/mask: 10.10.10.9/255.255.255.255
  RPF type: unicast
```

IPv6 Multicast Commands

The following section contains the IPv6 multicast commands.

clear ipv6 mroute

Clear learned multicast routes on the multicast forwarding table.

Syntax `clear ipv6 mroute [vrf vrf-name] {group-address [source-address] | *}`

Parameters

vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to configure this setting on that VRF.  NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.
group-address [source-address]	Enter the multicast group address and source address (if desired), in dotted decimal format, to clear information on a specific group.
*	Enter <code>*</code> to clear all multicast routes.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.11.3.0	Introduced on the C9000, S3048-ON, S3100, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON and Z9100-ON.

Related Commands

- `show ip pim tib` — show the PIM tree information base.

ipv6 multicast-routing

Enables IPv6 multicast forwarding.

Syntax `ipv6 multicast-routing [vrf vrf-name]`

To disable multicast forwarding, use the `no ipv6 multicast-routing [vrf vrf-name]` command.

Defaults Disabled.

Parameters

vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to enable IP multicast forwarding on that VRF.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

9.11.3.0 Introduced on the C9000, S3048-ON, S3100, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON and Z9100-ON.

Usage Information

After you enable multicast, you can enable IGMP and PIM on an interface. In INTERFACE mode, enter the `ip pim sparse-mode` command to enable IGMP and PIM on the interface.

Related Commands

- [ip pim sparse-mode](#) — enable IGMP and PIM on an interface.

show ipv6 mroute

View the IPv6 multicast routing table.

Syntax

```
show ipv6 mroute [vrf vrf-name] [static | group-address [source-address] | count] | summary | vlt [group-address [source-address] | count]
```

Parameters

- vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to configure this setting on that VRF.
 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.
- static** (OPTIONAL) Enter the keyword `static` to view static multicast routes.
- group-address [source-address]** (OPTIONAL) Enter the multicast group-address to view only routes associated with that group. Enter the source-address to view routes with that group-address and source-address.
- count** (OPTIONAL) Enter the keyword `count` to view the number of multicast routes and packets.
- summary** (OPTIONAL) Enter the keyword `summary` to view a summary of all routes.
- vlt** (OPTIONAL) Enter the keyword `vlt` to view multicast routes with a spanned incoming interface. Enter a multicast group address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes for a specified multicast group and optionally a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed for a specified multicast source. Enter the keyword `count` to display the total number of multicast routes with the spanned IIF.

- Command Modes**
- EXEC
 - EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

9.11.3.0 Introduced on the C9000, S3048-ON, S3100, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON and Z9100-ON.

Example

```
Dell# show ipv6 mroute

IP Multicast Routing Table

(*, ff0e:225:0:1::1), uptime 18:01:56
  Incoming interface: Null
  Outgoing interface list:
    Vlan 401
    Vlan 1001

(2001:120:3:1::11, ff0e:225:0:1::1), uptime 18:02:03
  Incoming interface: Vlan 401
  Outgoing interface list:
    Vlan 1001

(2001:130:3:1::11, ff0e:225:0:1::1), uptime 18:01:17
```

```

Incoming interface: Vlan 1001
Outgoing interface list:
    Vlan 401

(2001:140:3:1::11, ff0e:225:0:1::1), uptime 18:01:13
Incoming interface: Vlan 1001
Outgoing interface list:
    Vlan 401

Dell#

```

show ipv6 multicast-cam

Display the content addressable memory (CAM) size and the portions allocated for IP multicast traffic.

Syntax `show ipv6 multicast-cam [linecard slot-id | port-set port-pipe | stack-unit unit-id]`

Parameters

- linecard *slot-id*** Enter the keyword `linecard` with a slot id to select the line card for which to gather information. The range of slot IDs is from 0 to 2.
- port-set *port-pipe*** Enter the keyword `port-set` with a port-pipe number to select the port pipe for which to gather information. The range of port pipes is from 0 to 3.
- stack-unit *unit-id*** Enter the keyword `stack-unit` with a unit-id number to select the stack unit for which to gather information.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

9.11.3.0 Introduced on the C9000, S3048-ON, S3100, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON and Z9100-ON.

Example

```

Dell# show ipv6 multicast-cam stack-unit 1 port-set 0

Group Address   : ff0e::228:1:1
Source Address  : 400::2
VRF             : 1
VlanId          : 4095
IPMC            : 609
L2 Ports       : -
L3 Ports       : Te  0/10

```

show ipv6 rpf

View reverse path forwarding.

Syntax `show ipv6 rpf`

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

Version**Description****9.11.3.0**

Introduced on the C9000, S3048-ON, S3100, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON and Z9100-ON.

**Usage
Information**

Network administrators use static mroutes to control the reach-ability of the multicast sources. If a PIM-registered multicast source is reachable using static mroute as well as unicast route, the distance of each route is examined and the route with shorter distance is the one the PIM selects for reach-ability.

 **NOTE:** The default distance of mroutes is zero (0) and is CLI configurable on a per route basis.

Example

Multicast Listener Discovery Protocol

The Multicast Listener Discovery (MLD) protocol is used by IPv6 routers to discover multicast listeners on a directly attached link.

Similar to the Internet Group Management Protocol (IGMP), which handles multicast group memberships in IPv4 networks, MLD is used for multicast management on IPv6 networks.

Topics:

- [clear ipv6 mld groups](#)
- [debug ipv6 mld](#)

- [ipv6 mld version](#)
- [show ipv6 mld groups](#)
- [show ipv6 mld interface](#)
- [MLD Snooping](#)

clear ipv6 mld groups

Clear entries from the group cache table.

Syntax	<code>clear ipv6 mld [vrf vrf-name] groups [interface group-address]</code>	
Parameters	vrf vrf-name	(Optional) Enter the keyword <code>vrf</code> followed by the name of the VRF.
	interface	Enter the following keywords and slot/port or number information: • For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> followed by the slot/port information. • For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a VLAN, enter the keyword <code>vlan</code> followed by a number from 1 to 4094.
	group-address	(OPTIONAL) Enter the group address in the following format: <code>x:x:x:x::x</code> . The <code>::</code> notation specifies successive hexadecimal fields of zero.
Defaults	None.	
Command Modes	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.11(3.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

debug ipv6 mld

Enable debugging on IPv6 MLD packets.

Syntax `debug ipv6 mld [vrf vrf-name] {group-address | interface}`
To turn off debugging, use the `no debug ipv6 mld {group-address | interface}` command.

Parameters

vrf vrf-name	(Optional) Enter the keyword <code>vrf</code> followed by the name of the VRF.
group-address	(OPTIONAL) Enter the multicast group address in the x:x:x:x format. The :: notation specifies successive hexadecimal fields of zero.
interface	Enter the following keywords and slot/port or number information: - For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> followed by the slot/port information. - For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> followed by a number from 1 to 4094.

Defaults Disabled.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.11(3.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

ipv6 mld explicit-tracking

Enable MLD explicit tracking receivers.

Syntax `ipv6 mld explicit-tracking`
To disable explicit tracking, use the `no ipv6 mld explicit-tracking` command.

Defaults Disabled.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.11(3.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

ipv6 mld last-member-query-interval

Change the MAX Response Time inserted into the Group-Specific Queries sent in response to a Leave Group messages. This interval is also the interval between Group-Specific Query messages.

Syntax `ipv6 mld last-member-query-interval {milliseconds}`

To return to the default, use the `no ipv6 mld last-member-query-interval {milliseconds}` command.

Parameters	<i>milliseconds</i>	Enter the last member query interval in milliseconds. The range is from 100 to 65535.
Defaults	1000 milliseconds.	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.11(3.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

ipv6 mld query-interval

Change the transmission frequency of the MLD host.

Syntax	<code>ipv6 mld query-interval [seconds]</code> To return to the default interval, use the <code>no ipv6 mld query-interval</code> command.	
Parameters	<i>seconds</i>	Enter the interval in seconds. The range is from 1 to 18000.
Defaults	60 seconds.	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.11(3.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

ipv6 mld query-max-resp-time

Set the maximum query response time advertised in the general queries.

Syntax	<code>ipv6 mld query-max-resp-time {seconds}</code> To return to the default, use the <code>no ipv6 mld query-max-resp-time</code> command.	
Parameters	<i>seconds</i>	Enter the interval in seconds. The range is from 1 to 25.
Defaults	10 seconds.	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.11(3.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

ipv6 mld version

Configure the MLD version on the system.

Syntax `ipv6 mld version {1 | 2}`

Defaults MLD version 2

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.14(1.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

Usage Information The `ipv6 mld version` command is applicable for MLD snooping-enabled interfaces.

Example The following is a sample configuration wherein MLD version 1 is selected on the system.

```
interface Vlan 61
 ip vrf forwarding red
 ipv6 address 61::9/64
 ipv6 ospf 2 area 0
 untagged TenGigabitEthernet 2/18
 ipv6 pim sparse-mode
 ipv6 mld version 1
 no shutdown
```

show ipv6 mld groups

View the configured MDL groups.

Syntax `show ipv6 mld [vrf vrf-name] groups [detail] [group-address] [interface interface [detail]]`

Parameters

vrf vrf-name	(Optional) Enter the keyword <code>vrf</code> followed by the name of the VRF.
group-address	Enter the group address for which you want to display information.
interface interface	Enter the following keywords and slot/port or number information: - For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> followed by a number from 1 to 4094.
detail	View detailed group information.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.11(3.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

Example

```
Dell#show ipv6 mld groups
Total Number of Groups: 1
MLD Connected Group Membership
Group Address      Interface      Mode      Uptime      Expires      Last
Reporter
Ff08::12           Vlan 10       MLDv2     00:00:12    00:02:05    1::2
```

show ipv6 mld interface

View the configured MLD interfaces.

Syntax

```
show ipv6 mld [vrf vrf-name] interface [interface]
```

Parameters

- vrf vrf-name** (Optional) Enter the keyword `vrf` followed by the name of the VRF.
- interface**
interface Enter the following keywords and slot/port or number information:
- For a Port Channel interface, enter the keywords `port-channel` then a number.
 - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
 - For a VLAN, enter the keyword `vlan` followed by a number from 1 to 4094.

Command Modes EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version

Description

9.11(3.0)

Introduced on the S3048-ON, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

Example

```
Dell#show ipv6 mld interface vlan 20
Vlan 20 is up, line protocol is up
Inbound MLD access group is not set
Internet address is fe80::92b1:1cff:fef4:9b63/64
MLD is enabled on interface
MLD query interval is 60 seconds
MLD querier timeout is 125 seconds
MLD max query response time is 10 seconds
MLD last member query response interval is 1000 ms
MLD immediate-leave is enabled for all groups
MLD activity: 0 joins
MLD querying router is 35::1 (this system)
MLD version is 2
```

MLD Snooping

MLD snooping allows the switch to examine the MLD packets and forwards the decision based on their content. You can configure MLD snooping in subnets that receive MLD queries from either MLD or the MLD snooping querier. MLD snooping limits the IPv6 multicast traffic at Layer 2 by configuring Layer 2 LAN ports and dynamically forwards the IPv6 multicast traffic to the ports that want to receive it. Hosts join IPv6 multicast groups either by sending an unsolicited MLD report or by sending an MLD report in response to a general query from an IPv6 multicast router (the switch forwards general queries from IPv6 multicast routers to all the ports in a VLAN). The switch snoops these reports and in response to a snooped MLD report, the switch creates an entry in its forwarding table for the VLAN on which the report was received. When the other hosts that are interested in this multicast traffic send MLD reports, the switch snoops their report and adds them to the existing forwarding table entry. The switch creates only one entry per VLAN in the forwarding table for each multicast group, for which it snoops an MLD report.

clear ipv6 mld snooping groups

Clear entries from the group cache table.

Syntax	<code>clear ipv6 mld snooping groups [interface group-address]</code>	
Parameters	<i>interface</i>	Enter the following keywords and slot/port or number information: - For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> followed by the slot/port information. - For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> followed by a number from 1 to 4094.
	<i>group-address</i>	(OPTIONAL) Enter the group address in the following format: <code>x::x::x::x</code> . The <code>::</code> notation specifies successive hexadecimal fields of zero.
Defaults	None.	
Command Modes	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.14(0.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

debug ipv6 mld snooping

Enable debugging on IPv6 MLD snooping packets.

Syntax	<code>debug ipv6 mld {group-address interface}</code> To turn off debugging, use the <code>no debug ipv6 mld {group-address interface}</code> command.	
Parameters	<i>group-address</i>	(OPTIONAL) Enter the multicast group address in the <code>x::x::x::x</code> format. The <code>::</code> notation specifies successive hexadecimal fields of zero.
	<i>interface</i>	Enter the following keywords and slot/port or number information: - For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> followed by the slot/port information. - For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> followed by a number from 1 to 4094.
Defaults	Disabled.	
Command Modes	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.14(0.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

ipv6 mld snooping

Enable MLD snooping on a VLAN.

Syntax `ipv6 mld snooping`

To disable MLD snooping, use the `no ipv6 mld snooping` command.

Defaults Enabled on all VLAN interfaces.

Command Modes INTERFACE VLAN

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description

9.14(0.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

ipv6 mld snooping enable

Enable MLD snooping on the switch globally.

Syntax `ipv6 mld snooping enable`

To disable MLD snooping, use the `no ipv6 mld snooping enable` command.

Defaults Enabled on all VLAN interfaces.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description

9.14(0.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

ipv6 mld snooping explicit-tracking

Enable explicit MLD snooping tracking on an interface.

Syntax `ipv6 mld snooping explicit-tracking`

To disable MLD snooping explicit tracking, use the `no ipv6 mld snooping explicit-tracking` command.

Defaults Disabled.

Command Modes INTERFACE VLAN

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description

9.14(0.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

ipv6 mld snooping mrouter

Configure a Layer 2 port as a multicast router port.

Syntax	<code>ipv6 mld snooping mrouter interface {interface <i>interface</i>}</code>	
Parameters	interface	Enter the keyword <code>interface</code> to indicate the next-hop interface to the multicast router.
	<i>interface</i>	Enter one of the following keywords and the interface information: • For a null interface, enter the keyword <code>null</code> then the slot/port information. The Null interface number is 0. • For the Management interface on the stack-unit, enter the keyword <code>ManagementEthernet</code> then the slot/port information. • For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094. • For a port channel interface, enter the keywords <code>port-channel</code> then a number.
Defaults	None.	
Command Modes	INTERFACE VLAN	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.14(0.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

ipv6 mld snooping querier

Enable the MLD querier processing for the VLAN interface.

Syntax	<code>ipv6 mld snooping querier</code> To disable the querier feature, use the <code>no ipv6 mld snooping querier</code> command.	
Defaults	Disabled	
Command Modes	INTERFACE VLAN	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.14(0.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

show ipv6 mld snooping groups

Display the IPv6 MLD snooping group information.

Syntax	<code>show ipv6 mld snooping groups [group address] [summary] [interface interface [detail]]</code>

Parameters	<i>group-address</i>	(Optional) Enter the multicast group addresss in the X:X:X:X format. The :: notation specifies successive hexadecimal fields of zero.
	summary	(OPTIONAL) Enter the keyword <code>summary</code> to display a summary of groups.
	interface	Enter the following keywords and slot/port or number information:
	<i>interface</i>	- For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> followed by a number from 1 to 4094.
	detail	View detailed group information.
Defaults	None.	
Command Modes	EXEC	
	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.14(0.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.
Example	<pre>Dell EMC#show ipv6 mld snooping groups Total Number of Groups: 1 Channel ::/ff0e::225:1:1:1, interface Vlan 10 Uptime 11:24:49 , Last join time 00:00:15 Expires in 00:01:54 Ports : Po 1 Dell EMC#</pre>	

show ipv6 mld snooping interface

View the configured MLD snooping interfaces.

Syntax	<code>show ipv6 mld snooping interface [<i>interface</i>]</code>	
Parameters	interface	Enter the following keywords and slot/port or number information:
	<i>interface</i>	- For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> followed by a number from 1 to 4094.
Command Modes	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.14(0.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.
Example	<pre>DellEMC#show ipv6 mld snooping interface vlan 10 Vlan 10 is up, line protocol is up Interface address is fe80::3617:ebff:fe30:2482/64</pre>	

```
MLD protocol processing disabled
Current MLD snooping version is 2
MLD snooping is enabled on this interface
MLD snooping querier is disabled and is currently inactive
MLD snooping last member query response interval is 1000 ms
MLD snooping explicit tracking is disabled
```

show ipv6 mld snooping mrouter

Display information on the MLD snooping router.

Syntax `show ipv6 mld snooping mrouter [vlan]`

Parameters **VLAN** (OPTIONAL) Enter the keyword `VLAN` then the VLAN number to display the information on that specific VLAN. The VLAN range is from 1 to 4094.

Defaults None.

Command Modes EXEC
EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.14(0.0)	Introduced on the S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON, S3100, and C9010.

Example

```
Dell#show ipv6 mld snooping mrouter
Interface Ports (* - Dynamic)
Vlan 2 Gi 1/18
Dell#
```

Multicast Source Discovery Protocol (MSDP)

Multicast source discovery protocol (MSDP) connects multiple PIM Sparse-Mode (PIM-SM) domains together.

MSDP peers connect using TCP port 639. Peers send keepalives every 60 seconds. A peer connection is reset after 75 seconds if no MSDP packets are received. MSDP connections are parallel with MBGP connections.

clear ip msdp peer

Reset the TCP connection to the peer and clear all the peer statistics.

C9000 Series

Syntax	<code>clear ip msdp peer {peer address}</code>	
Parameters	peer address	Enter the peer address in a dotted decimal format (A.B.C.D.)
Defaults	Not configured.	
Command Modes	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.

Version	Description
8.3.7.1	Introduced on the S4810.
6.2.1.1	Introduced

clear ip msdp sa-cache

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

C9000 Series

Syntax	<code>clear ip msdp sa-cache [group-address rejected-sa local]</code>	
Parameters	group-address	Enter the group IP address in dotted decimal format (A.B.C.D.).
	rejected-sa	Enter the keywords <code>rejected-sa</code> to clear the cache source-active entries that are rejected because the RPF check failed, an SA filter or limit is configured, the RP or MSDP peer is unreachable, or because of a format error.
	local	Enter the keyword <code>local</code> to clear out local PIM advertised entries. It applies the redistribute filter (if present) while adding the local PIM SA entries to the SA cache.
Defaults	Without any options, this command clears the entire source-active cache.	
Command Modes	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.
7.8.1.0	Added the <code>local</code> option.
7.7.1.0	Added the <code>rejected-sa</code> option.
6.2.1.1	Introduced

clear ip msdp statistic

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

C9000 Series

Syntax	<code>clear ip msdp sa-cache [group-address rejected-sa local]</code>

Parameters	<i>group-address</i>	Enter the group IP address in dotted decimal format (A.B.C.D.).																		
	<i>rejected-sa</i>	Enter the keyword <code>rejected-sa</code> to clear the cache source-active entries that are rejected because the RPF check failed, an SA filter or limit is configured, the RP or MSDP peer is unreachable, or because of a format error.																		
	<i>local</i>	Enter the keyword <code>local</code> to clear out local PIM advertised entries. It applies the redistribute filter (if present) while adding the local PIM SA entries to the SA cache.																		
Defaults	Without any options, this command clears the entire source-active cache.																			
Command Modes	EXEC Privilege

debug ip msdp

Turn on MSDP debugging.

C9000 Series

Syntax	<code>debug ip msdp {event <i>peer address</i> packet <i>peer address</i> pim}</code>	
	To turn debugging off, use the <code>no debug ip msdp {event <i>peer address</i> packet <i>peer address</i> pim}</code> command.	
Parameters	<i>event peer address</i>	Enter the keyword <code>event</code> then the peer address in a dotted decimal format (A.B.C.D.).
	<i>packet peer address</i>	Enter the keyword <code>packet</code> then the peer address in a dotted decimal format (A.B.C.D.).
	<i>pim</i>	Enter the keyword <code>pim</code> to debug advertisement from PIM.
Defaults	Not configured.	
Command Modes	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
6.2.1.1	Introduced

ip msdp cache-rejected-sa

Enable an MSDP cache for the rejected source-active entries.

C9000 Series

Syntax	<pre>ip msdp cache-rejected-sa {number}</pre> To clear the MSDP rejected source-active entries, use the <code>no ip msdp cache-rejected-sa {number}</code> command then the <code>ip msdp cache-rejected-sa {number}</code> command.															
Parameters	number	Enter the number of rejected SA entries to cache. The range is from 0 to 32766.														
Defaults	none															
Command Modes	CONFIGURATION															
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. 7.4.1.0	Introduced															
Related Commands	show ip msdp sa-cache rejected-sa															

ip msdp default-peer

Define a default peer from which to accept all source-active (SA) messages.

C9000 Series

Syntax	<code>ip msdp default-peer peer address [list name]</code>

Version	Description
6.2.1.1	Introduced

ip msdp mesh-group

To be a member of a mesh group, configure a peer.

C9000 Series

Syntax	<pre>ip msdp mesh-group {name} {peer address}</pre> To remove the peer from a mesh group, use the <code>no ip msdp mesh-group {name} {peer address}</code> command.															
Parameters	name Enter a string of up to 16 characters long for as the mesh group name. peer address Enter the peer address in a dotted decimal format (A.B.C.D.).															
Defaults	Not configured.															
Command Modes	CONFIGURATION															
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. Version	Description															
9.9(0.0)	Introduced on the C9010.															
9.5(0.1)	Introduced on the Z9500.															
8.3.19.0	Introduced on the S4820T.															
8.3.11.1	Introduced on the Z9000.															
8.3.7.0	Introduced on the S4810.															
6.2.1.1	Introduced															
Usage Information	An MSDP mesh group is a mechanism for reducing SA flooding, typically in an intra-domain setting. When some subset of a domain's MSDP speakers are fully meshed, they can be configured into a mesh-group. If member X of a mesh-group receives a SA message from an MSDP peer that is also a member of the mesh-group, member X accepts the SA message and forwards it to all of its peers that are not part of the mesh-group. However, member X cannot forward the SA message to other members of the mesh-group.															

ip msdp originator-id

Configure the MSDP Originator ID.

C9000 Series

Syntax	<pre>ip msdp originator-id {interface}</pre> To remove the originator-id, use the <code>no ip msdp originator-id {interface}</code> command.	
Parameters	interface Enter the following keywords and slot/port or number information:	

- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 4096.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
6.2.1.1	Introduced

ip msdp peer

Configure an MSDP peer.

C9000 Series

Syntax `ip msdp peer peer address [connect-source] [description] [sa-limit number]`

To remove the MSDP peer, use the `no ip msdp peer peer address [connect-source interface] [description name] [sa-limit number]` command.

Parameters	<i>peer address</i>	Enter the peer address in a dotted decimal format (A.B.C.D.).
	<i>connect-source interface</i>	Enter the keywords <code>connect-source</code> then one of the interfaces and slot/port or number information: • For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. • For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 4096. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.
	<i>description name</i>	(OPTIONAL) Enter the keyword <code>description</code> then a description name (maximum 80 characters) to designate a description for the MSDP peer.

sa-limit *number* (OPTIONAL) Enter the maximum number of SA entries in SA-cache. The range is from 1 to 500000. The default is **500000**.

Defaults As described in the *Parameters* section.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
7.5.1.0	Added option for SA upper limit and the <code>description</code> option.
6.2.1.1	Introduced

Usage Information The `connect-source` option is used to supply a source IP address for the TCP connection. When an interface is specified using the `connect-source` option, the primary configured address on the interface is used.

If the total number of SA messages received from the peer is already larger than the limit when this command is applied, those SA messages continue to be accepted. To enforce the limit in such situation, use the `clear ip msdp peer` command to reset the peer.

Related Commands

- [ip msdp sa-limit](#) — configures the MSDP SA Limit.
- [clear ip msdp peer](#) — clears the MSDP peer.
- [show ip msdp](#) — displays the MSDP information.

ip msdp redistribute

Filter local PIM SA entries in the SA cache. SAs which the ACL denies time out and are not refreshed. Until they time out, they continue to reside in the MSDP SA cache.

C9000 Series

Syntax `ip msdp redistribute [list acl-name]`

Parameters **list *acl-name*** Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked.

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced

Usage Information

Modifications to the ACL do not have an immediate effect on the sa-cache.

To apply the redistribute filter to entries already present in the SA cache, use the `clear ip msdp sa-cache local` command.

ip msdp sa-filter

Permit or deny MSDP source active (SA) messages based on multicast source and/or group from the specified peer.

C9000 Series

Syntax	<pre>ip msdp sa-filter {in out} <i>peer-address</i> list [access-list name]</pre> Remove this configuration using the <code>no ip msdp sa-filter {in out} <i>peer address</i> list [access-list name]</code> command.	
Parameters	in	Enter the keyword <code>in</code> to enable incoming SA filtering.
	out	Enter the keyword <code>out</code> to enable outgoing SA filtering.
	<i>peer-address</i>	Enter the peer address of the MSDP peer in a dotted decimal format (A.B.C.D.).
	<i>access-list name</i>	Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked.
Defaults	Not configured.	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Introduced on the E-Series.

ip msdp sa-limit

Configure the upper limit of source-active (SA) entries in SA-cache.

C9000 Series

Syntax	<code>ip msdp sa-limit <i>number</i></code> To return to the default, use the <code>no ip msdp sa-limit <i>number</i></code> command.															
Parameters	<i>number</i>	Enter the maximum number of SA entries in SA-cache. The range is from 0 to 40000.														
Defaults	50000															
Command Modes	CONFIGURATION															
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.5(0.1)</td><td>Introduced on the Z9500.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr><tr><td>8.3.7.0</td><td>Introduced on the S4810.</td></tr><tr><td>7.5.1.0</td><td>Introduced on the E-Series.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.5(0.1)	Introduced on the Z9500.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	7.5.1.0	Introduced on the E-Series.
Version	Description															
9.9(0.0)	Introduced on the C9010.															
9.5(0.1)	Introduced on the Z9500.															
8.3.19.0	Introduced on the S4820T.															
8.3.11.1	Introduced on the Z9000.															
8.3.7.0	Introduced on the S4810.															
7.5.1.0	Introduced on the E-Series.															
Usage Information	The system counts the SA messages originated by itself and those messages received from the MSDP peers. When the total SA messages reach this limit, the subsequent SA messages are dropped (even if they pass RPF checking and policy checking). If the total number of SA messages is already larger than the limit when this command is applied, those SA messages that are already in the system continue to be accepted. To enforce the limit in such situation, use the <code>clear ip msdp sa-cache</code> command.															
Related Commands	ip msdp peer — configures the MSDP peer. clear ip msdp peer — clears the MSDP peer. show ip msdp — displays the MSDP information															

ip msdp shutdown

Administratively shut down a configured MSDP peer.

C9000 Series

Syntax	<code>ip msdp shutdown {<i>peer address</i>}</code>	
Parameters	<i>peer address</i>	Enter the peer address in a dotted decimal format (A.B.C.D.).
Defaults	Not configured.	
Command Modes	CONFIGURATION	

Command History

6.2.1.1	Introduced

show ip msdp

Display the MSDP peer status, SA cache, or peer summary.

C9000 Series

Syntax

`show ip msdp {peer peer address | sa-cache | summary}`

Parameters

peer peer address	Enter the keyword <code>peer</code> then the peer address in a dotted decimal format (A.B.C.D.).

sa-cache Enter the keywords `sa-cache` to display the Source-Active cache.

summary Enter the keyword `summary` to display an MSDP peer summary.

Defaults Not configured.

Command Modes

Multiple Spanning Tree Protocol (MSTP)

Multiple spanning tree protocol (MSTP), as implemented by the Dell Networking operating system, conforms to IEEE 802.1s.

Topics:

- [debug spanning-tree mstp](#)
- [disable](#)
- [forward-delay](#)
- [hello-time](#)
- [max-age](#)
- [max-hops](#)
- [msti](#)
- [name](#)
- [protocol spanning-tree mstp](#)
- [revision](#)
- [show config](#)
- [show spanning-tree mst configuration](#)
- [show spanning-tree msti](#)

- [spanning-tree msti](#)
- [spanning-tree mstp edge-port](#)
- [tc-flush-standard](#)

debug spanning-tree mstp

Enable debugging of the multiple spanning tree protocol and view information on the protocol.

C9000 Series

Syntax	<code>debug spanning-tree mstp [all bpdu interface {in out} events]</code>	
Parameters	all	(OPTIONAL) Enter the keyword <code>all</code> to debug all spanning tree operations.
	bpdu interface {in out}	(OPTIONAL) Enter the keyword <code>bpdu</code> to debug bridge protocol data units (BPDU). (OPTIONAL) Enter the interface keyword along with the type slot/port of the interface you want displayed. Type slot/port options are the following: • For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. Optionally, enter an <code>in</code> or <code>out</code> parameter with the optional interface: • For Receive, enter the keyword <code>in</code>. • For Transmit, enter the keyword <code>out</code>.
	events	(OPTIONAL) Enter the keyword <code>events</code> to debug MSTP events.
Command Modes	EXEC Privilege	

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Example

```
Dell#debug spanning-tree mstp bpdu tengigabitethernet 2/0 ?
in Receive (in)
out Transmit (out)
```

disable

Globally disable the multiple spanning tree protocol on the switch.

C9000 Series

Syntax

`disable`

To enable MSTP, enter the `no disable` command.

Defaults

disabled.

Command Modes

MULTIPLE SPANNING TREE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced.

Related Commands

[protocol spanning-tree mstp](#) — enters MULTIPLE SPANNING TREE mode.

forward-delay

The amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.

C9000 Series

Syntax	forward-delay seconds To return to the default setting, use the no forward-delay command.																			
Parameters	seconds	Enter the number of seconds the interface waits in the Blocking State and the Learning State before transiting to the Forwarding State. The range is from 4 to 30. The default is 15 seconds.																		
Defaults	15 seconds																			
Command Modes	MULTIPLE SPANNING TREE																			
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide. 7.6.1.0	Introduced on the S-Series.																			
7.5.1.0	Introduced on the C-Series.																			
6.5.1.0	Introduced.																			
Related Commands	max-age — changes the wait time before MSTP refreshes protocol configuration information. hello-time — changes the time interval between bridge protocol data units (BPDUs).																			

hello-time

Set the time interval between generation of MSTB bridge protocol data units (BPDUs).

C9000 Series

Syntax	<code>hello-time seconds</code> To return to the default value, use the <code>no hello-time</code> command.	
Parameters	seconds	Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10. The default is 2 seconds .
Defaults	2 seconds	
Command Modes	MULTIPLE SPANNING TREE	

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced.

Related Commands

[forward-delay](#) — the amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.

[max-age](#) — changes the wait time before MSTP refreshes protocol configuration information.

max-age

To maintain configuration information before refreshing that information, set the time interval for the MSTB.

C9000 Series

Syntax

`max-age seconds`

To return to the default values, use the `no max-age` command.

Parameters

max-age Enter a number of seconds the system waits before refreshing configuration information. The range is from 6 to 40. The default is **20 seconds**.

Defaults

20 seconds

Command Modes

MULTIPLE SPANNING TREE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced.

Related Commands

[forward-delay](#) — the amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.

[hello-time](#) — changes the time interval between BPDUs.

max-hops

Configure the maximum hop count.

C9000 Series

Syntax

`max-hops number`

To return to the default values, use the `no max-hops` command.

Parameters

range

Enter a number for the maximum hop count. The range is from 1 to 40. The default is **20**.

Defaults

20 hops

Command Modes

MULTIPLE SPANNING TREE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced.

Usage Information

The `max-hops` command is a configuration command that applies to both the IST and all MST instances in the MSTP region. The BPDUs sent out by the root switch set the remaining-hops parameter to the configured value of max-hops. When a switch receives the BPDU, it decrements the received value of the remaining hops and uses the resulting value as remaining-hops in the BPDUs. If the remaining-hops reach zero, the switch discards the BPDU and ages out any information that it holds for the port.

msti

Configure multiple spanning tree instance, bridge priority, and one or multiple VLANs mapped to the MST instance.

C9000 Series

Syntax

`msti instance {vlan range | bridge-priority priority}`

To disable mapping or bridge priority, use the `no msti instance {vlan range | bridge-priority priority}` command.

Version	Description
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced.

Usage Information

For two MSTP switches to be within the same MSTP region, the switches must share the same region name (including matching case).

Related Commands

[msti](#) — maps the VLAN(s) to an MST instance.
[revision](#) — assigns the revision number to the MST configuration.

protocol spanning-tree mstp

To enable and configure the multiple spanning tree group, enter MULTIPLE SPANNING TREE mode.

C9000 Series

Syntax

`protocol spanning-tree mstp`

To disable the multiple spanning tree group, use the `no protocol spanning-tree mstp` command.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Usage Information

MSTP is not enabled when you enter MULTIPLE SPANNING TREE mode. To enable MSTP globally on the switch, enter the `no disable` command while in MULTIPLE SPANNING TREE mode.

For more information about the multiple spanning tree protocol, refer to the *Dell Networking OS Configuration Guide*.

Example

```
Dell(conf)#protocol spanning-tree mstp
Dell(config-mstp)#no disable
```

**Related
Commands**

[disable](#) — disables multiple spanning tree.

revision

The revision number for the multiple spanning tree configuration.

C9000 Series

Syntax

`revision range`

To return to the default values, use the `no revision` command.

Parameters

range

Enter the revision number for the MST configuration. The range is from 0 to 65535. The default is **0**.

Defaults

0

Command Modes

MULTIPLE SPANNING TREE

**Command
History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

**Usage
Information**

For two MSTP switches to be within the same MST region, the switches must share the same revision number.

**Related
Commands**

[msti](#) — maps the VLAN(s) to an MST instance.

[name](#) — assigns the region name to the MST region.

show config

View the current configuration for the mode. Only non-default values are shown.

C9000 Series

Syntax

`show config`

Command Modes

MULTIPLE SPANNING TREE

**Command
History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced on the E-Series.

Example

```
Dell(conf-mstp)#show config
!
protocol spanning-tree mstp
  no disable
  name CustomerSvc
  revision 2
  MSTI 10 VLAN 101-105
  max-hops 5
Dell(conf-mstp)#
```

show spanning-tree mst configuration

View the multiple spanning tree configuration.

C9000 Series

Syntax show spanning-tree mst configuration

Command Modes • EXEC
 • EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Usage Information Enable the multiple spanning tree protocol prior to using this command.

Example

```
Dell#show spanning-tree mst configuration
MST region name: CustomerSvc
Revision: 2
MSTI VID
 10 101-105
Dell#
```

show spanning-tree msti

View the multiple spanning tree instance.

C9000 Series

Syntax

```
show spanning-tree msti [instance-number [brief]] [guard]
```

Parameters

<i>instance-number</i>	(Optional) Enter the multiple spanning tree instance number. The range is from 0 to 63.
<i>brief</i>	(Optional) Enter the keyword <i>brief</i> to view a synopsis of the MST instance.
<i>guard</i>	(Optional) Enter the keyword <i>guard</i> to display the type of guard enabled on an MSTP interface and the current port state.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.4.2.1	Support for the optional keyword <i>guard</i> was added on the C-Series, S-Series, and E-Series TeraScale.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.4.1.0	Expanded to display the port error disable state (EDS) loopback BPDU inconsistency causes.

Usage

Information

Enable the multiple spanning tree protocol prior to using this command.

Example

```
Dell#show spanning-tree msti 10
MSTI 10 VLANs mapped 101-105

Bridge Identifier has priority 32768, Address 0001.e802.3506
Configured hello time 2, max age 20, forward delay 15, max hops 5
Current root has priority 16384, Address 0001.e800.0a5c
Number of topology changes 0, last change occurred 3058087

Port 82 (TenGigabitEthernet 2/0) is designated Forwarding
```

```
Port path cost 0, Port priority 128, Port Identifier 128.82
Designated root has priority 16384, address 0001.e800.0a:5c
Designated bridge has priority 32768, address 0001.e802.35:06
Designated port id is 128.82, designated path cost
Number of transitions to forwarding state 1
BPDU (Mrecords): sent 1109, received 0
The port is not in the portfast mode
```

```
Port 88 (TenGigabitEthernet 2/6) is root Forwarding
Port path cost 0, Port priority 128, Port Identifier 128.88
Designated root has priority 16384, address 0001.e800.0a:5c
Designated bridge has priority 16384, address 0001.e800.0a:5c
Designated port id is 128.88, designated path cost
Number of transitions to forwarding state 4
BPDU (Mrecords): sent 19, received 1103
The port is not in the portfast mode
```

```
Port 89 (TenGigabitEthernet 2/7) is alternate Discarding
Port path cost 0, Port priority 128, Port Identifier 128.89
Designated root has priority 16384, address 0001.e800.0a:5c
Designated bridge has priority 16384, address 0001.e800.0a:5c
Designated port id is 128.89, designated path cost
Number of transitions to forwarding state 3
BPDU (Mrecords): sent 7, received 1103
The port is not in the portfast mode
```

Example (EDS and LBK)

The bold line shows the loopback BPDU inconsistency (LBK_INC).

```
Dell#show spanning-tree msti 0 brief
MSTI 0 VLANs mapped 1-4094

Executing IEEE compatible Spanning Tree Protocol
Root ID Priority 32768, Address 0001.e801.6aa8
Root Bridge hello time 2, max age 20, forward delay 15, max hops 20
Bridge ID Priority 32768, Address 0001.e801.6aa8
We are the root of MSTI 0 (CIST)
Configured hello time 2, max age 20, forward delay 15, max hops 20
CIST regional root ID Priority 32768, Address 0001.e801.6aa8

Designated bridge has priority 32768, address 0001.e801.6aa8
Designated port id is 128.257, designated path cost 0
Number of transitions to forwarding state 1
```

```
BPDU (MRecords): sent 21, received 9
The port is not in the Edge port mode
```

Usage Information

The following describes the `show spanning-tree msti 5 guard` command shown in the following example.

Field	Description
Interface Name	MSTP interface.
Instance	MSTP instance.
Sts	Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut).
Guard Type	Type of STP guard configured (Root, Loop, or BPDU guard).

Example (Guard)

```
Dell#show spanning-tree msti 5 guard
Interface
Name      Instance  Sts Guard      type
-----
Te 0/1    5          INCON (Root) Rootguard
Te 0/2    5          FWD          Loopguard
Te 0/3    5          EDS (Shut)   Bpduguard
```

spanning-tree

Enable the multiple spanning tree protocol on the interface.

C9000 Series

Syntax

`spanning-tree`

To disable the multiple spanning tree protocol on the interface, use the `no spanning-tree` command.

Parameters

spanning-tree Enter the keywords `spanning-tree` to enable the MSTP on the interface.

Defaults

Enable.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.0	Introduced on the E-Series.

spanning-tree msti

Configure multiple spanning tree instance cost and priority for an interface.

C9000 Series

Syntax	<code>spanning-tree msti <i>instance</i> {cost <i>cost</i> priority <i>priority</i>}</code>	
Parameters	msti <i>instance</i>	Enter the keyword <code>msti</code> and the MST instance number. The range is from zero (0) to 63.
	cost <i>cost</i>	(OPTIONAL) Enter the keyword <code>cost</code> then the port cost value. The range is from 1 to 200000. The defaults are: 10-Gigabit Ethernet interface = 2000 - Port Channel interface with one 10 Gigabit Ethernet = 2000 - Port Channel with two 10 Gigabit Ethernet = 1800
	priority <i>priority</i>	Enter keyword <code>priority</code> then a value in increments of 16 as the priority. The range is from 0 to 240. The default is 128 .
Defaults	- cost = depends on the interface type - priority = 128	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced on the E-Series.

spanning-tree mstp edge-port

Configures the interface as an MST edge port and optionally a Bridge Protocol Data Unit (BPDU) guard.

C9000 Series

Syntax	<code>spanning-tree mstp edge-port [bpduguard [shutdown-on-violation]]</code>	
Parameters	mstp edge-port	Enter the keyword <code>mstp</code> then the keywords <code>edge-port</code> to configure the interface as a Multiple Spanning Tree edge port.
	bpduguard	(OPTIONAL) Enter the keyword <code>portfast</code> to enable Portfast to move the interface into forwarding mode immediately after the root fails. Enter the keyword <code>bpduguard</code> to disable the port when it receives a BPDU.

shutdown-onviolation (OPTIONAL) Enter the keywords `shutdown-on-violation` to hardware disable an interface when a BPDU is received and the port is disabled.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.
8.2.1.0	Introduced the hardware <code>shutdown-on-violation</code> option.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced on the E-Series.

Usage Information On an MSTP switch, a port configured as an edge port immediately transitions to the Forwarding state. Only configure ports connected to end-hosts as edge ports. Consider an edge port similar to a port with spanning-tree portfast enabled.

If you do not enable `shutdown-on-violation`, BPDUs are still sent to the RPM CPU.

tc-flush-standard

Enable the MAC address flushing after receiving every topology change notification.

C9000 Series

Syntax `tc-flush-standard`
To disable, use the `no tc-flush-standard` command.

Defaults Disabled.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.

Version	Description
7.5.1.0	Introduced on the C-Series.
6.5.1.0	Introduced

**Usage
Information**

By default, the system implements an optimized flush mechanism for MSTP. This mechanism helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, this `knob` command can be turned on to enable flushing MAC addresses after receiving every topology change notification.

Neighbor Discovery Protocol (NDP)

The neighbor discovery protocol for IPv6 is defined in RFC 2461 as part of the Stateless Address Autoconfiguration protocol. It replaces the Address Resolution Protocol used with IPv4. NDP defines mechanisms for solving the following problems:

- Router discovery: Hosts can locate routers residing on a link
- Prefix discovery: Hosts can discover address prefixes for the link
- Parameter discovery
- Address autoconfiguration — configuration of addresses for an interface
- Address resolution — mapping from IP address to link-layer address
- Next-hop determination
- Neighbor unreachability detection (NUD): Determine that a neighbor is no longer reachable on the link.
- Duplicate address detection (DAD): Allow a node to check whether a proposed address is already in use.
- Redirect: The router can inform a node about a better first-hop.

NDP uses the following five ICMPv6 packet types in its implementation:

- Router Solicitation
- Router Advertisement
- Neighbor Solicitation
- Neighbor Advertisement
- Redirect

debug ipv6 nd ra-guard

Enable debugging for IPv6 RA guard snooping information.

Syntax `debug ipv6 nd ra-guard [interface_type slot/port | count value]`

Parameters

interface_type slot/port

Enter the one of the following interfaces and slot/port information:

- For a port channel interface, enter the keywords `port-channel` then a number.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

count value Enter the keyword `count` then the number of debug outputs. The range is from 1 to 65534. The default is infinity.

Defaults None

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

Version	Description
9.11(0.0)	Introduced on the C9010.
9.9(0.0)	Introduced on the Z9500.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9000 switches.

device-role

Specify the role of the device attached to the port.

Syntax `device-role {host | router}`
To reset the device role, use the `no device-role {host | router}` command.

Parameters

host	Enter the keyword <code>host</code> to set the device-role as host.
router	Enter the keyword <code>router</code> to set the device-role as router.

Defaults None

Command Modes POLICY LIST CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

Version	Description
9.11(0.0)	Introduced on the C9010.
9.9(0.0)	Introduced on the Z9500.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9000 switches.

Related Commands

- [ipv6 nd raguard policy policy-name](#) — define the RA guard policy name and enter the RA guard policy configuration mode.
- [ipv6 nd ra-guard enable](#) — configure the RA guard related commands.

hop-limit

Enable the verification of the advertised hop count limit. If this command is not configured, the verification process is bypassed.

Syntax	<code>hop-limit {maximum minimum <i>limit</i>}</code> To reset the hop count limit, use the <code>no hop-limit {maximum minimum <i>limit</i>}</code> command.	
Parameters	maximum <i>limit</i>	Enter the keyword <code>maximum</code> then the hop limit value. The range is from 0 to 254.
	minimum <i>limit</i>	Enter the keyword <code>minimum</code> then the hop limit value. The range is from 0 to 254.

Defaults None

Command Modes POLICY LIST CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

Version	Description
9.11(0.0)	Introduced on the C9010.
9.9(0.0)	Introduced on the Z9500.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9000 switches.

Related Commands

- [ipv6 nd ra-guard enable](#) — configure the RA guard related commands.
- [ipv6 nd raguard policy policy-name](#) — define the RA guard policy name and enter the RA guard policy configuration mode.

ipv6 nd ra-guard attach-policy

Apply the IPv6 RA guard to a specific interface.

Syntax	<code>ipv6 nd ra-guard attach-policy policy-name [vlan [vlan 1, vlan 2, vlan 3.....]]</code>	
Parameters	policy <i>policy-name</i>	Enter the keyword <code>policy</code> then the policy name. The policy-name allows a maximum of 140 characters.
	vlan [vlan 1, vlan 2, vlan 3.....]	Enter the keyword <code>vlan</code> then the VLAN range. The VLAN range is from 1 to 4094.

Defaults None

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

Version	Description
9.11(0.0)	Introduced on the C9010.
9.9(0.0)	Introduced on the Z9500.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.

Version	Description
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9000 switches.

Related Commands

- [show ipv6 nd ra-guard policy](#) — display the configuration applied on all the RA guard policies or a specific RA guard policy.

ipv6 nd ra-guard enable

Allow you to configure the RA guard related commands.

Syntax	<code>ipv6 nd ra-guard enable</code> To disable the RA guard, use the <code>no ipv6 nd ra-guard enable</code> command.
Defaults	Disabled
Command Modes	CONFIGURATION
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

Version	Description
9.11(0.0)	Introduced on the C9010.
9.10(0.0)	Introduced on the S6100-ON.
9.9(0.0)	Introduced on the Z9500.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9000 switches.

ipv6 nd ra-guard policy

Define the RA guard policy name and enter the RA guard policy list configuration mode.

Syntax	<code>ipv6 nd ra-guard policy policy-name</code>
Parameters	policy <i>policy-name</i> Enter the keyword <code>policy</code> then the policy-name. The policy name allows a maximum of 140 characters.
Defaults	None
Command Modes	CONFIGURATION
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.

Version	Description
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9000 switches.

Related Commands

- [ipv6 nd ra-guard enable](#) — configure the RA guard related commands.

managed-config-flag

Set the managed address configuration flag.

Syntax	managed-config-flag {on off}	
	To clear the flag, use the no managed-config-flag {on off} command.	
Parameters	on	Enter the keyword on to set the managed-config-flag value as ON.
	off	Enter the keyword off to set the managed-config flag value as OFF.

Defaults None

Command Modes POLICY LIST CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.7(0.0)	Introduced on the S4810, S4820T, S5000, S6000, and Z9000 switches.

Related Commands

- [ipv6 nd ra-guard enable](#) — configure the RA guard related commands.
- [ipv6 nd raguard policy policy-name](#) — define the router advertisement (RA) guard policy name and enter the RA guard policy configuration mode.

match ra

Enable verifying either of the configured source IPv6 address or prefix address or the source MAC address in the inspected messages. If this command is not configured, the verification process is bypassed.

Syntax	match ra {ipv6-access-list <i>name</i> ipv6-prefix-list <i>name</i> mac-access-list <i>name</i> }	
	To reset the access list, use the no match ra {ipv6-access-list ipv6-prefix-list mac-access-list} command.	

Parameters	ipv6-access-list <i>name</i>	Enter the keywords ipv6-access-list then the access-list name. The access-list name allows a maximum of 140 characters.
	ipv6-prefix-list <i>name</i>	Enter the keywords ipv6-prefix-list then the prefix-list name. The prefix-list name allows a maximum of 140 characters.

ipv6-mac-access-list *name* Enter the keywords `ipv6-mac-access-list` then the mac-access-list name. The mac-access-list name allows a maximum of **140** characters.

Defaults None

Command Modes POLICY LIST CONFIGURATION

Related Commands

- [ipv6 nd ra-guard enable](#) — configure the RA guard related commands.
- [ipv6 nd raguard policy policy-name](#) — define the RA guard policy name and enter the RA guard policy configuration mode.

mtu

Enable the verification of the configured maximum transmission unit (MTU) value in the received RA packets.

Syntax `mtu value`

To reset the MTU value, use the `no mtu value` command.

Parameters

value Enter the maximum transmission unit value in bytes. The range is from 1,280 to 11,982 bytes.

Defaults 0

Command Modes POLICY LIST CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

other-config-flag

Enable the verification of the advertised other configuration parameter. If this command is not configured, the verification process is bypassed.

Syntax `other-config-flag {on | off}`

To reset the other configuration parameter, use the `no other-config-flag {on | off}` command.

Parameters

on	Enter the keyword <code>on</code> to set the other-config-flag value as ON.
off	Enter the keyword <code>off</code> to set the other-config flag value as OFF.

Defaults None

reachable-time

Enable the verification of the configured reachability time in the received RA packets.

Syntax `reachable-time value`

To reset the advertised reachability time, use the `no reachable-time value` command.

Parameters

value	Enter the advertised reachability time in milliseconds. The range is from 0 to 3,600,000 milliseconds.

Defaults None

retrans-time

Enable the verification of the configured retransmission timer value in the received RA packets.

Syntax

`retrans-timer value`

To reset the advertised retransmission interval, use the `no retrans-timer value` command.

Parameters

value Enter the advertised retransmission time interval in milliseconds. The range is from 100 to 4,294,967,295 milliseconds.

Defaults

None

router-preference maximum

Enable the verification of the advertised default router preference (DRP) value. The preference value is lower than or equal to the specified limit. If this command is not configured, the verification process is bypassed.

Syntax

```
router-preference maximum {high | low | medium}
```

To reset the default router preference value, use the `no router-preference maximum {high | low | medium}` command.

Parameters

high	Enter the keyword <code>high</code> to set the DRP value as high.
low	Enter the keyword <code>low</code> to set the DRP value as low.
medium	Enter the keyword <code>medium</code> to set the DRP value as medium.

Defaults

Related Commands

- [ipv6 nd ra-guard enable](#) — configure the RA guard related commands.
- [ipv6 nd ra-guard policy](#) — define the RA guard policy name and enter the RA guard policy list configuration mode.
- [device-role](#) — specify the role of the device attached to the port.
- [hop-limit](#) — enable the verification of the advertised hop count limit.
- [mtu](#) — set the maximum transmission unit (MTU) value.
- [other-config-flag](#) — enable the verification of the advertised other configuration parameter.
- [reachable-time](#) — set the advertised reachability time.
- [retrans-timer](#) — set the advertised retransmission time.
- [router-preference maximum](#) — enable the verification of the advertised default router preference (DRP) value.
- [trusted-port](#) — apply the policy to trusted ports.
- [ipv6 nd raguard attach-policy](#) — apply the IPv6 RA guard to a specific interface.

trusted-port

Allow bypassing the configured RA guard validation and forwards the RA packets received on the interface, which has the trusted port policy attached.

Syntax

`trusted-port`

To reset the policy applied to the trusted port, use the `no trusted-port` command.

Defaults	None														
Command Modes	POLICY LIST CONFIGURATION														
Command History	This guide is platform-specific. Object Tracking

Object Tracking supports IPv4 and IPv6 protocols.

Object tracking allows you to define objects of interest, monitor their state, and report to a client when a change in an object's state occurs. The following tracked objects are supported:

- Link status of Layer 2 interfaces
- Routing status of Layer 3 interfaces (IPv4 and IPv6)
- Reachability of IPv4 and IPv6 routes
- Metric thresholds of IPv4 and IPv6 routes

You can configure client applications, such virtual router redundancy protocol (VRRP), to receive a notification when the state of a tracked object changes.

This chapter contains the following sections:

- [IPv4 Object Tracking Commands](#)
- [IPv6 Object Tracking Commands](#)

Topics:

- [IPv4 Object Tracking Commands](#)
- [IPv6 Object Tracking Commands](#)

IPv4 Object Tracking Commands

The following section describes the IPv4 object tracking commands.

debug track

Enable debugging for tracked objects.

C9000 Series

Syntax	debug track [all notifications <i>object-id</i>]							
Parameters	all	Enables debugging on the state and notifications of all tracked objects.						
	notifications	Enables debugging on the notifications of all tracked objects.						
	<i>object-id</i>	Enables debugging on the state and notifications of the specified tracked object. The range is from 1 to 500.						
Defaults	Enable debugging on the state and notifications of all tracked objects (debug track all).							
Command Modes	- EXEC - EXEC Privilege							
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.8(0.0)</td><td>Introduced on the S3048-ON and S4048-ON.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
Version	Description							
9.9(0.0)	Introduced on the C9010.							
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.							

Version	Description
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Example

```
Dell#debug track all

04:35:04: %RPM0-P:RP2 %OTM-5-STATE: track 6 - Interface
TenGigabitEthernet 1/2/1
line-protocol DOWN

04:35:04: %RPM0-P:RP2 %OTM-5-NOTIF: VRRP notification: resource ID 6 DOWN
```

delay

Configure the time delay used before communicating a change in the status of a tracked object to clients.

C9000 Series

Syntax	<pre>delay {[up <i>seconds</i>] [down <i>seconds</i>]}</pre> To return to the default setting, use the <code>no delay</code> command.												
Parameters	<i>seconds</i> Enter the number of seconds the object tracker waits before sending a notification about the change in the UP and/or DOWN state of a tracked object to clients. The range is 0 to 180. The default is 0 seconds.												
Defaults	0 seconds												
Command Modes	OBJECT TRACKING (<i>conf_track_object-id</i>)												
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table> <tr> <th>Version</th><th>Description</th></tr> <tr> <td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr> <tr> <td>9.8(0.0)</td><td>Introduced on the S3048-ON and S4048-ON.</td></tr> <tr> <td>9.7(0.0)</td><td>Introduced on the S6000-ON.</td></tr> <tr> <td>8.3.12.0</td><td>Introduced on the S4810.</td></tr> <tr> <td>8.4.1.0</td><td>Introduced.</td></tr> </table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.8(0.0)	Introduced on the S3048-ON and S4048-ON.	9.7(0.0)	Introduced on the S6000-ON.	8.3.12.0	Introduced on the S4810.	8.4.1.0	Introduced.
Version	Description												
9.9(0.0)	Introduced on the C9010.												
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.												
9.7(0.0)	Introduced on the S6000-ON.												
8.3.12.0	Introduced on the S4810.												
8.4.1.0	Introduced.												
Usage Information	To set the time delay before a change in the state of a tracked object is communicated to clients configure an UP and/or DOWN timer for each tracked object. The configured time delay starts when the state changes from UP to DOWN or vice-versa. If the state of an object changes back to its former UP/DOWN state before the timer expires, the timer is cancelled and the client is not notified. For example, if the DOWN timer is running when an interface goes down and comes back up, the DOWN timer is cancelled and the client is not notified of the event. If the timer expires and an object's state has changed, a notification is sent to the client. If you do not configure a delay timer, a notification is sent immediately after a change in the state of a tracked object is detected. The time delay in communicating a state change is specified in seconds.												
Related Commands	track interface ip routing – configures object tracking on the routing status of an IPv4 Layer 3 interface.												

- [track interface line-protocol](#) – configures object tracking on the line-protocol state of a Layer 2 interface.
- [track ip route metric threshold](#) – configures object tracking on the threshold of an IPv4 route metric.
- [track ip route reachability](#) – configures object tracking on the reachability of an IPv4 route.

description

Enter a description of a tracked object.

C9000 Series

Syntax	<code>description {text}</code> To remove the description, use the <code>no description {text}</code> command.													
Parameters	text	Enter a description to identify a tracked object (80 characters maximum).												
Defaults	none													
Command Modes	OBJECT TRACKING (<i>conf_track_object-id</i>)													
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. show running-config track

Display the current configuration of tracked objects.

C9000 Series

Syntax	<pre>show running-config track [object-id]</pre>	
Parameters	object-id	(OPTIONAL) Display information on the specified tracked object. The range is 1 to 500.
Command Modes	EXEC Privilege	

Command History

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Example

```
Dell#show running-config track

track 1 ip route 23.0.0.0/8 reachability

track 2 ipv6 route 2040::/64 metric threshold
delay down 3
delay up 5
threshold metric up 200

track 3 ipv6 route 2050::/64 reachability

track 4 interface TenGigabitEthernet 1/2/1 ip routing

track 5 ip route 192.168.0.0/24 reachability vrf red

track resolution ip route isis 20
track resolution ip route ospf 10
```

Example (Object-id)

```
Dell#show running-config track 300

track 300 ip route 10.0.0.0/8 metric threshold
delay down 3
delay up 5
threshold metric up 100
```

Related Commands

- [show track](#) – displays information about tracked objects, including configuration, current state, and clients which track the object.
- [track interface ip routing](#) – configures object tracking on the routing status of an IPv4 Layer 3 interface.
- [track interface line-protocol](#) – configures object tracking on the line-protocol state of a Layer 2 interface.
- [track ip route metric threshold](#) – configures object tracking on the threshold of an IPv4 route metric.
- [track ip route reachability](#) – configures object tracking on the reachability of an IPv4 route.

show track

Display information about tracked objects, including configuration, current tracked state (UP or DOWN), and the clients which are tracking an object.

C9000 Series

Syntax

```
show track [object-id [brief] | interface [brief] [vrf vrf-name] | ip route [brief] [vrf vrf-name] | resolution | vrf vrf-name [brief] | brief]
```

Parameters

<i>object-id</i>	(OPTIONAL) Display information on the specified tracked object. The range is 1 to 500.
<i>interface</i>	(OPTIONAL) Display information on all tracked interfaces (Layer 2 and IPv4 Layer 3).
<i>ip route</i>	(OPTIONAL) Display information on all tracked IPv4 routes.

resolution	(OPTIONAL) Display information on the configured resolution values used to scale protocol-specific route metrics. The range is 0 to 255.
brief	(OPTIONAL) Display a single line summary of the tracking information for a specified object, object type, or all tracked objects.
vrf <i>vrf-name</i>	(OPTIONAL) E-Series only: Display information on only the tracked objects that are members of the specified VRF instance. The maximum is 32 characters. If you do not enter a VRF name, information on the tracked objects from all VRFs displays.

Command Modes EXEC Privilege

Command History

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Usage Information

The following describes the `show track` command shown in the Example below.

Output	Description
Track <i>object-id</i>	Displays the number of the tracked object.
Interface <i>type slot/port</i>, IP route <i>ip-address</i>, IPv6 route <i>ipv6-address</i>	Displays the interface type and slot/port number or address of the IPv4/IPv6 route that is being tracked.
<i>object</i> is Up/Down	Up/Down state of tracked object; for example, IPv4 interface, reachability or metric threshold of an IP route.
<i>number</i> changes, last change <i>time</i>	Number of times that the state of the tracked object has changed and the time since the last change in <i>hours:minutes:seconds</i> .
First hop interface	Displays the type and slot/port number of the first-hop interface of the tracked route.
Tracked by	Client that is tracking an object's state; for example, VRRP.

The following describes the `show track brief` command shown in the Example below.

Output	Description
ResID	Number of the tracked object.
Resource	Type of tracked object.
Parameter	Detailed description of the tracked object.
State	Up or Down state of the tracked object.
Last Change	Time since the last change in the state of the tracked object.

Example

```
Dell#show track

Track 1
  IP route 23.0.0.0/8 reachability
  Reachability is Down (route not in route table)
    2 changes, last change 00:16:08
  Tracked by:

Track 2
  IPv6 route 2040::/64 metric threshold
  Metric threshold is Up (STATIC/0/0)
```

```

    5 changes, last change 00:02:16
    Metric threshold down 255 up 254
    First-hop interface is TenGigabitEthernet 1/2/1
    Tracked by:
      VRRP TenGigabitEthernet 2/3/4 IPv6 VRID 1

Track 3
  IPv6 route 2050::/64 reachability
  Reachability is Up (STATIC)
    5 changes, last change 00:02:16
    First-hop interface is TenGigabitEthernet 1/2/1
    Tracked by:
      VRRP TenGigabitEthernet 2/3/4 IPv6 VRID 1

```

Example (Brief)

```

Dell>show track brief
ResId Resource          Parameter      State LastChange
1      IP route reachability 10.16.0.0/16 Up    00:01:08
2      Interface line-protocol Ethernet0/2 Down  00:05:00
3      Interface ip routing  VLAN100      Up    01:10:05

```

Related Commands

- [show running-config track](#) – displays configuration information about tracked objects.
- [track interface ip routing](#) – configures object tracking on the routing status of an IPv4 Layer 3 interface.
- [track interface line-protocol](#) – configures object tracking on the line-protocol state of a Layer 2 interface.
- [track ip route metric threshold](#) – configures object tracking on the threshold of an IPv4 route metric.
- [track ip route reachability](#) – configures object tracking on the reachability of an IPv4 route.
-

threshold metric

Configure the metric threshold used to determine the UP and/or DOWN state of a tracked IPv4 or IPv6 route.

C9000 Series

Syntax

```
threshold metric {up number | down number}
```

To return to the default setting, use the `no threshold metric {up number | down number}` command.

Parameters

up <i>number</i>	Enter a number for the UP threshold to be applied to the scaled metric of an IPv4 or IPv6 route. The default UP threshold is 254 . The routing state is UP if the scaled route metric is less than or equal to the UP threshold.
down <i>number</i>	Enter a number for the DOWN threshold to be applied to the scaled metric of an IPv4 or IPv6 route. The default DOWN threshold is 255 . The routing state is DOWN if the scaled route metric is greater than or equal to the DOWN threshold.

Defaults

none

Command Modes

OBJECT TRACKING (*conf_track_object-id*)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.

Version	Description
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Usage Information

Determine the UP/DOWN state of a tracked route by the threshold for the current value of the route metric in the routing table. To provide a common tracking interface for different clients, route metrics are scaled in the range 0 to 255, where 0 is connected and 255 is inaccessible. The scaled metric value communicated to a client always considers a lower value to have priority over a higher value.

The resulting scaled value is compared against the configured threshold values to determine the state of a tracked route as follows:

- If the scaled metric for a route entry is less than or equal to the UP threshold, the state of a route is UP.
- If the scaled metric for a route is greater than or equal to the DOWN threshold or the route is not entered in the routing table, the state of a route is DOWN.

Configure the UP and DOWN thresholds for each tracked route with the `threshold metric` command. The default UP threshold is **254**; the default DOWN threshold is **255**. The notification of a change in the state of a tracked object is sent when a metric value crosses a configured threshold.

The tracking process uses a protocol-specific resolution value to convert the actual metric in the routing table to a scaled metric in the range 0 to 255. You can configure the resolution value used to scale route metrics for supported protocols with the `track resolution ip route` and `track resolution ipv6 route` commands.

Related Commands

- [track ip route metric threshold](#) – configures object tracking on the threshold of an IPv4 route metric.
- [track resolution ip route](#) – configures the protocol-specific resolution value used to scale an IPv4 route metric.

track interface ip routing

Configure object tracking on the routing status of an IPv4 Layer 3 interface.

C9000 Series

Syntax

```
track object-id interface interface ip routing
```

To return to the default setting, use the `no track object-id` command.

Parameters

<i>object-id</i>	Enter the ID number of the tracked object. The range is from 1 to 500.
<i>interface</i>	Enter one of the following values: • For a 1-Gigabit Ethernet interface, enter <code>gigabitethernet</code> and the slot-number/ port-number. • For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. • For a port channel interface, enter the keywords <code>port-channel</code> then a number. • For a 10-Gigabit Ethernet interface, enter <code>tengigabitethernet</code> and the slot-number/ port-number. • For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.

Defaults

none

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Usage Information

Use this command to create an object that tracks the routing state of an IPv4 Layer 3 interface:

- The status of the IPv4 interface is UP only if the Layer 3 status of the interface is UP and the interface has a valid IP address.
- The Layer 3 status of an IPv4 interface goes DOWN when its Layer 3 status goes down (for a Layer 3 VLAN, all VLAN ports must be down) or the IP address is removed from the routing table.

Related Commands

- [show track](#) – displays information about tracked objects, including configuration, current state, and clients which track the object.
- [track interface line-protocol](#) – configures object tracking on the line-protocol state of a Layer 2 interface.

track interface line-protocol

Configure object tracking on the line-protocol state of a Layer 2 interface.

C9000 Series

Syntax

```
track object-id interface interface line-protocol
```

To return to the default setting, use the `no track object-id` command.

Parameters

<i>object-id</i>	Enter the ID number of the tracked object. The range is 1 to 500.
<i>interface</i>	Enter one of the following values: • For a 1-Gigabit Ethernet interface, enter <code>gigabitethernet</code> and the slot-number/ port-number. • For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. • For a port channel interface, enter the keywords <code>port-channel</code> then a number. • For a 10-Gigabit Ethernet interface, enter <code>tengigabitethernet</code> and the slot-number/ port-number. • For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.

Defaults

none

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.

Version	Description
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Usage Information

Use this command to create an object that tracks the line-protocol state of a Layer 2 interface by monitoring its operational status (UP or DOWN).

When the link-level status goes down, the tracked object status is considered to be DOWN; if the link-level status is up, the tracked object status is considered to be UP.

Related Commands

- [show track](#) – displays information about tracked objects, including configuration, current state, and clients which track the object.
- [track interface ip routing](#) – configures object tracking on the routing status of an IPv4 Layer 3 interface.

track ip route metric threshold

Configure object tracking on the threshold of an IPv4 route metric.

C9000 Series

Syntax

```
track object-id ip route ip-address/prefix-len metric threshold
```

To return to the default setting, use the `no track object-id` command.

Parameters

object-id	Enter the ID number of the tracked object. The range is 1 to 500.
ip-address/prefix-len	Enter an IPv4 address in dotted decimal format. The valid IPv4 prefix lengths are from /0 to /32.

Defaults

none

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Usage Information

Use this command to create an object that tracks the UP and/or DOWN threshold of an IPv4 route metric. In order for a route's metric to be tracked, the route must appear as an entry in the routing table.

A tracked IPv4 route is considered to match an entry in the routing table only if the exact IPv4 address and prefix length match a table entry. For example, when configured as a tracked route, 10.0.0.0/24 does not match the routing table entry 10.0.0.0/8. If no route-table entry has the exact IPv4 address and prefix length, the status of the tracked route is considered to be DOWN.

When you configure the threshold of an IPv4 route metric as a tracked object, the UP/DOWN state of the tracked route is also determined by the current metric for the route in the routing table.

To provide a common tracking interface for different clients, route metrics are scaled in the range 0 to 255, where 0 is connected and 255 is inaccessible. The scaled metric value communicated to a client

always considers a lower value to have priority over a higher value. The resulting scaled value is compared against the configured threshold values to determine the state of a tracked route as follows:

- If the scaled metric for a route entry is less than or equal to the UP threshold, the state of a route is UP.
- If the scaled metric for a route is greater than or equal to the DOWN threshold or the route is not entered in the routing table, the state of a route is DOWN.

You configure the UP and DOWN thresholds for each tracked route by using the `threshold metric` command. The default UP threshold is **254**; the default DOWN threshold is **255**. The notification of a change in the state of a tracked object is sent when a metric value crosses a configured threshold.

Related Commands

- [show track](#) – displays information about tracked objects, including configuration, current state, and clients which track the object.
- [threshold metric](#) – configures the metric threshold used to determine the UP and/or DOWN state of a tracked route.
- [track resolution ip route](#) – configures the protocol-specific resolution value used to scale an IPv4 route metric.

track ip route reachability

Configure object tracking on the reachability of an IPv4 route.

C9000 Series

Syntax `track object-id ip route ip-address/prefix-len reachability`

To return to the default setting, use the `no track object-id` command.

Parameters

<i>object-id</i>	Enter the ID number of the tracked object. The range is from 1 to 500.
<i>ip-address/prefix-len</i>	Enter an IPv4 address in dotted decimal format. The valid IPv4 prefix lengths are from /0 to /32.

Defaults none

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Usage Information Use this command to create an object that tracks the reachability of an IPv4 route. In order for a route's reachability to be tracked, the route must appear as an entry in the routing table.

A tracked IPv4 route is considered to match an entry in the routing table only if the exact IPv4 address and prefix length match a table entry. For example, when configured as a tracked route, 10.0.0.0/24 does not match the routing table entry 10.0.0.0/8. If no route-table entry has the exact IPv4 address and prefix length, the status of the tracked route is considered to be DOWN.

When you configure IPv4 route reachability as a tracked object, the UP/DOWN state of the tracked route is also determined by the entry of the next-hop address in the address resolution protocol (ARP) cache. A tracked route is considered to be reachable if there is an ARP cache entry for the route's next-hop address.

If the next-hop address in the ARP cache ages out for a route tracked for its reachability, an attempt is made to regenerate the ARP cache entry if the next-hop address appears before considering the route DOWN.

Related Commands

- [show track](#) – displays information about tracked objects, including configuration, current state, and clients which track the object.
- [track ip route metric threshold](#) – configures object tracking on the threshold of an IPv4 route metric.

track reachability refresh

Change the refresh interval for tracking the reachability of the next-hop. If the next-hop address in the ARP cache ages out for a route tracked for its reachability, an attempt is made to check if the next-hop address is reachable after a certain refresh interval before considering the route DOWN.

Syntax `track reachability refresh interval`

Parameters *interval* Enter the refresh interval, in seconds, for object tracking reachability. The range is from 0 to 60 seconds. The default is 60.

Defaults Enabled

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Usage Information To disable the attempt to track the reachability of next-hop after the configured refresh interval, set the refresh interval as 0.

Related Commands

- [show track](#) – display information about tracked objects, including configuration, current state, and clients which track the object.
- [track ip route metric threshold](#) – configure object tracking on the threshold of an IPv4 route metric.

track resolution ip route

Configure the protocol-specific resolution value used to scale an IPv4 route metric.

C9000 Series

Syntax `track resolution ip route {isis resolution-value | ospf resolution-value}`
To return to the default setting, use the `no track object-id` command.

Parameters	<i>object-id</i>	Enter the ID number of the tracked object. The range is from 1 to 500.												
	<i>isis resolution-value</i>	Enter the resolution used to convert the metric in the routing table for ISIS routes to a scaled metric.												
	<i>ospf resolution-value</i>	Enter the resolution used to convert the metric in the routing table for OSPF routes to a scaled metric.												
Defaults	none

Version	Description													
9.9(0.0)	Introduced on the C9010.													
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.													
9.7(0.0)	Introduced on the S6000-ON.													
8.3.12.0	Introduced on the S4810.													
8.4.1.0	Introduced.													
Usage Information	Use this command to configure the protocol-specific resolution value that converts the actual metric of an IPv4 route in the routing table to a scaled metric in the range from 0 to 255. The UP/DOWN state of a tracked IPv4 route is determined by a user-configurable threshold (the <code>threshold metric</code> command) for the route's metric in the routing table. To provide a common tracking interface for different clients, route metrics are scaled in the range of 0-255, where 0 is connected and 255 is inaccessible. The protocol-specific resolution value calculates the scaled metric by dividing a route's cost by the resolution value set for the route protocol: - For ISIS, you can set the resolution in the range of 1-1000, where the default is 10. - For OSPF, you can set the resolution in the range of 1-1592, where the default is 1. - You cannot configure the resolution value used to map static routes. By default, Dell Networking OS assigns a metric of 0 to static routes. - You cannot configure the resolution value used to map RIP routes. The RIP hop-count is automatically multiplied by 16 to scale it. For example, a RIP metric of 16 (unreachable) scales to 256, which considers the route to be DOWN.													
Related Commands	threshold metric – configures the metric threshold used to determine the UP and/or DOWN state of a tracked route. track ip route metric threshold – configures object tracking on the threshold of an IPv4 route metric.													

IPv6 Object Tracking Commands

The following section describes the IPv6 object tracking commands.

The following object tracking commands apply to IPv4 and IPv6:

- [debug track](#)
- [delay](#)
- [description](#)
- [show running-config track](#)
- [threshold metric](#)
- [track interface line-protocol](#)

show track ipv6 route

Display information about all tracked IPv6 routes, including configuration, current tracked state (UP or DOWN), and the clients which are tracking an object.

C9000 Series

Syntax	show track ipv6 route [brief]	
Parameters	brief	(OPTIONAL) Display a single line summary of information for tracked IPv6 routes.
Command Modes	• EXEC • EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	

Usage Command The following table describes the show track ipv6 route command shown in the following example.

Output	Description
Track <i>object-id</i>	Displays the number of the tracked object.
Interface <i>type slot/port</i> , IP <i>route ip-address</i> , IPv6 route <i>ipv6-address</i>	Displays the interface type and slot/port number or address of the IPv4/IPv6 route that is being tracked.
<i>object</i> is Up/Down	Up/Down state of tracked object; for example, IPv4 interface, reachability, or metric threshold of an IP route.
<i>number</i> changes, last change <i>time</i>	Number of times that the state of the tracked object has changed and the time since the last change in <i>hours:minutes:seconds</i> .
First hop interface	Displays the type and slot/port number of the first-hop interface of the tracked route.
Tracked by	Client that is tracking an object's state; for example, VRRP.

The following table describes the show track ipv6 route brief command shown in the example.

Ouput	Description
ResID	Number of the tracked object.
Resource	Type of tracked object.
Parameter	Detailed description of the tracked object.
State	Up or Down state of the tracked object.
Last Change	Time since the last change in the state of the tracked object.

Example

```
Dell#show track ipv6 route

Track 2
  IPv6 route 2040::/64 metric threshold
  Metric threshold is Up (STATIC/0/0)
    5 changes, last change 00:02:30
  Metric threshold down 255 up 254
  First-hop interface is TenGigabitEthernet 1/2/1
  Tracked by:
    VRRP TenGigabitEthernet 2/4/1 IPv6 VRID 1

Track 3
  IPv6 route 2050::/64 reachability
  Reachability is Up (STATIC)
    5 changes, last change 00:02:30
  First-hop interface is TenGigabitEthernet 1/2/1
  Tracked by:
    VRRP TenGigabitEthernet 2/4/1 IPv6 VRID
```

Example (Brief)

```
Dell#show track ipv6 route brief

ResId Resource                               Parameter State LastChange
2      IPv6 route metric threshold 2040::/64 Up 00:02:36
3      IPv6 route reachability      2050::/64 Up 00:02:36
```

Related Commands

- [show running-config track](#) – displays configuration information about tracked objects.
- [show track](#) – displays information about tracked objects, including configuration, current state, and clients which track the object.
- [track interface ipv6 routing](#) – configures object tracking on the routing status of an IPv6 Layer 3 interface.
- [track ipv6 route metric threshold](#) – configures object tracking on the threshold of an IPv6 route metric.
- [track ipv6 route reachability](#) – configures object tracking on the reachability of an IPv6 route.

track interface ipv6 routing

Configure object tracking on the routing status of an IPv6 Layer 3 interface.

C9000 Series

Syntax

```
track object-id interface interface ipv6 routing
```

To return to the default setting, use the `no track object-id` command.

Parameters

<i>object-id</i>	Enter the ID number of the tracked object. The range is from 1 to 500.
<i>interface</i>	Enter one of the following values: • For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the slot/port information. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. • For a port channel interface, enter the keywords <code>port-channel</code> then a number. • For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.

Defaults

none

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Usage Information Use this command to create an object that tracks the routing state of an IPv6 Layer 3 interface:

- The status of the IPv6 interface is UP only if the Layer 2 status of the interface is UP and the interface has a valid IP address.
- The Layer 3 status of an IPv6 interface goes DOWN when its Layer 2 status goes down (for a Layer 3 VLAN, all VLAN ports must be down) or the IP address is removed from the routing table.

Related Commands

- [show track ipv6 route](#) – displays information about tracked IPv6 routes, including configuration, current state, and clients which track the route.
- [track interface ip routing](#) – configures object tracking on the routing status of an IPv4 Layer 3 interface.

track ipv6 route metric threshold

Configure object tracking on the threshold of an IPv4 route metric.

C9000 Series

Syntax `track object-id ipv6 route ipv6-address/prefix-len metric threshold`

To return to the default setting, use the `no track object-id` command.

Parameters

<i>object-id</i>	Enter the ID number of the tracked object. The range is from 1 to 500.
<i>ipv6-address/prefix-len</i>	Enter an IPv6 address in X:X:X:X format. The valid IPv6 prefix lengths are from /0 to / 128.

Defaults none

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Usage Information Use this command to create an object that tracks the UP and/or DOWN threshold of an IPv6 route metric. In order for a route's metric to be tracked, the route must appear as an entry in the routing table.

A tracked IPv6 route is considered to match an entry in the routing table only if the exact IPv6 address and prefix length match a table entry. For example, when configured as a tracked route, 3333:100:200:300:400::/80 does not match routing table entry 3333:100:200:300::/64. If no route-table entry has the exact IPv6 address and prefix length, the status of the tracked route is considered to be DOWN.

When you configure the threshold of an IPv6 route metric as a tracked object, the UP/DOWN state of the tracked route is also determined by the current metric for the route in the routing table.

To provide a common tracking interface for different clients, route metrics are scaled in the range 0 to 255, where 0 is connected and 255 is inaccessible. The scaled metric value communicated to a client always considers a lower value to have priority over a higher value. To determine the state of a tracked route, the resulting scaled value is compared against the configured threshold values as follows:

- If the scaled metric for a route entry is less than or equal to the UP threshold, the state of a route is UP.
- If the scaled metric for a route is greater than or equal to the DOWN threshold or the route is not entered in the routing table, the state of a route is DOWN.

Configure the UP and DOWN thresholds for each tracked IPv6 route using the `threshold metric` command. The default UP threshold is **254**; the default DOWN threshold is **255**. The notification of a change in the state of a tracked object is sent when a metric value crosses a configured threshold.

Related Commands

- [show track ipv6 route](#) – displays information about tracked IPv6 routes, including configuration, current state, and clients which track the route.
- [threshold metric](#) – configures the metric threshold used to determine the UP and/or DOWN state of a tracked route.
- [track resolution ipv6 route](#) – configures the protocol-specific resolution value used to scale an IPv6 route metric.

track ipv6 route reachability

Configure object tracking on the reachability of an IPv6 route.

Syntax	<code>track object-id ipv6 route ip-address/prefix-len reachability</code> To return to the default setting, use the <code>no track object-id</code> command.	
Parameters	object-id ipv6-address/ prefix-len	Enter the ID number of the tracked object. The range is from 1 to 500. Enter an IPv6 address in X:X:X:X format. The valid IPv6 prefix lengths are from /0 to / 128.
Defaults	none	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
	9.7(0.0)	Introduced on the S6000-ON.
	8.3.12.0	Introduced on the S4810.
	8.4.1.0	Introduced.
Usage Information	Use this command to create an object that tracks the reachability of an IPv6 route. In order for a route's reachability to be tracked, the route must appear as an entry in the routing table.	

A tracked route is considered to match an entry in the routing table only if the exact IPv6 address and prefix length match a table entry. For example, when configured as a tracked route, 3333:100:200:300:400::/80 does not match routing table entry 3333:100:200:300::/64. If no route-table entry has the exact IPv6 address and prefix length, the tracked route is considered to be DOWN.

When you configure IPv6 route reachability as a tracked object, the UP/DOWN state of the tracked route is also determined by the entry of the next-hop address in the ARP cache. A tracked route is considered to be reachable if there is an ARP cache entry for the route's next-hop address.

If the next-hop address in the ARP cache ages out for a route tracked for its reachability, an attempt is made to regenerate the ARP cache entry to if the next-hop address appears before considering the route DOWN.

Related Commands

- [show track ipv6 route](#) – displays information about tracked IPv6 routes, including configuration, current state, and clients which track the route.
- [track ipv6 route reachability](#) – configures object tracking on the reachability of an IPv4 route.

track reachability refresh

Change the refresh interval for tracking the reachability of the next-hop. If the next-hop address in the ARP cache ages out for a route tracked for its reachability, an attempt is made to check if the next-hop address is reachable after a certain refresh interval before considering the route DOWN.

Syntax `track reachability refresh interval`

Parameters *interval* Enter the refresh interval, in seconds, for object tracking reachability. The range is from 0 to 60 seconds. The default is 60.

Defaults Enabled

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Usage Information To disable the attempt to track the reachability of next-hop after the configured refresh interval, set the refresh interval as 0.

Related Commands

- [show track](#) – display information about tracked objects, including configuration, current state, and clients which track the object.
- [track ip route metric threshold](#) – configure object tracking on the threshold of an IPv4 route metric.

track resolution ipv6 route

Configure the protocol-specific resolution value used to scale an IPv6 route metric.

C9000 Series

Syntax `track resolution ipv6 route {isis resolution-value | ospf resolution-value}`
To return to the default setting, use the `no track object-id` command.

Parameters

<i>object-id</i>	Enter the ID number of the tracked object. The range is from 1 to 500.
<i>isis resolution-value</i>	Enter the resolution used to convert the metric in the routing table for ISIS routes to a scaled metric.
<i>ospf resolution-value</i>	Enter the resolution used to convert the metric in the routing table for OSPF routes to a scaled metric.

Defaults none

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
8.3.12.0	Introduced on the S4810.
8.4.1.0	Introduced.

Usage Information Use this command to configure the protocol-specific resolution value that converts the actual metric of an IPv6 route in the routing table to a scaled metric in the range of 0 to 255.

The UP/DOWN state of a tracked IPv6 route is determined by the user-configurable threshold (the `threshold metric` command) for a route's metric in the routing table. To provide a common tracking interface for different clients, route metrics are scaled in the range of 0 to 255, where 0 is connected and 255 is inaccessible.

The protocol-specific resolution value calculates the scaled metric by dividing a route's cost by the resolution value set for the route protocol:

- For ISIS, you can set the resolution in the range of 1 to 1000, where the default is 10.
- For OSPF, you can set the resolution in the range of 1 to 1592, where the default is 1.
- You cannot configure the resolution value used to map static routes. By default, Dell Networking OS assigns a metric of 0 to static routes.
- You cannot configure the resolution value used to map RIP routes. The RIP hop-count is automatically multiplied by 16 to scale it. For example, a RIP metric of 16 (unreachable) scales to 256, which considers the route to be DOWN.

Related Commands

- [threshold metric](#) – configures the metric threshold used to determine the UP and/or DOWN state of a tracked route.
- [track ipv6 route metric threshold](#) – configures object tracking on the threshold of an IPv6 route metric.

Open Shortest Path First (OSPFv2 and OSPFv3)

Open Shortest Path First (OSPF) is an Interior Gateway Protocol (IGP), which means that it distributes routing information between routers in a single Autonomous System (AS). OSPF is also a link-state protocol in which all routers contain forwarding tables derived from information about their links to their neighbors.

The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) are the same for OSPFv2 and OSPFv3. OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis.

On Tunnel interfaces, OSPFv2 is supported on IPv6 tunnels only and OSPFv3 is supported on IPv4 tunnels only.

This chapter is divided into two sections. There is no overlap between the two sets of commands. You cannot use an OSPFv2 command in the IPv6 OSPFv3 mode.

- [OSPFv2 Commands](#)
- [OSPFv3 Commands](#)

OSPF on Tunnel Interfaces:

NOTE: The Dell Networking OS versions 9.4(0.0) and 9.7(0.0) introduce support for VRF on OSPFv2 and OSPFv3, respectively.

The multi-process OSPF feature supported on Dell Networking OS version 7.8.1.0 is modified. In earlier versions, multiple OSPF processes were created without VRF (prior to 9.4 release). In Dell Networking OS version 9.4 and version 9.7 (for OSPFv3), multiple OSPF processes can be created on a router, but with only one OSPF process per VRF. However, there can be one OSPFv2 and one OSPFv3 on the same VRF.

Topics:

- [OSPFv2 Commands](#)
- [OSPFv3 Commands](#)

OSPFv2 Commands

The Dell Networking implementation of OSPFv2 is based on IETF RFC 2328. .

area default-cost

Set the metric for the summary default route the area border router (ABR) generates into the stub area. Use this command on the border routers at the edge of a stub area.

C9000 Series

Syntax	<code>area area-id default-cost cost</code>	
	To return default values, use the <code>no area area-id default-cost</code> command.	
Parameters	<i>area-id</i>	Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
	<i>cost</i>	Specifies the stub area's advertised external route metric. The range is from zero (0) to 65535.
Defaults	<code>cost = 1</code> ; no areas are configured.	

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information In the Dell Networking operating software, `cost` is defined as reference bandwidth/bandwidth.

Related Commands [area stub](#) — creates a stub area.

area nssa

Specify an area as a not so stubby area (NSSA).

C9000 Series

Syntax `area area-id nssa [default-information-originate] [no-redistribution] [no-summary]`

To delete an NSSA, use the `no area area-id nssa` command.

Parameters	area-id	Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
	no-redistribution	(OPTIONAL) Specify that the <code>redistribute</code> command does not distribute routes into the NSSA. Only use this command in an NSSA area border router (ABR).
	default-information-originate	(OPTIONAL) Allows external routing information to be imported into the NSSA by using Type 7 default.
	no-summary	(OPTIONAL) Specify that no summary LSAs should be sent into the NSSA.

Defaults Not configured.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Version	Description
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.

7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

area range

Summarize routes matching an address/mask at an area border router (ABR).

C9000 Series

Syntax	<code>area area-id range ip-address mask [not-advertise]</code> To disable route summarization, use the <code>no area area-id range ip-address mask</code> command.	
Parameters	area-id	Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
	ip-address	Specify an IP address in dotted decimal format.
	mask	Specify a mask for the destination prefix. Enter the full mask (for example, 255.255.255.0).
	not-advertise	(OPTIONAL) Enter the keywords <code>not-advertise</code> to set the status to DoNotAdvertise (that is, the Type 3 summary-LSA is suppressed and the component networks remain hidden from other areas.)
Defaults	Not configured.	
Command Modes	ROUTER OSPF

7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information	Only the routes within an area are summarized, and that summary is advertised to other areas by the ABR. External routes are not summarized.
Related Commands	area stub — creates a stub area. router ospf — enters ROUTER OSPF mode to configure an OSPF instance.

area stub

Configure a stub area, which is an area not connected to other areas.

C9000 Series

Syntax	<code>area area-id stub [no-summary]</code> To delete a stub area, use the <code>no area area-id stub</code> command.				
Parameters	<table><tr><td>area-id</td><td>Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.</td></tr><tr><td>no-summary</td><td>(OPTIONAL) Enter the keywords <code>no-summary</code> to prevent the ABR from sending summary Link State Advertisements (LSAs) into the stub area.</td></tr></table>	area-id	Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.	no-summary	(OPTIONAL) Enter the keywords <code>no-summary</code> to prevent the ABR from sending summary Link State Advertisements (LSAs) into the stub area.
area-id	Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.				
no-summary	(OPTIONAL) Enter the keywords <code>no-summary</code> to prevent the ABR from sending summary Link State Advertisements (LSAs) into the stub area.				
Defaults	Disabled.				
Command Modes	ROUTER OSPF				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.				

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information	To configure all routers and access servers within a stub, use this command.
Related Commands	router ospf — enters ROUTER OSPF mode to configure an OSPF instance.

auto-cost

Specify how the OSPF interface cost is calculated based on the reference bandwidth method.

C9000 Series

Syntax	<code>auto-cost [reference-bandwidth <i>ref-bw</i>]</code> To return to the default bandwidth or to assign cost based on the interface type, use the <code>no auto-cost [reference-bandwidth]</code> command.	
Parameters	<i>ref-bw</i>	(OPTIONAL) Specify a reference bandwidth in megabits per second. The range is from 1 to 4294967. The default is 100 megabits per second .
Defaults	100 megabits per second.	
Command Modes	ROUTER OSPFv3	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.

clear ip ospf

Clear all OSPF routing tables.

C9000 Series

Syntax	<code>clear ip ospf <i>process-id</i> [vrf {<i>vrf name</i>}] [[<i>process</i>]</code>	
Parameters	<i>process-id</i>	Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.
	<i>vrf name</i>	Enter the VRF process identifier to tie the OSPF instance to the VRF. All network commands under this OSPF instance are then tied to the VRF instance.
	<i>process</i>	(OPTIONAL) Enter the keyword <code>process</code> to reset the OSPF process.
Command Modes	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.4 (0.0)	Added support for VRF on all platforms (Except MXL and STOMP)
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.

Version	Description
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

clear ip ospf statistics

Clear the packet statistics in interfaces and neighbors.

C9000 Series

Syntax	<code>clear ip ospf process-id vrf vrf-name statistics [interface name {neighbor router-id}]</code>	
Parameters	<i>process-id</i>	Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.
	<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to clear all OSPF routing tables corresponding to that VRF
	<i>interface name</i>	(OPTIONAL) Enter the keyword <code>interface</code> then one of the following interface keywords and slot/port or number information: - For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the slot/port information. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. - For a Null interface, enter the keywords <code>null 0</code>. - For Port Channel groups, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128. - For a tunnel interface, enter the keyword <code>tunnel</code> then the tunnel ID. The range is from 1 to 16383. - For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.
	<i>neighbor router-id</i>	(OPTIONAL) Enter the keyword <code>neighbor</code> then the neighbor's router-id in dotted decimal format (A.B.C.D.).
Defaults	none	
Command Modes	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.

Version	Description
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Related Commands [show ip ospf statistics](#) — displays the OSPF statistics.

debug ip ospf

Display debug information on OSPF. Entering the `debug ip ospf` commands enables OSPF debugging for the first OSPF process.

C9000 Series

Syntax `debug ip ospf process-id [vrf vrf name][bfd | event | packet | spf | database-timers]`

To cancel the debug command, use the `no debug ip ospf` command.

Parameters	process-id	Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.
	vrf name	Enter the keyword <code>vrf</code> to view debugging information on OSPF corresponding to that VRF.
	bfd	(OPTIONAL) Enter the keyword <code>bfd</code> to debug only OSPF BFD information.
	event	(OPTIONAL) Enter the keyword <code>event</code> to debug only OSPF event information.
	packet	(OPTIONAL) Enter the keyword <code>packet</code> to debug only OSPF packet information.
	spf	(OPTIONAL) Enter the keyword <code>spf</code> to display the Shortest Path First information.
	database-timers	(OPTIONAL) Enter the keywords <code>database-timers</code> to display the LSA throttling timer information.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.8.0	Added the <code>database-timer rate-limit</code> option for the S4810.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.

Version	Description
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information

The following describes the `debug ip ospf` command shown in the Example below.

Field	Description
8:14	Displays the time stamp.
OSPF	Displays the OSPF process ID: instance ID.
v:	Displays the OSPF version. The system supports version 2 only.
t:	Displays the type of packet sent: • 1 - Hello packet • 2 - database description • 3 - link state request • 4 - link state update • 5 - link state acknowledgement
l:	Displays the packet length.
rid:	Displays the OSPF router ID.
aid:	Displays the Autonomous System ID.
chk:	Displays the OSPF checksum.
aut:	States if OSPF authentication is configured. One of the following is listed: • 0 - no authentication configured • 1 - simple authentication configured using the <code>ip ospf authentication-key</code> command • 2 - MD5 authentication configured using the <code>ip ospf message-digest-key</code> command
auk:	If the <code>ip ospf authentication-key</code> command is configured, this field displays the key used.
keyid:	If the <code>ip ospf message-digest-key</code> command is configured, this field displays the MD5 key
to:	Displays the interface to which the packet is intended.
dst:	Displays the destination IP address.
netmask:	Displays the destination IP address mask.
pri:	Displays the OSPF priority
N, MC, E, T	Displays information available in the Options field of the HELLO packet: • N + (N-bit is set) • N - (N-bit is not set) • MC+ (bit used by MOSPF is set and router is able to forward IP multicast packets) • MC- (bit used by MOSPF is not set and router cannot forward IP multicast packets) • E + (router is able to accept AS External LSAs) • E - (router cannot accept AS External LSAs) • T + (router can support TOS) • T - (router cannot support TOS)
hi:	Displays the amount of time configured for the HELLO interval.
di:	Displays the amount of time configured for the DEAD interval.
dr:	Displays the IP address of the designated router.

Field	Description
bdr:	Displays the IP address of the Border Area Router.

Example

```
Dell#debug ip ospf 1 packet
OSPF process 90, packet debugging is on

Dell#
08:14:24 : OSPF(100:00):
Xmt. v:2 t:1(HELLO) l:44 rid:192.1.1.1
      aid:0.0.0.1 chk:0xa098 aut:0 auk: keyid:0 to:Te 1/3 dst:224.0.0.5
      netmask:255.255.255.0 pri:1 N-, MC-, E+, T-,
      hi:10 di:40 dr:90.1.1.1 bdr:0.0.0.0
```

default-information originate

To generate a default external route into an OSPF routing domain, configure the system.

C9000 Series

Syntax `default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]`

To return to the default values, use the `no default-information originate` command.

Parameters	always	(OPTIONAL) Enter the keyword <code>always</code> to specify that default route information must always be advertised.
	metric <i>metric-value</i>	(OPTIONAL) Enter the keyword <code>metric</code> then a number to configure a metric value for the route. The range is from 1 to 16777214.
	metric-type <i>type-value</i>	(OPTIONAL) Enter the keywords <code>metric-type</code> then an OSPF link state type of 1 or 2 for default routes. The values are: 1 = Type 1 external route 2 = Type 2 external route
	route-map <i>map-name</i>	(OPTIONAL) Enter the keywords <code>route-map</code> then the name of an established route map.

Defaults Disabled.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.

Version	Description
6.1.1.1	Introduced on the E-Series.

Related Commands [redistribute](#) — redistributes routes from other routing protocols into OSPF.

default-metric

Change the metrics of redistributed routes to a value useful to OSPF. Use this command with the `redistribute` command.

C9000 Series

Syntax	<code>default-metric <i>number</i></code> To return to the default values, use the <code>no default-metric [<i>number</i>]</code> command.
Parameters	<i>number</i> Enter a number as the metric. The range is from 1 to 16777214.
Defaults	Disabled.
Command Modes	ROUTER OSPF
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Related Commands [redistribute](#) — redistributes routes from other routing protocols into OSPF.

description

Add a description about the selected OSPF configuration.

C9000 Series

Syntax	<code>description <i>description</i></code> To remove the OSPF description, use the <code>no description</code> command.
Parameters	<i>description</i> Enter a text string description to identify the OSPF configuration (80 characters maximum).

Defaults	none
Command Modes	ROUTER OSPF
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

distance

Define an administrative distance for particular routes to a specific IP address.

C9000 Series

Syntax	<pre>distance weight [ip-address mask prefix-list-name]</pre> To delete the settings, use the <code>no distance weight [ip-address mask prefix-list-name]</code> command.
Parameters	weight Specify an administrative distance. The range is from 1 to 255. The default is 110. ip-address (OPTIONAL) Enter a router ID in the dotted decimal format. If you enter a router ID, include the mask for that router address. mask (OPTIONAL) Enter a mask in dotted decimal format or /n format. prefix-list-name (OPTIONAL) Enter the name of an IP standard prefix list, up to 140 characters.
Defaults	110
Command Modes	ROUTER OSPF
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.

Version	Description
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

distance ospf

Configure an OSPF distance metric for different types of routes.

C9000 Series

Syntax	<code>distance ospf [external <i>dist3</i>] [inter-area <i>dist2</i>] [intra-area <i>dist1</i>]</code> To delete these settings, use the <code>no distance ospf</code> command.
Parameters	external <i>dist3</i> (OPTIONAL) Enter the keyword <code>external</code> then a number to specify a distance for external type 5 and 7 routes. The range is from 1 to 255. The default is 110. inter-area <i>dist2</i> (OPTIONAL) Enter the keywords <code>inter-area</code> then a number to specify a distance metric for routes between areas. The range is from 1 to 255. The default is 110. intra-area <i>dist1</i> (OPTIONAL) Enter the keywords <code>intra-area</code> then a number to specify a distance metric for all routes within an area. The range is from 1 to 255. The default is 110.
Defaults	- external <i>dist3</i> = 110 - inter-area <i>dist2</i> = 110 - intra-area <i>dist1</i> = 110
Command Modes	ROUTER OSPF
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information	To specify a distance for routes learned from other routing domains, use the <code>redistribute</code> command.

distribute-list in

Apply a filter to incoming routing updates from OSPF to the routing table.

C9000 Series

Syntax	<code>distribute-list <i>prefix-list-name</i> in [<i>interface</i>]</code> To delete a filter, use the <code>no <i>distribute-list prefix-list-name</i> in [<i>interface</i>]</code> command.				
Parameters	<table><tr><td><i>prefix-list-name</i></td><td>Enter the name of a configured prefix list.</td></tr><tr><td><i>interface</i></td><td>(OPTIONAL) Enter one of the following keywords and slot/port or number information: - For Port Channel groups, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. </td></tr></table>	<i>prefix-list-name</i>	Enter the name of a configured prefix list.	<i>interface</i>	(OPTIONAL) Enter one of the following keywords and slot/port or number information: - For Port Channel groups, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.
<i>prefix-list-name</i>	Enter the name of a configured prefix list.				
<i>interface</i>	(OPTIONAL) Enter one of the following keywords and slot/port or number information: - For Port Channel groups, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.				
Defaults	Not configured.				
Command Modes	ROUTER OSPF				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.				

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

distribute-list out

To restrict certain routes destined for the local routing table after the SPF calculation, apply a filter.

C9000 Series

Syntax	<code>distribute-list <i>prefix-list-name</i> out [<i>bgp connected isis rip static</i>]</code> To remove a filter, use the <code>no <i>distribute-list prefix-list-name</i> out [<i>bgp connected isis rip static</i>]</code> command.

Parameters	<i>prefix-list-name</i>	Enter the name of a configured prefix list.
	bgp	(OPTIONAL) Enter the keyword <code>bgp</code> to specify that BGP routes are distributed.  NOTE: BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.
	connected	(OPTIONAL) Enter the keyword <code>connected</code> to specify that connected routes are distributed.
	isis	(OPTIONAL) Enter the keyword <code>isis</code> to specify that IS-IS routes are distributed.  NOTE: BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.
	rip	(OPTIONAL) Enter the keyword <code>rip</code> to specify that RIP routes are distributed.  NOTE: BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.
	static	(OPTIONAL) Enter the keyword <code>static</code> to specify that only manually configured routes are distributed.

Defaults Not configured.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information The `distribute-list out` command applies to routes autonomous system boundary routers (ASBRs) redistributes into OSPF. It can be applied to external type 2 and external type 1 routes, but not to intra-area and inter-area routes.

enable inverse-mask

By default, the system allows you to input the OSPF `network` command with a net-mask. This command provides a choice between inverse-mask or net-mask (the default).

C9000 Series

Syntax `enable inverse mask`
To return to the default net-mask, use the `no enable inverse mask` command.

Defaults **net-mask**

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

fast-convergence

This command sets the minimum LSA origination and arrival times to zero (0), allowing more rapid route computation so that convergence takes less time.

C9000 Series

Syntax `fast-convergence {number}`

To cancel fast-convergence, use the `no fast convergence` command.

Parameters **number** Enter the convergence level desired. The higher this parameter is set, the faster OSPF converge takes place. The range is from 1 to 4.

Defaults none.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced on all platforms.

Usage Information

The higher this parameter is set, the faster OSPF converge takes place.

 **NOTE:** The faster the convergence, the more frequent the route calculations and updates. This behavior impacts CPU utilization and may impact adjacency stability in larger topologies.

Generally, convergence level 1 meets most convergence requirements. Higher convergence levels should only be selected following consultation with Dell Networking technical support.

graceful-restart grace-period

Specifies the time duration, in seconds, that the router's neighbors continue to advertise the router as fully adjacent regardless of the synchronization state during a graceful restart.

C9000 Series

Syntax	<code>graceful-restart grace-period seconds</code> To disable the grace period, use the <code>no graceful-restart grace-period</code> command.	
Parameters	<i>seconds</i>	Time duration, in seconds, that specifies the duration of the restart process before OSPF terminates the process. The range is from 40 to 1800 seconds.
Defaults	Not Configured	
Command Modes	ROUTER OSPF	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced on the S-Series. Added support for Multi-Process OSPF.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

graceful-restart helper-reject

Specify the OSPF router to not act as a helper during graceful restart.

C9000 Series

Syntax	<code>graceful-restart helper-reject ip-address</code> To return to default value, use the <code>no graceful-restart helper-reject</code> command.	
Parameters	<i>ip-address</i>	Enter the OSPF router-id, in IP address format, of the restart router that <i>will not</i> act as a helper during graceful restart.
Defaults	Not configured.	
Command Modes	ROUTER OSPF	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.
7.8.1.0	<code>Restart</code> role enabled on the S-Series (Both <code>Helper</code> and <code>Restart</code> roles now supported on S-Series). Added support for Multi-Process OSPF.
7.7.1.0	Added <code>Helper-Role</code> support on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

graceful-restart mode

Enable the graceful restart mode.

C9000 Series

Syntax	<code>graceful-restart mode [planned-only unplanned-only]</code> To disable graceful restart mode, use the <code>no graceful-restart mode</code> command.	
Parameters	planned-only	(OPTIONAL) Enter the keywords <code>planned-only</code> to indicate graceful restart is supported in a planned restart condition only.
	unplanned-only	(OPTIONAL) Enter the keywords <code>unplanned-only</code> to indicate graceful restart is supported in an unplanned restart condition only.
Defaults	Support for both planned and unplanned failures.	
Command Modes	ROUTER OSPF	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.
7.8.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

graceful-restart role

Specify the role for your OSPF router during graceful restart.

C9000 Series

Syntax	<code>graceful-restart role [helper-only restart-only]</code> To disable graceful restart role, use the <code>no graceful-restart role</code> command.				
Parameters	<table><tr><td>role helper-only</td><td>(OPTIONAL) Enter the keywords <code>helper-only</code> to specify the OSPF router is a helper only during graceful restart.</td></tr><tr><td>role restart-only</td><td>(OPTIONAL) Enter the keywords <code>restart-only</code> to specify the OSPF router is a restart only during graceful-restart.</td></tr></table>	role helper-only	(OPTIONAL) Enter the keywords <code>helper-only</code> to specify the OSPF router is a helper only during graceful restart.	role restart-only	(OPTIONAL) Enter the keywords <code>restart-only</code> to specify the OSPF router is a restart only during graceful-restart.
role helper-only	(OPTIONAL) Enter the keywords <code>helper-only</code> to specify the OSPF router is a helper only during graceful restart.				
role restart-only	(OPTIONAL) Enter the keywords <code>restart-only</code> to specify the OSPF router is a restart only during graceful-restart.				
Defaults	By default, OSPF routers are both helper and restart routers during a graceful restart.				
Command Modes	ROUTER OSPF				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .				

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF. Added Restart and Helper roles support on the S-Series.
7.7.1.0	Added Helper-Role support on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

ip ospf auth-change-wait-time

OSPF provides a grace period while OSPF changes its interface authentication type. During the grace period, OSPF sends out packets with new and old authentication scheme until the grace period expires.

C9000 Series

Syntax	<code>ip ospf auth-change-wait-time seconds</code> To return to the default, use the <code>no ip ospf auth-change-wait-time</code> command.		
Parameters	<table><tr><td>seconds</td><td>Enter the seconds. The range is from 0 to 300.</td></tr></table>	seconds	Enter the seconds. The range is from 0 to 300.
seconds	Enter the seconds. The range is from 0 to 300.		
Defaults	zero (0) seconds.		
Command Modes	INTERFACE		
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .		

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

ip ospf authentication-key

Enable authentication and set an authentication key on OSPF traffic on an interface.

C9000 Series

Syntax	<code>ip ospf authentication-key [encryption-type] key</code> To delete an authentication key, use the <code>no ip ospf authentication-key</code> command.	
Parameters	encryption-type	(OPTIONAL) Enter 7 to encrypt the key.
	key	Enter an eight-character string. Strings longer than eight characters are truncated.
Defaults	Not configured.	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.2(1.0)	Introduced on the Z9500.
	8.3.19.0	Introduced on the S4820T.
	8.3.11.1	Introduced on the Z9000.
	8.3.7.0	Introduced on the S4810.
	7.6.1.0	Introduced on the S-Series.
	7.5.1.0	Introduced on the C-Series.
	6.1.1.1	Introduced on the E-Series.
Usage Information	All neighboring routers in the same network must use the same password to exchange OSPF information.	

ip ospf cost

Change the cost associated with the OSPF traffic on an interface.

C9000 Series

Syntax	<code>ip ospf cost cost</code> To return to default value, use the <code>no ip ospf cost</code> command.																			
Parameters	cost	Enter a number as the cost. The range is from 1 to 65535.																		
Defaults	The default cost is based on the reference bandwidth.																			
Command Modes	INTERFACE																			
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr><tr><td>8.3.7.0</td><td>Introduced on the S4810.</td></tr><tr><td>7.6.1.0</td><td>Introduced on the S-Series.</td></tr><tr><td>7.5.1.0</td><td>Introduced on the C-Series.</td></tr><tr><td>6.1.1.1</td><td>Introduced on the E-Series.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	7.6.1.0	Introduced on the S-Series.	7.5.1.0	Introduced on the C-Series.	6.1.1.1	Introduced on the E-Series.
Version	Description																			
9.9(0.0)	Introduced on the C9010.																			
9.2(1.0)	Introduced on the Z9500.																			
8.3.19.0	Introduced on the S4820T.																			
8.3.11.1	Introduced on the Z9000.																			
8.3.7.0	Introduced on the S4810.																			
7.6.1.0	Introduced on the S-Series.																			
7.5.1.0	Introduced on the C-Series.																			
6.1.1.1	Introduced on the E-Series.																			
Usage Information	If this command is not configured, cost is based on the <code>auto-cost</code> command. When you configure OSPF over multiple vendors, to ensure that all routers use the same cost, use the <code>ip ospf cost</code> command. Otherwise, OSPF routes improperly.																			
Related Commands	auto-cost — controls how the OSPF interface cost is calculated.																			

ip ospf dead-interval

Set the time interval since the last hello-packet was received from a router. After the interval elapses, the neighboring routers declare the router dead.

C9000 Series

Syntax	<code>ip ospf dead-interval seconds</code> To return to the default values, use the <code>no ip ospf dead-interval</code> command.	
Parameters	seconds	Enter the number of seconds for the interval. The range is from 1 to 65535. The default is 40 seconds .
Defaults	40 seconds	
Command Modes	INTERFACE	

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information

By default, the dead interval is four times the default hello-interval.

Related Commands

[ip ospf hello-interval](#) — sets the time interval between the hello packets.

ip ospf hello-interval

Specify the time interval between the hello packets sent on the interface.

C9000 Series

Syntax

```
ip ospf hello-interval seconds
```

To return to the default value, use the `no ip ospf hello-interval` command.

Parameters

seconds Enter the number of seconds for the interval. The range is from 1 to 65535. The default is **10 seconds**.

Defaults

10 seconds

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information	The time interval between the hello packets must be the same for routers in a network.
Related Commands	ip ospf dead-interval — sets the time interval before a router is declared dead.

ip ospf message-digest-key

Enable OSPF MD5 authentication and send an OSPF message digest key on the interface.

C9000 Series

Syntax	<code>ip ospf message-digest-key <i>keyid</i> md5 <i>key</i></code> To delete a key, use the <code>no ip ospf message-digest-key <i>keyid</i></code> command.				
Parameters	<table><tr><td><i>keyid</i></td><td>Enter a number as the key ID. The range is from 1 to 255.</td></tr><tr><td><i>key</i></td><td>Enter a continuous character string as the password.</td></tr></table>	<i>keyid</i>	Enter a number as the key ID. The range is from 1 to 255.	<i>key</i>	Enter a continuous character string as the password.
<i>keyid</i>	Enter a number as the key ID. The range is from 1 to 255.				
<i>key</i>	Enter a continuous character string as the password.				
Defaults	No MD5 authentication is configured.				
Command Modes	INTERFACE				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.				

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
9.1(0.0)	Included usage information on maximum number of digest keys per interface.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information	You can configure a maximum of six digest keys on an interface. Of the available six digest keys, the switches select the MD5 key that is common. The remaining MD5 keys are unused. To change to a different key on the interface, enable the new key while the old key is still enabled. The system sends two packets: the first packet authenticated with the old key and the second packet authenticated with the new key. This process ensures that the neighbors learn the new key and communication is not disrupted by keeping the old key enabled. After the reply is received and the new key is authenticated, delete the old key. Dell recommends keeping only one key per interface.  NOTE: The MD5 secret is stored as plain text in the configuration file with service password encryption. Write down or otherwise record the key. You cannot learn the key once it is configured. Use caution when changing the key.

ip ospf mtu-ignore

Disable OSPF MTU mismatch detection upon receipt of database description (DBD) packets.

C9000 Series

Syntax	<code>ip ospf mtu-ignore</code> To return to the default, use the <code>no ip ospf mtu-ignore</code> command.
Defaults	Enabled.
Command Modes	INTERFACE
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

ip ospf network

Set the network type for the interface.

C9000 Series

Syntax	<code>ip ospf network {broadcast point-to-point}</code> To return to the default, use the <code>no ip ospf network</code> command.				
Parameters	<table><tr><td>broadcast</td><td>Enter the keyword <code>broadcast</code> to designate the interface as part of a broadcast network.</td></tr><tr><td>point-to-point</td><td>Enter the keywords <code>point-to-point</code> to designate the interface as part of a point-to-point network.</td></tr></table>	broadcast	Enter the keyword <code>broadcast</code> to designate the interface as part of a broadcast network.	point-to-point	Enter the keywords <code>point-to-point</code> to designate the interface as part of a point-to-point network.
broadcast	Enter the keyword <code>broadcast</code> to designate the interface as part of a broadcast network.				
point-to-point	Enter the keywords <code>point-to-point</code> to designate the interface as part of a point-to-point network.				
Defaults	Not configured.				
Command Modes	ROUTER OSPF				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .				

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Version	Description
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

ip ospf priority

To determine the designated router for the OSPF network, set the priority of the interface.

C9000 Series

Syntax	<code>ip ospf priority <i>number</i></code> To return to the default setting, use the <code>no ip ospf priority</code> command.	
Parameters	<i>number</i>	Enter a number as the priority. The range is from 0 to 255. The default is 1 .
Defaults	1	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information	Setting a priority of 0 makes the router ineligible for election as a designated router or backup designated router. Use this command for interfaces connected to multi-access networks, not point-to-point networks.

ip ospf retransmit-interval

Set the retransmission time between lost link state advertisements (LSAs) for adjacencies belonging to the interface.

C9000 Series

Syntax	<code>ip ospf retransmit-interval <i>seconds</i></code> To return to the default values, use the <code>no ip ospf retransmit-interval</code> command.																			
Parameters	<i>seconds</i>	Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is 5 seconds . This interval must be greater than the expected round-trip time for a packet to travel between two routers.																		
Defaults	5 seconds																			
Command Modes	INTERFACE																			
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr><tr><td>8.3.7.0</td><td>Introduced on the S4810.</td></tr><tr><td>7.6.1.0</td><td>Introduced on the S-Series.</td></tr><tr><td>7.5.1.0</td><td>Introduced on the C-Series.</td></tr><tr><td>6.1.1.1</td><td>Introduced on the E-Series.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	7.6.1.0	Introduced on the S-Series.	7.5.1.0	Introduced on the C-Series.	6.1.1.1	Introduced on the E-Series.
Version	Description																			
9.9(0.0)	Introduced on the C9010.																			
9.2(1.0)	Introduced on the Z9500.																			
8.3.19.0	Introduced on the S4820T.																			
8.3.11.1	Introduced on the Z9000.																			
8.3.7.0	Introduced on the S4810.																			
7.6.1.0	Introduced on the S-Series.																			
7.5.1.0	Introduced on the C-Series.																			
6.1.1.1	Introduced on the E-Series.																			
Usage Information	Set the time interval to a number large enough to prevent unnecessary retransmissions. For example, the interval must be larger for interfaces connected to virtual links.																			

ip ospf transmit-delay

To send a link state update packet on the interface, set the estimated time elapsed.

C9000 Series

Syntax	<code>ip ospf transmit-delay seconds</code> To return to the default value, use the <code>no ip ospf transmit-delay</code> command.	
Parameters	seconds	Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is 1 second . This value must be greater than the transmission and propagation delays for the interface.
Defaults	1 second	
Command Modes	INTERFACE	

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

log-adjacency-changes

To send a Syslog message about changes in the OSPF adjacency state, set the system.

C9000 Series

Syntax

log-adjacency-changes

To disable the Syslog messages, use the `no log-adjacency-changes` command.

Defaults

Disabled.

Command Modes ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

maximum-paths

Enable the software to forward packets over multiple paths.

C9000 Series

Syntax	<code>maximum-paths number</code> To disable packet forwarding over multiple paths, use the <code>no maximum-paths</code> command.	
Parameters	<i>number</i>	Specify the number of paths. The range for OSPFv2 is from 1 to 64. The default for OSPFv2 is 4 paths . The range for OSPFv3 is from 1 to 64. The default for OSPFv3 is 8 paths .
Defaults	4	
Command Modes	ROUTER OSPF for OSPFv2 ROUTER OSPFv3 for OSPFv3	

Command History This guide is platform-specific. For command information about other platforms, see relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1(0.0)	Introduced support for OSPFv3 on the S4810 and Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

network area

Define which interfaces run OSPF and the OSPF area for those interfaces.

C9000 Series

Syntax	<code>network ip-address mask area area-id</code> To disable an OSPF area, use the <code>no network ip-address mask area area-id</code> command.	
Parameters	<i>ip-address</i>	Specify a primary or secondary address in dotted decimal format. The primary address is required before adding the secondary address.
	<i>mask</i>	Enter a network mask in /prefix format. (/x)
	<i>area-id</i>	Enter the OSPF area ID as either a decimal value or in a valid IP address. Decimal value range is from 0 to 65535. IP address format is dotted decimal format A.B.C.D.

 **NOTE:** If the area ID is smaller than 65535, it is converted to a decimal value. For example, if you use an area ID of 0.0.0.1, it is converted to 1.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced to all platforms.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information To enable OSPF on an interface, the `network area` command must include, in its range of addresses, the primary IP address of an interface.

 **NOTE:** An interface can be attached only to a single OSPF area.

If you delete all the network area commands for Area 0, the `show ip ospf` command output does not list Area 0.

passive-interface

Suppress both receiving and sending routing updates on an interface.

C9000 Series

Syntax `passive-interface {default | interface}`

To enable both the receiving and sending routing, use the `no passive-interface interface` command.

To return all OSPF interfaces (current and future) to active, use the `no passive-interface default` command.

Parameters

default	Enter the keyword <code>default</code> to make all OSPF interfaces (current and future) passive.
interface	Enter the following keywords and slot/port or number information: - For Port Channel groups, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
7.4.1.0	Modified to include the keyword <code>default</code> .
6.1.1.1	Introduced on the E-Series.

Usage Information

Although the passive interface does not send or receive routing updates, the network on that interface is still included in OSPF updates sent using other interfaces.

The `default` keyword sets all interfaces as passive. You can then configure individual interfaces, where adjacencies are desired, using the `no passive-interface interface` command. The `no` form of this command is inserted into the configuration for individual interfaces when the `no passive-interface interface` command is issued while `passive-interface default` is configured.

This command behavior has changed as follows:

`passive-interface interface`

- The previous `no passive-interface interface` is removed from the running configuration.
- The ABR status for the router is updated.
- Save `passive-interface interface` into the running configuration.

`passive-interface default`

- All present and future OSPF interfaces are marked as *passive*.
- Any adjacency is explicitly terminated from all OSPF interfaces.
- All previous `passive-interface interface` commands are removed from the running configuration.
- All previous `no passive-interface interface` commands are removed from the running configuration.

`no passive-interface interface`

- Remove the interface from the passive list.
- The ABR status for the router is updated.
- If `passive-interface default` is specified, then save `no passive-interface interface` into the running configuration.

`No passive-interface default`

- Clear everything and revert to the default behavior.
- All previously marked passive interfaces are removed.
- May update ABR status.

redistribute

Redistribute information from another routing protocol throughout the OSPF process.

C9000 Series

Syntax	<pre>redistribute {connected rip static} [metric <i>metric-value</i> metric-type <i>type-value</i>] [route-map <i>map-name</i>] [tag <i>tag-value</i>]</pre> To disable redistribution, use the <code>no redistribute {connected isis rip static}</code> command.																					
Parameters	<table><tr><td>connected</td><td>Enter the keyword <code>connected</code> to specify that information from active routes on interfaces is redistributed.</td></tr><tr><td>rip</td><td>Enter the keyword <code>rip</code> to specify that RIP routing information is redistributed.</td></tr><tr><td>static</td><td>Enter the keyword <code>static</code> to specify that information from static routes is redistributed.</td></tr><tr><td>metric <i>metric-value</i></td><td>(OPTIONAL) Enter the keyword <code>metric</code> then a number. The range is from 0 (zero) to 16777214.</td></tr><tr><td>metric-type <i>type-value</i></td><td>(OPTIONAL) Enter the keywords <code>metric-type</code> then one of the following: 1 = OSPF External type 1 2 = OSPF External type 2 </td></tr><tr><td>route-map <i>map-name</i></td><td>(OPTIONAL) Enter the keywords <code>route-map</code> then the name of the route map.</td></tr><tr><td>tag <i>tag-value</i></td><td>(OPTIONAL) Enter the keyword <code>tag</code> then a number. The range is from 0 to 4294967295.</td></tr></table>		connected	Enter the keyword <code>connected</code> to specify that information from active routes on interfaces is redistributed.	rip	Enter the keyword <code>rip</code> to specify that RIP routing information is redistributed.	static	Enter the keyword <code>static</code> to specify that information from static routes is redistributed.	metric <i>metric-value</i>	(OPTIONAL) Enter the keyword <code>metric</code> then a number. The range is from 0 (zero) to 16777214.	metric-type <i>type-value</i>	(OPTIONAL) Enter the keywords <code>metric-type</code> then one of the following: 1 = OSPF External type 1 2 = OSPF External type 2	route-map <i>map-name</i>	(OPTIONAL) Enter the keywords <code>route-map</code> then the name of the route map.	tag <i>tag-value</i>	(OPTIONAL) Enter the keyword <code>tag</code> then a number. The range is from 0 to 4294967295.						
connected	Enter the keyword <code>connected</code> to specify that information from active routes on interfaces is redistributed.																					
rip	Enter the keyword <code>rip</code> to specify that RIP routing information is redistributed.																					
static	Enter the keyword <code>static</code> to specify that information from static routes is redistributed.																					
metric <i>metric-value</i>	(OPTIONAL) Enter the keyword <code>metric</code> then a number. The range is from 0 (zero) to 16777214.																					
metric-type <i>type-value</i>	(OPTIONAL) Enter the keywords <code>metric-type</code> then one of the following: 1 = OSPF External type 1 2 = OSPF External type 2																					
route-map <i>map-name</i>	(OPTIONAL) Enter the keywords <code>route-map</code> then the name of the route map.																					
tag <i>tag-value</i>	(OPTIONAL) Enter the keyword <code>tag</code> then a number. The range is from 0 to 4294967295.																					
Defaults	Not configured.																					
Command Modes	ROUTER OSPF																					
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr><tr><td>8.3.7.0</td><td>Introduced on the S4810.</td></tr><tr><td>7.8.1.0</td><td>Added support for Multi-Process OSPF.</td></tr><tr><td>7.6.1.0</td><td>Introduced on the S-Series.</td></tr><tr><td>7.5.1.0</td><td>Introduced on the C-Series.</td></tr><tr><td>6.1.1.1</td><td>Introduced on the E-Series.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	7.8.1.0	Added support for Multi-Process OSPF.	7.6.1.0	Introduced on the S-Series.	7.5.1.0	Introduced on the C-Series.	6.1.1.1	Introduced on the E-Series.
Version	Description																					
9.9(0.0)	Introduced on the C9010.																					
9.2(1.0)	Introduced on the Z9500.																					
8.3.19.0	Introduced on the S4820T.																					
8.3.11.1	Introduced on the Z9000.																					
8.3.7.0	Introduced on the S4810.																					
7.8.1.0	Added support for Multi-Process OSPF.																					
7.6.1.0	Introduced on the S-Series.																					
7.5.1.0	Introduced on the C-Series.																					
6.1.1.1	Introduced on the E-Series.																					
Usage Information	To redistribute the default route (0.0.0.0/0), configure the <code>default-information originate</code> command.																					
Related Commands	default-information originate — generates a default route into the OSPF routing domain.																					

redistribute bgp

Redistribute BGP routing information throughout the OSPF instance.

C9000 Series

Syntax	<pre>redistribute bgp as <i>number</i> [metric <i>metric-value</i>] [metric-type <i>type-value</i>] [tag <i>tag-value</i>]</pre> To disable redistribution, use the <code>no redistribute bgp as <i>number</i> [metric <i>metric-value</i>] [metric-type <i>type-value</i>] [route-map <i>map-name</i>] [tag <i>tag-value</i>]</code> command.	
Parameters	as <i>number</i>	Enter the autonomous system number. The range is from 1 to 65535.
	metric <i>metric-value</i>	(OPTIONAL) Enter the keyword <code>metric</code> then the metric-value number. The range is from 0 to 16777214.
	metric-type <i>type-value</i>	(OPTIONAL) Enter the keywords <code>metric-type</code> then one of the following: 1 = for OSPF External type 1 2 = for OSPF External type 2
	route-map <i>map-name</i>	(OPTIONAL) Enter the keywords <code>route-map</code> then the name of the route map.
	tag <i>tag-value</i>	(OPTIONAL) Enter the keyword <code>tag</code> to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.
Defaults	none	
Command Modes	ROUTER OSPF	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.3	Added Route Map for BGP Redistribution to OSPF.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
7.4.1.0	Added the keyword <code>default</code> .
6.1.1.1	Introduced on the E-Series.

redistribute isis

Redistribute IS-IS routing information throughout the OSPF instance.

C9000 Series

Syntax	<pre>redistribute isis [tag] [level-1 level-1-2 level-2] [metric <i>metric-value</i> metric-type <i>type-value</i>] [route-map <i>map-name</i>] [tag <i>tag-value</i>]</pre> To disable redistribution, use the <code>no redistribute isis [tag] [level-1 level-1-2 level-2] [metric <i>metric-value</i> metric-type <i>type-value</i>] [route-map <i>map-name</i>] [tag <i>tag-value</i>]</code> command.		
Parameters	<i>tag</i>	(OPTIONAL) Enter the name of the IS-IS routing process.	
	<i>level-1</i>	(OPTIONAL) Enter the keywords <code>level-1</code> to redistribute only IS-IS Level-1 routes.	
	<i>level-1-2</i>	(OPTIONAL) Enter the keywords <code>level-1-2</code> to redistribute both IS-IS Level-1 and Level-2 routes.	
	<i>level-2</i>	(OPTIONAL) Enter the keywords <code>level-2</code> to redistribute only IS-IS Level-2 routes.	
	<i>metric metric-value</i>	(OPTIONAL) Enter the keyword <code>metric</code> then a number. The range is from 0 (zero) to 4294967295.	
	<i>metric-type type-value</i>	(OPTIONAL) Enter the keywords <code>metric-type</code> then one of the following: ● 1 = for OSPF External type 1 ● 2 = for OSPF External type 2	
	<i>route-map map-name</i>	(OPTIONAL) Enter the keywords <code>route-map</code> then the name of the route map.	
	<i>tag tag-value</i>	(OPTIONAL) Enter the keyword <code>tag</code> to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.	
Defaults	Not configured.		
Command Modes	ROUTER OSPF		
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .		

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

router-id

To configure a fixed router ID, use this command.

C9000 Series

Syntax	<code>router-id ip-address</code> To remove the fixed router ID, use the <code>no router-id ip-address</code> command.	
Parameters	<i>ip-address</i>	Enter the router ID in the IP address format.
Defaults	none.	
Command Modes	ROUTER OSPF	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information	You can configure an arbitrary value in the IP address format for each router. However, each router ID must be unique. If you use this command on an OSPF router process, which is already active (that is, has neighbors), a prompt reminding you that changing the router-id brings down the existing OSPF adjacency. The new router ID is effective at the next reload.

Example	<pre>Dell(conf)#router ospf 100 Dell(conf-router_ospf)#router-id 1.1.1.1 Changing router-id will bring down existing OSPF adjacency [y/n]: Dell(conf-router_ospf)#show config ! router ospf 100 router-id 1.1.1.1 Dell(conf-router_ospf)#no router-id Changing router-id will bring down existing OSPF adjacency [y/n]: Dell#</pre>

router ospf

To configure an OSPF instance, enter ROUTER OSPF mode.

C9000 Series

Syntax	<pre>router ospf process-id [vrf {vrf name}]</pre> To delete an OSPF instance, use the <code>no router ospf process-id</code> command.																											
Parameters	process-id	Enter a number for the OSPF instance. The range is from 1 to 65535.																										
	vrf-name	Enter the VRF process identifier to tie the OSPF instance to the VRF. All network commands under this OSPF instance are then tied to the VRF instance.																										
Defaults	Not configured.																											
Command Modes	CONFIGURATION																											
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.4(0.0)</td><td>Added support for VRF on all platforms (Except MXL and STOMP).</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>9.1(0.0)</td><td>Added support for OSPFv3 on the S4810 and Z9000.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr><tr><td>8.3.7.0</td><td>Introduced on the S4810.</td></tr><tr><td>7.9.1.0</td><td>Added support for VRF on E-Series.</td></tr><tr><td>7.8.1.0</td><td>Added support for Multi-Process OSPF.</td></tr><tr><td>7.6.1.0</td><td>Introduced on the S-Series.</td></tr><tr><td>7.5.1.0</td><td>Introduced on the C-Series.</td></tr><tr><td>6.1.1.1</td><td>Introduced on the E-Series.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).	9.2(1.0)	Introduced on the Z9500.	9.1(0.0)	Added support for OSPFv3 on the S4810 and Z9000.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	7.9.1.0	Added support for VRF on E-Series.	7.8.1.0	Added support for Multi-Process OSPF.	7.6.1.0	Introduced on the S-Series.	7.5.1.0	Introduced on the C-Series.	6.1.1.1	Introduced on the E-Series.
Version	Description																											
9.9(0.0)	Introduced on the C9010.																											
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).																											
9.2(1.0)	Introduced on the Z9500.																											
9.1(0.0)	Added support for OSPFv3 on the S4810 and Z9000.																											
8.3.19.0	Introduced on the S4820T.																											
8.3.11.1	Introduced on the Z9000.																											
8.3.7.0	Introduced on the S4810.																											
7.9.1.0	Added support for VRF on E-Series.																											
7.8.1.0	Added support for Multi-Process OSPF.																											
7.6.1.0	Introduced on the S-Series.																											
7.5.1.0	Introduced on the C-Series.																											
6.1.1.1	Introduced on the E-Series.																											
Usage Information	You must have an IP address assigned to an interface to enter ROUTER OSPF mode and configure OSPF. After the OSPF process and the VRF are tied together, you cannot use the OSPF Process ID again in the system. You can only create one process per VRF.																											
Example	<pre>To create an OSPF instance in default vrf Dell(conf)#router ospf 1 Dell(conf-router_ospf-1)# To create an OSPF instance in a non-default vrf, for example, "vrf1" Dell(conf)#router ospf 2 vrf vrf1 Dell(conf-router_ospf-2)#</pre>																											

show config

Display the non-default values in the current OSPF configuration.

C9000 Series

Syntax `show config`

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Example

```
Dell(conf-router_ospf)#show config
!
router ospf 3
passive-interface FastEthernet 0/1
Dell(conf-router_ospf)#
```

show ip ospf

Display information on the OSPF process configured on the switch.

C9000 Series

Syntax `show ip ospf process-id [vrf vrf name]`

Parameters

process-id	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
vrf vrf-name	Enter the keyword <code>vrf</code> and the name of the VRF to view only the OSPF information tied to the VRF process.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Version	Description
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.8.0	Added output for LSA throttling timers.
8.3.7.0	Introduced on the S4810.
7.9.1.0	Added support for VRF on E-Series.
7.8.1.0	Added support of Multi-Process OSPF.
7.8.1.0	Added the <i>process-id</i> option, in support of Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information

If you delete all the network area commands for Area 0, the `show ip ospf` command output does not list Area 0.

The following describes the `show ip ospf` command shown in the following example.

Line Beginning with	Description
“Routing Process...”	Displays the OSPF process ID and the IP address associated with the process ID.
“Supports only...”	Displays the number of Type of Service (TOS) routes supported.
“SPF schedule...”	Displays the delay and hold time configured for this process ID.
“Convergence Level”	
“Min LSA....”	Displays the intervals set for LSA transmission and acceptance.
“Number of...”	Displays the number and type of areas configured for this process ID.

Example

```
Dell#show ip ospf 10
Routing Process ospf 10 with ID 1.1.1.1 Virtual router default
Supports only single TOS (TOS0) routes
SPF schedule delay 5 secs, Hold time between two SPFs 10 secs
Convergence Level 0
Min LSA origination 0 msec, Min LSA arrival 1000 msec
Min LSA hold time 5000 msec, Max LSA wait time 5000 msec
Number of area in this router is 1, normal 1 stub 0 nssa 0
    Area BACKBONE (0)
        Number of interface in this area is 1
        SPF algorithm executed 205 times
        Area ranges are
Dell#
```

Related Commands

[show ip ospf database](#) — displays information about the OSPF routes configured.

[show ip ospf interface](#) — displays the OSPF interfaces configured.

[show ip ospf neighbor](#) — displays the OSPF neighbors configured.

show ip ospf asbr

Display all autonomous system boundary router (ASBR) routers visible to OSPF.

C9000 Series

Syntax	show ip ospf <i>process-id</i> vrf <i>vrf-name</i> asbr		
Parameters	<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.	
	vrf <i>vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to view all ASBR routers visible to the OSPF process that is tied to a specific VRF.	
Defaults	none		
Command Modes	• EXEC • EXEC Privilege		
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .		

Version	Description
9.9(0.0)	Introduced on the C9010.
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support of Multi-Process OSPF.
7.8.1.0	Added the <i>process-id</i> option, in support of Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series and E-Series.

Usage Information	To isolate problems with external routes, use this command. In OSPF, external routes are calculated by adding the LSA cost to the cost of reaching the ASBR router. If an external route does not have the correct cost, use this command to determine if the path to the originating router is correct. The display output is not sorted in any order.  NOTE: ASBRs that are not in directly connected areas are also displayed. You can determine if an ASBR is in a directly connected area (or not) by the flags. For ASBRs in a directly connected area, E flags are set. In the following example, router 1.1.1.1 is in a directly connected area since the Flag is E/-/-/. For remote ASBRs, the E flag is clear (-/-/-/).

Example

```
Dell#show ip ospf lasbr

RouterID  Flags  Cost Nexthop  Interface Area
3.3.3.3   -/-/-/  2    10.0.0.2   Te 0/1     1
1.1.1.1   E/-/-/  0    0.0.0.0    -          0
Dell#
```

show ip ospf database

Display all LSA information. If you do not enable OSPF on the switch, no output is generated.

C9000 Series

Syntax	show ip ospf <i>process-id</i> [vrf <i>vrf-name</i>] database [<i>database-summary</i>]	
Parameters	<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
	vrf <i>vrf-name</i>	Enter the keyword <code>vrf</code> and then the name of the VRF to view LSA information on OSPF processes corresponding to that VRF.
	<i>database-summary</i>	(OPTIONAL) Enter the keywords <code>database-summary</code> to the display the number of LSA types in each area and the total number of LSAs.
Command Modes	- EXEC - EXEC Privilege	

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support of Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information	The following describes the <code>show ip ospf <i>process-id</i> database</code> command shown in the following example.	
	Field	Description
	Link ID	Identifies the router ID.
	ADV Router	Identifies the advertising router's ID.
	Age	Displays the link state age.
	Seq#	Identifies the link state sequence number. This number allows you to identify old or duplicate link state advertisements.
	Checksum	Displays the Fletcher checksum of an LSA's complete contents.
	Link count	Displays the number of interfaces for that router.

Example

```
Dell>show ip ospf 1 database

      OSPF Router with ID (11.1.2.1) (Process ID 1)
              Router (Area 0.0.0.0)
Link ID      ADV Router    Age  Seq#           Checksum Link count
```

```

Related Commands [show ip ospf database asbr-summary](#) — displays only ASBR summary LSA information.

show ip ospf database asbr-summary

Display information about autonomous system (AS) boundary LSAs.

C9000 Series

Syntax `show ip ospf [process-id | vrf vrf-name] database asbr-summary [link-state-id] [adv-router ip-address]`

Parameters

- process-id*** Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- vrf vrf-name*** Enter the keyword `vrf` and the name of the VRF to view information about AS boundary LSAs corresponding to a specific VRF.
- link-state-id*** (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
 - the network's IP address for Type 3 LSAs or Type 5 LSAs
 - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs
 - the default destination (0.0.0.0) for Type 5 LSAs
- adv-router ip-address*** (OPTIONAL) Enter the keywords `adv-router` and the ip-address to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Version	Description
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information

The following describes the `show ip ospf database asbr-summary` command shown in the following example.

Field	Description
LS Age	Displays the LSA's age.
Options	Displays the optional capabilities available on router. The following options can be found in this item: • TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service. • DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits. • E or No E is displayed on whether the originating router can accept AS External LSAs.
LS Type	Displays the LSA's type.
Link State ID	Displays the Link State ID.
Advertising Router	Identifies the advertising router's ID.
Checksum	Displays the Fletcher checksum of the LSA's complete contents.
Length	Displays the length in bytes of the LSA.
Network Mask	Displays the network mask implemented on the area.
TOS	Displays the Type of Service (TOS) options. Option 0 is the only option.
Metric	Displays the LSA metric.

Example

```
Dell#show ip ospf 100 database asbr-summary

      OSPF Router with ID (1.1.1.10) (Process ID 100)

      Summary Asbr (Area 0.0.0.0)

LS age: 1437
Options: (No TOS-capability, No DC, E)
LS type: Summary Asbr
Link State ID: 103.1.50.1
Advertising Router: 1.1.1.10
LS Seq Number: 0x8000000f
Checksum: 0x8221
Length: 28
Network Mask: /0
      TOS: 0 Metric: 2

LS age: 473
Options: (No TOS-capability, No DC, E)
```

```
LS type: Summary Asbr
Link State ID: 104.1.50.1
Advertising Router: 1.1.1.10
LS Seq Number: 0x80000010
Checksum: 0x4198
Length: 28
--More--
```

Related Commands

[show ip ospf database](#) — displays OSPF database information.

show ip ospf database external

Display information on the AS external (type 5) LSAs.

C9000 Series

Syntax	<code>show ip ospf [process-id vrf vrf-name] database external [link-state-id] [adv-router ip-address]</code>	
Parameters	<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
	<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to view information on AS external LSAs corresponding to the OSPF processes that are tied to a specific VRF.
	<i>link-state-id</i>	(OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following: - the network's IP address for Type 3 LSAs or Type 5 LSAs - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs - the default destination (0.0.0.0) for Type 5 LSAs
	<i>adv-router ip-address</i>	(OPTIONAL) Enter the keywords <code>adv-router</code> and the ip-address to display only the LSA information about that router.
Command Modes	- EXEC - EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information

The following describes the `show ip ospf process-id database external` command shown in the following example.

Field	Description
LS Age	Displays the LSA's age.
Options	Displays the optional capabilities available on router. The following options can be found in this item: • TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service. • DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits. • E or No E is displayed on whether the originating router can accept AS External LSAs.
LS Type	Displays the LSA's type.
Link State ID	Displays the Link State ID.
Advertising Router	Identifies the router ID of the LSA's originating router.
LS Seq Number	Identifies the link state sequence number. This number enables you to identify old or duplicate LSAs.
Checksum	Displays the Fletcher checksum of the LSA's complete contents.
Length	Displays the length in bytes of the LSA.
Network Mask	Displays the network mask implemented on the area.
Metrics Type	Displays the external type.
TOS	Displays the Type of Service (TOS) options. Option 0 is the only option.
Metric	Displays the LSA metric.
Forward Address	Identifies the address of the forwarding router. Data traffic is forwarded to this router. If the forwarding address is 0.0.0.0, data traffic is forwarded to the originating router.
External Route Tag	Displays the 32-bit field attached to each external route. The OSPF protocol does not use this field, but you can use the field for external route management.

Example

```
Dell#show ip ospf 1 database external

      OSPF Router with ID (20.20.20.5) (Process ID 1)

      Type-5 AS External

LS age: 612
Options: (No TOS-capability, No DC, E)
LS type: Type-5 AS External
Link State ID: 12.12.12.2
Advertising Router: 20.31.3.1
LS Seq Number: 0x80000007
Checksum: 0x4cde
Length: 36
Network Mask: /32
  Metrics Type: 2
  TOS: 0
  Metrics: 25
  Forward Address: 0.0.0.0
  External Route Tag: 43

LS age: 1868
Options: (No TOS-capability, DC)
LS type: Type-5 AS External
Link State ID: 24.216.12.0
Advertising Router: 20.20.20.8
LS Seq Number: 0x80000005
```

```
Checksum: 0xa00e
Length: 36
Network Mask: /24
    Metrics Type: 2
    TOS: 0
    Metrics: 1
    Forward Address: 0.0.0.0
    External Route Tag: 701
Dell#
```

Related Commands

[show ip ospf database](#) — displays OSPF database information.

show ip ospf database network

Display the network (type 2) LSA information.

C9000 Series

Syntax

```
show ip ospf [process-id | vrf vrf-name] database network [link-state-id]
[adv-router ip-address]
```

Parameters

<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to view the network LSA information corresponding to an OSPF process that is tied to a specific VRF
<i>link-state-id</i>	(OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following: - the network's IP address for Type 3 LSAs or Type 5 LSAs - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs - the default destination (0.0.0.0) for Type 5 LSAs
<i>adv-router ip-address</i>	(OPTIONAL) Enter the keywords <code>adv-router</code> and the <code>ip-address</code> to display only the LSA information about that router.

8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information

The following describes the `show ip ospf process-id database network` command shown in the following example.

Field	Description
LS Age	Displays the LSA's age.
Options	Displays the optional capabilities available on router. The following options can be found in this item: • TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service. • DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits. • E or No E is displayed on whether the originating router can accept AS External LSAs.
LS Type	Displays the LSA's type.
Link State ID	Displays the Link State ID.
Advertising Router	Identifies the router ID of the LSA's originating router.
Checksum	Identifies the link state sequence number. This number enables you to identify old or duplicate LSAs.
Length	Displays the Fletcher checksum of an LSA's complete contents.
Network Mask	Displays the length in bytes of the LSA.
Attached Router	Identifies the IP address of routers attached to the network.

Example

```
Dell#show ip ospf 1 data network

      OSPF Router with ID (20.20.20.5) (Process ID 1)

          Network (Area 0.0.0.0)
      LS age: 1372
      Options: (No TOS-capability, DC, E)
      LS type: Network
      Link State ID: 202.10.10.2
      Advertising Router: 20.20.20.8

7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information	The following describes the <code>show ip ospf process-id database opaque-area</code> command shown in the following example.	
	Item	Description
	LS Age	Displays the LSA's age.
	Options	Displays the optional capabilities available on router. The following options can be found in this item: - TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service. - DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits. - E or No E is displayed on whether the originating router can accept AS External LSAs.
	LS Type	Displays the LSA's type.
	Link State ID	Displays the Link State ID.
	Advertising Router	Identifies the advertising router's ID.
	Checksum	Displays the Fletcher checksum of the LSA's complete contents.
	Length	Displays the length in bytes of the LSA.

Item	Description
Opaque Type	Displays the Opaque type field (the first 8 bits of the Link State ID).
Opaque ID	Displays the Opaque type-specific ID (the remaining 24 bits of the Link State ID).

Example

```
Dell>show ip ospf 1 database opaque-area

      OSPF Router with ID (3.3.3.3) (Process ID 1)
      Type-10 Opaque Link Area (Area 0)

LS age: 1133
Options: (No TOS-capability, No DC, E)
LS type: Type-10 Opaque Link Area
Link State ID: 1.0.0.1
Advertising Router: 10.16.1.160
LS Seq Number: 0x80000416
Checksum: 0x376
Length: 28
Opaque Type: 1
Opaque ID: 1
Unable to display opaque data

LS age: 833
Options: (No TOS-capability, No DC, E)
LS type: Type-10 Opaque Link Area
Link State ID: 1.0.0.2
Advertising Router: 10.16.1.160
LS Seq Number: 0x80000002
Checksum: 0x19c2
--More--
```

Related Commands

[show ip ospf database](#) — displays OSPF database information.

show ip ospf database opaque-as

Display the opaque-as (type 11) LSA information.

C9000 Series

Syntax	<code>show ip ospf [process-id vrf vrf-name] database opaque-as [link-state-id] [adv-router ip-address]</code>	
Parameters	<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
	<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to view LSA information tied to the specific VRF.
	<i>link-state-id</i>	(OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following: - the network's IP address for Type 3 LSAs or Type 5 LSAs - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs - the default destination (0.0.0.0) for Type 5 LSAs
	<i>adv-router ip-address</i>	(OPTIONAL) Enter the keywords <code>adv-router</code> and the ip-address to display only the LSA information about that router.
Command Modes	- EXEC - EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

Syntax	<code>show ip ospf [<i>process-id</i>] vrf <i>vrf-name</i>]database router [<i>link-state-id</i>] [<i>adv-router ip-address</i>]</code>	
Parameters	<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
	<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to view the router LSA information corresponding to the OSPF process that is tied to a specific VRF.
	<i>link-state-id</i>	(OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following: - the network's IP address for Type 3 LSAs or Type 5 LSAs - the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs - the default destination (0.0.0.0) for Type 5 LSAs
	<i>adv-router ip-address</i>	(OPTIONAL) Enter the keywords <code>adv-router</code> followed by the IP address of an Advertising Router to display only the LSA information about that router.
Command Modes	- EXEC - EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.

Version	Description
6.1.1.1	Introduced on the E-Series.

Usage Information

The following describes the `show ip ospf process-id database router` command shown in the following example.

Item	Description
LS Age	Displays the LSA age.
Options	Displays the optional capabilities available on router. The following options can be found in this item: • TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service. • DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits. • E or No E is displayed on whether the originating router can accept AS External LSAs.
LS Type	Displays the LSA type.
Link State ID	Displays the Link State ID.
Advertising Router	Identifies the router ID of the LSA's originating router.
LS Seq Number	Displays the link state sequence number. This number detects duplicate or old LSAs.
Checksum	Displays the Fletcher checksum of an LSA's complete contents.
Length	Displays the length in bytes of the LSA.
Number of Links	Displays the number of active links to the type of router (Area Border Router or AS Boundary Router) listed in the previous line.
Link connected to:	Identifies the type of network to which the router is connected.
(Link ID)	Identifies the link type and address.
(Link Data)	Identifies the router interface address.
Number of TOS Metric	Lists the number of TOS metrics.
TOS 0 Metric	Lists the number of TOS 0 metrics.

Example

```
Dell#show ip ospf 100 database router

      OSPF Router with ID (1.1.1.10) (Process ID 100)

      Router (Area 0)

LS age: 967
Options: (No TOS-capability, No DC, E)
LS type: Router
Link State ID: 1.1.1.10
Advertising Router: 1.1.1.10
LS Seq Number: 0x8000012f
Checksum: 0x3357
Length: 144
AS Boundary Router
Area Border Router
  Number of Links: 10

Link connected to: a Transit Network
  (Link ID) Designated Router address: 192.68.129.1
  (Link Data) Router Interface address: 192.68.129.1
  Number of TOS metric: 0
```

```

TOS 0 Metric: 1

Link connected to: a Transit Network
(Link ID) Designated Router address: 192.68.130.1
(Link Data) Router Interface address: 192.68.130.1
Number of TOS metric: 0
TOS 0 Metric: 1

Link connected to: a Transit Network
(Link ID) Designated Router address: 192.68.142.2
(Link Data) Router Interface address: 192.68.142.2
Number of TOS metric: 0
TOS 0 Metric: 1

Link connected to: a Transit Network
(Link ID) Designated Router address: 192.68.141.2
(Link Data) Router Interface address: 192.68.141.2
Number of TOS metric: 0
TOS 0 Metric: 1

Link connected to: a Transit Network
(Link ID) Designated Router address: 192.68.140.2
(Link Data) Router Interface address: 192.68.140.2
Number of TOS metric: 0
TOS 0 Metric: 1

Link connected to: a Stub Network
(Link ID) Network/subnet number: 11.1.5.0
--More--

```

Related Commands

[show ip ospf database](#) — displays OSPF database information.

show ip ospf database summary

Display the network summary (type 3) LSA routing information.

C9000 Series

Syntax

```
show ip ospf [process-id|vrf vrf-name]database summary [link-state-id]
[adv-router ip-address]
```

Parameters

<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to view LSA routing information corresponding to the OSPF process that is tied to a specific VRF.
<i>link-state-id</i>	(OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following: • the network's IP address for Type 3 LSAs or Type 5 LSAs • the router's OSPF router ID for Type 1 LSAs or Type 4 LSAs • the default destination (0.0.0.0) for Type 5 LSAs
<i>adv-router ip-address</i>	(OPTIONAL) Enter the keywords <code>adv-router</code> then the IP address of an Advertising Router to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information

The following describes the `show ip ospf process-id database summary` command shown in the following example.

Item	Description
LS Age	Displays the LSA age.
Options	Displays the optional capabilities available on router. The following options can be found in this item: • TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service. • DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits. • E or No E is displayed on whether the originating router can accept AS External LSAs.
LS Type	Displays the LSA type.
Link State ID	Displays the Link State ID.
Advertising Router	Identifies the router ID of the LSA's originating router.
LS Seq Number	Displays the link state sequence number. This number allows you to identify old or duplicate LSAs.
Checksum	Displays the Fletcher checksum of an LSA's complete contents.
Length	Displays the length in bytes of the LSA.
Network Mask	Displays the network mask implemented on the area.
TOS	Displays the TOS options. Option 0 is the only option.
Metric	Displays the LSA metrics.

Example

```
Dell#show ip ospf 100 database summary

      OSPF Router with ID (1.1.1.10) (Process ID 100)

          Summary Network (Area 0.0.0.0)

LS age: 1551
Options: (No TOS-capability, DC, E)
LS type: Summary Network
Link State ID: 192.68.16.0
Advertising Router: 192.168.17.1
LS Seq Number: 0x80000054
Checksum: 0xb5a2
Length: 28
Network Mask: /24
```

```

TOS: 0 Metric: 1

LS age: 9
Options: (No TOS-capability, No DC, E)
LS type: Summary Network
Link State ID: 192.68.32.0
Advertising Router: 1.1.1.10
LS Seq Number: 0x80000016
Checksum: 0x987c
Length: 28
Network Mask: /24
TOS: 0 Metric: 1

LS age: 7
Options: (No TOS-capability, No DC, E)
LS type: Summary Network
Link State ID: 192.68.33.0
Advertising Router: 1.1.1.10
LS Seq Number: 0x80000016
Checksum: 0x1241
Length: 28
Network Mask: /26
TOS: 0 Metric: 1

```

Related Commands

[show ip ospf database](#) — displays OSPF database information.

show ip ospf interface

Display the OSPF interfaces configured. If OSPF is not enabled on the switch, no output is generated.

C9000 Series

Syntax

```
show ip ospf [process-id | vrf vrf-name] interface [interface]
```

Parameters

<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to view the OSPF processes that are tied to a specific VRF.
<i>interface</i>	(OPTIONAL) Enter the following keywords and slot/port or number information: • For the null interface, enter the keyword <code>null</code> then zero (0). • For loopback interfaces, enter the keyword <code>loopback</code> then a number from 0 to 16383. • For tunnel interfaces, enter the keyword <code>tunnel</code> then a number from 0 to 16383. • For Port Channel groups, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a VLAN, enter the keyword <code>vlan</code> then the VLAN ID. The range is from 1 to 4094. • For a port extender (PE) Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. • For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the <i>stack-unit unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE.

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced peTenGigE interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information The following describes the `show ip ospf process-id interface` command shown in the following example.

Item	Description
TenGigabitEthernet...	This line identifies the interface type slot/port and the status of the OSPF protocol on that interface.
Internet Address...	This line displays the IP address, network mask and area assigned to this interface.
Process ID...	This line displays the OSPF Process ID, Router ID, Network type and cost metric for this interface.
Transmit Delay...	This line displays the interface's settings for Transmit Delay, State, and Priority. In the State setting, BDR is Backup Designated Router.
Designated Router...	This line displays the ID of the Designated Router and its interface address.
Backup Designated...	This line displays the ID of the Backup Designated Router and its interface address.
Timer intervals...	This line displays the interface's timer settings for Hello interval, Dead interval, Transmit Delay (Wait), and Retransmit Interval.
Hello due...	This line displays the amount time until the next Hello packet is sent out this interface.
Neighbor Count...	This line displays the number of neighbors and adjacent neighbors. Listed below this line are the details about each adjacent neighbor.

Example

```
Dell>show ip ospf int

TenGigabitEthernet 1/17 is up, line protocol is up
  Internet Address 192.168.1.2/30, Area 0.0.0.1
  Process ID 1, Router ID 192.168.253.2, Network Type BROADCAST, Cost: 1
  Transmit Delay is 1 sec, State DR, Priority 1
  Designated Router (ID) 192.168.253.2, Interface address 192.168.1.2
  Backup Designated Router (ID) 192.168.253.1, Interface address
  192.168.1.1
```

```

Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
Hello due in 00:00:02
Neighbor Count is 1, Adjacent neighbor count is 1
Adjacent with neighbor 192.168.253.1 (Backup Designated Router)

TenGigabitEthernet 1/23 is up, line protocol is up
Internet Address 192.168.0.1/24, Area 0.0.0.1
Process ID 1, Router ID 192.168.253.2, Network Type BROADCAST, Cost: 1
Transmit Delay is 1 sec, State DROTHER, Priority 1
Designated Router (ID) 192.168.253.5, Interface address 192.168.0.4
Backup Designated Router (ID) 192.168.253.3, Interface address
192.168.0.2
Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
Hello due in 00:00:08
Neighbor Count is 3, Adjacent neighbor count is 2
Adjacent with neighbor 192.168.253.5 (Designated Router)
Adjacent with neighbor 192.168.253.3 (Backup Designated Router)

Loopback 0 is up, line protocol is up
Internet Address 192.168.253.2/32, Area 0.0.0.1
Process ID 1, Router ID 192.168.253.2, Network Type LOOPBACK, Cost: 1
Loopback interface is treated as a stub Host.
Dell>

```

show ip ospf neighbor

Display the OSPF neighbors connected to the local router.

C9000 Series

Syntax	show ip ospf [<i>process-id</i> vrf <i>vrf-name</i>] neighbor	
Parameters	<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
	vrf <i>vrf-name</i>	Enter the keyword vrf and the name of the VRF to view information corresponding to the OSPF neighbors that are tied to a specific VRF.
Command Modes	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information

The following describes the `show ip ospf process-id neighbor` command shown in the following example.

Item	Description
Neighbor ID	Displays the neighbor router ID.
Pri	Displays the priority assigned neighbor.
State	Displays the OSPF state of the neighbor.
Dead Time	Displays the expected time until the system declares the neighbor dead.
Address	Displays the IP address of the neighbor.
Interface	Displays the interface type slot/port information.
Area	Displays the neighbor's area (process ID).

Example

```
Dell#show ip ospf 34 neighbor

Neighbor ID Pri State          Dead Time Address Interface Area
20.20.20.7  1 FULL/DR      00:00:32 182.10.10.3 Te 0/0 0.0.0.2
192.10.10.2 1 FULL/DR      00:00:37 192.10.10.2 Te 0/1 0.0.0.1
20.20.20.1   1 FULL/DROTHER 00:00:36 192.10.10.4 Te 0/1 0.0.0.1
Dell#
```

show ip ospf routes

Display routes OSPF calculates and stores in OSPF RIB.

C9000 Series

Syntax

```
show ip ospf [process-id|vrf vrf-name] routes
```

Parameters

<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to view the OSPF RIB information corresponding to the OSPF processes that are tied to a specific VRF.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.

Version	Description
7.5.1.0	Introduced on the C-Series and E-Series.

Usage Information

This command is useful in isolating routing problems between the OSPF and the RTM. For example, if a route is missing from the RTM/FIB but is visible from the display output of this command, the problem is with downloading the route to the RTM.

This command has the following limitations:

- The display output is sorted by prefixes; intra-area ECMP routes are not displayed together.
- For Type 2 external routes, Type 1 cost is not displayed.

Example

```
Dell#show ip ospf 100 route

Prefix          Cost Nexthop    Interface Area  Type
1.1.1.1         1    0.0.0.0      Lo 0      0    Intra-Area
3.3.3.3         2    13.0.0.3     Te 0/47    1    Intra-Area
13.0.0.0        1    0.0.0.0      Te 0/47    0    Intra-Area
150.150.150.0   2    13.0.0.3     Te 0/47    -    External
172.30.1.0      2    13.0.0.3     Te 0/47    1    Intra-Area
Dell#
```

show ip ospf statistics

Display OSPF statistics.

C9000 Series

Syntax

```
show ip ospf [process-id | vrf vrf-name] statistics global | [interface name {neighbor router-id}]
```

Parameters

<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to display statistics corresponding to the OSPF process that is tied to a specific VRF.
<i>global</i>	Enter the keyword <code>global</code> to display the packet counts received on all running OSPF interfaces and packet counts OSPF neighbors receive and transmit.
<i>interface name</i>	(OPTIONAL) Enter the keyword <code>interface</code> then one of the following interface keywords and slot/port or number information: • For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the slot/port information. • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. • For a Null interface, enter the keywords <code>null 0</code>. • For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. • For a tunnel interface, enter the keyword <code>tunnel</code> then the tunnel ID. The range is from 1 to 16383. • For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.
<i>neighbor router-id</i>	(OPTIONAL) Enter the keyword <code>neighbor</code> then the neighbor's router-id in dotted decimal format (A.B.C.D.).

Defaults	none

TxQ-Len	The transmission queue length.																																		
RxQ-Len	The reception queue length.																																		
Tx-Mark	The highest number mark in the transmission queue.																																		
Rx-Mark	The highest number mark in the reception queue.																																		
Hello-Q	The queue, for transmission or reception, for the hello packets.																																		
LSR-Q	The queue, for transmission or reception, for the link state request packets.																																		
Other-Q	The queue, for transmission or reception, for the link state acknowledgement, database description, and update packets.																																		
Error Type	Description																																		
Intf_Down	Received packets on an interface that is either down or OSPF is not enabled.																																		

Error Type	Description
Non-Dr	Received packets with a destination address of ALL_DRP even though SELF is not a designated router.
Self-Orig	Receive the self originated packet.
Wrong_Len	The received packet length is different to what was indicated in the OSPF header.
Invld-Nbr	LSA, LSR, LSU, and DDB are received from a peer which is not a neighbor peer.
Nbr-State	LSA, LSR, and LSU are received from a neighbor with stats less than the loading state.
Auth-Error	Simple authentication error.
MD5-Error	MD5 error
Cksum-Err	Checksum Error
Version	Version mismatch
AreaMismatch	Area mismatch
Conf-Issue	The received hello packet has a different hello or dead interval than the configuration.
No-Buffer	Buffer allocation failure.
Seq-no	A sequence no errors occurred during the database exchange process.
Socket	Socket Read/Write operation error.
Q-overflow	Packets dropped due to queue overflow.
Unknown-Pkt	Received packet is not an OSPF packet.
RtidZero	Received router-ID (0.0.0.0) from peer.

Example

```

ell#show ip ospf 1 statistics
Interface TenGigabitEthernet 0/0
  Error packets (Receive statistics)
    Intf-Down      0  Non-Dr      0  Self-Orig      0
    Wrong-Len      0  Invld-Nbr    0  Nbr-State      0
    Auth-Error     0  MD5-Error   0  Cksum-Err      0
    Version        0  AreaMisMatch 0  Conf-Issue     0
    SeqNo-Err      0  Unknown-Pkt  0  Bad-LsReq      0
    RtidZero       0
  Neighbor ID 1.2.1.1
  Packet Statistics
    RX      Hello  DDiscr  LSReq  LSUpd  LSAck
    TX      130    2       1     3      3
    TX      144    2       1     3      2
  Timers
    Hello      6  Wait      0  Grace      0
    Dead      38  Transmit  0
  Queue Statistics
    LSU-Q-Len      0  LSU-Q-Wmark      2
    LSR-Q-Len      0  LSR-Q-Wmark      1

```

```

Dell#show ip ospf 1 statistics global

  OSPF Packet Count
    Total      Error      Hello      DDiscr      LSReq      LSUpd      LSAck
  RX      114      0      105      2      1      3      3
  TX      127      0      119      2      1      3      2

  OSPF Global Queue Length
    TxQ-Len      RxQ-Len      Tx-Mark      Rx-Mark
  Hello-Q      0      0      0      0
  LSR-Q      0      0      0      0
  Other-Q      0      0      0      0

  Error packets (Receive statistics)
  Intf-Down      0  Non-Dr      0  Self-Orig      0
  Wrong-Len      0  Invld-Nbr    0  Nbr-State      0
  Auth-Err      0  MD5-Err      0  Chksum         0

```

Version	0	AreaMis	0	Conf-Issues	0
No-Buffer	0	Seq-No	0	Socket	0
Q-OverFlow	0	Unknown-Pkt	0	RtidZero	0
Error packets (Transmit statistics)					
Socket Errors	0				

Usage Information

The `show ip ospf process-id statistics` command displays the error packet count received on each interface as:

- The hello-timer remaining value for each interface
- The wait-timer remaining value for each interface
- The grace-timer remaining value for each interface
- The packet count received and transmitted for each neighbor
- Dead timer remaining value for each neighbor
- Transmit timer remaining value for each neighbor
- The LSU Q length and its highest mark for each neighbor
- The LSR Q length and its highest mark for each neighbor

Example (Statistics)

```
Dell#show ip ospf 100 statistics

Interface TenGigabitEthernet 0/8

  Hello-Timer 9, Wait-Timer 0, Grace-Timer 0
  Error packets (Only for RX)

Intf-Down 0 Non-Dr 0 Self-Org 0
Wrong-Len 0 Invld-Nbr 0 Nbr-State 0
Auth-Error 0 MD5-Error 0 Cksum-Err 0
Version 0 AreaMisMatch 0 Conf-Issue 0
SeqNo-Err 0 Unkown-Pkt 0

  Neighbor ID 9.1.1.2

    Hello DDiscr LSReq LSUpd LSAck
RX  59   3      1    1    1
TX  62   2      1    0    0

  Dead-Timer 37, Transmit-Timer 0
  LSU-Q-Len 0, LSU-Q-Wmark 0
  LSR-Q-Len 0, LSR-Q-Wmark 1
```

Related Commands

[clear ip ospf statistics](#) — clears the packet statistics in all interfaces and neighbors.

show ip ospf timers rate-limit

Show the LSA currently in the queue waiting for timers to expire.

C9000 Series

Syntax

```
show ip ospf [process-id|vrf vrf-name]timers rate-limit
```

Parameters

<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to view LSAs corresponding to a specific VRF that are currently in queue waiting for timers to expire.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.8.0	Introduced on the S4810.

Example

```
Dell#show ip ospf 10 timers rate-limit

List of LSAs in rate limit Queue
LSA id: 1.1.1.0 Type: 3 Adv Rtid: 3.3.3.3 Expiry time: 00:00:09.111
LSA id: 3.3.3.3 Type: 1 Adv Rtid: 3.3.3.3 Expiry time: 00:00:23.96
Dell#
```

show ip ospf topology

Display routers in directly connected areas.

C9000 Series

Syntax

```
show ip ospf [process-id] vrf vrf-name topology
```

Parameters

<i>process-id</i>	Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> and the name of the VRF to view the information on routers corresponding to a specific VRF that are in directly connected areas.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.4(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.

Version	Description
7.5.1.0	Introduced on the C-Series and E-Series.

Usage Information

To isolate problems with inter-area and external routes, use this command. In OSPF inter-area and external routes are calculated by adding LSA cost to the cost of reaching the router. If an inter-area or external route is not of correct cost, the display can determine if the path to the originating router is correct or not.

Example

```
Dell#show ip ospf 1 topology

Router ID  Flags Cost  Nexthop  Interface Area
3.3.3.3    E/B/-/ 1    20.0.0.3 Te 13/1    0
1.1.1.1    E/-/-/ 1    10.0.0.1 Te 7/1     1
Dell#
```

summary-address

To advertise one external route, set the OSPF ASBR.

C9000 Series

Syntax

`summary-address ip-address mask [not-advertise] [tag tag-value]`

To disable summary address, use the `no summary-address ip-address mask` command.

Parameters

<i>ip-address</i>	Specify the IP address in dotted decimal format of the address to summarize.
<i>mask</i>	Specify the mask in dotted decimal format of the address to summarize.
not-advertise	(OPTIONAL) Enter the keywords <code>not-advertise</code> to suppress that match the network prefix/mask pair.
tag <i>tag-value</i>	(OPTIONAL) Enter the keyword <code>tag</code> then a value to match on routes redistributed through a route map. The range is from 0 to 4294967295.

Defaults

Not configured.

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

Usage Information

The `area range` command summarizes routes for the different areas.

With the `not-advertise` parameter configured, you can use this command to filter out some external routes. For example, if you want to redistribute static routes to OSPF, but you don't want OSPF to advertise routes with prefix 1.1.0.0, you can configure the `summary-address 1.1.0.0 255.255.0.0 not-advertise` to filter out all the routes fall in range 1.1.0.0/16.

Related Commands

[area range](#) — summarizes routes within an area.

timers spf

Set the time interval between when the switch receives a topology change and starts a shortest path first (SPF) calculation.

Syntax	<code>timers spf delay holdtime msec</code> To return to the default, use the <code>no timers spf</code> command.	
Parameters	delay	Enter a number as the delay. The range is from 0 to 2147483647. The default is 5 seconds .
	holdtime	Enter a number as the hold time. The range is from 0 to 2147483647. The default is 10 seconds .
	msec	Enter the keyword <code>msec</code> to specify the time interval value in milli seconds.  NOTE: If you do not specify the <code>msec</code> option, the timer values are considered as seconds.

- Defaults**
- delay = 5 seconds
 - holdtime = 10 seconds

Command Modes ROUTER OSPFv2

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.11.0.0	Introduced the keyword <code>msec</code> .
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
pre-6.1.1.1	Introduced on the E-Series.

Usage Information

Setting the *delay* and *holdtime* parameters to a low number enables the switch to an alternate path quickly but requires more CPU usage.

Example

```
DellEMC# conf
DellEMC(conf)# router ospf 1
DellEMC(conf-router_ospf-1)# timer spf 2 5 msec
DellEMC(conf-router_ospf-1)# show config
!
router ospf 1
timers spf 2 5 msec
DellEMC(conf-router_ospf-1)# end
```

timers throttle lsa all

Configure LSA transmit intervals.

C9000 Series

Syntax

```
timers throttle lsa all {start-interval | hold-interval | max-interval}
```

To return to the default, use the `no timers throttle lsa` command.

Parameters

start-interval	Set the minimum interval between initial sending and resending the same LSA. The range is from 0 to 600,000 milliseconds.
hold-interval	Set the next interval to send the same LSA. This interval is the time between sending the same LSA after the start-interval has been attempted. The range is from 1 to 600,000 milliseconds.
max-interval	Set the maximum amount of time the system waits before sending the LSA. The range is from 1 to 600,000 milliseconds.

Defaults

- start-interval: **0 msec**
- hold-interval: **5000 msec**
- max-interval: **5000 msec**

Command Modes ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.8.0	Introduced on the S4810.

Usage Information

LSAs are sent after the start-interval and then after hold-interval until the maximum interval is reached. In throttling, exponential backoff is used when sending same LSA, so that the interval is multiplied until the maximum time is reached. For example, if the *start-interval* 5000 and *hold-interval* 1000 and *max-interval* 100,000, the LSA is sent at 5000 msec, then 1000 msec, then 2000 msec, then 4000 until 100,000 msec is reached.

timers throttle lsa arrival

Configure the LSA acceptance intervals.

C9000 Series

Syntax	<code>timers throttle lsa arrival <i>arrival-time</i></code> To return to the default, use the <code>no timers throttle lsa</code> command.	
Parameters	<i>arrival-time</i>	Set the interval between receiving the same LSA repeatedly, to allow sufficient time for the system to accept the LSA. The range is from 0 to 600,000 milliseconds.
Defaults	1000 msec	
Command Modes	ROUTER OSPF	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.2(1.0)	Introduced on the Z9500.
	8.3.19.0	Introduced on the S4820T.
	8.3.11.1	Introduced on the Z9000.
	8.3.8.0	Introduced on the S4810.

OSPFv3 Commands

The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) remain unchanged. However, OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis. Most changes were necessary to handle the increased address size of IPv6.

The Dell Networking implementation of OSPFv3 is based on IETF RFC 2740.

area authentication

Configure an IPsec authentication policy for OSPFv3 packets in an OSPFv3 area.

C9000 Series

Syntax	<code>area <i>area-id</i> authentication ipsec spi <i>number</i> {MD5 SHA1} [key-encryption-type] <i>key</i></code>	
Parameters	<i>area area-id</i>	Area for which OSPFv3 traffic is to be authenticated. For <i>area-id</i> , you can enter a number. The range is from 0 to 4294967295.
	<i>ipsec spi number</i>	Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.

MD5 SHA1	Authentication type: Message Digest 5 (MD5) or Secure Hash Algorithm 1 (SHA-1).
key-encryption-type	(OPTIONAL) Specifies if the key is encrypted. The values are 0 (key is not encrypted) or 7 (key is encrypted).
key	Text string used in authentication. For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted). For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

Defaults Not configured.

Command Modes ROUTER OSPFv3

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced on the S4810 and Z9000.
8.3.19.0	Introduced on the S4820T.
8.4.2.0	Introduced on the E-Series TeraScale.

Usage Information Before you enable IPsec authentication on an OSPFv3 area, you must first enable OSPFv3 globally on the router. Configure the same authentication policy (same SPI and key) on each interface in an OSPFv3 link.

An SPI number must be unique to one IPsec security policy (authentication or encryption) on the router.

If you have enabled IPsec encryption in an OSPFv3 area with the `area encryption` command, you cannot use the `area authentication` command in the area at the same time.

The configuration of IPsec authentication on an interface-level takes precedence over an area-level configuration. If you remove an interface configuration, an area authentication policy that has been configured is applied to the interface.

To remove an IPsec authentication policy from an OSPFv3 area, enter the `no area area-id authentication spi number` command.

Related Commands [ipv6 ospf authentication](#) – configures an IPsec authentication policy on an OSPFv3 interface.
[show crypto ipsec policy](#) – displays the configuration of IPsec authentication policies.

area encryption

Configure an IPsec encryption policy for OSPFv3 packets in an OSPFv3 area.

C9000 Series

Syntax `area area-id encryption ipsec spi number esp encryption-algorithm [key-encryption-type] key authentication-algorithm [key-encryption-type] key`

Parameters **area area-id** Area for which OSPFv3 traffic is to be encrypted. For *area-id*, enter a number.
The range is from 0 to 4294967295.

ipsec spi <i>number</i>	Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.
esp encryption-algorithm	Encryption algorithm used with ESP. Valid values are: 3DES, DES, AES-CBC, and NULL. For AES-CBC, only the AES-128 and AES-192 ciphers are supported.
key-encryption-algorithm	(OPTIONAL) Specifies if the key is encrypted. Valid values: 0 (key is not encrypted) or 7 (key is encrypted).
key	Text string used in encryption. The required lengths of a non-encrypted or encrypted key are: 3DES - 48 or 96 hex digits; DES - 16 or 32 hex digits; AES-CBC - 32 or 64 hex digits for AES-128 and 48 or 96 hex digits for AES-192.
authentication-algorithm	Specifies the authentication algorithm to use for encryption. Valid values are MD5 or SHA1.
key-encryption-type	(OPTIONAL) Specifies if the authentication key is encrypted. Valid values: 0 (key is not encrypted) or 7 (key is encrypted).
key	Text string used in authentication. For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted). For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).
null	Causes an encryption policy configured for the area to not be inherited on the interface.

Defaults Not configured.

Command Modes ROUTER OSPFv3

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced on the S4810 and Z9000.
8.4.2.0	Introduced on the E-Series TeraScale.
8.3.19.0	Introduced on the S4820T.

Usage Information

Before you enable IPsec encryption on an OSPFv3 interface, first enable OSPFv3 globally on the router. Configure the same encryption policy (same SPI and keys) on each interface in an OSPFv3 link.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router.

When you configure encryption for an OSPFv3 area with the `area encryption` command, you enable both IPsec encryption and authentication. However, when you enable authentication on an area with the `area authentication` command, you do not enable encryption at the same time.

If you have enabled IPsec authentication in an OSPFv3 area with the `area authentication` command, you cannot use the `area encryption` command in the area at the same time.

The configuration of IPsec encryption on an interface-level takes precedence over an area-level configuration. If you remove an interface configuration, an area encryption policy that has been configured is applied to the interface.

To remove an IPsec encryption policy from an interface, enter the `no area area-id encryption spi number` command.

Related Commands

[ipv6 ospf encryption](#) – configures an IPsec encryption policy on an OSPFv3 interface.

[show crypto ipsec policy](#) – display the configuration of IPsec encryption policies.

area nssa

Specify an area as a not so stubby area (NSSA).

Syntax `area area-id nssa [default-information-originate] [no-redistribution] [no-summary]`

To delete an NSSA, use the `no area area-id nssa` command.

Parameters	<i>area-id</i>	Specify the OSPF area by entering a number from zero (0) to 65535.
	no-redistribution	(OPTIONAL) Specify that the <code>redistribute</code> command does not distribute routes into the NSSA. This command can be used when the router is an autonomous system boundary router (ASBR) or area border router (ABR).
	default-information-originate	(OPTIONAL) Allows external routing information to be imported into the NSSA by using Type 7 default.
	no-summary	(OPTIONAL) Specify that no summary LSAs should be sent into the NSSA.

Defaults Not configured.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.13(0.0)	Introduced on the remaining DNOS platforms.
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for the Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.

Version	Description
7.5.1.0	Introduced on the C-Series.
pre- 6.1.1.1	Introduced on the E-Series.

auto-cost

Specify how the OSPF interface cost is calculated based on the reference bandwidth method.

C9000 Series

Syntax	<code>auto-cost [reference-bandwidth <i>ref-bw</i>]</code> To return to the default bandwidth or to assign cost based on the interface type, use the <code>no auto-cost [reference-bandwidth]</code> command.	
Parameters	<i>ref-bw</i>	(OPTIONAL) Specify a reference bandwidth in megabits per second. The range is from 1 to 4294967. The default is 100 megabits per second .
Defaults	100 megabits per second.	
Command Modes	ROUTER OSPFv3	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
	9.9(0.0)	Introduced on the C9010.

clear ipv6 ospf process

Reset an OSPFv3 router process without removing or re-configuring the process.

C9000 Series

Syntax	<code>clear ipv6 ospf [<i>vrf vrf-name</i>] process</code>	
Parameters	<i>vrf vrf-name</i>	(Optional) Enter the keyword <code>vrf</code> and the name of the VRF to clear IPv6 routes corresponding to that VRF.
Command Modes	- EXEC - EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
	9.7(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
	9.1.(0.0)	Introduced on the S4810 and Z9000.

Version	Description
8.3.19.0	Introduced on the S4820T.
7.8.1.0	Added support for C-Series.
7.4.1.0	Introduced on the E-Series.

clear ipv6 route

Clear (refresh) all or a specific route from the IPv6 routing table.

C9000 Series

Syntax `clear ipv6 route { * | ipv6-address prefix-length } [vrf vrf-name]`

Parameters

*	Enter the * to clear (refresh) all routes from the IPv6 routing table.
ipv6-address prefix-length	Enter the IPv6 address in the x:x:x::x format then the prefix length in the /x format. The range is from /0 to /128.  NOTE: The :: notation specifies successive hexadecimal fields of zeros.
vrf vrf-name	(Optional) Enter the keyword <code>vrf</code> and the name of the VRF to clear the IPv6 routes corresponding to that VRF.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.7(0.1)	Introduced on the S3048-ON.
9.7(0.1)	Introduced on the S4048-ON.
9.7(0.0)	Added support for VRF.
9.0.0.0	Introduced on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
8.2.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series and S-Series.
7.4.1.0	Introduced on the E-Series TeraScale.

debug ipv6 ospf bfd

Display debug information and interface types for bidirectional forwarding detection (BFD) on OSPF IPv6 packets.

C9000 Series

Syntax `[no] debug ipv6 ospf bfd [interface]`

Parameters

interface

(OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a tunnel interface, enter the keyword `tunnel` then a number. The range is from 1 to 16383.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

debug ipv6 ospf events

Display debug information and interface types on OSPF IPv6 events.

Syntax `debug ipv6 ospf events [interface] [vrf vrf-name]`

Parameters

<i>interface</i>	(OPTIONAL) Enter one of the following keywords and slot/port or number information: - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a port channel interface, enter the keywords <code>port-channel</code> then a number. - For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> to view debugging information on OSPF corresponding to that VRF.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced on the S4810 and Z9000.
8.3.19.0	Introduced on the S4820T.
7.8.1.0	Added support for C-Series.
7.4.1.0	Introduced on E-Series.

Example

Example (detail)

Command Fields	Lines	Description
	Beginning With or Including	
	OSPFv3...	Debugging is on for all OSPFv3 packets and all interfaces.
	05:21:01	Displays the time stamp.

Lines Beginning With or Including	Description
Sending Ver:3	Sending OSPFv3 version..
type:	Displays the type of packet sent: • 1 - Hello packet • 2 - database description • 3 - link state request • 4 - link state update • 5 - link state acknowledgement
Length:	Displays the OSPFv3 packet length.
Router ID:	Displays the OSPFv3 router ID.
Area ID:	Displays the OSPFv3 area ID.
Chksum:	Displays the OSPFv3 checksum.

debug ipv6 ospf packet

Display debug information and interface types on OSPF IPv6 packets.

Syntax `debug ipv6 ospf packet [interface] [vrf vrf-name] [detail]`

Parameters

<i>interface</i>	(OPTIONAL) Enter one of the following keywords and slot/port or number information: • For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. • For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. • For a port channel interface, enter the keywords <code>port-channel</code> then a number. • For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.
<i>vrf vrf-name</i>	Enter the keyword <code>vrf</code> to view debugging information on OSPF corresponding to that VRF.
<i>detail</i>	Enter the keyword <code>detail</code> to view detailed debugging information.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.13(0.0)	Added support for detailed debugging.
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.

Version	Description
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced on the S4810 and Z9000.
8.3.19.0	Introduced on the S4820T.
7.8.1.0	Added support for C-Series.
7.4.1.0	Introduced on E-Series.

Example

Example (detail)

Command Fields	Lines	Description
	Beginning With or Including	
	OSPFv3...	Debugging is on for all OSPFv3 packets and all interfaces.
	05:21:01	Displays the time stamp.

	type:	Displays the type of packet sent: • 1 - Hello packet • 2 - database description • 3 - link state request • 4 - link state update • 5 - link state acknowledgement
	Length:	Displays the OSPFv3 packet length.
	Router ID:	Displays the OSPFv3 router ID.
	Area ID:	Displays the OSPFv3 area ID.
	Chksum:	Displays the OSPFv3 checksum.

debug ipv6 ospf spf

Display debug information for SPF timers on OSPF IPv6 packets.

Syntax [no] debug ipv6 ospf spf

Parameters *interface* (OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

	Version	Description
	9.11.0.0	Introduced the command.

	Lines Beginning With or Including	Description
	OSPFv3...	Debugging is on for all OSPFv3 packets and all interfaces.
	05:21:01	Displays the time stamp.
	Sending Ver:3	Sending OSPF3 version..

Example

default-information originate

Configure the system to generate a default external route into an OSPFv3 routing domain.

C9000 Series

Syntax	<pre>default-information originate [always] [metric <i>metric-value</i>] [metric-type <i>type-value</i>] [route-map <i>map-name</i>]</pre> To return to the default values, use the <code>no default-information originate</code> command.	
Parameters	always (OPTIONAL) Enter the keyword <code>always</code> to specify that default route information must always be advertised. metric <i>metric-value</i> (OPTIONAL) Enter the keyword <code>metric</code> then a number to configure a metric value for the route. The range is from 1 to 16777214. metric-type <i>type-value</i> (OPTIONAL) Enter the keywords <code>metric-type</code> then an OSPFv3 link state type of 1 or 2 for default routes. The values are: 1 = Type 1 external route 2 = Type 2 external route route-map <i>map-name</i> (OPTIONAL) Enter the keywords <code>route-map</code> then the name of an established route map.	
Defaults	Disabled.	
Command Modes	ROUTER OSPFv3	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced on the S4810 and Z9000.
8.3.19.0	Introduced on the S4820T.
7.8.1.0	Added support for C-Series.
7.4.1.0	Introduced on the E-Series.

Related Commands

[redistribute](#) — redistributes routes from other routing protocols into OSPFv3.

graceful-restart grace-period

Enable OSPFv3 graceful restart globally by setting the grace period (in seconds) that an OSPFv3 router's neighbors continues to advertise the router as adjacent during a graceful restart.

C9000 Series

Syntax	<code>graceful-restart grace-period seconds</code> To disable OSPFv3 graceful restart, enter <code>no graceful-restart grace-period</code> .	
Parameters	<i>seconds</i>	Time duration, in seconds, that specifies the duration of the restart process before OSPFv3 terminates the process. The range is from 40 to 1800 seconds.
Defaults	OSPFv3 graceful restart is disabled and functions in a helper-only role.	
Command Modes	ROUTER OSPFv3	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced on the S4810 and Z9000.
8.4.2.2	Introduced on the E-Series TeraScale.
8.3.19.0	Introduced on the S4820T.

Usage Information	By default, OSPFv3 graceful restart is disabled and functions only in a helper role to help restarting neighbor routers in their graceful restarts when it receives a Grace LSA. To enable OSPFv3 graceful restart, enter the <code>ipv6 router ospf</code> command to enter OSPFv3 configuration mode and then configure a grace period using the <code>graceful-restart grace-period</code> command. The grace period is the length of time that OSPFv3 neighbors continue to advertise the restarting router as though it is fully adjacent. When graceful restart is enabled (restarting role), an OSPFv3 restarting expects its OSPFv3 neighbors to help when it restarts by not advertising the broken link. When you enable the helper-reject role on an interface with the <code>ipv6 ospf graceful-restart helper-reject</code> command, you reconfigure OSPFv3 graceful restart to function in a "restarting-only" role. In a "restarting-only" role, OSPFv3 does not participate in the graceful restart of a neighbor.

graceful-restart mode

Specify the type of events that trigger an OSPFv3 graceful restart.

C9000 Series

Syntax	<code>graceful-restart mode {planned-only unplanned-only}</code> To disable graceful restart mode, enter <code>no graceful-restart mode</code> .

Parameters	planned-only	(OPTIONAL) Enter the keywords <code>planned-only</code> to indicate graceful restart is supported in a planned restart condition only.												
	unplanned-only	(OPTIONAL) Enter the keywords <code>unplanned-only</code> to indicate graceful restart is supported in an unplanned restart condition only.												
Defaults	OSPFv3 graceful restart supports both planned and unplanned failures.													
Command Modes	ROUTER OSPFv3													
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>9.1.(0.0)</td><td>Introduced on the S4810 and Z9000.</td></tr><tr><td>8.4.2.2</td><td>Introduced on the E-Series TeraScale.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	9.1.(0.0)	Introduced on the S4810 and Z9000.	8.4.2.2	Introduced on the E-Series TeraScale.	8.3.19.0	Introduced on the S4820T.
Version	Description													
9.9(0.0)	Introduced on the C9010.													
9.2(1.0)	Introduced on the Z9500.													
9.1.(0.0)	Introduced on the S4810 and Z9000.													
8.4.2.2	Introduced on the E-Series TeraScale.													
8.3.19.0	Introduced on the S4820T.													
Usage Information	OSPFv3 graceful restart supports planned-only and/or unplanned-only restarts. The default is support for both planned and unplanned restarts. - A planned restart occurs when you enter the <code>redundancy force-failover rpm</code> command to force the primary RPM to switch to the backup RPM. During a planned restart, OSPF sends out a Type-11 Grace LSA before the system switches over to the backup RPM. - An unplanned restart occurs when an unplanned event causes the active RPM to switch to the backup RPM, such as when an active process crashes, the active RPM is removed, or a power failure happens. During an unplanned restart, OSPF sends out a Grace LSA when the backup RPM comes online. By default, both planned and unplanned restarts trigger an OSPFv3 graceful restart. Selecting one or the other mode restricts OSPFv3 to the single selected mode.													

ipv6 neighbor

Configure a static entry in the IPv6 neighbor discovery.

C9000 Series

Syntax	<pre>ipv6 neighbor{ipv6-address} {interface interface} {hardware_address}[vrf vrf-name]</pre> To remove a static IPv6 entry from the IPv6 neighbor discovery, use the <code>no ipv6 neighboripv6-address{interface interface}</code>	
Parameters	ipv6-address	Enter the IPv6 address of the neighbor in the x:x:x:x:x format.  NOTE: The :: notation specifies successive hexadecimal fields of zero.
	interface intehardware_rface	Enter the keyword <code>interface</code> then the interface type and slot/port or number information: - For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the slot/port information. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port/subport information.

- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- For a tunnel interface, enter the keyword `tunnel` then the tunnel interface number. The range is from 1 to 16383.
- For a port extender Gigabit Ethernet interface, enter the keyword `peGigE` then the *pe-id* / *stack-unit* / *port-id* information. The *pe-id* range is from 0 to 255; the *stack-unit unit-number* range is from 0 to 7; and the *port-id* range is from 1 to 48
- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id* / *stack-unit* / *port-id* information. The *pe-id* range is from 0 to 255; the *stack-unit unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

hardware_addresses Enter a 48-bit hardware MAC address in nn:nn:nn:nn:nn:nn format.

vrf vrf-name (Optional) Enter the keyword `vrf` and the name of the VRF to install IPv6 routes in that VRF.

Defaults none

Command Modes CONFIGURATION
CONFIGURATION TERMINAL BATCH

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.

Usage Information Neighbor Discovery Protocol for IPv6 is defined in RFC 2461 as part of the Stateless Address Autoconfiguration protocol. It replaces the Address Resolution Protocol used with IPv4. It defines mechanisms for solving problems, such as:

- Router discovery: Hosts can locate routers residing on a link
- Prefix discovery: Hosts can discover address prefixes for the link.
- Parameter discovery
- Address autoconfiguration — configuration of addresses for an interface
- Address resolution — mapping from IP address to link-layer address
- Next-hop determination- Neighbor Unreachability Detection (NUD): Determine that a neighbor is no longer reachable on the link

- Duplicate Address Detection (DAD): Allow a node to check whether a proposed address is already in use.
- Redirect: The router can inform a node about a better first-hop.

Use the `ipv6 neighbor` command to manually configure the IPv6 address of a neighbor to be discovered by the switch.

 **NOTE:** The parameters `vrf`, `mac-address`, `interface` are not supported in the batch mode.

ipv6 ospf area

Enable IPv6 OSPF on an interface.

C9000 Series

Syntax	<code>ipv6 ospf process id area area id</code>	
	To disable OSPFv6 routing for an interface, use the <code>no ipv6 ospf process-id area area-id</code> command.	
Parameters	<i>process-id</i>	Enter the process identification number.
	<i>area area-id</i>	Specify the OSPF area. The range is from 0 to 4294967295.
Defaults	none	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	
	The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
	9.14(0.2)	Increased the area ID value from 65535 to 4294967295.
	9.9(0.0)	Introduced on the C9010.
	9.2(1.0)	Introduced on the Z9500.
	9.1.(0.0)	Introduced on the S4810 and Z9000.
	8.3.19.0	Introduced on the S4820T.
	7.4.1.0	Introduced on the E-Series and C-Series.

ipv6 ospf authentication

Configure an IPsec authentication policy for OSPFv3 packets on an IPv6 interface.

C9000 Series

Syntax	<code>ipv6 ospf authentication {null ipsec spi number {MD5 SHA1} [key-encryption-type] key}}</code>	
Parameters	<i>null</i>	Causes an authentication policy configured for the area to not be inherited on the interface.
	<i>ipsec spi number</i>	Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.

MD5 SHA1	Authentication type: Message Digest 5 (MD5) or Secure Hash Algorithm 1 (SHA-1).
key-encryption-type	(OPTIONAL) Specifies if the key is encrypted. Valid values: 0 (key is not encrypted) or 7 (key is encrypted).
key	Text string used in authentication. For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted). For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

Defaults	Not configured.
Command Modes	INTERFACE
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced on S4810 and Z9000.
8.4.2.0	Introduced on the E-Series.
8.3.19.0	Introduced on the S4820T.

Usage Information	Before you enable IPsec authentication on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area. An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router. Configure the same authentication policy (same SPI and key) on each OSPFv3 interface in a link. To remove an IPsec authentication policy from an interface, enter the <code>no ipv6 ospf authentication spi number</code> command. To remove null authentication on an interface to allow the interface to inherit the authentication policy configured for the OSPFv3 area, enter the <code>no ipv6 ospf authentication null</code> command.
Related Commands	area authentication – configures an IPsec authentication policy for an OSPFv3 area. show crypto ipsec policy – displays the configuration of IPsec authentication policies. show crypto ipsec sa ipv6 – displays the security associations set up for OSPFv3 interfaces in authentication policies.

ipv6 ospf bfd all-neighbors

Establish BFD sessions with all OSPFv3 neighbors on a single interface or use non-default BFD session parameters.

C9000 Series

Syntax	<pre>ipv6 ospf bfd all-neighbors [disable [interval interval min_rx min_rx multiplier value role {active passive}]]</pre> To disable all BFD sessions on an OSPFv3 interface implicitly, use the <code>no ipv6 ospf bfd all-neighbors disable</code> command in interface mode..		
Parameters	<table><tr><td>disable</td><td>(OPTIONAL) Enter the keyword <code>disable</code> to disable BFD on this interface.</td></tr></table>	disable	(OPTIONAL) Enter the keyword <code>disable</code> to disable BFD on this interface.
disable	(OPTIONAL) Enter the keyword <code>disable</code> to disable BFD on this interface.		

interval milliseconds	(OPTIONAL) Enter the keyword <code>interval</code> to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 200 .
min_rx milliseconds	Enter the keywords <code>min_rx</code> to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 1000. The default is 200 .
multiplier value	Enter the keyword <code>multiplier</code> to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3 .
role [active passive]	Enter the role that the local system assumes: • Active — The active system initiates the BFD session. Both systems can be active for the same session. • Passive — The passive system does not initiate a session. It only responds to a request for session initialization from the active system. The default is Active.

Defaults See Parameters

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.2.0.0	Introduced on the Z9000, S4820T, and S4810.

Usage Information This command provides the flexibility to fine-tune the timer values based on individual interface needs when you configure `ipv6 ospf bfd` in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the `bfd all-neighbors` command. Using the `no` form of this command does not disable BFD if you configure BFD in CONFIGURATION mode.

To disable BFD on a specific interface while you configure BFD in CONFIGURATION mode, use the keyword `disable`.

ipv6 ospf cost

Explicitly specify the cost of sending a packet on an interface.

C9000 Series

Syntax `ipv6 ospf interface-cost`

Parameters **interface-cost** Enter a unsigned integer value expressed as the link-state metric. The range is from 1 to 65535.

Defaults Default cost based on the bandwidth.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced on the S4810 and Z9000.
7.8.1.0	Added support for C-Series.
7.4.1.0	Introduced on the E-Series.
8.3.19.0	Introduced on the S4820T.

Usage Information

In general, the path cost is calculated as:

$10^8 / \text{bandwidth}$

Using this formula, the default path cost is calculated as:

- 10-Gigabit Ethernet—Default cost is 1
- 40-Gigabit Ethernet — Default cost is 1

ipv6 ospf dead-interval

Set the time interval since the last hello-packet was received from a router. After the time interval elapses, the neighboring routers declare the router down.

C9000 Series

Syntax

`ipv6 ospf dead-interval seconds`

To return to the default time interval, use the `no ipv6 ospf dead-interval` command.

Parameters

seconds

Enter the time interval in seconds. The range is from 1 to 65535 seconds.

Defaults

40 seconds (Ethernet).

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced on the S4810 and Z9000.
7.8.1.0	Added support for C-Series.
7.4.1.0	Introduced on the E-Series.
8.3.19.0	Introduced on the S4820T.

Usage Information

By default, the dead interval is four times longer than the default hello-interval.

Related Commands

[ipv6 ospf hello-interval](#) – specifies the time interval between hello packets.

ipv6 ospf encryption

Configure an IPsec encryption policy for OSPFv3 packets on an IPv6 interface.

C9000 Series

Syntax	<pre>ipv6 ospf encryption {null ipsec spi number esp encryption-algorithm [key-encryption-type] key authentication-algorithm [key-encryption-type] key}}</pre>	
Parameters	null	Causes an encryption policy configured for the area to not be inherited on the interface.
	ipsec spi number	Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.
	esp encryption-algorithm	Encryption algorithm used with ESP. Valid values are: 3DES, DES, AES-CBC, and NULL. For AES-CBC, only the AES-128 and AES-192 ciphers are supported.
	key-encryption-type	(OPTIONAL) Specifies if the key is encrypted. Valid values: 0 (key is not encrypted) or 7 (key is encrypted).
	key	Text string used in authentication. The required lengths of a non-encrypted or encrypted key are: 3DES - 48 or 96 hex digits; DES - 16 or 32 hex digits; AES-CBC -32 or 64 hex digits for AES-128 and 48 or 96 hex digits for AES-192.
	authentication-algorithm	Specifies the authentication algorithm to use for encryption. Valid values are MD5 or SHA1.
	key-encryption-type	(OPTIONAL) Specifies if the authentication key is encrypted. Valid values: 0 (key is not encrypted) or 7 (key is encrypted).
Defaults	key	Text string used in authentication. For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted). For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

Defaults Not configured.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced on the S4810 and Z9000.
8.4.2.0	Introduced on the E-Series TeraScale.
8.3.19.0	Introduced on the S4820T.

Usage Information	Before you enable IPsec encryption on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area. An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router. Configure the same encryption policy (same SPI and key) on each OSPFv3 interface in a link. To remove an IPsec encryption policy from an interface, enter the <code>no ipv6 ospf encryption spi number</code> command. To remove null authentication on an interface to allow the interface to inherit the authentication policy configured for the OSPFv3 area, enter the <code>no ipv6 ospf no ipv6 ospf encryption null</code> command.
Related Commands	area encryption – configures an IPsec encryption policy for an OSPFv3 area. show crypto ipsec policy – displays the configuration of IPsec encryption policies. show crypto ipsec sa ipv6 – displays the security associations set up for OSPFv3 interfaces in encryption policies.

ipv6 ospf graceful-restart helper-reject

Configure an OSPFv3 interface to not act upon the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

C9000 Series

Syntax	<pre>ipv6 ospf graceful-restart helper-reject</pre> To disable the helper-reject role, enter <code>no ipv6 ospf graceful-restart helper-reject</code>.												
Defaults	The helper-reject role is not configured.												
Command Modes	INTERFACE												
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table> <tr> <th>Version</th><th>Description</th></tr> <tr> <td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr> <tr> <td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr> <tr> <td>9.1.(0.0)</td><td>Introduced on the S4810 and Z9000.</td></tr> <tr> <td>8.4.2.2</td><td>Introduced on E-Series TeraScale.</td></tr> <tr> <td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr> </table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	9.1.(0.0)	Introduced on the S4810 and Z9000.	8.4.2.2	Introduced on E-Series TeraScale.	8.3.19.0	Introduced on the S4820T.
Version	Description												
9.9(0.0)	Introduced on the C9010.												
9.2(1.0)	Introduced on the Z9500.												
9.1.(0.0)	Introduced on the S4810 and Z9000.												
8.4.2.2	Introduced on E-Series TeraScale.												
8.3.19.0	Introduced on the S4820T.												
Usage Information	By default, OSPFv3 graceful restart is disabled and functions only in a helper role to help restarting neighbor routers in their graceful restarts when it receives a Grace LSA. When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor. The graceful-restart role command is not supported in OSPFv3. When you enable the helper-reject role on an interface, you reconfigure an OSPFv3 router to function in a “restarting-only” role.												

ipv6 ospf hello-interval

Specify the time interval between the hello packets sent on the interface.

C9000 Series

Syntax	<code>ipv6 ospf hello-interval seconds</code> To return to the default time interval, enter <code>no ipv6 ospf hello-interval</code> .															
Parameters	seconds	Enter the time interval in seconds as the time between hello packets. The range is from 1 to 65525 seconds.														
Defaults	10 seconds (Ethernet).															
Command Modes	INTERFACE															
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>9.1.(0.0)</td><td>Introduced on the S4810 and Z9000.</td></tr><tr><td>7.8.1.0</td><td>Added support for the C-Series.</td></tr><tr><td>7.4.1.0</td><td>Introduced on the E-Series.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	9.1.(0.0)	Introduced on the S4810 and Z9000.	7.8.1.0	Added support for the C-Series.	7.4.1.0	Introduced on the E-Series.	8.3.19.0	Introduced on the S4820T.
Version	Description															
9.9(0.0)	Introduced on the C9010.															
9.2(1.0)	Introduced on the Z9500.															
9.1.(0.0)	Introduced on the S4810 and Z9000.															
7.8.1.0	Added support for the C-Series.															
7.4.1.0	Introduced on the E-Series.															
8.3.19.0	Introduced on the S4820T.															
Usage Information	The time interval between hello packets must be the same for routers in a network.															
Related Commands	ipv6 ospf dead-interval – specifies the time interval between hello packets was received from a router.															

ipv6 ospf mtu-ignore

Disable OSPF MTU mismatch detection on receipt of database description (DBD) packets.

Syntax	<code>ipv6 ospf mtu-ignore</code> To return to the default, use the <code>no ipv6 ospf mtu-ignore</code> command.					
Defaults	Disabled					
Command Modes	INTERFACE					
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i>. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.14(2.3)</td><td>Introduced on the C9000, S3048-ON, S3100, S4048-ON, S4048T-ON, S6000, and Z9100-ON.</td></tr></table>		Version	Description	9.14(2.3)	Introduced on the C9000, S3048-ON, S3100, S4048-ON, S4048T-ON, S6000, and Z9100-ON.
Version	Description					
9.14(2.3)	Introduced on the C9000, S3048-ON, S3100, S4048-ON, S4048T-ON, S6000, and Z9100-ON.					

ipv6 ospf priority

To determine the Designated Router for the OSPFv3 network, set the priority of the interface.

C9000 Series

Syntax	<code>ipv6 ospf priority <i>number</i></code> To return to the default time interval, use the <code>no ipv6 ospf priority</code> command.															
Parameters	<i>number</i>	Enter the number as the priority. The range is from 1 to 255.														
Defaults	1															
Command Modes	INTERFACE															
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>9.1.(0.0)</td><td>Introduced on the S4810 and Z9000.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>7.8.1.0</td><td>Added support for the C-Series.</td></tr><tr><td>7.4.1.0</td><td>Introduced on the E-Series.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	9.1.(0.0)	Introduced on the S4810 and Z9000.	8.3.19.0	Introduced on the S4820T.	7.8.1.0	Added support for the C-Series.	7.4.1.0	Introduced on the E-Series.
Version	Description															
9.9(0.0)	Introduced on the C9010.															
9.2(1.0)	Introduced on the Z9500.															
9.1.(0.0)	Introduced on the S4810 and Z9000.															
8.3.19.0	Introduced on the S4820T.															
7.8.1.0	Added support for the C-Series.															
7.4.1.0	Introduced on the E-Series.															
Usage Information	Setting a priority of 0 makes the router ineligible for election as a Designated Router or Backup Designated Router. Use this command for interfaces connected to multi-access networks, not point-to-point networks.															

ipv6 router ospf

Enable OSPF for IPv6 router configuration.

C9000 Series

Syntax	<code>ipv6 router ospf process-id [vrf vrf-name]</code> To exit OSPF for IPv6, use the <code>no ipv6 router ospf process-id</code> command.	
Parameters	process-id	Enter the process identification number. The range is from 1 to 65535.
	vrf vrf-name	(Optional) Enter the keyword <code>vrf</code> and the name of the VRF to install IPv6 routes in that VRF.
Defaults	none	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Added support for VRF.
9.1.(0.0)	Introduced on the S4810 and Z9000.
8.3.19.0	Introduced on the S4820T.
7.8.1.0	Added support for the C-Series.
7.4.1.0	Introduced on the E-Series.

maximum-paths

Enable the software to forward packets over multiple paths.

C9000 Series

Syntax	<code>maximum-paths number</code>	
	To disable packet forwarding over multiple paths, use the <code>no maximum-paths</code> command.	
Parameters	<i>number</i>	Specify the number of paths. The range is from 1 to 64. The default is 8 paths.
Defaults	8	
Command Modes	ROUTER OSPF	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Added support for Multi-Process OSPF.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.1.1.1	Introduced on the E-Series.

passive-interface

Disable (suppress) sending routing updates on an interface.

C9000 Series

Syntax	<code>passive-interface interface</code>

To enable sending routing updates on an interface, use the `no passive-interface interface` command.

Parameters	<i>interface</i> Enter the following keywords and slot/port or number information: - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128. - For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.														
Defaults	Enabled, that is sending of routing updates are enabled by default.														
Command Modes	ROUTER OSPF for OSPFv2 ROUTER OSPFv3 for OSPFv3														
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>9.1.(0.0)</td><td>Introduced support for OSPFv3 on the S4810 and Z9000.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>7.8.1.0</td><td>Added support for the C-Series.</td></tr><tr><td>7.4.1.0</td><td>Introduced on the E-Series.</td></tr></table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	9.1.(0.0)	Introduced support for OSPFv3 on the S4810 and Z9000.	8.3.19.0	Introduced on the S4820T.	7.8.1.0	Added support for the C-Series.	7.4.1.0	Introduced on the E-Series.
Version	Description														
9.9(0.0)	Introduced on the C9010.														
9.2(1.0)	Introduced on the Z9500.														
9.1.(0.0)	Introduced support for OSPFv3 on the S4810 and Z9000.														
8.3.19.0	Introduced on the S4820T.														
7.8.1.0	Added support for the C-Series.														
7.4.1.0	Introduced on the E-Series.														
Usage Information	By default, no interfaces are <i>passive</i>. Routing updates are sent to all interfaces on which the routing protocol is enabled. If you disable the sending of routing updates on an interface, the particular address prefix continues to be advertised to other interfaces, and updates from other routers on that interface continue to be received and processed. OSPFv3 for IPv6 routing information is not sent or received through the specified router interface. The specified interface address appears as a stub network in the OSPFv3 for IPv6 domain.														

redistribute

Redistribute into OSPFv3.

C9000 Series

Syntax	<pre>redistribute {bgp as number}{connected static}[metric metric-value metric-type type-value] [route-map map-name] [tag tag-value]</pre> To disable redistribution, use the <code>no redistribute {connected static}</code> command.
Parameters	<i>bgp as number</i> Enter the keyword <code>bgp</code> then the autonomous system number. The range is from 1 to 65535.

connected	Enter the keyword <code>connected</code> to redistribute routes from physically connected interfaces.
static	Enter the keyword <code>static</code> to redistribute manually configured routes.
metric <i>metric-value</i>	Enter the keyword <code>metric</code> then the metric value. The range is from 0 to 16777214. The default is 20 .
metric-type <i>type-value</i>	(OPTIONAL) Enter the keywords <code>metric-type</code> then the OSPFv3 link state type of 1 or 2 for default routes. The values are: • 1 for a type 1 external route • 2 for a type 2 external route The default is 2 .
route-map <i>map-name</i>	(OPTIONAL) Enter the keywords <code>route-map</code> then the name of an established route map. If the route map is not configured, the default is deny (to drop all routes).
tag <i>tag-value</i>	(OPTIONAL) Enter the keyword <code>tag</code> to set the tag for routes redistributed into OSPFv3. The range is from 0 to 4294967295 The default is 0 .

Defaults Not configured.

Command Modes ROUTER OSPF for OSPFv2
ROUTER OSPFv3 for OSPFv3

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.
The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced support for OSPFv3 on the S4810 and Z9000.
8.3.19.0	Introduced on the S4820T.
7.8.1.0	Added support for the C-Series.
7.4.1.0	Introduced on the E-Series.

Usage Information To redistribute the default route (x:x:x:x::x), use the `default-information originate` command.

Related Commands [default-information originate](#) – configures default external route into OSPFv3.

router-id

Designate a fixed router ID.

C9000 Series

Syntax	<code>router-id ip-address</code> To return to the previous router ID, use the <code>no router-id ip-address</code> command.														
Parameters	<i>ip-address</i> Enter the router ID in the dotted decimal format.														
Defaults	The router ID is selected automatically from the set of IPv4 addresses configured on a router.														
Command Modes	ROUTER OSPF for OSPFv2 ROUTER OSPFv3 for OSPFv3														
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>9.1.(0.0)</td><td>Introduced support for OSPFv3 on the S4810 and Z9000.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>7.8.1.0</td><td>Added support for the C-Series.</td></tr><tr><td>7.4.1.0</td><td>Introduced on the E-Series.</td></tr></tbody></table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	9.1.(0.0)	Introduced support for OSPFv3 on the S4810 and Z9000.	8.3.19.0	Introduced on the S4820T.	7.8.1.0	Added support for the C-Series.	7.4.1.0	Introduced on the E-Series.
Version	Description														
9.9(0.0)	Introduced on the C9010.														
9.2(1.0)	Introduced on the Z9500.														
9.1.(0.0)	Introduced support for OSPFv3 on the S4810 and Z9000.														
8.3.19.0	Introduced on the S4820T.														
7.8.1.0	Added support for the C-Series.														
7.4.1.0	Introduced on the E-Series.														
Usage Information	You can configure an arbitrary value in the IP address for each router. However, each router ID must be unique. If this command is used on an OSPFv3 process that is already active (has neighbors), all the neighbor adjacencies are brought down immediately and new sessions are initiated with the new router ID.														
Related Commands	clear ipv6 ospf process – resets an OSPFv3 router process.														

show crypto ipsec policy

Display the configuration of IPsec authentication and encryption policies.

C9000 Series

Syntax	<code>show crypto ipsec policy [name name]</code>
Parameters	<i>name name</i> (OPTIONAL) Displays configuration details about a specified policy.
Defaults	None.
Command Modes	EXEC EXEC Privilege
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.1.(0.0)	Introduced on the S4810 and Z9000.
8.4.2.0	Introduced on the E-Series TeraScale.
8.3.19.0	Introduced on the S4820T.

Usage Information

The `show crypto ipsec policy` command output displays the AH and ESP parameters configured in IPsec security policies, including the SPI number, keys, and algorithms used.

When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

Table 6. `show crypto ipsec policy` Command Description

Field	Description
Policy name	Displays the name of an IPsec policy.
Policy refcount	Number of interfaces on the router that use the policy
Inbound ESP SPI Outbound ESP SPI	The encapsulating security payload (ESP) security policy index (SPI) for inbound and outbound links.
Inbound ESP Auth Key Outbound ESP Auth Key	The ESP authentication key for inbound and outbound links.
Inbound ESP Cipher Key Outbound ESP Cipher Key	The ESP encryption key for inbound and outbound links.
Transform set	The set of security protocols and algorithms used in the policy.
Inbound AH SPI Outbound AH SPI	The authentication header (AH) security policy index (SPI) for inbound and outbound links.
Inbound AH Key Outbound AH Key	The AH key for inbound and outbound links.

Example

```
Dell#show crypto ipsec policy

Crypto IPsec client security policy data

Policy name : OSPFv3-1-502

```

show crypto ipsec sa ipv6

Display the IPsec security associations (SAs) used on OSPFv3 interfaces.

C9000 Series

Syntax	show crypto ipsec sa ipv6 [interface <i>interface</i>]													
Parameters	interface <i>interface</i>	(OPTIONAL) Displays information about the SAs used on a specified OSPFv3 interface, where <i>interface</i> is one of the following values: - For a Port Channel interface, enter <code>port-channel <i>number</i></code>. - For a 10-Gigabit Ethernet interface, enter <code>TenGigabitEthernet <i>slot/port</i></code>. - For a 40-Gigabit Ethernet interface, enter <code>fortyGigE <i>slot/port</i></code>. - For a VLAN interface, enter <code>vlan <i>vlan-id</i></code>. The valid VLAN IDs range is from 1 to 4094.												
Defaults	None.													
Command Modes	EXEC EXEC Privilege													
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>9.1.(0.0)</td><td>Introduced on the S4810 and Z9000.</td></tr><tr><td>8.4.2.0</td><td>Introduced on the E-Series TeraScale.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	9.1.(0.0)	Introduced on the S4810 and Z9000.	8.4.2.0	Introduced on the E-Series TeraScale.	8.3.19.0	Introduced on the S4820T.
Version	Description													
9.9(0.0)	Introduced on the C9010.													
9.2(1.0)	Introduced on the Z9500.													
9.1.(0.0)	Introduced on the S4810 and Z9000.													
8.4.2.0	Introduced on the E-Series TeraScale.													
8.3.19.0	Introduced on the S4820T.													
Usage Information	The <code>show crypto ipsec sa ipv6</code> command output displays security associations set up for OSPFv3 links in IPsec authentication and encryption policies on the router.													

Example

Table 7. show crypto ipsec sa ipv6 Command Description

Field	Description
Interface	IPv6 interface.
Link local address	IPv6 address of interface
IPSecv6 policy name	Name of the IPsec security policy applied to the interface.
inbound/outbound ah	Authentication policy applied to inbound or outbound traffic.
inbound/outbound esp	Encryption policy applied to inbound or outbound traffic.
spi	Security policy index number used to identify the policy.
inbound/outbound esp	Encryption policy applied to inbound or outbound traffic.
spi	Security policy index number used to identify the policy.
transform	Security algorithm that is used to provide authentication, integrity, and confidentiality.
in use settings	Transform that the SA uses (only transport mode is supported).
replay detection support	Y: An SA has enabled the replay detection feature. N: The replay detection feature is not enabled.
STATUS	ACTIVE: The authentication or encryption policy is enabled on the interface.

Related Commands

[show crypto ipsec policy](#) – displays the configuration of IPsec authentication and encryption policies.

Example

```
Dell#show crypto ipsec policy
Dell#show crypto ipsec sa ipv6

```

show ipv6 ospf interface

View OSPFv3 interface information.

C9000 Series

Syntax

```
show ipv6 ospf [process-number] [vrf vrf-name] [interface]
```

Parameters

- process-number*** Enter the OSPF process number.
- vrf vrf-name*** (OPTIONAL) Enter the keyword *vrf* and the name of the VRF to display neighbors corresponding to that VRF.
-  **NOTE:** If you do not specify this option, neighbors corresponding to the default VRF are displayed.
- interface*** (OPTIONAL) Enter one of the following keywords and slot/port or number information:
- For a 1-Gigabit Ethernet interface, enter the keyword *GigabitEthernet* then the slot/port information.
 - For a 10-Gigabit Ethernet interface, enter the keyword *TenGigabitEthernet* then the slot/port information.
 - For a 40-Gigabit Ethernet interface, enter the keyword *fortyGigE* then the slot/port information.
 - For a Loopback interface, enter the keyword *loopback* then a number from 0 to 16383.
 - For a Null interface, enter the keywords *null 0*.
 - For a Port Channel interface, enter the keywords *port-channel* then a number.
 - For a tunnel interface, enter the keyword *tunnel* then the tunnel ID. The range is from 1 to 16383.
 - For a VLAN interface, enter the keyword *vlan* then a number from 1 to 4094.

EXEC

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Added support for VRF on all platforms (Except MXL and STOMP).
9.2.(0.0)	Added support for showing BFD status on the S4820T, S4810, and Z9000.
9.1.(0.0)	Added support for OSPFv3 on the S4810 and Z9000.
8.3.19.0	Introduced on the S4820T.
7.8.1.0	Added support for the C-Series.
7.4.1.0	Introduced on the E-Series.

Usage Information

If you enable BFD at the global level, *show ipv6 ospf interface* shows the BFD provisioning.

If you enable BFD at the interface level, *show ipv6 ospf interface* shows the BFD interval timers.

Example

```
Dell#show ipv6 ospf 3 interface gigabitethernet 1/2

GigabitEthernet 1/2 is up, line protocol is up
  Link Local Address fe80::201:e8ff:fe17:5bbd, Interface ID 67420217
  Area 0, Process ID 1, Instance ID 0, Router ID 11.1.1.1
  NetworkType BROADCAST, Cost: 1, Passive: No
  Transmit Delay is 100 sec, State DR, Priority 1
  Interface is using OSPF global mode BFD configuration.
  Designated router on this network is 11.1.1.1 (local)
  No backup designated router on this network
  Timer intervals configured, Hello 10, Dead 40, Wait 1, Retransmit 5

Dell#
```

```
Dell#show ipv6 ospf 3 interface tengigabitethernet 1/2

TenGigabitEthernet 1/2 is up, line protocol is up
  Link Local Address fe80::201:e8ff:fe17:5bbd, Interface ID 67420217
  Area 0, Process ID 1, Instance ID 0, Router ID 11.1.1.1
  NetworkType BROADCAST, Cost: 1, Passive: No
  Transmit Delay is 100 sec, State DR, Priority 1
  Interface is using OSPF global mode BFD configuration.
  Designated router on this network is 11.1.1.1 (local)
  No backup designated router on this network
  Timer intervals configured, Hello 10, Dead 40, Wait 1, Retransmit 5

Dell#
```

```
Dell#show ipv6 ospf 3 interface tengigabitethernet 1/2/1

TenGigabitEthernet 1/2/1 is up, line protocol is up
  Link Local Address fe80::201:e8ff:fe17:5bbd, Interface ID 67420217
  Area 0, Process ID 1, Instance ID 0, Router ID 11.1.1.1
  NetworkType BROADCAST, Cost: 1, Passive: No
  Transmit Delay is 100 sec, State DR, Priority 1
  Interface is using OSPF global mode BFD configuration.
  Designated router on this network is 11.1.1.1 (local)
  No backup designated router on this network
  Timer intervals configured, Hello 10, Dead 40, Wait 1, Retransmit 5

Dell#
```

Related Commands

[show ip ospf interface](#)—Display the OSPF interfaces configured.

show ipv6 ospf database

Display information in the OSPFv3 database, including link-state advertisements (LSAs) in detail.

Syntax `show ipv6 ospf [process-number] [vrf vrf-name] database [database-summary | grace-lsa | external | inter-area-prefix | inter-area-router | intra-area-prefix | link | network | router | nssa-external]`

Parameters	process-number	Enter the OSPF process number.
	vrf vrf-name	(Optional) Enter the keyword <code>vrf</code> followed by the name of the VRF to display neighbors corresponding to that VRF.  NOTE: If you do not specify this option, neighbors corresponding to the default VRF are displayed.
	database-summary	(OPTIONAL) Enter the keyword <code>database-summary</code> to view a summary of database LSA information.
	external	(OPTIONAL): Enter the keyword <code>external</code> to display the external link states.
	grace-lsa	(OPTIONAL): Enter the keyword <code>grace-lsa</code> to display the Type-11 Grace LSAs sent and received on an OSPFv3 router.
	inter-area-prefix	(OPTIONAL): Enter the keyword <code>inter-area-prefix</code> to display the inter area prefix link states.
	inter-area-router	(OPTIONAL): Enter the keyword <code>inter-area-router</code> to display the inter area router link states.
	intra-area-prefix	(OPTIONAL): Enter the keyword <code>intra-area-prefix</code> to display the intra area prefix link states.
	link	(OPTIONAL): Enter the keyword <code>link</code> to display the link states.
	network	(OPTIONAL): Enter the keyword <code>network</code> to display the network link states.
Defaults	nssa-external	(OPTIONAL): Enter the keyword <code>nssa-external</code> to display the nssa link state information.
	router	(OPTIONAL): Enter the keyword <code>router</code> to display the router link states.

Defaults None

Command Modes EXEC
EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.13(0.0)	Added support to display all the types of LSAs in detail.
9.10(0.1)	Introduced on the S6010-ON and S4048T-ON.
9.10(0.0)	Introduced on the S3148.
9.10(0.0)	Introduced on the S6100-ON.
9.8(2.0)	Introduced on the S3100 series.
9.8(1.0)	Introduced on the Z9100-ON.
9.8(0.0P5)	Introduced on the S4048-ON.
9.8(0.0P2)	Introduced on the S3048-ON.
9.7(0.0)	Added support for VRF.
9.2(1.0)	Introduced on the Z9500.

Version	Description
9.1.(0.0)	Added support for OSPFv3 on the S4810 and Z9000.
8.4.2.2	Added support for the display of graceful restart parameters and Type-11 Grace LSAs on E-Series routers.
8.3.19.0	Introduced on the S4820T.
7.8.1.0	Added support for C-Series.

Usage Information

The `show ipv6 ospf database` command output displays detailed information on the OSPFv3 database, including link-state advertisements (LSAs).

Example (grace-lsa)

Example (database-summary)

Example (external)

```
DellEMC# show ipv6 ospf database external

      OSPFv3 Router with ID (10.160.3.37) (Process ID 6)

      AS External Link States (Area 0)

LS Age: 1651
LS Type: OSPFv3 AS external LSA
Link State ID: 0.0.0.1
Advertising Router: 10.130.254.101
LS Seq Number: 0x80000001
Checksum: 0xF038
Length: 36
    Prefix: 9001::/64
    Prefix Options: 0x10 ( DN )
    Metric Type: 2   Metric: 20
```

Example (nssa-external)

```
DellEMC#show ipv6 ospf 10 database nssa-external

      OSPFv3 Router with ID (1.1.1.1) (Process ID 10)

      AS External Link States (Area 1)

LS Age: 35
LS Type: OSPFv3 NSSA LSA
Link State ID: 0.0.0.1
Advertising Router: 1.1.1.1
LS Seq Number: 0x80000001
Checksum: 0xD2DD
Length: 52
    Prefix: 101:101:1::/64
    Prefix Options: 0x8 ( P )
    Metric Type: 2   Metric: 20
    Forwarding Address: 101:101:1::1
```

show ipv6 ospf neighbor

Display the OSPF neighbor information on a per-interface basis.

C9000 Series

Syntax

```
show ipv6 ospf [process-number] [vrf vrf-name] neighbor [interface]
```

Parameters	process-number Enter the OSPF process number. vrf vrf-name (OPTIONAL) Enter the keyword vrf followed by the name of the VRF to display OSPF neighbors corresponding to that VRF. i NOTE: If you do not specify this option, neighbors corresponding to the default VRF are displayed. interface (OPTIONAL) Enter the following keywords and slot/port or number information: - For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the slot/port information. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a port channel interface, enter the keywords <code>port-channel</code> then a number. - For a tunnel interface, enter the keyword <code>tunnel</code> then the tunnel ID. The range is from 1 to 16383. - For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.

Defaults none

Dell#show ipv6 ospf 3 neighbor gi 1/2

Neighbor ID	Pri	State	Dead Time	Interface	ID	Interface
63.114.8.36	1	FULL/DR	00:00:38	4		Te 1/2/1

```
Dell#
```

snmp context

Configure SNMPv3 context name to map multiple OSPFv3 VRF instances.

Syntax `snmp context {context-name}`

To clear snmp context, use the `no snmp context {context-name}` command.

Parameters **context-name** Enter the SNMP context name. The maximum length is 32 alphanumeric characters.

Defaults None.

Command Modes IPv6 ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

Version	Description
9.14(1.0)	Introduced on the S3100 series, S3048-ON, S4048-ON, S4048T-ON, S5048F-ON, S6000, S6010-ON, S6100-ON, Z9100-ON, Z9500, S6000-ON, C9010, MXL, and FN IOM.

Usage Information Use SNMPv3 context configuration to distinguish between various OSPFv3 VRF instances.

Example

```
DellEMC(conf-ipv6-router_ospf)#snmp context ospf1
```

```
DellEMC>show runnig-config ospf
!
ipv6 router ospf 10
 router-id 10.10.10.1
 snmp context ospf1
!
DellEMC>
```

PE Console Commands

To configure a C1048P port extender from an attached PE console, you can use the following commands. Use these commands when the port extender cannot connect to a C9010.

You can also enter the PE console commands to debug an error condition in a PE stack.

- `cd`
- `clear logging`
- `copy`
- `delete`
- `diag`
- `dir`
- `disable`
- `enable`
- `exit`
- `format`
- `hostname`
- `offline`
- `online`
- `power-cycle`
- `pwd`
- `reload`
- `rename`
- `reset`
- `show boot system`
- `show clock`
- `show control-bridge status`
- `show diag`
- `show diag information`
- `show diag testcase`
- `show environment`
- `show file`
- `show file-systems`
- `show interfaces`
- `show inventory`
- `show lldp neighbors`
- `show logging`
- `show logging driverlog`
- `show logging kernellog`
- `show os-version`
- `show privilege`
- `show redundancy`
- `show revision`
- `show system`
- `show tech-support`
- `show version`
- `telnet-peer-stack-unit`

For information about the commands you can enter from a C9010 console to configure a port extender, see [Port Extenders \(PE\)](#) chapter.

Topics:

- [diag](#)
- [offline](#)
- [online](#)
- [power-cycle](#)
- [show control-bridge status](#)
- [show system](#)
- [telnet-peer-stack-unit](#)
- [upgrade system](#)

diag

Run offline diagnostics on all stack-units.

C9000 Series

Syntax	diag {stack-unit <i>unit-number</i> } [alllevels level0 level1 level2] [interactive] [testname <i>name</i>] [terminate]	
Parameters	stack-unit <i>unit-number</i>	Enter the <code>stack-unit</code> value to run offline diagnostic test on a specified stack-unit. The stack-unit range is 0 to 7.
	alllevels	Enter the keyword <code>all levels</code> to run the complete set of offline diagnostic tests.
	level0	Enter the keyword <code>level0</code> to run Level 0 diagnostics. Level 0 diagnostics check for the presence of various components and perform essential path verifications. In addition, they verify the identification registers of the components on the board.
	level1	Enter the keyword <code>Level1</code> to run Level 1 diagnostics. Level 1 diagnostics is a smaller set of diagnostic tests with support for automatic partitioning. They perform status/self test for all the components on the board and test their registers for appropriate values. In addition, they perform extensive tests on memory devices (for example, SDRAM, flash, NVRAM, EEPROM, and CPLD) wherever possible. At this level, ports are shut down automatically.
	level2	Enter the keyword <code>level2</code> to run Level 2 diagnostics. Level 2 diagnostics are a full set of diagnostic tests with no support for automatic partitioning. Level 2 diagnostics are used primarily for on-board loopback tests and more extensive component diagnostics. Various components on the board are put into Loopback mode and test packets are transmitted through those components. These diagnostics also perform snake tests using VLAN configurations.
	interactive	Enter the keyword <code>interactive</code> to run offline diagnostics in interactive mode.  NOTE: On a C1048P, interactive diagnostic tests are supported only in standalone mode; they are not supported in stacking mode.
	testname <i>name</i>	Enter the <code>testname name</code> parameters to run a specified offline diagnostic test. Enclose the test-case name in double quotes (" "). For example: <code>diag level1 testname "first"</code> .
	terminate	Enter the keyword <code>terminate</code> to stop the offline diagnostic tests that are running.
Defaults	All offline diagnostic tests are run on all switch CPUs (Control Processor, Route Processor, and line cards).	
Command Modes	EXEC Privilege	
Usage Information	Before you use this command to run diagnostic test, make sure that the port extender (PE) stack-unit is offline (<code>offline stack-unit <i>unit number</i></code> command). You are prompted to reboot when the offline diagnostics is complete.	

The PE unit goes offline and reboots automatically after the test is completed. Once the test is finished, the diag report is generated, and it is stored in the PE flash. To view the diag report, use the `show diag pe pe-id stack-unit unit-number` command from C9000 system. The `show diag pe` command uploads the TestReport from the PE to the C9000.

The filename of the TestReport is: `TestReport-SU-Stack-Unit-Number-PE-pe-id-Year_Month_Day_Unique-Tag.txt`, where SU identifies the PE stack-unit on which the offline diag test was run, `Year_Month_Day` is a timestamp to identify when the offline diag test was run for that unit, and the `Unique Tag` is to identify that specific diag test. Diag test reports on PE are not overwritten. Offline diag test reports for PE are stored in the following directory: `flash://default_diag_report_dir`. To view the test report, use the `show file flash://filename` command.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on C9010 and C1048P.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.3.1.0	Introduced the verbose option.
7.7.1.0	Introduced on the S-Series.

Example

```
Dell#offline stack-unit 3
Warning - offline of unit will bring down all the protocols and
the unit will be operationally down, except for running Diagnostics.
Please make sure that stacking is not configured for Diagnostics
execution.
If configured, the unit roles may change. The unit will become
standalone once diags are executed.
Also reboot/online command is necessary for normal operation after the
offline command is issued.
Proceed with Offline [confirm yes/no]:yes

Dell#diag stack-unit 3 level0
Warning - diagnostic execution will cause multiple link flaps on the
peer side - advisable to shut directly connected ports
Proceed with Diags [confirm yes/no]: yes
```

Related Commands

- [offline](#)
- [online](#)

offline

Place the PE stack-unit in the offline state to run the diagnostics tests.

C9000 Series

Syntax `offline stack-unit unit-number`

Parameters **stack-unit *slot-id*** Enter the keyword `stack-unit` and specify the stack-unit number. The stack-unit number range is from 0 to 7.

Defaults none

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010 and C1048P.

Usage Information Use this command to make the port extender offline and run offline diagnostics tests. After this command is issued, a warning message appears cautioning you about bringing down all the protocols and turning down the PE unit operationally during the diagnostics tests. If offline diagnostics are not run after issuing the `offline stack-unit` command, you must issue the `online stack-unit` command to bring up the PE stack-unit.

```
Dell#offline stack-unit 3
Warning - offline of unit will bring down all the protocols and the
unit will be operationally down, except for running Diagnostics. Please
make sure that stacking is not configured for Diagnostics execution. If
configured, the unit roles may change. The unit will become standalone
once diags are executed. Also reboot/online command is necessary for
normal operation after the offline command is issued. Proceed with
Offline [confirm yes/no]:
```

- Related Commands**
- [diag](#) — run diagnostic tests on an offline switch.
 - [online](#)—brings a PE stack-unit back online after running offline diagnostic tests.

online

Bring a PE stack-unit back to an online state after running the offline diagnostics tests.

C9000 Series

Syntax `online stack-unit unit-number`

Parameters **stack-unit *unit-number*** Enter the keyword `stack-unit` and specify the stack-unit number. The stack-unit number range is from 0 to 7.

Defaults none

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command-Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C1048P.

Example

```
Dell#diag stack-unit 3 level0 verbose no-reboot
Warning - diagnostic execution will cause multiple link flaps on the
peer side - advisable to shut directly connected ports
Warning - It is highly recommended to reboot the system after Offline
```

```
Diagnostics
Proceed with Diags [confirm yes/no]: yes
Dell#Jun 25 05:15:14: %PE-UNKN-C1048P:3 %DIAGAGT-6-DA_DIAG_STARTED:
Starting diags on stack-unit 3
14:19:49 : Approximate time to complete the Diags (level0)... 2 Mins
```

**Related
Commands**

- [diag](#) — run diagnostic tests on an offline switch.
- [offline](#) — places the stack-unit in the offline state to run the diagnostics tests.

power-cycle

Power-cycle the port extender (PE) stack-unit from the PE console

C9000 Series

Syntax `power-cycle stack-unit {unit-number | all }`

Parameters

<i>unit-number</i>	Enter a stack-unit number. Range is from 0 to 7.
all	Enter all to power-cycle all the stack-units.

Command Modes EXEC

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010 and C1048P.

Usage Information  **CAUTION: Do not attempt to reset or power cycle when the system is going through the process of upgrading.**

Example

```
Dell#power-cycle ?

```

show control-bridge status

Display the status of the control bridge from the port extender (PE) console.

C9000 Series

Syntax `show control-bridge status`

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command-Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C1048P.

Example

```
Dell#show control-bridge status
Reason: CNU - CSP Not Up, IPE - IPC Program Error
PPE - PEM Program Error, CPE - CHM Program Error
UE - UnKnown Error

CB System MAC : 34:17:eb:00:20:00
Csp Sess Status : UP
Active CB : YES
Uplink LAG : Port-channel 257
LAG Admin Status : UP
LAG Oper Status : UP
-----
Status Reason RPM-Id PE-Id
-----
Online -      0      255
```

Usage Information

Use the `show control-bridge status` command output information to debug the connectivity issues between the control bridge and port extender.

show system

Display the status of a specific stack-unit from the port extender (PE) console.

Syntax `show system [brief | stack-unit unit-id | stack-ports [status | topology]`

Parameters

brief	(OPTIONAL) Enter the keyword <code>brief</code> to view an abbreviated list of system information.
stack-unit <i>unit-id</i>	(OPTIONAL) Enter the keywords <code>stack-unit</code> then the stack unit number for information. The stack-unit number range is from 0 to 7.
stack-ports <i>status</i> <i>topology</i>	(OPTIONAL) Enter the keywords <code>stack-ports</code> for information about the status or topology of the stack ports.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010 and C1048P.
9.7(0.0)	Introduced on the S6000-ON.
9.4(0.0)	Added support for the <code>disabled-ports</code> parameter .
9.0.2.0	Introduced on the S6000.
9.0.0.0	Introduced on the Z9000.
8.3.19.0	Introduced on the S4820T.
8.3.11.4	The <code>brief</code> parameter no longer displays the current Reload mode. To display Reload mode, use the <code>show reload-type</code> command. Modified the <code>show system stack-unit</code> command output to support Piece Part ID (PPID).
8.3.11.1	Introduced on the Z9000.

Version	Description
8.3.7.0	Introduced on the S4810.
7.8.1.0	The Boot Flash field displays the code level for boot code 2.8.1.1 and newer, while older boot codes display as "Present".
7.7.1.0	Added Master Priority field.
7.6.1.0	Introduced on the S-Series.

telnet-peer-stack-unit

Connect through Telnet to a peer stack-unit from a port extender (PE) console.

C9000 Series

Syntax `telnet-peer-stack-unit`

Defaults Not configured.

Command Modes • EXEC

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9 (0.0)	Introduced on the C9010 and C1048P.

Usage Information In a PE stack setup (master unit), use the `telnet-peer-stack-unit` command to open a telnet session to the port extender standby unit.

After connecting to the standby unit, you can access the following subset of commands:

```

Dell(standby) #?
cd                  Change current directory
copy               Copy from one file to another
delete            Delete a file
dir               List files on a filesystem
disable           Turn off privileged commands
enable            Turn on privileged commands
exit              Exit from the EXEC
format            Format a filesystem
pwd               Display current working directory
rename            Rename a file

```

reset	Reset selected card
show	PE Show running system information
telnet-peer-stack-unit	Open a telnet connection to the peer
stack-unit	

Example

```
Dell#telnet-peer-stack-unit
Trying Unit 2...
Connected to Unit 2.
Exit character is '^]'.
Login: admin
Password:
Jun 24 10:14:11: %PE-UNKN-UNIT2-S:CP %SEC-5-LOGIN_SUCCESS: Login
successful for user admin on line vty0 ( Unit 3 )
Dell(standby)>en
Dell(standby)#exit
Session terminated for user admin on line vty 0 ( Unit 3 )

Closed connection.
Dell#Jun 24 10:14:29: %PE-UNKN-UNIT2-S:CP %SEC-5-LOGOUT: Exec session is
terminated for user admin on line vty0 ( Unit 3 )
```

upgrade system

Upgrade the Dell Networking OS image to the stack-unit.

C9000 Series

Syntax `upgrade system {stack-unit unit number | all } {usbflash: | flash:} {rpmA:| rpmB:}`

Parameters	stack-unit unit number Enter the keyword <code>stack-unit</code> and specify the stack-unit ID to sync the image to that of the stack-unit or enter <code>all</code> to sync the image on all stack-units. The stack-unit number range is from 0 to 7. all Enter the keyword <code>all</code> to sync the image on all the stack-units configured. flash: file-url Enter the keyword <code>flash:</code> and specify the location of the image file in the format <code>//directory-path</code> or press Enter to launch a prompt sequence. usbflash: file-url Enter the keyword <code>usbflash:</code> and copy the image from usbflash file <code>systemusbflash://filepath</code> press Enter to launch a prompt sequence. rpmA: rpm B: Specify the flash partition of the operating-system image that you want to upgrade.

Defaults none

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010 and C1048P.
9.7(0.0)	Added support for NFS mount.
9.2(1.0)	Introduced on the Z9500.
9.0(0.0)	Added support for IPv6 for the <code>file-url</code> parameter.

Version	Description
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000. Added support for the SSD on the Z9000 only.
8.3.7.0	Introduced on the S4810.
7.7.1.0	Added support for TFTP and SCP.
7.6.1.0	Introduced on the S-Series.

Usage Information

You can specify the source location and can choose `usbflash:` or `flash:` as a source location. You can choose `rpmA` (for partition A) or `rpm B` (for partition B) as your destination. The system boots up from the newly upgraded partition after you reload the system with the `reload` command. To verify that the Dell Networking OS image was correctly upgraded, use the `show boot system all` command.

For more information on the upgrade process, see the *Dell Networking C9010 and C1048P Release Notes*.

Example

```
Dell# upgrade system stack-unit 0 usbflash://FTOS-C1048.bin rpmA:
00:39:32 : Discarded 1 pkts. Expected block num : 51. Received block
num: 50
!00:39:36 : Discarded 1 pkts. Expected block num : 65. Received block
num: 64
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
.....!!!!!!!!!!!!!!!!!!!!!!!!!!!!
93924044 bytes successfully copied
System image upgrade completed successfully.
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

Image upgraded to all
```

PE Stacking

Use the commands in this chapter to configure and manage C1048P port-extender (PE) stacking. Stacking is not supported on C9010 switches.

For information about using the PE stacking feature, see the “Port Extender (PE) Stacking” chapter in the *Dell Networking OS Configuration Guide for the C9000 Series*.

You can use the commands to pre-configure a port extender, so that the configuration settings are invoked when the switch is attached to the chassis.

Topics:

- [renumber](#)
- [reset](#)
- [show pe system](#)
- [show hardware pe](#)
- [stack unit](#)
- [stack-unit](#)

renumber

To rearrange the stack units, reassign a stack unit ID number.

C9000 Series

Syntax	<code>pe pe-id stack-unit unit number renumber unit number</code>	
Parameters	pe pe-id	Enter the keyword <code>pe</code> and the PE ID. The range is from 0 to 255.
	stack-unit unit number	Enter the keyword <code>stack-unit</code> and the stack-unit ID number. The range is from 0 to 7.
	renumber unit number	Enter the keyword <code>renumber</code> and a new stack-unit ID number. The range is from 0 to 7.
Default	Default stack-unit number is zero.	
Command Modes	EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command-Line Reference Guide</i> .	

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Example

```
Dell# pe 255 stack-unit 0 renumber 2
```

reset

Reset or reboot the linecard, RPM, PE and PE stack-unit.

C9000 Series

Syntax	<code>reset {linecard slot-id rpm slot id [hard] pe pe-id [stack-unit unit-number]}</code> From a PE console , use <code>reset stack-unit unit-number [hard]</code> to reset the stack-unit.										
Parameters	<table><tr><td>linecard slot-id</td><td>Enter the keyword <code>linecard</code> and the <code>slot-id</code> number to specify the set of line-card ports for reset. The slot ID range is from 0 to 11.</td></tr><tr><td>rpm</td><td>Enter the keyword <code>rpm</code> and the <code>slot-id</code> number to specify the route processor module (RPM) ports for reset. The range for the RPM card ports is from 0 to 1.</td></tr><tr><td>hard</td><td>(Optional) Reboot (power cycle) the specified line card, RPM card, or PE stack-unit (The <code>hard</code> option for PE is only available from PE console).</td></tr><tr><td>pe pe-id</td><td>Enter the keyword <code>pe</code> and the port extender (PE) ID. The range for <code>pe-id</code> is from 0 to 255.</td></tr><tr><td>stack-unit unit-number</td><td>(Optional) Enter the keyword <code>stack-unit</code> and the stack-unit number. The range is from 0 to 7.</td></tr></table>	linecard slot-id	Enter the keyword <code>linecard</code> and the <code>slot-id</code> number to specify the set of line-card ports for reset. The slot ID range is from 0 to 11.	rpm	Enter the keyword <code>rpm</code> and the <code>slot-id</code> number to specify the route processor module (RPM) ports for reset. The range for the RPM card ports is from 0 to 1.	hard	(Optional) Reboot (power cycle) the specified line card, RPM card, or PE stack-unit (The <code>hard</code> option for PE is only available from PE console).	pe pe-id	Enter the keyword <code>pe</code> and the port extender (PE) ID. The range for <code>pe-id</code> is from 0 to 255.	stack-unit unit-number	(Optional) Enter the keyword <code>stack-unit</code> and the stack-unit number. The range is from 0 to 7.
linecard slot-id	Enter the keyword <code>linecard</code> and the <code>slot-id</code> number to specify the set of line-card ports for reset. The slot ID range is from 0 to 11.										
rpm	Enter the keyword <code>rpm</code> and the <code>slot-id</code> number to specify the route processor module (RPM) ports for reset. The range for the RPM card ports is from 0 to 1.										
hard	(Optional) Reboot (power cycle) the specified line card, RPM card, or PE stack-unit (The <code>hard</code> option for PE is only available from PE console).										
pe pe-id	Enter the keyword <code>pe</code> and the port extender (PE) ID. The range for <code>pe-id</code> is from 0 to 255.										
stack-unit unit-number	(Optional) Enter the keyword <code>stack-unit</code> and the stack-unit number. The range is from 0 to 7.										
Defaults	none										
Command Modes	EXEC										
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> .										

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010 and C1048P.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.3.1.0	Added the <code>hard reset</code> option.
7.8.1.0	Augmented to run on the standby unit in order to reset the standby unit directly.
7.7.1.0	Introduced on the S-Series.

Usage Information	Resetting is a soft reboot, including flushing the forwarding tables. The <code>hard</code> option is available for PE stack-unit from the PE console only. To reset (soft reboot) a stack-unit from PE console, use the <code>reset</code> command and specify the stack-unit number. To perform a hard reset or power-cycle to a specified stack-unit, use the <code>reset stack-unit unit-number hard</code> command.

Example: linecard	<pre>Dell#reset linecard 0 Dell#Jun 24 15:26:39: %RPM1-P:CP %CHMGR-5-LINECARD_RESET: linecard 0 being reset Jun 24 15:26:39: %RPM1-P:CP %CHMGR-2-LINECARD_DOWN: linecard 0 down - reset Jun 24 15:26:39: %RPM1-P:CP %IFMGR-1-DEL_PORT: Removed port: Fo 0/0-20, Dell#Jun 24 15:28:24: %RPM1-P:CP %CHMGR-5-CHECKIN: Checkin from linecard</pre>

```

0 (type C9000LC0640, 24 ports)

show pe system

Display information on all the system components of a port extender on a stack.

C9000 Series

Syntax	show pe <i>pe-id</i> system [<i>brief</i> <i>stack-port</i> [<i>status</i> <i>topology</i>] <i>stack-unit unit number</i>]	
Parameters	<i>pe-id</i>	Enter the port extender ID <i>pe-id</i> to view the port extender system status and details. Range is from 0 to 255.
	<i>brief</i>	(Optional) Enter the keyword <i>brief</i> to view a short summary of the port extender system status.
	<i>stack-port</i>	(Optional) Enter the keyword <i>stack port</i> to view the stack port information.
	<i>status</i>	(Optional) Enter the keyword <i>status</i> to view the status of the stack ports when there is a PE stack configuration.
	<i>topology</i>	(Optional) Enter the keyword <i>topology</i> to view the topology information when there is a PE stack configured. Topology for a PE stack can be: daisy chain or ring.
	<i>stack-unit unit number</i>	(Optional) Enter the keyword <i>stack-unit</i> and a stack unit number to view information on a specified stack-unit in detail. Stack unit range is from 0 to 7.

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Usage Information

The `show pe pe-id system` output displays detailed summary on different hardware and software components of all the stack units attached to a port extender. You can use the `brief` option to view a short summary of the stack-units attached to a port extender. Use the `stack-port status` to view the status of the stack-units attached to a port extender. The `stack-port topology` option allows you to view whether the stack is forming a daisy chain or a ring topology. Use the `stack-unit unit-number` option to display the detailed summary of both hardware and software components of a specific stack-unit.

show hardware pe

Display input and output traffic statistics and other operational information about a specified hardware component.

C9000 Series

Syntax	<code>show hardware pe <i>pe-id</i> stack-unit <i>unit number</i> {cpu drops stack-port unit}</code>		
Parameters	pe <i>pe-id</i> stack-unit <i>unit-number</i>	Enter <code>pe <i>pe-id</i> stack-unit <i>unit number</i></code> parameters with a command option to display hardware statistics from the specified port extender (PE) and stack-unit. The port extender ID range is from 0 to 255 and the stack-unit ID range is from 0 to 7. The command options are: • <code>cpu data-plane statistics</code>: Displays data-plane statistics, including the <code>bc pci</code> driver statistics for the device. • <code>drops unit <i>unit number</i> [user-port {port {<i>port-num</i> range}}]</code>: Displays the number of internal drops of control-plane and protocol control packets on the port specified. User port range is 1–51. • <code>stack-port</code> Displays traffic statistics for the stacking ports on a specified PE. • <code>unit <i>unit-number</i></code> to view with the following options: ◦ <code>counters</code>: Displays the traffic counters. ◦ <code>details</code>: Displays more detailed hardware information. ◦ <code>port-stats</code>: Displays the internal statistics on a per-port basis. ◦ <code>register</code>: Displays the internal registers. ◦ <code>table-dump</code>: Displays the tables from the bShell.	
Defaults	none		
Command Modes	• EXEC • EXEC Privilege		
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> .		

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
9.2(0.0)	Modified the <code>drops</code> keyword range, unit keyword range and added the <code>buffer</code> and <code>cpu management statistics</code> options.
8.3.19.0	Introduced on the S4820T.
8.3.11.5	Added i2c statistics and sata-interfaces statistics.
8.3.11.4	Added user port information.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Modified the <code>stack-port</code> keyword range expanded from 49-52 to 0-52; output modified for the <code>cpu data-plane statistics</code> option; the following options were added: <code>drops [unit 0-1 [port 0-27]]</code> and <code>unit 0-1 {counters details port-stats [detail] register}</code>
7.7.1.0	Introduced on the S-Series.

Related Commands

[clear hardware system-flow](#) — clears the statistics from selected hardware components.

[show system](#) — displays the current status of all the stack members or a specific member.

stack unit

Pre-provision the specified port-extender stack unit.

C9000 Series

Syntax

```
stack-unit unit-number {type unit-type | priority value}
```

To de-provision or delete a port extender stack unit, use the `no stack-unit unit-number {type unit-type | priority value}` command.

Parameters

stack-unit unit-number Enter the stack-unit ID number to locate a specific stack unit. Stack unit number range is 0–7.

type PE-type Enter a value for the stack-unit type.

priority value Enter the master priority value for the unit. The priority value range is from 1 to 14. The unit with the numerically highest priority value is elected the master.

Default

None

Command Modes

PE CONFIG

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command-Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.11(0.0)	Introduced the port extender types for the N20xx and N30xx series.
9.9(0.0)	Introduced on the C9010.

Usage Information

You can pre-provision a port extender stack unit using the `stack unit` command in the PE configuration mode and specify the stack-unit type. Only similar types of stack units are provisioned under a single port extender. The maximum number of stack units allowed for provisioning is 8. In a PE stack, by default, the stack unit with the highest MAC address is elected master; the stack unit with the second highest MAC address is elected standby. To change the default master and standby assignment, you can assign `stack-unit priority value`. If multiple units tie for the highest priority, the unit with the highest MAC address is elected master.

In the following example, **stack-unit 0** with priority 14 is the master and **stack-unit 1** with priority 13 is the standby.

 **NOTE:** You can configure a stack-unit priority only when the unit is online.

Example (stack-unit priority)

```
Dell(conf)#pe 2
Dell(conf-pe-2)#stack-unit 0 priority 14
Dell(conf-pe-2)#stack-unit 1 priority 13
```

Example (stack unit type)

```
Dell(conf-pe-201)#stack-unit 1 type ?
C1048P                    52-port GE/TE
```

```
N2024-PE          28-port GE/TE
N2024P-PE         28-port GE/TE
N2048-PE          52-port GE/TE
N2048P-PE         52-port GE/TE
N3024-PE          28-port GE/TE
N3024F-PE         28-port GE/TE
N3024P-PE         28-port GE/TE
N3048-PE          52-port GE/TE
N3048P-PE         52-port GE/TE
Dell(conf-pe-201) #
```

Example (stack unit type)

```
Dell(conf-pe-5) # stack-unit 4 type C1048P
```

```
Dell(conf-pe-5) # show config
!
pe provision 5
  stack-unit 4 type C1048P
```

Related Commands

- [redundancy force-failover](#) — Force the standby unit to become the primary or master unit
- [reset](#) — Reset or reboot the linecard, RPM, PE and PE stack-unit.

stack-unit

Extend the unused uplink ports as access ports.

Syntax

```
stack-unit unit-id access-ports port-range
```

To convert the port back to uplink, use the `no stack-unit unit-id access-ports port-range` command.

Parameters

stack-unit *unit-id* Enter the keyword `stack-unit` and the stack unit-id number. The stack-unit range is from 0 to 7.

access-ports *port-range* Enter the keyword `access-ports` and the port-range, separated by comma. There are maximum of 4 uplink ports in a PE, and the range is from 1 to 4.

 **NOTE:** Enter the *port-range* as 1 to 2 for front-end uplink ports and 3 to 4 for uplink ports in back panel (available in N30xx).

Default

None

Command Modes

PE CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command-Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command.

Version

Description

9.13.0.1P1

Introduced support for extending unused uplink port as access-port.

Usage Information

You can configure the unused uplink port as access-port even on a provisioned PE.

Example

```
DellEMC(conf) # pe provision 2
DellEMC(conf-pe-2) # stack-unit 1 access-ports 1
DellEMC(conf-pe-2) #
```

Example (stack unit type)

```
Dell(conf-pe-2) # show config
!
pe provision 2
  stack-unit 1 type C1048P
```

```
stack-unit 1 access-ports 1
stack-unit 3 type N2024P-PE
cascade interface TenGigabitEthernet 1/2
```

Per-VLAN Spanning Tree Plus (PVST+)

The Dell Networking operating software implementation of per-VLAN spanning tree plus (PVST+) is based on the IEEE 802.1w standard spanning tree protocol.

NOTE: For easier command line entry, the plus (+) sign is not used at the command line.

9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced on the E-Series.

Related Commands

[protocol spanning-tree pvst](#) — enter PVST+ mode.

extend system-id

To augment the Bridge ID with a VLAN ID so that PVST+ differentiate between BPDUs for each VLAN, use extend system ID. If the VLAN receives a BPDU meant for another VLAN, PVST+ does not detect a loop, and both ports can remain in Forwarding state.

C9000 Series

Syntax

`extend system-id`

Defaults

Disabled

Command Modes

PROTOCOL PVST

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.3.1.0	Introduced.

Example

```
Dell(conf-pvst)#do show spanning-tree pvst vlan 5 brief
VLAN 5
Executing IEEE compatible Spanning Tree Protocol
Root ID Priority 32773, Address 0001.e832.73f7
Root Bridge hello time 2, max age 20, forward delay 15
Bridge ID Priority 32773 (priority 32768 sys-id-ext 5), Address
0001.e832.73f7
We are the root of Vlan 5
Configured hello time 2, max age 20, forward delay 15

Interface Designated
Name      PortID  Prio   Cost   Sts Cost Bridge ID      PortID

```

Related Commands

[protocol spanning-tree pvst](#) – enter SPANNING TREE mode on the switch.

protocol spanning-tree pvst

To enable PVST+ on a device, enter the PVST+ mode.

C9000 Series

Syntax `protocol spanning-tree pvst`

To disable PVST+, use the `disable` command.

Defaults none

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.

Version	Description
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
8.3.1.0	Introduced.

Example

```
Dell#conf
Dell(conf)#protocol spanning-tree pvst
Dell(conf-pvst)#no disable
Dell(conf-pvst)#vlan 2 bridge-priority 4096
Dell(conf-pvst)#vlan 3 bridge-priority 16384
Dell(conf-pvst)#
Dell(conf-pvst)#show config
!
protocol spanning-tree pvst
    no disable
    vlan 2 bridge-priority 4096
    vlan 3 bridge-priority 16384
Dell#
```

Usage Information

After you enable PVST+, the device runs an STP instance for each VLAN it supports.

Related Commands

[disable](#) — disables PVST+.

[show spanning-tree pvst](#) — displays the PVST+ configuration.

show spanning-tree pvst

View the Per-VLAN spanning tree configuration.

C9000 Series

Syntax

```
show spanning-tree pvst [vlan vlan-id] [brief] [guard] [interface interface]
```

Parameters

vlan <i>vlan-id</i>	(OPTIONAL) Enter the keyword <code>vlan</code> then the VLAN ID. The range is 1 to 4094.
brief	(OPTIONAL) Enter the keyword <code>brief</code> to view a synopsis of the PVST+ configuration information.
interface <i>interface</i>	(OPTIONAL) Enter one of the interface keywords along with the slot/port information: - For a Port Channel interface, enter the keyword <code>port-channel</code> then a number: The range is 1 to 4096. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a port extender (PE) Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. - For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id</i> / <i>stack-unit</i> / <i>port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the <i>stack-unit unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE.

guard (OPTIONAL) Enter the keyword `guard` to display the type of guard enabled on a PVST interface and the current port state.

Defaults none

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.5.1.0	Added support for 4-port 40G line cards on ExaScale.
8.4.2.1	Support for the optional <code>guard</code> keyword was added on the C-Series, S-Series, and E-Series TeraScale.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.4.1.0	Expanded to display port error disable state (EDS) caused by loopback BPDU inconsistency and Port VLAN ID inconsistency.
6.2.1.1	Introduced.

Usage Information The following describes the `show spanning-tree pvst` command shown in the following examples.

Field	Description
Interface Name	PVST interface.
Instance	PVST instance.
Sts	Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut).
Guard Type	Type of STP guard configured (Root, Loop, or BPDU guard).

The `peGigE` ports and VP-LAG ports information is displayed as part of the `show spanning-tree 0` command output, only when the `guard` option is entered.

Example (Brief)

```
Dell#show spanning-tree pvst vlan 3 brief
VLAN 3
Executing IEEE compatible Spanning Tree Protocol
Root ID Priority 4096, Address 0001.e801.6aa8
Root Bridge hello time 2, max age 20, forward delay 15
Bridge ID Priority 16384, Address 0001.e805.e306
Configured hello time 2, max age 20, forward delay 15

Interface                               Designated
Name      PortID  Prio Cost Sts Cost      Bridge ID      PortID
-----
Te 1/0    128.130 128 20000 FWD 20000 4096 0001.e801.6aa8 128.426
Te 1/1    128.131 128 20000 BLK 20000 4096 0001.e801.6aa8 128.427
Te 1/16   128.146 128 20000 FWD 20000 16384 0001.e805.e306 128.146
Te 1/17   128.147 128 20000 FWD 20000 16384 0001.e805.e306 128.147
```

Interface Name	Role	PortID	Prio	Cost	Sts	Cost	Link-type	Edge
Te 1/0	Root	128.130	128	20000	FWD	20000	P2P	No
Te 1/1	Altr	128.131	128	20000	BLK	20000	P2P	No
Te 1/16	Desg	128.146	128	20000	FWD	20000	P2P	Yes
Te 1/17	Desg	128.147	128	20000	FWD	20000	P2P	Yes

Example

```
Dell#show spanning-tree pvst vlan 2
VLAN 2
Root Identifier has priority 4096, Address 0001.e805.e306
Root Bridge hello time 2, max age 20, forward delay 15
Bridge Identifier has priority 4096, Address 0001.e805.e306
Configured hello time 2, max age 20, forward delay 15
We are the root of VLAN 2
Current root has priority 4096, Address 0001.e805.e306
Number of topology changes 3, last change occurred 00:57:00

Port 130 (TenGigabitEthernet 1/0) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.130
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.130, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1567, received 3
The port is not in the Edge port mode

Port 131 (TenGigabitEthernet 1/1) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.131
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.131, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1567, received 0
The port is not in the Edge port mode

Port 146 (TenGigabitEthernet 1/16) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.146
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.146, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1578, received 0
The port is in the Edge port mode

Port 147 (TenGigabitEthernet 1/17) is designated Forwarding
Port path cost 20000, Port priority 128, Port Identifier 128.147
Designated root has priority 4096, address 0001.e805.e3:06
Designated bridge has priority 4096, address 0001.e805.e3:06
Designated port id is 128.147, designated path cost 0
Number of transitions to forwarding state 1
BPDU sent 1579, received 0
The port is in the Edge port mode
```

Example (EDS/ LBK)

```
Dell#show spanning-tree pvst vlan 2 interface tengigabitethernet 1/0

TenGigabitEthernet 1/0 of VLAN 2 is LBK_INC discarding

Edge port:no (default) port guard :none (default)
Link type: point-to-point (auto) bpdu filter:disable (default)
Bpdu guard :disable (default)
Bpdus sent 152, received 27562

Interface Designated
Name      PortID    Prio Cost   Sts Cost Bridge ID          PortID
-----
Te 1/0    128.1223 128   20000 EDS 0 32768 0001.e800.a12b 128.1223
```

Example (EDS/PVID)

```
Dell#show spanning-tree pvst vlan 2 interface tengigabitethernet 1/0

TenGigabitEthernet 1/0 of VLAN 2 is PVID_INC discarding

Edge port:no (default) port guard :none (default)
Link type: point-to-point (auto) bpdu filter:disable (default)
Bpdu guard :disable (default)
Bpdus sent 1, received 0

Interface Designated
Name      PortID    Prio Cost    Sts Cost Bridge ID          PortID
-----
Te 1/0 128.1223 128 20000 EDS 0 32768 0001.e800.a12b 128.1223
```

Example (Guard)

```
Dell#show spanning-tree pvst vlan 5 guard
Interface
Name      Instance Sts          Guard type
-----
Te 0/1 5      INCON(Root) Rootguard
Te 0/2 5      FWD         Loopguard
Te 0/3 5      EDS(Shut)   Bpduguard
```

Related Commands

[spanning-tree pvst](#) — configure PVST+ on an interface.

spanning-tree pvst

Configure a PVST+ interface with one of these settings: edge port with optional bridge port data unit (BPDU) guard, port disablement if an error condition occurs, port priority or cost for a VLAN range, loop guard, or root guard.

C9000 Series

Syntax

```
spanning-tree pvst {edge-port [bpduguard [shutdown-on-violation]] | err-
disable | vlan vlan-range {cost number | priority value} | loopguard |
rootguard}
```

Parameters

edge-port	Enter the keywords <code>edge-port</code> to configure the interface as a PVST+ edge port.
bpduguard	Enter the keyword <code>portfast</code> to enable Portfast to move the interface into Forwarding mode immediately after the root fails. Enter the keyword <code>bpduguard</code> to disable the port when it receives a BPDU.
shutdown-on-violation	(OPTIONAL) Enter the keywords <code>shutdown-on-violation</code> to hardware disable an interface when a BPDU is received and the port is disabled.
err-disable	Enter the keywords <code>err-disable</code> to enable the port to be put into the error-disable state (EDS) if an error condition occurs.
vlan <i>vlan-range</i>	Enter the keyword <code>vlan</code> then the VLAN numbers. The range is from 1 to 4094.
cost <i>number</i>	Enter the keyword <code>cost</code> then the port cost value. The range is from 1 to 200000. Defaults: • 10-Gigabit Ethernet interface = 2000. • Port Channel interface with one 10 Gigabit Ethernet = 2000. • Port Channel with two 10 Gigabit Ethernet = 1800.
priority <i>value</i>	Enter the keyword <code>priority</code> then the Port priority value in increments of 16. The range is from 0 to 240. The default is 128 .

loopguard	Enter the keyword <code>loopguard</code> to enable loop guard on a PVST+ port or port-channel interface.
rootguard	Enter the keyword <code>rootguard</code> to enable root guard on a PVST+ port or port-channel interface.

Defaults Not configured.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.4.2.1	Introduced the <code>loopguard</code> and <code>rootguard</code> options on the E-Series TeraScale, C-Series, and S-Series.
8.3.7.0	Introduced on the S4810.
8.2.1.0	Introduced the hardware <code>shutdown-on-violation</code> option.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
7.4.1.0	Added the optional Bridge Port Data Unit (BPDU) guard.
6.2.1.1	Introduced.

Usage Information

The BPDU guard option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into the Error Disable state if a BPDU appears, and a message is logged so that the administrator can take corrective action.

NOTE: A port configured as an edge port, on a PVST switch, immediately transitions to the forwarding state. Only ports connected to end-hosts should be configured as an edge port. Consider an edge port similar to a port with a spanning-tree portfast enabled.

If you do not enable `shutdown-on-violation`, BPDUs are still sent to the route process module (RPM) CPU.

You cannot enable `root guard` and `loop guard` at the same time on a port. For example, if you configure `loop guard` on a port on which `root guard` is already configured, the following error message is displayed: `% Error: RootGuard is configured. Cannot configure LoopGuard.`

When used in a PVST+ network, loop guard is performed per-port or per-port channel at a VLAN level. If no BPDUs are received on a VLAN interface, the port or port-channel transitions to a Loop-Inconsistent (blocking) state only for this VLAN.

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a Blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

On PE ports and on VP-LAGs (LAGs formed with PE ports)

- Spanning-tree with `bpdu guard shutdown-on-violation` is enabled by default
- No spanning tree command is valid. This command is not visible and issuing this command on VP-LAG ports results in a failure.

Example

```
Dell(conf-if-te-1/1)#spanning-tree pvst vlan 3 cost 18000
Dell(conf-if-te-1/1)#end
Dell(conf-if-te-1/1)#show config
!
interface TenGigabitEthernet 1/1
  no ip address
  switchport
  spanning-tree pvst vlan 3 cost 18000
  no shutdown
Dell(conf-if-te-1/1)#end
```

Related Commands

[show spanning-tree pvst](#) — views the PVST+ configuration.

spanning-tree pvst err-disable

Place ports in an Err-Disabled state if they receive a PVST+ BPDU when they are members an untagged VLAN.

C9000 Series

Syntax

`spanning-tree pvst err-disable cause invalid-pvst-bpdu`

Defaults

Enabled; ports are placed in the Err-Disabled state if they receive a PVST+ BPDU when they are members of an untagged VLAN.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.2(1.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.2.1.0	Introduced.

Usage Information

Some non-Dell Networking systems which have hybrid ports participating in PVST+ transmit two kinds of BPDUs: an 802.1D BPDU and an untagged PVST+ BPDU.

Dell Networking systems do not expect PVST+ BPDU on an untagged port. If this happens, the system places the port in the Error-Disable state. This behavior might result in the network not converging. To prevent the system from executing this action, use the `no spanning-tree pvst err-disable` command `cause invalid-pvst-bpdu`.

Related Commands

[show spanning-tree pvst](#) — views the PVST+ configuration.

tc-flush-standard

Enable the MAC address flushing after receiving every topology change notification.

C9000 Series

Syntax	<code>tc-flush-standard</code> To disable, use the <code>no tc-flush-standard</code> command.																		
Defaults	Disabled.																		
Command Modes	CONFIGURATION																		
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.2(1.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr><tr><td>8.3.7.0</td><td>Introduced on the S4810.</td></tr><tr><td>7.6.1.0</td><td>Introduced on the S-Series.</td></tr><tr><td>7.5.1.0</td><td>Introduced on the C-Series.</td></tr><tr><td>6.5.1.0</td><td>Introduced.</td></tr></tbody></table>	Version	Description	9.9(0.0)	Introduced on the C9010.	9.2(1.0)	Introduced on the Z9500.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	7.6.1.0	Introduced on the S-Series.	7.5.1.0	Introduced on the C-Series.	6.5.1.0	Introduced.

[vlan hello-time](#) — change the time interval between BPDUs.

[vlan max-age](#) — changes the time interval before PVST+ refreshes.

[show spanning-tree pvst](#) — displays the PVST+ configuration.

vlan forward-delay

Set the amount of time the interface waits in the Listening state and the Learning state before transitioning to the Forwarding state.

C9000 Series

Syntax

```
vlan vlan-range forward-delay seconds
```

To return to the default setting, use the `no vlan forward-delay` command.

Parameters

vlan *vlan-range* Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.

forward-delay *seconds* Enter the keywords `forward-delay` then the time interval, in seconds, that the system waits before transitioning PVST+ to the forwarding state. The range is from 4 to 30 seconds. The default is **15 seconds**.

Defaults

15 seconds

6.2.1.1	Introduced.

Related Commands	vlan bridge-priority — sets the bridge-priority value.
	vlan hello-time — changes the time interval between BPDUs.
	vlan max-age — changes the time interval before PVST+ refreshes.
	show spanning-tree pvst — displays the PVST+ configuration.

vlan hello-time

Set the time interval between generation of PVST+ 7 BPDUs.

C9000 Series

Syntax	vlan <i>vlan-range</i> hello-time <i>seconds</i> To return to the default value, use the no <code>vlan hello-time</code> command.	
Parameters	vlan <i>vlan-range</i> Enter the keyword <code>vlan</code> then the VLAN numbers. The range is from 1 to 4094. hello-time <i>seconds</i> Enter the keywords <code>hello-time</code> then the time interval, in seconds, between transmission of BPDUs. The range is from 1 to 10 seconds. The default is 2 seconds.	
Defaults	2 seconds	
Command Modes	CONFIGURATION (conf-pvst)	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.6.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
6.2.1.1	Introduced.

Related Commands	vlan bridge-priority — sets the bridge-priority value. vlan forward-delay — changes the time interval before Dell Networking OS transitions to the forwarding state. vlan max-age — changes the time interval before PVST+ refreshes. show spanning-tree pvst — displays the PVST+ configuration.

vlan max-age

To maintain configuration information before refreshing that information, set the time interval for the PVST+ bridge.

C9000 Series

Syntax	<code>vlan <i>vlan-range</i> max-age <i>seconds</i></code> To return to the default, use the <code>no vlan max-age</code> command.																			
Parameters	vlan <i>vlan-range</i>	Enter the keyword <code>vlan</code> then the VLAN numbers. The range is from 1 to 4094.																		
	max-age <i>seconds</i>	Enter the keywords <code>max-age</code> then the time interval, in seconds, that the system waits before refreshing configuration information. The range is from 6 to 40 seconds. The default is 20 seconds .																		
Defaults	20 seconds																			
Command Modes	CONFIGURATION (conf-pvst)																			
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. PIM-Source Specific Mode (PIM-SSM)

The protocol-independent multicast source-specific mode (PIM-SSM) commands in this section are supported in the Dell Networking operating system.

Topics:

- [IPv4 PIM Commands](#)
- [IPv4 PIM-Source Specific Mode Commands](#)

IPv4 PIM Commands

The following commands apply to IPv4 PIM-SM, IPv4 PIM-SSM, and PIM-DM.

- [clear ip pim tib](#)
- [debug ip pim](#)
- [ip pim dr-priority](#)
- [ip pim neighbor-filter](#)
- [ip pim query-interval](#)
- [show ip pim interface](#)
- [show ip pim neighbor](#)
- [show ip pim tib](#)

clear ip pim tib

Clear PIM tree information from the PIM database.

C9000 Series

Syntax	<code>clear ip pim tib [group]</code>
Parameters	group (OPTIONAL) Enter the multicast group address in dotted decimal format (A.B.C.D).
Command Modes	EXEC Privilege
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Usage Information	If you use this command on a local VLT node, all multicast routes from the local PIM TIB, the entire multicast route table, and all the entries in the data plane are deleted. The local VLT node sends a request to the peer VLT node to download multicast routes learned by the peer. Both local and synced routes are removed from the local VLT node multicast route table. The peer VLT node clears synced routes from the node. If you use this command on a peer VLT node, only the synced routes are deleted from the multicast route table.

debug ip pim

View IP PIM debugging messages.

C9000 Series

Syntax	<pre>debug ip pim [bsr events group packet [in out] register state timer [assert hello joinprune register]]</pre> To disable PIM debugging, use the <code>no debug ip pim</code> command or use the <code>undebg all</code>to disable all debugging command.														
Parameters	<table><tr><td>bsr</td><td>(OPTIONAL) Enter the keyword <code>bsr</code> to view PIM Candidate RP/BSR activities.</td></tr><tr><td>events</td><td>(OPTIONAL) Enter the keyword <code>group</code> to view PIM messages for a specific group.</td></tr><tr><td>group</td><td>(OPTIONAL) Enter the keyword <code>group</code> to view PIM messages for a specific group.</td></tr><tr><td>packet [in out]</td><td>(OPTIONAL) Enter the keyword <code>packet</code> to view PIM packets. Enter one of the optional parameters: <code>in</code>: to view incoming packets <code>out</code>: to view outgoing packets </td></tr><tr><td>register</td><td>(OPTIONAL) Enter the keyword <code>register</code> to view PIM register address in dotted decimal format (A.B.C.D).</td></tr><tr><td>state</td><td>(OPTIONAL) Enter the keyword <code>state</code> to view PIM state changes.</td></tr><tr><td>timer [assert hello joinprune register]</td><td>(OPTIONAL) Enter the keyword <code>timer</code> to view PIM timers. Enter one of the optional parameters: <code>assert</code>: to view the assertion timer <code>hello</code>: to view the PIM neighbor keepalive timer <code>joinprune</code>: to view the expiry timer (join/prune timer) <code>register</code>: to view the register suppression timer </td></tr></table>	bsr	(OPTIONAL) Enter the keyword <code>bsr</code> to view PIM Candidate RP/BSR activities.	events	(OPTIONAL) Enter the keyword <code>group</code> to view PIM messages for a specific group.	group	(OPTIONAL) Enter the keyword <code>group</code> to view PIM messages for a specific group.	packet [in out]	(OPTIONAL) Enter the keyword <code>packet</code> to view PIM packets. Enter one of the optional parameters: <code>in</code>: to view incoming packets <code>out</code>: to view outgoing packets	register	(OPTIONAL) Enter the keyword <code>register</code> to view PIM register address in dotted decimal format (A.B.C.D).	state	(OPTIONAL) Enter the keyword <code>state</code> to view PIM state changes.	timer [assert hello joinprune register]	(OPTIONAL) Enter the keyword <code>timer</code> to view PIM timers. Enter one of the optional parameters: <code>assert</code>: to view the assertion timer <code>hello</code>: to view the PIM neighbor keepalive timer <code>joinprune</code>: to view the expiry timer (join/prune timer) <code>register</code>: to view the register suppression timer
bsr	(OPTIONAL) Enter the keyword <code>bsr</code> to view PIM Candidate RP/BSR activities.														
events	(OPTIONAL) Enter the keyword <code>group</code> to view PIM messages for a specific group.														
group	(OPTIONAL) Enter the keyword <code>group</code> to view PIM messages for a specific group.														
packet [in out]	(OPTIONAL) Enter the keyword <code>packet</code> to view PIM packets. Enter one of the optional parameters: <code>in</code>: to view incoming packets <code>out</code>: to view outgoing packets														
register	(OPTIONAL) Enter the keyword <code>register</code> to view PIM register address in dotted decimal format (A.B.C.D).														
state	(OPTIONAL) Enter the keyword <code>state</code> to view PIM state changes.														
timer [assert hello joinprune register]	(OPTIONAL) Enter the keyword <code>timer</code> to view PIM timers. Enter one of the optional parameters: <code>assert</code>: to view the assertion timer <code>hello</code>: to view the PIM neighbor keepalive timer <code>joinprune</code>: to view the expiry timer (join/prune timer) <code>register</code>: to view the register suppression timer														
Defaults	Disabled.														
Command Modes	EXEC Privilege														
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.														

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.

Version	Description
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

ip pim dr-priority

Change the designated router (DR) priority for the interface.

C9000 Series

Syntax	<code>ip pim dr-priority <i>priority-value</i></code> To remove the DR priority value assigned, use the <code>no ip pim dr-priority</code> command.	
Parameters	<i>priority-value</i>	Enter a number. Preference is given to larger/higher number. The range is from 0 to 4294967294. The default is 1.
Defaults	1	
Command Modes	INTERFACE INTERFACE (BATCH Mode)	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series on port-channels and the S-Series.

Usage Information	The router with the largest value assigned to an interface becomes the designated router. If two interfaces contain the same designated router priority value, the interface with the largest interface IP address becomes the designated router.

ip pim neighbor-filter

To prevent a router from participating in protocol independent multicast (PIM), configure this feature.

C9000 Series

Syntax	<code>ip pim neighbor-filter {access-list}</code> To remove the restriction, use the <code>no ip pim neighbor-filter {access-list}</code> command.	
Parameters	<i>access-list</i>	Enter the name of a standard access list. Maximum 16 characters.
Defaults	none	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series and S-Series.
7.6.1.0	Introduced on the E-Series.

Usage Information	Do not enter this command before creating the access-list.

ip pim query-interval

Change the frequency of PIM Router-Query messages.

C9000 Series

Syntax	<code>ip pim query-interval seconds</code> To return to the default value, use the <code>no ip pim query-interval seconds</code> command.	
Parameters	<i>seconds</i>	Enter a number as the number of seconds between router query messages. The range is from 0 to 65535. The default is 30 seconds .
Defaults	30 seconds	
Command Modes	INTERFACE INTERFACE (BATCH Mode)	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series for the port-channels and the S-Series.

show ip pim interface

View information on the interfaces with IP PIM enabled.

C9000 Series

Syntax `show ip pim interface`

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Usage Information The following describes the `show ip pim interface` command shown in the following example.

Field	Description
Address	Lists the IP addresses of the interfaces participating in PIM.
Interface	List the interface type, with either slot/port information or ID (VLAN or Port Channel), of the interfaces participating in PIM.
Ver/Mode	Displays the PIM version number and mode for each interface participating in PIM:

Field	Description
	- v2 = PIM version 2 - S = PIM Sparse mode
Nbr Count	Displays the number of PIM neighbors discovered over this interface.
Query Intvl	Displays the query interval for Router Query messages on that interface (configured with <code>ip pim query-interval</code> command).
DR Prio	Displays the Designated Router priority value configured on the interface (use the <code>ip pim dr-priority</code> command).
DR	Displays the IP address of the Designated Router for that interface.

The `show ip pim interface` command does not display information corresponding to the loop-back interfaces.

Example

```
Dell#show ip pim interface
Address          Interface Ver/  Nbr   Query DR   DR
                  Mode Count Intvl Prio
172.21.200.254 Te 0/9   v2/S 0    30 1  172.21.200.254
172.60.1.2      Te 0/11 v2/S 0    30 1  172.60.1.2
192.3.1.1       Te 0/16 v2/S 1    30 1  192.3.1.1
192.4.1.1       Te 1/5   v2/S 0    30 1  192.4.1.1
172.21.110.1    Te 1/6   v2/S 0    30 1  172.21.110.1
172.21.203.1    Te 1/7   v2/S 0    30 1  172.21.203.1
```

show ip pim neighbor

View PIM neighbors.

C9000 Series

Syntax `show ip pim neighbor`

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Usage Information The following describes the `show ip pim neighbor` command shown in the following example.

Field	Description
Neighbor address	Displays the IP address of the PIM neighbor.

Field	Description
Interface	List the interface type, with either slot/port information or ID (VLAN or Port Channel), on which the PIM neighbor was found.
Uptime/expires	Displays the amount of time the neighbor has been up then the amount of time until the neighbor is removed from the multicast routing table (that is, until the neighbor hold time expires).
Ver	Displays the PIM version number. v2 = PIM version 2
DR prio/Mode	Displays the Designated Router priority and the mode. 1 = default Designated Router priority (use the <code>ip pim dr-priority</code> command) - DR = Designated Router - S = Sparse mode

Example

```
Dell#show ip pim neighbor
Neighbor Interface Uptime/Expires Ver DR
Address Prio/Mode
127.87.3.4 Te 1/16 09:44:58/00:01:24 v2 1 / S
```

show ip pim tib

View the PIM tree information base (TIB).

C9000 Series

Syntax `show ip pim tib [group-address [source-address]]`

Parameters

- group-address*** (OPTIONAL) Enter the group address in dotted decimal format (A.B.C.D).
- source-address*** (OPTIONAL) Enter the source address in dotted decimal format (A.B.C.D).

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Usage Information The following describes the `show ip pim tib` command shown in the following example.

Field	Description
(S, G)	Displays the entry in the multicast PIM database.
uptime	Displays the amount of time the entry has been in the PIM route table.
expires	Displays the amount of time until the entry expires and is removed from the database.
RP	Displays the IP address of the RP/source for this entry.
flags	List the flags to define the entries: • D = PIM Dense Mode • S = PIM Sparse Mode • C = directly connected • L = local to the multicast group • P = route was pruned • R = the forwarding entry is pointing toward the RP • F = Dell Networking OS is registering this entry for a multicast source • T = packets were received via Shortest Tree Path • J = first packet from the last hop router is received and the entry is ready to switch to SPT • K = acknowledge pending state
Incoming interface	Displays the reverse path forwarding (RPF) interface towards the RP/ source.
RPF neighbor	Displays the next hop from this interface towards the RP/source.
Outgoing interface list:	Lists the interfaces that meet one of the following criteria: • a directly connect member of the Group • statically configured member of the Group • received a (*,G) Join message

Example

```
Dell#do show ip pim tib

PIM Multicast Routing Table
Flags: D - Dense, S - Sparse, C - Connected, L - Local, P - Pruned,
      R - RP-bit set, F - Register flag, T - SPT-bit set, J - Join SPT,
      M - MSDP created entry, A - Candidate for MSDP Advertisement
      K - Ack-Pending State
Timers: Uptime/Expires
Interface state: Interface, next-Hop, State/Mode

(*, 225.1.1.1), uptime 00:40:16, expires 00:00:00, RP 20.40.4.4, flags:
SCJ
  Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
  Outgoing interface list:
    Vlan 2006 Forward/Sparse 00:06:21/Never

(20.10.4.9, 225.1.1.1), uptime 00:06:21, expires 00:02:06, flags: CT
  Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
  Outgoing interface list:
    Vlan 2006 Forward/Sparse 00:06:21/Never

(*, 225.1.1.2), uptime 00:40:15, expires 00:00:00, RP 20.40.4.4, flags:
SCJ
  Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
  Outgoing interface list:
    Vlan 2006 Forward/Sparse 00:06:21/Never

(20.10.4.9, 225.1.1.2), uptime 00:06:21, expires 00:02:06, flags: CT
  Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
  Outgoing interface list:
    Vlan 2006 Forward/Sparse 00:06:21/Never
```

IPv4 PIM-Source Specific Mode Commands

The following IPv4 PIM-source specific mode (PIM-SSM) commands are supported:

- `ip pim ssm-range`
- `show ip pim ssm-range`

ip pim ssm-range

Specify the SSM group range using an access list.

C9000 Series

Syntax	<code>ip pim ssm-range {access_list_name}</code>																												
Parameters	access_list_name Enter the name of the access list.																												
Defaults	Default SSM range is 232/8 and ff3x/32																												
Command Modes	CONFIGURATION																												
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. 8.1.1.0	Introduced on the E-Series ExaScale.																												
7.8.1.0	Introduced on the S-Series.																												
7.7.1.0	Introduced on the C-Series.																												
7.5.1.0	Introduced on the E-Series.																												
Usage Information	Dell Networking OS supports standard access lists for the SSM range. You cannot use extended ACLs for configuring the SSM range. If you configure an extended ACL and then used in the <code>ip pim ssm-range {access_list_name}</code> configuration, an error is reported. However, if you configure <code>ip pim ssm-range {access_list_name}</code> first and then you configure the ACL as an Extended ACL, an error is not reported and the ACL is not applied to the SSM range. Dell Networking OS-recommended best-practices are to configure the standard ACL, and then apply the ACL to the SSM range. After the SSM range is applied, the changes are applied internally without requiring clearing of the tree information base (TIB). When the ACL rules change, the ACL and protocol-independent multicast (PIM) modules apply the new rules automatically.																												

When you configure the SSM range, Dell Networking OS supports SSM for configured group range as well as the default SSM range.

When you remove the SSM ACL, PIM SSM is supported for the default SSM range only.

show ip pim ssm-range

Display the non-default groups added using the SSM range feature.

C9000 Series

Syntax	show ip pim ssm-range
Defaults	none
Command Modes	- EXEC - EXEC Privilege
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.7(0.1)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON. Added support for VRF on S6000, S4810, S4820T, Z9000, Z9500, and S6000-ON.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.1	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.
7.7.1.0	Introduced on the C-Series.
7.5.1.0	Introduced on the E-Series.

Example	Group Address / MaskLen

PIM-Sparse Mode (PIM-SM)

The protocol-independent multicast sparse-mode (PIM-SM) commands in this section are supported in the Dell Networking operating system.

Topics:

- [IPv4 PIM-Sparse Mode Commands](#)
- [IPv6 PIM-Sparse Mode Commands](#)

IPv4 PIM-Sparse Mode Commands

The following describes the IPv4 PIM-sparse mode (PIM-SM) commands.

clear ip pim rp-mapping

The bootstrap router (BSR) feature uses this command to remove all or particular rendezvous point (RP) advertisement.

C9000 Series

Syntax `clear ip pim rp-mapping [rp-address]`

Parameters *rp-address* (OPTIONAL) Enter the RP address in dotted decimal format (A.B.C.D).

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Usage Information This command re-applies the RP mapping logic for all the groups learnt by the node. Any stale information corresponding to the existing mapping configuration is updated. As a result, the existing BSR cache and the *,G's are deleted only if these entries are stale.

clear ip pim tib

Clear PIM tree information from the PIM database.

C9000 Series

Syntax	clear ip pim tib [group]																				
Parameters	group	(OPTIONAL) Enter the multicast group address in dotted decimal format (A.B.C.D).																			
Command Modes	EXEC Privilege																				
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.5(0.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>9.0.2.0</td><td>Introduced on the S6000.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.11.1</td><td>Introduced on the Z9000.</td></tr><tr><td>8.3.7.0</td><td>Introduced on the S4810.</td></tr><tr><td>8.1.1.0</td><td>Introduced on the E-Series ExaScale.</td></tr><tr><td>7.8.1.0</td><td>Introduced on the S-Series.</td></tr></table>			Version	Description	9.9(0.0)	Introduced on the C9010.	9.5(0.0)	Introduced on the Z9500.	9.0.2.0	Introduced on the S6000.	8.3.19.0	Introduced on the S4820T.	8.3.11.1	Introduced on the Z9000.	8.3.7.0	Introduced on the S4810.	8.1.1.0	Introduced on the E-Series ExaScale.	7.8.1.0	Introduced on the S-Series.
Version	Description																				
9.9(0.0)	Introduced on the C9010.																				
9.5(0.0)	Introduced on the Z9500.																				
9.0.2.0	Introduced on the S6000.																				
8.3.19.0	Introduced on the S4820T.																				
8.3.11.1	Introduced on the Z9000.																				
8.3.7.0	Introduced on the S4810.																				
8.1.1.0	Introduced on the E-Series ExaScale.																				
7.8.1.0	Introduced on the S-Series.																				
Usage Information	If you use this command on a local VLT node, all multicast routes from the local PIM TIB, the entire multicast route table, and all the entries in the data plane are deleted. The local VLT node sends a request to the peer VLT node to download multicast routes learned by the peer. Both local and synced routes are removed from the local VLT node multicast route table. The peer VLT node clears synced routes from the node. If you use this command on a peer VLT node, only the synced routes are deleted from the multicast route table.																				

debug ip pim

View IP PIM debugging messages.

C9000 Series

Syntax	debug ip pim [bsr events group packet [in out] register state timer [assert hello joinprune register]]		
	To disable PIM debugging, use the no debug ip pim command or use the undebg allto disable all debugging command.		
Parameters	bsr	(OPTIONAL) Enter the keyword bsr to view PIM Candidate RP/BSR activities.	
	events	(OPTIONAL) Enter the keyword group to view PIM messages for a specific group.	
	group	(OPTIONAL) Enter the keyword group to view PIM messages for a specific group.	
	packet [in out]	(OPTIONAL) Enter the keyword packet to view PIM packets. Enter one of the optional parameters:	

	• <code>in</code>: to view incoming packets • <code>out</code>: to view outgoing packets
register	(OPTIONAL) Enter the keyword <code>register</code> to view PIM register address in dotted decimal format (A.B.C.D).
state	(OPTIONAL) Enter the keyword <code>state</code> to view PIM state changes.
timer [assert hello joinprune register]	(OPTIONAL) Enter the keyword <code>timer</code> to view PIM timers. Enter one of the optional parameters: • <code>assert</code>: to view the assertion timer • <code>hello</code>: to view the PIM neighbor keepalive timer • <code>joinprune</code>: to view the expiry timer (join/prune timer) • <code>register</code>: to view the register suppression timer

Defaults Disabled.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.12.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

ip pim bsr-border

Define the border of PIM domain by filtering inbound and outbound PIM-BSR messages per interface.

C9000 Series

Syntax	<pre>ip pim bsr-border</pre> To return to the default value, use the <code>no ip pim bsr-border</code> command.				
Defaults	Disabled.				
Command Modes	INTERFACE INTERFACE (BATCH Mode)				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table> <tr> <th>Version</th><th>Description</th></tr> <tr> <td>9.10(0.0)</td><td>Introduced the Configuration Terminal Batch mode on C9010.</td></tr> </table>	Version	Description	9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
Version	Description				
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.				

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Usage Information This command is applied to the subsequent PIM-BSR. Existing BSR advertisements are cleaned up by time-out. To clean the candidate RP advertisements, use the `clear ip pim rp-mapping` command.

ip pim bsr-candidate

To join the Bootstrap election process, configure the PIM router.

C9000 Series

Syntax `ip pim bsr-candidate interface ][hash-mask-length] [priority]`

To return to the default value, use the `no ip pim bsr-candidate` command.

Parameters	interface	Enter the following keywords and slot/port or number information: - For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. - For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128. - For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the slot/port information. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.
	hash-mask-length	(OPTIONAL) Enter the hash mask length. The range is from zero (0) to 32. The default is 30 .
	priority	(OPTIONAL) Enter the priority used in Bootstrap election process. The range is from zero (0) to 255. The default is zero (0) .

Defaults Not configured.

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.

Version	Description
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
6.1.1.0	Added support for the VLAN interface.

ip pim dr-priority

Change the designated router (DR) priority for the interface.

C9000 Series

Syntax	<code>ip pim dr-priority <i>priority-value</i></code> To remove the DR priority value assigned, use the <code>no ip pim dr-priority</code> command.	
Parameters	<i>priority-value</i>	Enter a number. Preference is given to larger/higher number. The range is from 0 to 4294967294. The default is 1.
Defaults	1	
Command Modes	INTERFACE INTERFACE (BATCH Mode)	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series on port-channels and the S-Series.

Usage Information	The router with the largest value assigned to an interface becomes the designated router. If two interfaces contain the same designated router priority value, the interface with the largest interface IP address becomes the designated router.

ip pim graceful-restart

This feature permits configuration of non-stop forwarding (NSF or graceful restart) capability on a PIM enabled router.

Syntax `ip pim graceful-restart {nsf [restart-time | stale-entry-time]}`

Parameters

nsf	Enter the keyword <code>nsf</code> to configure the non-stop forwarding capability.  NOTE: <code>ip pim graceful-restart nsf</code> is applicable for the entire multicast sub-system.
restart-time	(OPTIONAL) Enter the keywords <code>restart-time</code> followed by the number of seconds estimated for the PIM speaker to restart. The range is 30 to 300 seconds. The default is 180 seconds .
stale-entry-time	(OPTIONAL) Enter the keywords <code>stale-entry-time</code> followed by the number of seconds for which entries are kept alive after restart. The range is 30 to 300 seconds. The default is 60 seconds .

Defaults as above

Command Modes CONFIGURATION

Command History

Version	Description
9.14(0.0)	Added support on the C9000.
9.0(1.3)	Introduced on the S5000.
8.2.1.0	Introduced on the E-Series ExaScale. Added the <code>ipv6</code> option for the E-Series.
7.6.1.0	Introduced on the E-Series.

Usage Information

The PIM-SM component uses the graceful-restart feature to relearn the PIM JOIN messages (*,G/S,G) from upstream neighbors. The upstream neighbors detect the RPM failover of the downstream router, on reception of a different gen-id in the PIM-hello message. They then start to send relevant PIM JOINS to the downstream router after establishing neighbor-ship with the new active RPM.

ip pim join-filter

Permit or deny PIM Join/Prune messages on an interface using an extended IP access list. This command prevents the PIM-SM router from creating state based on multicast source and/or group.

C9000 Series

Syntax `ip pim [vrf vrf-name] join-filter ext-access-list`

To remove the access list, use the `no ip pim [vrf vrf-name] join-filter ext-access-list` command.

Parameters

vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to permit or deny PIM join or prune messages on an interface associated with that VRF.
ext-access-list	Enter the name of an extended access list.

Defaults none

Command Modes INTERFACE
INTERFACE (BATCH Mode)

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Removed the in and out parameters. Introduced on the S6000-ON.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series for the port-channels and the S-Series.
7.7.1.0	Introduced on the E-Series.

Example

```
Dell(config)# ip access-list extended iptv-channels
Dell(config-ext-nacl)# permit ip 10.1.2.3/24 225.1.1.0/24
Dell(config-ext-nacl)# permit ip any 232.1.1.0/24
Dell(config-ext-nacl)# permit ip 100.1.1.0/16 any
Dell(config-if-te-1/1)# ip pim join-filter iptv-channels
Dell(config-if-te-1/1)# ip pim join-filter iptv-channels
```

Related Commands

[ip access-list extended](#) — configure an access list based on IP addresses or protocols.

ip pim ingress-interface-map

When the Dell Networking system is the RP, statically map potential incoming interfaces to (*,G) entries to create a lossless multicast forwarding environment.

C9000 Series

Syntax	<code>ip pim ingress-interface-map <i>std-access-list</i></code>
Parameters	<i>std-access-list</i> Enter the name of a standard access list.
Defaults	none
Command Modes	INTERFACE
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.

Version	Description
8.4.1.0	Introduced

Example

```
Dell(conf)# ip access-list standard map1
Dell(config-std-nacl)# permit 224.0.0.1/24
Dell(config-std-nacl)#exit
Dell(conf)#int tengig 1/1
Dell(config-if-te-1/1)# ip pim ingress-interface-map map1
```

ip pim neighbor-filter

To prevent a router from participating in protocol independent multicast (PIM), configure this feature.

C9000 Series

Syntax ip pim neighbor-filter {access-list}

To remove the restriction, use the no ip pim neighbor-filter {access-list} command.

Parameters access-list Enter the name of a standard access list. Maximum 16 characters.

Defaults none

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series and S-Series.
7.6.1.0	Introduced on the E-Series.

Usage Information Do not enter this command before creating the access-list.

ip pim query-interval

Change the frequency of PIM Router-Query messages.

C9000 Series

Syntax ip pim query-interval seconds

To return to the default value, use the `no ip pim query-interval seconds` command.

Parameters	<i>seconds</i>	Enter a number as the number of seconds between router query messages. The range is from 0 to 65535. The default is 30 seconds .
Defaults	30 seconds	
Command Modes	INTERFACE INTERFACE (BATCH Mode)	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
	9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
	9.9(0.0)	Introduced on the C9010.
	9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
	9.7(0.0)	Introduced on the S6000-ON.
	9.5(0.0)	Introduced on the Z9500.
	9.0.2.0	Introduced on the S6000.

	8.1.1.0	Introduced on the E-Series ExaScale.
	7.8.1.0	Introduced on the C-Series for the port-channels and the S-Series.

ip pim register-filter

To prevent a PIM source DR from sending register packets to an RP for the specified multicast source and group, use this feature.

C9000 Series

Syntax	<code>ip pim register-filter <i>access-list</i></code> To return to the default, use the <code>no ip pim register-filter <i>access-list</i> [vrf <i>vrf-name</i>]</code> command.	
Parameters	<i>access-list</i>	Enter the name of an extended access list. Maximum 16 characters.
Defaults	Not configured.	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
	9.9(0.0)	Introduced on the C9010.
	9.8(0.0)	Introduced on the S3048-ON and S4048-ON.

Version	Description
9.7(0.0)	Introduced on the S6000-ON. Added support for VRF.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
7.8.1.0	Introduced on the C-Series and S-Series.
7.6.1.0	Introduced

Usage Information

The access name is an extended IP access list that denies PIM register packets to RP at the source DR based on the multicast and group addresses. Do not enter this command before creating the access-list

ip pim rp-address

Configure a static PIM rendezvous point (RP) address for a group or access-list.

C9000 Series

Syntax

```
ip pim rp-address address {group-address group-address mask} [override]
```

To remove an RP address, use the `no ip pim rp-address address {group-address group-address mask} [vrf vrf-name] [override]` command.

Parameters

address	Enter the RP address in dotted decimal format (A.B.C.D).
group-address group-address mask	Enter the keywords <code>group-address</code> then a group-address mask, in dotted decimal format (/xx), to assign that group address to the RP.
override	Enter the keyword <code>override</code> to override the BSR updates with static RP. The override takes effect immediately during enable/disable.

 **NOTE:** This option is applicable to multicast group range.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.

Version	Description
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information

First-hop routers use this address by to send register packets on behalf of source multicast hosts. The RP addresses are stored in the order in which they are entered. RP addresses learned using BSR take priority over static RP addresses. Without the `override` option, RPs advertised by the BSR updates take precedence over the statically configured RPs.

ip pim rp-candidate

To send out a Candidate-RP-Advertisement message to the bootstrap (BS) router or define group prefixes that are defined with the RP address to PIM BSR, configure a PIM router.

C9000 Series

Syntax

```
ip pim rp-candidate {interface [priority] [acl-name]}
```

To return to the default value, use the `no ip pim rp-candidate {interface [priority] [vrf vrf-name]}` command.

Parameters

<i>interface</i>	Enter the following keywords and slot/port or number information: - For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. - For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128. - For a 1-Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the slot/port information. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.
<i>priority</i>	(OPTIONAL) Enter the priority used in Bootstrap election process. The range is zero (0) to 255. The default is 192 .
<i>acl-name</i>	(OPTIONAL) Enter the name of an ACL to configure a PIM router to act as an RP for a specific set of multicast group addresses that are defined in the ACL.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.11.0.0	Introduced the <code>acl-name</code> parameter.
9.9(0.0)	Introduced on the C9010.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.5(0.0)	Introduced on the Z9500.

Version	Description
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.
pre- 6.1.1.1	Introduced on the E-Series.

Usage Information Priority is stored at BSR router when receiving a Candidate-RP-Advertisement.

ip pim sparse-mode

Enable PIM sparse mode and IGMP on the interface.

C9000 Series

Syntax	<code>ip pim sparse-mode</code> To disable PIM sparse mode and IGMP, use the <code>no ip pim sparse-mode</code> command.
Defaults	Disabled.
Command Modes	INTERFACE INTERFACE (BATCH Mode)
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series for the port-channels and the S-Series.

Usage Information The interface must be enabled (the `no shutdown` command) and not have the `switchport` command configured. Multicast must also be enabled globally (using the `ip multicast-lag-hashing` command). PIM is supported on the port-channel interface.

ip pim spt-threshold

To switch to the shortest path tree when the traffic reaches the specified threshold value, configure the PIM router.

C9000 Series

Syntax	<pre>ip pim spt-threshold [infinity]</pre> To return to the default value, use the <code>no ip pim spt-threshold [infinity] [vrf vrf-name]</code> command.																	
Parameters	infinity	(OPTIONAL) Enter the keyword <code>infinity</code> to never switch to the source-tree.																
Defaults	Not configured.																	
Command Modes	CONFIGURATION																	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr><tr><td>9.8(0.0)</td><td>Introduced on the S3048-ON and S4048-ON.</td></tr><tr><td>9.7(0.0)</td><td>Introduced on the S6000-ON. Added support for VRF.</td></tr><tr><td>9.5(0.0)</td><td>Introduced on the Z9500.</td></tr><tr><td>8.3.19.0</td><td>Introduced on the S4820T.</td></tr><tr><td>8.3.12.0</td><td>Introduced on the S4810.</td></tr><tr><td>8.1.1.0</td><td>Introduced on the E-Series ExaScale.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.	9.8(0.0)	Introduced on the S3048-ON and S4048-ON.	9.7(0.0)	Introduced on the S6000-ON. Added support for VRF.	9.5(0.0)	Introduced on the Z9500.	8.3.19.0	Introduced on the S4820T.	8.3.12.0	Introduced on the S4810.	8.1.1.0	Introduced on the E-Series ExaScale.
Version	Description																	
9.9(0.0)	Introduced on the C9010.																	
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.																	
9.7(0.0)	Introduced on the S6000-ON. Added support for VRF.																	
9.5(0.0)	Introduced on the Z9500.																	
8.3.19.0	Introduced on the S4820T.																	
8.3.12.0	Introduced on the S4810.																	
8.1.1.0	Introduced on the E-Series ExaScale.																	
Usage Information	This command is applicable to last hop routers on the shared tree towards the rendezvous point (RP).																	

ip pim sparse-mode sg-expiry-timer

Enable expiry timers globally for all sources.

C9000 Series

Syntax	<pre>ip pim sparse-mode sg-expiry-timer seconds</pre> To disable configured timers and return to default mode, use the <code>no ip pim sparse-mode sg-expiry-timer</code> command.	
Parameters	seconds	Enter the number of seconds the S, G entries are retained. The range is from 211 to 65535.
Defaults	Disabled. The default expiry timer (with no times configured) is 210 sec.	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON and added support for VRF.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the C-Series for the port-channels and the S-Series.
7.7.1.1	Introduced

Usage Information

This command configures an expiration timer for all S.G entries, unless they are assigned to an Extended ACL.

Even though the FHR nodes act as RPs, these nodes still send *Register encap* messages to themselves and expect to receive a *Register stop* message (for Anycast RP support). As a result, if the DLT timer expires, SG is not deleted until the register state is deleted in the node. This register state expires 210 seconds after the last Null register is received.

show ip pim bsr-router

View information on the Bootstrap router.

C9000 Series

Syntax `show ip pim bsr-router`

- Command Modes**
- EXEC
 - EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Example

```
Dell#show ip pim bsr-router
PIMv2 Bootstrap information
This system is the Bootstrap Router (v2)
  BSR address: 7.7.7.7 (?)
  BSR Priority: 0, Hash mask length: 30
  Next bootstrap message in 00:00:08

This system is a candidate BSR
  Candidate BSR address: 7.7.7.7, priority: 0, hash mask length: 30
```

show ip pim snooping neighbor

Display information on PIM neighbors learned through PIM-SM snooping.

C9000 Series

Syntax

`show ip pim snooping neighbor [vlan vlan-id]`

Parameters

vlan *vlan-id*

(OPTIONAL) Enter a VLAN ID to display information about PIM neighbors that PIM-SM snooping discovered on a specified VLAN. The valid VLAN IDs range is from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.4.1.1	Introduced on the E-Series ExaScale.

Usage Information The following describes the `show ip pim snooping neighbor` commands shown in the following example.

Field	Description
Neighbor address	Displays the IP address of the neighbor learned through PIM-SM snooping.
Interface	Displays the VLAN ID number and slot/port on which the PIM-SM-enabled neighbor was discovered.
Uptime/expires	Displays the amount of time the neighbor has been up then the amount of time until the neighbor is removed from the multicast routing table (that is, until the neighbor hold time expires).
Ver	Displays the PIM version number: v2 = PIM version 2
DR prio/Mode	Displays the Designated Router priority and the mode: 1 = default Designated Router priority (use the <code>ip pim dr-priority</code> command) - DR = Designated Router - S = Sparse mode

Example

```
Dell#show ip pim snooping neighbor

Neighbor      Interface      Uptime/Expires      Ver  DR Prio
Address
165.87.32.2   V1 2 [Te 1/13 ] 00:04:03/00:01:42   v2   1
165.87.32.10  V1 2 [Te 1/11 ] 00:00:46/00:01:29   v2   0
165.87.32.12  V1 2 [Te 41/20 ] 00:00:51/00:01:24   v2   0
```

show ip pim interface

View information on the interfaces with IP PIM enabled.

C9000 Series

Syntax `show ip pim interface`

- Command Modes**
- EXEC
 - EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Usage Information The following describes the `show ip pim interface` command shown in the following example.

Field	Description
Address	Lists the IP addresses of the interfaces participating in PIM.
Interface	List the interface type, with either slot/port information or ID (VLAN or Port Channel), of the interfaces participating in PIM.
Ver/Mode	Displays the PIM version number and mode for each interface participating in PIM: • v2 = PIM version 2 • S = PIM Sparse mode
Nbr Count	Displays the number of PIM neighbors discovered over this interface.
Query Intvl	Displays the query interval for Router Query messages on that interface (configured with <code>ip pim query-interval</code> command).
DR Prio	Displays the Designated Router priority value configured on the interface (use the <code>ip pim dr-priority</code> command).
DR	Displays the IP address of the Designated Router for that interface.

The `show ip pim interface` command does not display information corresponding to the loop-back interfaces.

Example

```
Dell#show ip pim interface
Address          Interface Ver/  Nbr   Query  DR    DR
                  Mode Count Intvl Prio
172.21.200.254 Te 0/9   v2/S  0     30 1   172.21.200.254
172.60.1.2      Te 0/11  v2/S  0     30 1   172.60.1.2
192.3.1.1       Te 0/16  v2/S  1     30 1   192.3.1.1
192.4.1.1       Te 1/5   v2/S  0     30 1   192.4.1.1
172.21.110.1    Te 1/6   v2/S  0     30 1   172.21.110.1
172.21.203.1    Te 1/7   v2/S  0     30 1   172.21.203.1
```

show ip pim neighbor

View PIM neighbors.

C9000 Series

Syntax `show ip pim neighbor`

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Usage Information The following describes the `show ip pim neighbor` command shown in the following example.

Field	Description
Neighbor address	Displays the IP address of the PIM neighbor.
Interface	List the interface type, with either slot/port information or ID (VLAN or Port Channel), on which the PIM neighbor was found.
Uptime/expires	Displays the amount of time the neighbor has been up then the amount of time until the neighbor is removed from the multicast routing table (that is, until the neighbor hold time expires).
Ver	Displays the PIM version number. v2 = PIM version 2
DR prio/Mode	Displays the Designated Router priority and the mode. 1 = default Designated Router priority (use the <code>ip pim dr-priority</code> command) - DR = Designated Router - S = Sparse mode

Example

```
Dell#show ip pim neighbor↵
Neighbor Interface Uptime/Expires Ver DR↵
Address Prio/Mode↵
127.87.3.4 Te 1/16 09:44:58/00:01:24 v2 1 / S↵
```

show ip pim rp

View all multicast groups-to-RP mappings.

C9000 Series

Syntax

show ip pim rp [mapping | group-address]

Parameters

mapping

(OPTIONAL) Enter the keyword mapping to display the multicast groups-to-RP mapping and information on how RP is learnt.

group-address

(OPTIONAL) Enter the multicast group address mask in dotted decimal format to view RP for a specific group.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Added support for VRF. Introduced on the S6000-ON.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Example

```
Dell#show ip pim rp
Group          RP
224.2.197.115  165.87.20.4
224.2.217.146  165.87.20.4
224.3.3.3      165.87.20.4
225.1.2.1      165.87.20.4
225.1.2.2      165.87.20.4
229.1.2.1      165.87.20.4
229.1.2.2      165.87.20.4
Dell#
```

Example (Mapping)

```
Dell#show ip pim rp mapping
PIM Group-to-RP Mappings
Group(s): 224.0.0.0/4, Static
```

```
RP: 50.40.4.4, v2
Dell#
```

Example (Address)

```
Dell#show ip pim rp 229.1.2.1
Group      RP
229.1.2.1  165.87.20.4
```

show ip pim snooping interface

Display information on VLAN interfaces with PIM-SM snooping enabled.

C9000 Series

Syntax `show ip pim snooping interface [vlan vlan-id]`

Parameters **vlan *vlan-id*** (OPTIONAL) Enter a VLAN ID to display information about a specified VLAN configured for PIM-SM snooping. The valid VLAN IDs range is from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.4.1.1	Introduced on the E-Series ExaScale.

Usage Information The following describes the `show ip pim snooping interface` commands shown in the following example.

Field	Description
Interface	Displays the VLAN interfaces with PIM-SM snooping enabled.
Ver/Mode	Displays the PIM version number for each VLAN interface with PIM-SM snooping enabled: - v2 = PIM version 2 - S = PIM Sparse mode
Nbr Count	Displays the number of neighbors learned through PIM-SM snooping on the interface.
DR Prio	Displays the Designated Router priority value configured on the interface (<code>ip pim dr-priority</code> command).
DR	Displays the IP address of the Designated Router for that interface.

Example (#2)

```
Dell#show ip pim snooping interface
Interface Ver Nbr    DR    DR
          Count Prio
Vlan 2    v2   3     1     165.87.32.2
```

show ip pim summary

View information about PIM-SM operation.

C9000 Series

Syntax

`show ip pim summary [vrf vrf-name]`

Parameters

vrf vrf-name

(OPTIONAL) Enter the keyword vrf followed by the name of the VRF to configure this setting on that VRF.

 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON. Added support for VRF.
9.5(0.0)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.4.1.1	Support for the display of PIM-SM snooping status was added on E-Series ExaScale.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Example

```
Dell# show ip pim summary

PIM TIB version 495
Uptime 22:44:52
Entries in PIM-TIB/MFC : 2/2

Active Modes :
    PIM-SNOOPING

Interface summary:
    1 active PIM interface
    0 passive PIM interfaces
    3 active PIM neighbors

TIB summary:

Data path event summary:
0 no-cache messages received
0 last-hop switchover messages received
0/0 pim-assert messages sent/received
0/0 register messages sent/received

```

show ip pim tib

View the PIM tree information base (TIB).

C9000 Series

Syntax `show ip pim tib [group-address [source-address]]`

Parameters

group-address (OPTIONAL) Enter the group address in dotted decimal format (A.B.C.D).

source-address (OPTIONAL) Enter the source address in dotted decimal format (A.B.C.D).

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.0)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.1.1.0	Introduced on the E-Series ExaScale.
7.8.1.0	Introduced on the S-Series.

Usage Information The following describes the `show ip pim tib` command shown in the following example.

Field	Description
(S, G)	Displays the entry in the multicast PIM database.
uptime	Displays the amount of time the entry has been in the PIM route table.
expires	Displays the amount of time until the entry expires and is removed from the database.
RP	Displays the IP address of the RP/source for this entry.
flags	List the flags to define the entries: D = PIM Dense Mode

Field	Description
	• S = PIM Sparse Mode • C = directly connected • L = local to the multicast group • P = route was pruned • R = the forwarding entry is pointing toward the RP • F = Dell Networking OS is registering this entry for a multicast source • T = packets were received via Shortest Tree Path • J = first packet from the last hop router is received and the entry is ready to switch to SPT • K = acknowledge pending state
Incoming interface	Displays the reverse path forwarding (RPF) interface towards the RP/ source.
RPF neighbor	Displays the next hop from this interface towards the RP/source.
Outgoing interface list:	Lists the interfaces that meet one of the following criteria: • a directly connect member of the Group • statically configured member of the Group • received a (*,G) Join message

Example

```
Dell#do show ip pim tib

PIM Multicast Routing Table
Flags: D - Dense, S - Sparse, C - Connected, L - Local, P - Pruned,
       R - RP-bit set, F - Register flag, T - SPT-bit set, J - Join SPT,
       M - MSDP created entry, A - Candidate for MSDP Advertisement
       K - Ack-Pending State
Timers: Uptime/Expires
Interface state: Interface, next-Hop, State/Mode

(*, 225.1.1.1), uptime 00:40:16, expires 00:00:00, RP 20.40.4.4, flags:
SCJ
  Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
  Outgoing interface list:
    Vlan 2006 Forward/Sparse 00:06:21/Never

(20.10.4.9, 225.1.1.1), uptime 00:06:21, expires 00:02:06, flags: CT
  Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
  Outgoing interface list:
    Vlan 2006 Forward/Sparse 00:06:21/Never

(*, 225.1.1.2), uptime 00:40:15, expires 00:00:00, RP 20.40.4.4, flags:
SCJ
  Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
  Outgoing interface list:
    Vlan 2006 Forward/Sparse 00:06:21/Never

(20.10.4.9, 225.1.1.2), uptime 00:06:21, expires 00:02:06, flags: CT
  Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
  Outgoing interface list:
    Vlan 2006 Forward/Sparse 00:06:21/Never
```

show running-config pim

Display the current configuration of PIM-SM snooping.

C9000 Series

Syntax show running-config pim

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
8.3.19.0	Introduced on the S4820T.
8.3.12.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.4.1.0	Introduced on the E-Series ExaScale.

Example

```
Dell#show running-config pim
!
ip pim snooping enable
```

IPv6 PIM-Sparse Mode Commands

The following describes the IPv6 PIM-sparse mode (PIM-SM) commands.

clear ipv6 pim tib

Clear the IPv6 PIM multicast-routing database (tree information base—TIB).

Syntax `clear ipv6 pim [vrf vrf-name] tib [group-address]`

Parameters

vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to configure this setting on that VRF.  NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.
group-address	(OPTIONAL) Enter the multicast group address in the x:x:x::x format.  NOTE: The :: notation specifies successive hexadecimal fields of zero.

Defaults none

Command Modes EXEC Privilege

Command History

Version	Description
9.11.3.0	Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.

Related Commands `show ipv6 pim tib` – displays the IPv6 PIM tree information base (TIB)

debug ipv6 pim

Invoke IPv6 PIM debugging.

Syntax `debug ipv6 pim [vrf vrf-name] [bsr | events | group [group] | packet [in | out] | register [group] | state | timer [assert | hello | joinprune | register]]`

To disable IPv6 PIM debugging, use the `no debug ipv6 pim [vrf vrf-name]` command.

Parameters	vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to view IP PIM debugging messages corresponding to that VRF.  NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.
	bsr	(OPTIONAL) Enter the keyword <code>bsr</code> to invoke debugging of IPv6 PIM Candidate RP/BSR activities.
	events	(OPTIONAL) Enter the keyword <code>events</code> to invoke debugging of IPv6 PIM events.
	group [group]	(OPTIONAL) Enter the keyword <code>group</code> followed by the group address to invoke debugging on that specific group.
	packet	(OPTIONAL) Enter the keyword <code>packet</code> to invoke debugging of IPv6 PIM packets.
	register [group]	(OPTIONAL) Enter the keyword <code>register</code> and optionally the group address to invoke debugging of IPv6 PIM register messages for a particular group.
	state	(OPTIONAL) Enter the keyword <code>state</code> to view IPv6 PIM state changes.
	timer [assert hello joinprune register]	(OPTIONAL) Enter the keyword <code>timer</code> to view IPv6 PIM timers. Enter one of the optional parameters: • <code>assert</code>: to view the assertion timer • <code>hello</code>: to view the IPv6 PIM neighbor keepalive timer • <code>joinprune</code>: to view the expiry timer (join/prune timer) • <code>register</code>: to view the register suppression timer

Defaults Disabled.

Command Modes EXEC Privilege

Command History	Version	Description
	9.11.3.0	Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.

ipv6 pim bsr-border

Define the border of IPv6 PIM domain by filtering inbound and outbound PIM-BSR messages per interface.

Syntax `ipv6 pim bsr-border`
To return to the default value, use the `no ipv6 pim bsr-border` command.

Defaults Disabled.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell EMC Networking OS Command Line Reference Guide*.

9.14(1.0)	Introduced on the C9010, S3048-ON, S3100 Series, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON.

Usage Information This command is applied to the subsequent PIM-BSR. Existing BSR advertisements are cleaned up by time-out.

ipv6 pim bsr-candidate

To join the Bootstrap election process, configure the PIM router as a bsr-candidate.

Syntax	<code>ipv6 pim [vrf vrf-name] bsr-candidate interface [hash-mask-length] [priority]</code>	
	To return to the default value, use the <code>no ipv6 pim bsr-candidate [vrf vrf-name]</code> command.	
Parameters	vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> then the name of the VRF to configure the PIM router on a VRF.
	interface	Enter the following keywords and slot/port or number information: - For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. - For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. - For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.
	hash-mask-length	(OPTIONAL) Enter the hash mask length. The range is from eight (8) to 128. The default is 126 .
	priority	(OPTIONAL) Enter the priority used in Bootstrap election process. The range is from zero (0) to 255. In the BSR election process, the BSR with the higher priority takes the precedence. If the priority values are equal, the router with the higher IP address becomes the BSR. The default is 0 .
Defaults	Not configured.	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .	
	Version	Description
	9.14(1.0)	Introduced on the C9010, S3048-ON, S3100 Series, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON.

ipv6 pim dr-priority

Change the designated router (DR) priority for the IPv6 interface.

Syntax	<code>ipv6 pim dr-priority priority-value</code>	
	To remove the DR priority value assigned, use the <code>no ipv6 pim dr-priority</code> command.	
Parameters	priority-value	Enter a number. Preference is given to larger/higher number. The range is from 0 to 4294967294. The default is 1 .
Defaults	1	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	
	The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.11.3.0	Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.

Usage Information The router with the largest value assigned to an interface becomes the designated router. If two interfaces contain the same designated router priority value, the interface with the largest interface IP address becomes the designated router.

ipv6 pim query-interval

Change the frequency of IPv6 PIM router-query messages.

Syntax	<code>ipv6 pim query-interval seconds</code> To return to the default value, use the <code>no ipv6 pim query-interval seconds</code> command.	
Parameters	seconds	Enter a number as the number of seconds between router query messages. The range is from 0 to 65535. The default is 30 seconds .
Defaults	30 seconds	
Command Modes	INTERFACE	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.11.3.0	Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.

ipv6 pim rp-address

Configure a static PIM rendezvous point (RP) address for a group. First-hop routers use this address to send register packets on behalf of the source multicast host.

Syntax	<code>ipv6 pim [vrf vrf-name] rp-address address {group-address group-address mask} [override]</code> To remove an RP address, use the <code>no ipv6 pim re-address address group-address mask [override]</code> command.	
Parameters	vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to view IP PIM debugging messages corresponding to that VRF. <i>i</i> NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.
	address	Enter the IPv6 RP address in the x:x:x::x format. <i>i</i> NOTE: The :: notation specifies successive hexadecimal fields of zero.
	group-address group-address mask	Enter the keywords <code>group-address</code> then the group address in the x:x:x::x format and then the mask in /nn format to assign that group address to the RP. <i>i</i> NOTE: The :: notation specifies successive hexadecimal fields of zero.
	override	(OPTIONAL) Enter the keyword <code>override</code> to override the BSR updates with static RP. The override takes effect immediately during enable/disable. <i>i</i> NOTE: This option is applicable to multicast group range.

Defaults	none				
Command Modes	CONFIGURATION				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table> <tr> <th>Version</th><th>Description</th></tr> <tr> <td>9.11.3.0</td><td>Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.</td></tr> </table>	Version	Description	9.11.3.0	Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.
Version	Description				
9.11.3.0	Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.				
Usage Information	The device selects the RP based on the longest prefix match of the configured group address when both static and dynamic RPs are configured. The <code>override</code> option allow you to use statically configured RP instead of the longest prefix match of the configured group address associated with a dynamic RP.				

ipv6 pim rp-candidate

Configure an IPv6 PIM router to send out a Candidate-RP-Advertisement message to the bootstrap (BS) router or define group prefixes that are defined with the RP address to PIM BSR.

Syntax	<pre>ipv6 pim [vrf vrf-name] rp-candidate {interface [priority] [acl-name]}</pre> To return to the default value, use the <code>no ipv6 pim [vrf vrf-name] rp-candidate {interface [priority]}</code> command.		
Parameters	vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF.  NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.	
	interface	Enter the following keywords and slot/port or number information: - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information. - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a Loopback interface, enter the keyword <code>loopback</code> then a number from 0 to 16383. - For a port-channel interface, enter the keywords <code>port-channel</code> then the port-channel ID. - For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.	
	priority	(OPTIONAL) Enter the priority used in RP election process. The range is zero (0) to 255. The default is 192 . In the RP election process, the RP with the lower priority takes the precedence.	
	acl-name	(OPTIONAL) Enter the name of an ACL to configure a PIM router to act as an RP for a specific set of multicast group addresses that are defined in the ACL.  NOTE: If you do not specify the <code>acl-name</code>, the system uses the default multicast IPv6 group range, which is <code>ff00::/8</code>.	
Defaults	Not configured.		
Command Modes	CONFIGURATION		
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .		
	Version	Description	
	9.14(1.0)	Introduced on the C9010, S3048-ON, S3100 Series, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON.	

Usage Information

Priority is stored at BSR router when receiving a Candidate-RP-Advertisement.

ipv6 pim sparse-mode

Enable IPv6 PIM sparse mode and MLD on the interface.

Syntax

`ipv6 pim sparse-mode`

To disable IPv6 PIM sparse mode and MLD on the interface, use the `no ipv6 pim sparse-mode` command.

Defaults

Disabled.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description

9.11.3.0	Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.

Usage Information

Enable the interface (use the `no shutdown` command) and not have the `switchport` command configured. Also enable Multicast globally. PIM is supported on the port-channel interface.

ipv6 pim sparse-mode sg-expiry-timer

Enable expiry timers globally for all sources.

Syntax

`ipv6 pim [vrf vrf-name] sparse-mode sg-expiry-timer seconds`

To disable configured timers and return to default mode, use the `no ipv6 pim sparse-mode sg-expiry-timer` command.

Parameters

vrf vrf-name

(OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to enable expiry timer for all sources on that VRF.

 **NOTE:** Applies to specific VRF if input is provided, else applies to Default VRF.

seconds

Enter the number of seconds the S, G entries are retained. The range is from 211 to 65535.

Defaults

Disabled. The default expiry timer (with no times configured) is 210 sec.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

Version	Description

9.11.3.0	Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.

Usage Information

This command configures an expiration timer for all S.G entries, unless they are assigned to an Extended ACL.

Even though the FHR nodes act as RPs, these nodes still send *Register encap* messages to themselves and expect to receive a *Register stop* message (for Anycast RP support). As a result, if the DLT timer expires, SG is not deleted until the register state is deleted in the node. This register state expires 210 seconds after the last Null register is received.

ipv6 pim spt-threshold

Specifies when a PIM leaf router should join the shortest path tree.

Syntax	<code>ipv6 pim [vrf vrf-name] spt-threshold {infinity}</code> To return to the default value, use the <code>no ipv6 pim spt-threshold</code> command.					
Parameters	vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to view IP PIM debugging messages corresponding to that VRF.  NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.				
	infinity	Enter the keyword <code>infinity</code> to have all sources for the specified group use the shared tree and never join shortest path tree (SPT).				
Defaults	Not configured.					
Command Modes	CONFIGURATION					
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.11.3.0</td><td>Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.</td></tr></table>		Version	Description	9.11.3.0	Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.
Version	Description					
9.11.3.0	Introduced on the Z9100-ON, S4048-ON, S6000-ON, S6100-ON, S4048T-ON, S3100, S6010-ON, S3048-ON, and C9010.					
Usage Information	PIM leaf routers join the shortest path tree immediately after the first packet arrives from a new source.					

show ipv6 pim bsr-router

View information on the bootstrap router.

Syntax	show ipv6 pim [vrf vrf-name] bsr-router	
Parameters	vrf vrf-name	(OPTIONAL) Enter the keyword vrf followed by the name of the VRF.
Command Modes	- EXEC - EXEC Privilege	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	
Version	Description	
9.14(1.0)	Introduced on the C9010, S3048-ON, S3100 Series, S4048-ON, S4048T-ON, S6000-ON, S6010-ON, S6100-ON, Z9100-ON.	
Example	<pre>DellEMC#show ipv6 pim bsr-router PIMv2 Bootstrap information BSR address: 200::1 (?) BSR Priority: 0, Hash mask length: 126 Expires: 00:01:43 This system is a candidate BSR Candidate BSR address: 100::1, priority: 0, hash mask length: 126 Next Cand_RP_advertisement in 00:00:25 RP: 100::1(Lo 0) DellEMC#</pre>	

show ipv6 pim interface

Display IPv6 PIM enabled interfaces.

Syntax

`show ipv6 pim [vrf vrf-name] interface`

Parameters

vrf vrf-name

(OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to view IP PIM debugging messages corresponding to that VRF.

NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.

Address : fe80::4e76:25ff:fee5:32c2
DR          : this router
```

show ipv6 pim neighbor

Displays IPv6 PIM neighbor information.

Syntax

`show ipv6 pim [vrf vrf-name] neighbor [detail]`

Parameters

vrf vrf-name

(OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to view IP PIM debugging messages corresponding to that VRF.

NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.

detail

(OPTIONAL) Enter the keyword `detail` to displayed PIM neighbor detailed information.

DellEMC#
```

show ipv6 pim rp

View all IPv6 multicast groups-to-rendezvous point (RP) mappings.

Syntax `show ipv6 pim [vrf vrf-name] rp [mapping | group-address]`

Parameters

- vrf vrf-name** (OPTIONAL) Enter the keyword `vrf` followed by the name of the VRF to view IP PIM debugging messages corresponding to that VRF.
- mapping** (OPTIONAL) Enter the keyword `mapping` to display the multicast groups-to-RP mapping and information on how RP is learned.
- group-address** (OPTIONAL) Enter the multicast group address in the x:x:x:x format to view RP mappings for a specific group.

 **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

Command Modes

281 last-hop switchover messages received
26260/2958 pim-assert messages sent/received
0/0 register messages sent/received

Dell#

```

show ipv6 pim tib

View the IPv6 PIM multicast-routing database (tree information base — tib).

Syntax

```
show ipv6 pim [vrf vrf-name] tib [group-address [source-address]]
```

Parameters

vrf vrf-name	(OPTIONAL) Enter the keyword <code>vrf</code> followed by the name of the VRF to view IP PIM debugging messages corresponding to that VRF.  NOTE: Applies to specific VRF if input is provided, else applies to Default VRF.
group-address	(OPTIONAL) Enter the multicast group address in the x:x:x:x format to view RP mappings for a specific group.  NOTE: The :: notation specifies successive hexadecimal fields of zero.
source-address	(OPTIONAL) Enter the source address in the x:x:x:x format.  NOTE: The :: notation specifies successive hexadecimal fields of zero.

Policy-based Routing (PBR)

Policy-based routing (PBR) allows you to apply routing policies to specific interfaces. To enable PBR, create a redirect list and apply it to the interface. After the redirect list is applied to the interface, all traffic passing through the interface is subject to the rules defined in the redirect list. PBR is supported by the Dell Networking Operating System (OS).

You can apply PBR to physical interfaces and logical interfaces (such as a link aggregation group [LAG] or virtual local area network [VLAN]). Trace lists and redirect lists do not function correctly when you configure both in the same configuration.

 **NOTE:** Apply PBR to Layer 3 interfaces only.

 **NOTE:** For more information, refer to [Content Addressable Memory \(CAM\)](#) chapter.

Topics:

- [ip redirect-group](#)
- [ip redirect-list](#)
- [permit](#)
- [redirect](#)
- [seq](#)
- [show cam pbr](#)
- [show ip redirect-list](#)

ip redirect-group

Apply a redirect list (policy-based routing) on an interface. You can apply multiple redirect lists to an interface by entering this command multiple times.

C9000 Series

Syntax `ip redirect-group redirect-list-name`

To remove a redirect list from an interface, use the `no ip redirect-group name` command.

Parameters ***redirect-list-name*** Enter the name of a configured redirect list.

Defaults none

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.5(0.1)	Introduced on the Z9500.
9.4(0.0)	Introduced on the S4810, S4820T, S6000, and Z9000.

Version	Description
8.4.2.1	Introduced on the C-Series and S-Series.
8.4.2.0	Introduced on the E-Series TeraScale.
7.7.1.0	Introduced on the E-Series ExaScale.

Usage Information

You can apply any number of redirect-groups to an interface. A redirect list can contain any number of configured rules. These rules include the next-hop IP address where the incoming traffic is redirected.

If the next hop address is reachable, traffic is forwarded to the specified next hop. Otherwise, the normal routing table is used to forward traffic. When a redirect-group is applied to an interface and the next-hop is reachable, the rules are added into the PBR CAM region. When incoming traffic hits an entry in the CAM, the traffic is redirected to the corresponding next-hop IP address specified in the rule.

 **NOTE:** Apply the redirect list to physical, VLAN, or LAG interfaces only.

Related Commands

- [show cam pbr](#) – displays the content of the PBR CAM.
- [show ip redirect-list](#) – displays the redirect-list configuration.

ip redirect-list

Configure a redirect list and enter REDIRECT-LIST mode.

C9000 Series

Syntax	<code>ip redirect-list <i>redirect-list-name</i>]</code> To remove a redirect list, use the <code>no ip redirect-list</code> command.	
Parameters	<i>redirect-list-name</i>	Enter a description to identify the IP redirect list (16 characters maximum)
Defaults	None	
Command Modes	CONFIGURATION CONFIGURATION TERMINAL BATCH	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.5(0.1)	Introduced on the Z9500.
9.4(0.0)	Introduced on the S4810, S4820T, S6000, and Z9000.
8.4.2.1	Introduced on the C-Series and S-Series.
8.4.2.0	Introduced on the E-Series TeraScale.
7.7.1.0	Introduced on the E-Series ExaScale.

permit

Configure a permit rule. A permit rule excludes the matching packets from PBR classification and routes them using conventional routing.

C9000 Series

Syntax

```
permit {ip-protocol-number | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operators]
```

To remove the rule, use one of the following:

- If you know the filter sequence number, use the `no seq sequence-number syntax` command.
- You can also use the `no permit {ip-protocol-number | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operators]` command.

Parameters

<i>ip-protocol-number</i>	Enter a number from 0 to 255 for the protocol identified in the IP protocol header.
<i>protocol-type</i>	Enter one of the following keywords as the protocol type: • <code>icmp</code> for internet control message protocol • <code>ip</code> for any internet protocol • <code>tcp</code> for transmission control protocol • <code>udp</code> for user datagram protocol
<i>source</i>	Enter the IP address of the network or host from which the packets were sent.
<i>mask</i>	Enter a network mask in /prefix format (/x).
<i>any</i>	Enter the keyword <code>any</code> to specify that all traffic is subject to the filter.
<i>host ip-address</i>	Enter the keyword <code>host</code> then the IP address to specify a host IP address.
<i>destination</i>	Enter the IP address of the network or host to which the packets are sent.
<i>bit</i>	(OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags: • <code>ack</code> = acknowledgement • <code>fin</code> = finish (no more data from the user) • <code>psh</code> = push function • <code>rst</code> = reset the connection • <code>syn</code> = synchronize sequence number • <code>urg</code> = urgent field
<i>operator</i>	(OPTIONAL) For TCP and UDP parameters only. Enter one of the following logical operand: • <code>eq</code> = equal to • <code>neq</code> = not equal to • <code>gt</code> = greater than • <code>lt</code> = less than • <code>range</code> = inclusive range of ports (you must specify two ports for the <code>portcommand</code> parameter.)

Defaults none

Command Modes REDIRECT-LIST

Command History

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.

Version	Description
9.7(0.0)	Introduced on the S6000-ON.
9.5(0.1)	Introduced on the Z9500.
9.4(0.0)	Introduced on the S4810, S4820T, S6000, and Z9000.
8.4.2.1	Introduced on the C-Series and S-Series.
8.4.2.0	Introduced on the E-Series TeraScale.
7.7.1.0	Introduced on the E-Series ExaScale.

redirect

Configure a rule for the redirect list.

C9000 Series

Syntax

```
redirect {ip-address | slot/port} | tunnel tunnel-id [track <obj-id>] {ip-protocol-number | protocol-type [bit]} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator]
```

To remove this filter, use one of the following:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- You can also use the `no redirect {ip-address | slot/port} | tunnel tunnel-id [track <obj-id>] {ip-protocol-number [bit] | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator]` command.

Parameters

redirect	Enter the keyword <code>redirect</code> to assign the sequence to the redirect list.
ip-address	Enter the IP address of the forwarding router.
slot/port	Enter the keyword <code>slot / port</code> then the slot/port information.
tunnel	Enter the keyword <code>tunnel</code> to configure the tunnel setting.
tunnel-id	Enter the keyword <code>tunnel-id</code> to redirect the traffic.
track	Enter the keyword <code>track</code> to enable the tracking.
track <obj-id>	Enter the keyword <code>track <obj-id></code> to track object-id.
ip-protocol-number	Enter a number from 0 to 255 for the protocol identified in the IP protocol header.
protocol-type	Enter one of the following keywords as the protocol type: • <code>icmp</code> for internet control message protocol • <code>ip</code> for any internet protocol • <code>tcp</code> for transmission control protocol • <code>udp</code> for user datagram protocol
bit	(OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags: • <code>ack</code> = acknowledgement • <code>fin</code> = finish (no more data from the user) • <code>psh</code> = push function • <code>rst</code> = reset the connection • <code>syn</code> = synchronize sequence number • <code>urg</code> = urgent field

source	Enter the IP address of the network or host from which the packets were sent.
mask	Enter a network mask in /prefix format (/x).
any	Enter the keyword any to specify that all traffic is subject to the filter.
host ip-address	Enter the keyword host then the IP address to specify a host IP address.
destination	Enter the IP address of the network or host to which the packets are sent.
operator	(OPTIONAL) For TCP and UDP parameters only. Enter one of the following logical operand: • eq = equal to • neq = not equal to • gt = greater than • lt = less than • range = inclusive range of ports (you must specify two ports for the port command parameter.)

Defaults none

Command Modes REDIRECT-LIST

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.8(0.0)	Introduced on the S3048-ON and S4048-ON.
9.7(0.0)	Introduced on the S6000-ON.
9.7(0.0)	Added support for the track-id on the S4810, S4820T, S6000, and Z9000.
9.5(0.1)	Introduced on the Z9500.
9.4(0.0)	Introduced on the S4810, S4820T, S6000, and Z9000.
8.4.2.1	Introduced on the C-Series and S-Series.
8.4.2.0	Introduced on the E-Series TeraScale.
7.7.1.0	Introduced on the E-Series ExaScale.

seq

Configure a filter with an assigned sequence number for the redirect list.

C9000 Series

Syntax

```
seq sequence-number {permit | redirect {ip-address | tunnel tunnel-id}
[track <obj-id>] }} {ip-protocol-number | protocol-type} {source mask
| any | host ip-address} {destination mask | any | host ip-address}
[bit] [operator]{source-port source-port| source-port-range start-port -
end-port} {destination-port destination-port| destination-port-range start-
port - end-port}
```

To delete a filter, use the `no seq sequence-number` command.

Parameters

sequence-number	Enter a number from 1 to 65535.

permit	Enter the keyword <code>permit</code> assign the sequence to the permit list.
redirect	Enter the keyword <code>redirect</code> to assign the sequence to the redirect list.
ip-address	Enter the keyword <code>IP</code> address of the forwarding router.
tunnel	Enter the keyword <code>tunnel</code> to configure the tunnel setting.
tunnel-id	Enter the keyword <code>tunnel-id</code> to redirect the traffic.
track	Enter the keyword <code>track</code> to enable the tracking.
track <obj-id>	Enter the keyword <code>track <obj-id></code> to track object-id.
ip-protocol-number	Enter the keyword <code>ip-protocol-number</code> then the number from 0 to 255 for the protocol identified in the IP protocol header.
protocol-type	Enter one of the following keywords as the protocol type: • <code>icmp</code> for internet control message protocol • <code>ip</code> for any internet protocol • <code>tcp</code> for transmission control protocol • <code>udp</code> for user datagram protocol
source	Enter the IP address of the network or host from which the packets were sent.
mask	Enter a network mask in /prefix format (/x).
any	Enter the keyword <code>any</code> to specify that all traffic is subject to the filter.
host ip-address	Enter the keyword <code>host</code> then the IP address to specify a host IP address.
destination	Enter the IP address of the network or host to which the packets are sent.
bit	(OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags: • <code>ack</code> = acknowledgement • <code>fin</code> = finish (no more data from the user) • <code>psh</code> = push function • <code>rst</code> = reset the connection • <code>syn</code> = synchronize sequence number • <code>urg</code> = urgent field
operator	(OPTIONAL) For the TCP and UDP parameters only. Enter one of the following logical operand: • <code>eq</code> = equal to • <code>neq</code> = not equal to • <code>gt</code> = greater than • <code>lt</code> = less than • <code>range</code> = inclusive range of ports (you must specify two ports for the port command parameter.)
source port	Enter the keywords <code>source-port</code> then the port number to be matched in the ACL rule in the ICAP rule
destination-port	Enter the keywords <code>destination-port</code> then the port number to be matched in the ACL rule in the ICAP rule.
source-port-range	Enter the keywords <code>Source-port-range</code> then the range of the start port to end port to be matched in the ACL rule in the ICAP rule.
destination-port-range	Enter the keywords <code>destination-port-range</code> then the range of the start port to end port to be matched in the ACL rule in the ICAP rule.

Defaults none

show cam pbr

Display the PBR CAM content.

C9000 Series

Syntax	<code>show cam pbr {[interface <i>interface</i>] linecard <i>slot-number</i> port-set <i>number</i>]} [summary]</code>													
Parameters	interface <i>interface</i>	Enter the keyword <code>interface</code> then the name of the interface.												
	linecard <i>number</i>	Enter the keyword <code>linecard</code> then the slot number. The range is from 0 to 11.												
	port-set <i>number</i>	Enter the keywords <code>port-set</code> then the port-pipe number.												
	summary	Enter the keyword <code>summary</code> to view only the total number of CAM entries.												
Defaults	none

Port Extenders (PE)

To configure a C1048P port extender (PE) attached to a C9010, use the commands in this chapter from the C9010 console.

Important Points to Remember

- You can perform the following tasks using the commands described in this chapter:
 - Provisioning a Port Extender
 - Managing a Port Extender
 - PE Stacking
- You must configure the `feature extended-bridge` command to turn on support for PE configuration on a C9010.
- The GVRP and FRRP protocols are not supported on the PE ports.

 **NOTE:** Dell Networking OS recommends not to use RPM Slots 10 and 11 for PE connectivity.

For information on the commands you can enter from a PE console to configure a port extender, see the *PE Console* chapter.

For information on using the PE features, see the “Port Extenders” chapter in the *Dell Networking OS Configuration Guide for the C9000 Series*.

cascade interface

Configure an interface as a cascade interface.

C9000 Series

Syntax `cascade interface interface slot/port-range [peer]`

Parameters	interface interface	Enter <i>interface</i> and specify the interface supported on the switch. The TenGigabit Ethernet interface is the only interface type supported for this feature.
	slot/port-range	Enter the <i>slot/port-range</i> to specify a linecard and either a single port number, a port range, or a combination of both for auto-LAG configuration. Slot number range is from 0 to 9. In linecard slots 0 to 9, the range of port numbers is from 0 to 23.
	peer	Enter <i>peer</i> to configure the VLT peer in a dual-homing setup. This parameter is available only in the Configuration Terminal Batch Mode.

Default None

Command Modes PE CONFIGURATION
CONFIGURATION TERMINAL BATCH

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command-Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode and the <i>peer</i> parameter on C9010.
9.9(0.0)	Introduced on the C9010.

Usage Information This command provisions the port extender for automatic link aggregation group (LAG) port channel creation on the connected ports. The LAG member ports must be operationally up and have a default port configuration with no Layer 2 and Layer 3 configuration. The port interfaces must be of the same type. You can configure up to 16 switch ports in the auto-LAG.

Use *cascade interface interface slot/port-range peer* in the Configuration Terminal Batch Mode to provision the port extender in a dual-homing setup. It is recommended to configure the port extender through batch mode only in a dual-homing setup. If the peer is not connected during the configuration, ensure that you import the configuration from the peer once it is up. See [import peer-config](#) on page 1357.

- The *slot/port-range* specifies a line card and either a single port number, a port range, or a combination of both for auto-LAG configuration. The range of slot numbers is from 0 to 9 for linecard slots. The range of port numbers is from 0 to 23.

Example PE Configuration Mode

```
Dell(conf)# feature extended-bridge
Dell(conf)# pe provision 4
Dell(conf-pe-4)#cascade interface tengigabitethernet 1/1-2
```

Configuration Terminal Batch Mode

```
Dell#conf terminal batch
Peer is registered
Dell(conf-b)#pe provision 4
Dell(conf-b-pe-4)#cascade interface tengigabitethernet 1/1-2
```

clear pe statistics

Delete the statistics related to a specified port extender.

C9000 Series

Syntax	clear pe <i>pe-id</i> statistics					
Parameters	<i>pe-id</i>	Enter the keyword <i>pe</i> and the port extender ID. Range is from 0 to 255.				
	statistics	Enter the keyword <i>statistics</i> to delete the statistics related to a specified PE from the system.				
Default	None					
Command Modes	EXEC Privilege					
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.
Version	Description					
9.9(0.0)	Introduced on the C9010.					
Example	<pre>Dell#clear pe 4 statistics</pre>					

connect pe

Connect to a port extender (PE) through Telnet.

C9000 Series

Syntax	connect pe <i>pe-id</i>					
Parameters	<i>pe-id</i>	Enter the keyword pe and the port extender ID. Range is from 0 to 255.				
Default	None					
Command Modes	EXEC Privilege					
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.
Version	Description					
9.9(0.0)	Introduced on the C9010.					
Usage Information	You can connect to an attached PE through Telnet using the <code>connect pe</code> command and view information specific to the PE system. After you log in to a port extender, enter <code>?</code> or <code>help</code> to display a list of supported commands.					
Example	<pre>Dell#connect pe 254 Login: peadmin</pre>					

```
Password:
DellPE>
```

feature extended-bridge

Enable 802.1BR (bridge port extender) support on the switch.

C9000 Series

Syntax	<code>[no] feature extended-bridge</code> To disable 802.1BR support on the switch, use the <code>no feature extended-bridge</code> command.						
Default	None						
Command Modes	CONFIGURATION CONFIGURATION TERMINAL BATCH						
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>9.10(0.0)</td><td>Introduced the Configuration Terminal Batch mode on C9010.</td></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></tbody></table>	Version	Description	9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.	9.9(0.0)	Introduced on the C9010.
Version	Description						
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.						
9.9(0.0)	Introduced on the C9010.						

Usage Information

This command enables support for the 802.1 bridge PE (BR) on the switch. Enabling the PE feature allows you to provision the PE. The `no feature extended-bridge` command disables bridge PE support and deprovisions a PE. When you use this command in the Configuration Terminal Batch mode, you can enable the support for the bridge PE connected in a Dual-Homing setup.

You can use the `show feature` command to check whether the extended-bridge feature has been enabled as shown in the following example.

Example

```
Dell>show feature
Feature                State
-----
VRF                    disabled
Extended-Bridge        enabled
```

Related Commands [pe provision](#) — Logically provision or add a PE.

location-led

Toggle the location LED of a specified interface, linecard or port extender (PE) on or off.

C9000 Series

Syntax

```
location-led {interface interface | linecard slot-id | pe pe-id stack-unit
unit-number | rpm slot-id }{off|on}
```

Parameters	interface <i>interface</i>	Enter the following keywords and slot/port or number information: - For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information. - For a Gigabit Ethernet interface, enter the keyword <code>gigabitethernet</code> then the slot/port information. - For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.				
	linecard <i>slot-id</i>	Enter the keyword <code>linecard</code> and the slot ID. The linecard <i>slot-id</i> range is from 0 to 9.				
	pe <i>pe-id</i>	Enter the keyword <code>pe</code> and the PE ID. The range is from 0 to 255.				
	stack-unit <i>unit</i> <i>number</i>	Enter the keyword <code>stack-unit</code> and the stack unit number. The range is from 0 to 7.				
	rpm <i>slot-id</i>	Enter the keyword <code>rpm</code> and specify the route processor slot ID. RPM slot-id values are <i>rpm0</i> and <i>rpm1</i> .				
	on off	Turn the location LED(s) of the specified interfaces, linecard, port extenders (PE), ports and RPMs on or off.				
Default	None					
Command Modes	EXEC Privilege					
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.
Version	Description					
9.9(0.0)	Introduced on the C9010.					
Usage Information	When the location LED setting is turned “on” for a port extender (PE), the main power supply LED on the PE flashes green light and when the location LED setting is turned “off”, the main power supply LED is in a solid green state. The <code>location-led</code> settings are not saved through power cycles if the C1048 system is power cycled.					
Example	<pre>Dell# Dell#location-led pe 255 stack-unit 0 on</pre>					

pe

Add a pre-provisioned port extender (PE) .

C9000 Series

Syntax	<code>pe pe-id</code> To remove a port extender, use the <code>no pe pe-id</code> command.
Parameters	pe pe-id Enter keyword <code>pe</code> and PE ID. The range is from 0 to 255.
Default	None
Command Modes	CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, see to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Usage Information

The `pe pe-id` command adds a pre-provisioned PE. The port extender ID (*pe-id*) range is from 0 to 255. You can add a port extender stack-unit using `stack-unit unit number` keyword.

To remove a port extender, use the `no pe pe-id` command.

Example

```
Entering pe context
DELL(conf)# pe 0

Removing pe 0
DELL(conf)# no pe 0

Entering port extender configuration mode:
DELL(conf)#pe 10
DELL(conf-pe-10)#
DELL(conf-pe-10)#stack-unit 0 type c1048P
```

Related Commands

- [stack-unit](#) — add or delete a specified port extender stack-unit.
- [show pe](#) —display the port extender status and details.

pe provision

Logically provision or add a port extender (PE).

C9000 Series

Syntax

`pe provision pe-id`

To de-provision or delete a port extender, use the `no pe provision pe-id` command.

Parameters

pe provision *pe-id* Enter port-extender configuration mode to logically provision a port extender. Port extender ID range is from 0 to 255

Default

None

Command Modes

CONFIGURATION
CONFIGURATION TERMINAL BATCH

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.11(2.0P2)	Introduced the PE description and stack-unit description options.
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.

Usage Information

Before you provision a port extender, enable the extended bridge feature using the `feature extended-bridge` command. The `pe provision pe-id` command logically pre-provisions or adds a port

extender (PE) even when the PE is not physically connected to the switch. The port extender ID (*pe-id*) range is from 0 to 255.

After provisioning a PE using the `pe provision pe-id`, you can provision a stack unit using the `stack-unit` command.

You can also add a PE description and stack-unit description using the `description name` and the `stack-unit 0 description name` commands respectively.

You can provision a port extender connected in a Dual-Homing setup from the Configuration Terminal Batch mode.

To de-provision a port extender, use the `no pe provision pe-id` command.

 **NOTE:** You must ensure that the port extender units are offline before you issue the `no pe provision` command.

Example

```
DELL(conf)# pe provision 10
DELL(conf-pe-10)#

DELL(conf)# no pe provision 10

DELL(conf)# pe provision 0
DELL(conf-pe-0)# stack-unit 0 type N2048-PE
DELL(conf-pe-0)# stack-unit 1 type N2024P-PE
DELL(conf-pe-0)# cascade interface TenGigabitEthernet 0/14-15
DELL(conf-pe-0)# description Test
DELL(conf-pe-0)# stack-unit 0 description first
DELL(conf-pe-0)# stack-unit 1 description second
```

Commands**

- [feature extended-bridge](#)
- [stack unit](#)
- [show pe](#)

pe-version-compat-support

Enables the scheduled PE reboot feature.

Syntax	<code>pe-version-compat-support enable</code>				
Defaults	Enable.				
Parameters	enable Enter the keyword <code>enable</code> to turn on the scheduled PE reboot feature.				
Command Modes	CONFIGURATION				
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.13(0.0)</td><td>Introduced on the C9010.</td></tr></table>	Version	Description	9.13(0.0)	Introduced on the C9010.
Version	Description				
9.13(0.0)	Introduced on the C9010.				
Usage Information	This command adds an entry to the startup-config file. Once this feature is enabled, it is available for all PEs.				

reset pe schedule

Configure the PEs to reset or reboot at a specified period of time.

Syntax	<code>reset pe schedule {after <i>HHHH:MMMM</i> at [<i>HHHH:MMMM-DD:MM:YR</i> <i>HHHH:MMMM</i>] } {range <i>pe-id-pe-id</i>}</code>	
Defaults	None.	
Parameters	after <i>HHHH:MMMM</i>	Enter the keyword <code>after</code> followed by the amount of time in hours and minutes after which the PEs should reboot.
	at <i>HHHH:MMMM</i>	Enter the keyword <code>at</code> followed by the exact time on the current date at which the PEs should reboot.
	at <i>HHHH:MMMM-DD:MM:YR</i>	Enter the keyword <code>at</code> followed by the exact date and time at which the PEs should reboot.
	range <i>pe-id-pe-id</i>	Enter the keyword <code>range</code> followed by the range of pe-ids that you want to schedule to reboot. The range is from 0 to 255.

Command Modes • EXEC Privilege

- Usage Information**
- You can schedule a PE to reboot after a particular amount of time, in hours and minutes (HH:MM), from the current time. For example, you can schedule a PE to reset 10 minutes from the current time using the following command: `reset pe schedule after 0:10 range 10-20`.
 - You can schedule a PE to reset exactly at the specific date and time. For example, you can schedule a PE to reset at a 0:10 PM on 29th November 2017 using the following command: `reset pe schedule at 0:10-11/29/17 range 10-20`.

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13(0.0)	Introduced on the C9010.

reset pe range

Specify a range of port extenders (PEs) that you want to schedule for rebooting at a later point of time.

Syntax	<code>reset pe range {<i>pe-id-pe-id</i> <i>pe-id1,pe-id2,.....</i>} {no-confirm}</code>	
Defaults	None.	
Parameters	<i>pe-id-pe-id</i>	Enter the range of port extender IDs that you want to schedule for rebooting.
	<i>pe-id1,pe-id2,.....</i>	Enter a list of port extender IDs that you want to schedule for rebooting with each pe-id delimited by a coma.
	no-confirm	Enter the keyword <code>no-confirm</code> to suppress the warning messages that are displayed during rebooting of the PE.

Command Modes • EXEC Privilege

- Usage Information**
- The `reset pe range` command is applicable for the entire PE stack-unit. This command is not used for per stack-unit scenario.

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13(0.0)	Added the <code>range</code> keyword to the command.
9.9(0.0)	Introduced on the C9010.

Example

The following command resets all the PEs within range 1 to 5: `reset pe range 1-5 no-confirm`.

The following command resets all the PEs within range 5 to 10 and also the pe-ids 1 and 3: `reset pe range 1,3,5-10 no-confirm`.

reset pe schedule show

Display a list of PEs that are scheduled to be rebooted.

Syntax `reset pe schedule show`

Defaults None.

Command Modes • EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13(0.0)	Introduced on the C9010.

Example

JobID	Status	Scheduled Start Time	Scheduled PE's
000	Scheduled	08:59-09/19/17	0,1
001	Scheduled	23:30-09/19/17	2,3
002	Scheduled	20:30-12/29/17	5-6

reset pe unschedule

Use this command to undo the scheduled PR reboot configuration.

Syntax `reset pe unschedule job-id`

Defaults None.

Parameters *job-id* Enter the job ID of the scheduled PE reboot configuration that you want to undo.

Command Modes • EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE. - For a port channel interface, enter the keyword <code>port-channel</code> - For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.	pe pe-id	Enter the keyword <code>pe</code> keyword and specify a port extender ID number. Range is from 0 to 255.	stack-unit unit-number	Enter the keyword <code>stack-unit</code> and the unit number. Range is from 0 to 7.
interface interface	Enter the <code>interface</code> keyword, and specify one of the following <i>interface</i> types: - For a PE Gigabit Ethernet interface, enter the keyword <code>peGigE</code>. You must specify a <i>pe-id/stack-unit/port-id</i> for the interface. - For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id / stack-unit / port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE. - For a port channel interface, enter the keyword <code>port-channel</code> - For a VLAN interface, enter the keyword <code>vlan</code> then a number from 1 to 4094.						
pe pe-id	Enter the keyword <code>pe</code> keyword and specify a port extender ID number. Range is from 0 to 255.						
stack-unit unit-number	Enter the keyword <code>stack-unit</code> and the unit number. Range is from 0 to 7.						
Default	None						

Command Modes EXEC

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.14(0.0)	Added the SVP (Source Virtual Port) information also along with E-Channel identifier (ECID) information.
9.13.0.1P1	Introduced peTenGigE interface support on the C9010.
9.9(0.0)	Introduced on the C9010.

Usage Information

Use the `show ecid` command to view the E-Channel Identifier (ECID) information for a specified interface such as a port extender Gigabit Ethernet (peGigE) interface.

Example

```
DellEMC#show ecid pe 255
-----
Interface          ECID      SVP
-----
Port-channel 513    3225      8022

show pe

Display the port extender status and details including the PE description.

C9000 Series

Syntax `show pe [pe-id | brief | statistics]`

Parameters

<i>pe-id</i>	(Optional) Enter the port extender ID number <i>pe-id</i> to display the status and details of a specified port extender.
brief	(Optional) Enter the keyword brief to display all the port extender information in brief.
statistics	(Optional) Enter the keyword statistics to display all the port extender statistics.

Default

None

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.14(0.0)	Enhanced to include maximum number of PEX ports information to appear in the display content.
9.13(0.1)	Added the port validation error (PVE) status information to appear in the display content. Added the online and offline PE and PE unit count information to appear in the display content.
9.13(0.0)	Added the Software Version Compatibility (SVC) status information to appear in the display content.
9.11(2.0P2)	Enhanced to include the PE description field.
9.9(0.0)	Introduced on the C9010.

Usage Information

This command shows the current number of PEs in the system that are online and the current number of PEs that are offline. This command also shows the port validation error (PVE) to indicate that the number of PEX ports have exceeded the maximum limit. The PVE error results from an incorrect provisioning of PEs or misconfiguration of converted uplink ports in the dual homed system. All the PE units in the secondary VLT node are shown to be in PVE state.

Example

```
Dell#show pe
Maximum number of PE Units allowed: 80
Current number of PE units in the system: 7 (Online: 5 Offline: 2)
Current number of PEs in the system: 3 (Online: 2 Offline: 1)
Current number of PEX ports in the system: 288 (Maximum: 4000)

Codes:  A - Active, I - Inactive
        SVC - Software Version Compatible
Reason: CTM - Card Type Mismatch, CAM - CAM ACL Mismatch
        SVM - Software Version Mismatch, UE - Unknown Error
Offline Reason: UNP - Unit Not Present, PVE - Port Validation Error
                ICE - IPC CP Error, IRE - IPC RP Error
                ISE - IPC Setup Error, CVE - Card Validation Error

Dell#

show pe csp

Display the control and status protocol (CSP) session information for the port extenders.

C9000 Series

Syntax show pe CSP

Default None

Command Modes

- EXEC
- EXEC Privileged

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Usage Information The following example displays the CSP session information for the port extenders. The command output shows the following information:

- TxPDUSemStatus shows the next port extender CSP PDU TX state machine status.
- RxPDUSemStatus shows the last port extender CSP PDU RX state machine status.
- LocalReqSemStatus shows the port extender CSP local request state machine status.
- RemoteReqSemStatus shows the port extender CSP remote request state machine status

Example

```
Dell#show pe csp
-- Port Extenders CSP Information --
-----
PE-id TxPDUSemStatus RxPDUSemStatus LocalReqSemStatus RemoteReqSemStatus
-----
254 WAIT_TX WAIT_RX RESP_RECVED SEND_RESP
```

show pe errors

Display the port extender error logs.

C9000 Series

Syntax show pe errors

Default None

- Command Modes**
- EXEC
 - EXEC Privileged

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

In the following example, the Te 1/16 is added as a cascade interface in PE 9, but Te1/16 is connected to a different PE, which is not provisioned. Hence, the cascade interface is kept in error state.

Example

```
Dell#show pe errors
PE-id: Not Assigned
PE MAC: f8:b1:56:00:01:04
Interface Errors:
  TenGigabitEthernet 1/16 - Error State

Dell#show pe 9

Dual Homing

Use the commands in the following section to setup the configurations on a port extender connected in a dual-homing environment.

batch-write-memory

Saves the running configuration in both the VLT peers.

Syntax	batch-write-memory				
Parameters	None				
Defaults	None				
Command Modes	CONFIGURATION TERMINAL BATCH				
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell EMC Networking OS Command Line Reference Guide</i> .				
	<table><tr><th>Version</th><th>Description</th></tr><tr><td>9.13(0.0)</td><td>Introduced on the C9010.</td></tr></table>	Version	Description	9.13(0.0)	Introduced on the C9010.
Version	Description				
9.13(0.0)	Introduced on the C9010.				
Usage Information	If the batch-write-memory command fails on one of the VLT peers, it does not affect the operation in the other VLT peer. Instead, an appropriate error message is displayed.				
Example	Primary VLT				

```
DelleMC(conf-b)#batch-write-mem
DelleMC(conf-b)#Dec 6 11:33:35 %RPM1-P:CP %FILEMGR-5-FILESAVED: Copied
running-config to startup-config in flash by default
Dec 6 11:33:36 %RPM1-P:CP %CLIBATCH-6-
CLIBATCH_PEER_CONFIG_WRITE_COMPLETE: Copy of running-config to startup-
config in VLT peer flash is successful
```

Secondary VLT

```
DelleMC#Dec 6 10:44:31 %RPM1-P:CP %CLIBATCH-6-
CLI_BATCH_CONFIG_IN_PROGRESS_TRAP: Batch configuration commit is in
progress
Dec 6 10:44:31 %RPM1-P:CP %CLIBATCH-6-CLI_BATCH_CONFIG_COMPLETE_TRAP:
Batch configuration commit is success
Dec 6 10:44:31 %RPM1-P:CP %FILEMGR-5-FILESAVED: Copied running-config
to startup-config in flash by default
Dec 6 10:46:08 %RPM1-P:CP %FILEMGR-5-FILESAVED: Copied running-config
to startup-config in flash by default
```

commit

Use commit to apply the common configurations made in the Configuration Terminal Batch mode.

C9000 Series

Syntax	commit
Default	None
Command Modes	CONFIGURATION TERMINAL BATCH
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced on the C9010.

Usage Information

The Configuration Terminal Batch mode is used to setup common configurations on a port extender connected in a dual-homing environment. Use the `commit` command to apply the configuration changes. In the Configuration Terminal Batch mode, you can continue to commit the changes without exiting the batch mode.

Example

Example with multiple Commits:

```
Dell#configure terminal batch
Peer is registered
Dell(conf-b)#interface peGigE 184/0/1
Dell(conf-b-if-pegig-184/0/1)#no shutdown
Dell(conf-b-if-pegig-184/0/1)#commit
Dell(conf-b)#Apr 5 06:48:28: %RPM1-P:CP %CLIBATCH-6-
CLI_BATCH_CONFIG_IN_PROGRESS_TRAP: Batch configuration commit is in
progress
Apr 5 06:48:28: %RPM1-P:CP %IFMGR-5-ASTATE_UP: Changed interface Admin
state to up: PeGi 184/0/1
Apr 5 06:48:28: %RPM1-P:CP %CLIBATCH-6-CLI_BATCH_CONFIG_COMPLETE_TRAP:
Batch configuration commit is success

Dell(conf-b)#interface peGigE 184/0/1
Dell(conf-b-if-pegig-184/0/1)#switchport
Dell(conf-b-if-pegig-184/0/1)#int vla 1000
Dell(conf-b-if-vl-1000)#tagged peGigE 184/0/1
Dell(conf-b-if-vl-1000)#commit
Dell(conf-b)#Apr 5 06:48:47: %RPM1-P:CP %CLIBATCH-6-
CLI_BATCH_CONFIG_IN_PROGRESS_TRAP: Batch configuration commit is in
progress
Apr 5 06:48:47: %RPM1-P:CP %IFMGR-5-ACTIVE: Changed Vlan interface state
to active: Vl 1000
Apr 5 06:48:48: %RPM1-P:CP %CLIBATCH-6-CLI_BATCH_CONFIG_COMPLETE_TRAP:
Batch configuration commit is success
```

commit write

Use `commit write` to apply the common configurations made in the Configuration Terminal Batch mode and to save the running configuration in both VLT peers.

C9000 Series

Syntax	<code>commit write</code>
Parameters	None
Default	None
Command Modes	CONFIGURATION TERMINAL BATCH
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13(0.0)	Introduced on the C9010.

Usage Information

The Configuration Terminal Batch mode is used to setup common configurations on a port extender connected in a dual-homing environment. Use the `commit write` command to apply the configuration

changes. It also saves the running configuration to the startup configuration in both VLT peers. In the Configuration Terminal Batch mode, you can continue to commit the changes without exiting the batch mode.

 **NOTE:** If the `commit write` command fails on one VLT peer, your configuration is not applied on both VLT peers.

Example

Primary VLT

```
DelleMC(conf-b)#int range Tengigabitethernet 3/0 - 5
DelleMC(conf-if-range-te-3/0-5)#mtu 3500
DelleMC(conf-if-range-te-3/0-5)#exit
DelleMC(conf-b)#show conf
interface range tengigabitethernet 3/0 - 5
mtu 3500
DelleMC(conf-b)#commit write
DelleMC(conf-b)#Dec 6 11:31:58 %RPM1-P:CP %CLIBATCH-6-
CLI_BATCH_CONFIG_IN_PROGRESS_TRAP: Batch configuration commit is in
progress
Dec 6 11:31:58 %RPM1-P:CP %FILEMGR-5-FILESAVED: Copied running-config
to startup-config in flash by default
Dec 6 11:31:59 %RPM1-P:CP %CLIBATCH-6-CLI_BATCH_CONFIG_COMPLETE_TRAP:
Batch configuration commit is success
Dec 6 11:31:59 %RPM1-P:CP %CLIBATCH-6-
CLIBATCH_PEER_CONFIG_WRITE_COMPLETE: Copy of running-config to startup-
config in VLT peer flash is successful
```

Secondary VLT

```
DelleMC#Dec 6 10:44:31 %RPM1-P:CP %CLIBATCH-6-
CLI_BATCH_CONFIG_IN_PROGRESS_TRAP: Batch configuration commit is in
progress
Dec 6 10:44:31 %RPM1-P:CP %CLIBATCH-6-CLI_BATCH_CONFIG_COMPLETE_TRAP:
Batch configuration commit is success
Dec 6 10:44:31 %RPM1-P:CP %FILEMGR-5-FILESAVED: Copied running-config
to startup-config in flash by default
```

Related Commands

- [commit](#) — apply the common configuration changes made in the Configuration Terminal Batch mode.

discard

Use the `discard` command to cancel the uncommitted changes made to common configurations in the Configuration Terminal Batch mode.

C9000 Series

Syntax	<code>discard</code>				
Default	None				
Command Modes	CONFIGURATION TERMINAL BATCH				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><thead><tr><th>Version</th><th>Description</th></tr></thead><tbody><tr><td>9.10(0.0)</td><td>Introduced on the C9010.</td></tr></tbody></table>	Version	Description	9.10(0.0)	Introduced on the C9010.
Version	Description				
9.10(0.0)	Introduced on the C9010.				
Usage Information	The Configuration Terminal Batch mode is used to setup common configurations on a port extender connected in a dual-homing environment. Use the <code>discard</code> command to cancel the uncommitted common configuration changes.				

Example

The following example shows the configurations being discarded:

```
Dell(conf-b)#interface vlan 2000
Dell(conf-b-if-vl-2000)#tagged peGigE 184/0/1
Dell(conf-b-if-vl-2000)#show config
interface vlan 2000
tagged peGigE 184/0/1

Dell(conf-b-if-vl-2000)#discard
Dell(conf-b)#show config
Dell(conf-b)#exit
Dell#
```

import peer-config

Use `import peer-config` to import the common configurations from the peer chassis.

C9000 Series

Syntax `import peer-config`

Default None

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced on the C9010.

Usage Information Use the `import peer-config` to import the common configurations from the peer chassis and apply them in the local system.

show config-mismatch

Use `show config-mismatch` to view the configurations that differ between the peer chassis.

C9000 Series

Syntax `show config-mismatch`

Default None

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced on the C9010.

Usage Information Use the `show config-mismatch` command to view the configurations in the local that do not match with the peer chassis.

show running-config local

Use `show running-config local` to view the local configurations.

C9000 Series

Syntax `show running-config local`

Default None

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced on the C9010.

Usage Information Use `show running-config local` to view only the configurations corresponding to the local chassis.

Example

```
Dell#show running-config local

  cascade interface TenGigabitEthernet 0/5 peer
!
interface peGigE 255/0/1
  shutdown
!
--More--

```

show config

Display the configuration in the batch mode.

C9000 Series

Syntax	show config [common user local]	
Parameters	common	Displays the common configuration in the batch mode.
	user	Displays the configuration done in the batch mode in an order entered by the user.
	local	Displays the local configuration in the batch mode.
Command Modes	CONFIGURATION TERMINAL BATCH	
Command History	This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	
	The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
9.10(0.0)	Introduced on the C9010.	

Example

```
Dell(conf-b)#show config
interface vlan 10
interface vlan 20
no shutdown
interface vlan 30
interface vlan 40
ip access-list standard stdacl1
Dell(conf-b)#

Dell(conf-b)#show config user
interface vlan 10
exit
interface vlan 20
no shutdown
exit
interface vlan 30
exit
interface vlan 40
exit
ip access-list standard stdacl1
exit
```

write memory local

Use write memory local to save the local configurations to startup configuration.

C9000 Series

Syntax	write memory local
Default	None
Command Modes	EXEC Privilege
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced on the C9010.

Usage Information You can use the `write memory local` command to write only the local configurations to startup configuration.

Debugging

Use the commands in this section to debug the port extender hardware.

clear hardware system-flow pe

Clear the system-flow statistics from the specified port extender hardware component.

C9000 Series

Syntax `clear hardware system-flow pe pe-id stack-unit unit number port-set port-pipe-id counters`

Parameters

pe pe-id	Enter the keyword <code>pe</code> and the port extender ID. Range is from 0 to 255.
stack-unit unit number	Enter the keyword <code>stack-unit</code> and the stack unit number. Range is from 0 to 7.
port-set port-pipe-id	Enter the keyword <code>port-set</code> and the port pipe number. Port-pipe-id range is from 0 to 48.
counters	Enter the keyword <code>counters</code> to reset the system flow entry counter-values.

Defaults None

Command Modes EXEC

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Usage Information Use the `clear hardware system-flow pe` command to clear the system flow statistics on a specified port extender and the stack unit in a PE stack.

Use the keywords `port-set` along with a port-pipe number, then the keyword `counters` to clear the system-flow counters on the selected port-pipe. The port-pipe value is 0.

Example

The example below is before and after clearing system-flow counters:

```
Dell#show hardware system-flow pe 255 stack-unit 1 port-set 0 counters
```

EntryId	Description	#HITS
1024	IPC traffic coming on PE Access Port	0
1023	IPC traffic destined to stack_unit 0 PE CPU	0
1022	IPC traffic destined to stack_unit 1 PE CPU	1011
1021	IPC traffic destined to stack_unit 2 PE CPU	12
1020	IPC traffic destined to stack_unit 3 PE CPU	0

```

1019      IPC traffic destined to stack_unit 4 PE CPU      0
1018      IPC traffic destined to stack_unit 5 PE CPU      0
1017      IPC traffic destined to stack_unit 6 PE CPU      0
1016      IPC traffic destined to stack_unit 7 PE CPU      0
1014      ECP traffic forwarded to next PE CPU              0
1013      ECP traffic destined to PE CPU                    139
1011      LLDP traffic forwarded to next PE CPU              36
1010      LLDP traffic destined to PE CPU                    45
1009      LLDP/LACP traffic coming on access port-0        0
1008      LLDP/LACP traffic coming on access port-1        0
1007      LLDP/LACP traffic coming on access port-2        0
1006      LLDP/LACP traffic coming on access port-3        0
1005      LLDP/LACP traffic coming on access port-4        0
1004      LLDP/LACP traffic coming on access port-5        0
1003      LLDP/LACP traffic coming on access port-6        0
1002      LLDP/LACP traffic coming on access port-7        0
1001      LLDP/LACP traffic coming on access port-8        0

```

show software pemgr

Display the port extender (PE) manager data.

C9000 Series

Syntax

```
show software pemgr pe-id {ipc-stats [message type 0-FFFFF | service-id 0-FFFFF ]| pq-stats {High | Medium | Low}| reg-client}
```

From a **PE console**, use `show software pemgr{ipc-stats [message type 0-FFFFF | service-id 0-FFFFF ]| pq-stats {High | Medium | Low}| reg-client}` to view the PE manager software information.

Parameters

- pe *pe-id*** Enter the keyword `pe` and the port extender ID. Range is from 0 to 255.
- ipc-stats** Enter the keyword `ipc-stats` to display inter-module communication statistics.
- message type** (Optional) Enter the keyword option `message type` to display the data in 0-FFFF message data format.

service-d	(Optional) Enter the keyword option <code>service-id</code> to display the statistics with a specified service or module ID.
pq-stats	Enter the keyword <code>pq-stats</code> to display a summary of priority queue (PQ) based statistics.
High	(Optional) Enter the keyword <code>High</code> to display the statistics for the high priority queue.
Medium	(Optional) Enter the keyword <code>Medium</code> to display the statistics for the medium priority queue.
Low	(Optional) Enter the keyword <code>Low</code> to display the statistics for the low priority queue.
reg-client	Enter the <code>reg-client</code> keyword to display the registered manager — agent / (client) information.

Defaults None

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010. and C1048P.

Usage Information The `show software pemgr` command is supported on a C1048P console.

Example: show software pemgr pe 0 ipc-stats

```
Dell#show software pemgr pe-id 1 ipc-stats

Power over Ethernet (PoE)

Use the commands in this section to configure the Power over Ethernet (PoE) feature on a C1048P port-extender (PE). PoE is not supported on C9010 switches. To manage PoE on port-extender ports, the C1048P uses two types of power supplies: the main internal, fixed AC power supply and an external DC power supply. Each power supply provides 1000W, of which up to 850W is used for PoE. For information about using the PoE stacking feature, refer to the “Power over Ethernet (PoE)” chapter in the Dell Networking OS Configuration Guide for the C9000 Series. The following PoE commands are supported on the Dell Networking OS.

advertise dot3-tlv

Configure the system or an interface to advertise IEEE 802.3at extended power-via-mdi.

C9000 Series

Syntax	advertise dot3-tlv power-via-mdi To remove the advertised dot3-tlv, use the no advertise dot3-tlv power-via-mdi command				
Parameters	power-via-mdi Enter the keyword power-via-mdi to advertise IEEE 802.3at power-via-mdi TLV.				
Defaults	Disabled				
Command Modes	- LLDP CONFIGURATION (conf-lldp) - INTERFACE LLDP CONFIGURATION (conf-if-interface-lldp)				
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table> <tr> <th>Version</th><th>Description</th></tr> <tr> <td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr> </table>	Version	Description	9.9(0.0)	Introduced on the C9010.
Version	Description				
9.9(0.0)	Introduced on the C9010.				
Usage Information	The advertise dot3-tlv power-via-mdi command enables the system to advertise IEEE 802.3at power-via-mdi TLV to advertise its power negotiation capabilities with the powered devices via Link Layer Discovery Protocol (LLDP). You can configure this command either on a specific interface or globally.				
Example	<pre>Dell(conf)#interface peGigE 0/0/0 Dell(conf-if-pegig-0/0/0)#protocol lldp Dell(conf-if-pegig-0/0/0-lldp)#advertise dot3-tlv power-via-mdi Dell(conf-if-pegig-0/0/0-lldp)#</pre>				

advertise med power-via-mdi

Configure the system to advertise IEEE 802.1ab extended power-via— MDI TLV.

C9000 Series

Syntax	<pre>[no] advertise med power-via-mdi</pre> To return to the default, use the <code>no advertise med power-via-mdi</code> command.						
Parameters	power-via-mdi	Enter the keyword <code>power-via-mdi</code> to advertise IEEE 802.1ab MED Extended power-via-mdi TLV.					
Defaults	Disabled						
Command Modes	• LLDP CONFIGURATION (<code>conf-lldp</code>) • INTERFACE LLDP CONFIGURATION (<code>conf-if-interface-lldp</code>)						
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></table>			Version	Description	9.9(0.0)	Introduced on the C9010.
Version	Description						
9.9(0.0)	Introduced on the C9010.						
Usage Information	Advertise extended power via MDI TLVs to all ports that are connected to the 802.1ab powered endpoint devices. When the <code>advertise med power-via-mdi</code> command is enabled in CONFIGURATION mode, advertisement is enabled for all the interfaces in a system. To enable advertisement for a specific interface, configure the command in INTERFACE configuration mode. Port extender (PE) processes and advertises LLDP power-via-MDI TLVs when the LLDP advertisement of the TLV is enabled on the PE in class power management mode. Incoming LLDP messages are processed only when the PE is in class power management mode.						

on-disable

Enable transmission of LLDP shutdown frames.

C9000 Series

Syntax	on-disable transmit {shutdown}					
Parameters	transmit	Enter the keyword transmit to transmits the LLDP frames.				
	shutdown	Enter the keyword shutdown to shut down the LLDP frames.				
Defaults	None.					
Command Modes	CONFIGURATION INTERFACE (conf-if-interface-lldp)					
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></table>		Version	Description	9.9(0.0)	Introduced on the C9010.
Version	Description					
9.9(0.0)	Introduced on the C9010.					

Usage Information

Example

Related Commands

The `on-disable transmit shutdown` command allows transmission of LLDP shutdown frames when the LLDP protocol is disabled in the interface mode.

```
Dell#sh running-config interface tengigabitethernet 0/1
!
interface TenGigabitEthernet 10/1
  no ip address
  switchport
  switchport mode private-vlan host
!
  protocol lldp
  on-disable transmit shutdown
  no shutdown
```

`show running-config lldp` — displays the LLDP running configuration.

power budget global-threshold

Set a global threshold limit for the PoE power budget on a specified port extender.

C9000 Series

Syntax

Parameters

Default

Command Modes

Command History

`power budget global-threshold pe pe-id stack-unit unit number threshold-value`

pe <i>pe-id</i>	Enter the keyword <code>pe</code> and port extender ID. Range is from 0 to 255.
stack-unit <i>unit number</i>	Enter the keyword <code>stack-unit</code> and unit number. Range is from 0 to 7.
threshold-value	Enter the power threshold limit value in percentage. Range is from 10 to 99%. Default value is 99%.

None

CONFIGURATION
CONFIGURATION TERMINAL BATCH

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.

Configure a global threshold limit for the Power over Ethernet (PoE) power budget for a specified port extender. A default power threshold value of 99% is configured when there is no threshold value configured.

Use this command in Configuration Terminal Batch mode to configure the threshold limit for the PoE power budget in a dual-homing setup.

```
Dell(conf)#power budget global-threshold pe 1 stack-unit 0 99

Dell#show power detail pe 0 stack-unit 0
Unit      Total      System  Redundancy Inline      Inline      Inline      Inline
Inline
Power      Power      Power   Power     Power     Power     Power     Power
```

Power Remaining (Watts)	Available (Watts)	Consumed (Watts)	Consumed (Watts)	Threshold (%)	Available (Watts)	Allocated (Watts)	Consumed (Watts)
0/0 841	1000	150	0	99	841	0	0

Related Command
[show power detail](#)

power inline

Enable inline power and configure maximum power allocation with priority for the powered device connected to an interface.

C9000 Series

Syntax
`power inline {[max_milliwatts ]| priority {critical | high | low}}`
 To disable a device that has been enabled for PoE power supply, use the `no power inline` command.

- Parameters**

max_milliwatts

(OPTIONAL) Specify the maximum amount of inline power allocation to a powered device connected to the interface. Range is 440–30000 milliwatts (mWs). The default value is 30000 mWs.

NOTE: The *max_milliwatt* configuration is effective only in Static mode.

priority

Enter the keyword `priority` to specify the PoE priority for the powered device connected to the interface. Default priority value is low.

critical

Enter the keyword `critical` to set the PoE priority level as critical.

high

Enter the keyword `high` to set the PoE priority level as high.

low

Enter the keyword `low` to set the PoE priority as low.

Defaults
 Default priority is low.

Command Modes
 INTERFACE CONFIGURATION

Command History
 This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.
 The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Usage information
 The `power inline [max_milliwatts]` command enables inline power supply to an interface. You can specify the maximum amount of power allocation to a device in `max-milliwatts`, within a range of 440–30000 mW. If a specific power supply value is not configured, the default value of 30,000 mW is configured as the maximum power for allocation to powered devices. You can disable the inline power supply to a port using the `no power inline` command.

 The `power inline priority` command allows you to specify the power inline priority for an interface when a power shortage occurs. PoE is removed from ports configured with `low` priority first, then ports configured with `high` priority are disabled. The ports configured with `critical` priority are the last ports disabled during a power shortage. When two or more ports are configured with same priority level, the ports with higher interface numbers are disabled first. For example, if ports 1, 2, 47, and 48 are all configured with a `low` priority and there is a shortage of inline power supply, PoE is first disabled on port 48, followed by port 47 and, then port 2. Port 1 (with the lowest interface number) takes precedence over all other ports and is disabled after all other ports are disabled.

Example

```
Dell(conf)#int peGigE 0/0/0
Dell(conf-if-pegig-0/0/0)#power inline 30000
Dell(conf-if-pegig-0/0/0)#power inline priority critical

Dell(conf-if-pegig-0/0/0)# Dell#show power inline pe 0 stack-unit 0
Global inline power Threshold      : 99
Power Reserved for inline Power    : 841W
Total Inline Power Consumed        : 0W
Remaining inline power Available   : 841W
Power Management Mode              : Static
```

Interface	Inline Power	Inline Power	Class	Device	PoE Port
LLDP	Max / Alloc	Consumed		Type	Priority
Support	(Watts)	(Watts)			
-----	-----	-----	-----	-----	-----
PeGi 0/0/0	30.00/0.00	0.00	NO_PD	-	critical
0					

power inline legacy

Allocate inline power to the legacy devices on a Port Extender .

C9000 Series

Syntax

```
power inline legacy {pe pe-id stack-unit unit number}
```

To disable the detection of legacy powered devices in a port extender, use the `no power inline legacy {pe pe-id stack-unit unit number}` command.

Parameters

pe pe-id

Enter the keyword `pe` and the port extender ID. Range is 0–255.

stack-unit unit number

Enter the keyword `stack-unit` and the unit number. Range is 0–7.

Defaults

Enabled

Command Modes

CONFIGURATION
CONFIGURATION TERMINAL BATCH

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.

Usage Information

The `power inline legacy` command allows the system to detect and allocate inline power to the legacy devices on a Port Extender.

Use this command in Configuration Terminal Batch mode to allocate inline power to the legacy devices in a dual-homing setup.

Example

```
Dell(conf)#power inline legacy pe 0 stack-unit 0
```

power inline mode

Configures PoE power management mode for a specified port extender.

C9000 Series

Syntax

power inline mode {pe pe-id stack-unit unit number class | static }

Parameters

pe pe-id

Enter the keyword pe and port extender ID. Range is 0–255.

stack-unit unit number

Enter the keyword stack-unit and the unit number. Range is 0–7.

class

Enter the keyword class to configure the class mode for the specified port extender.

static

Enter the keyword static to configure the static mode for the specified port extender.

Defaults

Static

Command Modes

CONFIGURATION
CONFIGURATION TERMINAL BATCH

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
9.9(0.0)	Introduced on the C9010.

Usage Information

The power inline mode command allows you to manage inline power supply on the port extender (PE) ports. You can configure class or static mode to manage inline power in a port extender.

When class mode is configured, maximum power for the particular class of device is allocated. Class mode supports power allocation via Layer 2 classification and power negotiation by Link Layer Discovery Protocol (LLDP) 802.3at standard . When static mode is configured, the inline power is allocated based on the actual power consumption by the powered device. Power negotiation via LLDP is not supported in static mode.

Use this command in Configuration Terminal Batch mode to manage inline power supply in a dual-homing setup.

The following examples show power management mode, “class” configured for the port extender 255.

Example

```
Dell(conf)#power inline mode pe 0 stack-unit 0 static

Dell#show power inline pe 0 stack-unit 0

Global inline power Threshold :          99
Power Reserved for inline Power:        841W

```

power inline restore pe

Enable the temporarily suspended PoE power supply to all the ports in a port extender unit.

C9000 Series

Syntax	power inline restore pe <i>pe-id</i> stack-unit <i>unit number</i>						
Parameters	pe <i>pe-id</i>	Enter the keyword pe and the port extender ID. Range is from 0 to 255.					
	stack-unit <i>unit number</i>	Enter the keyword stack-unit and the stack-unit number. Range is from 0 to 7.					
Defaults	None						
Command Modes	EXEC						
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command. <table><tr><th>Version</th><th>Description</th></tr><tr><td>9.9(0.0)</td><td>Introduced on the C9010.</td></tr></table>			Version	Description	9.9(0.0)	Introduced on the C9010.
Version	Description						
9.9(0.0)	Introduced on the C9010.						
Usage Information	The power inline restore pe command enables or restores the temporarily suspended PoE power supply to all the ports on a port extender unit.						
Example	<pre>Dell# power inline restore pe 1 stack-unit 2</pre>						

power inline suspend pe

Disable PoE power supply to all the ports in a port extender unit temporarily.

C9000 Series

Syntax	power inline suspend pe <i>pe-id</i> stack-unit <i>unit number</i>		
Parameters	pe <i>pe-id</i>	Enter the keyword <code>pe</code> and the port extender ID. Range is 0–255.	
	stack-unit <i>unit number</i>	Enter the keyword <code>stack-unit</code> and the stack unit number. Range is 0–7.	
Defaults	None		
Command Modes	EXEC		
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .		
	The following is a list of the Dell Networking OS version history for this command.		

Version	Description
9.9(0.0)	Introduced on the C9010.

Usage Information

The `power inline suspend pe` command temporarily disables PoE power supply to all the ports in a port extender (PE) unit. You can use the `power inline restore pe` command to restore or enable the PoE power supply to the PE unit.

Example

```
Dell#power inline suspend pe 1 stack-unit 2
% Error: StackUnit 2 of PE 1 not provisioned/connected
```

upgrade poe-controller

Manually upgrade the PoE controller firmware for a specified port extender unit.

C9000 Series

Syntax `upgrade poe-controller pe pe-id stack-unit unit number`

Parameters

pe <i>pe-id</i>	Enter the keyword <code>pe</code> and port extender ID. Range is from 0 to 255.
stack-unit <i>unit number</i>	Enter the keyword <code>stack-unit</code> and the unit number. Range is from 0 to 7.

Defaults None

Command Modes EXEC

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.

Usage Information

The `upgrade poe-controller pe` command is used to manually upgrade the PoE controller firmware for a specified port extender unit.

You can upgrade the PoE controller firmware using the firmware image that is packed with the Dell Networking OS. Once the upgrade is successful, the Port Extender reloads automatically.

In a dual homing setup, you can use this command only from the primary VLT peer.

Example

```
Dell#upgrade poe-controller pe 254 stack-unit 1
```

show power inline

Display the PoE power allocation on a specified port extender.

C9000 Series

Syntax `show power inline {pe pe-id stack-unit unit number | interface interface }`

Parameters

pe <i>pe-id</i>	Enter the keyword <code>pe</code> and the port extender ID. Range is from 0 to 255.

stack-unit unit number	Enter the keyword <code>stack-unit</code> and the stack unit number Range is from 0 to 7.
interface interface	Enter the <code>interface</code> keyword, and specify one of the following <i>interface</i> types: - For a PE Gigabit Ethernet interface, enter the keyword <code>peGigE</code>. You must specify a <i>pe-id/Unit/Port</i> for the interface. - For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id / stack-unit / port-id</i> information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE.

Defaults	None
Command Modes	- EXEC - EXEC Privilege
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.13.0.1P1	Introduced <code>peTenGigE</code> interface support on the C9010.
9.9(0.0)	Introduced on the C9010.

Usage Information	The following describes the output fields of the <code>show power inline</code> command: <table><tr><th>Field</th><th>Description</th></tr><tr><td>Interface</td><td>Displays the line card or the port extender interface slot and port number.</td></tr><tr><td>Inline Power Allocated</td><td>Displays the amount of power allocated to the port.</td></tr><tr><td>Inline Power Consumed</td><td>Displays the amount of power consumed by the connected device.</td></tr><tr><td>Class</td><td>Displays the power classification of the connected device. If the device is powered up properly, it displays Class 0, 1, 2, 3, or 4. Displays the following under different conditions: - NO_DEVICE if no device is present. - LEGACY if a legacy device is connected. - PD_S/C if a short-circuit condition is detected. - PD_OVRD if overload condition is detected. </td></tr><tr><td>Device Type</td><td>Displays whether the device is Type 1 or Type 2.</td></tr><tr><td>PoE Port Priority</td><td>Displays the power configured for the port (default is low). See <code>power inline priority</code>.</td></tr><tr><td>LLDP Support</td><td>Displays the power requested is via LLDP-MED extended power-via-mdi TLV or IEEE 802.3at power-via-mdi TLV.</td></tr></table>	Field	Description	Interface	Displays the line card or the port extender interface slot and port number.	Inline Power Allocated	Displays the amount of power allocated to the port.	Inline Power Consumed	Displays the amount of power consumed by the connected device.	Class	Displays the power classification of the connected device. If the device is powered up properly, it displays Class 0, 1, 2, 3, or 4. Displays the following under different conditions: - NO_DEVICE if no device is present. - LEGACY if a legacy device is connected. - PD_S/C if a short-circuit condition is detected. - PD_OVRD if overload condition is detected.	Device Type	Displays whether the device is Type 1 or Type 2.	PoE Port Priority	Displays the power configured for the port (default is low). See <code>power inline priority</code> .	LLDP Support	Displays the power requested is via LLDP-MED extended power-via-mdi TLV or IEEE 802.3at power-via-mdi TLV.
Field	Description																
Interface	Displays the line card or the port extender interface slot and port number.																
Inline Power Allocated	Displays the amount of power allocated to the port.																
Inline Power Consumed	Displays the amount of power consumed by the connected device.																
Class	Displays the power classification of the connected device. If the device is powered up properly, it displays Class 0, 1, 2, 3, or 4. Displays the following under different conditions: - NO_DEVICE if no device is present. - LEGACY if a legacy device is connected. - PD_S/C if a short-circuit condition is detected. - PD_OVRD if overload condition is detected.																
Device Type	Displays whether the device is Type 1 or Type 2.																
PoE Port Priority	Displays the power configured for the port (default is low). See <code>power inline priority</code> .																
LLDP Support	Displays the power requested is via LLDP-MED extended power-via-mdi TLV or IEEE 802.3at power-via-mdi TLV.																

Example

```
Dell#show power inline pe 255 stack-unit 0

Global inline power Threshold :          99

Port Monitoring

The port monitoring feature allows you to monitor network traffic by forwarding a copy of each incoming or outgoing packet from one port to another port.

Important Points to Remember

- Port monitoring is supported on physical ports and logical interfaces, such as port channels and virtual local area networks (VLANs).
- The monitoring (destination, “MG”) and monitored (source, “MD”) ports must be on the same switch.
- In general, a monitoring port should have `no ip address` and `no shutdown` as the only configuration; Dell Networking OS permits a limited set of commands for monitoring ports; display them using the `?` command. A monitoring port also may not be a member of a VLAN.
- A total of 4 MG may be configured in a single port-pipe.
- MG and MD ports can be reside anywhere across a port-pipe.
- The Dell Networking OS supports multiple source ports to be monitored by a single destination port in one monitor session.
- One monitor session can have only one MG port.
- PE Gigabit Ethernet (peGigE) ports can be added as source ports only. You cannot add cascade ports as destination ports.

 **NOTE:** The monitoring port should not be a part of any other configuration.

description

Enter a description of this monitoring session.

C9000 Series

Syntax	<code>description {description}</code> To remove the description, use the <code>no description {description}</code> command.	
Parameters	description	Enter a description regarding this session (80 characters maximum).
Defaults	none	
Command Modes	CONFIGURATION	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . The following is a list of the Dell Networking OS version history for this command.	

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.11.1	Introduced on the Z9000.
8.3.7.0	Introduced on the S4810.
8.1.1.0	Introduced on the E-Series ExaScale.
7.7.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
7.7.1.0	Introduced on the E-Series.

Related Commands [monitor session](#) — enables a monitoring session.

erpm

Configure the source and destination IP address for ERPM traffic.

Syntax `erpm source-ip ip-address dest-ip ip-address [gre-protocol value]`
 To remove the configuration, use the `no erpm source-ip IP-address dest-ip IP-address [gre-protocol value]` command.

Parameters

source-ip <i>ip-address</i>	Enter the keywords <code>source-ip</code> then the source IP address in dotted decimal format.
destination-ip <i>ip-address</i>	Enter the keywords <code>dest-ip</code> then the destination IP address in dotted decimal format.
gre-protocol <i>value</i>	(OPTIONAL) Enter the keywords <code>gre-protocol</code> then the protocol type value for ERPM type monitor session. The range is from 1 to 65535.

Command Modes MONITOR SESSION (conf-mon- *sess-session-ID*)

Example

```
Dell(conf-mon-sess-10)#erpm source-ip 10.10.10.1 dest-ip 5.1.1.2 gre-protocol 1111
```

Command History This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.11(0.0)	Introduced GRE protocol support.

monitor session

Create a session for monitoring traffic with port monitoring.

C9000 Series

Syntax	<code>monitor session session-ID (type { rpm erpm })</code>	
	To delete a session, use the <code>no monitor session session-ID</code> command.	
	To delete all monitor sessions, use the <code>no monitor session all</code> command.	
Parameters	session-ID	Enter a session identification number. The range is from 0 to 65535.
	type rpm erpm	Specifies one of the following type: - rpm: to create remote port monitoring session. - erpm: to create encapsulated remote port monitoring session.
Defaults	none	
Command Modes	CONFIGURATION	
	CONFIGURATION TERMINAL BATCH	
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .	
	The following is a list of the Dell Networking OS version history for this command.	
	Version	Description
	9.10(0.0)	Introduced the Configuration Terminal Batch mode on C9010.
	9.9(0.0)	Introduced on the C9010.
	9.5(0.1)	Introduced on the Z9500.
	9.4(0.0)	Introduced on the S4810, S4820T, S6000, and Z9000.
	9.0.2.0	Introduced on the S6000.
	9.0.2.0	Introduced on the MXL.
	8.3.11.1	Introduced on the Z9000.
Usage Information	8.3.7.0	Introduced on the S4810.
	The <code>monitor</code> command is saved in the running configuration at Monitor Session mode level and can be restored after a chassis reload.	
Example	Use this command in Configuration Terminal Batch mode to monitor the traffic in a dual-homing setup.	
	<pre>Dell(conf)# monitor session 60 Dell(conf-mon-sess-60)</pre>	
Related Command	show monitor session — displays the monitor session.	
	show running-config monitor session — displays the running configuration of a monitor session.	

show config

Display the current monitor session configuration.

C9000 Series

Syntax	show config
Defaults	none
Command Modes	MONITOR SESSION (conf-mon-sess-session-ID)
Command History	This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>. The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.1.1.0	Introduced on the E-Series ExaScale.
7.7.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Example

```
Dell(conf-mon-sess-2)#show config
!
monitor session 2 type rpm
source fortyGigE 0/60 destination remote-vlan 300 direction rx
source Port-channel 10 destination remote-vlan 300 direction rx
no disable
Dell#
```

show monitor session

Display port extender (PE) Gigabit Ethernet interface monitoring information.

C9000 Series

Syntax	show monitor session {session-ID}	To display monitoring information for all sessions, use the <code>show monitor session</code> command. To display monitoring information for port extender interface, when added as a source port, use the <code>do show monitor session</code> command in CONFIGURATION mode.
Parameters	session-ID	(OPTIONAL) Enter a session identification number. The range is from 0 to 65535.
Defaults	none

 - EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

Version	Description
9.11(0.0)	Introduced the support for GRE Protocol and FC Monitor in the command output.
9.9(0.0)	Introduced on the C9010.
9.5(0.1)	Introduced on the Z9500.
9.4.0.0	Added support for the RPM / ERPM.
9.0.2.0	Introduced on the S6000.
8.3.19.0	Introduced on the S4820T.
8.3.7.0	Introduced on the S4810.
8.3.11.1	Introduced on the Z9000.
8.1.1.0	Introduced on the E-Series ExaScale.
7.7.1.0	Introduced on the S-Series.
7.5.1.0	Introduced on the C-Series.
7.4.1.0	Introduced on the E-Series.

Example

```
Dell#show monitor session 1
SessID Source      Destination Dir Mode SourceIP DestIP  DSCP TTL Drop Rate Gre-
Protocol FcMonitor
-----
-----
1  PeGi 0/0/0 Te 10/2 rx Port 0.0.0.0 0.0.0.0 0 0 0 No N/A N/A
Yes
```

Related Commands

[monitor session](#) — creates a monitoring session.

show running-config monitor session

Display the running configuration of all monitor sessions or a specific session.

C9000 Series

- Syntax**
- ```
show running-config monitor session {session-ID}
```
- To display the running configuration for all monitor sessions, use the `show running-config monitor session` command.
- Parameters**
- session-ID** (OPTIONAL) Enter a session identification number. The range from 0 to 65535.
- Defaults**
- none
- Command Modes**
- EXEC
  - EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                          |
|----------|--------------------------------------|
| 9.9(0.0) | Introduced on the C9010.             |
| 9.5(0.1) | Introduced on the Z9500.             |
| 9.0.2.0  | Introduced on the S6000.             |
| 8.3.19.0 | Introduced on the S4820T.            |
| 8.3.11.1 | Introduced on the S4810.             |
| 8.3.11.1 | Introduced on the Z9000.             |
| 8.1.1.0  | Introduced on the E-Series ExaScale. |
| 7.7.1.0  | Introduced on the S-Series.          |
| 7.5.1.0  | Introduced on the C-Series.          |
| 7.4.1.0  | Introduced on the E-Series.          |

#### Usage Information

The monitoring command is saved in the running configuration at the Monitor Session mode level and can be restored after a chassis reload.

#### Example

```
Dell(conf-mon-sess-0)#do show running-config monitor session
!
monitor session 0
source Port-channel 10 destination TenGigabitEthernet 0/33 direction tx
!
```

#### Related Commands

[monitor session](#) — creates a monitoring session.  
[show monitor session](#) — displays a monitoring session.

## source (port monitoring)

Configure a port monitor source.

### C9000 Series

#### Syntax

```
source interface | range destination interface direction {rx | tx | both}
```

To disable a monitor source, use the `no source interface destination interface direction {rx | tx | both}` command.

#### Parameters

- source *interface*** Enter the one of the following keywords and slot/port information:
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keyword `port-channel` and a port-channel ID.
  - For a port extender (PE) Gigabit Ethernet interface, enter the keyword `peGigE` then the *pe-id* / *stack-unit* / *port-id* information.
  - For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id* / *stack-unit* / *port-id* information. The *pe-id* range is from 0 to 255; the *stack-unit unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.
  - For a VLAN interface, enter the keyword `VLAN` and a *vlan-id* number. Range is from 1 to 4094.

- For a remote VLAN interface, enter the keyword `Remote-VLAN` and a *vlan-id* number. Range is from 1 to 4094
- For a port channel interface, enter the keyword `port-channel` and a port-channel ID.

 **NOTE:** You cannot configure VLAN 4092 and 4093. These VLANs are reserved for internal use.

**range** Enter the keyword `range` to specify the list of interfaces.

**destination** Enter the keyword `destination` to specify the destination interface.

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port channel interface, enter the keyword `port-channel` and a the port-channel ID.
- For a remote VLAN interface, enter the keyword `Remote-VLAN` and a *vlan-id* number. Range is from 1 to 4094

**interface** Enter the one of the following keywords and slot/port information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a VLAN interface, enter the keyword `VLAN` and a *vlan-id* number. Range is from 1 to 4094.
- For a port channel interface, enter the keyword `port-channel` and a the port-channel ID.

**direction {rx | tx | both}** Enter the keyword `direction` then one of the packet directional indicators.

- `rx`: to monitor receiving packets only.
- `tx`: to monitor transmitting packets only.
- `both`: to monitor both transmitting and receiving packets.

**Defaults** none

**Command Modes** MONITOR SESSION (`conf-mon- sess-session-ID`)

**Command History** This guide is platform-specific. For command information about other platforms, see to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell EMC Networking OS version history for this command.

| Version           | Description                                                       |
|-------------------|-------------------------------------------------------------------|
| <b>9.13.0.1P1</b> | Introduced <code>peTenGigE</code> interface support on the C9010. |
| <b>9.9(0.0)</b>   | Introduced on the C9010.                                          |
| <b>9.5(0.1)</b>   | Introduced on the Z9500.                                          |
| <b>9.4.0.0</b>    | Added support for Source and destination.                         |
| <b>9.0.2.0</b>    | Introduced on the S6000.                                          |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                         |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                          |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                          |
| <b>8.5.1.0</b>    | Added support for 4-port 40G line cards on ExaScale.              |
| <b>8.1.1.0</b>    | Introduced on the E-Series ExaScale.                              |
| <b>7.7.1.0</b>    | Introduced on the S-Series.                                       |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                       |

| Version | Description                 |
|---------|-----------------------------|
| 7.4.1.0 | Introduced on the E-Series. |

**Usage  
Information**

You can configure a port extender (PE) Gigabit Ethernet peGigE port as a source port in the `source (port monitoring)` command and monitor traffic flow on this port. You cannot configure a cascade port as a destination port.

**Example**

```
Dell# monitor session 0
source Port-channel 10 destination TenGigabitEthernet 0/33 direction tx
```

# Private VLAN (PVLAN)

The private VLAN (PVLAN) feature of the Dell Networking operating software.

Private VLANs extend the system security suite by providing Layer 2 isolation between ports within the same private VLAN. A private VLAN partitions a traditional VLAN into subdomains identified by a primary and secondary VLAN pair. The private VLAN implementation is based on RFC 3069.

For more information, see the following commands. The command output is augmented in the Dell Networking OS version 7.8.1.0 at later to provide PVLAN data:

- [show arp](#)
- [show vlan](#)

## Private VLAN Concepts

### Primary VLAN:

The primary VLAN is the base VLAN and can have multiple secondary VLANs. There are two types of secondary VLAN — community VLAN and isolated VLAN:

- A primary VLAN can have any number of community VLANs and isolated VLANs.
- Private VLANs block all traffic to isolated ports except traffic from promiscuous ports. Traffic received from an isolated port is forwarded only to promiscuous ports or trunk ports.

### Community VLAN:

A community VLAN is a secondary VLAN of the primary VLAN:

- Ports in a community VLAN can talk to each other. Also, all ports in a community VLAN can talk to all promiscuous ports in the primary VLAN and vice versa.
- Devices on a community VLAN can communicate with each other using member ports, while devices in an isolated VLAN cannot.

### Isolated VLAN:

An isolated VLAN is a secondary VLAN of the primary VLAN:

- Ports in an isolated VLAN cannot talk to each other. Servers would be mostly connected to isolated VLAN ports.
- Isolated ports can talk to promiscuous ports in the primary VLAN, and vice versa.

### Port Types:

- *Community port*: A community port is a port that belongs to a community VLAN and is allowed to communicate with other ports in the same community VLAN and with promiscuous ports.
- *Isolated port*: An isolated port is a port that, in Layer 2, can only communicate with promiscuous ports that are in the same PVLAN.
- *Promiscuous port*: A promiscuous port is a port that is allowed to communicate with any other port type.
- *Trunk port*: A trunk port carries VLAN traffic across switches:
  - A trunk port in a PVLAN is always tagged.
  - A trunk port in Tagged mode carries primary or secondary VLAN traffic. The tag on the packet helps identify the VLAN to which the packet belongs.
  - A trunk port can also belong to a regular VLAN (non-private VLAN).

### Topics:

- [ip local-proxy-arp](#)
- [private-vlan mode](#)
- [private-vlan mapping secondary-vlan](#)
- [show interfaces private-vlan](#)
- [show vlan private-vlan](#)
- [switchport mode private-vlan](#)

# ip local-proxy-arp

Enable/disable Layer 3 communication between secondary VLANs in a private VLAN.

## C9000 Series

**Syntax**

```
[no] ip local-proxy-arp
```

To disable Layer 3 communication between secondary VLANs in a private VLAN, use the `no ip local-proxy-arp` command in INTERFACE VLAN mode for the primary VLAN.

To disable Layer 3 communication in a particular secondary VLAN, use the `no ip local-proxy-arp` command in INTERFACE VLAN mode for the selected secondary VLAN.

 **NOTE:** Even after you disable `ip-local-proxy-arp` in a secondary VLAN, Layer 3 communication may happen between some secondary VLAN hosts, until the ARP timeout happens on those hosts.

**Defaults**

Layer 3 communication is disabled between secondary VLANs in a private VLAN.

**Command Modes**

INTERFACE VLAN

**Command History**

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                              |
|----------|------------------------------------------|
| 9.9(0.0) | Introduced on the C9010.                 |
| 9.2(1.0) | Introduced on the Z9500.                 |
| 8.3.19.0 | Introduced on the S4820T.                |
| 8.3.11.1 | Introduced on the Z9000.                 |
| 8.3.7.0  | Introduced on the S4810.                 |
| 7.8.1.0  | Introduced on the C-Series and S-Series. |

- Related Commands**
- [private-vlan mode](#) — sets the mode of the selected VLAN to community, isolated, or primary.
  - [private-vlan mapping secondary-vlan](#) — maps secondary VLANs to the selected primary VLAN.
  - [show arp](#) — displays the ARP table.
  - [show interfaces private-vlan](#) — displays the type and status of the PVLAN interfaces.
  - [show vlan private-vlan](#) — displays the PVLANS and/or interfaces that are part of a PVLAN.
  - [switchport mode private-vlan](#) — sets PVLAN mode of the selected port.

# private-vlan mode

Set PVLAN mode of the selected VLAN to community, isolated, or primary.

## C9000 Series

**Syntax**

```
[no] private-vlan mode {community | isolated | primary}
```

To remove the PVLAN configuration, use the `no private-vlan mode {community | isolated | primary}` command syntax.

|                   |                  |                                                                                    |
|-------------------|------------------|------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>community</b> | Enter the keyword <code>community</code> to set the VLAN as a community VLAN.      |
|                   | <b>isolated</b>  | Enter the keyword <code>isolated</code> to configure the VLAN as an isolated VLAN. |

|                          | <b>primary</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Enter the keyword <code>primary</code> to configure the VLAN as a primary VLAN. |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                                          |

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                              |
|----------|------------------------------------------|
| 9.9(0.0) | Introduced on the C9010.                 |
| 9.2(1.0) | Introduced on the Z9500.                 |
| 8.3.19.0 | Introduced on the S4820T.                |
| 8.3.11.1 | Introduced on the Z9000.                 |
| 8.3.7.0  | Introduced on the S4810.                 |
| 7.8.1.0  | Introduced on the C-Series and S-Series. |

#### Usage Information

The list of secondary VLANs can be:

- Specified in comma-delimited or hyphenated-range format.
- Specified with this command even before they have been created.
- Amended by specifying the new secondary VLAN to be added to the list.

#### Related Commands

- [private-vlan mode](#) — sets the mode of the selected VLAN to community, isolated, or primary.
- [show interfaces private-vlan](#) — displays the type and status of the PVLAN interfaces.
- [show vlan private-vlan](#) — displays the PVLANS and/or interfaces that are part of a PVLAN.
- [switchport mode private-vlan](#) — sets PVLAN mode of the selected port.

## show interfaces private-vlan

Display type and status of PVLAN interfaces.

### C9000 Series

#### Syntax

```
show interfaces private-vlan [interface interface]
```

#### Parameters

**interface**  
***interface***

(OPTIONAL) Enter the keyword *interface* and the interface type, slot/port numbers or port-channel number to specify the port(s) for which you want to display PVLAN information. Enter only a slot ID to display the PVLAN status for all ports on a line card. The valid values are:

- For a port channel interface, enter the keyword *port-channel* and a port-channel ID.
- For a 10-Gigabit Ethernet interface, enter the keyword *tenGigabitEthernet* then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword *fortyGigE* then the slot/port information.
- For a port extender (PE) Gigabit Ethernet interface, enter the keyword *peGigE* then the *pe-id* / *stack-unit* / *port-id* information.
- For a port extender 10-Gigabit Ethernet interface, enter the keyword *peTenGigE* then the *pe-id* / *stack-unit* / *port-id* information. The *pe-id* range is from 0 to 255; the *stack-unit unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

#### Defaults

none

#### Command Modes

- EXEC
- EXEC Privilege

#### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version           | Description                                          |
|-------------------|------------------------------------------------------|
| <b>9.13.0.1P1</b> | Introduced peTenGigE interface support on the C9010. |
| <b>9.9(0.0)</b>   | Introduced on the C9010.                             |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                             |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                            |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                             |
| <b>8.3.7.1</b>    | Introduced on the S4810.                             |
| <b>7.8.1.0</b>    | Introduced on the C-Series and S-Series.             |

#### Usage Information

This command has two types of display — a list of all PVLAN interfaces or for a specific interface. Examples of both types of output are shown below.

The following describes the `show interfaces private-vlan` command shown in the examples below.

| Field                 | Description                                                          |
|-----------------------|----------------------------------------------------------------------|
| <b>Interface</b>      | Displays the type of interface and associated slot and port number.  |
| <b>Vlan</b>           | Displays the VLAN ID of the designated interface.                    |
| <b>PVLAN-Type</b>     | Displays the type of VLAN in which the designated interface resides. |
| <b>Interface Type</b> | Displays the PVLAN port type of the designated interface.            |
| <b>Status</b>         | States whether the interface is operationally up or down.            |

#### Example (All)

```
Dell# show interfaces private-vlan
Interface Vlan PVLAN-Type Interface Type Status

Fo 1/52 30 Isolated Host Up
Fo 2/12 20 Community Host Up
Po 10 10 Primary Trunk Up
```

#### Example (Specific)

```
Dell# show interfaces private-vlan te 2/2
Interface Vlan PVLAN-Type Interface Type Status

Te 2/2 100 Isolated Host Up
```

#### Related Commands

- [private-vlan mode](#) – sets the mode of the selected VLAN to community, isolated, or primary.
- [show vlan private-vlan](#) – displays the PVLANS and/or interfaces that are part of a PVLAN.
- [switchport mode private-vlan](#) – sets PVLAN mode of the selected port.

## show vlan private-vlan

Display PVLAN configurations, including member interfaces, type, and status.

### C9000 Series

#### Syntax

```
show vlan private-vlan [vlan-id | community vlan-id | interface interface |
isolated vlan-id | mapping vlan-id | primary vlan-id]
```

#### Parameters

|                                 |                                                                                                                               |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <b><i>vlan-id</i></b>           | (OPTIONAL) Enter a VLAN ID number to display the PVLAN configuration.                                                         |
| <b>community <i>vlan-id</i></b> | (OPTIONAL) Enter the keyword <code>community</code> and a PVLAN ID number to display the configuration for a community PVLAN. |

|                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>interface</b><br><b>interface</b> | (OPTIONAL) Enter the keyword <code>interface</code> and specify the interface type and slot/port numbers or port-channel number to display the PVLAN configuration for a member interface. The valid values are: <ul style="list-style-type: none"> <li>For a port channel interface, enter the keyword <code>port-channel</code> and a port-channel ID.</li> <li>For a 10-Gigabit Ethernet interface, enter the keyword <code>tenGigabitEthernet</code> then the slot/port information.</li> <li>For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li> <li>For a port extender (PE) Gigabit Ethernet interface, enter the keyword <code>peGigE</code> then the <i>pe-id</i> / stack-unit / port-id information.</li> <li>For a port extender 10-Gigabit Ethernet interface, enter the keyword <code>peTenGigE</code> then the <i>pe-id</i> / stack-unit / port-id information. The <i>pe-id</i> range is from 0 to 255; the stack-unit <i>unit-number</i> range is from 0 to 7; and the <i>port-id</i> range is 25 to 28 or 49 to 52 depending on the PE.</li> </ul> |
| <b>isolated</b>                      | (OPTIONAL) Enter the keyword <code>isolated</code> and a PVLAN ID number to display the configuration of an isolated PVLAN.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>mapping</b>                       | (OPTIONAL) Enter the keyword <code>mapping</code> to display the community and isolated PVLAN mapping to primary PVLANS.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>primary vlan-id</b>               | (OPTIONAL) Enter the keyword <code>primary</code> and a PVLAN ID number to display the configuration of a primary PVLAN.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

**Defaults** none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version           | Description                                                       |
|-------------------|-------------------------------------------------------------------|
| <b>9.13.0.1P1</b> | Introduced <code>peTenGigE</code> interface support on the C9010. |
| <b>9.9(0.0)</b>   | Introduced on the C9010.                                          |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                          |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                         |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                          |
| <b>8.3.7.1</b>    | Introduced on the S4810.                                          |
| <b>7.8.1.0</b>    | Introduced on the C-Series and S-Series.                          |

**Usage Information** Examples of all types of command output are shown below. The first type of output is the result of not entering an optional keyword. It displays a detailed list of all PVLANS and their member VLANs and interfaces. The other types of output show details about PVLAN subsets.

The following describes the `show private-vlan` command shown in the Examples below.

| Field            | Description                                                             |
|------------------|-------------------------------------------------------------------------|
| <b>Primary</b>   | Displays the VLAN ID of the designated or associated primary VLAN(s).   |
| <b>Secondary</b> | Displays the VLAN ID of the designated or associated secondary VLAN(s). |
| <b>Type</b>      | Displays the type of VLAN in which the listed interfaces reside.        |
| <b>Active</b>    | States whether the interface is operationally up or down.               |
| <b>Ports</b>     | Displays the interface IDs in the listed VLAN.                          |

**Example (All)**

```

Dell# show vlan private-vlan
Primary Secondary Type Active Ports

10 100 primary Yes Te 2/1,3
 101 isolated Yes Te 2/2
 101 community Yes Te 2/10
20 101 primary Yes Po 10, 12-13
 101 primary Yes Te 1/1
 200 isolated Yes Te 1/2,4-6
 201 community No
 202 community Yes Te 1/11-12

```

**Example  
(Primary)**

```

Dell# show vlan private-vlan primary
Primary Secondary Type Active Ports

10 101 primary Yes Te 2/1,3
20 101 primary Yes Te 1/1,3

```

**Example  
(Isolated)**

```

Dell# show vlan private-vlan isolated
Primary Secondary Type Active Ports

10 100 primary Yes Te 2/1,3
 100 isolated Yes Te 2/2,4-6
 200 isolated Yes Te 1/2,4-6

```

**Example  
(Community)**

```

Dell# show vlan private-vlan community
Primary Secondary Type Active Ports

10 101 primary Yes Te 2/1,3
 101 community Yes Te 2/7-10
20 101 primary Yes Po 10, 12-13
 101 primary Yes Te 1/1
 201 community No
 202 community Yes Te 1/11-12

```

**Example  
(Interface)**

```

Dell# show vlan private-vlan interface te 2/1
Primary Secondary Type Active Ports

10 101 primary Yes Te 2/1

```

**Example  
(Mapping)**

```

Dell# show vlan private-vlan mapping

Private Vlan:
 Primary : 10
 Isolated : 30
 Community : 20

```

**Usage  
Information**

Note that if the VLAN ID you enter is a primary VLAN, the entire private VLAN output is displayed, as shown below. If the VLAN ID is a secondary VLAN, only its primary VLAN and secondary VLAN properties are displayed, as shown in the second Example below.

**Example**

```

Dell# show vlan private-vlan 10
Primary Secondary Type Active Ports

10 102 primary Yes Te 2/1,3
 102 isolated Yes Te 0/4
 101 community Yes Te 2/7-10

```

**Example**

```

Dell# show vlan private-vlan 102
Primary Secondary Type Active Ports

```

|     |          |     |        |
|-----|----------|-----|--------|
| 10  | Primary  | Yes | Po 1   |
|     |          |     | Te 0/2 |
| 102 | Isolated | Yes | Te 0/4 |

## Related Commands

[private-vlan mode](#) – sets the mode of the selected VLAN to community, isolated, or primary.

[show interfaces private-vlan](#) – displays type and status of PVLAN interfaces.

[switchport mode private-vlan](#) – sets PVLAN mode of the selected port.

# switchport mode private-vlan

Set PVLAN mode of the selected port.

## C9000 Series

### Syntax

```
[no] switchport mode private-vlan {host | promiscuous | trunk}
```

To remove PVLAN mode from the selected port, use the `no switchport mode private-vlan` command.

### Parameters

|                    |                                                                                                                         |
|--------------------|-------------------------------------------------------------------------------------------------------------------------|
| <b>host</b>        | Enter the keyword <code>host</code> to configure the selected port or port channel as an isolated interface in a PVLAN. |
| <b>promiscuous</b> | Enter the keyword <code>promiscuous</code> to configure the selected port or port channel as a promiscuous interface.   |
| <b>trunk</b>       | Enter the keyword <code>trunk</code> to configure the selected port or port channel as a trunk port in a PVLAN.         |

### Defaults

Disabled.

### Command Modes

INTERFACE

### Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                              |
|-----------------|------------------------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.                 |
| <b>9.2(1.0)</b> | Introduced on the Z9500.                 |
| <b>8.3.19.0</b> | Introduced on the S4820T.                |
| <b>8.3.11.1</b> | Introduced on the Z9000.                 |
| <b>8.3.7.0</b>  | Introduced on the S4810.                 |
| <b>7.8.1.0</b>  | Introduced on the C-Series and S-Series. |

### Usage Information

The assignment of the various PVLAN port types to port and port channel (LAG) interfaces is shown in the following example.

### Example

```
Dell#conf
Dell(conf)#interface TenGigabitEthernet 2/1
Dell(conf-if-te-2/1)#switchport mode private-vlan promiscuous

Dell(conf)#interface TenGigabitEthernet 2/2
Dell(conf-if-te-2/2)#switchport mode private-vlan host

Dell(conf)#interface TenGigabitEthernet 2/3
Dell(conf-if-te-2/3)#switchport mode private-vlan trunk
```

```
Dell(conf)#interface port-channel 10
Dell(conf-if-te-2/3)#switchport mode private-vlan promiscuous
```

**Related  
Commands**

- [private-vlan mode](#) — sets the mode of the selected VLAN to community, isolated, or primary.
- [private-vlan mapping secondary-vlan](#) — sets the mode of the selected VLAN to primary and then associates the secondary VLANs to it.
- [show interfaces private-vlan](#) — displays type and status of PVLAN interfaces.

# Quality of Service (QoS)

The Dell Networking operating software commands for quality of service (QoS) include traffic conditioning and congestion control.

This chapter contains the following sections:

- [Global Configuration Commands](#)
- [Per-Port QoS Commands](#)
- [Policy-Based QoS Commands](#)

## Topics:

- [Global Configuration Commands](#)
- [Per-Port QoS Commands](#)
- [Policy-Based QoS Commands](#)
- [DSCP Color Map Commands](#)

## Global Configuration Commands

The following QoS commands are enabled globally when configured on your switch.

### qos-rate-adjust

Enable QoS rate adjustment to include overhead fields in rate metering calculations.

#### C9000 Series

|                        |                                                                                                                                                                                                                                                           |                                                                                                                                          |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>qos-rate-adjust overhead-bytes-number</code>                                                                                                                                                                                                        |                                                                                                                                          |
| <b>Parameters</b>      | <b><i>overhead-bytes-number</i></b>                                                                                                                                                                                                                       | Enter the number of bytes of packet overhead to include in rate limiting, policing, and shaping calculations. The range is from 1 to 31. |
| <b>Defaults</b>        | QoS rate adjustment is disabled by default.                                                                                                                                                                                                               |                                                                                                                                          |
| <b>Command Modes</b>   | CONFIGURATION<br>CONFIGURATION TERMINAL BATCH                                                                                                                                                                                                             |                                                                                                                                          |

| Version          | Description                                                |
|------------------|------------------------------------------------------------|
| <b>9.10(0.0)</b> | Introduced the Configuration Terminal Batch mode on C9010. |
| <b>9.9(0.0)</b>  | Introduced on the C9010.                                   |
| <b>9.2(1.0)</b>  | Introduced on the Z9500.                                   |
| <b>8.3.19.0</b>  | Introduced on the S4820T.                                  |
| <b>8.3.11.1</b>  | Introduced on the Z9000.                                   |
| <b>8.3.7.0</b>   | Introduced on the S4810.                                   |

| Version | Description |
|---------|-------------|
| 8.3.1.0 | Introduced. |

## Usage Information

By default, when rate policing and shaping, the system does not include the Preamble, SFD, or the IFG fields. These fields are overhead; only the fields from MAC destination address to the CRC are used for forwarding and are included in these rate metering calculations.

Use this command in Configuration Terminal Batch mode to enable the QoS rate adjustment in a dual-homing setup.

# service-class bandwidth-percentage

Specify a minimum bandwidth for queues.

## C9000 Series

**Syntax** `service-class bandwidth-percentage queue0 percentage queue1 percentage queue2 percentage queue3 percentage queue4 percentage queue5 percentage queue6 percentage`

**Parameters** *percentage* Enter the bandwidth-weight as a percentage. The range is from 1 to 100.

**Defaults** none

**Command Modes** CONFIGURATION  
CONFIGURATION TERMINAL BATCH

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version   | Description                                                |
|-----------|------------------------------------------------------------|
| 9.10(0.0) | Introduced the Configuration Terminal Batch mode on C9010. |
| 9.9(0.0)  | Introduced on the C9010.                                   |
| 9.2(1.0)  | Introduced on the Z9500.                                   |
| 8.3.19.0  | Introduced on the S4820T.                                  |
| 8.3.11.1  | Introduced on the Z9000.                                   |
| 8.3.7.1   | Introduced on the S4810.                                   |
| 8.2.1.0   | Introduced on the C-Series and S-Series.                   |

## Usage Information

Guarantee a minimum bandwidth to different queues globally using the `service-class bandwidth-percentage` command from CONFIGURATION mode. The command is applied in the same way as the `bandwidth-percentage` command in an output QoS policy. The `bandwidth-percentage` command in QOS-POLICY-OUT mode supersedes the `service-class bandwidth-percentage` command.

Use this command in Configuration Terminal Batch mode to specify the minimum bandwidth for queues in a dual-homing setup.

## service-class dot1p-mapping

Configure a service-class criterion based on a dot1p value.

### C9000 Series

| <b>Syntax</b>            | <code>service-class dot1p-mapping {dot1p0 value   dot1p1 value   dot1p2 value   dot1p3 value   dot1p4 value  dot1p5 value   dot1p6 value   dot1p7 value}</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                      |         |             |           |                                                            |          |                          |          |                          |          |                           |          |                          |         |                          |          |                                                  |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|---------|-------------|-----------|------------------------------------------------------------|----------|--------------------------|----------|--------------------------|----------|---------------------------|----------|--------------------------|---------|--------------------------|----------|--------------------------------------------------|
| <b>Parameters</b>        | <b>dot1p0 value ...<br/>dot1p7 value</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Enter a dot1p list number and value. The list number range is from 0 to 7. The range is from 0 to 7. |         |             |           |                                                            |          |                          |          |                          |          |                           |          |                          |         |                          |          |                                                  |
| <b>Defaults</b>          | For each dot1p Priority, the default CoS queue value is: <ul style="list-style-type: none"><li>• Dot1p Priority: 0 1 2 3 4 5 6 7</li><li>• Queue: 1 0 2 3 4 5 6 7</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                      |         |             |           |                                                            |          |                          |          |                          |          |                           |          |                          |         |                          |          |                                                  |

## service-class dynamic dot1p

Honor all 802.1p markings on incoming switched traffic on an interface (from INTERFACE mode) or on all interfaces (from CONFIGURATION mode). A CONFIGURATION mode entry supersedes an INTERFACE mode entry.

### C9000 Series

|                 |                                                                                                                                                   |
|-----------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>   | <code>service-class dynamic dot1p</code><br><br>To return to the default setting, use the <code>no service-class dynamic dot1p</code> command.    |
| <b>Defaults</b> | All dot1p traffic is mapped to Queue 0 unless you enable the <code>service-class dynamic dot1p</code> command. The default mapping is as follows: |

**Table 8. Default Mapping**

| dot1p | Queue ID |
|-------|----------|
| 0     | 1        |
| 1     | 0        |
| 2     | 2        |
| 3     | 3        |

**Command History** This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version          | Description                                                                 |
|------------------|-----------------------------------------------------------------------------|
| <b>9.10(0.0)</b> | Introduced the Configuration Terminal Batch mode on C9010.                  |
| <b>9.9(0.0)</b>  | Introduced on the C9010.                                                    |
| <b>9.2(1.0)</b>  | Introduced on the Z9500.                                                    |
| <b>8.3.19.0</b>  | Introduced on the S4820T.                                                   |
| <b>8.3.11.1</b>  | Introduced on the Z9000.                                                    |
| <b>8.3.7.0</b>   | Introduced on the S4810.                                                    |
| <b>8.2.1.0</b>   | Added the <code>kbps</code> option on the C-Series, E-Series, and S-Series. |
| <b>7.6.1.0</b>   | Introduced on the S-Series.                                                 |
| <b>7.5.1.0</b>   | Introduced on the C-Series.                                                 |
| <b>6.5.1.0</b>   | Expanded the command to permit configuration on port channels.              |
| <b>6.1.1.1</b>   | Introduced on the E-Series.                                                 |

**Usage Information** To honor all incoming 802.1p markings on incoming switched traffic on the interface, enter this command. By default, this facility is not enabled (that is, the 802.1p markings on incoming traffic are not honored).

You can apply this command on both physical interfaces and port channels. When you set the `service-class dynamic` for a port channel, the physical interfaces assigned to the port channel are automatically configured; you cannot assign the `service-class dynamic` command to individual interfaces in a port channel.

- All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command on an interface or globally.
- Layer 2 or Layer 3 service policies supersede dot1p service classes.

Use this command in Configuration Terminal Batch mode to honor the incoming 802.1p markings in a dual-homing setup.

## service-class wred backplane

After you create a WRED profile with ECN functionality, specify per-queue granularity for backplane ports and include the WRED profile in a service class. Using this command, you can enable or disable queue-specific settings and specify minimum and maximum buffer thresholds in the WRED profile applied to each packet color-code. Also, you can specify the maximum drop rate percentage for yellow and green profiles. The per-queue profile configured is applied to all the backplane ports.

### C9000 Series

**Syntax**

```
[no] service-class wred {green | weight | yellow} {[queue0 number/string] || [queue1 number/string] || [queue2 number/string] || [queue3 number/string] || [queue4 number/string] || [queue5 number/string] || [queue6 number/string] || [queue7 number/string]} backplane
```

|                   |                           |                                                                                                                                                                                                                                                                        |
|-------------------|---------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>service-class</b>      | Define the mapping between the service class and policy-based QoS or routing.                                                                                                                                                                                          |
|                   | <b>wred</b>               | Specify WRED curve parameters for a queue                                                                                                                                                                                                                              |
|                   | <b>green</b>              | Specify green (low) drop precedence to a queue.                                                                                                                                                                                                                        |
|                   | <b>weight</b>             | Specify a weight factor to a queue.                                                                                                                                                                                                                                    |
|                   | <b>yellow</b>             | Specify yellow (medium) drop precedence to a queue.                                                                                                                                                                                                                    |
|                   | <b>queue 0 to queue 7</b> | Specify the queue number to which the WRED parameters apply.                                                                                                                                                                                                           |
|                   | <b>number</b>             | Enter a weight for the queue as a number in the range of 1 to 15. This parameter applies only if you specify the green or yellow drop precedence.                                                                                                                      |
|                   | <b>string</b>             | Enter the WRED profile name. It is a string of up to 32 characters. Or use one of the five pre-defined WRED profile names. Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_. This parameter applies only if you specify a weight factor. |
|                   | <b>backplane</b>          | Specify that the WRED weight and profile configured for each queue apply to backplane ports.                                                                                                                                                                           |

**Default** All queues on backplane ports operate in tail-drop (best-effort traffic) mode by default. There is no default WRED green or yellow profile. The default weight is 0.

**Command Modes** QOS-POLICY-OUT mode

|                        |                 |                                   |
|------------------------|-----------------|-----------------------------------|
| <b>Command History</b> | <b>Version</b>  | <b>Description</b>                |
|                        | <b>9.9(0.0)</b> | Introduced on the C9010.          |
|                        | <b>9.2.1.0</b>  | Introduced on the Z9500 switch.   |
|                        | <b>9.3.0.0</b>  | Introduced on the Z9000 platform. |

**Usage Information** You can configure queues 0-7. WRED profile contains a set of characteristics, such as the minimum and maximum WRED thresholds and the maximum drop rate. You can add and remove WRED parameters for one or more queues by using the command in a single line. All of the configured attributes apply to all the backplane ports and are for each queue. To assign drop precedence to green or yellow traffic, use this command. If there is no honoring enabled on the input, all the traffic defaults to green drop precedence.

#### Example

```
Dell(conf-wred)#wred thresh-1
Dell(conf-wred)#threshold min 100 max 200 max-drop-rate 40
Dell(conf-wred)#wred thresh-2
Dell(conf-wred)#threshold min 300 max 400 max-drop-rate 80
Dell(conf)#service-class wred green queue5 thresh-1 queue7 thresh-2
backplane
Dell(conf)#service-class wred yellow queue1 thresh-2 queue3 thresh-1
backplane
Dell(conf)#service-class wred weight queue0 11 queue6 4 queue7 9
backplane
```

## service-pool wred

Configure a global buffer pool that serves as a shared buffer accessed by multiple queues when the minimum guaranteed buffers for a queue are consumed.

The switch supports four global service-pools in the egress direction. Two service pools are used—one for lossy queues and the other for lossless (priority-based flow control (PFC)) queues. You can enable WRED and ECN operation on the global service-pools. You can define WRED profiles and weight on each of the global service-pools for both lossy and lossless (PFC) service-pools.

### C9000 Series

**Syntax** `[no] buffer-pool wred {green | weight | yellow} {[pool0 number/string] || [pool1 number/string]}`

|                   |                    |                                                                                                                                                                                                                                                                        |
|-------------------|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>buffer-pool</b> | Define the mapping between the service class and policy-based QoS or routing.                                                                                                                                                                                          |
|                   | <b>wred</b>        | Specify WRED curve parameters for a queue.                                                                                                                                                                                                                             |
|                   | <b>green</b>       | Specify green (low) drop precedence to a queue.                                                                                                                                                                                                                        |
|                   | <b>weight</b>      | Specify a weight factor to a queue                                                                                                                                                                                                                                     |
|                   | <b>yellow</b>      | Specify yellow (medium) drop precedence to a queue                                                                                                                                                                                                                     |
|                   | <b>pool0</b>       | Service-pool buffer 1 (default service-pool for PFC traffic)                                                                                                                                                                                                           |
|                   | <b>pool1</b>       | Service-pool buffer 0 (default service-pool for lossy traffic)                                                                                                                                                                                                         |
|                   | <b>number</b>      | Enter a weight for the queue as a number in the range of 1 to 15. This parameter applies only if you specify the green or yellow drop precedence.                                                                                                                      |
|                   | <b>string</b>      | Enter the WRED profile name. It is a string of up to 32 characters. Or use one of the five pre-defined WRED profile names. Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_. This parameter applies only if you specify a weight factor. |

**Default** All queues on backplane ports operate in tail-drop (best-effort traffic) mode by default. There is no default WRED green or yellow profile. The default weight is 0.

**Command Modes** CONFIGURATION mode

|                        |                 |                                              |
|------------------------|-----------------|----------------------------------------------|
| <b>Command History</b> | <b>Version</b>  | <b>Description</b>                           |
|                        | <b>9.9(0.0)</b> | Introduced on the C9010.                     |
|                        | <b>9.2.1.0</b>  | Introduced on the Z9500 switch.              |
|                        | <b>9.3.0.0</b>  | Introduced on the S6000 and Z9000 platforms. |

**Usage Information** You can configure only service pools 0 and 1 because the Dell Networking OS uses only these two service pools. The service0 pool is used for lossy queues; the service1 pool is used for lossless (PFC) queues on all platforms.

You can configure the weight for the WRED average queue size on service1 pool on which PFC is supported; service0 pool does not support PFC.

A WRED profile contains a set of attributes, such as the minimum and maximum threshold values, and the maximum drop rate for the received packets. You can add or remove WRED parameter configurations for one or more shared service pools using a single command. The `buffer-pool wred` command is similar in usage and working to the `service-class bandwidth-percentage queue-id` command.

#### Example

```
Dell(conf-wred)#wred thresh-1
Dell(conf-wred)#threshold min 100 max 200 max-drop-rate 40

Dell(conf-wred)#wred thresh-2
Dell(conf-wred)#threshold min 300 max 400 max-drop-rate 80
```

```
Dell(config)#service-class wred green pool0 thresh-1 pool1 thresh-2
Dell(config)#service-class wred yellow pool0 thresh-3 pool1 thresh-4
Dell(config)#service-class wred weight pool0 11 pool1 4
```

## service-class wred ecn backplane

Apply ECN marking on backplane port-queues in a service class.

### C9000 Series

| <b>Usage Information</b> | <p>You can add or remove ECN marking configuration on a list of queues on all backplane ports. All of the configured attributes apply to all the backplane ports and are for each queue. You can configure all the data queues. You can configure queues 0 to 7. By default, ECN marking is disabled on all queues. When you enable WRED with ECN and the number of packets in the queue is below the minimum threshold, packets are transmitted per the usual WRED treatment. When you enable WRED with ECN and the number of packets in the queue is between the minimum threshold and the maximum threshold, one of the following three scenarios can occur:</p> <ul style="list-style-type: none"> <li>• If the transmission endpoints are ECN-capable and traffic is congested, and the WRED algorithm determines that the packet should be dropped based on the drop probability, the packet is transmitted and marked so the routers know the system is congested and can slow transmission rates.</li> <li>• If neither endpoint is ECN-capable, the packet may be dropped based on the WRED drop probability. This behavior is the identical treatment that a packet receives when WRED is enabled without ECN configured on the router.</li> <li>• If the network is experiencing congestion, the packet is transmitted. No further marking is required. When you enable WRED with ECN and the number of packets in the queue is above the maximum threshold, packets are dropped based on the drop probability. This behavior is the identical treatment a packet receives when WRED is enabled without ECN configured on the router.</li> </ul> |                                                                                                                                                                                                                                                                                                                |

#### Example

```
Dell(config)#service-class wred ecn 0, 3-5, 7 backplane
```

# show qos dot1p-queue-mapping

Displays the dot1p priority to queue mapping on the switch.

## C9000 Series

| Syntax           | show qos dot1p-queue-mapping                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |         |             |          |                          |          |                          |          |                           |          |                          |          |                                              |

# Per-Port QoS Commands

Per-port QoS (port-based QoS) allows you to define the QoS configuration on a per-physical-port basis.

## dot1p-priority

Assign a value to the IEEE 802.1p bits on the traffic this interface receives.

## C9000 Series

| <b>Usage Information</b> | <p>The <code>dot1p-priority</code> command changes the priority of incoming traffic on the interface. The system places traffic marked with a priority in the correct queue and processes that traffic according to its queue.</p> <p>When you set the priority for a port channel, the physical interfaces assigned to the port channel are configured with the same value. You cannot assign the <code>dot1p-priority</code> command to individual interfaces in a port channel.</p>                                                                                                                                                                                                                                                                                                                                          |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |                |                             |

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>rate police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]] [vlan vlan-id]</code>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Parameters</b>      | <p><b>kbps</b> Enter the keyword <code>kbps</code> to specify the rate limit in Kilobits per second (Kbps).</p> <p><b>committed-rate</b> Enter the bandwidth in Mbps. The range is from 0 to 40000.</p> <p><b>burst-KB</b> (OPTIONAL) Enter the burst size in KB. The range is from 16 to 200000. The default is <b>50</b>.</p> <p><b>peak peak-rate</b> (OPTIONAL) Enter the keyword <code>peak</code> then a number to specify the peak rate in Mbps. The range is from 0 to 40000.</p> <p><b>vlan vlan-id</b> (OPTIONAL) Enter the keyword <code>vlan</code> then a VLAN ID to police traffic to those specific VLANs. The range is from 1 to 4094.</p> |
| <b>Defaults</b>        | Granularity for <code>committed-rate</code> and <code>peak-rate</code> is Mbps unless you use the <code>kbps</code> option.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Command Modes</b>   | INTERFACE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Command History</b> | <p>This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i>.</p> <p>The following is a list of the Dell Networking OS version history for this command.</p>                                                                                                                                                                                                                                                                                                                                                                                            |

| Version         | Description                                                                 |
|-----------------|-----------------------------------------------------------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.                                                    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.                                                    |
| <b>8.3.19.0</b> | Introduced on the S4820T.                                                   |
| <b>8.3.11.1</b> | Introduced on the Z9000.                                                    |
| <b>8.3.7.0</b>  | Introduced on the S4810.                                                    |
| <b>8.2.1.0</b>  | Added the <code>kbps</code> option on the C-Series, E-Series, and S-Series. |
| <b>7.6.1.0</b>  | Introduced on the S-Series.                                                 |
| <b>7.5.1.0</b>  | Introduced on the C-Series.                                                 |
| <b>6.1.1.1</b>  | Introduced on the E-Series.                                                 |

#### Usage Information

**NOTE:** Per Port rate limit and rate police is supported for Layer 2 tagged and untagged switched traffic and for Layer 3 traffic. Per VLAN rate limit and rate police is supported on only tagged ports with Layer 2 switched traffic.

On one interface, you can configure the `rate police` command for a VLAN or you can configure the `rate police` command for an interface. For each physical interface, you can configure three `rate police` commands specifying different VLANs.

#### Related Commands

[rate-police](#) — specifies traffic policing on the selected interface.

## rate shape

Shape the traffic output on the selected interface.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description               |
|-----------------|---------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.  |
| <b>9.2(1.0)</b> | Introduced on the Z9500.  |
| <b>8.3.19.0</b> | Introduced on the S4820T. |
| <b>8.3.11.1</b> | Introduced on the Z9000.  |
| <b>8.3.7.0</b>  | Introduced on the S4810.  |

| Version | Description                                                                 |
|---------|-----------------------------------------------------------------------------|
| 8.2.1.0 | Added the <code>kbps</code> option on the C-Series, E-Series, and S-Series. |
| 7.6.1.0 | Introduced on the S-Series and C-Series.                                    |
| 6.1.1.1 | Introduced on the E-Series.                                                 |

**Usage Information** If traffic is shaped between 64 and 1000 Kbs, for some values, the shaped rate is much less than the value configured.

**Related Commands** [rate-shape](#) — shapes traffic output as part of the designated policy.

## Policy-Based QoS Commands

Policy-based traffic classification is handled with class maps. These maps classify unicast traffic into one of four classes. The system allows you to match multiple class maps and specify multiple match criteria. Policy-based QoS is not supported on logical interfaces, such as port-channels, VLANs, or loopbacks.

### bandwidth-percentage

Assign a percentage of weight to the class/queue.

#### C9000 Series

|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <code>bandwidth-percentage percentage</code><br>To remove the bandwidth percentage, use the <code>no bandwidth-percentage</code> command.                                                                                                             |                                                                                                             |
| <b>Parameters</b>      | <b><i>percentage</i></b>                                                                                                                                                                                                                              | Enter the percentage assignment of weight to the class/queue. The range is from 1 to 100% (granularity 1%). |
| <b>Defaults</b>        | none                                                                                                                                                                                                                                                  |                                                                                                             |
| <b>Command Modes</b>   | CONFIGURATION (conf-qos-policy-out)                                                                                                                                                                                                                   |                                                                                                             |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .<br>The following is a list of the Dell Networking OS version history for this command. |                                                                                                             |

| Version   | Description                 |
|-----------|-----------------------------|
| 9.9(0.0)  | Introduced on the C9010.    |
| 9.2(1.0)  | Introduced on the Z9500.    |
| 8.3.1.9.0 | Introduced on the S4820T.   |
| 8.3.11.1  | Introduced on the Z9000.    |
| 8.3.7.0   | Introduced on the S4810.    |
| 6.2.1.1   | Introduced on the E-Series. |

**Usage Information** The unit of bandwidth percentage is 1%. If the sum of the bandwidth percentages given to all eight classes exceeds 100%, the bandwidth percentage automatically scales down to 100%.

**Related Commands** [qos-policy-output](#) — creates a QoS output policy.

## buffer-stats-snapshot

Enable the buffer statistics tracking utility and enter the Buffer Statistics Snapshot configuration mode. You must enable this utility to be able to configure the parameters for buffer statistics tracking.

|                          | <b>9.10(0.0)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Introduced the Configuration Terminal Batch mode on C9010. |
|                          | <b>9.9(0.0)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Introduced on the C9010.                                   |
|                          | <b>9.7(0.0)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Introduced on the S6000-ON.                                |
|                          | <b>9.3.0.0</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Introduced on the S6000 platform                           |
| <b>Usage Information</b> | <p>Only the software-based trigger for retrieving and calculating the snapshots of the statistical counters of the buffer space is supported. Collection of snapshots of buffer statistical counters based on hardware threshold settings is not supported, which can be used to specify the type of hardware threshold and the threshold profile templates.</p> <p>Use this command in Configuration Terminal Batch mode to enable the tracking utility in a dual-homing setup.</p> |                                                            |

#### Example

```
Dell (conf) #buffer-stats-snapshot
Dell (conf-buffer-stats-snapshot) #?
disable Disable buffer-stats-snapshot globally
end Exit from configuration mode
exit Exit from buffer-stats-snapshot configuration
mode
no Negate a command or set its defaults
show Show buffer-stats-snapshot configuration
Dell (conf-buffer-stats-snapshot) #no disable
Dell (conf-buffer-stats-snapshot) #show configuration
!
buffer-stats-snapshot
no disable
```

## class-map

Create a class map. Class maps differentiate traffic so that you can apply separate quality-of-service policies to each class.

### C9000 Series

|                   |                                                                                  |                                                                                                                                                                                                                         |
|-------------------|----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>class-map {match-all   match-any} class-map-name [layer2] [cpu-qos]</code> |                                                                                                                                                                                                                         |
| <b>Parameters</b> | <b>match-all</b>                                                                 | Determines how packets are evaluated when multiple match criteria exist. Enter the keywords <code>match-all</code> to determine that the packets must meet all the match criteria in order to be a member of the class. |

|                       |                                                                                                                                                                                                                                     |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>match-any</b>      | Determines how packets are evaluated when multiple match criteria exist. Enter the keywords <code>match-any</code> to determine that the packets must meet at least one of the match criteria in order to be a member of the class. |
| <b>class-map-name</b> | Enter a name of the class for the class map in a character format (32 character maximum).                                                                                                                                           |
| <b>layer2</b>         | Enter the keyword <code>layer2</code> to specify a Layer 2 Class Map. The default is <b>Layer 3</b> .                                                                                                                               |
| <b>cpu-qos</b>        | Enter the keyword <code>cpu-qos</code> to create a class map to filter protocol traffic for rate-limiting control-plane traffic (CoPP).                                                                                             |

| Version          | Description                                                                          |
|------------------|--------------------------------------------------------------------------------------|
| <b>9.10(0.0)</b> | Introduced the Configuration Terminal Batch mode on C9010.                           |
| <b>9.9(0.0)</b>  | Introduced on the C9010.                                                             |
| <b>9.2(1.0)</b>  | Introduced on the Z9500.                                                             |
| <b>8.3.19.0</b>  | Introduced on the S4820T.                                                            |
| <b>8.3.11.1</b>  | Introduced on the Z9000.                                                             |
| <b>8.3.7.0</b>   | Introduced on the S4810.                                                             |
| <b>8.2.1.0</b>   | Class-map names can be 32 characters. Layer2 available on the C-Series and S-Series. |
| <b>7.6.1.0</b>   | Introduced on the S-Series.                                                          |
| <b>7.5.1.0</b>   | Introduced on the C-Series.                                                          |
| <b>7.4.1.0</b>   | E-Series Only: Expanded to add support for Layer 2.                                  |

**Usage Information** Packets arriving at the input interface are checked against the match criteria and configured using this command to determine if the packet belongs to that class. This command accesses CLASS-MAP mode, where the configuration commands include the `match ip` and `match mac` options.

When you create a class map to filter protocol traffic for CoPP, you must enter the keyword `cpu-qos`.

Use this command in Configuration Terminal Batch mode to create the class map in a dual-homing setup.

**Related Commands**

- [ip access-list extended](#) — configures an extended IP ACL.
- [match ip access-group](#) — configures the match criteria based on the access control list (ACL).
- [match ip precedence](#) — identifies the IP precedence values as match criteria.
- [match ip dscp](#) — configures the match criteria based on the DSCP value.
- [match mac access-group](#) — configures a match criterion for a class map based on the contents of the designated MAC ACL.
- [match mac dot1p](#) — configures a match criterion for a class map based on a dot1p value.
- [match mac vlan](#) — configures a match criterion for a class map based on VLAN ID.
- [service-queue](#) — assigns a class map and QoS policy to different queues.
- [show qos class-map](#) — views the current class map information.

# clear qos statistics

Clear Matched Packets through class maps applied to inbound ports

## C9000 Series

| Syntax           | clear qos statistics <i>interface-name</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                   |         |             |          |                          |          |                          |          |                           |          |                          |         |                          |         |                             |         |                             |         |                             |

| Version            | Description               |
|--------------------|---------------------------|
| <b>9.9(0.0)</b>    | Introduced on the C9010.  |
| <b>9.2(1.0)</b>    | Introduced on the Z9500.  |
| <b>8.3.19.0</b>    | Introduced on the S4820T. |
| <b>8.3.11.1</b>    | Introduced on the Z9000.  |
| <b>8.3.7.0</b>     | Introduced on the S4810.  |
| <b>pre-7.7.1.0</b> | Introduced.               |

#### Related Commands

[policy-map-input](#) — creates an input policy map.  
[policy-map-output](#) — creates an output policy map.  
[qos-policy-input](#) — creates an input QoS-policy on the router.  
[qos-policy-output](#) — creates an output QoS-policy on the router.  
[wred-profile](#) — creates a WRED profile.

## match ip access-group

Configure match criteria for a class map, based on the access control list (ACL).

### C9000 Series

#### Syntax

```
match ip access-group access-group-name [set-ip-dscp value]
```

To remove ACL match criteria from a class map, use the `no match ip access-group access-group-name [set-ip-dscp value]` command.

#### Parameters

***access-group-name*** Enter the ACL name whose contents are used as the match criteria in determining if packets belong to the class the class-map specifies.

***set-ip-dscp value*** (OPTIONAL) Enter the keywords `set-ip-dscp` then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

#### Defaults

none

#### Command Modes

CLASS-MAP CONFIGURATION (config-class-map)

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

## match ip dscp

Use a differentiated services code point (DSCP) value as a match criteria.

### C9000 Series

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <b>Syntax</b>          | <pre>match {ip   ipv6   ip-any} dscp dscp-list [set-ip-dscp value   set-color value]</pre> <p>To remove a DSCP value as a match criteria, use the <code>no match {ip   ipv6   ip-any} dscp dscp-list [[multicast] set-ip-dscp value   set-color value]</code> command.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| <b>Parameters</b>      | <p><b>ip</b> Enter the keyword <code>ip</code> to support IPv4 traffic.</p> <p><b>ipv6</b> Enter the keyword <code>ipv6</code> to support IPv6 traffic.</p> <p><b>ip-any</b> Enter the keyword <code>ip-any</code> to support IPv4 and IPv6 traffic.</p> <p><b>dscp-list</b> Enter the IP DSCP values that is to be the match criteria. Separate values by commas — no spaces ( 1,2,3 ) or indicate a list of values separated by a hyphen (1-3). The range is from 0 to 63.</p> <p><b>set-ip-dscp value</b> (OPTIONAL) Enter the keywords <code>set-ip-dscp</code> then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.</p> <p><b>set-color value</b> (Optional) Enter the keyword <code>set-color</code> followed by a color value. Traffic that fulfills the match criteria is marked with the color value that you specify. The default value is yellow.</p> |  |
| <b>Defaults</b>        | none                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |  |
| <b>Command Modes</b>   | CLASS-MAP CONFIGURATION (config-class-map)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |

| Version  | Description                                                                                          |
|----------|------------------------------------------------------------------------------------------------------|
| 9.9(0.0) | Introduced on the C9010.                                                                             |
| 9.5(0.1) | Added the <code>ipv6</code> and <code>ip-any</code> options on the Z9500.                            |
| 9.5(0.0) | Added the <code>ipv6</code> and <code>ip-any</code> options on the Z9000, S6000, S4820T, S4810, MXL. |
| 9.2(1.0) | Introduced on the Z9500.                                                                             |
| 9.0.2.0  | Introduced on the S6000.                                                                             |
| 8.3.19.0 | Introduced on the S4820T.                                                                            |
| 8.3.11.1 | Introduced on the Z9000.                                                                             |

| Version | Description                                                                                       |
|---------|---------------------------------------------------------------------------------------------------|
| 8.3.7.0 | Introduced on the S4810.                                                                          |
| 7.7.1.0 | Added the keyword <code>multicast</code> . Added the DSCP Marking option support on the S-Series. |
| 7.6.1.0 | Introduced on the S-Series.                                                                       |
| 7.5.1.0 | Introduced on the C-Series. Added support for the DSCP Marking option.                            |
| 6.2.1.1 | Introduced on the E-Series.                                                                       |

#### Usage Information

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

The `match ip dscp` and `match ip precedence` commands are mutually exclusive.

Up to 64 IP DSCP values can be matched in one match statement. For example, to indicate IP DSCP values 0 1 2 3 4 5 6 7, enter either the `match ip dscp 0,1,2,3,4,5,6,7` or `match ip dscp 0-7` command.

**NOTE:** Only one of the IP DSCP values must be a successful match criterion, not all of the specified IP DSCP values must match.

#### Related Commands

[class-map](#) — identifies the class map.

## match ip precedence

Use IP precedence values as a match criteria.

### C9000 Series

#### Syntax

```
match {ip | ipv6 | ip-any} precedence ip-precedence-list [set-ip-dscp value
| set-color value]
```

To remove IP precedence as a match criteria, use the `no match {ip | ipv6 | ip-any} precedence ip-precedence-list [[multicast] set-ip-dscp value| set-color value` command.

#### Parameters

|                           |                                                                                                                                                                                                       |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ip</b>                 | Enter the keyword <code>ip</code> to support IPv4 traffic.                                                                                                                                            |
| <b>ipv6</b>               | Enter the keyword <code>ipv6</code> to support IPv6 traffic.                                                                                                                                          |
| <b>ip-any</b>             | Enter the keyword <code>ip-any</code> to support IPv4 and IPv6 traffic.                                                                                                                               |
| <b>ip-precedence-list</b> | Enter the IP precedence value(s) as the match criteria. Separate values by commas — no spaces ( 1,2,3 ) or indicate a list of values separated by a hyphen (1-3). The range is from 0 to 7.           |
| <b>set-ip-dscp value</b>  | (Optional) Enter the keywords <code>set-ip-dscp</code> then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.                                          |
| <b>set-color value</b>    | (Optional) Enter the keyword <code>set-color</code> followed by a color value. Traffic that fulfills the match criteria is marked with the color value that you specify. The default value is Yellow. |

#### Defaults

none

CLASS-MAP CONFIGURATION (config-class-map)

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                                                                                                         |
|-----------------|---------------------------------------------------------------------------------------------------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.                                                                                            |
| <b>9.5(0.1)</b> | Added support for the <code>ipv6</code> and <code>ip-any</code> options on the Z9500.                               |
| <b>9.5(0.0)</b> | Added support for the <code>ipv6</code> and <code>ip-any</code> options on the Z9000, S6000, S4820T, S4810, MXL.    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.                                                                                            |
| <b>9.0.2.0</b>  | Introduced on the S6000.                                                                                            |
| <b>8.3.19.0</b> | Introduced on the S4820T.                                                                                           |
| <b>8.3.19.0</b> | Introduced on the S4820T.                                                                                           |
| <b>8.3.11.1</b> | Introduced on the Z9000.                                                                                            |
| <b>8.3.7.0</b>  | Introduced on the S4810.                                                                                            |
| <b>7.7.1.0</b>  | Added the keyword <code>multicast</code> . Added support for the <code>DSCP marking</code> option for the S-Series. |
| <b>7.6.1.0</b>  | Introduced on the S-Series.                                                                                         |
| <b>7.5.1.0</b>  | Introduced on the C-Series.                                                                                         |
| <b>7.5.1.0</b>  | Added support for the <code>DSCP Marking</code> option.                                                             |
| <b>6.1.1.1</b>  | Introduced on the E-Series.                                                                                         |

#### Usage Information

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

The `match ip precedence` command and the `match ip dscp` command are mutually exclusive.

Up to eight precedence values can be matched in one match statement. For example, to indicate the IP precedence values 0 1 2 3, enter either the `match ip precedence 0-3` or `match ip precedence 0,1,2,3` command.

 **NOTE:** Only one of the IP precedence values must be a successful match criterion, not all of the specified IP precedence values must match.

#### Related Commands

[class-map](#) — identifies the class map.

## match ip vlan

Uses a VLAN as the match criterion for an L3 class map.

### C9000 Series

|                        |                                                                                                                                                                                                                                                                 |                                                                                               |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <pre>match ip vlan <i>vlan-id</i></pre> <p>To remove VLAN as the match criterion, use the <code>no match ip vlan <i>vlan-id</i></code> command.</p>                                                                                                             |                                                                                               |
| <b>Parameters</b>      | <b>vlan <i>vlan-id</i></b>                                                                                                                                                                                                                                      | Enter the keyword <code>vlan</code> and then the ID of the VLAN. The range is from 1 to 4094. |
| <b>Defaults</b>        | none                                                                                                                                                                                                                                                            |                                                                                               |
| <b>Command Modes</b>   | CONF-CLASS-MAP                                                                                                                                                                                                                                                  |                                                                                               |

|------------------|------------------------------------------|
| <b>9.9(0.0)</b>  | Introduced on the C9010.                 |
| <b>9.5(0.1)</b>  | Introduced on the Z9500.                 |
| <b>9.4.(0.0)</b> | Introduced on the S-Series and Z-Series. |

#### Usage Information

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

Use this command to match an IP class-map against a single VLAN ID .

#### Related Commands

[class-map](#) — identifies the class map.

## match mac access-group

Configure a match criterion for a class map, based on the contents of the designated MAC ACL.

### C9000 Series

**Syntax** `match mac access-group {mac-acl-name}`

**Parameters** **mac-acl-name** Enter a MAC ACL name. Its contents is used as the match criteria in the class map.

**Defaults** none

**Command Modes** CLASS-MAP

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                                |
|-----------------|--------------------------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.                   |
| <b>9.2(1.0)</b> | Introduced on the Z9500.                   |
| <b>8.3.19.0</b> | Introduced on the S4820T.                  |
| <b>8.3.11.1</b> | Introduced on the Z9000.                   |
| <b>8.3.7.0</b>  | Introduced on the S4810.                   |
| <b>8.2.1.0</b>  | Available on the C-Series and S-Series.    |
| <b>7.5.1.0</b>  | Added support for the DSCP Marking option. |
| <b>7.4.1.0</b>  | Introduced.                                |

#### Usage Information

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

#### Related Commands

[class-map](#) — identifies the class map.

## match mac dot1p

Configure a match criterion for a class map based on a dot1p value.

### C9000 Series

| <b>Syntax</b>            | match mac dot1p {dot1p-list}                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                                         |                |                                                         |                |             |

## match mac vlan

Configure a match criterion for a class map based on VLAN ID.

### C9000 Series

| Syntax          | match mac vlan <i>number</i>                                                                                                                                                                                                                                                                                                                                                                   |                                                 |         |             |                 |                          |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|---------|-------------|-----------------|--------------------------|
| Parameters      | <i><b>number</b></i>                                                                                                                                                                                                                                                                                                                                                                           | Enter the VLAN ID. The range is from 1 to 4094. |         |             |                 |                          |
| Defaults        | none                                                                                                                                                                                                                                                                                                                                                                                           |                                                 |         |             |                 |                          |

| <b>9.9(0.0)</b> | Introduced on the C9010.                                                                                                                                                                                                                                                                                                                                                                       |                                                 |         |             |                 |                          |

| Version         | Description               |
|-----------------|---------------------------|
| <b>9.2(1.0)</b> | Introduced on the Z9500.  |
| <b>8.3.19.0</b> | Introduced on the S4820T. |
| <b>8.3.11.1</b> | Introduced on the Z9000.  |
| <b>8.3.7.0</b>  | Introduced on the S4810.  |
| <b>8.2.1.0</b>  | Introduced.               |

#### Usage Information

To access this command, enter the `class-map` command. You can match against only one VLAN ID.

#### Related Commands

[class-map](#) — identifies the class map.

## policy-aggregate

Allow an aggregate method of configuring per-port QoS via policy maps. An aggregate QoS policy is part of the policy map (input/output) applied on an interface.

### C9000 Series

#### Syntax

`policy-aggregate qos-policy-name`

To remove a policy aggregate configuration, use the `no policy-aggregate qos-policy-name` command.

#### Parameters

***qos-policy-name*** Enter the name of the policy map in character format (32 characters maximum).

#### Defaults

none

#### Command Modes

CONFIGURATION (policy-map-input and policy-map-output)

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                                          |
|-----------------|------------------------------------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.                             |
| <b>9.2(1.0)</b> | Introduced on the Z9500.                             |
| <b>8.3.19.0</b> | Introduced on the S4820T.                            |
| <b>8.3.11.1</b> | Introduced on the Z9000.                             |
| <b>8.3.7.0</b>  | Introduced on the S4810.                             |
| <b>8.2.1.0</b>  | Policy name character limit increased from 16 to 32. |
| <b>7.6.1.0</b>  | Introduced on the S-Series.                          |
| <b>7.5.1.0</b>  | Introduced on the C-Series.                          |
| <b>6.1.1.1</b>  | Introduced on the E-Series.                          |

#### Usage Information

An aggregate output QoS policy applies to all outbound port traffic. An aggregate output QoS policy can coexist with per-queue output QoS policies.

#### Related Commands

[policy-map-input](#) — creates an input policy map.

[policy-map-output](#) — creates an output policy map.

# policy-map-input

Create an input policy map.

## C9000 Series

| <b>Syntax</b>                 | <code>policy-map-input <i>policy-map-name</i> [layer2] [cpu-qos]</code><br>To remove an input policy map, use the <code>no policy-map-input <i>policy-map-name</i> [layer2] [cpu-qos]</code> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                               |                                                                               |                  |                                                                                                                  |                 |                                                                                                                                    |                 |                          |                 |                           |                 |                          |                |                          |                |                                                      |                |                             |                |                             |                |                                      |                |                             |

| Usage Information | To specify the name of the input QoS policy, use this command. After the input policy is specified, rate-police is defined. This command enables Qos-Policy-Input Configuration mode — ( <code>conf-qos-policy-in</code> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                            |             |                  |                                                            |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                                                      |                |                                          |                |                             |                |                             |
|                   | When changing a Service-Queue configuration in a QoS policy map, all QoS rules are deleted and re-added automatically to ensure that the order of the rules is maintained. As a result, the Matched Packets value shown in the <code>show qos statistics</code> command is reset.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                            |             |                  |                                                            |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                                                      |                |                                          |                |                             |                |                             |
|                   | If you create create a QoS input policy to be used for CoPP, you must enter the keyword <code>cpu-qos</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                            |             |                  |                                                            |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                                                      |                |                                          |                |                             |                |                             |
|                   | Use this command in Configuration Terminal Batch mode to create the QoS input policy in a dual-homing setup.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                            |             |                  |                                                            |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                                                      |                |                                          |                |                             |                |                             |

## qos-policy-output

Create a QoS output policy.

### C9000 Series

|                   |                                                                                                                                                                 |
|-------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <pre>qos-policy-output qos-policy-name</pre> <p>To remove an existing output QoS policy, use the <code>no qos-policy-output qos-policy-name</code> command.</p> |
| <b>Parameters</b> | <b><i>qos-policy-name</i></b> Enter your output QoS policy name in character format (32 characters maximum).                                                    |

| <b>Defaults</b>          | none                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |         |             |                  |                                                            |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                                                      |                |                                          |                |                             |

|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>rate-police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB] ]</code>                                                                                                                                   |                                                                                                                                                                                                                                 |
| <b>Parameters</b> | <b>kbps</b>                                                                                                                                                                                                                     | Enter the keyword <code>kbps</code> to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps). |
|                   | <b>committed-rate</b>                                                                                                                                                                                                           | Enter the bandwidth in Mbps. The range is from 0 to 40000.                                                                                                                                                                      |
|                   | <b>burst-KB</b>                                                                                                                                                                                                                 | (OPTIONAL) Enter the burst size in KB. The range is from 16 to 200000. The default is <b>100</b> .                                                                                                                              |
|                   | <b>peak peak-rate</b>                                                                                                                                                                                                           | (OPTIONAL) Enter the keyword <code>peak</code> then a number to specify the peak rate in Mbps. The range is from 0 to 40000. The default is the same as designated for <code>committed-rate</code> .                            |
| <b>Defaults</b>   | Burst size is 100KB. <code>peak-rate</code> is by default the same as <code>committed-rate</code> . Granularity for <code>committed-rate</code> and <code>peak-rate</code> is Mbps unless you use the <code>kbps</code> option. |                                                                                                                                                                                                                                 |

**Command Modes** QOS-POLICY-IN

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                                                                 |
|-----------------|-----------------------------------------------------------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.                                                    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.                                                    |
| <b>8.3.19.0</b> | Introduced on the S4820T.                                                   |
| <b>8.3.11.1</b> | Introduced on the Z9000.                                                    |
| <b>8.3.7.0</b>  | Introduced on the S4810.                                                    |
| <b>8.2.1.0</b>  | Added the <code>kbps</code> option on the C-Series, E-Series, and S-Series. |
| <b>7.6.1.0</b>  | Introduced on the S-Series.                                                 |
| <b>7.5.1.0</b>  | Introduced on the C-Series.                                                 |
| <b>6.1.1.1</b>  | Introduced on the E-Series.                                                 |

**Usage Information** The default burst size is 100Kb. If a different value is required, you must configure the burst size to the required value.

**Related Commands** [rate shape](#) — shapes traffic output as part of the designated policy.  
[qos-policy-input](#) — creates a QoS output policy.

## rate-shape

Shape traffic output as part of an output QoS policy.

## C9000 Series

**Syntax** `rate-shape {kbps | pps} peak-rate {burst-kbps | burst-packets} [committed {kbps | pps} committed-rate {burst-kbps | burst-packets}]`

|                   |                      |                                                                                                                                                                                                        |
|-------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>kbps</b>          | Enter the keyword <code>kbps</code> to specify the rate limit in kilobits per second (Kbps) in multiples of 64. The default granularity is Megabits per second (Mbps).The range is from 0 to 40000000. |
|                   | <b>pps</b>           | Enter the keyword <code>pps</code> to specify the rate limit in packets per second (pps).The range is from 1-268000000.                                                                                |
|                   | <b>committed</b>     | Enter the keyword to specify the committed rate.                                                                                                                                                       |
|                   | <b>burst-kbps</b>    | [Optional] Enter the peak rate or committed rate size in kilobits per second. The range is from 0-10000 . The default is 50.                                                                           |
|                   | <b>burst-packets</b> | [Optional] Enter the peak rate or committed rate size in packets per second. The range is from 1-1073000. The default is 200.                                                                          |

**Command Modes** QOS-POLICY-OUT

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description              |
|-----------------|--------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010. |

| Version         | Description                                                                 |
|-----------------|-----------------------------------------------------------------------------|
| <b>9.5(1.0)</b> | Added support for packets-per-second and committed rate.                    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.                                                    |
| <b>8.3.19.0</b> | Introduced on the S4820T.                                                   |
| <b>8.3.11.1</b> | Introduced on the Z9000.                                                    |
| <b>8.3.7.0</b>  | Introduced on the S4810.                                                    |
| <b>8.2.1.0</b>  | Added the <code>kbps</code> option on the C-Series, E-Series, and S-Series. |
| <b>7.6.1.0</b>  | Introduced on the S-Series.                                                 |
| <b>7.5.1.0</b>  | Introduced on the C-Series.                                                 |
| <b>6.1.1.1</b>  | Introduced on the E-Series.                                                 |

#### Usage Information

You must configure the peak rate and peak burst size using the same value: kilobits or packets per second. Similarly, you must configure the committed rate and committed burst size with the same measurement.

Peak rate refers to the maximum rate for traffic arriving or exiting an interface under normal traffic conditions. Peak burst size indicates the maximum size of unused peak bandwidth that is aggregated. This aggregated bandwidth enables brief durations of burst traffic that exceeds the peak rate and committed burst.

Committed rate refers to the guaranteed bandwidth for traffic entering or leaving the interface under normal network conditions. When traffic propagates at an average rate that is less than or equal to the committed rate, it is considered to be green-colored or coded. When the transmitted traffic falls below the committed rate, the bandwidth, which is not used by any traffic that is traversing the network, is aggregated to form the committed burst size. Traffic is considered to be green-colored up to the point at which the unused bandwidth does not exceed the committed burst size.

#### Related Commands

[qos-policy-output](#) — creates a QoS output policy.

[rate police](#) — specifies traffic policing on the selected interface.

## service-class buffer shared-threshold-weight

Create a service class and associate the threshold weight of the shared buffer with each of the queues per port in the egress direction. A global buffer pool that is a shared buffer pool accessed by multiple queues when the minimum guaranteed buffers for the queue are consumed can be configured on the switch.

### C9000 Series

#### Syntax

```
[No] Service-class buffer shared-threshold-weight {[queue0 number] ||
[queue1 number] || [queue2 number] || [queue3 number] || [queue4 number] ||
[queue5 number] || [queue6 number] || [queue7 number] }
```

#### Parameters

|                                |                                                                                        |
|--------------------------------|----------------------------------------------------------------------------------------|
| <b>buffer</b>                  | Define the shared buffer settings                                                      |
| <b>shared-threshold-weight</b> | Specify the weight of a queue for the shared buffer space                              |
| <b>queue 0 to queue 7</b>      | Specify the queue number to which the WRED parameters apply                            |
| <b><i>number</i></b>           | Enter a weight for the queue on the shared buffer as a number in the range of 1 to 11. |

#### Default

The default threshold weight on the shared buffer for each queue is 9. Therefore, each queue can consume up to 66.67 percent of available shared buffer by default.

**Command Modes** INTERFACE mode

## Command History

### Version

### Description

- 9.9(0.0)** Introduced on the C9010.
- 9.7(0.0)** Introduced on the S6000-ON.
- 9.3(0.0)** Introduced on the S6000 platform

## Usage Information

You can configure all the data queues. For S6000, you can configure queues 0-7.

The following table describes the mapping between the threshold weight of the shared buffer on the queue and the percentage of available shared buffer that is used by the queue for each of the corresponding threshold weights of the shared buffer:

| shared-threshold-weight on the queue | % of available shared buffer that can be consumed by the queue. |
|--------------------------------------|-----------------------------------------------------------------|
| 0                                    | No dynamic sharing; shared buffer = 0.                          |
| 1                                    | 0.77%                                                           |
| 2                                    | 1.54%                                                           |
| 3                                    | 3.03%                                                           |
| 4                                    | 5.88%                                                           |
| 5                                    | 11.11%                                                          |
| 6                                    | 20%                                                             |
| 7                                    | 33.33%                                                          |
| 8                                    | 50%                                                             |
| 9                                    | 66.67%                                                          |
| 10                                   | 80%                                                             |
| 11                                   | 88.89%                                                          |

## Example

```
Dell(conf-if-te-0/8)#service-class buffer shared-threshold-weight queue5
4 queue7 6
```

## service-policy input

Apply an input policy map to the selected interface.

### C9000 Series

#### Syntax

```
service-policy input policy-map-name [layer2]
```

To remove the input policy map from the interface, use the `no service-policy input policy-map-name [layer2]` command.

#### Parameters

***policy-map-name*** Enter the name for the policy map in character format (32 characters maximum). You can identify an existing policy map or name one that does not yet exist.

|                          | <b>layer2</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | (OPTIONAL) Enter the keyword <code>layer2</code> to specify a Layer 2 Class Map. The default is <b>Layer 3</b> . |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |                |                             |                |                                                     |                |                             |

| <b>Usage Information</b> | <p>You can attach a single policy-map to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.</p> <p> <b>NOTE:</b> The <code>service-policy</code> commands are not allowed on a port channel. The <code>service-policy input policy-map-name</code> command and the <code>service-class dynamic dot1p</code> command are not allowed simultaneously on an interface. However, the <code>service-policy input</code> command (without the <code>policy-map-name</code> option) and the <code>service-class dynamic dot1p</code> command are allowed on an interface.</p>                                                                                                                                                                                                                                       |                                                                                                                  |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |                |                             |                |                                                     |                |                             |

| Version         | Description                              |
|-----------------|------------------------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.                 |
| <b>9.2(1.0)</b> | Introduced on the Z9500.                 |
| <b>8.3.19.0</b> | Introduced on the S4820T.                |
| <b>8.3.11.1</b> | Introduced on the Z9000.                 |
| <b>8.3.7.0</b>  | Introduced on the S4810.                 |
| <b>7.6.1.0</b>  | Introduced on the C-Series and S-Series. |
| <b>6.1.1.1</b>  | Introduced on the E-Series.              |

#### Usage Information

A single policy-map can be attached to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.

#### Related Commands

[policy-map-output](#) — creates an output policy map.

## service-queue

Assign a class map and QoS policy to different queues.

### C9000 Series

#### Syntax

```
service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]
```

To remove the queue assignment, use the `no service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]` command.

#### Parameters

|                                   |                                                                                                                                                                                                                                                                                                                      |
|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>queue-id</b>                   | Enter the value used to identify a queue. The range is from 0 to 7.                                                                                                                                                                                                                                                  |
| <b>class-map class-map-name</b>   | (OPTIONAL) Enter the keyword <code>class-map</code> then the class map name assigned to the queue in character format (32 character maximum).<br> <b>NOTE:</b> This option is available under <code>policy-map-input</code> only. |
| <b>qos-policy qos-policy-name</b> | (OPTIONAL) Enter the keywords <code>qos-policy</code> then the QoS policy name assigned to the queue in text format (32 characters maximum). This specifies the input QoS policy assigned to the queue under <code>policy-map-input</code> and output QoS policy under <code>policy-map-output</code> context.       |

#### Defaults

none

#### Command Modes

CONFIGURATION (conf-policy-map-in and conf-policy-map-out)

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                 |
|-----------------|-----------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.    |
| <b>8.3.19.0</b> | Introduced on the S4820T.   |
| <b>8.3.11.1</b> | Introduced on the Z9000.    |
| <b>8.3.7.0</b>  | Introduced on the S4810.    |
| <b>7.6.1.0</b>  | Introduced on the S-Series. |

| Version | Description                 |
|---------|-----------------------------|
| 7.5.1.0 | Introduced on the C-Series. |
| 6.1.1.1 | Introduced on the E-Series. |

**Usage Information** This command assigns a class map or QoS policy to different queues. There are eight queues per interface on the Z9500.

- Related Commands**
- [class-map](#)— identifies the class map.
  - [service-policy input](#)— applies an input policy map to the selected interface.
  - [service-policy output](#)— applies an output policy map to the selected interface.

## set

Mark outgoing traffic with a differentiated service code point (DSCP) or dot1p value.

## C9000 Series

**Syntax** `set {ip-dscp value | mac-dot1p value}`

**Parameters**

**ip-dscp *value*** (OPTIONAL) Enter the keywords `ip-dscp` then the IP DSCP value. The range is from 0 to 63.

**mac-dot1p *value*** Enter the keywords `mac-dot1p` then the dot1p value. The range is from 0 to 7.

**Defaults** none

**Command Modes** CONFIGURATION (conf-qos-policy-in)

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                                                |
|----------|------------------------------------------------------------|
| 9.9(0.0) | Introduced on the C9010.                                   |
| 9.2(1.0) | Introduced on the Z9500.                                   |
| 8.3.19.0 | Introduced on the S4820T.                                  |
| 8.3.11.1 | Introduced on the Z9000.                                   |
| 8.3.7.0  | Introduced on the S4810.                                   |
| 8.2.1.0  | Added <code>mac-dot1p</code> on the C-Series and S-Series. |
| 7.6.1.0  | Introduced on the S-Series.                                |
| 7.5.1.0  | Introduced on the C-Series.                                |
| 7.4.1.0  | E-Series Only: Added support for <code>mac-dot1p</code> .  |
| 6.1.1.1  | Introduced on the E-Series.                                |

**Usage Information** After the IP DSCP bit is set, other QoS services can then operate on the bit settings.

# show qos class-map

View the current class map information.

- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

**detail *interface*** To view a policy map interface in detail, enter the keyword `detail` and optionally one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port extender (PE) Gigabit Ethernet interface, enter the keyword `peGigE` then the *pe-id / stack-unit / port-id* information.
- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

**Defaults** none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version           | Description                                                       |
|-------------------|-------------------------------------------------------------------|
| <b>9.13.0.1P1</b> | Introduced <code>peTenGigE</code> interface support on the C9010. |
| <b>9.9(0.0)</b>   | Introduced on the C9010.                                          |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                          |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                         |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                          |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                          |
| <b>7.6.1.0</b>    | Introduced on the S-Series.                                       |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                       |
| <b>7.4.1.0</b>    | E-Series only: Added <code>Trust IPv6 diffserv</code> .           |
| <b>6.2.1.1</b>    | Introduced on the E-Series.                                       |

#### Example (IPv4)

```
Dell#show qos policy-map detail tengigabitethernet 1/1

Interface TenGigabitEthernet 1/1

Policy-map-input policy
Trust diffserv
Queue# Class-map-name Qos-policy-name
0 - q0
1 CM1q1
2 CM2q2
3 CM3q3
4 CM4q4
5 CM5q5
6 CM6q6
7 CM7q7
Dell#
```

### Example (IPv6)

```
Dell# show qos policy-map detail tengigabitethernet 0/10

Interface TengigabitEthernet 0/10

Policy-map-input pmap1
Queue# Class-map-name Qos-policy-name
0 c0 q0
1 c1 q1
2 c2 q2
3 c3 q3
4 c4 q4
5 c5 -
6 c6 q6
7 c7 q7
Dell#
```

### Example (Summary IPv4)

```
Dell#sho qos policy-map summary

Interface policy-map-input policy-map-output
Te 2/1 PM1 -
Te 2/2 PM2 PMOut
Dell#
```

## show qos policy-map-input

View the input QoS policy map details.

### C9000 Series

#### Syntax

```
show qos policy-map-input [policy-map-name] [class class-map-name] [qos-
policy-input qos-policy-name]
```

#### Parameters

- policy-map-name*** Enter the policy map name.
- class class-map-name*** Enter the keyword *class* then the class map name.
- qos-policy-input qos-policy-name*** Enter the keyword *qos-policy-input* then the QoS policy name.

#### Defaults

none

#### Command Modes

- EXEC
- EXEC Privilege

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                 |
|-----------------|-----------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.    |
| <b>8.3.19.0</b> | Introduced on the S4820T.   |
| <b>8.3.11.1</b> | Introduced on the Z9000.    |
| <b>8.3.7.0</b>  | Introduced on the S4810.    |
| <b>7.6.1.0</b>  | Introduced on the S-Series. |
| <b>7.5.1.0</b>  | Introduced on the C-Series. |

- 7.4.1.0

E-Series Only: Added Trust IPv6 diffserv.
- pre-6.1.1.1

Introduced on the E-Series.

Example

```
Dell#show qos policy-map-input

Policy-map-input PolicyMapInput
Aggregate Qos-policy-name AggPolicyIn
Queue# Class-map-name Qos-policy-name
0 ClassMap1 qosPolicyInput
Dell#
```

Example

```
Dell# show qos policy-map-input

Policy-map-input pmap1
Trust ipv6-diffserv
Queue# Class-map-name Qos-policy-name
0 c0 q0
1 c1 q1
2 c2 q2
3 c3 q3
4 c4 q4
5 c5 -
6 c6 q6
7 c7 q7
Dell#
```

show qos policy-map-output

View the output QoS policy map details.

C9000 Series

Syntax

show qos policy-map-output [policy-map-name] [qos-policy-output qos-policy-name]

Parameters

**policy-map-name**

Enter the policy map name.

**qos-policy-output qos-policy-name**

Enter the keyword qos-policy-output then the QoS policy name.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description               |
|----------|---------------------------|
| 9.9(0.0) | Introduced on the C9010.  |
| 9.2(1.0) | Introduced on the Z9500.  |
| 8.3.19.0 | Introduced on the S4820T. |
| 8.3.11.1 | Introduced on the Z9000.  |
| 8.3.7.0  | Introduced on the S4810.  |

| Version        | Description                              |
|----------------|------------------------------------------|
| <b>7.6.1.0</b> | Introduced on the C-Series and S-Series. |
| <b>6.1.1.1</b> | Introduced on the E-Series.              |

#### Example

```
Dell#show qos policy-map-output

Policy-map-output PolicyMapOutput
Aggregate Qos-policy-name AggPolicyOut
Queue# Qos-policy-name
0 qosPolicyOutput
Dell#
```

## show qos qos-policy-input

View the input QoS policy details.

### C9000 Series

|                        |                                                                                                                                                                                                                                                                 |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | show qos qos-policy-input [ <i>qos-policy-name</i> ]                                                                                                                                                                                                            |
| <b>Parameters</b>      | <b><i>qos-policy-name</i></b> Enter the QoS policy name.                                                                                                                                                                                                        |
| <b>Defaults</b>        | none                                                                                                                                                                                                                                                            |
| <b>Command Modes</b>   | <ul style="list-style-type: none"> <li>EXEC</li> <li>EXEC Privilege</li> </ul>                                                                                                                                                                                  |

| Version         | Description                 |
|-----------------|-----------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.    |
| <b>8.3.19.0</b> | Introduced on the S4820T.   |
| <b>8.3.11.1</b> | Introduced on the Z9000.    |
| <b>8.3.7.0</b>  | Introduced on the S4810.    |
| <b>7.6.1.0</b>  | Introduced on the S-Series. |
| <b>7.5.1.0</b>  | Introduced on the C-Series. |
| <b>6.1.1.1</b>  | Introduced on the E-Series. |

#### Example

```
Dell#show qos qos-policy-input

Qos-policy-input QosInput
Rate-police 100 50 peak 100 50
Dscp 32
Dell#
```

# show qos qos-policy-output

View the output QoS policy details.

## C9000 Series

| Syntax          | show qos qos-policy-output [ <i>qos-policy-name</i> ]                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |         |             |          |                          |          |                          |          |                           |          |                          |         |                          |         |                                          |         |                             |

- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

### ***interface***

Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port extender (PE) Gigabit Ethernet interface, enter the keyword `peGigE` then the *pe-id / stack-unit / port-id* information.
- For a port extender 10-Gigabit Ethernet interface, enter the keyword `peTenGigE` then the *pe-id / stack-unit / port-id* information. The *pe-id* range is from 0 to 255; the stack-unit *unit-number* range is from 0 to 7; and the *port-id* range is 25 to 28 or 49 to 52 depending on the PE.

**Defaults** none

**Command Modes** EXEC

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version           | Description                                                       |
|-------------------|-------------------------------------------------------------------|
| <b>9.13.0.1P1</b> | Introduced <code>peTenGigE</code> interface support on the C9010. |
| <b>9.9(0.0)</b>   | Introduced on the C9010.                                          |
| <b>9.2(1.0)</b>   | Introduced on the Z9500.                                          |
| <b>8.3.19.0</b>   | Introduced on the S4820T.                                         |
| <b>8.3.11.1</b>   | Introduced on the Z9000.                                          |
| <b>8.3.7.0</b>    | Introduced on the S4810.                                          |
| <b>7.7.1.1</b>    | Introduced on the S-Series.                                       |
| <b>7.5.1.0</b>    | Introduced on the C-Series.                                       |
| <b>6.1.1.1</b>    | Introduced on the E-Series.                                       |

**Usage Information** In a dual homing setup, you can use this command only from the primary VLT peer.

### **Example**

```
DELL#show qos statistics peGigE 0/1/1
Interface peGigE 0/1/1
Queue# Matched Pkts
 0 0
 1 0
 2 0
 3 0
 4 0
 5 0
 6 0
 7 0

DELL#show qos statistics wred-profile peGigE 0/1/1
Interface peGigE 0/1/1
Drop-statistic Dropped Pkts
Green 0
Yellow 0
Out of Profile 0
```

# show qos wred-profile

View the WRED profile details.

| Command History | This guide is platform-specific. For command information about other platforms, see the relevant <i>Dell Networking OS Command Line Reference Guide</i> . |                                                          |  |

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 6.1.1.1  | Introduced on the E-Series. |

Example

```
Dell#show qos wred-profile

Wred-profile-name min-threshold max-threshold max-drop-rate
wred_drop 0 0 100
wred_teng_y 594 5941 100
wred_teng_g 594 5941 50
wred_fortyg_y 594 5941 50
wred_fortyg_g 594 5941 25
wred_oneg_y_pe 154 1538 100
wred_oneg_g_pe 154 1538 50
wred_teng_y_pe 154 1538 50
wred_teng_g_pe 154 1538 25
Dell#
```

## threshold

Specify the minimum and maximum threshold values for the configured WRED profiles.

## C9000 Series

|            |                                                                                                   |                                                                                                               |  |
|------------|---------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------|--|
| Syntax     | threshold min <i>number</i> max <i>number</i>                                                     |                                                                                                               |  |
|            | To remove the threshold values, use the no threshold min <i>number</i> max <i>number</i> command. |                                                                                                               |  |
| Parameters | <b>min <i>number</i></b>                                                                          | Enter the keyword min then the minimum threshold number for the WRED profile. The range is from 0 to 12000KB. |  |

**max number** Enter the keyword `max` then the maximum threshold number for the WRED profile. The range is from 0 to 12000KB.

**Defaults** none

**Command Modes** CONFIGURATION (config-wred)

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.8.0  | Introduced on the S4810.    |
| 6.1.1.1  | Introduced on the E-Series. |

**Usage Information** To configure the minimum and maximum threshold values for user-defined profiles, use this command. Additionally, to modify the minimum and maximum threshold values for the pre-defined WRED profiles, use this command. If you delete the threshold values of the pre-defined WRED profiles, the profiles revert to their original default values.

**Table 9. Threshold Values for the Pre-defined WRED Profiles**

| Pre-Defined WRED Profile Name | Minimum Threshold | Maximum Threshold |
|-------------------------------|-------------------|-------------------|
| wred_drop                     | 0                 | 0                 |
| wred_ge_y                     | 1024              | 2048              |
| wred_ge_g                     | 2048              | 4096              |
| wred_teng_y                   | 4096              | 8192              |
| wred_teng_g                   | 8192              | 16384             |

**Related Commands** [wred-profile](#) — creates a WRED profile.

## trust

Specify dynamic classification (DSCP) or dot1p to trust.

## C9000 Series

**Syntax** `trust {diffserv [fallback]| dot1p [fallback]}`

**Parameters**

|                 |                                                                                                                                                                            |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>diffserv</b> | Enter the keyword <code>diffserv</code> to specify trust of DSCP markings.                                                                                                 |
| <b>dot1p</b>    | Enter the keyword <code>dot1p</code> to specify trust dot1p configuration.                                                                                                 |
| <b>fallback</b> | Enter the keyword <code>fallback</code> to classify packets according to their DSCP value as a secondary option in case no match occurs against the configured class maps. |

**Defaults** none

**Command Modes** CONFIGURATION (conf-policy-map-in)

## Command History

This guide is platform-specific. For command information about other platforms, see the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                                            |
|----------|--------------------------------------------------------|
| 9.9(0.0) | Introduced on the C9010.                               |
| 9.2(1.0) | Introduced on the Z9500.                               |
| 8.3.19.0 | Introduced on the S4820T.                              |
| 8.3.11.1 | Introduced on the Z9000.                               |
| 8.3.7.0  | Introduced on the S4810.                               |
| 8.3.1.0  | Added <code>fallback</code> to the E-Series.           |
| 8.2.1.0  | Added <code>dot1p</code> to the C-Series and S-Series. |
| 7.6.1.0  | Introduced on the S-Series.                            |
| 7.5.1.0  | Introduced on the C-Series.                            |
| 7.4.1.0  | Added <code>dot1p</code> and <code>IPv6 DSCP</code> .  |
| 6.1.1.1  | Introduced on the E-Series                             |

## Usage Information

When you configure `trust`, matched bytes/packets counters are not incremented in the `show qos statistics` command.

Dynamic mapping honors packets marked according to the standard definitions of DSCP. The following lists the default mapping.

**Table 10. Default Mapping**

| DSCP/CP hex Range (XXX) | DSCP Definition           | Traditional IP Precedence | C9010 Internal Queue ID | DSCP/CP Decimal |
|-------------------------|---------------------------|---------------------------|-------------------------|-----------------|
| 111XXX                  |                           | Network Control           | 7                       | 48–63           |
| 110XXX                  |                           | Internetwork Control      | 6                       | 48–63           |
| 101XXX                  | EF (Expedited Forwarding) | CRITIC/ECP                | 5                       | 32–47           |
| 100XXX                  | AF4 (Assured Forwarding)  | Flash Override            | 4                       | 32–47           |
| 011XXX                  | AF3                       | Flash                     | 3                       | 16–31           |
| 010XXX                  | AF2                       | Immediate                 | 2                       | 16–31           |
| 001XXX                  | AF1                       | Priority                  | 1                       | 0–15            |
| 000XXX                  | BE (Best Effort)          | Best Effort               | 0                       | 0–15            |

## wred

Configure a WRED profile for yellow or green traffic.

## C9000 Series

### Syntax

```
wred {yellow | green} profile-name
```

To remove the WRED drop precedence, use the `no wred {yellow | green} [profile-name]` command.

| Parameters        | <b>yellow   green</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Enter the keyword <code>yellow</code> for yellow traffic. A DSCP value of xxx100, xxx101, and xxx110 maps to yellow.<br><br>Enter the keyword <code>green</code> for <code>green</code> traffic. A DSCP value of xxx0xx maps to green.                                                        |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                                                       |                |                             |

| Usage Information | To assign drop precedence to green or yellow traffic, use this command. If there is no honoring enabled on the input, all the traffic defaults to green drop precedence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                               |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                                                       |                |                             |

## wred weight

Configure the weight factor used to determine the average-queue size for WRED and ECN operation. The weight value is used in an output QoS policy applied to a front-end or backplane port.

|----------------------|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>        | <code>[no] wred weight <i>number</i></code> |                                                                                                                                                                                                                                                               |
| <b>Parameters</b>    | <b>weight</b>                               | Define the weight factor to be used for computation of the WRED average-queue size to either enable WRED to discard packets or cause ECN to mark packets that exceed the minimum threshold configured. This setting applies to front-end and backplane ports. |
|                      | <b><i>number</i></b>                        | Enter the weight as a number to be used to calculate the average-queue size. The range is 1 to 15. The default is 0.                                                                                                                                          |
| <b>Default</b>       | The default weight is zero.                 |                                                                                                                                                                                                                                                               |
| <b>Command Modes</b> | QOS-POLICY-OUT mode                         |                                                                                                                                                                                                                                                               |

|                          |                                                                                                                                                                                                                                                                                                                                                                                                     |                                             |

|                          | <b>9.3.0.0</b>                                                                                                                                                                                                                                                                                                                                                                                      | Introduced on the S6000 and Z9000 platforms |
| <b>Usage Information</b> | If the average queue size is more than the maximum threshold of WRED, the packet is dropped. If the average queue size is between the minimum and maximum threshold values, the decision to drop or queue the packet is taken based on the packet drop probability. The probability that a packet is dropped depends on the minimum threshold, maximum threshold, and mark probability denominator. |                                             |
| <b>Example</b>           | <pre>Dell(conf-qos-policy-out)# wred weight 5</pre>                                                                                                                                                                                                                                                                                                                                                 |                                             |

## wred ecn

To indicate network congestion without dropping packets, use explicit congestion notification (ECN).

### C9000 Series

| <b>Syntax</b>            | <p>wred ecn</p> <p>To stop marking packets, use the <code>no wred ecn</code> command.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |

| <b>Usage Information</b> | <p>When you enable <code>wred ecn</code>, and the number of packets in the queue is below the minimum threshold, packets are transmitted per the usual WRED treatment.</p> <p>When you enable <code>wred ecn</code>, and the number of packets in the queue is between the minimum threshold and the maximum threshold, one of the following scenarios can occur:</p> <ul style="list-style-type: none"> <li>• If the transmission endpoints are ECN-capable and traffic is congested, and the WRED algorithm determines that the packet should have been dropped based on the drop probability, the packet is transmitted and marked so the routers know the system is congested and can slow transmission rates.</li> <li>• If neither endpoint is ECN-capable, the packet may be dropped based on the WRED drop probability. This behavior is the identical treatment that a packet receives when WRED is enabled without ECN configured on the router.</li> </ul> <p>When you enable <code>wred ecn</code>, and the number of packets in the queue is above the maximum threshold, packets are dropped based on the drop probability. ## DSCP Color Map Commands

The DSCP color map allows you to set the number of specific DSCP values to yellow or red. Traffic marked as yellow delivers traffic to the egress queue which will either transmit the packet if it has available bandwidth or drop the packet due to no ability to send. Traffic marked as red (high drop precedence) is dropped.

### dscp

Sets the number of specific DSCP values for a color map profile to yellow or red.

### C9000 Series

|                        |                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                             |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>          | <pre>dscp {yellow   red} [<i>list-dscp-values</i>]</pre> <p>To remove a color policy map profile, use the <code>no dscp {yellow   red} [<i>dscp-list</i>]</code> command.</p>                                                                                   |                                                                                                                                                                                                                                                                                             |
| <b>Parameters</b>      | <b>Yellow</b>                                                                                                                                                                                                                                                   | Enter the <code>yellow</code> keyword. Traffic marked as yellow delivers traffic to the egress queue which either transmits the packet if it has available bandwidth or drops the packet due to no ability to send.                                                                         |
|                        | <b>red</b>                                                                                                                                                                                                                                                      | Enter the <code>red</code> keyword. Traffic marked as red is dropped.                                                                                                                                                                                                                       |
|                        | <b><i>dscp-list</i></b>                                                                                                                                                                                                                                         | Enter a list of IP DSCP values. The <i>dscp-list</i> parameter specifies the full list of IP DSCP value(s) for the specified color. Each DSCP value in a list is separate values by commas – no spaces (1,2,3) or indicates a list of values separated by a hyphen (1-3). Range is 0 to 63. |
| <b>Defaults</b>        | <b>None</b>                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                             |
| <b>Command Modes</b>   | CONFIG-COLOR-MAP                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                                                             |

| <b>9.5(0.0)</b> | Introduced on the Z9000, S6000, S4820T, S4810, and MXL. |

### Usage Information

If the specified color-map does not exist, the Diffserv Manager (DSM) creates a color map and sets all the DSCP values to green (low drop precedence).

The default setting for each DSCP value (0-63) is green (low drop precedence). This command allows setting the number of specific DSCP values to yellow or red.

### Important Points to Remember

- All DSCP values that are not specified as yellow or red are colored green.
- A DSCP value cannot be in both the yellow and red lists. Setting the red or yellow list with any DSCP value that is already in the other list results in an error and no update to that list is made.
- Each color map can only have one list of DSCP values for each color; any DSCP values previously listed for that color that are not in the new DSCP list are colored green.

### Example

```
Dell(conf-dscp-color-map) # dscp yellow 9,10,11,13,15,16
```

### Related Commands

[qos dscp-color-map](#) — configures the DSCP color map

[qos dscp-color-policy](#) — configures a DSCP color policy

## qos dscp-color-map

Configure the DSCP color map.

## C9000 Series

### Syntax

```
qos dscp-color-map map-name
```

To remove a color map, use the `no qos dscp-color-map map-name` command.

### Parameters

**map-name** Enter the name of the DSCP color map. The map name can have a maximum of 32 characters.

### Defaults

None

### Command Modes

CONFIGURATION

CONFIGURATION TERMINAL BATCH

### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version          | Description                                                |
|------------------|------------------------------------------------------------|
| <b>9.10(0.0)</b> | Introduced the Configuration Terminal Batch mode on C9010. |
| <b>9.9(0.0)</b>  | Introduced on the C9010.                                   |
| <b>9.5(0.1)</b>  | Introduced on the Z9500.                                   |
| <b>9.5(0.0)</b>  | Introduced on the Z9000, S6000, S4820T, S4810, and MXL.    |

### Usage Information

A color map outlines the codepoint mappings to the appropriate color mapping (green, yellow, red) for the traffic. The system uses this information use to handle the traffic on the interface based on the traffic

priority and places it into the appropriate shaping queue. You cannot delete a DSCP color map when it is configured on an interface. If you do, all the DSCP values are set to green (low drop precedence). To delete the DSCP color map that is being used by one or more interfaces, remove the DSCP map from each interface.

Use this command in Configuration Terminal Batch mode to configure the DSCP color map in a dual-homing setup.

**Example**

```
Dell(conf)# qos dscp-color-map mymap
```

**Related Commands**

[qos dscp-color-map](#)— associates the DSCP color map profile with an interface so that all IP packets received on it is given a color based on that color map

[dscp](#)— sets the number of specific DSCP values for color map profile to yellow or red.

## qos dscp-color-policy

Associates the DSCP color map profile with an interface so that all IP packets received on it is given a color based on that color map.

### C9000 Series

**Syntax**

```
dscp-color-policy color-map-profile-name
```

To remove a color policy map profile, use the `no dscp-color-policy color-map-profile-name` command.

**Parameters**

***color-map-profile-name***

Enter the color map profile name. The name can have a maximum of 32 characters.

**Defaults**

None

**Command Modes**

CONFIG-INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                                             |
|-----------------|---------------------------------------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.                                |
| <b>9.5(0.1)</b> | Introduced on the Z9500.                                |
| <b>9.5(0.0)</b> | Introduced on the Z9000, S6000, S4820T, S4810, and MXL. |

**Usage Information**

If the specified color-map does not exist, the Diffserv Manager (DSM) creates a color map and sets all the DSCP values to green (low drop precedence).

**Example**

The following example assigns the color map, **bat-enclave-map**, to interface **te 0/11**.

```
Dell(conf)# int te 0/11
Dell(conf-if-te-0/11)# qos dscp-color-policy bat-enclave-map
```

**Related Commands**

[dscp](#)— sets the number of specific DSCP values for color map profile to yellow or red.

[qos dscp-color-map](#)— configures the DSCP color map.

# show qos dscp-color-map

Display the DSCP color map for one or all interfaces.

| 9.5(0.0) | Introduced on the Z9000, S6000, S4820T, S4810, and MXL. |

### Example

```
Display all DSCP color maps.

Dell# show qos dscp-color-map
Dscp-color-map mapONE
 yellow 4,7
 red 20,30
Dscp-color-map mapTWO
 yellow 16,55

Display a specific DSCP color map.

Dell# show qos dscp-color-map mapTWO
Dscp-color-map mapTWO
 yellow 16,55
```

**Related Commands** [qos dscp-color-map](#)— Configures a DSCP color map.

# Rapid Spanning Tree Protocol (RSTP)

The Dell Networking operating software implementation of rapid spanning tree protocol (RSTP) is based on the IEEE 802.1w standard spanning-tree protocol. The RSTP algorithm configures connectivity throughout a bridged local area network (LAN) that is comprised of LANs interconnected by bridges.

## Topics:

- [bridge-priority](#)
- [debug spanning-tree rstp](#)
- [description](#)
- [disable](#)
- [forward-delay](#)
- [hello-time](#)
- [max-age](#)
- [protocol spanning-tree rstp](#)
- [show config](#)
- [show spanning-tree rstp](#)
- [spanning-tree rstp](#)
- [tc-flush-standard](#)

## bridge-priority

Set the bridge priority for RSTP.

| <b>Parameters</b> | <b>all</b>                              | (OPTIONAL) Enter the keyword <code>all</code> to debug all spanning tree operations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|                   | <b>bpdu <i>interface</i> {in   out}</b> | (OPTIONAL) Enter the keyword <code>bpdu</code> to debug the bridge protocol data units.<br>(OPTIONAL) Enter the keyword <code>interface</code> along with the type slot/port of the interface you want displayed. Type slot/port options are the following: <ul style="list-style-type: none"> <li>For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 4096.</li> <li>For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li> <li>For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li> </ul> Optionally, enter an <code>in</code> or <code>out</code> parameter with the optional interface: <ul style="list-style-type: none"> <li>For Receive, enter <code>in</code>.</li> <li>For Transmit, enter <code>out</code>.</li> </ul> |
|                   | <b>events</b>                           | (OPTIONAL) Enter the keyword <code>events</code> to debug RSTP events.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                                          |
|----------|------------------------------------------------------|
| 9.9(0.0) | Introduced on the C9010.                             |
| 9.2(1.0) | Introduced on the Z9500.                             |
| 8.3.19.0 | Introduced on the S4820T.                            |
| 8.3.11.1 | Introduced on the Z9000.                             |
| 8.5.1.0  | Added support for 4-port 40G line cards on ExaScale. |
| 8.3.7.0  | Introduced on the S4810.                             |
| 7.6.1.0  | Introduced on the S-Series.                          |
| 7.5.1.0  | Introduced on the C-Series.                          |
| 6.2.1.1  | Introduced on the E-Series.                          |

Example

```
Dell#debug spanning-tree rstp bpdu tengigabitethernet 2/0 ?
in Receive (in)
out Transmit (out)
```

# description

Enter a description of the rapid spanning tree.

## C9000 Series

| Syntax           | <code>description {description}</code><br>To remove the description, use the <code>no description {description}</code> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |         |             |          |                          |          |                          |          |                           |          |                          |         |                          |         |             |
|------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-------------|----------|--------------------------|----------|--------------------------|----------|---------------------------|----------|--------------------------|---------|--------------------------|---------|-------------|
| Parameters       | <b>description</b> Enter a description to identify the rapid spanning tree (80 characters maximum).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |         |             |          |                          |          |                          |          |                           |          |                          |         |                          |         |             |
| Defaults         | none                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |         |             |          |                          |          |                          |          |                           |          |                          |         |                          |         |             |
| Command Modes    | SPANNING TREE (The prompt is “config-rstp”.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |         |             |          |                          |          |                          |          |                           |          |                          |         |                          |         |             |

| Usage Information | <p>The hello time is encoded in BPDUs in increments of 1/256ths of a second. The standard minimum hello time in seconds is 1 second, which is encoded as 256. Millisecond hello times are encoded using values less than 256; the millisecond hello time equals (x/1000)*256.</p> <p>When you configure millisecond hellos, the default hello interval of 2 seconds is still used for edge ports; the millisecond hello interval is not used.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                                                                               |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                                                             |                |                             |                |                             |                |                             |

| Version                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |
| <b>9.9(0.0)</b>        | Introduced on the C9010.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |
| <b>9.2(1.0)</b>        | Introduced on the Z9500.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |
| <b>8.3.19.0</b>        | Introduced on the S4820T.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |
| <b>8.3.11.1</b>        | Introduced on the Z9000.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |
| <b>8.3.7.0</b>         | Introduced on the S4810.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |
| <b>7.6.1.0</b>         | Introduced on the S-Series.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |

| Version | Description                 |
|---------|-----------------------------|
| 7.5.1.0 | Introduced on the C-Series. |
| 6.2.1.1 | Introduced on the E-Series. |

#### Usage Information

RSTP is not enabled when you enter RSTP mode. To enable RSTP globally on the system, use the `no disable` command from RSTP mode.

#### Example

```
Dell(conf)#protocol spanning-tree rstp
Dell(config-rstp)##no disable
```

#### Related Commands

[disable](#) — disables RSTP globally on the system.

## show config

View the current configuration for the mode. Only non-default values are displayed.

### C9000 Series

#### Syntax

`show config`

#### Command Modes

CONFIGURATION RSTP (conf-rstp)

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.2.1.1  | Introduced on the E-Series. |

#### Example

```
Dell(conf-rstp)#show config
!
protocol spanning-tree rstp
no disable
bridge-priority 16384
```

# show spanning-tree rstp

Display the RSTP configuration.

## C9000 Series

|               |                                                                             |                                                                                                                                       |
|---------------|-----------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------|
| Syntax        | show spanning-tree rstp [brief] [guard]                                     |                                                                                                                                       |
| Parameters    | brief                                                                       | (OPTIONAL) Enter the keyword <code>brief</code> to view a synopsis of the RSTP configuration information.                             |
|               | guard                                                                       | (OPTIONAL) Enter the keyword <code>guard</code> to display the type of guard enabled on an RSTP interface and the current port state. |
| Command Modes | <ul style="list-style-type: none"><li>EXEC</li><li>EXEC Privilege</li></ul> |                                                                                                                                       |

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                                                                                                  |
|----------|--------------------------------------------------------------------------------------------------------------|
| 9.9(0.0) | Introduced on the C9010.                                                                                     |
| 9.2(1.0) | Introduced on the Z9500.                                                                                     |
| 8.3.19.0 | Introduced on the S4820T.                                                                                    |
| 8.3.11.1 | Introduced on the Z9000.                                                                                     |
| 8.4.2.1  | Added support for the optional <code>guard</code> keyword on the C-Series, S-Series, and E-Series TeraScale. |
| 8.3.7.0  | Introduced on the S4810.                                                                                     |
| 7.6.1.0  | Introduced on the S-Series.                                                                                  |
| 7.5.1.0  | Introduced on the C-Series.                                                                                  |
| 6.4.1.0  | Expanded to display the port error disable state (EDS) caused by loopback BPDU inconsistency.                |
| 6.2.1.1  | Introduced on the E-Series.                                                                                  |

|                   |                                                                                                                |                                                                                                                                         |
|-------------------|----------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| Usage Information | The following describes the <code>show spanning-tree rstp guard</code> command shown in the following example. |                                                                                                                                         |
|                   | Field                                                                                                          | Description                                                                                                                             |
|                   | Interface Name                                                                                                 | RSTP interface.                                                                                                                         |
|                   | Instance                                                                                                       | RSTP instance.                                                                                                                          |
|                   | Sts                                                                                                            | Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), disabled (DIS), or shut down (EDS Shut). |
|                   | Guard Type                                                                                                     | Types of STP guard configured (Root, Loop, or BPDU guard)                                                                               |

| Version  | Description                                                                                                  |
|----------|--------------------------------------------------------------------------------------------------------------|
| 9.9(0.0) | Introduced on the C9010.                                                                                     |
| 9.2(1.0) | Introduced on the Z9500.                                                                                     |
| 8.3.19.0 | Introduced on the S4820T.                                                                                    |
| 8.3.11.1 | Introduced on the Z9000.                                                                                     |
| 8.4.2.1  | Added support for the optional <code>guard</code> keyword on the C-Series, S-Series, and E-Series TeraScale. |
| 8.3.7.0  | Introduced on the S4810.                                                                                     |
| 8.2.1.0  | Introduced the <code>hardware shutdown-on-violation</code> options.                                          |
| 7.6.1.0  | Introduced on the S-Series.                                                                                  |
| 7.5.1.0  | Introduced on the C-Series.                                                                                  |
| 7.4.1.0  | Added the optional bridge port data unit (BPDU) guard.                                                       |
| 6.2.1.1  | Introduced on the E-Series.                                                                                  |

## Usage Information

The `BPDU guard` option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into an Error Disable state if a BPDU appears and a message is logged so that the administrator can take corrective action.

**NOTE:** A port configured as an edge port, on an RSTP switch, immediately transitions to the Forwarding state. Only configure ports connected to end-hosts as edge ports. Consider an edge port similar to a port with a `spanning-tree portfast` enabled.

If you do not enable `shutdown-on-violation`, BPDUs are still sent to the RPM CPU.

You cannot enable STP root guard and loop guard at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message displays: `% Error: RootGuard is configured. Cannot configure LoopGuard.`

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a Blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

On the port extender (PE) ports and on VP-LAGs (LAGs created with PE):

- Spanning-tree with `BPDU guard shutdown-on-violation` is enabled as a default setting.
- No spanning tree command is valid. This command is not visible and issuing this command on VP-LAG ports results in a failure.

## Example

```
Dell(conf)#interface tengigabitethernet 2/0
Dell(conf-if-te-2/0)#spanning-tree rstp edge-port
Dell(conf-if-te-2/0)#show config
!
interface TenGigabitEthernet 2/0
 no ip address
 switchport
 spanning-tree rstp edge-port
 no shutdown
Dell#
```

# tc-flush-standard

Enable the MAC address flushing after receiving every topology change notification.

## C9000 Series

### Syntax

`tc-flush-standard`

To disable, use the `no tc-flush-standard` command.

### Defaults

Disabled

### Command Modes

CONFIGURATION (conf-rstp)

### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description              |
|----------|--------------------------|
| 9.9(0.0) | Introduced on the C9010. |
| 9.2(1.0) | Introduced on the Z9500. |

| Version         | Description                 |
|-----------------|-----------------------------|
| <b>8.3.19.0</b> | Introduced on the S4820T.   |
| <b>8.3.11.1</b> | Introduced on the Z9000.    |
| <b>8.3.7.0</b>  | Introduced on the S4810.    |
| <b>7.6.1.0</b>  | Introduced on the S-Series. |
| <b>7.5.1.0</b>  | Introduced on the C-Series. |
| <b>6.5.1.0</b>  | Introduced on the E-Series. |

**Usage  
Information**

By default, the system implements an optimized flush mechanism for RSTP. This implementation helps in flushing MAC addresses only when necessary (and less often), allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn on this *knob* command to enable flushing MAC addresses after receiving every topology change notification.

## Remote Monitoring (RMON)

Dell Networking operating software remote monitoring (RMON) is based on IEEE standards, providing both 32-bit and 64-bit monitoring and long-term statistics collection.

RMON supports the following RMON groups, as defined in RFC-2819, RFC-3273, RFC-3434, and RFC-4502:

- Ethernet Statistics Table; RFC-2819
- Ethernet Statistics High-Capacity Table; RFC-3273, 64bits
- Ethernet History Control Table; RFC-2819
- Ethernet History Table; RFC-2819
- Ethernet History High-Capacity Table; RFC-3273, 64bits
- Alarm Table; RFC-2819
- High-Capacity Alarm Table (64bits); RFC-3434, 64bits
- Event Table; RFC-2819
- Log Table; RFC-2819
- User History Control Table; RFC-4502
- User History Object Table
- User History Table
- Probe Config

RMON does not support the following statistics:

- etherStatsCollisions
- etherHistoryCollisions
- etherHistoryUtilization

 **NOTE:** Only SNMP GET/GETNEXT access is supported. Configure RMON using the RMON commands. Collected data is lost during a chassis reboot.

## rmon alarm

Set an alarm on any MIB object.

### C9000 Series

#### Syntax

```
rmon alarm number variable interval {delta | absolute} rising-threshold
value event-number falling-threshold value event-number [owner string]
```

To disable the alarm, use the `no rmon alarm number` command.

|                   |                                                             |                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------|-------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b><i>number</i></b>                                        | Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.                                                                                                                                                                                                                                                                                         |
|                   | <b><i>variable</i></b>                                      | Enter the MIB object to monitor. The variable must be in the SNMP OID format; for example, 1.3.6.1.2.1.1.3. The object type must be a 32-bit integer.                                                                                                                                                                                                                                     |
|                   | <b><i>interval</i></b>                                      | Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.                                                                                                                                                                                                                                         |
|                   | <b><i>delta</i></b>                                         | Enter the keyword <code>delta</code> to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.                                                                                                                                                                                                                                                       |
|                   | <b><i>absolute</i></b>                                      | Enter the keyword <code>absolute</code> to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.                                                                                                                                                                                                                                                          |
|                   | <b><i>rising-threshold<br/>value event-<br/>number</i></b>  | Enter the keywords <code>rising-threshold</code> then the value (32 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.          |
|                   | <b><i>falling-threshold<br/>value event-<br/>number</i></b> | Enter the keywords <code>falling-threshold</code> then the value (32 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero. |
|                   | <b><i>owner string</i></b>                                  | (OPTIONAL) Enter the keyword <code>owner</code> then the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.                                                                                                                                                                                                                   |

**Defaults** **owner**

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| <b>Version</b>  | <b>Description</b>          |
|-----------------|-----------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.    |
| <b>8.3.19.0</b> | Introduced on the S4820T.   |
| <b>8.3.11.1</b> | Introduced on the Z9000.    |
| <b>8.3.7.0</b>  | Introduced on the S4810.    |
| <b>7.6.1.0</b>  | Introduced on the S-Series. |
| <b>7.5.1.0</b>  | Introduced on the C-Series. |
| <b>6.1.1.0</b>  | Introduced on the E-Series. |

# rmon collection history

Enable the RMON MIB history group of statistics collection on an interface.

## C9000 Series

|                 |                                                                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                                  |  |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| Syntax          | <pre>rmon collection history {controlEntry integer} [owner name] [buckets number] [interval seconds]</pre> <p>To remove a specified RMON history group of statistics collection, use the <code>no rmon collection history {controlEntry integer}</code> command.</p> |                                                                                                                                                                                                                                                                  |  |
| Parameters      | <b>controlEntry integer</b>                                                                                                                                                                                                                                          | Enter the keyword <code>controlEntry</code> to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON group of statistics. The integer value must be a unique index in the RMON history table. |  |
|                 | <b>owner name</b>                                                                                                                                                                                                                                                    | (OPTIONAL) Enter the keyword <code>owner</code> then the owner name to record the owner of the RMON group of statistics.                                                                                                                                         |  |
|                 | <b>buckets number</b>                                                                                                                                                                                                                                                | (OPTIONAL) Enter the keyword <code>buckets</code> then the number of buckets for the RMON collection history group of statistics. The bucket range is from 1 to 1000. The default is <b>50</b> .                                                                 |  |
|                 | <b>interval seconds</b>                                                                                                                                                                                                                                              | (OPTIONAL) Enter the keyword <code>interval</code> then the number of seconds in each polling cycle. The range is from 5 to 3600 seconds. The default is <b>1800 seconds</b> .                                                                                   |  |
| Defaults        | none                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                  |  |
| Command Modes   | CONFIGURATION INTERFACE (config-if)                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                  |  |
| Command History | This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .                                                                                                       |                                                                                                                                                                                                                                                                  |  |

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.1.1.0  | Introduced on the E-Series. |

# rmon collection statistics

Enable RMON MIB statistics collection on an interface.

## C9000 Series

|        |                                                                           |
|--------|---------------------------------------------------------------------------|
| Syntax | <pre>rmon collection statistics {controlEntry integer} [owner name]</pre> |
|--------|---------------------------------------------------------------------------|

To remove RMON MIB statistics collection on an interface, use the `no rmon collection statistics {controlEntry integer}` command.

|                   |                             |                                                                                                                                                                                                                                                          |
|-------------------|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>controlEntry integer</b> | Enter the keyword <code>controlEntry</code> to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON Statistic Table. The integer value must be a unique in the RMON statistic table. |
|                   | <b>owner name</b>           | (OPTIONAL) Enter the keyword <code>owner</code> then the owner name to record the owner of the RMON group of statistics.                                                                                                                                 |

**Defaults** none

**Command Modes** CONFIGURATION INTERFACE (config-if)

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.1.1.0  | Introduced on the E-Series. |

## rmon event

Add an event in the RMON event table.

### C9000 Series

**Syntax** `rmon event number [log] [trap community] [description string] [owner name]`  
To disable RMON on an interface, use the `no rmon event number [log] [trap community] [description string]` command.

|                   |                           |                                                                                                                                                                                                                     |
|-------------------|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>number</b>             | Assign an event number in integer format from 1 to 65535. The number value must be unique in the RMON event table.                                                                                                  |
|                   | <b>log</b>                | (OPTIONAL) Enter the keyword <code>log</code> to generate an RMON log entry. The log entry is triggered and sets the eventType in the RMON MIB to log or log-and-trap. The default is <b>No log</b> .               |
|                   | <b>trap community</b>     | (OPTIONAL) Enter the keyword <code>trap</code> then an SNMP community string to configure the eventType setting in the RMON MIB. This keyword sets either snmp-trap or log-and-trap. The default is <b>public</b> . |
|                   | <b>description string</b> | (OPTIONAL) Enter the keyword <code>description</code> then a string describing the event.                                                                                                                           |
|                   | <b>owner name</b>         | (OPTIONAL) Enter the keyword <code>owner</code> then the name of the owner of this event.                                                                                                                           |

**Defaults** As noted in the *Parameters* section.

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.1.1.0  | Introduced on the E-Series. |

## rmon hc-alarm

Set an alarm on any MIB object.

### C9000 Series

**Syntax** `rmon hc-alarm number variable interval {delta | absolute} rising-threshold value event-number falling-threshold value event-number [owner string]`

To disable the alarm, use the `no rmon hc-alarm number` command.

|                   |                                             |                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>number</b>                               | Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.                                                                                                                                                                                                                                                                                         |
|                   | <b>variable</b>                             | The MIB object to monitor. The variable must be in the SNMP OID format; for example, 1.3.6.1.2.1.1.3 The object type must be a 64-bit integer.                                                                                                                                                                                                                                            |
|                   | <b>interval</b>                             | Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.                                                                                                                                                                                                                                         |
|                   | <b>delta</b>                                | Enter the keyword <code>delta</code> to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.                                                                                                                                                                                                                                                       |
|                   | <b>absolute</b>                             | Enter the keyword <code>absolute</code> to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.                                                                                                                                                                                                                                                          |
|                   | <b>rising-threshold value event-number</b>  | Enter the keywords <code>rising-threshold</code> then the value (64 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.          |
|                   | <b>falling-threshold value event-number</b> | Enter the keywords <code>falling-threshold</code> then the value (64 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero. |
|                   | <b>owner string</b>                         | (OPTIONAL) Enter the keyword <code>owner</code> then the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.                                                                                                                                                                                                                   |

**Defaults** **owner**

**Command Modes** CONFIGURATION

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                 |
|-----------------|-----------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.    |
| <b>8.3.19.0</b> | Introduced on the S4820T.   |
| <b>8.3.11.1</b> | Introduced on the Z9000.    |

| <b>7.6.1.0</b>  | Introduced on the S-Series. |
| <b>7.5.1.0</b>  | Introduced on the C-Series. |
| <b>6.1.1.0</b>  | Introduced on the E-Series. |

#### Example

```
Dell# show rmon
RMON status
 total memory used 218840 bytes.
 ether statistics table: 8 entries, 4608 bytes
 ether history table: 8 entries, 6000 bytes
 alarm table: 390 entries, 102960 bytes
 high-capacity alarm table: 5 entries, 1680 bytes
 event table: 500 entries, 206000 bytes
```

```
log table: 2 entries, 552 bytes
Dell#
```

## show rmon alarms

Display the contents of the RMON alarm table.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                 |
|-----------------|-----------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.    |
| <b>8.3.19.0</b> | Introduced on the S4820T.   |
| <b>8.3.11.1</b> | Introduced on the Z9000.    |
| <b>8.3.7.0</b>  | Introduced on the S4810.    |
| <b>7.6.1.0</b>  | Introduced on the S-Series. |
| <b>7.5.1.0</b>  | Introduced on the C-Series. |
| <b>6.1.1.0</b>  | Introduced on the E-Series. |

#### Example (Index)

```
Dell#show rmon alarm 1
RMON alarm entry 1
 sample Interval: 5
 object: 1.3.6.1.2.1.1.3
 sample type: absolute value.
 value: 255161
 alarm type: rising or falling alarm.
 rising threshold: 1, RMON event index: 1
 falling threshold: 501, RMON event index: 501
 alarm owner: 1
 alarm status: OK
Dell#
```

#### Example (Brief)

```
Dell#show rmon alarms brief
Index SampleType SNMP OID

1 delta 1.3.6.1.2.1.2.2.1.4.1048581
```

# show rmon events

Display the contents of the RMON event table.

## C9000 Series

| Defaults        | none                                                                                                                                                           |                                                                                                      |
| Command Modes   | EXEC                                                                                                                                                           |                                                                                                      |
| Command History | This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . |                                                                                                      |

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.1.1.0  | Introduced on the E-Series. |

### Example (Index)

```
Dell#show rmon event 1
RMON event entry 1
 description: 1
 event type: LOG and SNMP TRAP.
 event community: public
 event last time sent: none
 event owner: 1
 event status: OK
Dell#
```

### Example (Brief)

```
Dell#show rmon events brief
index eventType description

1 LOG and SNMP TRAP "DELTA RISING LOG TRAP"
2 LOG and SNMP TRAP "DELTA FALLING LOG TRAP"
```

# show rmon hc-alarm

Display the contents of RMON High-Capacity alarm table.

## C9000 Series

|                        |                                                                                                                                                                |                                                                                                                    |  |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|--|
| <b>Syntax</b>          | show rmon hc-alarm [ <i>index</i> ] [ <i>brief</i> ]                                                                                                           |                                                                                                                    |  |

| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . |                                                                                                                    |  |

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.1.1.0  | Introduced on the E-Series. |

### Example (Index)

```
Dell#show rmon hc-alarm 1
RMON high-capacity alarm entry 1
 object: 1.3.6.1.2.1.1.3
 sample interval: 5
 sample type: absolute value.
 value: 185638
 alarm type: rising or falling alarm.
 alarm rising threshold value: positive.
 rising threshold: 1001, RMON event index: 1
 alarm falling threshold value: positive.
 falling threshold: 999, RMON event index: 6
 alarm sampling failed 0 times.
 alarm owner: 1
 alarm storage type: non-volatile.
 alarm status: OK
Dell#
```

### Example (Brief)

```
Dell#show rmon hc-alarm brief
index SNMP OID

1 1.3.6.1.2.1.1.3
2 1.3.6.1.2.1.1.3
3 1.3.6.1.2.1.1.3
4 1.3.6.1.2.1.1.3
5 1.3.6.1.2.1.1.3
Dell#
```

# show rmon history

Display the contents of the RMON Ethernet history table.

## C9000 Series

|                        |                                                                                                                                                                |                                                                                                                |  |

| <b>Command Modes</b>   | EXEC                                                                                                                                                           |                                                                                                                |  |
| <b>Command History</b> | This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . |                                                                                                                |  |

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.1.1.0  | Introduced on the E-Series. |

### Example (Index)

```
Dell#show rmon history 6001
RMON history control entry 6001
 interface: ifIndex.100974631 TenGigabitEthernet 2/0
 bucket requested: 1
 bucket granted: 1
 sampling interval: 5 sec
 owner: 1
 status: OK
Dell#
```

### Example (Brief)

```
Dell#show rmon history brief
index ifIndex interface

6001 100974631 TenGigabitEthernet 1/0
6002 100974631 TenGigabitEthernet 1/0
6003 101236775 TenGigabitEthernet 1/1
6004 101236775 TenGigabitEthernet 1/1
9001 134529054 TenGigabitEthernet 2/0
9002 134529054 TenGigabitEthernet 2/0
9003 134791198 TenGigabitEthernet 2/1
9004 134791198 TenGigabitEthernet 2/1
Dell#
```

# show rmon log

Display the contents of the RMON log table.

## C9000 Series

|                 |                                                                                                                                                                |                                                                                                    |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------|
| Syntax          | show rmon log [ <i>index</i> ] [ <i>brief</i> ]                                                                                                                |                                                                                                    |
| Parameters      | <i>index</i>                                                                                                                                                   | (OPTIONAL) Enter the table index number to display just that entry.                                |

| Command Modes   | EXEC                                                                                                                                                           |                                                                                                    |
| Command History | This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . |                                                                                                    |

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.1.1.0  | Introduced on the E-Series. |

|                   |                                                                                                                                              |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| Usage Information | The log table has a maximum of 500 entries. If the log exceeds that maximum, the oldest log entry is purged to allow room for the new entry. |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------|

|                 |                                                                                                                                                      |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| Example (Index) | <pre>Dell#show rmon log 2 RMON log entry, alarm table index 2, log index 1   log time: 14638 (THU AUG 12 22:10:40 2004)   description: 2 Dell#</pre> |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------|

|                 |                                                                                                                                                                                                                                                        |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Example (Brief) | <pre>Dell#show rmon logs brief eventIndex    logIndex      description ----- 1              1              "DELTA RISING LOG TRAP" 2              1              "DELTA FALLING LOG TRAP" 2              2              "DELTA FALLING LOG TRAP"</pre> |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# show rmon statistics

Display the contents of RMON Ethernet statistics table.

| Command History | This guide is platform-specific. For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> . |                                                                                                                          |

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.6.1.0  | Introduced on the S-Series. |
| 7.5.1.0  | Introduced on the C-Series. |
| 6.1.1.0  | Introduced on the E-Series. |

### Example (Index)

```
Dell#show rmon statistics 6001
RMON statistics entry 6001
 interface: ifIndex.100974631 TengigabitEthernet 2/0
 packets dropped: 0
 bytes received: 0
 packets received: 0
 broadcast packets: 0
 multicast packets: 0
 CRC error: 0
 under-size packets: 0
 over-size packets: 0
 fragment errors: 0
 jabber errors: 0

# Routing Information Protocol (RIP)

Routing information protocol (RIP) is a distance vector routing protocol. The Dell Networking operating software supports both RIP version 1 (RIPv1) and RIP version 2 (RIPv2).

The implementation of RIP is based on IETF RFCs 2453 and RFC 1058. For more information about configuring RIP, refer to the *Dell Networking OS Configuration Guide*.

## auto-summary

Restore the default behavior of automatic summarization of subnet routes into network routes. This command applies only to RIP version 2.

## C9000 Series

|                      |                                                                                                                    |
|----------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>        | <code>auto-summary</code><br>To send sub-prefix routing information, use the <code>no auto-summary</code> command. |

| <b>Command Modes</b> | ROUTER RIP                                                                                                         |

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version     | Description                 |
|-------------|-----------------------------|
| 9.9.(0.0)   | Introduced on the C9010.    |
| 9.0.2.0     | Introduced on the S6000.    |
| 8.3.19.0    | Introduced on the S4820T.   |
| 8.3.11.1    | Introduced on the Z9000.    |
| 8.3.7.0     | Introduced on the S4810.    |
| 7.8.1.0     | Introduced on the S-Series. |
| 7.6.1.0     | Introduced on the C-Series. |
| pre-6.2.1.1 | Introduced on the E-Series. |

## clear ip rip

Update all the RIP routes in the system routing table.

## C9000 Series

**Syntax**

clear ip rip

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.8.1.0  | Introduced on the S-Series. |
| 7.6.1.0  | Introduced on the C-Series. |
| 6.2.1.1  | Introduced on the E-Series. |

**Usage Information**

This command triggers updates of the main RIP routing tables.

# debug ip rip

Examine RIP routing information for troubleshooting.

## C9000 Series

**Syntax** `debug ip rip [interface | database | events [interface] | packet[interface] | trigger]`

To turn off debugging output, use the `no debug ip rip` command.

|                   |                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Parameters</b> | <b>interface</b> | (OPTIONAL) Enter the interface type and ID as one of the following: <ul style="list-style-type: none"><li>For a Gigabit Ethernet interface, enter the keyword <code>GigabitEthernet</code> then the slot/port information.</li><li>For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128.</li><li>For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li><li>For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li><li>For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.</li></ul> |
|                   | <b>database</b>  | (OPTIONAL) Enter the keyword <code>database</code> to display messages when there is a change to the RIP database.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|                   | <b>events</b>    | (OPTIONAL) Enter the keyword <code>events</code> to debug only RIP protocol changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|                   | <b>packet</b>    | (OPTIONAL) Enter the keyword <code>packet</code> to debug only RIP protocol packet.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|                   | <b>trigger</b>   | (OPTIONAL) Enter the keyword <code>trigger</code> to debug only RIP trigger extensions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|                   |                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

**Command Modes** EXEC Privilege

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                                          |
|----------|------------------------------------------------------|
| 9.9(0.0) | Introduced on the C9010.                             |
| 9.2(1.0) | Introduced on the Z9500.                             |
| 8.3.19.0 | Introduced on the S4820T.                            |
| 8.3.11.1 | Introduced on the Z9000.                             |
| 8.5.1.0  | Added support for 4-port 40G line cards on ExaScale. |
| 8.3.7.0  | Introduced on the S4810.                             |
| 7.8.1.0  | Introduced on the S-Series.                          |
| 7.6.1.0  | Introduced on the C-Series.                          |
| 6.2.1.1  | Introduced on the E-Series.                          |

# default-information originate

Generate a default route for the RIP traffic.

## C9000 Series

|                          |                                                                                                                                                                                                                   |                                                                                                                                          |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>            | <pre>default-information originate [always] [metric <i>metric-value</i>] [route-map <i>map-name</i>]</pre> <p>To return to the default values, use the <code>no default-information originate</code> command.</p> |                                                                                                                                          |
| <b>Parameters</b>        | <b>always</b>                                                                                                                                                                                                     | (OPTIONAL) Enter the keyword <code>always</code> to enable the switch software to always advertise the default route.                    |
|                          | <b>metric <i>metric-value</i></b>                                                                                                                                                                                 | (OPTIONAL) Enter the keyword <code>metric</code> then a number as the metric value. The range is from 1 to 16. The default is <b>1</b> . |
|                          | <b>route-map <i>map-name</i></b>                                                                                                                                                                                  | (OPTIONAL) Enter the keywords <code>route-map</code> then the name of a configured route-map.                                            |
| <b>Defaults</b>          | Disabled. Metric: <b>1</b> .                                                                                                                                                                                      |                                                                                                                                          |
| <b>Command Modes</b>     | ROUTER RIP                                                                                                                                                                                                        |                                                                                                                                          |

|                          | <b>6.2.1.1</b>                                                                                                                                                                                                    | Introduced on the E-Series.                                                                                                              |
| <b>Usage Information</b> | The default route must be present in the switch routing table for the <code>default-information originate</code> command to take effect.                                                                          |                                                                                                                                          |

# default-metric

Change the default metric for routes. To ensure that all redistributed routes use the same metric value, use this command with the `redistribute` command.

## C9000 Series

|                   |                                                                                                                                                     |                                                                        |

| Version | Description                 |
|---------|-----------------------------|
| 7.7.1.0 | Introduced on the E-Series. |

**Related Commands**      [router rip](#) — enters ROUTER mode on the switch.

## distance

Assign a weight (for prioritization) to all routes in the RIP routing table or to a specific route. Lower weights (“administrative distance”) are preferred.

For command information about other platforms, refer to the relevant <i>Dell Networking OS Command Line Reference Guide</i> .<br><br>The following is a list of the Dell Networking OS version history for this command.                                                                                                                                                                                                                                                                                                                                                                                      |  |

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T    |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.8.1.0  | Introduced on the S-Series. |
| 7.6.1.0  | Introduced on the C-Series. |
| 6.2.1.1  | Introduced on the E-Series. |

**Related Commands**      [default-metric](#) — assigns one distance metric to all routes learned using the `redistribute` command.

# distribute-list in

Configure a filter for incoming routing updates.

## C9000 Series

| <b>Syntax</b>                  | <code>distribute-list <i>prefix-list-name</i> in [<i>interface</i>]</code><br>To delete the filter, use the <code>no distribute-list <i>prefix-list-name</i> in</code> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                |                                             |                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |                          |          |                           |          |                          |         |                                                      |         |                          |         |                             |         |                             |         |                             |

| Version         | Description                 |
|-----------------|-----------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.    |
| <b>8.3.19.0</b> | Introduced on the S4820T.   |
| <b>8.3.11.1</b> | Introduced on the Z9000.    |
| <b>8.3.7.0</b>  | Introduced on the S4810.    |
| <b>7.8.1.0</b>  | Introduced on the S-Series. |
| <b>7.6.1.0</b>  | Introduced on the C-Series. |
| <b>6.2.1.1</b>  | Introduced on the E-Series. |

**Related Commands**      [ip split-horizon](#) — sets the RIP routing updates to exclude routing prefixes.

## ip rip receive version

To receive specific versions of RIP, set the interface. The RIP version you set on the interface overrides the version command in ROUTER RIP mode.

| <b>6.2.1.1</b>  | Introduced on the E-Series. |

**Usage Information**      If you want the interface to receive both versions of RIP, use the `ip rip receive version 1 2` command.

**Related Commands**      [ip rip send version](#) — sets the RIP version for sending RIP traffic on an interface.  
[version](#) — sets the RIP version the switch software uses.

# ip rip send version

To send a specific version of RIP, set the interface. The version you set on the interface overrides the version command in ROUTER RIP mode.

| <b>6.2.1.1</b>           | Introduced on the E-Series.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                        |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |                |                             |                |                             |
| <b>Usage Information</b> | To enable the interface to send both version of RIP packets, use the <code>ip rip send version 1 2</code> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                        |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |                |                             |                |                             |
| <b>Related Commands</b>  | <a href="#">ip rip receive version</a> — sets the RIP version for the interface to receive traffic.<br><a href="#">version</a> — sets the RIP version for the switch software.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                        |         |             |                 |                          |                 |                          |                 |                           |                 |                          |                |                          |                |                             |                |                             |                |                             |

# ip split-horizon

Enable split-horizon for RIP data on the interface. As described in RFC 2453, the split-horizon scheme prevents any routes learned over a specific interface to be sent back out that interface.

## C9000 Series

## Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.8.1.0  | Introduced on the S-Series. |
| 7.6.1.0  | Introduced on the C-Series. |
| 6.2.1.1  | Introduced on the E-Series. |

## Related Commands

[ip poison-reverse](#) — sets the prefix for RIP routing updates.

# maximum-paths

Set RIP to forward packets over multiple paths.

## C9000 Series

### Syntax

`maximum-paths number`

To return to the default values, use the `no maximum-paths` commands.

### Parameters

**number** Enter the number of paths. The range is from 1 to 16. The default is **4** paths.

### Defaults

**4**

### Command Modes

ROUTER RIP

## Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.8.1.0  | Introduced on the S-Series. |
| 7.6.1.0  | Introduced on the C-Series. |
| 6.2.1.1  | Introduced on the E-Series. |

## Usage Information

RIP supports a maximum of 16 ECMP paths.

# neighbor

Define a neighbor router with which to exchange RIP information.

|                          | <b>6.2.1.1</b>                                                                                                                                                                                                                                                                | Introduced on the E-Series.                                                                     |
| <b>Usage Information</b> | When a neighbor router is identified, unicast data exchanges occur. Multiple neighbor routers are possible.<br>To ensure that only specific interfaces are receiving and sending data, use the <code>passive-interface</code> command with the <code>neighbor</code> command. |                                                                                                 |
| <b>Related Commands</b>  | <a href="#">passive-interface</a> — sets the interface to only listen to RIP broadcasts.                                                                                                                                                                                      |                                                                                                 |

# network

Enable RIP for a specified network. To enable RIP on all networks connected to the switch, use this command.

## C9000 Series

|                   |                                                                                                                      |                                                                                      |
|-------------------|----------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <b>Syntax</b>     | <code>network ip-address</code><br>To disable RIP for a network, use the <code>no network ip-address</code> command. |                                                                                      |
| <b>Parameters</b> | <b><i>ip-address</i></b>                                                                                             | Specify an IP network address in dotted decimal format. You cannot specify a subnet. |
| <b>Defaults</b>   | No RIP network is configured.                                                                                        |                                                                                      |

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version  | Description                 |
|----------|-----------------------------|
| 9.9(0.0) | Introduced on the C9010.    |
| 9.2(1.0) | Introduced on the Z9500.    |
| 8.3.19.0 | Introduced on the S4820T.   |
| 8.3.11.1 | Introduced on the Z9000.    |
| 8.3.7.0  | Introduced on the S4810.    |
| 7.8.1.0  | Introduced on the S-Series. |
| 7.6.1.0  | Introduced on the C-Series. |
| 6.2.1.1  | Introduced on the E-Series. |

**Usage Information** You can enable an unlimited number of RIP networks.  
RIP operates over interfaces configured with any address the `network` command specifies.

## offset-list

Specify a number to add to the incoming or outgoing route metrics learned using RIP.

### C9000 Series

**Syntax** `offset-list prefix-list-name {in | out} offset [interface]`  
To delete an offset list, use the `no offset-list prefix-list-name {in | out} offset [interface]` command.

**Parameters**

|                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b><i>prefix-list-name</i></b> | Enter the name of an established Prefix list to determine which incoming routes are modified.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>offset</i></b>           | Enter a number from zero (0) to 16 to be applied to the incoming route metric matching the access list specified. If you set an offset value to zero (0), no action is taken.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b><i>interface</i></b>        | (OPTIONAL) Enter the following keywords and slot/port or number information: <ul style="list-style-type: none"><li>For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128.</li><li>For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</li><li>For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</li><li>For a VLAN, enter the keyword <code>vlan</code> then a number from 1 to 4094.</li></ul> |

**Defaults** Not configured.

**Command Modes** ROUTER RIP

**Command History** This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                                          |
|-----------------|------------------------------------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.                             |
| <b>9.2(1.0)</b> | Introduced on the Z9500.                             |
| <b>8.3.19.0</b> | Introduced on the S4820T.                            |
| <b>8.3.11.1</b> | Introduced on the Z9000.                             |
| <b>8.5.1.0</b>  | Added support for 4-port 40G line cards on ExaScale. |
| <b>8.3.7.0</b>  | Introduced on the S4810.                             |
| <b>7.8.1.0</b>  | Introduced on the S-Series.                          |
| <b>7.6.1.0</b>  | Introduced on the C-Series.                          |
| <b>6.2.1.1</b>  | Introduced on the E-Series.                          |

**Usage Information**

When the offset metric is applied to an interface, that value takes precedence over an offset value that is not extended to an interface.

**Related Commands**

[ip prefix-list](#) — enters PREFIX-LIST mode and configure a prefix list.

## output-delay

Set the interpacket delay of successive packets to the same neighbor.

## C9000 Series

**Syntax**

`output-delay delay`

To return to the switch software defaults for interpacket delay, use the `no output-delay` command.

**Parameters**

***delay***

Specify a number of milliseconds as the delay interval. The range is from 8 to 50.

**Defaults**

Not configured.

**Command Modes**

ROUTER RIP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

| Version         | Description                 |
|-----------------|-----------------------------|
| <b>9.9(0.0)</b> | Introduced on the C9010.    |
| <b>9.2(1.0)</b> | Introduced on the Z9500.    |
| <b>8.3.19.0</b> | Introduced on the S4820T.   |
| <b>8.3.11.1</b> | Introduced on the Z9000.    |
| <b>8.3.7.0</b>  | Introduced on the S4810.    |
| <b>7.8.1.0</b>  | Introduced on the S-Series. |
| <b>7.6.1.0</b>  | Introduced on the C-Series. |
| <b>6.2.1.1</b>  | Introduced on the E-Series. |

**Usage Information**

This command is intended for low-speed interfaces.

# passive-interface

Suppress routing updates on a specified interface.

## C9000 Series

| <b>Syntax</b>            | <code>passive-interface interface</code><br>To delete a passive interface, use the <code>no passive-interface interface</code> command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |         |             |          |                          |          |                          |          |                           |          |                          |         |                                                      |         |                          |         |                             |         |                             |         |                             |
