Notes, Cautions, and Warnings

**NOTE:** A NOTE indicates important information that helps you make better use of your computer.

⚠️ **CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

⚠️ **NOTE:** A WARNING indicates a potential for property damage, personal injury, or death.
Chapter 1: About this Guide

Objectives................................................................. 37
Audience................................................................. 37
Conventions.............................................................. 37
Information Icons.................................................... 38

Chapter 2: CLI Basics

Accessing the Command Line........................................ 39
Multiple Configuration Users...................................... 39
Obtaining Help.......................................................... 40
Navigating the CLI..................................................... 41
Using the Keyword no Command................................. 41
Filtering show Commands.......................................... 42
Enabling Software Features on Devices Using a Command Option......................................................... 42
    feature vrf.............................................................. 43
    show feature.......................................................... 43
Command Modes....................................................... 44

Chapter 3: File Management

cd................................................................. 52
copy.......................................................... 53
delete.............................................................. 55
dir............................................................... 56
mkdir............................................................. 57
mount nfs.......................................................... 57
rmdir............................................................... 58
HTTP Copy via CLI................................................. 58
boot system......................................................... 59
format flash........................................................ 60
restore factory-defaults............................................ 60
rename.............................................................. 62
show boot system.................................................. 63
show bootvar....................................................... 64
show file........................................................... 65
show os-version.................................................... 66
show running-config............................................... 67
show startup-config............................................... 70
show version....................................................... 71
upgrade.............................................................. 72
upgrade system.................................................... 74
upgrade fpga-image............................................... 75
    verify............................................................... 76

Chapter 4: Control and Monitoring........................................... 77
Chapter 5: 802.1X...................................................................................................................... 129
  debug dot1x.................................................................................................................... 130
  dot1x auth-fail-vlan......................................................................................................... 130
  dot1x auth-server............................................................................................................. 131
  dot1x auth-type mab-only............................................................................................... 131
  dot1x authentication (Configuration)............................................................................... 132

About this Guide

This book provides information about the Dell Networking OS command line interface (CLI).
This book also includes information about the protocols and features found in Dell Networking OS.

References

For more information about your system, refer to the following documents:

- Dell Networking OS Configuration Guides
- Installation and Maintenance Guides
- Release Notes

Topics:

- Objectives
- Audience
- Conventions
- Information Icons

Objectives

This book is intended as a reference guide for the Dell Networking OS CLI commands, with detailed syntax statements, along with usage information and sample output.

NOTE: For more information about when to use the CLI commands, refer to the Dell Networking OS Configuration Guide for your system.

Audience

This book is intended for system administrators who are responsible for configuring or maintaining networks. This guide assumes that you are knowledgeable in Layer 2 and Layer 3 networking technologies.

Conventions

This book uses the following conventions to describe command syntax.

|Keyword| Parameter| {X}| [X]| x|y| x||y|
|---|---|---|---|---|---|---|
|Keywords are in Courier font and must be entered in the CLI as listed.| Parameters are in italics and require a number or word to be entered in the CLI.| Keywords and parameters within braces must be entered in the CLI.| Keywords and parameters within brackets are optional.| Keywords and parameters separated by a bar require you to choose one option.| Keywords and parameters separated by a double bar allows you to choose any or all of the options.
Information Icons

This book uses the following information symbols:

NOTE: The Note icon signals important operational information.

CAUTION: The Caution icon signals information about situations that could result in equipment damage or loss of data.

NOTE: The Warning icon signals information about hardware handling that could result in injury.
This chapter describes the command line interface (CLI) structure and command modes. The Dell Networking operating software commands are in a text-based interface that allows you to use the launch commands, change command modes, and configure interfaces and protocols.

Topics:

- Accessing the Command Line
- Multiple Configuration Users
- Obtaining Help
- Navigating the CLI
- Using the Keyword no Command
- Filtering show Commands
- Enabling Software Features on Devices Using a Command Option
- Command Modes

### Accessing the Command Line

When the system boots successfully, you are positioned on the command line in EXEC mode and not prompted to log in. You can access the commands through a serial console port or a Telnet session. When you Telnet into the switch, you are prompted to enter a login name and password.

**Example**

```
telnet 172.31.1.53
Trying 172.31.1.53...
Connected to 172.31.1.53.
Escape character is '^]'.
Login: username
Password: Dell>
```

After you log in to the switch, the prompt provides you with the current command-level information. For example:

<table>
<thead>
<tr>
<th>Prompt</th>
<th>CLI Command Mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell&gt;</td>
<td>EXEC</td>
</tr>
<tr>
<td>Dell#</td>
<td>EXEC Privilege</td>
</tr>
<tr>
<td>Dell(conf)#</td>
<td>CONFIGURATION</td>
</tr>
</tbody>
</table>

**NOTE:** For a list of all the command mode prompts, refer to the Command Modes section.

### Multiple Configuration Users

When a user enters CONFIGURATION mode and another user is already in CONFIGURATION mode, the Dell Networking operating software generates an alert warning message similar to the following:

```
Dell#conf
% Warning: The following users are currently configuring the system:
User "" on line console0
User "admin" on line vty0 (123.12.1.123)
User "admin" on line vty1 (123.12.1.123)
```
When another user enters CONFIGURATION mode, Dell Networking OS sends a message similar to the following:

% Warning: User "admin" on line vty2 "172.16.1.210" is in configuration

In this case, the user is “admin” on vty2.

## Obtaining Help

As soon as you are in a command mode there are several ways to access help.

To obtain a list of keywords at any command mode:

Type a `?` at the prompt or after a keyword. There must always be a space before the `?`.

To obtain a list of keywords with a brief functional description:

Type `help` at the prompt.

To obtain a list of available options:

Type a keyword and then type a space and a `?`.

To obtain a list of partial keywords using a partial keyword:

Type a partial keyword and then type a `?`.

### Example

The following is an example of typing `ip ?` at the prompt:

```
Dell(conf)#ip ?
access-list           Named access-list
as-path              BGP autonomous system path filter
community-list       Add a community list entry
domain-list          Domain name to complete unqualified host name
domain-lookup        Enable IP Domain Name System hostname translation
domain-name          Define the default domain name
fib                   FIB configuration commands
ftp                   FTP configuration commands
host                  Add an entry to the ip hostname table
max-frag-count       Max. fragmented packets allowed in IP re-assembly
multicast-routing     Enable IP multicast forwarding
name-server          Specify address of name server to use
pim Protocol         Independent Multicast
prefix-list          Build a prefix list
radius               Interface configuration for RADIUS
redirect-list        Named redirect-list
route                Establish static routes
scp                   SCP configuration commands
source-route         Process packets with source routing header options
ssh                   SSH configuration commands
tacacs                Interface configuration for TACACS+
telnet                Specify telnet options
tftp                  TFTP configuration commands
trace-group          Named trace-list
trace-list           Named trace-list
Dell(conf)#ip
```

When entering commands, you can take advantage of the following timesaving features:

- The commands are not case-sensitive.
- You can enter partial (truncated) command keywords. For example, you can enter `int teng 1/1` for the `interface tengigabitethernet 1/1` command.
- To complete keywords in commands, use the TAB key.
- To display the last enabled command, use the up Arrow key.
● Use either the Backspace key or Delete key to erase the previous character.
● To navigate left or right in the Dell Networking OS command line, use the left and right Arrow keys.
The shortcut key combinations at the Dell Networking OS command line are as follows:

<table>
<thead>
<tr>
<th>Key Combination</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>CNTL-A</td>
<td>Moves the cursor to the beginning of the command line.</td>
</tr>
<tr>
<td>CNTL-B</td>
<td>Moves the cursor back one character.</td>
</tr>
<tr>
<td>CNTL-D</td>
<td>Deletes the character at the cursor.</td>
</tr>
<tr>
<td>CNTL-E</td>
<td>Moves the cursor to the end of the line.</td>
</tr>
<tr>
<td>CNTL-F</td>
<td>Moves the cursor forward one character.</td>
</tr>
<tr>
<td>CNTL-I</td>
<td>Completes a keyword.</td>
</tr>
<tr>
<td>CNTL-K</td>
<td>Deletes all the characters from the cursor to the end of the command line.</td>
</tr>
<tr>
<td>CNTL-L</td>
<td>Re-enters the previous command.</td>
</tr>
<tr>
<td>CNTL-N</td>
<td>Returns to the more recent commands in the history buffer after recalling commands with Ctrl-P or the up Arrow key.</td>
</tr>
<tr>
<td>CNTL-P</td>
<td>Recalls commands, beginning with the last command.</td>
</tr>
<tr>
<td>CNTL-R</td>
<td>Re-enters the previous command.</td>
</tr>
<tr>
<td>CNTL-U</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-W</td>
<td>Deletes the previous word.</td>
</tr>
<tr>
<td>CNTL-X</td>
<td>Deletes the line.</td>
</tr>
<tr>
<td>CNTL-Z</td>
<td>Ends continuous scrolling of the command outputs.</td>
</tr>
<tr>
<td>Esc B</td>
<td>Moves the cursor back one word.</td>
</tr>
<tr>
<td>Esc F</td>
<td>Moves the cursor forward one word.</td>
</tr>
<tr>
<td>Esc D</td>
<td>Deletes all the characters from the cursor to the end of the word.</td>
</tr>
</tbody>
</table>

Navigating the CLI

Dell Networking OS displays a CLI prompt comprised of the host name and CLI mode.
● Host name is the initial part of the prompt and is “Dell” by default. You can change the host name with the hostname command.
● CLI mode is the second part of the prompt and reflects the current CLI mode. For a list of the Dell Networking OS command modes, refer to the command mode list in the Accessing the Command Line section.

The CLI prompt changes as you move up and down the levels of the command structure. Starting with CONFIGURATION mode, the command prompt adds modifiers to further identify the mode. For more information about command modes, refer to the Command Modes section.

Using the Keyword no Command

To disable, delete or return to default values, use the no form of the commands.

For most commands, if you type the keyword no in front of the command, you disable that command or delete it from the running configuration. In this guide, the no form of the command is described in the Syntax portion of the command description.
Filtering show Commands

To find specific information, display certain information only or begin the command output at the first instance of a regular expression or phrase, you can filter the display output of a show command.

When you execute a show command, and then enter a pipe ( | ), one of the following parameters, and a regular expression, the resulting output either excludes or includes those parameters.

**NOTE:** Dell Networking OS accepts a space before or after the pipe, no space before or after the pipe, or any combination. For example: Dell#command | grep gigabit | except regular-expression | find regular-expression

- **display**: displays additional configuration information
- **except**: displays only the text that does not match the pattern (or regular expression)
- **find**: searches for the first occurrence of a pattern
- **grep**: displays text that matches a pattern.

The **grep** command option has an ignore-case suboption that makes the search case-insensitive. For example, the commands:

- `show run | grep Ethernet` returns a search result with instances containing a capitalized “Ethernet,” such as `interface TenGigabitEthernet 1/1`
- `show run | grep ethernet` does not return the previous search result because it only searches for instances containing a noncapitalized “ethernet”
- `show run | grep Ethernet ignore-case` returns instances containing both “Ethernet” and “ethernet”

- **no-more**: does not paginate the display output
- **save**: copies the output to a file for future use

Displaying All Output

To display the output all at once (not one screen at a time), use the no-more option after the pipe. This operation is similar to the terminal length screen-length command except that the no-more option affects the output of just the specified command. For example: Dell#show running-config|no-more.

Filtering the Command Output Multiple Times

You can filter a single command output multiple times. To filter a command output multiple times, place the save option as the last filter. For example: Dell# command | grep regular-expression | except regular-expression | grep other-regular-expression | find regular-expression | no-more | save.

Enabling Software Features on Devices Using a Command Option

This capability to activate software applications or components on a device using a command is supported on the S4810, S4820T, and S6000, platforms.

Starting with Release 9.4(0.0), you can enable or disable specific software functionalities or applications that need to run on a device by using a command attribute in the CLI interface. This capability enables effective, streamlined management and administration of applications and utilities that run on a device. You can employ this capability to perform an on-demand activation or turn-off of a software component or protocol. A feature configuration file that is generated for each image contains feature names denotes whether this enabling or disabling method is available for such features. In 9.4(0.0), you can enable or disable the VRF application globally across the system by using this capability.
You can activate VRF application on a device by using the `feature vrf` command in CONFIGURATION mode.

**NOTE:** The `no feature vrf` command is not supported on any of the platforms.

To enable the VRF feature and cause all VRF-related commands to be available or viewable in the CLI interface, use the following command. You must enable the VRF feature before you can configure its related attributes.

Dell(conf)# feature vrf

Based on whether VRF feature is identified as supported in the Feature Configuration file, configuration command `feature vrf` becomes available for usage. This command will be stored in running-configuration and will precede all other VRF-related configurations.

**NOTE:** The MXL and Z9000 platforms currently do not support VRF. These platforms support only the management and default VRFs, which are available by default. As a result, the `feature vrf` command is not available for these platforms.

To display the state of Dell Networking OS features:

Dell#show feature

**Example of show feature output**

For a particular target where VRF is enabled, the show output is similar to the following:

```
Feature  State
-------------
VRF      enabled
```

**feature vrf**

Enable the VRF application on a switch. After you enable the VRF feature, you cannot deactivate it.

**Z9500**

- **Syntax**: `feature vrf`
- **Defaults**: Disabled
- **Command Modes**: CONFIGURATION
- **Command History**:
  - **Version 9.5(0.0)**: Introduced on the Z9500.
  - **Version 9.4(0.0)**: Introduced on the S4810, S4820T, and S6000.
- **Usage Information**: You can activate VRF application on a device by using the `feature vrf` command in CONFIGURATION mode. The `no feature vrf` command is not supported on any platform.

**show feature**

Verify the status of software applications, such as VRF, that are activated and running on a device.

- **Syntax**: `show feature`
- **Command Modes**: EXEC, EXEC Privilege
- **Command History**:
  - **Version 9.4(0.0)**: Introduced on the S4810, S4820T, and S6000.
- **Usage Information**: You can activate VRF application on a device by using the `feature vrf` command in CONFIGURATION mode. The `no feature vrf` command is not supported on any of the platforms.
Command Modes

To navigate and launch various CLI modes, use specific commands. Navigation to these modes is described in the following sections.

BGP ADDRESS-FAMILY Mode

To enable or configure IPv4 for BGP, use BGP ADDRESS-FAMILY mode. For more information, refer to Border Gateway Protocol IPv4 (BGPv4).

To enter BGP ADDRESS-FAMILY mode:
1. Verify that you are logged in to ROUTER BGP mode.
2. Enter the command `address-family`
3. Enter the protocol type.
   ● For IPv4, enter `ipv4 multicast`. The prompt changes to include (conf-router_bgp_at) for IPv4.

CLASS-MAP Mode

To create or configure a class map, use CLASS-MAP mode. For more information, refer to Policy-Based QoS Commands.

To enter CLASS-MAP mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `class-map` command then enter the class map name. The prompt changes to include (config-class-map).
You can return to CONFIGURATION mode by using the `exit` command.

CONFIGURATION Mode

In EXEC Privilege mode, use the `configure` command to enter CONFIGURATION mode and configure routing protocols and access interfaces.

To enter CONFIGURATION mode:
1. Verify that you are logged in to EXEC Privilege mode.
2. Enter the `configure` command. The prompt changes to include (conf).
From this mode, you can enter INTERFACE mode by using the `interface` command.

CONTROL-PLANE Mode

To manage control-plane traffic, use CONTROL-PLANE mode. For more information, refer to Control Plane Policing (CoPP).

To enter CONTROL-PLANE mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `control-plane-cpuqos` command. The prompt changes to include (conf-control-cpuqos).
You can return to CONFIGURATION mode by using the `exit` command.

DHCP Mode

To enable and configure Dynamic Host Configuration Protocol (DHCP), use DHCP mode. For more information, refer to Dynamic Host Configuration Protocol (DHCP).
To enter DHCP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ip dhcp server` command. The prompt changes to include (config-dhcp).

You can return to CONFIGURATION mode by using the `exit` command.

**DHCP POOL Mode**

To create an address pool, use DHCP POOL mode. For more information, refer to Dynamic Host Configuration Protocol (DHCP).

To enter DHCP POOL mode:

1. Verify that you are logged in to DHCP mode.
2. Enter the `pool` command then the pool name. The prompt changes to include (config-dhcp-pool-name).

You can return to DHCP mode by using the `exit` command.

**ECMP GROUP Mode**

To enable or configure traffic distribution monitoring on an ECMP link bundle, use ECMP GROUP mode. For more information, refer to `ecmp_overview`.

To enter ECMP GROUP mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ecmp-group` command then enter the ECMP group ID. The prompt changes to include (conf-ecmp-group-ecmp-group-id).

You can return to CONFIGURATION mode by using the `exit` command.

**EIS Mode**

To enable or configure Egress Interface Selection (EIS), use EIS mode.

To enter EIS mode:

1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `management egress-interface-selection` command. The prompt changes to include (conf-mgmt-eis).

You can return to CONFIGURATION mode by using the `exit` command.

**EXEC Mode**

When you initially log in to the switch, by default, you are logged in to EXEC mode. This mode allows you to view settings and enter EXEC Privilege mode, which is used to configure the device.

When you are in EXEC mode, the > prompt is displayed following the host name prompt, which is “Dell” by default. You can change the host name prompt using the `hostname` command.

**EXEC Privilege Mode**

The `enable` command accesses EXEC Privilege mode. If an administrator has configured an “Enable” password, you are prompted to enter it.

EXEC Privilege mode allows you to access all the commands accessible in EXEC mode, plus other commands, such as to clear address resolution protocol (ARP) entries and IP addresses. In addition, you can access CONFIGURATION mode to configure interfaces, routes and protocols on the switch. While you are logged in to EXEC Privilege mode, the # prompt is displayed.

**EXTENDED COMMUNITY LIST Mode**

To enable and configure a BGP extended community, use EXTENDED COMMUNITY LIST mode.
To enter EXTENDED COMMUNITY LIST mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ip extcommunity-list` command then a community list name. The prompt changes to include (conf-ext-community-list).
You can return to CONFIGURATION mode by using the `exit` command.

FRRP Mode

To enable or configure Force10 Resilient Ring Protocol (FRRP), use FRRP mode. For more information, refer to Force10 Resilient Ring Protocol (FRRP).

To enter FRRP mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol frrp` command then the ring ID. The prompt changes to include (conf-frrp-ring-id).
You can return to CONFIGURATION mode by using the `exit` command.

GRUB Mode

To enable GRUB mode, press ESC when the following message appears during a system boot: Press ESC key to stop autoreboot.... Select Force10 Boot using the arrow keys and then press the “C” key to enter the GRUB Command Line Interface. The command prompt changes to grub>.

INTERFACE Mode

Use INTERFACE mode to configure interfaces or IP services on those interfaces. An interface can be physical (for example, a Gigabit Ethernet port) or virtual (for example, the Null interface).

To enter INTERFACE mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `interface` command and then enter an interface type and interface number that is available on the switch. The prompt changes to include the designated interface and slot/port number. For example:

<table>
<thead>
<tr>
<th>Prompt</th>
<th>Interface Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Dell(conf-if)#</td>
<td>INTERFACE mode</td>
</tr>
<tr>
<td>Dell(conf-if-gi-0/0)#</td>
<td>Gigabit Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-te-0/0)#</td>
<td>Ten-Gigabit Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-fo-0/0)#</td>
<td>Forty-Gigabit Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-lo-0)#</td>
<td>Loopback interface number</td>
</tr>
<tr>
<td>Dell(conf-if-nu-0)#</td>
<td>Null Interface then zero</td>
</tr>
<tr>
<td>Dell(conf-if-po-0)#</td>
<td>Port-channel interface number</td>
</tr>
<tr>
<td>Dell(conf-if-vl-0)#</td>
<td>VLAN Interface then VLAN number (range 1–4094)</td>
</tr>
<tr>
<td>Dell(conf-if-ma-0/0)#</td>
<td>Management Ethernet interface then slot/port information</td>
</tr>
<tr>
<td>Dell(conf-if-tu-0)#</td>
<td>Tunnel interface then tunnel ID.</td>
</tr>
<tr>
<td>Prompt</td>
<td>Interface Type</td>
</tr>
<tr>
<td>--------</td>
<td>----------------</td>
</tr>
<tr>
<td>Dell(conf-if-range)#</td>
<td>Designated interface range (used for bulk configuration).</td>
</tr>
</tbody>
</table>

**IP ACCESS LIST Mode**

To enter IP ACCESS LIST mode and configure either standard or extended access control lists (ACLs), use the `ip access-list standard` or `ip access-list extended` command.

To enter IP ACCESS LIST mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `ip access-list standard` or `ip access-list extended` command. Include a name for the ACL. The prompt changes to include (conf-std-nacl) or (conf-ext-nacl).
   
   You can return to CONFIGURATION mode by using the `exit` command.

**ISIS ADDRESS-FAMILY Mode**

To enable or configure IPv6 for ISIS, use ISIS ADDRESS-FAMILY mode. For more information, refer to **Intermediate System to Intermediate System (IS-IS)**.

To enter ISIS ADDRESS-FAMILY mode:
1. Verify that you are logged in to ROUTER ISIS mode.
2. Enter the command `address-family ipv6 unicast`. The prompt changes to include (conf-router_isis-af_ipv6).

**LLDP Mode**

To enable and configure Link Layer Discovery Protocol (LLDP), use LLDP mode. For more information, refer to **Link Layer Discovery Protocol (LLDP)**.

To enter LLDP mode:
1. To enable LLDP globally, verify that you are logged in to CONFIGURATION mode. To enable LLDP on an interface, verify that you are logged in to INTERFACE mode.
2. Enter the `protocol lldp` command. The prompt changes to include (conf-lldp) or (conf-if-interface-lldp).

**LLDP MANAGEMENT INTERFACE Mode**

To enable and configure Link Layer Discovery Protocol (LLDP) on management interfaces, use LLDP MANAGEMENT INTERFACE mode.

To enter LLDP MANAGEMENT INTERFACE mode:
1. Verify that you are logged in to LLDP mode.
2. Enter the `management-interface` command. The prompt changes to include (conf-lldp-mgmtIf).

**LINE Mode**

To configure the console or virtual terminal parameters, use LINE mode.

To enter LINE mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `line` command. Include the keywords `console` or `vty` and their line number available on the switch. The prompt changes to include (config-line-console) or (config-line-vty).
   
   You can exit this mode by using the `exit` command.
MAC ACCESS LIST Mode

To enter MAC ACCESS LIST mode and configure either standard or extended access control lists (ACLs), use the `mac access-list standard` or `mac access-list extended` command.

To enter MAC ACCESS LIST mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `mac access-list standard` or `mac access-list extended` command. Include a name for the ACL. The prompt changes to include (conf-std-macl) or (conf-ext-macl).

You can return to CONFIGURATION mode by using the `exit` command.

MONITOR SESSION Mode

To enable and configure a traffic monitoring session using port monitoring, use MONITOR SESSION mode. For more information, refer to Port Monitoring.

To enter MONITOR SESSION mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `monitor session` command then the session ID. The prompt changes to include (conf-mon-sess-sessionID).

MULTIPLE SPANNING TREE (MSTP) Mode

To enable and configure MSTP, use MULTIPLE SPANNING TREE mode. For more information, refer to Multiple Spanning Tree Protocol (MSTP).

To enter MULTIPLE SPANNING TREE mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol spanning-tree mstp` command. The prompt changes to include (conf-mstp).

You can return to CONFIGURATION mode by using the `exit` command.

OPENFLOW INSTANCE Mode

To enable and configure OpenFlow instances, use OPENFLOW INSTANCE mode.

To enter OPENFLOW INSTANCE mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `openflow of-instance` command then the OpenFlow ID number of the instance you want to create or configure. The prompt changes to include (conf-of-instance of-id).

You can return to the CONFIGURATION mode by entering the exit command.

Per-VLAN SPANNING TREE (PVST+) Plus Mode

To enable and configure the Per-VLAN Spanning Tree (PVST+) protocol, use PVST+ mode. For more information, refer to Per-VLAN Spanning Tree Plus (PVST+).

**NOTE:** The protocol name is PVST+, but the plus sign is dropped at the CLI prompt.

To enter PVST+ mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol spanning-tree pvst` command. The prompt changes to include (conf-pvst).

You can return to CONFIGURATION mode by using the `exit` command.

PORT-CHANNEL FAILOVER-GROUP Mode

To configure shared LAG state tracking, use PORT-CHANNEL FAILOVER-GROUP mode. For more information, refer to Port Channel Commands.

To enter PORT-CHANNEL FAILOVER-GROUP mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `port-channel failover-group` command. The prompt changes to include (conf-po-failover-grp).
You can return to CONFIGURATION mode by using the `exit` command.

**PREFIX-LIST Mode**

To configure a prefix list, use PREFIX-LIST mode.

To enter PREFIX-LIST mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ip prefix-list` command. Include a name for the prefix list. The prompt changes to include (conf-nprefixl).
You can return to CONFIGURATION mode by using the `exit` command.

**PROTOCOL GVRP Mode**

To enable and configure GARP VLAN Registration Protocol (GVRP), use PROTOCOL GVRP mode. For more information, refer to GARP VLAN Registration (GVRP).

To enter PROTOCOL GVRP mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol gvrp` command. The prompt changes to include (config-gvrp).
You can return to CONFIGURATION mode by using the `exit` command.

**RAPID SPANNING TREE (RSTP) Mode**

To enable and configure RSTP, use RSTP mode. For more information, refer to Rapid Spanning Tree Protocol (RSTP).

To enter RSTP mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol spanning-tree rstp` command. The prompt changes to include (conf-rstp).
You can return to CONFIGURATION mode by using the `exit` command.

**ROUTE-MAP Mode**

To configure a route map, use ROUTE-MAP mode.

To enter ROUTE-MAP mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `route-map map-name [permit | deny] [sequence-number]` command. The prompt changes to include (config-route-map).
You can return to CONFIGURATION mode by using the `exit` command.

**ROUTER BGP Mode**

To enable and configure Border Gateway Protocol (BGP), use ROUTER BGP mode. For more information, refer to Border Gateway Protocol IPv4 (BGPv4)

To enter ROUTER BGP mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `router bgp` command then enter the AS number. The prompt changes to include (conf-router_bgp).
You can return to CONFIGURATION mode by using the `exit` command.

**ROUTER ISIS Mode**

To enable and configure Intermediate System to Intermediate System (ISIS), use ROUTER ISIS mode. For more information, refer to Intermediate System to Intermediate System (IS-IS).
To enter ROUTER ISIS mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Use the `router isis` command. The prompt changes to include (conf-router_isis).
You can return to CONFIGURATION mode by using the `exit` command.

ROUTER OSPF Mode

To configure OSPF, use ROUTER OSPF mode. For more information, refer to Open Shortest Path First (OSPFv2).
To enter ROUTER OSPF mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `router ospf {process-id}` command. The prompt changes to include (conf-router_ospf-id).
You can switch to INTERFACE mode by using the `interface` command or you can switch to ROUTER RIP mode by using the `router rip` command.

ROUTER OSPFV3 Mode

To configure OSPF for IPv6, use ROUTER OSPFV3 mode.
To enter ROUTER OSPFV3 mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ipv6 router ospf {process-id}` command. The prompt changes to include (conf-ipv6-router_ospf).
You can return to CONFIGURATION mode by using the `exit` command.

ROUTER RIP Mode

To enable and configure Router Information Protocol (RIP), use ROUTER RIP mode. For more information, refer to Routing Information Protocol (RIP).
To enter ROUTER RIP mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `router rip` command. The prompt changes to include (conf-router_rip).
You can return to CONFIGURATION mode by using the `exit` command.

SPANNING TREE Mode

To enable and configure the Spanning Tree protocol, use SPANNING TREE mode. For more information, refer to Spanning Tree Protocol (STP).
To enter SPANNING TREE mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `protocol spanning-tree stp-id` command. The prompt changes to include (conf-stp).
You can return to CONFIGURATION mode by using the `exit` command.

TRACE-LIST Mode

To configure a Trace list, use TRACE-LIST mode.
To enter TRACE-LIST mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `ip trace-list` command. Include the name of the Trace list. The prompt changes to include (conf-trace-acl).
You can exit this mode by using the `exit` command.
**VLT DOMAIN Mode**

To enable and configure the VLT domain protocol, use VLT DOMAIN mode. For more information, refer to [Virtual Link Trunking (VLT)](VLT).

To enter VLT DOMAIN mode:
1. Verify that you are logged in to CONFIGURATION mode.
2. Enter the `vlt domain` command then the VLT domain number. The prompt changes to include (conf-vlt-domain).

You can return to CONFIGURATION mode by entering the `exit` command.

**VRRP Mode**

To enable and configure Virtual Router Redundancy Protocol (VRRP), use VRRP mode. For more information, refer to [Virtual Router Redundancy Protocol (VRRP)](VRRP).

To enter VRRP mode:
1. To enable VRRP globally, verify that you are logged in to CONFIGURATION mode.
2. Enter the `vrrp-group` command then enter the VRRP group ID. The prompt changes to include (conf-if-interface-type-slot/port-vid-vrrp-group-id).
This chapter contains command line interface (CLI) commands needed to manage the configuration files as well as other file management commands.

**Topics:**
- cd
- copy
- delete
- dir
- mkdir
- mount nfs
- rmdir
- HTTP Copy via CLI
- boot system
- format flash
- restore factory-defaults
- rename
- show boot system
- show bootvar
- show file
- show os-version
- show running-config
- show version
- upgrade
- upgrade system
- upgrade fpga-image
- verify

**cd**

Change to a different working directory.

**Syntax**

```
cd directory
```

**Parameters**

- `directory` (OPTIONAL) Enter one of the following:
  - `flash:` (internal Flash) or any sub-directory
  - `nfs-mount://<mount-point>/filepath`: NFS mounted path

**NOTE:** While switching to a remote NFS file system, it is mandatory to specify the mount-point that indicates the working directory on the NFS file system. You cannot enter the root directory of the remote NFS file system.

- `usbflash:` (internal Flash) or any sub-directory

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
### copy

Copy one file to another location. Dell Networking OS supports IPv4 and IPv6 addressing for FTP, TFTP, and SCP (in the hostip field).

#### Syntax

```
copy compressed-config source-file-url destination-file-url
```

#### Parameters

- **compressed-config**: Enter the keyword `compressed-config` to copy one file, after optimizing and reducing the size of the configuration file, to another location. Dell Networking OS supports IPv4 and IPv6 addressing for FTP, TFTP, and SCP (in the hostip field).
- **file-url**: Enter the following location keywords and information:
  - To copy a file from the internal FLASH: `flash://` followed by the filename
  - To copy a file on an FTP server: `ftp://user:password@hostip/filepath`
  - To copy a file on a HTTP server: `http://hostip/filepath`
  - To copy a file on a NFS mounted system: `nfsmount://<mount-point/filepath`

  **NOTE**: While switching to a remote NFS file system, it is mandatory to specify the mount-point that indicates the working directory on the NFS file system. You cannot enter the root directory of the remote NFS file system.

- To copy the running configuration: enter the keyword `running-config`
- To copy the startup configuration: enter the keyword `startup-config`
- To copy using a Secure Copy (SCP):
  - If you enter `scp:` in the source position, enter the target URL:
  - If you enter `scp:` in the target position, first enter the source URL:
- To copy a file on the external FLASH: `slot0://` followed by the filename
To copy a file on a TFTP server: enter `tftp://hostip/filepath`

To copy a file from an external USB drive: enter `usbflash://filepath`

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON. Added the <code>nfsmount:&lt;mount-point&gt;</code> parameters that enables you to mount a remote NFS file system.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Added the <code>compressed-config</code> parameter.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Added IPv6 addressing support for FTP, TFTP, and SCP.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Added <code>usbflash</code> and <code>rpm0usbflash</code> commands on E-Series ExaScale.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series and added the SSH port number to the SCP prompt sequence on all systems.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>E-Series</td>
<td>Original command.</td>
</tr>
</tbody>
</table>

**Usage Information**

Dell Networking OS supports a maximum of 100 files at the root directory level, on both the internal and external Flash.

When copying a file to a remote location (for example, using Secure Copy [SCP]), enter only the keywords and Dell Networking OS prompts you for the rest of the information. For example, when using SCP, you can enter `copy running-config scp:`, where `running-config` is the source and the target is specified in the ensuing prompts. Dell Networking OS prompts you to enter any required information, as needed for the named destination—remote destination, destination filename, user ID, password, etc.

When you use the `copy running-config startup-config` command to copy the running configuration (the startup configuration file amended by any configuration changes made since the system was started) to the startup configuration file, Dell Networking OS creates a backup file on the internal flash of the startup configuration.

Dell Networking OS supports copying the running-configuration to a TFTP server, an FTP server, or a remote NFS file system. For example:

- `copy running-config tftp:
- copy running-config ftp:
- copy running-config nfsmount://<mount-point>/filepath`

You can compress the running configuration by grouping all the VLANs and the physical interfaces with the same property. Support to store the operating configuration to the startup config in the compressed mode and to perform an image downgrade without any configuration loss are provided.

Two existing exec mode CLIs are enhanced to display and store the running configuration in the compressed mode.
Example

Dell#copy running-config scp:/
Address or name of remote host []: 10.10.10.1
Destination file name [startup-config]? old_running
User name to login remote host? sburgess
Password to login remote host? dilling

In this copy scp: flash: example, specifying SCP in the first position indicates that the target is to be specified in the ensuing prompts. Entering flash: in the second position indicates that the target is the internal Flash. The source is on a secure server running SSH, so you are prompted for the user datagram protocol (UDP) port of the SSH server on the remote host.

Example

Dell#copy running-config nfsmount://<mount-point>/filepath
Destination file name [test.txt]:
User name to login remote host: username
Password to login remote host:

Example

Dell#copy scp: flash:
Address or name of remote host []: 10.11.199.134
Port number of the server [22]: 99
Source file name []: test.cfg
User name to login remote host: admin
Password to login remote host:
Destination file name [test.cfg]: test1.cfg

Example

FTOS#copy compressed-config compressed-cfg
!
6655 bytes successfully copied
FTOS#
FTOS#copy compressed-config ftp:
Address or name of remote host []: 10.11.8.12
Destination file name [startup-config]:
User name to login remote host: spbalaji
Password to login remote host:
!
6655 bytes successfully copied

Related Commands

cd – changes the working directory.

delete

Delete a file from the flash. After deletion, files cannot be restored.

Syntax

delete flash-url [no-confirm]

Parameters

flash-url

Enter the following location and keywords:

- For a file or directory on the internal Flash, enter flash:// followed by the filename or directory name.
- For a file or directory on the NFS mounted file system, enter nfsmount:// followed by the mount point and the file path.

NOTE: While deleting a file directory on a remote NFS file system, it is mandatory to specify the mount-point that indicates the working directory on the NFS file system. You cannot delete the root directory of the remote NFS file system.

- For a file or directory on an external USB drive, enter usbflash:// followed by the filename or directory name.

no-confirm

(OPTIONAL) Enter the keyword no-confirm to specify that Dell Networking OS does not require user input for each file prior to deletion.
dir

Display the files in a file system. The default is the current directory.

Syntax

```
dir [filename | directory name:]
```

Parameters

- `filename` (OPTIONAL) Enter one of the following:
  - For a file or directory on the internal Flash, enter `flash://` then the filename or directory name.
  - For a file or directory on an NFS mounted file system, enter `nfsmount://` followed by the mount point and file path.
  - For a file or directory on the external Flash, enter `usbflash://` then the filename or directory name.

- `directory name` (OPTIONAL) Enter one of the following:
  - For a file or directory on the internal Flash, enter `flash://` then the filename or directory name.
  - For a file or directory on an NFS mounted file system, enter `nfsmount://` followed by the mount point and file path.
  - For a file or directory on the external Flash, enter `usbflash://` then the filename or directory name.

Command Modes

EXEC Privilege

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

9  drwx       4096   May 31 2013 02:49:46 +00:00 CONFD_LOG_DIR
flash: 2056916992 bytes total (2052784128 bytes free)

Example (NFS Mount)

Dell#dir nfsmount:
Directory of nfsmount:

1  drwx        512   Nov 06 2014 06:58:19 +00:00 .
2  drwx        512   Nov 06 2014 06:58:19 +00:00 ..
nfsmount: 1463410688 bytes total (618045440 bytes free)

Related Commands

cd – changes the working directory.

mkdir

Creates a directory on the NFS mounted file system.

Syntax

```
mkdir nfsmount://mount-point/username
```

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.7(0.0)  Introduced this command.

Example

```
Dell#mkdir nfsmount://nfs-mountpoint/guest
```

Related Commands

```
rmdir – removes a directory.
```

mount nfs

Mounts an NFS file system to a device.

Syntax

```
mount nfs rhost:path mount-point [username password]
```

Parameters

Enter the following location keywords and information:

```
rhost:path  Enter the remote host’s path directory.
mount-point Enter the folder name in the local file system.
username   (OPTIONAL) Enter the user name to access the device.
password   (OPTIONAL) Enter the password.
```
Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version 9.7(0.0)** Introduced this command.

Example

```
Dell#mount nfs nfstest nfs-mount-point usrname pwd
```

Related Commands

`cd` – changes the working directory.

**rmdir**

Removes a directory from the NFS mounted file system.

**Syntax**

```
rmdir nfsmount://mount-point/username
```

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version 9.7(0.0)** Introduced this command.

Example

```
Dell#rmdir nfsmount:/nfs-mountpoint/guest
Proceed to remove the directory [confirm yes/no]: yes
Dell#
```

Related Commands

`mkdir` – creates a directory.

**HTTP Copy via CLI**

Copy one file to another location. Dell Networking OS supports IPv4 and IPv6 addressing for FTP, TFTP, and SCP (in the `hostip` field).

This feature is supported on Z9000 platform.

**Syntax**

```
```

You can copy from the server to the switch and vice-versa.

**Parameters**

- `copy http:` Address or name of remote host [:] 10.16.206.77
  - Port number of the server [80]:
  - Source file name [:] sample_file
  - User name to login remote host: x
  - Password to login remote host:
  - Destination file name [sample_file]:

**Defaults**

None.

**Command Modes**

EXEC

**Command History**

**Version 9.3(0.1)** Introduced on the S6000, Z9000, S4810, and S4820T.
Example

```
copy http://admin:admin123@10.16.206.77/sample_file flash://sample_file
```
format flash

Erase all existing files and reformat the file system in the internal flash memory or the USB drive. After the file system is formatted, files cannot be restored.

Z9000

Syntax
format [flash: | slot0: | usbflash: ]

Parameters
flash: | slot0: | usbflash:

- flash: reformat the file system in the internal flash memory.
- slot0: reformat the file system in the external flash memory; for example, SSD.
- usbflash: reformat the file system in the usbflash.

Defaults
flash memory

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.0.2.0
Introduced on the S6000.

Version 8.3.11.1
Introduced on the Z9000.

Usage Information
Include the colon (:) when entering this command.

CAUTION: This command deletes all files, including the startup configuration file. So, after executing this command, consider saving the running config as the startup config (use the write memory command or copy run start command).

restore factory-defaults

Restore factory defaults.

Syntax
restore factory-defaults stack-unit {0-5 | all} {clear-all | bootvar | nvram}

Parameters
factory-defaults
Return the system to its factory default mode.

0-5
Enter the stack member unit identifier to restore only the mentioned stack-unit.

all
Enter the keyword all to restore all units in the stack.

bootvar
Enter the keyword bootvar to reset boot line.

clear-all
Enter the keywords clear-all to reset the NvRAM, boot environment variables, and the system startup configuration.

nvram
Enter the keyword nvram to reset the NvRAM only.

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.5(0.1)
Added bootvar as a new parameters.

Version 9.0.2.0
Introduced on the S6000.
Usage

Version 9.0.0.0 Introduced on the Z9000.
Version 8.3.19.0 Introduced on the S4820T.
Version 8.3.12.0 Introduced on the S4810.
Version 8.3.16.0 Introduced on the MXL 10/40GbE Switch IO Module.

Restoring factory defaults deletes the existing startup configuration and all persistent settings (stacking, fan-out, and so forth).

When restoring all units in a stack, all the units in the stack are placed into stand-alone mode.
When restoring a single unit in a stack, that unit placed in stand-alone mode. No other units in the stack are affected.
When restoring units in stand-alone mode, the units remain in stand-alone mode after the restoration. After the restore is complete, the units power cycle immediately.

⚠️ CAUTION: There is no undo for this command.

Following are the factory-default environment variables:
- baudrate
- primary_boot
- secondary_boot
- default_boot
- ipaddr
- gatewayip
- netmask
- macaddr
- mgmtautoneg
- mgmtspeed100
- mgmtfullduplex

Each boot path variable (primary_boot, secondary_boot, and default_boot) is further split into the following three independent variables:
- primary_server, primary_file, and primary_type
- secondary_server, secondary_file, and secondary_type
- default_server, default_file, and default_type

**NOTE:** For information on the default values that these variables take, refer to the Restoring Factory Default Environment Variables section in the Dell Networking OS Configuration guide.

Example (all stack units)

```
Dell#restore factory-defaults stack-unit all clear-all
******************************************************
* Warning - Restoring factory defaults will delete the existing *
* startup-config and all persistent settings (stacking, fanout, etc.)*
* All the units in the stack will be split into standalone units. *
* After restoration the unit(s) will be poweredcycled immediately. *
* Proceed with caution ! *
******************************************************
Proceed with factory settings? Confirm [yes/no]:yes

------------------------
1 Success
Power-cycling the unit(s).
Dell#
```

rename

Rename a file in the local file system.

**Syntax**

```
rename url url
```

**Parameters**

- `url` Enter the following keywords and a filename:
● For a file on the internal Flash, enter `flash:///` followed by the filename.
● For a file on an NFS mounted file system, enter `nfsmount://` followed by the mount point and file path.
● For a file on an external USB drive, enter `usbflash:///` followed by the filename.

**Command Modes**

EXEC Privilege

show running-config

Display the current configuration and display changes from the default values.

**Syntax**

```
show running-config [entity] [configured] [status] [compressed]
```

**Parameters**

- `entity` (OPTIONAL) To display that entity’s current (non-default) configuration, enter one of the following keywords:
  - `aaa` for the current AAA configuration
  - `acl` for the current ACL configuration
  - `arp` for the current static ARP configuration
  - `as-path` for the current AS-path configuration
  - `bfd` for the current BFD configuration
  - `bgp` for the current BGP configuration
  - `boot` for the current boot configuration
  - `cam-profile` for the current CAM profile in the configuration
  - `class-map` for the current class-map configuration
  - `community-list` for the current community-list configuration
  - `ecmp-group` for the current ECMP group configuration
  - `eis` for the current EIS configuration
  - `ethernet` for the current Ethernet CFM configuration
  - `fefd` for the current FEFD configuration
  - `ftp` for the current FTP configuration
  - `frrp` for the current FRRP configuration
  - `fvrp` for the current FVRP configuration
  - `gvrp` for the current GVRP configuration
  - `host` for the current host configuration
  - `hardware-monitor` for hardware-monitor action-on-error settings
  - `hypervisor` for the current hypervisor configuration
  - `igmp` for the current IGMP configuration
  - `interface` for the current interface configuration
  - `interface port-channel` for the current port-channel interface configuration. The range is from 1 to 128.
  - `interface tunnel` for all configured tunnels. For a specific tunnel, enter the tunnel ID. The range is from 1 to 16383.
  - `ip` for the current IP configuration

**Note:** If you did not configure anything that entity, nothing displays and the prompt returns.

**File Management**
isis for the current ISIS configuration
line for the current line configuration
lldp for the current LLDP configuration
load-balance for the current port-channel load-balance configuration
logging for the current logging configuration
mac for the current MAC ACL configuration
mac-address-table for the current MAC configuration
management-eis for the current management EIS configuration
management-route for the current Management port forwarding configuration
mld for the current MLD configuration
monitor for the current Monitor configuration
mroute for the current Mroutes configuration
msdp for the current MSDP configuration
ntp for the current NTP configuration
ospf for the current OSPF configuration
pim for the current PIM configuration
policy-map-input for the current input policy map configuration
policy-map-output for the current output policy map configuration
po-failover-group for the current port-channel failover-group configuration
prefix-list for the current prefix-list configuration
privilege for the current privilege configuration
qos-policy-input for the current input QoS policy configuration
qos-policy-output for the current output QoS policy configuration
radius for the current RADIUS configuration
redirect-list for the current redirect-list configuration
redundancy for the current RPM redundancy configuration
resolve for the current DNS configuration
rip for the current RIP configuration
rmon for the current RMON configuration
route-map for the current route map configuration
sflow for the current sFlow configuration
snmp for the current SNMP configuration
spanning-tree for the current spanning tree configuration
static for the current static route configuration
status for the file status information
For the current TACACS+ configuration
For the current TFTP configuration
For the current trace-group configuration
For the current trace-list configuration
For the uplink state group configuration
For the current users configuration
For the current VLT configuration
For the current wred-profile configuration

configured (OPTIONAL) Enter the keyword configuration to display line card interfaces with non-default configurations only.
status (OPTIONAL) Enter the keyword status to display the checksum for the running configuration and the start-up configuration.
compressed (Optional) Enter the keyword compressed to display the compressed group configuration. Displays the compressed configuration by grouping all similar configurations. The compression is done only for interface related configurations.

upgrade
Upgrade the bootflash image or system image of the management unit.
Syntax
upgrade {boot | system} {ftp: | scp: | tftp: | flash: {A: | B:}} | stack-unit | usbflash | slot0:}
Parameters
  boot
  Enter the keyword boot to change the boot image.
  system
  Enter the keyword system to change the system image.
  ftp:
  After entering the keyword ftp:, you can either follow it with the location of the source file in
    userid:password@hostip/filepath or press Enter to launch a prompt sequence.
scp: After entering the keyword `scp:`, you can either follow it with the location of the source file in this form:
`userid:password@hostip/filepath` or press Enter to launch a prompt sequence.

slot0: After entering the keyword `slot0:`, you can either follow it with the location of the source file in this form:
`hostlocation/filepath` or press Enter to launch a prompt sequence.

tftp: After entering the keyword `tftp:`, you can either follow it with the location of the source file in this form:
`hostlocation/filepath` or press Enter to launch a prompt sequence.

flash: After entering the keyword `flash:`, you can either follow it with the location of the source file in this form:
`filepath` or press Enter to launch a prompt sequence.

A: | B: Enter the partition to upgrade from the flash.

stack-unit: Enter the keywords `stack-unit:` to synch the image to the stack-unit.

file-url Enter the following location keywords and information to upgrade using a Dell Networking OS image other than the one currently running:

- To specify an Dell Networking OS image on the internal flash, enter `flash:// file-path/filename`.
- To specify an Dell Networking OS image on an FTP server, enter `ftp://user:password@hostip/filepath`.
- To specify an Dell Networking OS image on the external flash on the primary RPM, enter `slot0://file-path/filename`.
- To copy a file on a TFTP server, enter `tftp://hostip/filepath/filename`.

where `hostip` is either an IPv4 dotted decimal address or an IPv6 URI [x:x:x:x] format address.

Defaults none

Command Modes EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.0(0.0) Added support for IPv6 for the `file-url` parameter.

Version 8.3.19.0 Introduced on the S4820T.

Version 8.3.11.1 Introduced on the Z9000. Added support for the SSD on the Z9000 only.

Version 8.3.7.0 Introduced on the S4810.

Version 7.7.1.0 Added support for TFTP and SCP.

Version 7.6.1.0 Introduced on the S-Series.

Usage Information

RFC 3986 specifies that IPv6 host addresses in a uniform resource identifier (URI) must be enclosed in square brackets. For maximum flexibility this command accepts IPv6 host addresses with or without the square brackets.

Reload Dell Networking OS after executing this command. To copy Dell Networking OS from the management unit to one or more stack members, use the `upgrade system stack-unit` (S-Series stack member) command.

Example

Dell# upgrade system ?
ftp: Copy from remote file system (ftp://userid:password@hostip/filepath)
scp: Copy from remote file system (scp://userid:password@hostip/filepath)
tftp: Copy from remote file system (tftp://hostip/filepath)
Dell# upgrade system ftp://username:password@10.11.1.1/FTOS-SB-7.7.1.0.bin
Erasing Sseries Imageupgrade Table of Contents, please wait

File Management
upgrade system

Upgrade the Dell Networking OS image. To upgrade the bootflash or bootselector image, use the upgrade boot command.

**Syntax**

```
upgrade system {flash: | ftp: | nfsmount: | scp: | stack-unit {stack-unit-id | all} | tftp: | usbflash:} file-url {A: | B:}
```

**Parameters**

- `system` Enter the keyword system to upgrade the operating system (OS) image.
- `flash: file-url` Enter the keyword flash: and specify the location of the image file in the format `//directory-path` or press Enter to launch a prompt sequence.
- `ftp: file-url` Enter the keyword ftp: and specify the location of the image file in the format `//userid:password@host-ip/filepath` or press Enter to launch a prompt sequence.
- `nfsmount://<mount-point>/filepath` Enter the keyword nfsmount: and specify the location of the image file in the format `//<mount-point>/filepath`.
- `scp: file-url` Enter the keyword scp: and specify the location of the image file in the format `userid:password@host-ip/filepath` or press Enter to launch a prompt sequence.
- `stack-unit stack-unit-id` Enter the keyword stack-unit and specify the stack-unit ID to sync the image to that stack-unit.
- `stack-unit all` Enter the keyword stack-unit followed by the keyword all to sync the image on all stack-units.
- `tftp: file-url` Enter the keyword tftp: and specify the location of the image file in the format `//host-ip/filepath` or press Enter to launch a prompt sequence.
- `usbflash: file-url` Enter the keyword usbflash: and specify the location of the source file in the format `//directory-path` to upgrade from an external flash device or press Enter to launch a prompt sequence.
- `A:` | `B:` Specify the flash partition of the operating-system image to be upgraded.

**Defaults**

none

**Command Modes** EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.7(0.0)** Added support for NFS mount.
- **Version 9.2(1.0)** Introduced on the Z9500.
- **Version 9.0(0.0)** Added support for IPv6 for the file-url parameter.
- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.11.1** Introduced on the Z9000. Added support for the SSD on the Z9000 only.
- **Version 8.3.7.0** Introduced on the S4810.
- **Version 7.7.1.0** Added support for TFTP and SCP.
- **Version 7.6.1.0** Introduced on the S-Series.

**Usage Information**

RFC 3986 specifies that IPv6 host addresses in a uniform resource identifier (URI) must be enclosed in square brackets ([ ]). For maximum flexibility this command accepts IPv6 host addresses with or without the square brackets.

After you upgrade the system image, by entering the command, specify the location where the Dell Networking OS image used to boot the system is stored (`boot system`), save the configuration to the start-up config file (`write memory`), and reload the system (`reload`).

**Example**

```
Dell# upgrade system tftp://10.11.8.12/dv-rainier-13 a:
00:39:32 : Discarded 1 pkts. Expected block num : 51.Received block num: 50 
00:39:36 : Discarded 1 pkts. Expected block num : 65. Received block num: 64
!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
93924044 bytes successfully copied
System image upgrade completed successfully.
```
upgrade fpga-image

Use this command only on systems with SFM3 modules (and only when required by the Upgrade Procedure in the release notes).

Z9000

Syntax

upgrade fpga-image {sfm} {all | id} [booted | flash:// | ftp: | slot0: | tftp] file-url

Parameters

- **sfm**: Enter the keyword sfm to upgrade the FPGA on the SFMs.
- **all**: Enter the keyword all to upgrade the FPGA on all the SFMs.
- **id**: Enter the keyword id to upgrade the FPGA on all a specific SFM.
- **booted**: Enter the path to the upgrade source. Entering <CR> updates the FPGA from the flash.
- **file-url**: Enter the following location keywords and information to upgrade the FPGA using an Dell Networking OS image other than the one currently running:
  - To specify an Dell Networking OS image on the internal flash, enter flash:// file-path/filename.
  - To specify an Dell Networking OS image on an FTP server, enter ftp:// user:password@hostip/filepath.
  - To specify an Dell Networking OS image on the external flash on the primary RPM, enter slot0://file-path/filename.
  - To copy a file on a TFTP server, enter tftp://hostip/filepath/filename where hostip is either an IPv4 dotted decimal address or an IPv6 URI [x:x:x:x] format address..

Defaults

none

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.0.0.0**: Introduced on the Z-Series.
- **Version 8.3.1.0**: Added the rpm option.
- **Version 7.5.1.0**: Introduced on the C-Series.

Example

Dell#upgrade sfm 1 autoreset
SFM1: upgrade in progress
!!! !!! !!!
SFM1: upgrade complete
SFM1 is active. Resetting it might temporarily impact traffic.
Proceed with reset [confirm yes/no]: yes
Dell#

Usage Information

Reset the card using the power-cycle option after restoring the FPGA command.
verify

Validate the software image on the flash drive after the image has been transferred to the system, but before the image has been installed.

Syntax

```
verify { md5 | sha256 } [flash:// ] img-file [ hash-value ]
```

Parameters

- **md5**: Enter the `md5` keyword to use the MD5 message-digest algorithm.
- **sha256**: Enter the `sha256` keyword to use the SHA256 Secure Hash Algorithm.
- **flash://**: (Optional). Enter the `flash://` keyword. The default is to use the flash drive. You can just enter the image file name.
- **img-file**: Enter the name the Dell Networking software image file to validate.
- **hash-value**: (Optional). Enter the relevant hash published on i-Support.

Defaults

- flash drive

Command Modes

- EXEC mode

Command History

- Version 9.5.(0.0) Introduced on the Z9000, S6000, S4820T, S4810, MXL

Usage Information

You can enter this command in the following ways:

- `verify md5 flash://img-file`
- `verify md5 flash://img-file <hash-value>`
- `verify sha256 flash://img-file`
- `verify sha256 flash://img-file <hash-value>`

Example

**Without Entering the Hash Value for Verification using SHA256**

```
Dell# verify sha256 flash://FTOS-SE-9.5.0.0.bin
SHA256 hash for FTOS-SE-9.5.0.0.bin:
e6328c06faf814e6899ceed219afbf9360e986d9298802b749e6b2093e933
```

**Entering the Hash Value for Verification using SHA256**

```
Dell# verify sha256 flash://FTOS-SE-9.5.0.0.bin
e6328c06faf814e6899ceed219afbf9360e986d9298802b749e6b2093e933
SHA256 hash VERIFIED for FTOS-SE-9.5.0.0.bin
```
This chapter contains the commands to configure and monitor the system, including Telnet, file transfer protocol (FTP), and trivial file transfer protocol (TFTP).

**NOTE:** Starting in version 8.3.11.4, the `enable xfp-power-updates` command was deprecated for the Z9000. This command replaces the `enable optic-info-update interval` command to update information on temperature and power monitoring in the simple network management protocol (SNMP) management information base (MIB).

**Topics:**

- `asf-mode`
- `banner exec`
- `banner login`
- `banner motd`
- `cam-acl`
- `clear alarms`
- `clear command history`
- `clear line`
- `configure`
- `debug cpu-traffic-stats`
- `debug ftpserver`
- `disable`
- `do`
- `enable`
- `enable optic-info-update interval`
- `enable xfp-power-updates`
- `end`
- `exec-timeout`
- `exit`
- `ftp-server enable`
- `ftp-server topdir`
- `ftp-server username`
- `hostname`
- `ip ftp password`
- `ip ftp source-interface`
- `ip ftp username`
- `ip ftp vrf`
- `ip telnet server enable`
- `ip telnet server vrf`
- `ip telnet source-interface`
- `ip telnet vrf`
- `ip tftp source-interface`
- `ip tftp vrf`
- `line`
- `motd-banner`
- `ping`
- `reload`
- `send`
- `service timestamps`
- `show alarms`
- `show cam-acl-vlan`
asf-mode

Enable alternate store and forward (ASF) mode and forward packets as soon as a threshold is reached.

Syntax

```
asf-mode stack-unit {unit-id | all} queue size
```

To return to standard Store and Forward mode, use the

```
no asf-mode stack unit
```

Parameters

- **unit-id**: Enter the stack member unit identifier of the stack member to reset. The Z9000 range is from 0 to 7.
- **queue size**: Enter the queue size of the stack member. The range is from 0 to 15.

Defaults

Not configured

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

You must save the configuration and reload the system to implement ASF. When you enter the command, the system sends a message stating that the new mode is enabled when the system reloads.

banner exec

Configure a message that is displayed when your enter EXEC mode.

Syntax

```
banner exec c line c
```

To delete a banner, use the `no banner exec` command.
Enter the keywords `banner exec`, then enter a character delineator, represented here by the letter c. Press ENTER.

Enter a text string for your banner message ending the message with your delineator. In the following example, the delineator is a percent character (%); the banner message is “testing, testing”.

No banner is displayed.

Configuration mode

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>

Dell>
```

Related Commands

- `line` — enables and configures the console and virtual terminal lines to the system.
**banner login**

Set a banner to display when logging on to the system.

**Syntax**

```
banner login {keyboard-interactive | no keyboard-interactive} [c line c]
```

Enter **no banner login** to delete the banner text. Enter no **banner login keyboard-interactive** to automatically go to the banner message prompt (does not require a carriage return).

**Parameters**

- **keyboard-interactive**: Enter the keyword `keyboard-interactive` to require a carriage return (CR) to get the message banner prompt.
- **c**: Enter a delineator character to specify the limits of the text banner. The delineator is a percent character (%).
- **line**: Enter a text string for your text banner message ending the message with your delineator. The delineator is a percent character (%). Range: maximum of 50 lines, up to 255 characters per line

**Defaults**

No banner is configured and the CR is required when creating a banner.

<td>Original command</td>
</tr>
</tbody>
</table>

Usage Information
After entering the banner login command, type one or more spaces and a delineator character. Enter the banner text then the second delineator character. When the user is connected to the router, if a message of the day banner is configured, it displays first. If no message of the day banner is configured, the login banner and prompt appear. After the user has logged in, the banner EXEC (if configured) displays.

Related Commands

- **banner exec** — enables the display of a text string when you enter EXEC mode.
- **banner login** — sets a banner to display after successful login to the system.
Allocate content addressable memory (CAM) for IPv4 and IPv6 ACLs.

Z9000

cam-acl {default | l2acl number ipv4acl number ipv6acl number ipv4qos number l2qos number l2pt number ipmacacl number [vman-qos | vman-dual-qos] number ecfmacl number {openflow {4|8}}}

Parameters

default

Use the default CAM profile settings and set the CAM as follows:
- L3 ACL (ipv4acl): 4
- L2 ACL(l2acl): 6
- IPv6 L3 ACL (ipv6acl): 0
- L3 QoS (ipv4qos): 2
- L2 QoS (l2qos): 1
- OpenFlow: 0 (disabled)
- FCoE (fcoeacl): 0 (disabled)
- iSCSI Optimization (iscsioptacl): 0 (disabled)

l2acl number ipv4acl number ipv6acl number ipv4qos number l2qos number l2pt number ipmacacl number [vman-qos | vman-dual-qos] number ecfmacl number {openflow {4|8}}

Allocate space to each CAM region.

Enter the CAM profile name then the amount of CAM space to be allotted. The total space allocated must equal 13. The ipv6acl range must be a factor of 2.

Enter 4 or 8 for the number of OpenFlow FP blocks.

- 4: Creates 242 entries for use by the OpenFlow controller (256 total entries minus the 14 entries reserved for internal functionality)
- 8: Creates 498 entries for use by the OpenFlow controller (512 total entries minus the 14 entries reserved for internal functionality)

Command Modes

CONFIGURATION

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
9.2(0.2) Added support for the fcoe parameter on the S4810 and S4820T.
9.1.(0.0) Added support for OpenFlow on the Z9000.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Added the keywords fcoeacl and iscsioptacl on the S4810.
8.3.11.1 Introduced on the Z9000.
8.3.1.0 Added the keywords ecfmacl, vman-qos, and vman-dual-qos.
8.2.1.0 Introduced on the S-Series.
7.8.1.0 Introduced on the C-Series.

Usage Information

For the new settings to take effect, save the new CAM settings to the startup-config (write-mem or copy run start) then reload the system.
The total amount of space allowed is 16 FP Blocks. System flow requires three blocks and these blocks cannot be reallocated. The ipv4acl profile range is from 1 to 4.

When configuring space for IPv6 ACLs, the total number of Blocks must equal 13.

Ranges for the CAM profiles are from 1 to 10, except for the ipv6acl profile which is from 0 to 10. The ipv6acl allocation must be a factor of 2 (2, 4, 6, 8, 10).

If you enabled BMP, to perform a reload on the chassis to upgrade any configuration changes that have changed the NVRAM content, use the reload conditional nvram-cfg-change command.

clear alarms

Clear alarms on the system.

Syntax

```
clear alarms
```

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.0.2.0**  Introduced on the S6000.
- **Version 8.3.19.0**  Introduced on the S4820T.
- **Version 8.3.12.0**  Introduced on the S4810.
- **Version 8.3.11.1**  Introduced on the Z9000.
- **Version 8.1.1.0**  Introduced on the E-Series ExaScale.
- **Version 7.6.1.0**  Introduced on the S-Series.
- **Version 7.5.1.0**  Introduced on the C-Series.
- **E-Series**  Original command.

Usage Information

This command clears alarms that are no longer active. If an alarm situation is still active, it is seen in the system output.

clear command history

Clear the command history log.

Syntax

```
clear command history
```

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.0.2.0**  Introduced on the S6000.
- **Version 8.3.19.0**  Introduced on the S4820T.
- **Version 8.3.12.0**  Introduced on the S4810.
- **Version 8.3.11.1**  Introduced on the Z9000.
- **Version 8.1.1.0**  Introduced on the E-Series ExaScale.
- **Version 7.6.1.0**  Introduced on the S-Series.
- **Version 7.5.1.0**  Introduced on the C-Series.
clear line

Reset a terminal line.

Syntax

```
clear line {line-number | aux 0 | console 0 | vty number}
```

Parameters

- **line-number**: Enter a number for one of the 12 terminal lines on the system. The range is from 0 to 11.
- **aux 0**: Enter the keywords aux 0 to reset the auxiliary port.
- **console 0**: Enter the keywords console 0 to reset the console port.
- **vty number**: Enter the keyword vty then a number to clear a terminal line. The range is from 0 to 9.

configure

Enter CONFIGURATION mode from EXEC Privilege mode.

Syntax

```
command configure [terminal]
```

Parameters

- **terminal**: (OPTIONAL) Enter the keyword terminal to specify that you are configuring from the terminal.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

debug cpu-traffic-stats

Enable the collection of computer processor unit (CPU) traffic statistics.

Syntax
debug cpu-traffic-stats

To disable the debugging, use the no debug cpu-traffic-stats command.

Defaults
Disabled

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 9.0.2.0 Introduced on the S6000.
Version 8.3.19.0 Introduced on the S4820T.
Version 8.3.12.0 Introduced on the S4810.
Version 8.3.11.1 Introduced on the Z9000.
Version 7.6.1.0 Introduced on the S-Series.
Version 7.5.1.0 Introduced on the C-Series.
Version 6.2.1.1 Introduced on the E-Series.

Usage Information
This command enables (and disables) the collection of CPU traffic statistics from the time this command is executed (not from system boot). However, excessive traffic a CPU receives automatically triggers (turn on) the collection of CPU traffic statics.

The following message is an indication that collection of CPU traffic is automatically turned on. To view the traffic statistics, use the show cpu-traffic-stats command.

If the CPU receives excessive traffic, traffic is rate controlled.

NOTE: This command must be enabled before the show cpu-traffic-stats command displays traffic statistics. Dell Networking recommends disabling debugging (no debug cpu-traffic-stats) after troubleshooting is complete.

Related Commands
show cpu-traffic-stats — displays the cpu traffic statistics.
**debug ftpserver**

View transactions during an FTP session when a user is logged into the FTP server.

**Syntax**

```
debug ftpserver
```

**Command Modes**

</tbody>
</table>

Usage Information:
The following commands are not supported by the do command:

- `enable`
- `disable`
- `exit`
- `config`

Example:
```
Dell(conf-if-te-5/1)#do clear counters
Clear counters on all interfaces [confirm]
Dell(conf-if-te-5/1)#do clear logging
Clear logging buffer [confirm]
Dell(conf-if-te-5/1)#do reload
System configuration has been modified. Save? [yes/no]: n
Proceed with reload [confirm yes/no]: n
```

enable

Enter EXEC Privilege mode or any other privilege level configured. After entering this command, you may need to enter a password.

Syntax: `enable [level]`

Parameters:
- `level`: (OPTIONAL) Enter a number for a privilege level of Dell Networking OS. The range is from 0 to 15.

Defaults:
- 15
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</tr>
</tbody>
</table>

E-Series
Original command.

Usage Information

Users entering EXEC Privilege mode or any other configured privilege level can access configuration commands. To protect against unauthorized access, use the enable password command to configure a password for the enable command at a specific privilege level. If no privilege level is specified, the default is privilege level 15.

NOTE: If you are authorized for the EXEC Privilege mode by your role, you do not need to enter an enable password.

Related Commands

enable password — configures a password for the enable command and to access a privilege level.

enable optic-info-update interval

Enable polling intervals of optical information updates for simple network management protocol (SNMP).

Syntax

```
enable optic-info-update interval seconds
```

To disable optical power information updates, use the no enable optic-info-update interval command.

Parameters

- **interval seconds**: Enter the keyword interval then the polling interval in seconds. The range is from 120 to 6000 seconds. The default is 300 seconds (5 minutes).

Defaults

Disabled

</tbody>
</table>

#### Usage Information

The chassis MIB contains the entry `chSysXfpRecvPower` in the `chSysPortTable` table. Periodically, IFA polls the XFP power for each of the ports and sends the values to IFM where it is cached.

To enable polling and to configure the polling frequency, use this command.
Return to EXEC Privilege mode from other command modes (for example, CONFIGURATION or ROUTER OSPF modes).

Syntax

```
end
```

Related Commands

- `exit` — returns to the lower command mode.

exec-timeout

Set a time interval that the system waits for input on a line before disconnecting the session.

```
exec-timeout minutes [seconds]
```

To return to default settings, use the `no exec-timeout` command.

Parameters

- **minutes**
  - Enter the number of minutes of inactivity on the system before disconnecting the current session. The range is from 0 to 35791. The default is 10 minutes for the console line and 30 minutes for the VTY line.
- **seconds**
  - (OPTIONAL) Enter the number of seconds. The range is from 0 to 2147483. The default is 0 seconds.
Defaults 10 minutes for console line; 30 minutes for VTY lines; 0 seconds

</tr>
</tbody>
</table>

**Usage Information**

After you enable FTP server functions with the `ftp-server enable` command, Dell Networking recommends specifying a top-level directory path. Without a top-level directory path specified, the Dell Networking OS directs users to the flash directory when logging in to the FTP server.

**Related Commands**

- `ftp-server username` — sets a username and password for incoming FTP connections to the E-Series.

**ftp-server username**

Create a user name and associated password for incoming FTP server sessions.

**Syntax**

```
ftp-server username username password [encryption-type] password
```

To delete a user name and its password, use the `no ftp-server username username` command.

**Parameters**

- **username**
  
  Enter a text string up to 40 characters long as the user name.

- **password**
  
  Enter the keyword `password` then a string up to 40 characters long as the password. Without specifying an encryption type, the password is unencrypted.
**encryption-type**  (OPTIONAL) After the keyword `password`, enter one of the following numbers:

- 0 (zero) for an unencrypted (clear text) password
- 7 (seven) for a hidden text password

**Defaults**  Not enabled.

**Command Modes**  CONFIGURATION

**Command History**  This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Usage Information
The hostname is used in the prompt.

ip ftp password

Specify a password for outgoing FTP connections.

Syntax
ip ftp password [encryption-type] password

Parameters
encryption-type  (OPTIONAL) Enter one of the following numbers:
● 0 (zero) for an unencrypted (clear text) password
● 7 (seven) for a hidden text password
password  Enter a string up to 40 characters as the password.

Defaults
Not configured.

</table>

Usage Information
The password is listed in the configuration file; you can view the password by entering the show running-config ftp command.

Use the ip ftp password command when you use the ftp: parameter in the copy command.

Related Commands
ip ftp username — sets the user name for the FTP sessions.

ip ftp source-interface

Specify an interface’s IP address as the source IP address for FTP connections.

Syntax
ip ftp source-interface interface

To delete an interface, use the no ip ftp source-interface interface command.

Parameters
interface  Enter the following keywords and slot/port or number information:
● For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.

For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

For a tunnel interface, enter the keyword `tunnel`.

**Defaults**

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

**Command Modes**

`CONFIGURATION`

**Command History**

</tbody>
</table>

### ip ftp username

Assign a user name for outgoing FTP connection requests.

**Syntax**

```
ip ftp username username
```

To return to anonymous FTP connections, use the `no ip ftp username [username]` command.

**Parameters**

- `username` Enter a text string as the user name up to 40 characters long.

**Defaults**

No user name is configured.

**Command Modes**

`CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</tr>
</tbody>
</table>
### ip ftp vrf

Configures an FTP client with a VRF that is used to connect to the FTP server.

**Syntax**

```
ip ftp [vrf vrf-name]
```

To undo the FTP client configuration, use the `no ip ftp [vrf vrf-name]` command.

**Parameters**

- `vrf vrf-name`: Enter the keyword `vrf` and then the name of the VRF to specify the VRF that is used by the FTP client.

**Defaults**

Disabled

**Command Modes**

`CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S-Series and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to make the FTP clients VRF-aware. The VRF name that you specify is used by the FTP client to reach the FTP server. If no VRF name is specified, then the default VRF is used.

### ip telnet server enable

Enable the Telnet server on the switch.

**Syntax**

```
ip telnet server enable
```

To disable the Telnet server, use the `no ip telnet server enable` command.

**Defaults**

Enabled

**Command Modes**

`CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Added the <code>no ip telnet server enable</code> command.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Added the <code>no ip telnet server enable</code> command.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is supported on the E-Series ExaScale.

See also:

- `ip ftp password` — sets the password for FTP connections.
### Version | Description
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.11.1 | Introduced on the Z9000.
8.1.1.0 | Introduced on the E-Series ExaScale.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
6.1.1.0 | Introduced on the E-Series.

### Related Commands
- `ip ssh server` — enables the secure shell (SSH) server on the system.

### ip telnet server vrf

Configures the TELNET server on either a specific VRF or a management VRF.

**Syntax**

```plaintext
ip telnet server vrf {management | vrf-name}
```

To undo the TELNET server configuration, use the `no ip telnet server [vrf vrf-name]` command.

**Parameters**

- `vrf management` Enter the keyword `vrf` followed by the keyword `management` to specify a management VRF that is used by the TELNET server.

- `vrf vrf-name` Enter the keyword `vrf` and then the name of the VRF to specify the VRF that is used by the TELNET server.

**Defaults**

Disabled

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

### Version | Description
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.5(0.0) | Introduced on the Z9500.
9.4.(0.0) | Introduced on the S-Series and Z9000.

**Usage Information**

You can enable the TELNET server on either a management VRF or a user-defined VRF but not both. If you do not specify a VRF name, then the TELNET server is enabled on the default VRF.

**Example**

```plaintext
Dell(conf)#ip telnet server vrf vrf1
Dell(conf)#no ip telnet server vrf
Dell(conf)#ip telnet server vrf management
Dell(conf)#no ip telnet server vrf
```
ip telnet source-interface

Set an interface’s IP address as the source address in outgoing packets for Telnet sessions.

Syntax

```
ip telnet source-interface interface
```

To return to the default setting, use the `no ip telnet source-interface [interface]` command.

Parameters

- `interface`
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For Loopback interfaces, enter the keyword `loopback` then a number from zero (0) to 16383.
    - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
    - For a tunnel interface, enter the keyword `tunnel`.

Defaults

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

Related Commands:

- `telnet` — telnet to another device.

ip telnet vrf

Configures a TELNET client to use a specific VRF.

Syntax

```
ip telnet [vrf vrf-name]
```

To undo the TELNET client configuration, use the `ip telnet [vrf vrf-name]` command.
ip telnet vrf vrf-name

Enter the keyword vrf and then the name of the VRF to specify the VRF that is used by the TELNET client.

Defaults
Disabled

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant FTOS Command Line Reference Guide.

<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.4.(0.0)</td>
<td>Introduced on the S-Series and Z9000.</td>
</tr>
</tbody>
</table>

Usage Information
If you configure a TELNET client to use a specific VRF, then you need not explicitly specify the same VRF during the TELNET client sessions corresponding to that VRF.

Example
Dell(conf)#ip telnet vrf vrf1
Dell(conf)#do telnet 10.10.10.2
Dell(conf)#no ip telnet vrf vrf1

ip tftp source-interface

Assign an interface’s IP address in outgoing packets for TFTP traffic.

Z9000

Syntax
ip tftp source-interface interface

To return to the default setting, use the no ip tftp source-interface interface command.

Parameters
interface

Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults
The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

### ip tftp vrf

Configures an TFTP client with a VRF that is used to connect to the TFTP server.

**Syntax**

```
ip tftp [vrf vrf-name]
```

To undo the TFTP client configuration, use the `no ip tftp [vrf vrf-name]` command.

**Parameters**

- **vrf vrf-name**
  - Enter the keyword `vrf` and then the name of the VRF to specify the VRF that is used by the TFTP client.

**Defaults**

Disabled

**Command Modes**

CONFIGURATION

**Usage Information**

Use this command to make the TFTP clients VRF aware. The VRF name that you specify is used by the TFTP client to reach the TFTP server. If no VRF is specified, then the default VRF is used.

**Related Commands**

- `ftp-server topdir` — sets the directory to be used for incoming FTP connections.
- `ftp-server username` — sets a username and password for incoming FTP connections.

### line

Enable and configure console and virtual terminal lines to the system. This command accesses LINE mode, where you can set the access conditions for the designated line.

**Syntax**

```
line {aux 0 | console 0 | vty number [end-number]}
```

**Parameters**

- **aux 0**
  - Enter the keyword `aux 0` to configure the auxiliary terminal connection.

- **console 0**
  - Enter the keyword `console 0` to configure the console port. The console option for the S-Series is `<0-0>`. 
**vty number**

Enter the keyword `vty` then a number from 0 to 9 to configure a virtual terminal line for remote sessions. The system supports 10 remote sessions.

**end-number**

(Optional) Enter a number from 1 to 9 as the last virtual terminal line to configure. You can configure multiple lines at one time.

**Defaults**

Not configured

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>E-Series</td>
<td>Original command</td>
</tr>
</tbody>
</table>

**Usage Information**

You cannot delete a terminal connection.

**Related Commands**

- **access-class** — restricts the incoming connections to a particular IP address in an IP access control list (ACL).
- **password** — specifies a password for users on terminal lines.

---

**motd-banner**

Enable a message of the day (MOTD) banner to appear when you log in to the system.

**Syntax**

```
motd-banner
```

To disable the MOTD banner, use the `no motd-banner` command.

**Defaults**

Enabled on all lines.

**Command Modes**

LINE

102  Control and Monitoring
### ping

Test connectivity between the system and another device by sending echo requests and waiting for replies.

**Syntax**

```
ping [host | ip-address | ipv6-address] [count {number | continuous}] [datagram-size] [timeout] [source (ip src-ipv4-address) | interface] [tos] [df-bit {y|n}] [validate-reply(y|n)] [outgoing-interface] [pattern pattern] [sweep-min-size] [sweep-max-size] [sweep-interval] [interface (ip src-ipv4-address) | interface]
```

**Parameters**

- **host** (OPTIONAL) Enter the host name of the devices to which you are testing connectivity.
- **ip-address** (OPTIONAL) Enter the IPv4 address of the device to which you are testing connectivity. The address must be in the dotted decimal format.
- **ipv6-address** (OPTIONAL) Enter the IPv6 address, in the x:x:x:x::x format, to which you are testing connectivity.  
  
  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.  

- **count** Enter the number of echo packets to be sent. The default is 5.  
  - number: from 1 to 2147483647  
  - continuous: transmit echo request continuously

- **datagram size** Enter the ICMP datagram size. The range is from 36 to 15360 bytes. The default is 100.

- **timeout** Enter the interval to wait for an echo reply before timing out. The range is from 0 to 3600 seconds. The default is 2 seconds.

- **source** Enter the IPv4 or IPv6 source ip address or the source interface. For IPv6 addresses, you may enter global addresses only. Enter the IP address in A.B.C.D format.  
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.  
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.  
  - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.  
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.  
  - For a Tunnel interface, enter the keyword tunnel then a number from 1 to 16383.

- **tos** (IPv4 only) Enter the type of service required. The range is from 0 to 255. The default is 0.

- **df-bit** (IPv4 only) Enter y or n for the “don’t fragment” bit in IPv4 header.  
  - n: Do not set the “don’t fragment” bit.  
  - y: Do set “don’t fragment” bit  
  
  Default is No.

- **validate-reply** (IPv4 only) Enter y or n for reply validation.
Do not validate reply data.

Y: Do validate reply data.

Default is No.

**outgoing-interface**

(IPv6 link-local address) Enter the outgoing interface for ping packets to a destination link-local address.

**pattern pattern**

(IPv4 only) Enter the IPv4 data pattern. Range: 0-FFFF. Default: 0xABCD.

**sweep-min-size**

Enter the minimum size of datagram in sweep range. The range is from 52 to 15359 bytes.

**sweep-max-size**

Enter the maximum size of datagram in sweep range. The range is from 53 to 15359 bytes.

**sweep-interval**

Enter the incremental value for sweep size. The range is from 1 to 15308 seconds.

**interface**

(IPv4 only) Enter the outgoing interface for multicast packets. Enter the IP address in A.B.C.D format.

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

<tr>
<td>8.5.1.0</td>
<td>Added support for 4-port 40G line cards on the ExaScale.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>IPv6 pinging available on management interface.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Introduced extended ping options.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the E-Series ExaScale (IPv6).</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale (IPv4).</td>
</tr>
<tr>
<td>7.9.1.0</td>
<td>Introduced VRF.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Added support for IPv6 address on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

When you enter the `ping` command without specifying an IP/IPv6 address (Extended Ping), you are prompted for a target IP/IPv6 address, a repeat count, a datagram size (up to 1500 bytes), a timeout (in
seconds), and for Extended Commands. For information on the ICMP message codes that return from a ping command, refer to ICMP Message Types.

The following table provides descriptions for the ping command status response symbols displayed in the output.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>!</td>
<td>Each exclamation point indicates receipt of a reply.</td>
</tr>
<tr>
<td>.</td>
<td>Each period indicates the network server timed out while waiting for a reply.</td>
</tr>
<tr>
<td>U</td>
<td>A destination unreachable error PDU was received.</td>
</tr>
<tr>
<td>Q</td>
<td>Source quench (destination too busy).</td>
</tr>
<tr>
<td>M</td>
<td>Could not fragment.</td>
</tr>
<tr>
<td>?</td>
<td>Unknown packet type.</td>
</tr>
<tr>
<td>&amp;</td>
<td>Packet lifetime exceeded.</td>
</tr>
</tbody>
</table>

**Example (IPv4)**

```
Dell#ping 172.31.1.255
Type Ctrl-C to abort.
Sending 5, 100-byte ICMP Echos to 172.31.1.255, timeout is 2 seconds:
Reply to request 1 from 172.31.1.208 0 ms
Reply to request 1 from 172.31.1.216 0 ms
Reply to request 1 from 172.31.1.205 16 ms
:
Reply to request 5 from 172.31.1.209 0 ms
Reply to request 5 from 172.31.1.66 0 ms
Reply to request 5 from 172.31.1.87 0 ms
Dell#
```

**Example (IPv6)**

```
Dell#ping 100::1
Type Ctrl-C to abort.
Sending 5, 100-byte ICMP Echos to 100::1, timeout is 2 seconds:
!!!!!
Success rate is 100.0 percent (5/5), round-trip min/avg/max = 0/0/0 (ms)
Dell#
```

**reload**

Reboot Dell Networking Operating System (OS).

**Syntax**

```
reload [conditional nvram-cfg-change]
```

**Parameters**

- `conditional nvram-cfg-change`: Reload if the condition is true. A configuration change to the nvram requires a switch reload. To reload the switch, select `nvram-cfg-change`.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
Version Description
9.0.0.0 Introduced on the Z9000.
9.1(0.0) Added 'conditional' parameter.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
E-Series Original command.

Usage Information
If there is a change in the configuration, FTOS prompts you to save the new configuration. Or you can save your running configuration with the `copy running-config` command. Use the conditional parameter if any configuration changes made to the nvram, such as stack-group and fanout configurations, must be saved.

send

Send messages to one or all terminal line users.

**Syntax**
```
send [*] | [line ] | [console] | [vty]
```

**Parameters**
- `*` Enter the asterisk character * to send a message to all tty lines.
- `line` Send a message to a specific line. The range is from 0 to 11.
- `console` Enter the keyword `console` to send a message to the primary terminal line.
- `vty` Enter the keyword `vty` to send a message to the virtual terminal.

**Defaults**
none

**Command Modes**
EXEC

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
Messages can contain an unlimited number of lines; however, each line is limited to 255 characters. To move to the next line, use `<CR>`. To send the message use `CTR-Z`; to abort a message, use `CTR-C`. 
service timestamps

To debug and log messages, add time stamps. This command adds either the uptime or the current time and date.

**Syntax**

```
service timestamps [debug | log] [datetime [localtime] [msec] [show-timezone] | uptime]
```

To disable timestamping, use the `no service timestamps [debug | log]` command.

**Parameters**

- **debug** (OPTIONAL) Enter the keyword `debug` to add timestamps to debug messages.
- **log** (OPTIONAL) Enter the keyword `log` to add timestamps to log messages with severity from 0 to 6.
- **datetime** (OPTIONAL) Enter the keyword `datetime` to have the current time and date added to the message.
- **localtime** (OPTIONAL) Enter the keyword `localtime` to include the localtime in the timestamp.
- **msec** (OPTIONAL) Enter the keyword `msec` to include milliseconds in the timestamp.
- **show-timezone** (OPTIONAL) Enter the keyword `show-timezone` to include the time zone information in the timestamp.
- **uptime** (OPTIONAL) Enter the keyword `uptime` to have the timestamp based on time elapsed since system reboot.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>

</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td><strong>E-Series</strong></td>
<td>Original command.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you do not specify parameters and enter service timestamps, it appears as service timestamps debug uptime in the running-configuration.

To view the current options set for the `service timestamps` command, use the `show running-config` command.

show alarms

View alarms currently active in the system.

**Syntax**

```
show alarms [threshold]
```
Parameters

threshold  (OPTIONAL) Enter the keyword threshold to display the temperature thresholds in Celsius for each level.

Command Modes

- EXEC
- EXEC Privilege

</tr>
</tbody>
</table>

Example

Dell# show alarms
-- Minor Alarms --
Alarm Type Duration
----------------------------------------------
RPM 0 PEM A failed or rmvd 7 hr, 37 min
SFM 0 PEM A failed or rmvd 7 hr, 37 min
SFM 1 PEM A failed or rmvd 7 hr, 37 min
SFM 2 PEM A failed or rmvd 7 hr, 37 min
SFM 3 PEM A failed or rmvd 7 hr, 37 min
SFM 4 PEM A failed or rmvd 7 hr, 37 min
SFM 5 PEM A failed or rmvd 7 hr, 37 min
SFM 6 PEM A failed or rmvd 7 hr, 37 min
SFM 7 PEM A failed or rmvd 7 hr, 36 min
stack-unit 1 PEM A failed or rmvd 7 hr, 36 min
stack-unit 4 PEM A failed or rmvd 7 hr, 36 min
only 8 SFMs in chassis 7 hr, 35 min

-- Major Alarms --
Alarm Type Duration
----------------------------------------------
No major alarms
Dell#

show cam-acl-vlan

Display the block sizes allocated for the VLAN CAM ACL.

Syntax

show cam-acl-vlan

Command Modes

EXEC
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series and E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

One trace log message is generated for each command. No password information is saved to this file. A command-history trace log is saved to a file after an RPM failover. Dell Networking TAC analyzes this file to help identify the root cause of an RPM failover.

**Example**

Dell#show command-history
[11/20 15:47:22]: CMD-(CLI):[service password-encryption]by default from console
- Repeated 3 times.
[11/20 15:47:23]: CMD-(CLI):[service timestamps log datetime]by default from console
[11/20 15:47:23]: CMD-(CLI):[enable password 7 ******]by default from console
[11/20 15:47:23]: CMD-(CLI):[username admin password 7 ******]by default from console
[11/20 15:47:23]: CMD-(CLI):[enable restricted 7 ******]by default from console
[11/20 15:47:23]: CMD-(CLI):[protocol spanning-tree rstp]by default from console
[11/20 15:47:23]: CMD-(CLI):[no disable]by default from console
[11/20 15:47:23]: CMD-(CLI):[interface tengigabitethernet 1/1]by default from console
show command-tree

Display the entire CLI command tree, and optionally, display the utilization count for each command and its options.

Syntax

```
show command-tree [count | no]
```

Parameters

- **count**: Display the command tree with a usage counter for each command.
- **no**: Display all of the commands that may be preceded by the keyword `no`, which is the keyword used to remove a command from the running-configuration.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>

</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

Reload the system to reset the command-tree counters.
show cpu-traffic-stats

View the CPU traffic statistics.

Syntax

show cpu-traffic-stats [port number | all | cp ]

Parameters

port number  (OPTIONAL) Enter the port number to display traffic statistics on that port only. The range is from 1 to 1568.

all  (OPTIONAL) Enter the keyword all to display traffic statistics on all the interfaces receiving traffic, sorted based on the traffic.

cp  (OPTIONAL) Enter the keyword cp to display traffic statistics on the specified CPU.

Defaults

all

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>

<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
Usage Information
Traffic statistics are sorted on a per-interface basis; the interface receiving the most traffic is displayed first. All CPU and port information is displayed unless a specific port or CPU is specified. Traffic information is displayed for router ports only; not for management interfaces. The traffic statistics are collected only after the debug cpu-traffic-stats command is executed; not from the system bootup.

**NOTE:** After debugging is complete, use the no debug cpu-traffic-stats command to shut off traffic statistics collection.

Example

```
Dell#show cpu-traffic-stats
Processor: CP
----------------------
Received 100% traffic on TenGigabitEthernet 8/2 Total packets:100
LLC:0, SNAP:0, IP:100, ARP:0, other:0
Unicast:100, Multicast:0, Broadcast:0
Processor: RP1
----------------------
Received 62% traffic on TenGigabitEthernet 8/2 Total packets:500
LLC:0, SNAP:0, IP:500, ARP:0, other:0
Unicast:500, Multicast:0, Broadcast:0
Received 37% traffic on TenGigabitEthernet 8/1 Total packets:300
LLC:0, SNAP:0, IP:300, ARP:0, other:0
Unicast:300, Multicast:0, Broadcast:0
Processor: RP2
----------------------
No CPU traffic statistics.
Dell#
```

**show debugging**

View a list of all enabled debugging processes.

**Syntax**

```
show debugging
```

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series</td>
</tr>
</tbody>
</table>

**E-Series**

Original command.

Example

```
Dell#show debug
Generic IP:
  IP packet debugging is on for
      ManagementEthernet 0/0
      Port-channel 1-2
```
show inventory

Display the S-Series or Z-Series switch type, components (including media), and Dell Networking Operating System (OS), including hardware identification numbers and configured protocols.

Syntax

show inventory [media slot]

Parameters

- **media slot** (OPTIONAL) Enter the keyword media then the stack ID of the stack member for which you want to display pluggable media inventory.

**NOTE:** This parameter is available but not supported in Dell Networking Operating System version 8.3.11.4. Because stacking is not supported, if you use this parameter, the output displays “Media not present or accessible.”

Defaults

- none

Command Modes

- CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.4</td>
<td>Output expanded to include Piece Part ID (PPID) and eSR4 optics.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced this version of the command for S-Series. S-Series output differs from E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

- If there are no fiber ports in the unit, just the header under show inventory media displays. If there are fiber ports but no optics inserted, the output displays “Media not present or accessible.”

Example (S6000)

```
Dell#show inventory
System Type            : S6000
System Mode            : 1.0
Software Version       : 9-4(0-168)

Unit Type  Serial Number  Part Number  Rev  Piece Part ID
-------------------------------------------
* 0  S6000-01-FE-32T  NA           08YWFG  A00  CN-08YWFG-28298-39Q-0015

0 8 QSFP 40GBASE-CR4-1M APF12300017GEY Yes
0 9 QSFP 40GBASE-CR4-1M APF12300017GEY Yes
0 10 QSFP 40GBASE-CR4-1M APF12300017GEY Yes
```

### Related Commands
- `show interfaces` — displays the interface configuration.
- `show interfaces transceiver` — displays the physical status and operational status of an installed transceiver. The output also displays the transceiver’s serial number.

### show processes ipc flow-control

Display the single window protocol queue (SWPQ) statistics.

**Syntax**

```markdown
show processes ipc flow-control [cp]
```

**Parameters**

- `cp` (OPTIONAL) Enter the keyword `cp` to view the control processor’s SWPQ statistics.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

# of to / Timeout | Timeout count
# of Retr /Retries | Number of retransmissions
# msg Sent /Msg Sent/ | Number of messages sent
# msg Ackd /Ack Rcvd | Number of messages acknowledged
Retr /Available Retra | Number of retries left
Total / Max Retra | Number of retries allowed

Important Points:
- The SWP provides flow control-based reliable communication between the sending and receiving software tasks.
- A sending task enqueues messages into the SWP queue for a receiving task and waits for an acknowledgement.
- If no response is received within a defined period of time, the SWP timeout mechanism resubmits the message at the head of the FIFO queue.
- After retrying a defined number of times, the SWP-2-NOMORETIMEOUT timeout message is generated.
- In the S-Series example, a retry (Retries) value of zero indicates that the SWP mechanism reached the maximum number of retransmissions without an acknowledgement.

Example (S-Series)
```
Dell#show processes ipc flow-control ?
cp | Control Processor
    Pipe through a command
```

**show software ifm**

Display interface management (IFM) data.

**Syntax**
```
show software ifm {clients [summary] | ifagt number | ifcb interface | stack-unit unit-ID | trace-flags}
```

**Parameters**
- **clients** Enter the keyword clients to display IFM client information.
- **summary** (OPTIONAL) Enter the keyword summary to display brief information about IFM clients.
- **ifagt number** Enter the keyword ifagt then the number of an interface agent to display software pipe and IPC statistics.
- **ifcb interface** Enter the keyword ifcb then one of the following interface IDs then the slot/port information to display interface control block information for that interface:
  - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- **stack-unit unit-ID** Enter the keyword stack-unit then the stack member number to display IFM information for that unit.

**NOTE:** This option is only available on the S-Series.
trace-flags Enter the keyword `trace-flags` to display IFM information for internal trace flags.

Defaults none

```

show system

Display the status of all stack members or a specific member.

Syntax
```
show system [brief | stack-unit unit-id]
```

Parameters
- **brief** (OPTIONAL) Enter the keyword `brief` to view an abbreviated list of system information.
- **stack-unit unit-id** (OPTIONAL) Enter the keywords `stack-unit` then the stack member ID for information on the stack member. The unit ID range for the Z9000 is from 0 to 7.
- **stack-ports status | topology** (OPTIONAL) Enter the keywords `stack-ports` for information about the status or topology of the stack ports.

Command Modes
- EXEC
- EXEC Privilege
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

### Related Commands
- `show version` – displays the Dell Networking OS version.
- `show hardware stack-unit` – displays the data plane and management plane input and output statistics of a particular stack member.

### show tech-support

Display a collection of data from other `show` commands, necessary for Dell Networking technical support to perform troubleshooting.

#### Syntax

```
show tech-support [stack-unit unit-id | page]
```

#### Parameters

- **stack-unit**
  - (OPTIONAL) Enter the keywords `stack-unit` to view CPU memory usage for the stack member designated by `unit-id`. The unit ID range for the Z9000 is from 0 to 7.
- **page**
  - (OPTIONAL) Enter the keyword `page` to view 24 lines of text at a time. Press the SPACE BAR to view the next 24 lines. Press the ENTER key to view the next line of text.

  When using the pipe command (`|`), enter one of these keywords to filter command output. For details about filtering commands, refer to CLI Basics.

- **save**
  - Enter the keyword `save` to save the command output.

#### Command Modes

EXEC Privilege

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced <code>save</code> to the file options.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

#### Usage Information

Without the `page` or `stack-unit` option, the command output is continuous. To interrupt the command output, use Ctrl-z.

The `save` option works with other filtering commands. This allows you to save specific information of a `show` command. The `save` entry must always be the last option. For example: Dell#show tech-support | grep regular-expression | except regular-expression | find regular-expression | save flash://result
This display output is an accumulation of the same information that is displayed when you execute one of the following show commands:

- show version
- show clock
- show running-config
- show system stack-ports
- show interfaces
- show process memory
- show process cpu
- show file system
- show system
- show environment
- show ip traffic
- show ip management route
- show ip route summary
- show Inventory
- show log summary
- show command-history (last 20 commands)
- show log

Example (S-Series)

Dell#show tech-support ?
   page  Page through output
   stack-unit Unit Number
          | Pipe through a command
<cr>
Dell#show tech-support stack-unit 1 ?
          | Pipe through a command
<cr>
Dell#show tech-support stack-unit 1 | ?
   except Show only text that does not match a pattern
   find   Search for the first occurrence of a pattern
   grep   Show only text that matches a pattern
   no-more Don't paginate output
   save   Save output to a file

Dell#show tech-support stack-unit 1 | save ?
   flash:   Save to local file system (flash://filename (max 20 chars) )

Dell#show tech-support stack-unit 1 | save flash://LauraSave
Start saving show command report .......

Commands

**ssh-peer-stack-unit**

Open an SSH connection to the peer stack-unit.

**Syntax**

```
ssh-peer-stack-unit [-l username]
```

**Parameters**

`-l username` (OPTIONAL) Enter the keyword -l then your user name. The default is the user name associated with the terminal.

**Defaults**

Not configured.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
</tbody>
</table>
telnet

Connect through Telnet to a server. The Telnet client and server in Dell Networking support IPv4 and IPv6 connections. You can establish a Telnet session directly to the router or a connection can be initiated from the router.

Syntax

telnet {host | ip-address | ipv6-address prefix-length} [/source-interface]

Parameters

- **host**
  - Enter the name of a server.
- **ip-address**
  - Enter the IPv4 address in dotted decimal format of the server.
- **ipv6-address**
  - Enter the IPv6 address in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **source-interface** (OPTIONAL)
  - Enter the keywords /source-interface then the interface information to include the source interface. Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
    - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
    - For a Null interface, enter the keyword null then the Null interface number.
    - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
    - For Tunnel interface types, enter the keyword tunnel then the slot/port information. The range is from 1 to 16383.
    - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults

Not configured.

Command Modes

- EXEC
- EXEC Privilege

</tr>
</tbody>
</table>

### terminal length

Configure the number of lines displayed on the terminal screen.

**Syntax**

```
terminal length screen-length
```

**Parameters**

- `screen-length`  
  Enter a number of lines. Entering zero causes the terminal to display without pausing. The range is from 0 to 512.

**Defaults**

24 lines

**Command Modes**

- EXEC
- EXEC Privilege

### traceroute

View a packet’s path to a specific device.

**Syntax**

```
traceroute {host | ip-address | ipv6-address}
```

**Parameters**

- **host**
  - Enter the name of device.
- **ip-address**
  - Enter the IP address of the device in dotted decimal format.
- **ipv6-address**
  - Enter the IPv6 address, in the x:x:x:x::x format, to which you are testing connectivity.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

**Defaults**

- Timeout = 5 seconds
- Probe count = 3
- 30 hops max
- 40 byte packet size
- UDP port = 33434

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the E-Series ExaScale with IPv6.</td>
</tr>
</tbody>
</table>
**Version**  
**Description**  
8.1.1.0  Introduced on the E-Series ExaScale (IPv4 only).  
7.9.1.0  Introduced VRF.  
7.6.1.0  Added support for the S-Series.  
7.5.1.0  Introduced on the C-Series.  
7.4.1.0  Added support for IPv6 address on the E-Series.  
E-Series  Original command.  

### Usage Information

When you enter the `traceroute` command without specifying an IP address (Extended Traceroute), you are prompted for a target and source IP address, timeout (in seconds) (default is 5), a probe count (default is 3), minimum TTL (default is 1), maximum TTL (default is 30), and port number (default is 33434). To keep the default setting for those parameters, press the ENTER key.

For IPv6, you are prompted for a minimum hop count (default is 1) and a maximum hop count (default is 64).

### Example (IPv4)

```
Dell#traceroute www.Dell Networking.com  
Translating "www.Dell Networking.com"...domain server (10.11.0.1) [OK] 
Type Ctrl-C to abort.  
-----------------------------------------------  
Tracing the route to www.Dell Networking.com (10.11.84.18), 30 hops max, 40 byte packets  
-----------------------------------------------  
TTL Hostname      Probe1     Probe2     Probe3  
1   10.11.199.190 001.000 ms 001.000 ms 002.000 ms  
2   gwegress-sjc-02.Dell Networking.com (10.11.30.126) 005.000 ms 001.000 ms 001.000 ms  
001.000 ms 001.000 ms 001.000 ms  
3   fw-sjc-01.Dell Networking.com (10.11.127.254) 000.000 ms 000.000 ms 000.000 ms  
000.000 ms  
4   www.Dell Networking.com (10.11.84.18) 000.000 ms 000.000 ms 000.000 ms  
000.000 ms  
FTOS#  
```

### Example (IPv6)

```
Dell#traceroute 100::1  
Type Ctrl-C to abort.  
-----------------------------------------------  
Tracing the route to 100::1, 64 hops max, 60 byte packets  
-----------------------------------------------  
Hops Hostname Probe1    Probe2    Probe3  
1    100::1 000.000 ms 000.000 ms 000.000 ms  
FTOS#traceroute 3ffe:501::fff:100:201:e8ff:fe00:4c8b  
Type Ctrl-C to abort.  
-----------------------------------------------  
Tracing the route to 3ffe:501::fff:100:201:e8ff:fe00:4c8b, 64 hops max, 60 byte packets  
-----------------------------------------------  
Hops Hostname Probe1    Probe2    Probe3  
1    3ffe:501::fff:100:201:e8ff:fe00:4c8b 000.000 ms 000.000 ms 000.000 ms  
Dell#  
```

### Related Commands

- **ping** — tests the connectivity to a device.
**undebug all**

Disable all debug operations on the system.

**Syntax**

```
undebug all
```

**Defaults**

```
none
```

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**E-Series**

Original command

---

**virtual-ip**

Configure a virtual IP address for the active management interface. You can configure virtual addresses both for IPv4 and IPv6 independently.

**Syntax**

```
virtual-ip {ipv4-address | ipv6-address}
```

To return to the default, use the `no virtual-ip {ipv4-address | ipv6-address}` command.

**Parameters**

- **ipv4-address**
  - Enter the IP address of the active management interface in a dotted decimal format (A.B.C.D.).

- **ipv6-address**
  - Enter an IPv6 address of the active management interface, in the x:x:x:x::x format.

**Defaults**

```
none
```

**Command Modes**

CONFIGURATION

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>
You can configure both IPv4 and IPv6 virtual addresses simultaneously, but only one of each. Each time this command is issued, it replaces the previously configured address of the same family, IPv4 or IPv6. The no virtual-ip command takes an address/prefix-length argument, so that the desired address only is removed. If you enter the no virtual-ip command without any specified address, then both IPv4 and IPv6 virtual addresses are removed.

Related Commands

- **ip address** — assigns a primary and secondary IP address to the interface.

## write

Copy the current configuration to either the startup-configuration file or the terminal.

**Syntax**

```plaintext
write {memory compressed| terminal}
```

**Parameters**

- **memory**
  - Enter the keyword memory to copy the current running configuration to the startup configuration file. This command is similar to the copy running-config startup-config command.

- **compressed**
  - Enter the keyword compressed to write the operating configuration to the startup-config file in the compressed mode.

- **terminal**
  - Enter the keyword terminal to copy the current running configuration to the terminal. This command is similar to the show running-config command.

**Command Modes**

EXEC Privilege

<td>Original command.</td>
</tr>
</tbody>
</table>

**Usage Information**

The write memory command saves the running-configuration to the file labeled startup-configuration. When using a LOCAL CONFIG FILE other than the startup-config not named "startup-configuration" (for example, you used a specific file during the boot config command), the running-config is not saved to that file; use the copy command to save any running-configuration changes to that local file.
An authentication server must authenticate a client connected to an 802.1X switch port. Until the authentication, only extensible authentication protocol over LAN (EAPOL) traffic is allowed through the port to which a client is connected. After authentication is successful, normal traffic passes through the port.

The Dell Networking operating software supports remote authentication dial-in service (RADIUS) and active directory environments using 802.1X Port Authentication.

Important Points to Remember

Dell Networking operating software limits network access for certain users by using virtual local area network (VLAN) assignments. 802.1X with VLAN assignment has these characteristics when configured on the switch and the RADIUS server.

- If the primary RADIUS server becomes unresponsive, the authenticator begins using a secondary RADIUS server, if configured.
- If no VLAN is supplied by the RADIUS server or if you disable 802.1X authorization, the port configures in its access VLAN after successful authentication.
- If you enable 802.1X authorization but the VLAN information from the RADIUS server is not valid, the port returns to the Unauthorized state and remains in the configured access VLAN. This safeguard prevents ports from appearing unexpectedly in an inappropriate VLAN due to a configuration error. Configuration errors create an entry in Syslog.
- If you enable 802.1X authorization and all information from the RADIUS server is valid, the port is placed in the specified VLAN after authentication.
- If you enable port security on an 802.1X port with VLAN assignment, the port is placed in the RADIUS server assigned VLAN.
- If you disable 802.1X on the port, it returns to the configured access VLAN.
- When the port is in the Force Authorized, Force Unauthorized, or Shutdown state, it is placed in the configured access VLAN.
- If an 802.1X port is authenticated and put in the RADIUS server assigned VLAN, any change to the port access VLAN configuration does not take effect.
- The 802.1X with VLAN assignment feature is not supported on trunk ports, dynamic ports, or with dynamic-access port assignment through a VLAN membership.

debug dot1x

Display 802.1X debugging information.

Syntax
dot1x debug [all | auth-pae-fsm | backend-fsm | eapol-pdu] [interface interface]

Parameters
- all: Enable all 802.1X debug messages.
- auth-pae-fsm: Enable authentication PAE FSM debug messages.
- backend-fsm: Enable backend FSM debug messages.
- eapol-pdu: Enable the EAPOL frame trace and related debug messages.
- interface: Restricts the debugging information to an interface.

Defaults
Disabled

dot1x auth-fail-vlan

Configure an authentication failure VLAN for users and devices that fail 802.1X authentication.

Syntax
dot1x auth-fail-vlan vlan-id [max-attempts number]

Parameters
- vlan-id: Enter the VLAN Identifier. The range is from 1 to 4094.
- max-attempts number (OPTIONAL) Enter the keywords max-attempts followed number of attempts desired before authentication fails. The range is from 1 to 5. The default is 3.

Defaults
3 attempts

</tr>
</tbody>
</table>
### Usage Information

If the host responds to 802.1X with an incorrect login/password, the login fails. The switch attempts to authenticate again until the maximum attempts configured is reached. If the authentication fails after all allowed attempts, the interface moves to the authentication failed VLAN.

After the authentication VLAN is assigned, the port-state must be toggled to restart authentication. Authentication occurs at the next reauthentication interval (dot1x reauthentication).

Related Commands

- `dot1x port-control` — Enable port control on an interface
- `dot1x guest-vlan` — Configure a guest VLAN for limited access users or for devices that are not 802.1X capable.
- `show dot1x interface` — Display the 802.1X configuration of an interface.

### dot1x auth-server

Configure the authentication server to RADIUS.

**Syntax**

```plaintext
dot1x auth-server radius
```

</tbody>
</table>

The prerequisites for enabling MAB-only authentication on a port are:
- Enable 802.1X authentication globally on the switch and on the port (the dot1x authentication command).
- Enable MAC authentication bypass on the port (the dot1x mac-auth-bypass command).

In MAB-only authentication mode, a port authenticates using the host MAC address even though 802.1X authentication is enabled. If the MAB-only authentication fails, the host is placed in the guest VLAN (if configured).

To disable MAB-only authentication on a port, enter the no dot1x auth-type mab-only command.

**Related Commands**

- dot1x mac-auth-bypass — Enable MAC authentication bypass.

### dot1x authentication (Configuration)

Enable dot1x globally. Enable dot1x both globally and at the interface level.

**Syntax**

```
dot1x authentication
```

**Defaults**

Disabled

Related Commands

dot1x authentication (Configuration) — Enables dot1x globally.

dot1x guest-vlan

Configure a guest VLAN for limited access users or for devices that are not 802.1X capable.

Syntax

dot1x guest-vlan vlan-id

To disable the guest VLAN, use the no dot1x guest-vlan vlan-id command.

Parameters

vlan-id Enter the VLAN Identifier. The range is from 1 to 4094.

Defaults

Not configured.

Command Modes

CONFIGURATION (conf-if-interface-slot/port)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
1X authentication is enabled when an interface is connected to the switch. If the host fails to respond within a designated amount of time, the authenticator places the port in the guest VLAN. If a device does not respond within 30 seconds, it is assumed that the device is not 802.1X capable. Therefore, a guest VLAN is allocated to the interface and authentication, for the device, occurs at the next reauthentication interval (dot1x reauthentication).

If the host fails authentication for the designated number of times, the authenticator places the port in authentication failed VLAN (dot1x auth-fail-vlan).

NOTE: You can create the Layer 3 portion of a guest VLAN and authentication fail VLANs regardless if the VLAN is assigned to an interface or not. After an interface is assigned a guest VLAN (which has an IP address), routing through the guest VLAN is the same as any other traffic. However, the interface may join/leave a VLAN dynamically.

Related Commands

- `dot1x auth-fail-vlan` — Configure an authentication failure VLAN.
- `dot1x reauthentication` — Enable periodic re-authentication of the client.
- `dot1x reauth-max` — Configure the maximum number of times to re-authenticate a port before it becomes unauthorized.

## dot1x host-mode

Enable single-host or multi-host authentication.

```
dot1x host-mode {single-host | multi-host | multi-auth}
```

**Parameters**

- `single-host`: Enable single-host authentication.
- `multi-host`: Enable multi-host authentication.

**Defaults**

```
single-host
```

**Command Modes**

```
INTERFACE
```

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000–ON.
9.0.2.0 | Introduced on the S6000.
9.0.0.0 | Introduced on the Z9000.
8.3.19.0 | Introduced on the S4820T.
8.3.12.0 | Introduced on the S4810.
8.3.11.1 | Introduced on the Z9000.
8.4.1.0 | Added the `multi-auth` option on the C-Series and S-Series.
Version Description
8.3.2.0 Added the single-host and multi-host options on the C-Series, E-Series, and S-Series.

Usage Information
- Single-host mode authenticates only one host per authenticator port and drops all other traffic on the port.
- Multi-host mode authenticates the first host to respond to an Identity Request and then permits all other traffic on the port.
- Multi-supplicant mode authenticates every device attempting to connect to the network on the authenticator port.

Related Commands
- show dot1x interface — Display the 802.1X configuration of an interface.

dot1x mac-auth-bypass

Enable MAC authentication bypass. If 802.1X times out because the host did not respond to the Identity Request frame, Dell Networking OS attempts to authenticate the host based on its MAC address.

Syntax
dot1x mac-auth-bypass

To disable MAC authentication bypass on a port, use the no dot1x mac-auth-bypass command.

Defaults Disabled

Command Modes INTERFACE

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000–ON.
9.0.2.0 Introduced on the S6000.
9.0.0.0 Introduced on the Z9000.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.
8.3.11.1 Introduced on the Z9000.
8.4.1.0 Introduced on the C-Series and S-Series.

Usage Information
To disable MAC authentication bypass on a port, enter the no dot1x mac-auth-bypass command.

dot1x max-eap-req

Configure the maximum number of times an extensive authentication protocol (EAP) request is transmitted before the session times out.

Syntax
dot1x max-eap-req number

To return to the default, use the no dot1x max-eap-req command.

Parameters
number

Enter the number of times an EAP request is transmitted before a session time-out.

The range is from 1 to 10. The default is 2.

Defaults 2
dot1x max-supplicants

Restrict the number of supplicants that can be authenticated and permitted to access the network through the port. This configuration is only takes effect in Multi-auth mode.

Syntax

dot1x max-supplicants number

Parameters

number

Enter the number of supplicants that can be authenticated on a single port in Multi-auth mode. The range is from 1 to 128. The default is 128.

Defaults

128 hosts can be authenticated on a single authenticator port.

Related Commands

dot1x host-mode — Enables single-host or multi-host authentication.

dot1x port-control

Enable port control on an interface.

Syntax

dot1x port-control {force-authorized | auto | force-unauthorized}
**Parameters**

- **force-authorized**: Enter the keywords `force-authorized` to forcibly authorize a port.
- **auto**: Enter the keyword `auto` to authorize a port based on the 802.1X operation result.
- **force-unauthorized**: Enter the keywords `force-unauthorized` to forcibly de-authorize a port.

**Defaults**

- **none**

**Command Modes**

- **Auto**

</tbody>
</table>

**Usage Information**

The authenticator completes authentication only when you set `port-control` to `auto`.

---

**dot1x quiet-period**

Set the number of seconds that the authenticator remains quiet after a failed authentication with a client.

**Syntax**

```
dot1x quiet-period seconds
```

To disable quiet time, use the `no dot1x quiet-period` command.

**Parameters**

- **seconds**: Enter the number of seconds. The range is from 1 to 65535. The default is **60**.

**Defaults**

- **60 seconds**

<td>Introduced on the C-Series and S-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you configure the `dot1x server-timeout` value, take into account the communication medium used to communicate with an authentication server and the number of RADIUS servers configured. Ideally, the `dot1x server-timeout` value (in seconds) is based on the configured RADIUS-server timeout and retransmit values and calculated according to the following formula:

```
dot1x server-timeout seconds > (radius-server retransmit seconds + 1) * radius-server timeout seconds.
```

Where the default values are as follows: `dot1x server-timeout` (30 seconds), radius-server retransmit (3 seconds), and radius-server timeout (5 seconds).

**Example**

```
Dell(conf)#radius-server host 10.11.197.105 timeout 6
Dell(conf)#radius-server host 10.11.197.105 retransmit 4
Dell(conf)#interface tengigabitethernet 2/23
Dell(conf-if-te-2/23)#dot1x server-timeout 40
```
**dot1x supplicant-timeout**

Configure the amount of time after which exchanges with the supplicant time-out.

**Syntax**

```
dot1x supplicant-timeout seconds
```

To return to the default, use the `no dot1x supplicant-timeout` command.

**Parameters**

- `seconds` Enter a time-out value in seconds. The range is from 1 to 300, where 300 is implementation dependant. The default is 30.

**Defaults**

30 seconds

show dot1x cos-mapping interface

Display the CoS priority-mapping table the RADIUS server provides and applies to authenticated supplicants on an 802.1X-enabled system.

Syntax

```
show dot1x cos-mapping interface [interface mac-address]
```

Parameters

- **interface**
  - Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- **mac-address**
  - (Optional) MAC address of an 802.1X-authenticated supplicant.

Defaults

```
none
```

Command Modes

- EXEC
- EXEC privilege

</tbody>
</table>

Usage Information

Enter a supplicant’s MAC address using the `mac-address` option to display CoS mapping information only for the specified supplicant.

You can display the CoS mapping information applied to traffic from authenticated supplicants on 802.1X-enabled ports that are in Single-Hot, Multi-Host, and Multi-Supplicant authentication modes.

Example

```
Dell#show dot1x cos-mapping interface tengigabitethernet 1/32
802.1p CoS re-map table on Te 1/32:
---------------------------------------
Dot1p      Remapped Dot1p
0          7
1          6
2          5
3          4
4          3
5          2
6          1
```
show dot1x interface

Display the 802.1X configuration of an interface.

**Syntax**

```
show dot1x interface interface [mac-address mac-address]
```

**Parameters**

- **interface**
  - Enter one of the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- **mac-address**
  - (Optional) MAC address of a supplicant.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC privilege

Dell#
Access Control Lists (ACL)

Access control lists (ACLs) are supported by the Dell Networking OS.

Dell Networking OS supports the following types of ACL, IP prefix list, and route maps:

- Commands Common to all ACL Types
- Common IP ACL Commands
- Standard IP ACL Commands
- Extended IP ACL Commands
- Common MAC Access List Commands
- Standard MAC ACL Commands
- Extended MAC ACL Commands
- IP Prefix List Commands
- Route Map Commands
- AS-Path Commands
- IP Community List Commands

**NOTE:** For ACL commands that use the Trace function, refer to the Trace List Commands section in the Security chapter.

**NOTE:** For IPv6 ACL commands, refer to IPv6 Access Control Lists (IPv6 ACLs).

Topics:

- Commands Common to all ACL Types
- Common IP ACL Commands
- Standard IP ACL Commands
- Extended IP ACL Commands
- Common MAC Access List Commands
- Standard MAC ACL Commands
- Extended MAC ACL Commands
- IP Prefix List Commands
- Route Map Commands
- AS-Path Commands
- IP Community List Commands
- deny (for Standard IP ACLs)
- deny (for Extended IP ACLs)
- seq (for Standard IPv4 ACLs)
- deny tcp (for Extended IP ACLs)
- deny udp (for Extended IP ACLs)
- deny arp (for Extended MAC ACLs)
- deny icmp (for Extended IP ACLs)
- deny ether-type (for Extended MAC ACLs)
- deny (for Standard MAC ACLs)
- deny (for Extended MAC ACLs)
- permit (for Standard IP ACLs)
- permit arp (for Extended MAC ACLs)
- permit ether-type (for Extended MAC ACLs)
- permit icmp (for Extended IP ACLs)
- permit udp (for Extended IP ACLs)
- permit (for Extended IP ACLs)
- permit (for Standard MAC ACLs)
- seq (for Standard MAC ACLs)
- permit tcp (for Extended IP ACLs)
• seq arp (for Extended MAC ACLs)
• seq ether-type (for Extended MAC ACLs)
• seq (for IP ACLs)
• seq (for IPv6 ACLs)
• permit udp (for IPv6 ACLs)
• permit tcp (for IPv6 ACLs)
• permit icmp (for IPv6 ACLs)
• permit (for IPv6 ACLs)
• deny udp (for IPv6 ACLs)
• deny tcp (for IPv6 ACLs)
• deny icmp (for Extended IPv6 ACLs)
• deny (for IPv6 ACLs)

Commands Common to all ACL Types

The following commands are available within each ACL mode and do not have mode-specific options. Some commands in this chapter may use similar names, but require different options to support the different ACL types (for example, the `deny` and `permit` commands).

**remark**

Enter a description for an ACL entry.

**Syntax**

`remark [remark-number] [description]`

**Parameters**

- `remark-number` Enter the remark number. The range is from 0 to 4294967290.

  **NOTE:** You can use the same sequence number for the remark and an ACL rule.

- `description` Enter a description of up to 80 characters.

**Defaults**

Not configured.

**Command Modes**

- CONFIGURATION-STANDARD-ACCESS-LIST
- CONFIGURATION-EXTENDED-ACCESS-LIST
- CONFIGURATION-MAC ACCESS LIST-STANDARD
- CONFIGURATION-MAC ACCESS LIST-EXTENDED

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
The remark command is available in each ACL mode. You can configure up to 4294967290 remarks in a given ACL.

The following example shows the use of the remark command twice within CONFIGURATION-STANDARD-ACCESS-LIST mode. The same sequence number was used for the remark and for an associated ACL rule. The remark precedes the rule in the running-config because it is assumed that the remark is for the rule with the same sequence number, or the group of rules that follow the remark.

Example

```
Dell(config-std-nacl)#remark 10 Deny rest of the traffic
Dell(config-std-nacl)#remark 5 Permit traffic from XYZ Inc.
Dell(config-std-nacl)#show config
!
ip access-list standard test
remark 5 Permit traffic from XYZ Inc.
seq 5 permit 1.1.1.0/24 count
remark 10 Deny rest of the traffic
seq 10 Deny any
Dell(config-std-nacl)#
```

Related Commands

show config — displays the current ACL configuration.

show config

Display the current ACL configuration.

Syntax

```
show config
```

Command Modes

- CONFIGURATION-STANDARD-ACCESS-LIST
- CONFIGURATION-EXTENDED-ACCESS-LIST
- CONFIGURATION-MAC ACCESS LIST-STANDARD
- CONFIGURATION-MAC ACCESS LIST-EXTENDED

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Example

```
Dell(config-std-nacl)#show conf
!
ip access-list standard test
remark 5 Permit traffic from XYZ Inc.
seq 5 permit 1.1.1.0/24 count
remark 10 Deny traffic from ABC
seq 10 deny 2.1.1.0/24 count
Dell(config-std-nacl)#
```
Common IP ACL Commands

The following commands are available within both Ingress and Egress IP ACL modes (Standard and Extended) and do not have mode-specific options. When an ACL is created without a rule and then is applied to an interface, ACL behavior reflects an implicit permit.

The Z9000 supports both Ingress and Egress IP ACLs.

NOTE: Also refer to the Commands Common to all ACL Types section.

access-class

Apply a standard ACL to a terminal line.

Syntax

access-class access-list-name

To remove an ACL, use the no access-class access-list-name command.

Parameters

access-list-name Enter the name of a configured Standard ACL, up to 140 characters.

Defaults

Not configured.

Command Modes

LINE

Command History

</tr>
</tbody>
</table>

clear counters ip access-group

Erase all counters maintained for access lists.

Syntax

clear counters ip access-group [access-list-name]

Parameters

access-list-name (OPTIONAL) Enter the name of a configured access-list, up to 140 characters.

Command Modes

EXEC Privilege

Command History

</table>
### ip access-group

Assign an IP access list (IP ACL) to an interface.

**Syntax**
```
ip access-group access-list-name {in | out} [implicit-permit] [vlan vlan-id]
```

To delete an IP access-group configuration, use the `no ip access-group access-list-name {in | out} [implicit-permit] [vlan vlan-id]` command.

**Parameters**
- `access-list-name`: Enter the name of a configured access list, up to 140 characters.
- `in`: Enter the keyword `in` to apply the ACL to incoming traffic.
- `out`: Enter the keyword `out` to apply the ACL to outgoing traffic.
- `implicit-permit`: (OPTIONAL) Enter the keyword `implicit-permit` to change the default action of the ACL from implicit-deny to implicit-permit (that is, if the traffic does not match the filters in the ACL, the traffic is permitted instead of dropped).
- `vlan vlan-id`: (OPTIONAL) Enter the keyword `vlan` then the ID numbers of the VLANs. The range is from 1 to 4094 (you can use IDs from 1 to 4094).

**Defaults**
Not enabled.

**Command Modes**
```
INTERFACE/VRF MODE
```

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **9.0.2.0**
  Introduced on the S6000.

- **8.3.19.0**
  Introduced on the S4820T.

- **8.3.11.1**
  Introduced on the Z9000.

- **8.3.7.0**
  Introduced on the S4810.

- **8.1.1.0**
  Introduced on the E-Series ExaScale.

- **7.8.1.0**
  Increased the name string to accept up to 140 characters. Prior to 7.8.1.0, names were up to 16 characters long.

- **7.6.1.0**
  Introduced on the S-Series.

- **7.5.1.0**
  Introduced on the C-Series.

- **6.2.1.1**
  Introduced on the E-Series.
6.2.1.1 Introduced on the E-Series.

Usage Information
You can assign one ACL (standard or extended ACL) to an interface.

**NOTE:** This command supports Loopback interfaces EE3 and EF series route processor modules (RPMs). This command does not support Loopback interfaces ED series RPMs and S-Series Loopback interfaces.

**NOTE:** If you apply outbound(egress) IP acl on a switch port, the filter applies only for routed traffic egressing out of that port.

Related Commands
ip access-list standard — configures a standard ACL.

ip access-list extended — configures an extended ACL.

**ip control-plane egress-filter**

Enable egress Layer 3 ACL lookup for IPv4 CPU traffic.

**Syntax**

```
ip control-plane egress-filter
```

**Defaults**
Not enabled.

**Command Modes**
EXEC Privilege

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>

</tr>
</tbody>
</table>

**show ip accounting access-list**

Display the IP access-lists created on the switch and the sequence of filters.

**Syntax**

```
show ip accounting {access-list access-list-name | cam_count} interface
```

**Parameters**

- **access-list-name** Enter the name of the ACL to be displayed.
- **cam_count** List the count of the CAM rules for this ACL.
- **interface** Enter the keyword interface then the one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- **in | out** Identify whether ACL is applied on the ingress or egress side.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Release Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.5.1.0</td>
<td>Added support for the 4-port 40G line cards on ExaScale.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

**show ip accounting access-lists Field**

- **“Extended IP...”** Displays the name of the IP ACL.
- **“seq 5...”** Displays the filter. If the keywords **count** or **byte** were configured in the filter, the number of packets or bytes the filter processes is displayed at the end of the line.
- **“order 4”** Displays the QoS order of priority for the ACL entry.

**Example**

```plaintext
Dell#show ip accounting access-list
!
Standard Ingress IP access list test on TenGigabitEthernet 0/88
Total cam count 2
  seq 5 permit 1.1.1.0/24 count (0 packets)
  seq 10 deny 2.1.1.0/24 count (0 packets)
```

**Standard IP ACL Commands**

When you create an ACL without any rule and then apply it to an interface, the ACL behavior reflects an implicit permit. The Z9000 supports both Ingress and Egress IP ACLs.

**NOTE:** Also refer to the Commands Common to all ACL Types and Common IP ACL Commands sections.

**deny**

To drop packets with a certain IP address, configure a filter.

**Syntax**

```
deny {source | any | host {ip-address}}
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no deny {source [mask] | any | host ip-address}` command.

**Parameters**

- **source**
  - Enter the IP address in dotted decimal format of the network from which the packet was sent.
- **any**
  - Enter the keyword **any** to specify that all routes are subject to the filter. You can enter any of the following keywords to specify route types:
    - **bytes** — Enter the keyword **count** to count packets the filter processes.
- count — Enter the keyword bytesorder to count bytes the filter processes.
- dscp — Enter the keyword dscp followed by the DCSP value to match to the IP DCSCP values. The range is from 0 to 63.
- fragments — Enter the keyword fragments to use ACLs to control packet fragments.
- order — Enter the keyword order to specify the QoS order of priority for the ACL entry. The range is from 0 to 254 (0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). The default is, if you do not use the keyword order, the ACLs have the lowest order by default (255).

**host ip-address**  Enter the keyword host and then enter the IP address to specify a host IP address only.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION-STANDARD-ACCESS-LIST

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Added the DSCP value for ACL matching.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Allows ACL control of fragmented packets for IP (Layer 3) ACLs.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Added support for the non-contiguous mask and added the monitor option.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

**Usage Information**
The `order` option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

The software cannot count both packets and bytes, so when you enter the `count byte` options, only bytes increment.

**Related Commands**
- **ip access-list standard** — configures a standard ACL.
- **permit** — configures a permit filter.

## ip access-list standard

Create a standard IP access list (IP ACL) to filter based on IP address.

**Syntax**

```
ip access-list standard access-list-name
```

To delete an access list, use the `no ip access-list standard access-list-name` command.

**Parameters**

- **access-list-name**  Enter a string up to 140 characters long as the ACL name.

**Defaults**
All IP access lists contain an implicit "deny any," that is, if no match occurs, the packet is dropped.
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.10.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Increased the name string to accept up to 140 characters.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Added support for the non-contiguous mask and added the monitor option.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

Dell Networking OS supports one ingress and one egress IP ACL per interface. Prior to Dell Networking OS version 7.8.1.0, names are up to 16 characters long. The number of entries allowed per ACL is hardware-dependent. For detailed specifications on entries allowed per ACL, refer to your line card documentation.

Example

```
Dell(conf)#ip access-list standard TestList
Dell(config std-nacl)#
```

Related Commands

- `ip access-list extended` — creates an extended access list.
- `show config` — displays the current configuration.

**permit**

To permit packets from a specific source IP address to leave the switch, configure a filter.

**Syntax**

```
permit {source [mask] | any | host ip-address}
```

**Parameters**

- `source` (required) Enter the IP address in dotted decimal format of the network from which the packet was sent.
- `mask` (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- `any` Enter the keyword any to specify that all routes are subject to the filter. You can enter any of the following keywords to specify route types.
  - `bytes` — Enter the keyword bytes to count bytes processed by the filter.
  - `count` — Enter the keyword count to count packets the filter processes.
  - `dscp` — Enter the keyword dscp to match to the IP DCSCP values.
  - `fragments` — Enter the keyword fragments to match to non-initial fragments of a datagram.
  - `monitor` — Enter the keyword monitor to monitor traffic on a port. For more information, refer to Port Monitoring.
**order** — Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).

host `ip-address` Enter the keyword `host` then the IP address to specify a host IP address or hostname.

**Defaults**

Not configured.

**Command Modes**

`CONFIGURATION-STANDARD-ACCESS-LIST`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Added support for the non-contiguous mask and added the <code>monitor</code> option.</td>
</tr>
<tr>
<td>6.5.10</td>
<td>Expanded to include the optional QoS <code>order</code> priority for the ACL entry.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `order` option is relevant in the context of the Policy QoS feature only. For more information, refer to the “Quality of Service” chapter of the Dell Networking OS Configuration Guide.

**Related Commands**

deny — assigns a IP ACL filter to deny IP packets.

ip access-list standard — creates a standard ACL.

**resequence access-list**

Re-assign sequence numbers to entries of an existing access-list.

**Syntax**

```
resequence access-list {ipv4 | ipv6 | mac} {access-list-name StartingSeqNum Step-to-Increment}
```

**Parameters**

- `ipv4 | ipv6 | mac` Enter the keyword `ipv4` or `ipv6` or `mac` to identify the access list type to resequence.
- `access-list-name` Enter the name of a configured IP access list.
- `StartingSeqNum` Enter the starting sequence number to resequence. The range is from 0 to 4294967290.
- `Step-to-Increment` Enter the step to increment the sequence number. The range is from 1 to 4294967290.

**Defaults**

None

**Command Modes**

- EXEC
- EXEC Privilege

**Related Commands**

- deny — assigns a IP ACL filter to deny IP packets.
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

When you have exhausted all the sequence numbers, this feature permits re-assigning a new sequence number to entries of an existing access-list.

**resequence prefix-list ipv4**

Re-assign sequence numbers to entries of an existing prefix list.

**Syntax**

```
resequence prefix-list ipv4 {prefix-list-name StartingSeqNum Step-to-Increment}
```

**Parameters**

- `prefix-list-name` Enter the name of the configured prefix list, up to 140 characters long.
- `StartingSeqNum` Enter the starting sequence number to resequence. The range is from 0 to 65535.
- `Step-to-Increment` Enter the step to increment the sequence number. The range is from 1 to 65535.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
When you have exhausted all the sequence numbers, this feature permits re-assigning a new sequence number to entries of an existing prefix list.

**Related Commands**

resequence access-list — resequences an access-list.

**seq**

Assign a sequence number to a deny or permit filter in an IP access list while creating the filter.

**Syntax**

```
seq sequence-number {deny | permit} {source [mask] | any | host ip-address} [count [bytes]] [dscp value] [order] [fragments]
```

To delete a filter, use the no seq sequence-number command.

**Parameters**

- `sequence-number` Enter a number from 0 to 4294967290. Enter a number from 0 to 4294967290.
- `deny` Enter the keyword deny to configure a filter to drop packets meeting this condition.
- `permit` Enter the keyword permit to configure a filter to forward packets meeting this criteria.
- `source` Enter an IP address in dotted decimal format of the network from which the packet was received.
- `mask` (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- `any` Enter the keyword any to specify that all routes are subject to the filter.
- `host ip-address` Enter the keyword host then the IP address to specify a host IP address or hostname.
- `count` (OPTIONAL) Enter the keyword count to count packets the filter processes.
- `bytes` (OPTIONAL) Enter the keyword bytes to count bytes the filter processes.
- `order` (OPTIONAL) Enter the keyword order to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).
- `dscp` (OPTIONAL) Enter the keyword dscp to match to the IP DCSCP values.
- `fragments` Enter the keyword fragments to use ACLs to control packet fragments.

</table>
### Extended IP ACL Commands

When an ACL is created without any rule and then applied to an interface, ACL behavior reflects an implicit permit. The following commands configure extended IP ACLs, which in addition to the IP address, also examine the packet’s protocol type.

The Z9000 supports both Ingress and Egress IP ACLs.

**NOTE:** Also refer to the [Commands Common to all ACL Types](#) and [Common IP ACL Commands](#) sections.

### deny

Configure a filter that drops IP packets meeting the filter criteria.

**Syntax**

```plaintext
deny {ip | ip-protocol-number} {source mask | any | host ip-address} {destination mask | any | host ip-address} [count [byte] | log] [dscp value] [order] [monitor] [fragments]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny {ip | ip-protocol-number} {source mask | any | host ip-address} {destination mask | any | host ip-address} command.

**Parameters**

- `ip`: Enter the keyword `ip` to configure a generic IP access list. The keyword `ip` specifies that the access list denies all IP protocols.
- `ip-protocol-number`: Enter a number from 0 to 255 to deny based on the protocol identified in the IP protocol header.
- `source`: Enter the IP address of the network or host from which the packets were sent.
- `mask`: Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or noncontiguous.

<td>Added support for the noncontiguous mask and added the monitor option.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

Usage Information
The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

When you use the log option, the CP processor logs detail the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets' details.

The monitor option is relevant in the context of flow-based monitoring only. For more information, refer to the Port Monitoring chapter.
The C-Series and S-Series cannot count both packets and bytes, when you enter the count byte options, only bytes are incremented.

**NOTE:** When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

**Related Commands**
- deny tcp — assigns a filter to deny TCP packets.
- deny udp — assigns a filter to deny UDP packets.
- ip access-list extended — creates an extended ACL.

### deny icmp

To drop all or specific internet control message protocol (ICMP) messages, configure a filter.

**Syntax**

```
deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [count [byte] [order] [fragments]
```

To remove this filter, you have two choices:
- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} command.

**Parameters**

- **source**
  - Enter the IP address of the network or host from which the packets were sent.
- **mask**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- **any**
  - Enter the keyword any to specify that all routes are subject to the filter.
- **host ip-address**
  - Enter the keyword host then the IP address to specify a host IP address.
- **destination**
  - Enter the IP address of the network or host to which the packets are sent.
- **dscp**
  - Enter this keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.
- **count**
  - (OPTIONAL) Enter the keyword count to count packets processed by the filter.
- **byte**
  - (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.
- **order**
  - (OPTIONAL) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower order numbers have a higher priority) If you did not use the keyword order, the ACLs have the lowest order by default (255).
- **fragments**
  - Enter the keyword fragments to use ACLs to control packet fragments.

**Defaults**

Not configured.

<td>Added support for non-contiguous mask and added the monitor option.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `order` option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

The `monitor` option is relevant in the context of flow-based monitoring only. For more information, refer to the Port Monitoring chapter.

When you use the `log` option, the CP processor logs details the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

**deny tcp**

Configure a filter that drops transmission control protocol (TCP) packets meeting the filter criteria.

**Syntax**

```plaintext
deny tcp {source mask | any | host ip-address} [bit] [operator port [port]]
(destination mask | any | host ip-address) [dscp] [bit] [operator port [port]]
[count [byte] [order] [fragments]]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny tcp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- **source**
  - Enter the IP address of the network or host from which the packets are sent.
- **mask**
  - Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- **any**
  - Enter the keyword `any` to specify that all routes are subject to the filter.
- **host ip-address**
  - Enter the keyword `host` then the IP address to specify a host IP address.
- **dscp**
  - Enter this keyword `dscp` to deny a packet based on the DSCP value. The range is from 0 to 63.
- **bit**
  - Enter a flag or combination of bits:
    - `ack`: acknowledgement field
    - `fin`: finish (no more data from the user)
    - `psh`: push function
    - `rst`: reset the connection
    - `syn`: synchronize sequence numbers
    - `urg`: urgent field
- **operator**
  - (OPTIONAL) Enter one of the following logical operand:
    - `eq = equal to`
    - `neq = not equal to`
    - `gt = greater than`
    - `lt = less than`
    - `range = inclusive range of ports (you must specify two ports for the port command)`
Enter the application layer port number. Enter two port numbers if using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:

- 23 = Telnet
- 20 and 21 = FTP
- 25 = SMTP
- 169 = SNMP

Enter the IP address of the network or host to which the packets are sent.

Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

(Optional) Enter the keyword count to count packets the filter processes.

(Optional) Enter the keyword byte to count bytes the filter processes.

(Optional) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority) If you did not use the keyword order, the ACLs have the lowest order by default (255).

Enter the keyword fragments to use ACLs to control packet fragments.

Not configured.

CONFIGURATION-EXTENDED-ACCESS-LIST

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Added the keyword dscp.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Allows ACL control of fragmented packets for IP (Layer 3) ACLs.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Added support for non-contiguous mask and added the monitor option. Deprecated the keyword established.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the Dell Networking OS Configuration Guide.

The monitor option is relevant in the context of flow-based monitoring only. For more information, refer to the Port Monitoring chapter.

When you use the log option, the CP processor logs details the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

The C-Series and S-Series cannot count both packets and bytes; when you enter the count byte options, only bytes are incremented.
NOTE: When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt, or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

Related Commands

deny — assigns a filter to deny IP traffic.
deny udp — assigns a filter to deny UDP traffic.

deny udp

To drop user datagram protocol (UDP) packets meeting the filter criteria, configure a filter.

Syntax

deny udp {source mask | any | host ip-address} [operator port [port]]
{destination mask | any | host ip-address} [dscp] [operator port [port]]
[count [byte] [order] [fragments]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny udp {source mask | any | host ip-address} {destination mask
  | any | host ip-address} command.

Parameters

- **source**
  Enter the IP address of the network or host from which the packets were sent.

- **mask**
  Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- **any**
  Enter the keyword any to specify that all routes are subject to the filter.

- **host ip-address**
  Enter the keyword host then the IP address to specify a host IP address.

- **dscp**
  Enter this keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.

- **operator**
  (OPTIONAL) Enter one of the following logical operand:
  - eq = equal to
  - neq = not equal to
  - gt = greater than
- \texttt{lt} = less than
- \texttt{range} = inclusive range of ports (you must specify two ports for the \texttt{port command})

\texttt{port port}

Enter the application layer port number. Enter two port numbers if using the range logical operand. The range is from 0 to 65535.

\texttt{destination}

Enter the IP address of the network or host to which the packets are sent.

\texttt{mask}

Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

\texttt{count}

(Optional) Enter the keyword \texttt{count} to count packets processed by the filter.

\texttt{byte}

(Optional) Enter the keyword \texttt{byte} to count bytes processed by the filter.

\texttt{order}

(Optional) Enter the keyword \texttt{order} to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority) If you did not use the keyword \texttt{order}, the ACLs have the lowest order by default (255).

\texttt{fragments}

Enter the keyword \texttt{fragments} to use ACLs to control packet fragments.

\textbf{Defaults}

Not configured.

\textbf{Command Modes}

CONFIGURATION-EXTENDED-ACCESS-LIST

\textbf{Command History}

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

\begin{tabular}{|l|l|}
\hline
\textbf{Version} & \textbf{Description} \\
\hline
9.7(0.0) & Introduced on the S6000--ON. \\
9.0.2.0 & Introduced on the S6000. \\
8.3.19.0 & Introduced on the S4820T. \\
8.3.11.1 & Introduced on the Z9000. \\
8.3.7.0 & Introduced on the S4810. \\
8.3.1.0 & Added the keyword \texttt{dscp}. \\
8.2.1.0 & Allows ACL control of fragmented packets for IP (Layer 3) ACLs. \\
8.1.1.0 & Introduced on the E-Series ExaScale. \\
7.6.1.0 & Introduced on the S-Series. \\
7.5.1.0 & Introduced on the C-Series. \\
7.4.1.0 & Added support for non-contiguous mask and added the \texttt{monitor} option. Deprecated the keyword \texttt{established}. \\
6.5.1.0 & Expanded to include the optional QoS \texttt{order} priority for the ACL entry. \\
\end{tabular}

\textbf{Usage Information}

The \texttt{order} option is relevant in the context of the Policy QoS feature only. For more information, refer to the Quality of Service chapter of the \textit{Dell Networking OS Configuration Guide}.

The \texttt{monitor} option is relevant in the context of flow-based monitoring only. For more information, refer to the Port Monitoring chapter.

When you use the \texttt{log} option, the CP processor logs details the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets' details.

The C-Series and S-Series cannot count both packets and bytes; when you enter the count byte options, only bytes are incremented.
NOTE: When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

Most ACL rules require one entry in the CAM. However, rules with TCP and UDP port operators (for example, gt, lt or range) may require more than one entry. The range of ports is configured in the CAM based on bit mask boundaries; the space required depends on exactly what ports are included in the range.

Example

An ACL rule with a TCP port range of 4000–8000 uses eight entries in the CAM.

Related Commands
deny — assigns a filter to deny IP traffic.
deny tcp — assigns a filter to deny TCP traffic.

ip access-list extended

Name (or select) an extended IP access list (IP ACL) based on IP addresses or protocols.

Syntax

ip access-list extended access-list-name

To delete an access list, use the no ip access-list extended access-list-name command.

Parameters

access-list-name Enter a string up to 140 characters long as the access list name.

Defaults

All access lists contain an implicit “deny any”; that is, if no match occurs, the packet is dropped.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>
### Version | Description
---|---
7.8.1.0 | Increased the name string to accept up to 140 characters. Prior to 7.8.1.0, names were up to 16 characters long.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
6.2.1.1 | Introduced on the E-Series.

### Usage Information
The number of entries allowed per ACL is hardware-dependent. For detailed specification about entries allowed per ACL, refer to your line card documentation. Prior to 7.8.1.0, names are up to 16 characters long.

### Example
```
Dell(conf)#ip access-list extended TESTListEXTEND
Dell(config-ext-nacl)#
```

### Related Commands
- `ip access-list standard` — configures a standard IP access list.
- `show config` — displays the current configuration.

### permit
To pass IP packets meeting the filter criteria, configure a filter.

#### Syntax
```
permit {source mask | any | host ip-address} {destination mask | any | host ip-address} [count [bytes]] [dscp value] [order] [fragments]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no deny {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

#### Parameters
- **source**
  - Enter the IP address in dotted decimal format of the network from which the packet was sent.
- **mask**
  - (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- **any**
  - Enter the keyword `any` to specify that all routes are subject to the filter.
- **host ip-address**
  - Enter the keyword `host` then the IP address to specify a host IP address or hostname.
- **destination**
  - Enter the IP address of the network or host to which the packets are sent.
- **count**
  - (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.
- **bytes**
  - (OPTIONAL) Enter the keyword `bytes` to count bytes processed by the filter.
- **dscp**
  - (OPTIONAL) Enter the keyword `dscp` to match to the IP DCSCP values.
- **order**
  - (OPTIONAL) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).
- **fragments**
  - Enter the keyword `fragments` to use ACLs to control packet fragments.

#### Defaults
Not configured.

#### Command Modes
- `CONFIGURATION-EXTENDED-ACCESS-LIST`

#### Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.4.1.0</td>
<td>Added support for the non-contiguous mask and added the monitor option.</td>
</tr>
<tr>
<td>6.5.10</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

**Usage Information**

The order option is relevant in the context of the Policy QoS feature only. For more information, refer to the “Quality of Service” chapter of the Dell Networking OS Configuration Guide.

The software cannot count both packets and bytes; when you enter the count byte options, only bytes are incremented.

**Related Commands**

- `ip access-list extended` — creates an extended ACL.
- `permit tcp` — assigns a permit filter for TCP packets.
- `permit udp` — assigns a permit filter for UDP packets.

**permit tcp**

To pass TCP packets meeting the filter criteria, configure a filter.

**Syntax**

```
permit tcp {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operator port [port]] [dscp] [operator port [port]] [count [byte] [order] [fragments]]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit tcp {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operator port [port]] [dscp] [operator port [port]] [count [byte] [order] [fragments]` command.

**Parameters**

- `source`
  
  Enter the IP address of the network or host from which the packets were sent.

- `mask`
  
  Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

- `any`
  
  Enter the keyword any to specify that all routes are subject to the filter.

- `host ip-address`
  
  Enter the keyword host then the IP address to specify a host IP address.

- `bit`
  
  Enter a flag or combination of bits:
  - `ack`: acknowledgement field
  - `fin`: finish (no more data from the user)
  - `psh`: push function
  - `rst`: reset the connection
  - `syn`: synchronize sequence numbers
  - `urg`: urgent field
**dscp**  
Enter the keyword `dscp` to deny a packet based on the DSCP value. The range is from 0 to 63.

**operator**  
(OPTIONAL) Enter one of the following logical operand:
- `eq` = equal to
- `neq` = not equal to
- `gt` = greater than
- `lt` = less than
- `range` = inclusive range of ports (you must specify two ports for the port parameter)

**port port**  
Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.

The following list includes some common TCP port numbers:
- 23 = Telnet
- 20 and 21 = FTP
- 25 = SMTP
- 169 = SNMP

**destination**  
Enter the IP address of the network or host to which the packets are sent.

**mask**  
Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

**count**  
(OPTIONAL) Enter the keyword `count` to count packets the filter processes.

**byte**  
(OPTIONAL) Enter the keyword `byte` to count bytes the filter processes.

**order**  
(OPTIONAL) Enter the keyword `order` to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword `order`, the ACLs have the lowest order by default (255).

**fragments**  
Enter the keyword `fragments` to use ACLs to control packet fragments.

### Related Commands

- `ip access-list extended` — creates an extended ACL.
- `permit` — assigns a permit filter for IP packets.
- `permit udp` — assigns a permit filter for UDP packets.

### permit udp

To pass UDP packets meeting the filter criteria, configure a filter.

**Syntax**

```plaintext
permit udp {source mask | any | host ip-address} [operator port [port]]
{destination mask | any | host ip-address} [dscp] [operator port [port]]
[count [byte] [order] [fragments]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit udp {source mask | any | host ip-address} [destination mask | any | host ip-address] command.

**Parameters**

- `source` Enter the IP address of the network or host from which the packets were sent.
mask

Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.

any

Enter the keyword any to specify that all routes are subject to the filter.

host ip-address

Enter the keyword host and then enter the IP address to specify a host IP address.

dscp

Enter the keyword dscp to deny a packet based on the DSCP value. The range is from 0 to 63.

operator

(Optional) Enter one of the following logical operand:
- eq = equal to
- neq = not equal to
- gt = greater than
- lt = less than
- range = inclusive range of ports (you must specify two ports for the port parameter)

port port

Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is 0 to 65535.

destination

Enter the IP address of the network or host to which the packets are sent.

count

(Optional) Enter the keyword count to count packets processed by the filter.

byte

(Optional) Enter the keyword byte to count bytes processed by the filter.

order

(Optional) Enter the keyword order to specify the QoS priority for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

fragments

Enter the keyword fragments to use ACLs to control packet fragments.

Defaults

Not configured.

Related Commands

ip access-list extended — creates an extended ACL.
permit — assigns a permit filter for IP packets.
permit tcp — assigns a permit filter for TCP packets.

resequence access-list

Re-assign sequence numbers to entries of an existing access-list.

Syntax

resequence access-list {ipv4 | mac} {access-list-name StartingSeqNum Step-to-Increment}

Parameters

ipv4 | mac Enter the keyword ipv4 or mac to identify the access list type to resequence.
access-list-name Enter the name of a configured IP access list, up to 140 characters.
StartingSeqNum Enter the starting sequence number to resequence. The range is from 0 to 4294967290.
Step-to-Increment Enter the step to increment the sequence number. The range is from 1 to 4294967290.

Defaults

none

Command Modes

EXEC
EXEC Privilege

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

Usage Information

When all sequence numbers are exhausted, this feature permits re-assigning a new sequence number to entries of an existing access-list.

resequence prefix-list ipv4

Re-assign sequence numbers to entries of an existing prefix list.

Syntax

resequence prefix-list ipv4 {prefix-list-name StartingSeqNum Step-to-Increment}

Parameters

- **prefix-list-name**: Enter the name of the configured prefix list, up to 140 characters long.
- **StartingSeqNum**: Enter the starting sequence number to resequence. The range is from 0 to 65535.
- **Step-to-Increment**: Enter the step to increment the sequence number. The range is from 1 to 65535.

Defaults

none

Command Modes

</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

When you have exhausted all the sequence numbers, this feature permits re-assigning a new sequence number to entries of an existing prefix list.
seq

Assign a sequence number to a deny or permit filter in an extended IP access list while creating the filter.

Syntax
```
seq sequence-number {deny | permit} {ip-protocol-number | icmp | ip | tcp | udp} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator port [port]] [count [byte] | log] [dscp value] [order] [monitor] [fragments]
```

Parameters
- `sequence-number` Enter a number from 0 to 4294967290.
- `deny` Enter the keyword deny to configure a filter to drop packets meeting this condition.
- `permit` Enter the keyword permit to configure a filter to forward packets meeting this criteria.
- `ip-protocol-number` Enter a number from 0 to 255 to filter based on the protocol identified in the IP protocol header.
- `icmp` Enter the keyword icmp to configure an ICMP access list filter.
- `ip` Enter the keyword ip to configure a generic IP access list. The keyword ip specifies that the access list permits all IP protocols.
- `tcp` Enter the keyword tcp to configure a TCP access list filter.
- `udp` Enter the keyword udp to configure a UDP access list filter.
- `source` Enter an IP address in dotted decimal format of the network from which the packet was received.
- `mask` (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D. The mask, when specified in A.B.C.D format, may be either contiguous or non-contiguous.
- `any` Enter the keyword any to specify that all routes are subject to the filter.
- `host ip-address` Enter the keyword host and then enter the IP address to specify a host IP address or hostname.
- `operator` (OPTIONAL) Enter one of the following logical operands:
  - `eq` = equal to
  - `neq` = not equal to
  - `gt` = greater than
  - `lt` = less than
  - `range` = inclusive range of ports (you must specify two ports for the port parameter.)
- `port port` (OPTIONAL) Enter the application layer port number. Enter two port numbers if you are using the range logical operand. The range is from 0 to 65535.
  - The following list includes some common TCP port numbers:
    - 23 = Telnet
    - 20 and 21 = FTP
    - 25 = SMTP
    - 169 = SNMP
- `destination` Enter the IP address of the network or host to which the packets are sent.
- `count` (OPTIONAL) Enter the keyword count to count packets the filter processes.
- `byte` (OPTIONAL) Enter the keyword byte to count bytes the filter processes.
(OPTIONAL, E-Series only) Enter the keyword log to enter ACL matches in the log. Supported on Jumbo-enabled line cards only.

log

(Optional) Enter the keyword dscp to match to the IP DCSCP values.

dscp

(Optional) Enter the keyword order to specify the QoS order for the ACL entry. The range is from 0 to 254 (where 0 is the highest priority and 254 is the lowest; lower-order numbers have a higher priority). If you do not use the keyword order, the ACLs have the lowest order by default (255).

order

(Optional) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

NOTE: For more information, refer to the Flow-based Monitoring section in the Port Monitoring chapter of the Dell Networking OS Configuration Guide.

monitor

Enter the keyword fragments to use ACLs to control packet fragments.

fragments

Defaults

Not configured

Command Modes

CONFIGURATION-EXTENDED-ACCESS-LIST

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Add the DSCP value for ACL matching.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Allows ACL control of fragmented packets for IP (Layer 3) ACLs.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Added support for the non-contiguous mask and added the monitor option. Deprecated the keyword established.</td>
</tr>
<tr>
<td>6.5.10</td>
<td>Expanded to include the optional QoS order priority for the ACL entry.</td>
</tr>
</tbody>
</table>

Usage Information

The monitor option is relevant in the context of flow-based monitoring only. For more information, refer to Port Monitoring.

The order option is relevant in the context of the Policy QoS feature only. The following applies:

- The seq sequence-number command is applicable only in an ACL group.
- The order option works across ACL groups that are applied on an interface via the QoS policy framework.
- The order option takes precedence over seq sequence-number.
- If you do not configure sequence-number, the rules with the same order value are ordered according to their configuration order.
- If you configure sequence-number, the sequence-number is used as a tiebreaker for rules with the same order.

When you use the log option, the CP processor logs details about the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.
If you configure the `sequence-number`, the `sequence-number` is used as a tie breaker for rules with the same order.

**NOTE:** When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

Related Commands
- `deny` — configures a filter to drop packets.
- `permit` — configures a filter to forward packets.

## Common MAC Access List Commands

The following commands are available within both MAC ACL modes (Standard and Extended) and do not have mode-specific options. These commands allow you to clear, display, and assign MAC ACL configurations.

The Z9000 supports both Ingress and Egress MAC ACLs.

The MAC ACL can be applied on Physical, Port-channel and VLAN interfaces. As per the specified rules in the acl, the traffic on the interface/ VLAN members or Port-channel members will be permitted or denied.

### clear counters mac access-group

Clear counters for all or a specific MAC ACL.

**Syntax**
```
clear counters mac access-group [mac-list-name]
```

**Parameters**
- `mac-list-name` (OPTIONAL) Enter the name of a configured MAC access list.

**Command Modes**
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant `Dell Networking OS Command Line Reference Guide`.

The following is a list of the `Dell Networking OS` version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

### mac access-group

Apply a MAC ACL to traffic entering or exiting an interface. The following interface types can be used for VLAN, Physical interface, Port channel interface. Enter into the interface mode and apply the mac acl in the following manner.

**Syntax**
```
mac access-group access-list-name [in | out]
```

To delete a MAC access-group, use the `no mac access-group mac-list-name` command.
Parameters

- **access-list-name**: Enter the name of a configured MAC access list, up to 140 characters.
- **vlan vlan-range**: (OPTIONAL) Enter the keyword `vlan` and then enter a range of VLANs. The range is from 1 to 4094 (you can use IDs 1 to 4094).
  - **NOTE**: This option is available only with the keyword `in` option.
- **in**: Enter the keyword `in` to configure the ACL to filter incoming traffic.
- **out**: Enter the keyword `out` to configure the ACL to filter outgoing traffic.
  - **NOTE**: The option is not available on the S-Series.

1. If the MAC ACL is applied on VLAN, none of the VLAN members should have an access list applied for that VLAN.
2. If the MAC ACL is applied on a Physical or Port Channel interface, the VLAN in which this port is associated should not have an access list applied.
3. If the MAC ACL is applied on a VLAN, then that VLAN should not belong to VLAN ACL group.
4. If the MAC ACL is applied on a VLAN ACL group, then none of the VLANs in that group should have an access list applied on it.

Defaults

- none

</tr>
<tr>
<td>6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

You can assign one ACL (standard or extended) to an interface.

Related Commands

- `mac access-list standard` — configures a standard MAC ACL.
- `mac access-list extended` — configures an extended MAC ACL.
show mac access-lists

Display all of the Layer 2 ACLs configured in the system, whether or not they are applied to an interface, and the count of matches/mismatches against each ACL entry displayed.

**Syntax**
```
show mac access-lists [access-list-name] [interface interface] [in | out]
```

**Parameters**
- `access-list-name` Enter the name of a configured MAC ACL, up to 140 characters.
- `interface` Enter the keyword `interface` then the one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- `in | out` Identify whether ACL is applied on ingress or egress side.

**Command Modes**
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

show mac accounting access-list

Display MAC access list configurations and counters (if configured).

**Syntax**
```
show mac accounting access-list access-list-name interface interface in | out
```

**Parameters**
- `access-list-name` Enter the name of a configured MAC ACL, up to 140 characters.
- `interface` Enter the keyword `interface` then the one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keyword `port-channel` then a number. The range is from 1 to 128.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- `in | out` Identify whether ACL is applied on ingress or egress side.

**Command Modes**
- EXEC
- EXEC Privilege
Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series</td>
</tr>
<tr>
<td>6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The ACL hit counters increment the counters for each matching rule, not just the first matching rule.

Example

```
Dell#show mac accounting access-list TestMac interface tengigabitethernet 1/8 in
Ingress Standard mac access-list TestMac on TenGigabitEthernet 1/89
Total cam count 2
  seq 5 permit aa:aa:aa:aa:00:00 00:00:00:00:ff:ff count (0 packets)
  seq 10 deny any count (20072594 packets)
Dell#
```

Standard MAC ACL Commands

When you create an access control list without any rule and then apply it to an interface, the ACL behavior reflects implicit permit. These commands configure standard MAC ACLs and support both Ingress and Egress MAC ACLs.

NOTE: For more information, also refer to the Commands Common to all ACL Types and Common MAC Access List Commands sections.

deny

To drop packets with a the MAC address specified, configure a filter.

Syntax

```
deny (any | mac-source-address [mac-source-address-mask]) [count [byte]] [log] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny (any | mac-source-address mac-source-address-mask)` command.

Parameters

- `any` Enter the keyword `any` to specify that all routes are subject to the filter.

Example

```
Dell#show mac accounting access-list TestMac interface tengigabitethernet 1/8 in
Ingress Standard mac access-list TestMac on TenGigabitEthernet 1/89
Total cam count 2
  seq 5 permit aa:aa:aa:aa:00:00 00:00:00:00:ff:ff count (0 packets)
  seq 10 deny any count (20072594 packets)
Dell#
```
**mac-source-address-mask**  
(OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).

**count**  
(OPTIONAL) Enter the keyword count to count packets processed by the filter.

**byte**  
(OPTIONAL) Enter the keyword byte to count bytes processed by the filter.

**log**  
(OPTIONAL, E-Series only) Enter the keyword log to log the packets.

**monitor**  
(OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. For more information, refer to the “Flow-based Monitoring” section in the Port Monitoring chapter of the Dell Networking OS Configuration Guide.

**Defaults**  
Not enabled.

**Command Modes**  
CONFIGURATION-MAC ACCESS LIST-STANDARD

**Command History**  
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>

</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Added the monitor option.</td>
</tr>
</tbody>
</table>

**Usage Information**  
When you use the log option, the CP processor logs detail the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

**NOTE:** When you configure ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

**Related Commands**  
`permit` — configures a MAC address filter to pass packets.

`seq` — configures a MAC address filter with a specified sequence number.

---

**mac access-list standard**

To configure a standard MAC ACL, name a new or existing MAC access control list (MAC ACL) and enter MAC ACCESS LIST mode. Also refer to the Commands Common to all ACL Types section and the Common MAC Access List Commands section.

**Syntax**  
mac access-list standard **mac-list-name**

To delete a MAC access list, use the `no mac access-list standard **mac-list-name**` command.

**Parameters**  
`**mac-list-name**` Enter a text string as the name of the standard MAC access list (140 character maximum).

**Defaults**  
Not configured.
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

Dell Networking OS supports one ingress and one egress MAC ACL per interface.

The number of entries allowed per ACL is hardware-dependent. For detailed specifications about entries allowed per ACL, refer to your line card documentation.

**NOTE:** Ingress ACLs are supported on C-Series and S-Series platforms only.

```
Dell(conf)#mac-access-list access-list standard TestMAC
Dell(config-std-macl)#permit 00:00:00:00:00:00 00:00:00:ff:ff count
Dell(config-std-macl)#deny any count
```

**permit**

To forward packets from a specific source MAC address, configure a filter.

**Syntax**

```
permit {any | mac-source-address [mac-source-address-mask]} [count [byte]] | [log] [monitor]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit {any | mac-source-address mac-source-address-mask}` command.

**Parameters**

- **any**
  - Enter the keyword `any` to forward all packets received with a MAC address.
- **mac-source-address**
- **mac-source-address-mask**
  - (OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).
- **count**
  - (OPTIONAL) Enter the keyword `count` to count packets processed by the filter.
- **byte**
  - (OPTIONAL) Enter the keyword `byte` to count bytes processed by the filter.
- **log**
  - (OPTIONAL, E-Series only) Enter the keyword `log` to log the packets.
monitor (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

NOTE: For more information, refer to the Flow-based Monitoring section in the Port Monitoring chapter of the Dell Networking OS Configuration Guide.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
When you use the log option, the CP processor logs details about the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

NOTE: When you configure the ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

Related Commands
deny — configures a MAC ACL filter to drop packets.
seq — configure a MAC ACL filter with a specified sequence number.

seq
To a deny or permit filter in a MAC access list while creating the filter, assign a sequence number.

Syntax
seq sequence-number {deny | permit} {any | mac-source-address [mac-source-address-mask]} [count [byte]] [log] [monitor]

To remove this filter, use the no seq sequence-number command.

Parameters
- **sequence-number**: Enter a number from 0 to 65535.
- **deny**: Enter the keyword deny to configure a filter to drop packets meeting this condition.
- **permit**: Enter the keyword permit to configure a filter to forward packets meeting this criteria.
- **any**: Enter the keyword any to filter all packets.
- **mac-source-address**: Enter a MAC address in nn:nn:nn:nn:nn:nn format.
mac-source-address-mask (OPTIONAL) Specify which bits in the MAC address must match. If no mask is specified, a mask of 00:00:00:00:00:00 is applied (in other words, the filter allows only MAC addresses that match).

count (OPTIONAL) Enter the keyword count to count packets the filter processes.

byte (OPTIONAL) Enter the keyword byte to count bytes the filter processes.

log (OPTIONAL, E-Series only) Enter the keyword log to log the packets.

monitor (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

NOTE: For more information, refer to the “Flow-based Monitoring” section in the Port Monitoring chapter of the Dell Networking OS Configuration Guide.

Usage Information When you use the log option, the CP processor logs details about the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

NOTE: When you configure the ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

Related Commands deny — configures a filter to drop packets.

permit — configures a filter to forward packets.

Extended MAC ACL Commands

When an access-list is created without any rule and then applied to an interface, ACL behavior reflects implicit permit. The following commands configure Extended MAC ACLs.

The Z9000 supports both Ingress and Egress MAC ACLs.

NOTE: For more information, also refer to the Commands Common to all ACL Types and Common MAC Access List Commands sections.
deny

To drop packets that match the filter criteria, configure a filter.

Syntax

deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} {ethertype-operator} [count [byte]] [log] [monitor]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter's sequence number.
- Use the no deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} command.

Parameters

- **any**
  - Enter the keyword any to drop all packets.

- **host mac-address**
  - Enter the keyword host and then enter a MAC address to drop packets with that host address.

- **mac-source-address**

- **mac-source-address-mask**
  - Specify which bits in the MAC address must match.
  - The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

- **mac-destination-address**
  - Enter the destination MAC address and mask in nn:nn:nn:nn:nn:nn format.

- **mac-destination-address-mask**
  - Specify which bits in the MAC address must match.
  - The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

- **ethertype-operator**
  - (OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:
    - ev2 - is the Ethernet II frame format
    - llc - is the IEEE 802.3 frame format
    - snap - is the IEEE 802.3 SNAP frame format

- **count**
  - (OPTIONAL) Enter the keyword count to count packets processed by the filter.

- **byte**
  - (OPTIONAL) Enter the keyword byte to count bytes processed by the filter.

- **log**
  - (OPTIONAL, E-Series only) Enter the keyword log to log the packets.

- **monitor**
  - (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface. For more information, refer to the "Flow-based Monitoring" section in the Port Monitoring chapter of the Dell Networking OS Configuration Guide.

</tbody>
</table>
Version | Description
--- | ---
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series ExaScale.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
7.4.1.0 | Added the monitor option.
6.1.1.0 | Introduced on the E-Series.

Usage Information

When you use the log option, the CP processor logs detail the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

**NOTE:** When you configure the ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

Related Commands

- `permit` — configures a MAC address filter to pass packets.
- `seq` — configures a MAC address filter with a specified sequence number.

mac access-list extended

Name a new or existing extended MAC access control list (extended MAC ACL).

**Syntax**

```
mac access-list extended access-list-name [cpu-qos]
```

To delete a MAC access list, use the `no mac access-list extended access-list-name` command.

**Parameters**

- `access-list-name` Enter a text string as the MAC access list name, up to 140 characters.
- `cpu-qos` Enter the keywords `cpu-qos` to assign this ACL to control plane traffic only (CoPP).

**Defaults**

`none`

**Command Modes**

`CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000–ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.10.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series ExaScale.
7.8.1.0 | Increased the name string to accept up to 140 characters. Prior to 7.8.1.0, names were up to 16 characters long.
7.6.1.0 | Introduced on the S-Series.
### Usage Information

The number of entries allowed per ACL is hardware-dependent. For detailed specifications about entries allowed per ACL, refer to your line card documentation.

Prior to 7.8.1.0, names are up to 16 characters long.

### Example

```
Dell(conf)#mac-access-list access-list extended TestMATExt
Dell(config-ext-macl)#remark 5 IPv4
Dell(config-ext-macl)#seq 10 permit any any ev2 eq 800 count bytes
Dell(config-ext-macl)#remark 15 ARP
Dell(config-ext-macl)#seq 20 permit any any ev2 eq 806 count bytes
Dell(config-ext-macl)#remark 25 IPv6
Dell(config-ext-macl)#seq 30 permit any any ev2 eq 86dd count bytes
Dell(config-ext-macl)#exit
Dell(conf)#do show mac accounting access-list snickers interface tengig 1/17 in
Extended mac access-list snickers on TenGigabitEthernet 1/17
seq 10 permit any any ev2 eq 800 count bytes (559851886 packets 191402152148 bytes)
seq 20 permit any any ev2 eq 806 count bytes (74481486 packets 5031686754 bytes)
seq 30 permit any any ev2 eq 86dd count bytes (7751519 packets 797843521 bytes)
```

### Related Commands

- `mac access-list standard` — configures a standard MAC access list.
- `show mac accounting access-list` — displays MAC access list configurations and counters (if configured).

### permit

To pass packets matching the criteria specified, configure a filter.

#### Syntax

```
permit {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} [ethertype operator] [count [byte]] | [log] [monitor]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit {any | host mac-address | mac-source-address mac-source-address-mask} {any | mac-destination-address mac-destination-address-mask} command.```

#### Parameters

- **any**: Enter the keyword `any` to forward all packets.
- **host**: Enter the keyword `host` then a MAC address to forward packets with that host address.
- **mac-source-address**: Enter a MAC address in nn:nn:nn:nn:nn:nn format.
- **mac-source-address-mask**: (OPTIONAL) Specify which bits in the MAC address must match.
  - The MAC ACL supports an inverse mask: therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.
- **mac-destination-address**: Enter the destination MAC address and mask in nn:nn:nn:nn:nn:nn format.
**mac-destination-address-mask**
Specify which bits in the MAC address must be matched.

The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

**ethertype**
(OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:
- ev2 - is the Ethernet II frame format
- llc - is the IEEE 802.3 frame format
- snap - is the IEEE 802.3 SNAP frame format

**operator**

**count**
(OPTIONAL) Enter the keyword count to count packets the filter processes.

**byte**
(OPTIONAL) Enter the keyword byte to count bytes the filter processes.

**log**
(OPTIONAL, E-Series only) Enter the keyword log to log the packets.

**monitor**
(OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

1 **NOTE:** For more information, refer to the Flow-based Monitoring section in the Port Monitoring chapter of the Dell Networking OS Configuration Guide.

**Usage Information**
When you use the log option, the CP processor logs details about the packets that match. Depending on how many packets match the log entry and at what rate, the CP may become busy as it has to log these packets’ details.

1 **NOTE:** When you configure the ACL logging and byte counters simultaneously, byte counters may display an incorrect value. Configure packet counters with logging instead.

**Related Commands**
- deny — configures a MAC ACL filter to drop packets.
- seq — configure a MAC ACL filter with a specified sequence number.
seq

Configure a filter with a specific sequence number.

**Syntax**

```
seq sequence-number {deny | permit} {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} \[ethertype operator\] \[count \[byte\]\] \[log\] \[monitor\]
```

To delete a filter, use the no seq sequence-number command.

**Parameters**

- **sequence-number**
  - Enter a number as the filter sequence number. The range is from zero (0) to 65535.

- **deny**
  - Enter the keyword deny to drop any traffic matching this filter.

- **permit**
  - Enter the keyword permit to forward any traffic matching this filter.

- **any**
  - Enter the keyword any to filter all packets.

- **host mac-address**
  - Enter the keyword host and then enter a MAC address to filter packets with that host address.

- **mac-source-address**
  - The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

- **mac-source-address-mask**
  - Specify which bits in the MAC address must be matched.

- **mac-destination-address**
  - Enter the destination MAC address and mask in nn:nn:nn:nn:nn:nn format.

- **mac-destination-address-mask**
  - Specify which bits in the MAC address must be matched.
  - The MAC ACL supports an inverse mask; therefore, a mask of ff:ff:ff:ff:ff:ff allows entries that do not match and a mask of 00:00:00:00:00:00 only allows entries that match exactly.

- **ethertype operator**
  - (OPTIONAL) To filter based on protocol type, enter one of the following Ethertypes:
    - `ev2` - is the Ethernet II frame format.
    - `llc` - is the IEEE 802.3 frame format.
    - `snap` - is the IEEE 802.3 SNAP frame format.

- **count**
  - (OPTIONAL) Enter the keyword count to count packets the filter processes.

- **byte**
  - (OPTIONAL) Enter the keyword byte to count bytes the filter processes.

- **log**
  - (OPTIONAL, E-Series only) Enter the keyword log to log the packets.

- **monitor**
  - (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**NOTE:** For more information, refer to the Flow-based Monitoring section in the Port Monitoring chapter of the Dell Networking OS Configuration Guide.

IP Prefix List Commands

When you create an access-list without any rule and then apply it to an interface, the ACL behavior reflects implicit permit. To configure or enable IP prefix lists, use these commands.

**clear ip prefix-list**

Reset the number of times traffic meets the conditions (“hit” counters) of the configured prefix lists.

**Syntax**
clear ip prefix-list [prefix-name]

**Parameters**

prefix-name (OPTIONAL) Enter the name of the configured prefix list to clear only counters for that prefix list, up to 140 characters long.

**Defaults**
Clears “hit” counters for all prefix lists unless a prefix list is specified.

**Command Modes**
EXEC Privilege

Related Commands
ip prefix-list — configures a prefix list.

deny
To drop packets meeting the criteria specified, configure a filter.

Syntax deny ip-prefix [ge min-prefix-length] [le max-prefix-length]

Parameters
- **ip-prefix**
  - Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.
- **ge min-prefix-length** (OPTIONAL)
  - Enter the keyword ge and then enter the minimum prefix length, which is a number from zero (0) to 32.
- **le max-prefix-length** (OPTIONAL)
  - Enter the keyword le and then enter the maximum prefix length, which is a number from zero (0) to 32.

Defaults Not configured.

**Usage Information**  
Prefix lists redistribute OSPF and RIP routes meeting specific criteria.

**Related Commands**  
show ip route list — displays IP routes in an IP prefix list.  
show ip prefix-list summary — displays a summary of the configured prefix lists.

**permit**

Configure a filter that passes packets meeting the criteria specified.

**Syntax**

```
permit ip-prefix [ge min-prefix-length] [le max-prefix-length]
```

To delete a forward filter, use the no permit ip-prefix command.

**Parameters**

- `ip-prefix`  
  Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.

- `ge min-prefix-length`  
  (OPTIONAL) Enter the keyword `ge` and then enter the minimum prefix length, which is a number from zero (0) to 32.

- `le max-prefix-length`  
  (OPTIONAL) Enter the keyword `le` and then enter the maximum prefix length, which is a number from zero (0) to 32.

Usage
Information
Sequence numbers for this filter are automatically assigned starting at sequence number 5.
If you do not use the ge or le options, only packets with an exact match to the prefix are filtered.

Related
Commands
deny — configures a filter to drop packets.
seq — configures a drop or permit filter with a specified sequence number.

seq

To a deny or permit filter in a prefix list while configuring the filter, assign a sequence number.

Syntax

```
seq sequence-number {deny | permit} {any} | [ip-prefix /nn {ge min-prefix-length} {le max-prefix-length}] | [bitmask number]
```

To delete a specific filter, use the no seq sequence-number {deny | permit} {any} | [ip-prefix {ge min-prefix-length} {le max-prefix-length}] | [bitmask number].

Parameters

- `sequence-number` Enter a number. The range is from 1 to 4294967294.
- `deny` Enter the keyword deny to configure a filter to drop packets meeting this condition.
- `permit` Enter the keyword permit to configure a filter to forward packets meeting this condition.
- `any` (OPTIONAL) Enter the keyword any to match any packets.
- `ip-prefix /nn` (OPTIONAL) Specify an IP prefix in the network/length format. For example, 35.0.0.0/8 means match the first 8 bits of address 35.0.0.0.
- `ge min-prefix-length` (OPTIONAL) Enter the keyword ge and then enter the minimum prefix length, which is a number from zero (0) to 32.
- `le max-prefix-length` (OPTIONAL) Enter the keyword le and then enter the maximum prefix length, which is a number from zero (0) to 32.
- `bitmask number` Enter the keyword bitmask then enter a bit mask number in dotted decimal format.

Defaults

Not configured.

Route Map Commands

When you create an access-list without any rule and then applied to an interface, the ACL behavior reflects implicit permit. To configure route maps and their redistribution criteria, use the following commands.

**continue**

To a route-map entry with a higher sequence number, configure a route-map.

**Syntax**

```plaintext
continue [sequence-number]
```

**Parameters**

- `sequence-number` (OPTIONAL) Enter the route map sequence number. The range is from 1 to 65535.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The continue feature allows movement from one route-map entry to a specific route-map entry (the sequence number). If you do not specify the sequence number, the continue feature simply moves to the next sequence number (also known as an implied continue). If a match clause exists, the continue feature executes only after a successful match occurs. If there are no successful matches, the continue feature is ignored.

**Match clause with Continue clause**

The continue feature can exist without a match clause. A continue clause without a match clause executes and jumps to the specified route-map entry.

With a match clause and a continue clause, the match clause executes first and the continue clause next in a specified route map entry. The continue clause launches only after a successful match. The behavior is:

- A successful match with a continue clause, the route map executes the set clauses and then goes to the specified route map entry upon execution of the continue clause.
- If the next route map entry contains a continue clause, the route map executes the continue clause if a successful match occurs.
If the next route map entry does not contain a continue clause, the route map evaluates normally. If a match does not occur, the route map does not continue and falls through to the next sequence number, if one exists.

**Set Clause with Continue Clause**

If the route-map entry contains sets with the continue clause, set actions are performed first then the continue clause jumps to the specified route map entry.

- If a set action occurs in the first route map entry and then the same set action occurs with a different value in a subsequent route map entry, the last set of actions overrides the previous set of actions with the same set command.

- If `set community additive` and `set as-path prepend` are configure, the communities and AS numbers are prepended.

**Related Commands**

- `set community` — specifies a COMMUNITY attribute.
- `set as-path` — configures a filter to modify the AS path.

**description**

Add a description to this route map.

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- `description` Enter a description to identify the route map (80 characters maximum).

**Defaults**

none

**Command Modes**

<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>pre-7.7.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `route-map` — enables a route map.

**match as-path**

To match routes that have a certain AS number in their BGP path, configure a filter.

**Syntax**

```
match as-path as-path-name
```

To delete a match AS path filter, use the `no match as-path as-path-name` command.

**Parameters**

- `as-path-name` Enter the name of an established AS-PATH ACL, up to 140 characters.
match community

To match routes that have a certain COMMUNITY attribute in their BGP path, configure a filter.

Syntax

```
match community community-list-name [exact]
```

To delete a community match filter, use the `no match community` command.

Parameters

- `community-list-name` Enter the name of a configured community list.
- `exact` (OPTIONAL) Enter the keywords `exact` to process only those routes with this community list name.

Defaults

Not configured.

Related Commands

- `set as-path` — adds information to the BGP AS_PATH attribute.
Version: Description
7.5.1.0: Introduced on the C-Series.
pre-6.1.1.0: Introduced on the E-Series.

Related Commands:
- set community — specifies a COMMUNITY attribute.

match interface

To match routes whose next hop is on the interface specified, configure a filter.

Syntax:
match interface interface

To remove a match, use the no match interface interface command.

Parameters:
- interface: Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
  - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults:
Not configured.

Command Modes:

Command History:
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000–ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.5.1.0 Added support for 4-port 40G line cards on ExaScale.
8.1.1.0 Introduced on the E-Series ExaScale.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
6.1.1.0 Introduced on the E-Series.

Related Commands:
- match ip address — redistributes routes that match an IP address.
- match ip next-hop — redistributes routes that match the next-hop IP address.
- match ip route-source — redistributes routes that match routes advertised by other routers.
- match metric — redistributes routes that match a specific metric.
- match route-type — redistributes routes that match a route type.
match tag — redistributes routes that match a specific tag.

**match ip address**

To match routes based on IP addresses specified in an access list, configure a filter.

**Syntax**

```
match ip address prefix-list-name
```

To delete a match, use the `no match ip address prefix-list-name` command.

**Parameters**

- `prefix-list-name` Enter the name of configured prefix list, up to 140 characters.

**Defaults**

Not configured.

- `match metric` — redistributes routes that match a specific metric.
- `match route-type` — redistributes routes that match a route type.
- `match tag` — redistributes routes that match a specific tag.

**match ip next-hop**

To match based on the next-hop IP addresses specified in an IP access list or IP prefix list, configure a filter.

**Syntax**

```
match ip next-hop {prefix-list prefix-list-name}
```

To delete a match, use the `no match ip next-hop {prefix-list prefix-list-name}` command.

**Parameters**

- `prefix-list prefix-list-name` Enter the keywords `prefix-list` and then enter the name of configured prefix list, up to 140 characters.

**Defaults**

Not configured.
To match based on the routes advertised by routes specified in IP access lists or IP prefix lists, configure a filter.

**Syntax**
```
match ip route-source {prefix-list prefix-list-name}
```

**Parameters**
- `prefix-list prefix-list-name`: Enter the keywords `prefix-list` and then enter the name of configured prefix list, up to 140 characters.

**Defaults**
Not configured.

**Related Commands**
- `match interface`: redistributes routes that match the next-hop interface.
- `match ip address`: redistributes routes that match an IP address.

- `match tag` — redistributes routes that match a specific tag.
**match route-type** — redistributes routes that match a route type.

**match tag** — redistributes routes that match a specific tag.

### match origin

To match routes based on the value found in the BGP path ORIGIN attribute, configure a filter.

**Syntax**
```
match origin {egp | igp | incomplete}
```

To disable matching filter, use the `no match origin {igp | egp | incomplete}` command.

**Parameters**
- **egp**
  Enter the keyword `egp` to match routes originating outside the AS.
- **igp**
  Enter the keyword `igp` to match routes originating within the same AS.
- **incomplete**
  Enter the keyword `incomplete` to match routes with incomplete routing information.

**Defaults**
Not configured.

### match route-type

To match routes based on the how the route is defined, configure a filter.

**Syntax**
```
match route-type {external [type-1 | type-2] | internal | level-1 | level-2 | local}
```

To delete a match, use the `no match route-type {local | internal | external [type-1 | type-2] | level-1 | level-2}` command.

**Parameters**
- **external [type-1 | type-2]**
  Enter the keyword `external` then either type-1 or type-2 to match only on OSPF Type 1 routes or OSPF Type 2 routes.
- **internal**
  Enter the keyword `internal` to match only on routes generated within OSPF areas.
- **level-1**
  Enter the keyword `level-1` to match IS-IS Level 1 routes.
- **level-2**
  Enter the keyword `level-2` to match IS-IS Level 2 routes.
- **local**
  Enter the keyword `local` to match only on routes generated within the switch.

**Defaults**
Not configured.
match tag

To redistribute only routes that match a specified tag value, configure a filter.

Syntax

```
match tag tag-value
```

To remove a match, use the no  match  tag command.

Parameters

- **tag-value**
  Enter a value as the tag on which to match. The range is from zero (0) to 4294967295.

Defaults

Not configured.

route-map

Enable a route map statement and configure its action and sequence number. This command also places you in ROUTE-MAP mode.

Syntax

route-map map-name [permit | deny] [sequence-number]

To delete a route map, use the no route-map map-name [permit | deny] [sequence-number] command.

Parameters

map-name Enter a text string of up to 140 characters to name the route map for easy identification.
permit (OPTIONAL) Enter the keyword permit to set the route map default as permit. If you do not specify a keyword, the default is permit.
deny (OPTIONAL) Enter the keyword deny to set the route map default as deny.
sequence-number (OPTIONAL) Enter a number to identify the route map for editing and sequencing with other route maps. You are prompted for a sequence number if there are multiple instances of the route map. The range is from 1 to 65535.

Defaults

Not configured.

If you do not define a keyword (permit or deny) for the route map, the permit action is the default.

Command Modes

CONFIGURATION

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000–ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.1.1.0 Introduced on the E-Series ExaScale.
7.8.1.0 Increased the name string to accept up to 140 characters. Prior to 7.8.1.0, names are up to 16 characters long.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.

Related Commands

match interface — redistributes routes that match the next-hop interface.
match ip address — redistributes routes that match an IP address.
match ip next-hop — redistributes routes that match the next-hop IP address.
match ip route-source — redistributes routes that match routes advertised by other routers.
match metric — redistributes routes that match a specific metric.
match route-type — redistributes routes that match a route type.
**set as-path**

To modify the AS path for border gateway protocol (BGP) routes, configure a filter.

**Syntax**

```
set as-path prepend as-number [... as-number]
```

To remove an AS-Path setting, use the `no set as-path {prepend as-number | tag}` command.

**Parameters**

- `prepend as-number`

  Enter the keyword `prepend` and then enter up to eight AS numbers to be inserted into the BGP path information. The range is from 1 to 65535.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

You can prepend up to eight AS numbers to a BGP route.

This command influences best path selection in BGP by inserting a tag or AS number into the AS_PATH attribute.

**Related Commands**

- `match as-path` — redistributes routes that match an AS-PATH attribute.
**set automatic-tag**

To automatically compute the tag value of the route, configure a filter.

**Syntax**

```plaintext
set automatic-tag
```

To return to the default, enter `no set automatic-tag`.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `set level` — specify the OSPF area for route redistribution.
- `set metric` — specify the metric value assigned to redistributed routes.
- `set metric-type` — specify the metric type assigned to redistributed routes.
- `set tag` — specify the tag assigned to redistributed routes.

**set comm-list delete**

To remove the specified community list from the BGP route’s COMMUNITY attribute, configure a filter.

**Syntax**

```plaintext
set comm-list community-list-name delete
```

To insert the community list into the COMMUNITY attribute, use the `no set comm-list community-list-name delete` command.

**Parameters**

- `community-list-name` Enter the name of an established Community list, up to 140 characters.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
The community list used in the `set comm-list delete` command must be configured so that each filter contains only one community. For example, the filter `deny 100:12` is acceptable, but the filter `deny 120:13 140:33` results in an error.

If the `set comm-list delete` command and the `set community` command are configured in the same route map sequence, the deletion command (`set comm-list delete`) is processed before the insertion command (`set community`).

**set community**

Allows you to assign a BGP COMMUNITY attribute.

**Syntax**

```
set community {community-number | local-as | no-advertise | no-export | none} [additive]
```

To delete a BGP COMMUNITY attribute assignment, use the `no set community {community-number | local-as | no-advertise | no-export | none}` command.

**Parameters**

- **community-number**
  - Enter the community number in AA:NN format where AA is the AS number (2 bytes) and NN is a value specific to that autonomous system.

- **local-AS**
  - Enter the keywords `local-AS` to drop all routes with the COMMUNITY attribute of NO_EXPORT_SUBCONFED.
  - All routes with the NO_EXPORT_SUBCONFED (0xFFFFFF03) community attribute must not be advertised to external BGP peers.

- **no-advertise**
  - Enter the keywords `no-advertise` to drop all routes containing the well-known community attribute of NO_ADVERTISE.
  - All routes with the NO_ADVERTISE (0xFFFFFF02) community attribute must not be advertised to other BGP peers.

- **no-export**
  - Enter the keywords `no-export` to drop all routes containing the well-known community attribute of NO_EXPORT.
  - All routes with the NO_EXPORT (0xFFFFFF01) community attribute must not be advertised outside a BGP confederation boundary.

- **none**
  - Enter the keyword `none` to remove the community attribute from routes meeting the route map criteria.

- **additive**
  - (OPTIONAL) Enter the keyword `additive` to add the communities to already existing communities.

**Defaults**

Not configured.
set level

To specify the IS-IS level or OSPF area to which matched routes are redistributed, configure a filter.

**Syntax**

```
set level {backbone | level-1 | level-1-2 | level-2 | stub-area}
```

To remove a set level condition, use the `no set level {backbone | level-1 | level-1-2 | level-2 | stub-area}` command.

**Parameters**

- **backbone**
  - Enter the keyword `backbone` to redistribute matched routes to the OSPF backbone area (area 0.0.0.0).
- **level-1**
  - Enter the keyword `level-1` to redistribute matched routes to IS-IS Level 1.
- **level-1-2**
  - Enter the keyword `level-1-2` to redistribute matched routes to IS-IS Level 1 and Level 2.
- **level-2**
  - Enter the keyword `level-2` to redistribute matched routes to IS-IS Level 2.
- **stub-area**
  - Enter the keyword `stub` to redistributed matched routes to OSPF stub areas.

**Defaults**

Not configured.

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000–ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series ExaScale.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-6.1.1.0 | Introduced on the E-Series.
**set local-preference**

To set the BGP LOCAL_PREF attribute for routers within the local autonomous system, configure a filter.

**Syntax**

```
set local-preference value
```

To delete a BGP LOCAL_PREF attribute, use the `no set local-preference` command.

**Parameters**

- **value**
  
Enter a number as the LOCAL_PREF attribute value. The range is from 0 to 4294967295.

**Defaults**

Not configured.

**Command Modes**

ROUTE-MAP

**Command History**

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `set local-preference` command changes the LOCAL_PREF attribute for routes meeting the route map criteria. To change the LOCAL_PREF for all routes, use the `bgp default local-preference` command.

**Related Commands**

- `bgp default local-preference` — changes the default LOCAL_PREF attribute for all routes.
**set metric**

To assign a new metric to redistributed routes, configure a filter.

**Syntax**

```
set metric [+ | -] metric-value
```

To delete a setting, enter `no set metric`.

**Parameters**

- **+**  
  (OPTIONAL) Enter `+` to add a metric-value to the redistributed routes.
- **-**  
  (OPTIONAL) Enter `-` to subtract a metric-value from the redistributed routes.
- **metric-value**  
  Enter a number as the new metric value. The range is from zero (0) to 4294967295.

**Defaults**

Not configured.

**Related Commands**

- `set automatic-tag` — computes the tag value of the route.
- `set level` — specifies the OSPF area for route redistribution.
- `set metric-type` — specifies the route type assigned to redistributed routes.
- `set tag` — specifies the tag assigned to redistributed routes.

**set metric-type**

To assign a new route type for routes redistributed to OSPF, configure a filter.

**Syntax**

```
set metric-type {internal | external | type-1 | type-2}
```

To delete a setting, use the `no set metric-type` command.

**Parameters**

- **internal**  
  Enter the keyword `internal` to assign the Interior Gateway Protocol metric of the next hop as the route’s BGP MULTI_EXIT_DES (MED) value.
- **external**  
  Enter the keyword `external` to assign the IS-IS external metric.
- **type-1**  
  Enter the keyword `type-1` to assign the OSPF Type 1 metric.
- **type-2**  
  Enter the keyword `type-2` to assign the OSPF Type 2 metric.

**Defaults**

Not configured.

**set origin**

To manipulate the BGP ORIGIN attribute, configure a filter.

**Syntax**

```
set origin {igp | egp | incomplete}
```

To delete an ORIGIN attribute setting, use the `no set origin` command.

**Parameters**

- `egp`  
  Enter the keyword `egp` to set routes originating from outside the local AS.
- `igp`  
  Enter the keyword `igp` to set routes originating within the same AS.
- `incomplete`  
  Enter the keyword `incomplete` to set routes with incomplete routing information.

**set tag**

To specify a tag for redistributed routes, configure a filter.

**Syntax**

```
set tag tag-value
```

To delete a setting, use the `no set tag` command.

**Parameters**

- `tag-value`  
  Enter a number as the tag. The range is from zero (0) to 4294967295.

**Defaults**

Not configured.
To add a non-RFC compliant attribute to the BGP route to assist with route selection, configure a filter.

**Syntax**

```
set weight weight
```

To delete a weight specification, use the `no set weight weight` command.

**Parameters**

`weight` Enter a number as the weight used by the route meeting the route map specification. The range is from 0 to 65535. The default is router-originated = 32768 and all other routes = 0.

When there are multiple routes to the same destination, the routes with a higher weight are preferred.

**Defaults**

router-originated = 32768; all other routes = 0

</tbody>
</table>
show ip as-path-access-lists

Display the all AS-PATH access lists configured on the E-Series.

Syntax

```
show ip as-path-access-lists
```

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- Version 8.3.19.0 Introduced on the S4820T.
- Version 8.3.11.1 Introduced on the Z9000.
- Version 8.3.7.0 Introduced on the S4810.
- Version 8.1.1.0 Introduced on the E-Series ExaScale.

Example

```
Dell#show ip as-path-access-lists
ip as-path access-list acc
  permit 750
  deny 10
```

IP Community List Commands

IP community list commands are supported on the Dell Networking OS.

ip community-list

Enter COMMUNITY-LIST mode and create an IP community-list for BGP.

Syntax

```
ip community-list comm-list-name
```

Parameters

- `comm-list-name`: Enter a text string as the name of the community-list, up to 140 characters.

Command Modes

- CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

**Version 8.3.19.0**  Introduced on the S4820T.

**Version 8.3.11.1**  Introduced on the Z9000.

**Version 8.3.7.0**  Introduced on the S4810.

**Version 8.1.1.0**  Introduced on the E-Series ExaScale.

**Version 7.8.1.0**  Increased the name string to accept up to 140 characters. Prior to 7.8.1.0, names are up to 16 characters long.

**pre-Version 6.1.1.0**  Introduced on the E-Series.

### Example

```bash
Dell(conf)#ip community-list TestComList
Dell(config-community-list)#
```

### show ip community-lists

Display configured IP community lists in alphabetic order.

**Syntax**

```
show ip community-lists [name]
```

**Parameters**

- **name**  (OPTIONAL) Enter the name of the standard or extended IP community list, up to 140 characters.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version 8.3.19.0**  Introduced on the S4820T.

**Version 8.3.7.0**  Introduced on the S4810.

**Version 8.1.1.0**  Introduced on the E-Series ExaScale.

**Version 7.8.1.0**  Increased the name string to accept up to 140 characters. Prior to 7.8.1.0, names are up to 16 characters long.

**pre-Version 6.1.1.0**  Introduced on the E-Series.

### Example

```bash
Dell#show ip community-lists
ip community-list ABC
  permit local-AS
  deny no-advertise
  permit no-export
Dell#
```

### deny (for Standard IP ACLs)

To drop packets with a certain IP address, configure a filter.

**Syntax**

```
deny {source | any | host {ip-address}} [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:
● Use the `no seq sequence-number` command if you know the filter’s sequence number.
● Use the `no deny {source [mask] | any | host ip-address}` command.

**Parameters**

- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

**Command Modes**

- CONFIGURATION-STANDARD-ACCESS-LIST

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.</td>
</tr>
</tbody>
</table>

**Usage Information**

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- `ip access-list standard` — configures a standard ACL.
- `permit` — configures a permit filter.

## deny (for Extended IP ACLs)

Configure a filter that drops IP packets meeting the filter criteria.

**Syntax**

deny (ip | ip-protocol-number) {source mask | any | host ip-address} {destination mask | any | host ip-address} [count [byte]] [dscp value]
To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no deny {ip | ip-protocol-number} {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- `deny tcp` — Assigns a filter to deny TCP packets.
- `deny udp` — Assigns a filter to deny UDP packets.
- `ip access-list extended` — Creates an extended ACL.
**seq (for Standard IPv4 ACLs)**

Assign a sequence number to a deny or permit filter in an IP access list while creating the filter.

**Syntax**
```
seq sequence-number {deny | permit} {source [mask] | any | host ip-address} [count [bytes]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To delete a filter, use the `no seq sequence-number` command.

**Parameters**
- **log** (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- **threshold-in-msgs count** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs are generated. The interval range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**
By default, 10 ACL logs are generated if you do not specify the threshold explicitly.
The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**
- `deny` — Configures a filter to drop packets.
- `permit` — Configures a filter to forward packets.
deny tcp (for Extended IP ACLs)

Configure a filter that drops transmission control protocol (TCP) packets meeting the filter criteria.

**Syntax**

```plaintext
deny tcp {source mask | any | host ip-address} [bit] [operator port [port]] {destination mask | any | host ip-address} [dscp] [bit] [operator port [port]] [count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no deny tcp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- `deny` — assigns a filter to deny IP traffic.
deny udp — assigns a filter to deny UDP traffic.

deny udp (for Extended IP ACLs)

To drop user datagram protocol (UDP) packets meeting the filter criteria, configure a filter.

Syntax

deny udp {source mask | any | host ip-address} [operator port [port]]
(traffic-mask) [any | host ip-address] [dscp] [operator port [port]]
[count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-
msgs [count]]]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny udp {source mask | any | host ip-address} {destination mask
| any | host ip-address} command.

Parameters

log
(OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

threshold-in-msgs count
(OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes
(OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.
The default frequency at which ACL logs are generated is five minutes.

Command Modes

CONFIGURATION-EXTENDED-ACCESS-LIST

Command History

Version 9.3(0.0)
Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval
at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started
and the packet count for that new interval commences from zero. If ACL logging was stopped previously
because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging
interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and
MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you
cannot enable logging for ACLs that are associated with egress interfaces.

Related Commands

deny — assigns a filter to deny IP traffic.
deny tcp — assigns a filter to deny TCP traffic.

deny arp (for Extended MAC ACLs)

Configure an egress filter that drops ARP packets on egress ACL supported line cards. (For more information, refer to your line card documentation).

Syntax

deny arp {destination-mac-address mac-address-mask | any} vlan vlan-id {ip-
address | any | opcode code-number} [count [byte]] [order] [log [interval
minutes] [threshold-in-msgs [count]] [monitor]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no deny arp {destination-mac-address mac-address-mask | any} vlan
 vlan-id {ip-address | any | opcode code-number} command.
deny icmp (for Extended IP ACLs)

To drop all or specific internet control message protocol (ICMP) messages, configure a filter.

NOTE: Only the options that have been newly introduced in Release 9.3(0.0) and Release 9.4(0.0) are described here. For a complete description on all of the keywords and variables that are available with this command, refer the topic of this command discussed earlier in this guide.

Syntax

deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [message-type] [count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]

To remove this filter, you have two choices:
• Use the no seq sequence-number command if you know the filter’s sequence number.
Use the `no deny icmp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

### Parameters
- **log** (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- **threshold-in-msgs count** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

### Defaults
By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

### Command Modes
**CONFIGURATION-EXTENDED-ACCESS-LIST**

### Command History
- **Version 9.3(0.0)** Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.
- **Version 9.4(0.0)** Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.

### Usage Information
When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

### deny ether-type (for Extended MAC ACLs)
Configure an egress filter that drops specified types of Ethernet packets on egress ACL supported line cards. (For more information, refer to your line card documentation).

#### Syntax
```
deny ether-type protocol-type-number {destination-mac-address mac-address-mask | any} vlan vlan-id {source-mac-address mac-address-mask | any} [count [byte]] [order] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```
To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter’s sequence number.
Use the `no deny ether-type protocol-type-number \{destination-mac-address mac-address-mask | any\} vlan vlan-id \{source-mac-address mac-address-mask | any\}` command.

### Parameters

- **log** (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- **threshold-in-msgs count** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

### Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

### Command Modes

**CONFIGURATION-EXTENDED-ACCESS-LIST**

### Command History

- **Version 9.7(0.0)** Introduced on the S6000–ON.
- **Version 9.4(0.0)** Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
- **Version 9.3(0.0)** Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

### Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

### deny (for Standard MAC ACLs)

To drop packets with a the MAC address specified, configure a filter.

#### Syntax

```
deny \{any | mac-source-address [mac-source-address-mask]\} [count [byte]] [log [interval minutes] [threshold-in-msgs [count] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no deny \{any | mac-source-address mac-source-address-mask\}` command.
deny (for Extended MAC ACLs)

To drop packets that match the filter criteria, configure a filter.

**Syntax**

```
deny {any | host mac-address | mac-source-address mac-source-address-mask} 
     {any | host mac-address | mac-destination-address mac-destination-address-mask} 
     [ethertype-operator] [count [byte]] [log [interval minutes] 
     [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:
- Use the no seq sequence-number command if you know the filter’s sequence number.
Use the no deny {any | host mac-address | mac-source-address mac-source-address-mask} {any | host mac-address | mac-destination-address mac-destination-address-mask} command.

**Parameters**

- **log** *(OPTIONAL)* Enter the keyword log to enable the triggering of ACL log messages.
- **threshold-in msgs count** *(OPTIONAL)* Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- **interval minutes** *(OPTIONAL)* Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
- **monitor** *(OPTIONAL)* Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

**Command Modes**

- **CONFIGURATION-MAC ACCESS LIST-EXTENDED**

**Command History**

- **Version**
  - **9.7(0.0)**: Introduced on the S6000-ON.
  - **9.4(0.0)**: Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
  - **9.3(0.0)**: Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

**Usage Information**

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

**Related Commands**

- **permit** — configures a MAC address filter to pass packets.
- **seq** — configures a MAC address filter with a specified sequence number.
permit (for Standard IP ACLs)

To permit packets from a specific source IP address to leave the switch, configure a filter.

Syntax

```
permit {source [mask] | any | host ip-address} [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit {source [mask] | any | host ip-address}` command.

Parameters

- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the `interval` followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes

- `CONFIGURATION-STANDARD-ACCESS-LIST`"
permit arp (for Extended MAC ACLs)

Configure a filter that forwards ARP packets meeting this criteria. This command is supported only on 12-port GE line cards with SFP optics; refer to your line card documentation for specifications.

Syntax

```
permit arp {destination-mac-address mac-address-mask | any} vlan vlan-id
{ip-address | any | opcode code-number} [count [byte]] [order] [fragments]
[log [interval minutes] [threshold-in msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `{destination-mac-address mac-address-mask | any} vlan vlan-id {ip-address | any | opcode code-number}` command.

Parameters

- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).
permit ether-type (for Extended MAC ACLs)

Configure a filter that allows traffic with specified types of Ethernet packets. This command is supported only on 12-port GE line cards with SFP optics. For specifications, refer to your line card documentation.

**Syntax**

```
permit ether-type protocol-type-number {destination-mac-address mac-address-mask | any} vlan vlan-id {source-mac-address mac-address-mask | any} [count [byte]] [order] [log [interval minutes] [threshold-in-msgs count]] [monitor]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit ether-type protocol-type-number {destination-mac-address mac-address-mask | any} vlan vlan-id {source-mac-address mac-address-mask | any}` command.

**Parameters**

- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly. The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).
permit icmp (for Extended IP ACLs)

Configure a filter to allow all or specific ICMP messages.

**Syntax**

```plaintext
permit icmp {source mask | any | host ip-address} {destination mask | any | host ip-address} [dscp] [message-type] [count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit icmp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

**Parameters**

- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).
permit udp (for Extended IP ACLs)

To pass UDP packets meeting the filter criteria, configure a filter.

Syntax

```
permit udp {source mask | any | host ip-address} [destination mask | any | host ip-address] [operator port [port]] [count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]][monitor]
```

To remove this filter, you have two choices:

- Use the `no seq` sequence-number command if you know the filter's sequence number.
- Use the `no permit udp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

Parameters

- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

### Related Commands
- **deny** — configures a filter to drop packets.
- **permit** — configures a filter to forward packets.

### permit tcp (for Extended IP ACLs)

To pass TCP packets meeting the filter criteria, configure a filter.

#### Syntax
```
permit tcp {source mask | any | host ip-address} [bit] [operator port [port]] {destination mask | any | host ip-address} [bit] [dscp] [operator port [port]] [count [byte]] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:
- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit tcp {source mask | any | host ip-address} {destination mask | any | host ip-address}` command.

#### Parameters
- **log** (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- **threshold-in-msgs count** (OPTIONAL) Enter the `threshold-in-msgs` keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

#### Defaults
By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

#### Command Modes
- **CONFIGURATION-EXTENDED-ACCESS-LIST**

#### Command History
- **Version 9.7(0.0)** Introduced on the S6000—ON.
- **Version 9.4(0.0)** Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.
- **Version 9.3(0.0)** Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

#### Usage Information
When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by...
monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

Related Commands
ip access-list extended — creates an extended ACL.
permit — assigns a permit filter for IP packets.
permit udp — assigns a permit filter for UDP packets.

seq arp (for Extended MAC ACLs)

Configure an egress filter with a sequence number that filters ARP packets meeting this criteria. This command is supported only on 12-port GE line cards with SFP optics. For specifications, refer to your line card documentation.

NOTE: Only the options that have been newly introduced in Release 9.3(0.0) and Release 9.4(0.0) are described here. For a complete description on all of the keywords and variables that are available with this command, refer the topic of this command discussed earlier in this guide.

Syntax
seq sequence-number {deny | permit} arp {destination-mac-address mac-address-mask | any} vlan vlan-id {ip-address | any | opcode code-number} [count [byte]] [order] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]

To remove this filter, use the no seq sequence-number command.

Parameters
log (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
threshold-in-msgs count (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. You can enter a threshold in the range of 1-100.
interval minutes (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. You can enter an interval in the range of 1-10 minutes.
monitor (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults
By default, 10 ACL logs are generated if you do not specify the threshold explicitly.
The default frequency at which ACL logs are generated is 5 minutes. By default, flow-based monitoring is not enabled.

ACL logging is supported for standard and extended IPv4 ACLs, standard and extended IPv6 ACLs, and standard and extended MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

seq ether-type (for Extended MAC ACLs)

Configure an egress filter with a specific sequence number that filters traffic with specified types of Ethernet packets. This command is supported only on 12-port GE line cards with SFP optics. For specifications, refer to your line card documentation.

**NOTE:** Only the options that have been newly introduced in Release 9.3(0.0) and Release 9.4(0.0) are described here. For a complete description on all of the keywords and variables that are available with this command, refer the topic of this command discussed earlier in this guide.

**Syntax**
```
seq sequence-number {deny | permit} ether-type protocol-type-number {destination-mac-address mac-address-mask | any} vlan vlan-id {source-mac-address mac-address-mask | any} [count [byte]] [order] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, use the `no seq sequence-number` command.

**Parameters**
- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. You can enter a threshold in the range of 1-100.
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. You can enter an interval in the range of 1-10 minutes.
- `monitor` (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**
- By default, 10 ACL logs are generated if you do not specify the threshold explicitly.
- The default frequency at which ACL logs are generated is 5 minutes. By default, flow-based monitoring is not enabled.

specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing
packets on one port and forwards (mirrors) them to another port. The source port is the monitored port
(MD) and the destination port is the monitoring port (MG).

**seq (for IP ACLs)**

Assign a sequence number to a deny or permit filter in an extended IP access list while creating the filter.

```
seq sequence-number {deny | permit} {ip-protocol-number | icmp | ip | tcp
| udp} {source mask | any | host ip-address} {destination mask | any
| host ip-address} [operator port [port]] [count [byte]] [dscp value] [order]
[fragments] [log [interval minutes] [threshold-in msgs [count]] [monitor]
```

**Parameters**

- **log** (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- **threshold-in msgs count** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to
  indicate the maximum number of ACL logs that can be generated, exceeding
  which the generation of ACL logs is terminated with the seq, permit, or deny
  commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword interval followed by the time period in minutes
  at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic
  that you want to monitor and the ACL in which you are creating the rule is applied
to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring
is not enabled.

**Related Commands**

- `deny` — configures a filter to drop packets.
- `permit` — configures a filter to forward packets.

### seq (for IPv6 ACLs)

Assign a sequence number to a deny or permit the filter in an IPv6 access list while creating the filter.

**Syntax**

```
seq sequence-number (deny | permit) {ipv6-protocol-number | icmp | ip | tcp | udp} {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} [operator port [port]] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To delete a filter, use the `no seq sequence-number` command.

**Parameters**

- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminate with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

### Related Commands

- **permit** – configures a filter to forward packets.

### permit udp (for IPv6 ACLs)

Configure a filter to pass UDP packets meeting the filter criteria.

**Syntax**

```
permit udp {source address mask | any | host ipv6-address} [destination address | any | host ipv6-address] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter’s sequence number.
- Use the `no permit udp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address}` command.

**Parameters**

- **log** (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- **threshold-in-msgs count** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.

### Related Commands

**permit** – assigns a permit filter for IP packets.

### permit icmp (for IPv6 ACLs)

To allow all or specific internet control message protocol (ICMP) messages, configure a filter.

**Syntax**

```
permit icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} [message-type] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command if you know the filter's sequence number.
- Use the `no permit icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address}` command.

**Parameters**

- `log` *(OPTIONAL)*: Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs count` *(OPTIONAL)*: Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- `interval minutes` *(OPTIONAL)*: Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` *(OPTIONAL)*: Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

permit (for IPv6 ACLs)

To configure a filter that matches the filter criteria, select an IPv6 protocol number, ICMP, IPv6, TCP, or UDP.

Syntax

```
permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp} [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs [count]]] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command syntax if you know the filter's sequence number
- Use the `no permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp}` command

Parameters

- `log` (OPTIONAL) Enter the keyword `log` to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated with the `seq`, `permit`, or `deny` commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword `interval` followed by the time period in minutes at which ACL logs must be generated. The interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword `monitor` when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

deny udp (for IPv6 ACLs)

Configure a filter to drop user datagram protocol (UDP) packets meeting the filter criteria.

Syntax

```
deny udp {source address mask | any | host ipv6-address} [destination address | any | host ipv6-address] [operator port [port]] [count [byte]] [log [interval minutes] [threshold-in-msgs [count]] [monitor]
```

Parameters

- **log** (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- **threshold-in-msgs count** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- **interval minutes** (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The threshold range is from 1 to 10 minutes.
- **monitor** (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes

- **ACCESS-LIST**

Command History

</tr>
<tr>
<td>9.3(0.0)</td>
<td>Added support for logging of ACLs on the S4810, S4820T, Z9000, and MXL 10/40GbE Switch IO Module platforms.</td>
</tr>
</tbody>
</table>
When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs.

You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

deny tcp (for IPv6 ACLs)

Configure a filter that drops TCP packets that match the filter criteria.

Syntax

```
deny tcp {source address mask | any | host ipv6-address} [operator port [port]] \(destination address | any \) [operator port [port]] [count] [byte] [log [interval minutes] [threshold-in-msgs count] [monitor]
```

To remove this filter, you have two choices:

- Use the `no seq sequence-number` command syntax if you know the filter's sequence number
- Use the `no deny tcp {source address mask | any | host ipv6-address} [destination address | any \)` command

Parameters

- `log` (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- `threshold-in-msgs count` (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.
- `interval minutes` (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.
- `monitor` (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

<td>Added support for flow-based monitoring on the S4810, S4820T, S6000, and Z9000 platforms.</td>
</tr>
</tbody>
</table>
Version Description
9.3(0.0) Added support for logging of ACLs on the S4810, S4820T, and Z9000 platforms.

Usage Information
When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

deny icmp (for Extended IPv6 ACLs)

Configure a filter to drop all or specific ICMP messages.

**NOTE:** Only the options that have been newly introduced in Release 9.3(0.0) and Release 9.4(0.0) are described here. For a complete description on all of the keywords and variables that are available with this command, refer the topic of this command discussed earlier in this guide.

**Syntax**

deny icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} [message-type] [count [byte]] | [log [interval minutes] [threshold-in-msgs [count]] [monitor]

**Parameters**

- **log** (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.
- **threshold-in-msgs count** (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. You can enter a threshold in the range of 1-100.
- **interval minutes** (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. You can enter an interval in the range of 1-10 minutes.
- **monitor** (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

**Defaults**

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is 5 minutes. By default, flow-based monitoring is not enabled.

**Command Modes** ACCESS-LIST

246 Access Control Lists (ACL)
When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the flow-based enable command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).

deny (for IPv6 ACLs)

Configure a filter that drops IPv6 packets that match the filter criteria.

Syntax

deny {ipv6-protocol-number | icmp | ipv6 | tcp | udp} [count [byte]] [dscp value] [order] [fragments] [log [interval minutes] [threshold-in-msgs count]] [monitor]

To remove this filter, you have two choices:

- Use the no seq sequence-number command syntax if you know the filter’s sequence number
- Use the no deny {ipv6-protocol-number | icmp | ipv6 | tcp | udp} command

Parameters

log (OPTIONAL) Enter the keyword log to enable the triggering of ACL log messages.

threshold-in msgs count (OPTIONAL) Enter the threshold-in-msgs keyword followed by a value to indicate the maximum number of ACL logs that can be generated, exceeding which the generation of ACL logs is terminated, with the seq, permit, or deny commands. The threshold range is from 1 to 100.

interval minutes (OPTIONAL) Enter the keyword interval followed by the time period in minutes at which ACL logs must be generated. The time interval range is from 1 to 10 minutes.

monitor (OPTIONAL) Enter the keyword monitor when the rule is describing the traffic that you want to monitor and the ACL in which you are creating the rule is applied to the monitored interface.

Defaults

By default, 10 ACL logs are generated if you do not specify the threshold explicitly.

The default frequency at which ACL logs are generated is five minutes. By default, flow-based monitoring is not enabled.

Command Modes ACCESS-LIST

### Usage Information

When the configured maximum threshold is exceeded, generation of logs is stopped. When the interval at which ACL logs are configured to be recorded expires, the subsequent, fresh interval timer is started and the packet count for that new interval commences from zero. If ACL logging was stopped previously because the configured threshold is exceeded, it is re-enabled for this new interval.

If ACL logging is stopped because the configured threshold is exceeded, it is re-enabled after the logging interval period elapses. ACL logging is supported for standard and extended IPv4 ACLs, IPv6 ACLs, and MAC ACLs. You can configure ACL logging only on ACLs that are applied to ingress interfaces; you cannot enable logging for ACLs that are associated with egress interfaces.

You can activate flow-based monitoring for a monitoring session by entering the `flow-based enable` command in the Monitor Session mode. When you enable this capability, traffic with particular flows that are traversing through the ingress and egress interfaces are examined and, appropriate ACLs can be applied in both the ingress and egress direction. Flow-based monitoring conserves bandwidth by monitoring only specified traffic instead all traffic on the interface. This feature is particularly useful when looking for malicious traffic. It is available for Layer 2 and Layer 3 ingress and egress traffic. You may specify traffic using standard or extended access-lists. This mechanism copies all incoming or outgoing packets on one port and forwards (mirrors) them to another port. The source port is the monitored port (MD) and the destination port is the monitoring port (MG).
Access Control List (ACL) VLAN Groups and Content Addressable Memory (CAM)

This chapter describes the access control list (ACL) VLAN group and content addressable memory (CAM) enhancements.

Topics:
- member vlan
- ip access-group
- show acl-vlan-group
- show cam-acl-vlan
- cam-acl-vlan
- show cam-usage
- show running config acl-vlan-group
- acl-vlan-group
- show acl-vlan-group detail
- description (ACL VLAN Group)

member vlan

Add VLAN members to an ACL VLAN group.

Syntax
```
member vlan {VLAN-range}
```

Parameters
- **VLAN-range**
  
  Enter the member VLANs using comma-separated VLAN IDs, a range of VLAN IDs, a single VLAN ID, or a combination. For example:
  - Comma-separated: 3, 4, 6
  - Range: 5-10
  - Combination: 3, 4, 5-10, 8

Default
None

Command Modes
- CONFIGURATION (conf-acl-vl-grp)

Command History
- **Version 9.3.(0.0)** Introduced on the S4810, S4820T, and Z9000 platforms.

Usage Information
At a maximum, there can be only 32 VLAN members in all ACL VLAN groups. A VLAN can belong to only one group at any given time.

You can create an ACL VLAN group and attach the ACL with the VLAN members. The optimization is applicable only when you create an ACL VLAN group. If you apply an ACL separately on the VLAN interface, each ACL has a mapping with the VLAN and increased CAM space utilization occurs.

Attaching an ACL individually to VLAN interfaces is similar to the behavior of ACL-VLAN mapping storage in CAM prior to the implementation of the ACL VLAN group functionality.

ip access-group

Apply an egress IP ACL to the ACL VLAN group.

Syntax
```
ip access-group {group name} out implicit-permit
```
**show acl-vlan-group**

Display all the ACL VLAN groups or display a specific ACL VLAN group, identified by name.

**Syntax**
```
show acl-vlan-group {group-name | detail}
```

**Parameters**
- `group-name` *(Optional)* Display only the ACL VLAN group that is specified, up to 140 characters.
- `detail` Display information in a line-by-line format to display the names in their entirety. Without the detail option, the output displays in a table style and information may be truncated.

**Default**
No default behavior or values

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
- Version 9.3.(0.0) Introduced on the S4810, S4820T, Z9000 and MXL platforms

**Usage Information**
- When an ACL-VLAN-Group name or the Access List Group Name contains more than 30 characters, the name is truncated in the show acl-vlan-group command output.

**Examples**

The following sample illustrates the output of the `show acl-vlan-group` command.

```
NOTE: Some group names and some access list names are truncated.
```

```
Dell#show running-config acl-vlan-group

 acl-vlan-group Test
 member vlan 1-100
 ip access-group test in

 Dell#show acl-vlan-group

 Group Name  Egress IP Acl  Ingress IP Acl  Ingress V6 Acl
 Vlan Members
 Test        -           test            -
 1-100

The following sample output is displayed when using the `show acl-vlan-group group-name` option.

```
NOTE: The access list name is truncated.
```

```
Dell#show acl-vlan-group TestGroupSeventeenTwenty

 Group Name  Egress IP Acl  Ingress IP Acl  Ingress IPV6 Acl
```
The following sample output shows the line-by-line style display when using the `show acl-vlan-group detail` option.

```markdown
NOTE: No group or access list names are truncated
```

```
Dell#show acl-vlan-group detail
Group Name : Test
Egress IP Acl : test
Ingress IP Acl : test
Ingress IPV6 Acl : -
Vlan Members : 1-100
```

### show cam-acl-vlan

Display the number of flow processor (FP) blocks that is allocated for the different VLAN services.

**Syntax**

```
show cam-acl-vlan
```

**Command Modes**

EXEC Privilege

**Command History**

Version 9.3.(0.0) Introduced on the S4810, S4820T, Z9000 and MXL platforms.

**Usage Information**

After CAM configuration for ACL VLAN groups is performed, you must reboot the system to enable the settings to be stored in nonvolatile storage. During the initialization of CAM, the chassis manager reads the NVRAM and allocates the dynamic VCAP regions.

The following table describes the output fields of this `show` command:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chassis Vlan Cam ACL</td>
<td>Details about the CAM blocks allocated for ACLs for various VLAN operations at a system-wide, global level.</td>
</tr>
<tr>
<td>Stack Unit &lt;number&gt;</td>
<td>Details about the CAM blocks allocated for ACLs for various VLAN operations for a particular stack unit.</td>
</tr>
<tr>
<td>Current Settings(in block sizes)</td>
<td>Information about the number of FP blocks that are currently in use or allocated.</td>
</tr>
<tr>
<td>VlanOpenFlow</td>
<td>Number of FP blocks for VLAN open flow operations.</td>
</tr>
<tr>
<td>VlanIscsi</td>
<td>Number of FP blocks for VLAN internet small computer system interface (iSCSI) counters.</td>
</tr>
<tr>
<td>VlanHp</td>
<td>Number of FP blocks for VLAN high performance processes.</td>
</tr>
<tr>
<td>VlanFcoe</td>
<td>Number of FP blocks for VLAN Fiber Channel over Ethernet (FCoE) operations.</td>
</tr>
<tr>
<td>VlanAclOpt</td>
<td>Number of FP blocks for ACL VLAN optimzation feature.</td>
</tr>
</tbody>
</table>
**Example**

```
Dell#show cam-acl-vlan
-- Chassis Vlan Cam ACL --
 Current Settings (in block sizes)
 VlanOpenFlow :         0
 VlanIscsi    :         0
 VlanAclOpt   :         2
 VlanHp       :         1
 VlanFcoe     :         1
```

**cam-acl-vlan**

Allocate the number of flow processor (FP) blocks or entries for VLAN services and processes.

**Syntax**

```
cam-acl-vlan { default | vlanopenflow <0-2> | vlaniscsi <0-2> | vlanaclopt <0-2>
```

**Parameters**

- **default**
  - Reset the number of FP blocks to default. By default, 0 groups are allocated for the ACL in VCAP. ACL VLAN groups or CAM optimization is not enabled by default, and you need to allocate the slices for CAM optimization.

- **vlanopenflow <0-2>**
  - Allocate the number of FP blocks for VLAN open flow operations.

- **vlaniscsi <0-2>**
  - Allocate the number of FP blocks for VLAN iSCSI counters.

- **vlanaclopt <0-2>**
  - Allocate the number of FP blocks for the ACL VLAN optimization feature.

**Default**

If you use the `default` keyword with the `cam-acl-vlan` command, the FP blocks allocated for VLAN processes are restored to their default values. No FP blocks or dynamic VLAN Content Aware Processor (VCAP) groups are allocated for VLAN operations by default.

**Command Modes**

- `CONFIGURATION`

**Command History**

- **Version 9.3(0.0)**
  - Introduced on the S4810 and Z9000 platforms.

**Usage Information**

- The VLAN ContentAware Processor (VCAP) application is a pre-ingress CAP that modifies the VLAN settings before packets are forwarded. To support the ACL CAM optimization functionality, the CAM carving feature is enhanced. A total of four VACP groups are present, of which two are for fixed groups and the other two are for dynamic groups. Out of the total of two dynamic groups, you can allocate zero, one, or two flow processor (FP) blocks to iSCSI Counters, OpenFlow and ACL Optimization. You can configure only two of these features at a point in time.

**show cam-usage**

View the amount of CAM space available, used, and remaining in each partition (including IPv4Flow and Layer 2 ACL sub-partitions).

**Syntax**

```
show cam-usage [acl | router | switch]
```

**Parameters**

- **acl**
  - (OPTIONAL) Enter the keyword `acl` to display Layer 2 and Layer 3 ACL CAM usage.

- **router**
  - (OPTIONAL) Enter the keyword `router` to display Layer 3 CAM usage.

- **switch**
  - (OPTIONAL) Enter the keyword `switch` to display Layer 2 CAM usage.

**Command Modes**

- `EXEC`
- `EXEC Privilege`
### Command History

**Version 9.3.(0.0)**  Introduced on the S4810, S4820T, Z9000 and MXL platforms.

### Usage Information

The following regions must be provided in the `show cam-usage` output:

- L3AclCam
- L2AclCam
- V6AclCam

The following table describes the output fields of this `show` command:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LineCard</td>
<td>Number of the line card that contains information on ACL VLAN groups</td>
</tr>
<tr>
<td>Portpipe</td>
<td>The hardware path that packets follow through a system for ACL optimization</td>
</tr>
<tr>
<td>CAM-Region</td>
<td>Type of area in the CAM block that is used for ACL VLAN groups</td>
</tr>
<tr>
<td>Total CAM space</td>
<td>Total amount of space in the CAM block</td>
</tr>
<tr>
<td>Used CAM</td>
<td>Amount of CAM space that is currently in use</td>
</tr>
<tr>
<td>Available CAM</td>
<td>Amount of CAM space that is free and remaining to be allocated for ACLs</td>
</tr>
</tbody>
</table>

**Example 1:**

Output of the `show cam-usage` Command

```
Dell#show cam-usage
Linecard|Portpipe| CAM Partition | Total CAM | Used CAM | Available CAM
--------|--------|---------------|-----------|----------|----------------
1       | 0      | IN-L2 ACL     | 1008      | 320      | 688            |

show running config acl-vlan-group

Display the running configuration of all or a given ACL VLAN group.

Syntax

```
show running config acl-vlan-group group name
```

Parameters

- **group-name**
  - Display only the ACL VLAN group that is specified. The maximum group name is 140 characters.

Default

None

Command Modes

- EXEC
- EXEC Privilege

Command History

- **Version 9.3.(0.0)** Introduced on the S4810, S4820T, Z9000 and MXL platforms

Examples

The following sample output shows the line-by-line style display when using the show running-config acl-vlan-group option. Note that no group or access list names are truncated.

```
Dell#show running-config acl-vlan-group

acl-vlan-group Test
member vlan 1-100
ip access-group test in

Dell#show running-config acl-vlan-group Test

acl-vlan-group Test
member vlan 1-100
ip access-group test in
```

acl-vlan-group

Create an ACL VLAN group.

Syntax

```
acl-vlan-group {group name}
```

To remove an ACL VLAN group, use the no acl-vlan-group {group name} command.
Parameters

**group-name**

Specify the name of the ACL VLAN group. The name can contain a maximum 140 characters.

**Default**

No default behavior or values

**Command Modes**

CONFIGURATION

**Command History**

Version 9.3(0.0) Introduced on the S4810, S4820T, and Z9000 platforms

**Usage Information**

You can have up to eight different ACL VLAN groups at any given time. When you configure an ACL VLAN group, you enter the ACL VLAN Group Configuration mode.

To avoid the problem of excessive consumption of CAM area, you can configure ACL VLAN groups that combines all the VLANS that are applied with the same ACL in a single group. A unique identifier for each of ACL attached to the VLAN is used as a handle or locator in the CAM area instead of the VLAN id.

This method of processing significantly reduces the number of entries in the CAM area and saves memory space in CAM.

You can create an ACL VLAN group and attach the ACL with the VLAN members. Optimization is applicable only when you create an ACL VLAN group. If you apply an ACL separately on the VLAN interface, each ACL maps with the VLAN and increased CAM space utilization occurs.

Attaching an ACL individually to VLAN interfaces is similar to the behavior of ACL-VLAN mapping storage in CAM prior to the implementation of the ACL VLAN group functionality.

---

**show acl-vlan-group detail**

Display all the ACL VLAN Groups or display a specific ACL VLAN Group by name. To display the names in their entirety, the output displays in a line-by-line format.

**Syntax**

```
show acl-vlan-group detail
```

**Parameters**

**detail**

Display information in a line-by-line format to display the names in their entirety.

Without the detail option, the output is displayed in a table style and information may be truncated.

**Default**

No default behavior or values

**Command Modes**

EXEC

EXEC Privilege

**Command History**

Version 9.3.(0.0) Introduced on the S4810, S4820T, Z9000, and MXL platforms

**Usage Information**

The output for this command displays in a line-by-line format. This allows the ACL-VLAN-Group names (or the Access List Group Names) to display in their entirety.

**Examples**

The following sample output shows the line-by-line style display when using the `show acl-vlan-group detail` option. Note that no group or access list names are truncated.

```
Dell#show acl-vlan-group detail
Group Name : Test
Egress IP Acl : 
Ingress IP Acl : test
Ingress IPV6 Acl : 
Vlan Members : 1-100
```
**description (ACL VLAN Group)**

Add a description to the ACL VLAN group.

**Syntax**

```markdown
description description
```

**Parameters**

- `description` Enter a description to identify the ACL VLAN group (80 characters maximum).

**Default**

No default behavior or values

**Command Modes**

CONFIGURATION (conf-acl-vl-grp)

**Command History**

- **Version 9.3.(0.0)** Introduced on the S4810, S4820T, and Z9000 platforms

**Usage Information**

Enter a description for each ACL VLAN group that you create for effective and streamlined administrative and logging purposes.
Bidirectional Forwarding Detection (BFD)

Bidirectional forwarding detection (BFD) is a detection protocol that provides fast forwarding path failure detection.

The Dell Networking operating software implementation is based on the standards specified in the IETF Draft draft-ietf-bfd-base-03 and supports BFD on all Layer 3 physical interfaces including VLAN interfaces and port-channels

Topics:
- bfd all-neighbors
- bfd disable
- bfd enable (Configuration)
- bfd enable (Interface)
- bfd interval
- bfd neighbor
- bfd protocol-liveness
- ip route bfd
- ipv6 ospf bfd all-neighbors
- isis bfd all-neighbors
- neighbor bfd
- neighbor bfd disable
- show bfd neighbors
- vrrp bfd neighbor

Bfd all-neighbors

Enable BFD sessions with all neighbors discovered by Layer 3 protocols virtual router redundancy protocol (VRRP), intermediate system to intermediate system (IS-IS), open shortest path first (OSPF), OSPFv3, or border gateway protocol (BGP) on router interfaces, and (optionally) reconfigure the default timer values.

Z9000

Syntax

```
bfd all-neighbors [interval interval min_rx min_rx multiplier value role {active | passive}]```

Parameters

- **interval milliseconds**: (OPTIONAL) Enter the keyword interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 100.
- **min_rx milliseconds**: Enter the keyword min_rx to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 100. The default is 100.
- **multiplier value**: Enter the keyword multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.
- **role [active | passive]**: Enter the role that the local system assumes:
  - **Active** — The active system initiates the BFD session. Both systems can be active for the same session.
  - **Passive** — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is **active**.
Defaults
Refer to Parameters.

Command Modes
- ROUTER OSPF
- ROUTER OSPFv3
- ROUTER BGP
- ROUTER ISIS

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.2.(0.0)</td>
<td>Introduced BFD for VRRP and OSPFv3 on Z9000, S4810, and S4820T.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced BFD for BGP on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced BFD for BGP on the S4810.</td>
</tr>
<tr>
<td>8.4.1.3</td>

<td>Introduced BFD for ISIS on the E-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced BFD for OSPF on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
All neighbors inherit the timer values configured with the bfd neighbor command except in the following cases:
- Timer values configured with the isis bfd all-neighbors or ip ospf bfd all-neighbors commands in INTERFACE mode override timer values configured with the bfd neighbor command. Likewise, using the no bfd neighbor command does not disable BFD on an interface if you explicitly enable BFD using the isis bfd all-neighbors command.
- Neighbors that have been explicitly enabled or disabled for a BFD session with the bfd neighbor or neighbor bfd disable commands in ROUTER BGP mode do not inherit the global BFD enable/disable values configured with the bfd neighbor command or configured for the peer group to which a neighbor belongs. The neighbors inherit only the global timer values (configured with the bfd neighbor command).

You can only enable BFD for VRRP in INTERFACE command mode (vrrp bfd all-neighbors).

Related Commands
neighbor bfd disable — Explicitly disables a BFD session with a BGP neighbor or a BGP peer group.

\**bfd disable**

Disable BFD on an interface.

**Z9000**

**Syntax**

```
bfd disable
```

Re-enable BFD using the no bfd disable command.

**Defaults**

BFD is disabled by default.
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

**bfd interval**

Specify non-default BFD session parameters beginning with the transmission interval.

**Z9000**

**Syntax**

```
bfd interval interval min_rx min_rx multiplier value role {active | passive}
```

**Parameters**

- `interval milliseconds` Enter the keywords `interval` to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 100.
- `min_rx milliseconds` Enter the keywords `min_rx` to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 1000. The default is 100.
- `multiplier value` Enter the keywords `multiplier` to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.
- `role [active | passive]` Enter the role that the local system assumes:
  - `Active` — The active system initiates the BFD session. Both systems can be active for the same session.
  - `Passive` — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is `Active`.

**Defaults**

Refer to Parameters.
**Example**

Dell(config-if-te-1/3)#bfd interval 250 min_rx 300 multiplier 4 role passive
Dell(config-if-te-1/3)#

### bfd neighbor

Establish a BFD session with a neighbor.

**Syntax**

```
bfd neighbor ip-address
```

To remove the BFD session with the neighbor, use the `no bfd neighbor ip-address` command.

**Parameters**

- `ip-address`: Enter the IP address of the neighbor in dotted decimal format (A.B.C.D).

**Defaults**

none

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>8.3.10.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Protocol Liveness is a feature that notifies the BFD Manager when a client protocol (for example, OSPF and ISIS) is disabled. When a client is disabled, all BFD sessions for that protocol are torn down. Neighbors on the remote system receive an Admin Down control packet and are placed in the Down state. Peer routers might take corrective action by choosing alternative paths for the routes that originally pointed to this router.

**ip route bfd**

Enable BFD for all neighbors configured through static routes.

### Z9000

**Syntax**

```plaintext
ip route bfd [interval interval min_rx min_rx multiplier value role {active | passive}]
```

To disable BFD for all neighbors configured through static routes, use the no ip route bfd [interval interval min_rx min_rx multiplier value role {active | passive}] command.

**Parameters**

- `interval milliseconds` (OPTIONAL) Enter the keywords `interval` to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 100.
- `min_rx milliseconds` Enter the keywords `min_rx` to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 1000. The default is 100.
- `multiplier value` Enter the keywords `multiplier` to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.
- `role [active | passive]` Enter the role that the local system assumes:
  - `Active` — The active system initiates the BFD session. Both systems can be active for the same session.
  - `Passive` — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is `Active`.

</tbody>
</table>
ipv6 ospf bfd all-neighbors

Establish BFD sessions with all OSPFv3 neighbors on a single interface or use non-default BFD session parameters.

Z9000

**Syntax**

```
ipv6 ospf bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]
```

To disable all BFD sessions on an OSPFv3 interface implicitly, use the `no ipv6 ospf bfd all-neighbors disable` command in interface mode.

**Parameters**

- `disable` (OPTIONAL) Enter the keyword disable to disable BFD on this interface.
- `interval milliseconds` (OPTIONAL) Enter the keyword interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 100.
- `min_rx milliseconds` Enter the keywords min_rx to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 100. The default is 100.
- `multiplier value` Enter the keyword multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.
- `role [active | passive]` Enter the role that the local system assumes:
  - `Active` — The active system initiates the BFD session. Both systems can be active for the same session.
  - `Passive` — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is `Active`.

**Defaults**

See Parameters

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2.0.0</td>
<td>Introduced on the Z9000, S4820T, and S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command provides the flexibility to fine-tune the timer values based on individual interface needs when you configure ipv6 ospf bfd in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the bfd all-neighbors command. Using the `no` form of this command does not disable BFD if you configure BFD in CONFIGURATION mode.

To disable BFD on a specific interface while you configure BFD in CONFIGURATION mode, use the keyword disable.
isis bfd all-neighbors

Enable BFD on all IS-IS neighbors discovered on an interface.

Z9000

Syntax

isis bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role (active | passive)]]

To remove all BFD sessions with IS-IS neighbors discovered on this interface, use the no isis bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role (active | passive)]] command.

Parameters

disable (OPTIONAL) Enter the keyword disable to disable BFD on this interface.

interval milliseconds (OPTIONAL) Enter the keywords interval to specify non-default BFD session parameters beginning with the transmission interval. The range is from 50 to 1000. The default is 100.

min_rx milliseconds Enter the keywords min_rx to specify the minimum rate at which the local system would like to receive control packets from the remote system. The range is from 50 to 1000. The default is 100.

multiplier value Enter the keywords multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.

role [active | passive] Enter the role that the local system assumes:

- Active — The active system initiates the BFD session. Both systems can be active for the same session.
- Passive — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is Active.

Defaults

<td>8.2.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

This command provides the flexibility to fine-tune the timer values based on individual interface needs when ISIS BFD is configured in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the bfd all-neighbors command. Using the no form of this command does not disable BFD if BFD is configured in CONFIGURATION mode.

To disable BFD on a specific interface while BFD is configured in CONFIGURATION mode, use the keyword disable.
neighbor bfd

Explicitly enable a BFD session with a BGP neighbor or a BGP peer group.

Z9000

Syntax

neighbor {ip-address | peer-group-name} bfd

Parameters

- **ip-address**: Enter the IP address of the BGP neighbor that you want to explicitly enable for BFD sessions in dotted decimal format (A.B.C.D).
- **peer-group-name**: Enter the name of the peer group that you want to explicitly enable for BFD sessions.

Defaults

none

Command Modes

ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.0.0.0</td>

</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.3</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>

Usage Information

When you enable a BFD session with a specified BGP neighbor or peer group using the bfd neighbor command, the default BFD session parameters are used (interval: 100 milliseconds, min_rx: 100 milliseconds, multiplier: 3 packets, and role: active) if you have not specified parameters with the bfd neighbor command.

When you explicitly enable a BGP neighbor for a BFD session with the bfd neighbor command:

- The neighbor does not inherit the global BFD enable values configured with the bfd neighbor command or configured for the peer group to which the neighbor belongs.
- The neighbor only inherits the global timer values configured with the bfd neighbor command: interval, min_rx, and multiplier.

Related Commands

- **neighbor bfd disable** — Explicitly disables a BFD session with a BGP neighbor or a BGP peer group.

neighbor bfd disable

Explicitly disable a BFD session with a BGP neighbor or a BGP peer group.

Z9000

Syntax

neighbor {ip-address | peer-group-name} bfd disable

Parameters

- **ip-address**: Enter the IP address of the BGP neighbor that you want to explicitly disable for BFD sessions in dotted decimal format (A.B.C.D).
**peer-group-name**  Enter the name of the peer group that you want to explicitly disable for BFD sessions.

**Defaults**  none

**Command Modes**  ROUTER BGP

**Command History**  This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.3</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>

**Usage Information**  When you explicitly disable a BGP neighbor for a BFD session with the `neighbor bfd disable` command:
- The neighbor does not inherit the global BFD disable values configured with the `bfd neighbor` command or configured for the peer group to which the neighbor belongs.
- The neighbor only inherits the global timer values configured with the `bfd neighbor` command: `interval`, `min_rx`, and `multiplier`.

When you remove the Disabled state of a BFD for a BGP session with a specified neighbor by entering the `no neighbor bfd disable` command, the BGP link with the neighbor returns to normal operation and uses the BFD session parameters globally configured with the `bfd neighbor` command or configured for the peer group to which the neighbor belongs.

**Related Commands**  
neighbor bfd — Explicitly enables a BGP session with a BGP neighbor or a BGP peer group.

**show bfd neighbors**

Display BFD neighbor information on all interfaces or a specified interface.

**Z9000**

**Syntax**  
```
show bfd neighbors [interface [detail]]
```

**Parameters**  
- `interface`  Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- `detail`  (OPTIONAL) Enter the keyword `detail` to view detailed information about BFD neighbors.

**Defaults**  none
Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

I    - ISIS
O    - OSPF
R    - Static Route (RTM)

LocalAddr    RemoteAddr    Interface State  Rx-int Tx-int Mult Clients
* 10.1.3.2   10.1.3.1    Te 1/3    Up    300    250    3    C
```

Example (Detail)

```
Dell#show bfd neighbors detail

Session Discriminator: 1
Neighbor Discriminator: 1
Local Addr: 10.1.3.2
Local MAC Addr: 00:01:e8:02:15:0e
Remote Addr: 10.1.3.1
Remote MAC Addr: 00:01:e8:27:2b:f1
Int: TenGigabitEthernet 1/3
State: Up
Configured parameters:
  TX: 100ms, RX: 100ms, Multiplier: 3
Neighbor parameters:
  TX: 250ms, RX: 300ms, Multiplier: 4
Actual parameters:
  TX: 300ms, RX: 250ms, Multiplier: 3
Role: Active
Delete session on Down: False
Client Registered: CLI
Uptime: 00:02:04
Statistics:
  Number of packets received from neighbor: 376
  Number of packets sent to neighbor: 314
  Number of state changes: 2
  Number of messages from IFA about port state change: 0
  Number of messages communicated b/w Manager and Agent: 6
```

Related Commands

- `bfd neighbor` — establishes a BFD session with a neighbor.
- `bfd all-neighbors` — establishes BFD sessions with all neighbors discovered by the IS-IS protocol or OSPF protocol out of all interfaces.
**vrrp bfd neighbor**

Establish a BFD for VRRP session with a neighbor.

**Z9000**

**Syntax**

```
vrrp bfd neighbor ip-address
```

To remove the BFD session with the neighbor, use the `no vrrp bfd neighbor ip-address` command.

**Parameters**

- `ip-address`: Enter the IP address of the neighbor in dotted decimal format (A.B.C.D).

**Defaults**

none

**Command Modes**

INTERFACE

**Command History**

**Related Commands**

- `show bfd neighbors` — displays the BFD neighbor information on all interfaces or a specified interface.
Border Gateway Protocol

BGP is an external gateway protocol that transmits interdomain routing information within and between autonomous systems (AS). BGP version 4 (BGPv4) supports classless inter-domain routing (CIDR) and the aggregation of routes and AS paths. Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically sent messages to update those routing tables.

BGP is supported in Dell Networking OS version 9.0.0.0 for the Z9000 platform.

**NOTE:** For more information about configuring the border gateway protocol (BGP), refer to the BGP chapter in the Dell Networking OS Configuration Guide.

This chapter contains the following sections:

- BGPv4 Commands
- MBGP Commands
- BGP Extended Communities (RFC 4360)
- IPv6 BGP Commands

**Topics:**

- BGP IPv4 Commands
- MBGP Commands
- BGP Extended Communities (RFC 4360)
- IPv6 BGP Commands
- IPv6 MBGP Commands

### BGP IPv4 Commands

Border Gateway Protocol (BGP) is an external gateway protocol that transmits interdomain routing information within and between Autonomous Systems (AS). BGP supports classless interdomain routing (CIDR) and the aggregation of routes and AS paths. Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically send messages to update those routing tables.

**NOTE:** Dell Networking OS supports 2-byte (16-bit) and 4-byte (32-bit) format for autonomous system numbers (ASNs), where the 2-byte format is 1 to 65535 and the 4-byte format is 1 to 4294967295.

**NOTE:** Dell Networking OS supports dotted format as well as the traditional plain format for AS numbers. The dot format is displayed when using the `show ip bgp` commands. To determine the comparable dot format for an ASN from a traditional format, use `ASN/65536`, `ASN%65536`. For more information about using the 2– or 4-byte format, refer to the Dell Networking OS Configuration Guide.

#### address-family

Enable the IPv4 multicast or the IPv6 address family.

**Z9000**

**Syntax**

```
address-family [ipv4 {multicast | | ipv6 unicast]
```

**Parameters**

- **ipv4 multicast**
  
  Enter the keyword `ipv4` followed by the keyword `multicast` to enable BGPv4 multicast mode.

- **ipv6 unicast**
  
  Enter the keyword `ipv6` followed by the keyword `unicast` to enable BGPv6 mode.
aggregate-address

To minimize the number of entries in the routing table, summarize a range of prefixes.

Z9000

Syntax

```
aggregate-address ip-address mask [advertise-map map-name] [as-set]
[attribute-map map-name] [summary-only] [suppress-map map-name]
```

Parameters

- `ip-address mask`: Enter the IP address and mask of the route to be the aggregate address. Enter the IP address in dotted decimal format (A.B.C.D) and mask in /prefix format (/x).
- `advertise-map map-name` (OPTIONAL): Enter the keywords advertise-map then the name of a configured route map to set filters for advertising an aggregate route.
- `as-set`: (OPTIONAL) Enter the keyword as-set to generate path attribute information and include it in the aggregate. AS_SET includes AS_PATH and community information from the routes included in the aggregated route.
- `attribute-map map-name` (OPTIONAL): Enter the keywords attribute-map then the name of a configured route map to modify attributes of the aggregate, excluding AS_PATH and NEXT_HOP attributes.
- `summary-only` (OPTIONAL): Enter the keyword summary-only to advertise only the aggregate address. Specific routes are not advertised.
- `suppress-map map-name` (OPTIONAL): Enter the keywords suppress-map then the name of a configured route map to identify which more-specific routes in the aggregate are suppressed.

Defaults

Not configured.

Command Modes

- ROUTER BGP ADDRESS FAMILY
- ROUTER BGP ADDRESS FAMILY IPv6

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
Version | Description
---|---
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
7.7.1.0 | Introduced on the C-Series.

Usage Information
At least one of the routes included in the aggregate address must be in the BGP routing table for the configured aggregate to become active.

If routes within the aggregate are constantly changing, do not add the as-set parameter to the aggregate as the aggregate flaps to keep track of the changes in the AS_PATH.

In route maps used in the suppress-map parameter, routes meeting the deny clause are not suppress; in other words, they are allowed. The opposite is also true: routes meeting the permit clause are suppressed.

If the route is injected via the network command, that route still appears in the routing table if the summary-only parameter is configured in the aggregate-address command.

The summary-only parameter suppresses all advertisements. If you want to suppress advertisements to only specific neighbors, use the neighbor distribute-list command.

In the show ip bgp command, aggregates contain an ‘a’ in the first column and routes suppressed by the aggregate contain an ‘s’ in the first column.

When an aggregate address is denied using a peer’s outbound route-map, individual routes suppressed by the aggregate address are advertised to that peer.

The attribute-map corresponding to an aggregate address is applied during the outbound update creation time; hence the value set in that attribute-map will not be shown in the output of the show ip bgp aggregate route command.

bgp add-path

Allow the advertisement of multiple paths for the same address prefix without the new paths replacing any previous ones.

Z9000

Syntax
bgp add-path [send | receive | both] path-count

Parameters
- **send**
Enter the keyword send to indicate that the system sends multiple paths to peers.
- **receive**
Enter the keyword receive to indicate that the system accepts multiple paths from peers.
- **both**
Enter the keyword both to indicate that the system sends and accepts multiple paths from peers.
- **path-count**
Enter the number paths supported. The range is from 2 to 64.

Defaults
Disabled

Command Modes
- ROUTER BGP
- ROUTER BGP-address-family

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
**bgp always-compare-med**

Allows you to enable comparison of the MULTI_EXIT_DISC (MED) attributes in the paths from different external ASs.

**Z9000**

**Syntax**

```
bgp always-compare-med
```

To disable comparison of MED, enter `no bgp always-compare-med`.

**Defaults**

Disabled (that is, the software only compares MEDs from neighbors within the same AS).

**Command Modes**

ROUTER BGP

**Version**

- **9.7(0.0)**: Introduced on the S6000–ON.
- **9.0.2.0**: Introduced on the S6000.
- **8.3.19.0**: Introduced on the S4820T.
- **8.3.11.0**: Introduced on the Z9000.
- **8.3.8.0**: Introduced on the S4810.

**Usage Information**

Any update without a MED attribute is the least preferred route.

If you enable this command, use the `clear ip bgp *` command to recompute the best path.

**bgp asnotation**

Allows you to implement a method for AS number representation in the command line interface (CLI).

**Z9000**

**Syntax**

```
bgp asnotation [asplain | asdot+ | asdot]
```

To disable a dot or dot+ representation and return to ASPLAIN, enter the `no bgp asnotation` command.
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Introduced the dynamic application of AS notation changes.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Before enabling this feature, enable the `enable bgp four-octet-as-support` command. If you disable the `four-octect-support` command after using dot or dot+ format, the AS numbers revert to asplain text.

When you apply an anotation, it is reflected in the running-configuration. If you change the notation type, the running-config updates dynamically and the new notation shows.

```
Dell(conf)#router bgp 1
Dell(conf-router_bgp)#bgp asnotation asdot
Dell(conf-router_bgp)#ex
Dell(conf)#do show run | grep bgp
router bgp 1
   bgp four-octet-as-support
   bgp asnotation asdot

Dell(conf)#router bgp 1
Dell(conf-router_bgp)#bgp asnotation asdot+
Dell(conf-router_bgp)#ex
Dell(conf)#do show run | grep bgp
router bgp 1
   bgp four-octet-as-support
   bgp asnotation asdot+

Dell(conf)#router bgp 1
Dell(conf-router_bgp)#bgp asnotation asplain
Dell(conf-router_bgp)#ex
Dell(conf)#do show run |grep bgp
router bgp 1
   bgp four-octet-as-support

Dell(conf)#
```

Related Commands:
- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.
bgp bestpath as-path ignore

Ignore the AS PATH in BGP best path calculations.

Z9000

Syntax

bgp bestpath as-path ignore
To return to the default, enter the no bgp bestpath as-path ignore command.

Defaults
Disabled (that is, the software considers the AS_PATH when choosing a route as best).

Command Modes
ROUTER BGP

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>

<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

If you enable this command, use the clear ip bgp * command to recompute the best path.

bgp bestpath as-path multipath-relax

Include prefixes received from different AS paths during multipath calculation.

Syntax

bgp bestpath as-path multipath-relax
To return to the default BGP routing process, use the no bgp bestpath as-path multipath-relax command.

Defaults
Disabled

Command Modes
ROUTER BGP

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.4</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
The `bestpath router bgp configuration mode` command changes the default bestpath selection algorithm. The `multipath-relax` option allows load-sharing across providers with different (but equal-length) autonomous system paths. Without this option, ECMP expects the AS paths to be identical for load-sharing.

**bgp bestpath med confed**

Enable MULTI_EXIT_DISC (MED) attribute comparison on paths learned from BGP confederations.

**Z9000**

**Syntax**

```
bgp bestpath med confed
```

To disable MED comparison on BGP confederation paths, enter the `no bgp bestpath med confed` command.

**Defaults**

Disabled

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.11.1</td>

</tr>
<tr>
<td>8.3.10.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The software compares the MEDs only if the path contains no external autonomous system numbers. If you enable this command, use the `clear ip bgp *` command to recompute the best path.

**bgp bestpath med missing-as-best**

During path selection, indicate preference to paths with missing MED (MULTI_EXIT_DISC) over paths with an advertised MED attribute.

**Z9000**

**Syntax**

```
bgp bestpath med missing-as-best
```

To return to the default selection, use the `no bgp bestpath med missing-as-best` command.

**Defaults**

Disabled

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>7.8.1.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The software compares the MEDs only if the path contains no external autonomous system numbers. If you enable this command, use the `clear ip bgp *` command to recompute the best path.
bgp bestpath router-id ignore

Do not compare router-id information for external paths during best path selection.

Z9000

Syntax

```none
bgp bestpath router-id ignore
```

To return to the default selection, use the `no bgp bestpath router-id ignore` command.

Defaults

Disabled

Command Modes

- ROUTER BGP

<td>Introduced</td>
</tr>
</tbody>
</table>

Usage Information

Configuring this option retains the current best-path. When sessions are then reset, the oldest received path is chosen as the best-path.

bgp client-to-client reflection

Allows you to enable route reflection between clients in a cluster.

Syntax

```none
bgp client-to-client reflection
```

To disable client-to-client reflection, use the `no bgp client-to-client reflection` command.

Defaults

Enabled when a route reflector is configured.
bgp cluster-id

Assign a cluster ID to a BGP cluster with more than one route reflector.

Z9000

Syntax

bgp cluster-id {ip-address | number}

To delete a cluster ID, use the no bgp cluster-id {ip-address | number} command.

Parameters

- ip-address: Enter an IP address as the route reflector cluster ID.
- number: Enter a route reflector cluster ID as a number from 1 to 4294967295.

Defaults

Not configured.

Command Modes

ROUTER BGP

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell

</tr>
</tbody>
</table>
When a BGP cluster contains only one route reflector, the cluster ID is the route reflector’s router ID. For redundancy, a BGP cluster may contain two or more route reflectors. Assign a cluster ID with the `bgp cluster-id` command. Without a cluster ID, the route reflector cannot recognize route updates from the other route reflectors within the cluster.

The default format for displaying the cluster-id is dotted decimal, but if you enter the cluster-id as an integer, it is displayed as an integer.

This command automatically restarts the BGP instance for the configuration to take effect.

### Related Commands
- `bgp client-to-client reflection` — enables route reflection between the route reflector and clients.
- `neighbor route-reflector-client` — configures a route reflector and clients.
- `show ip bgp cluster-list` — views paths with a cluster ID.

### bgp confederation identifier

Configure an identifier for a BGP confederation.

**Z9000**

**Syntax**

```plaintext
bgp confederation identifier as-number
```

To delete a BGP confederation identifier, use the `no` `bgp confederation identifier as-number` command.

**Parameters**

- `as-number`  
  Enter the AS number. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

**Defaults**

Not configured.

**Command Modes**

- ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series. Added support for the 4-byte format</td>
</tr>
</tbody>
</table>

**Usage Information**

To accept 4-byte formats before entering a 4-byte AS number, configure your system. All the routers in the Confederation must be 4 byte or 2 byte identified routers. You cannot mix them.

The autonomous systems configured in this command are visible to the EBGP neighbors. Each autonomous system is fully meshed and contains a few connections to other autonomous systems. The next hop, MED, and local preference information is preserved throughout the confederation.

Dell Networking OS accepts confederation EBGP peers without a LOCAL_PREF attribute. The software sends AS_CONFED_SET and accepts AS_CONFED_SET and AS_CONF_SEQ.

If a local-as is configured, BGP does not allow for the configuration of BGP confederation. Similarly, if BGP confederation is configured, then BGP does not allow the configuration of local-as.
If the neighbor is an eBGP neighbor, then BGP performs a check on the first AS number. In this scenario, it is mandatory that the first sequence in the AS path is of type AS_SEQUENCE or AS_CONFED_SEQUENCE (in the case of confederations). If the first entry appears as an AS_CONFED_SET and the neighbor is not in the local AS, then this is strictly a problem with the neighbor node.

This command automatically restarts the BGP instance for the configuration to take effect.

**Related Commands**

- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.

## bgp confederation peers

Specify the autonomous systems (ASs) that belong to the BGP confederation.

### Z9000

#### Syntax

```
bgp confederation peers as-number [...as-number]
```

To return to the default, use the `no bgp confederation peers` command.

#### Parameters

- `as-number` Enter the AS number. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

- `...as-number` (OPTIONAL) Enter up to 16 confederation numbers. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

#### Defaults

Not configured.

#### Command Modes

- ROUTER BGP

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series. Added support for the 4-byte format.</td>
</tr>
</tbody>
</table>

#### Usage Information

All the routers in the Confederation must be 4 byte or 2 byte identified routers. You cannot mix them. The autonomous systems configured in this command are visible to the EBGP neighbors. Each autonomous system is fully meshed and contains a few connections to other autonomous systems. After specifying autonomous systems numbers for the BGP confederation, recycle the peers to update their configuration.

#### Related Commands

- `bgp confederation identifier` — configures a confederation ID.
- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.
**bgp dampening**

Enable BGP route dampening and configure the dampening parameters.

**Z9000**

**Syntax**

```
bgp dampening [half-life reuse suppress max-suppress-time] [route-map map-name]
```

To disable route dampening, use the `no bgp dampening [half-life reuse suppress max-suppress-time] [route-map map-name]` command.

**Parameters**

- **half-life** (OPTIONAL) Enter the number of minutes after which the Penalty is decreased. After the router assigns a Penalty of 1024 to a route, the Penalty is decreased by half after the half-life period expires. The range is from 1 to 45. The default is 15 minutes.
- **reuse** (OPTIONAL) Enter a number as the reuse value, which is compared to the flapping route’s Penalty value. If the Penalty value is less than the reuse value, the flapping route is once again advertised (or no longer suppressed). The range is from 1 to 20000. The default is 750.
- **suppress** (OPTIONAL) Enter a number as the suppress value, which is compared to the flapping route’s Penalty value. If the Penalty value is greater than the suppress value, the flapping route is no longer advertised (that is, it is suppressed). The range is from 1 to 20000. The default is 2000.
- **max-suppress-time** (OPTIONAL) Enter the maximum number of minutes a route can be suppressed. The default is four times the half-life value. The range is from 1 to 255. The default is 60 minutes.
- **route-map map-name** (OPTIONAL) Enter the keyword route-map then the name of a configured route map.

Only match commands in the configured route map are supported.

**Defaults**

Disabled.

**Command Modes**

- ROUTER BGP
- ROUTER BGP-address-family

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you enter the `bgp dampening` command, the default values for `half-life`, `reuse`, `suppress`, and `max-suppress-time` are applied. The parameters are position-dependent; therefore, if you configure one parameter, configure the parameters in the order they appear in the CLI.

Route refresh is sent when you enable BGP dampening.
**bgp default local-preference**

Change the default local preference value for routes exchanged between internal BGP peers.

**Syntax**

```
bgp default local-preference value
```

To return to the default value, use the `no bgp default local-preference` command.

**Parameters**

- **value** Enter a number to assign to routes as the degree of preference for those routes. When routes are compared, the higher the degree of preference or local preference value, the more the route is preferred. The range is from 0 to 4294967295. The default is 100.

**Defaults**

100

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

All routers apply the `bgp default local-preference` command setting within the AS. To set the local preference for a specific route, use the `set local-preference` command in ROUTE-MAP mode.

**Related Commands**

- `set local-preference` — assigns a local preference value for a specific route.

---

**bgp dmzlink-bw**

Enables BGP Link Bandwidth.

**Z9000**

**Syntax**

```
bgp dmzlink-bw
```

To disable BGP Link Bandwidth, enter the `no bgp dmzlink-bw` command.

**Parameters**

- **dmzlink-bw** Enter the keyword `dmzlink-bw` to enable BGP Link Bandwidth in BGP multipath.

**Defaults**

N/A

**Command Modes**

ROUTER BGP

---
Configuring or un-configuring the command will bring down and bring up the BGP Route Manager, this will result in tear down and re-establishment of all active sessions.

Link Bandwidth has to be configured on the router in order to tell it to associate Link Bandwidth with prefixes (paths) and/or to use Link Bandwidth in BGP Multipath route selection.

This is done under BGP configuration and is supported per address family – for IPv4 and IPv6 address families.

The configuration for a particular address family will apply across all VRFs configured.

This command must be performed on the router which is attaching link bandwidth to prefixes (typically a border router) as well as the router which is expected to load share traffic proportional to the bandwidth of the external links.

**bgp enforce-first-as**

Disable (or enable) enforce-first-as check for updates received from EBGP peers.

**Z9000**

**Syntax**

```
bgp enforce-first-as
```

To turn off the default, use the **no bgp enforce-first-as** command.

**Defaults**

Enabled

**Command Modes**

ROUTER BGP

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is enabled by default, that is for all updates received from EBGP peers, BGP ensures that the first AS of the first AS segment is always the AS of the peer. If not, the update is dropped and a counter is increments. Use the **show ip bgp neighbors** command to view the “failed enforce-first-as check” counter.

If you disable the **enforce-first-as** command, it can be viewed using the **show ip protocols** command.

In the event of an enforce-first-as check failure, the existing BGP session is flapped.

**Related Commands**

- **show ip bgp neighbors** — views the information the BGP neighbors exchange.
- **show ip protocols** — views information on routing protocols.
bgp fast-external-fallover

Enable the fast external fallover feature, which immediately resets the BGP session if a link to a directly connected external peer fails.

Z9000

Syntax

    bgp fast-external-fallover

    To disable fast external fallover, use the no bgp fast-external-fallover command.

Defaults

    Enabled

Command Modes

    ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version    Description

9.7(0.0)    Introduced on the S6000–ON.
9.0.2.0      Introduced on the S6000.
8.3.19.0     Introduced on the S4820T.
8.3.11.1     Introduced on the Z9000.
8.3.7.0      Introduced on the S4810.
7.8.1.0      Introduced on the S-Series.
7.7.1.0      Introduced on the C-Series.

Usage Information

    The bgp fast-external-fallover command appears in the show config command output.

    The fast external fallover configuration is applied only after you manually reset all the existing BGP sessions. As a result, after you execute this command, you must also manually execute the clear ip bgp command in order for the configuration to take effect.

bgp four-octet-as-support

Enable 4-byte support for the BGP process.

Z9000

Syntax

    bgp four-octet-as-support

    To disable 4-byte support, use the no bgp four-octet-as-support command.

Defaults

    Disabled (supports 2-byte format)

Command Modes

    ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version    Description

9.7(0.0)    Introduced on the S6000–ON.
9.0.2.0      Introduced on the S6000.
Routers supporting 4-byte ASNs advertise that function in the OPEN message. The behavior of a 4-byte router is slightly different depending on whether it is speaking to a 2-byte router or a 4-byte router.

When creating Confederations, all the routers in the Confederation must be 4 byte or 2 byte identified routers. You cannot mix them.

Where the 2-byte format is from 1 to 65535, the 4-byte format is from 1 to 4294967295. Both formats are accepted and the advertisements reflect the entered format.

For more information about using the 2 byte or 4-byte format, refer to the Dell Networking OS Configuration Guide.

This command automatically restarts the BGP instance for the configuration to take effect.

**bgp graceful-restart**

To support graceful restart as a receiver only, enable graceful restart on a BGP neighbor, a BGP node, or designate a local router.

**Z9000**

**Syntax**

```plaintext
bgp graceful-restart [restart-time seconds] [stale-path-time seconds] [role receiver-only]
```

To return to the default, use the ```no bgp graceful-restart``` command.

**Parameters**

- `restart-time seconds`
  - Enter the keyword `restart-time` then the maximum number of seconds to restart and bring-up all the peers. The range is from 1 to 3600 seconds. The default is 120 seconds.

- `stale-path-time seconds`
  - Enter the keyword `stale-path-time` then the maximum number of seconds to wait before restarting a peer’s stale paths. The default is 360 seconds.

- `role receiver-only`
  - Enter the keyword `role receiver-only` to designate the local router to support graceful restart as a receiver only.

**Defaults**

as above

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
This feature is advertised to BGP neighbors through a capability advertisement. In Receiver Only mode, BGP saves the advertised routes of peers that support this capability when they restart. BGP graceful restart is active only when the neighbor becomes established. Otherwise it is disabled. Graceful-restart applies to all neighbors with established adjacency.

This command automatically restarts the BGP instance for the configuration to take effect.

### bgp log-neighbor-changes

Enable logging of BGP neighbor resets.

<table>
<thead>
<tr>
<th>Syntax</th>
<th>bgp log-neighbor-changes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Defaults</td>
<td>Enabled</td>
</tr>
<tr>
<td>Command Modes</td>
<td>ROUTER BGP</td>
</tr>
</tbody>
</table>

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.0.2.0** Introduced on the S6000.
- **Version 8.3.11.1** Introduced on the Z9000.
- **Version 7.8.1.0** Introduced on the S-Series.
- **Version 7.7.1.0** Introduced on the C-Series.

To view BGP neighbor resets, use the `show logging` command in EXEC mode.

The `bgp log-neighbor-changes` command appears in the `show config` command output.

**Related Commands**

- `show logging` — views logging settings and system messages logged to the system.

### bgp non-deterministic-med

Compare MEDs of paths from different autonomous systems.

<table>
<thead>
<tr>
<th>Syntax</th>
<th>bgp non-deterministic-med</th>
</tr>
</thead>
<tbody>
<tr>
<td>Defaults</td>
<td>Disabled (that is, paths/routes for the same destination but from different ASs do not have their MEDs compared).</td>
</tr>
<tr>
<td>Command Modes</td>
<td>ROUTER BGP</td>
</tr>
</tbody>
</table>

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.7(0.0)** Introduced on the S6000-ON.
**bgp recursive-bgp-next-hop**

Enable next-hop resolution through other routes learned by BGP.

**Z9000**

**Syntax**

```
bgp recursive-bgp-next-hop
```

To disable next-hop resolution, use the `no bgp recursive-bgp-next-hop` command.

**Defaults**

Enabled

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is a knob to disable BGP next-hop resolution using BGP learned routes. During the next-hop resolution, only the first route that the next-hop resolves through is verified for the route’s protocol source and is checked if the route is learned from BGP or not.

The `clear ip bgp` command is required for this command to take effect and to keep the BGP database consistent. Execute the `clear ip bgp` command right after executing this command.
bog regex-eval-optz-disable

Disables the Regex Performance engine that optimizes complex regular expression with BGP.

**Z9000**

**Syntax**

```
bgp regex-eval-optz-disable
```

To re-enable optimization engine, use the no bgp regex-eval-optz-disable command.

**Defaults**

Enabled

**Command Modes**

ROUTER BGP (conf-router_bgp)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

**Usage Information**

BGP uses regular expressions (regex) to filter route information. In particular, the use of regular expressions to filter routes based on AS-PATHs and communities is common. In a large-scale configuration, filtering millions of routes based on regular expressions can be quite CPU intensive, as a regular expression evaluation involves generation and evaluation of complex finite state machines.

BGP policies, containing regular expressions to match as-path and communities, tend to use much CPU processing time, which in turn affects the BGP routing convergence. Additionally, the show bgp commands, which are filtered through regular expressions, use up CPU cycles particularly with large databases. The Regex Engine Performance Enhancement feature optimizes the CPU usage by caching and reused regular expression evaluation results. This caching and reuse may be at the expensive of RP1 processor memory.

**Examples**

```
Dell(conf-router_bgp)#no bgp regex-eval-optz-disable
Dell(conf-router_bgp)#do show ip protocols
Routing Protocol is "ospf 22222"
  Router ID is 2.2.2.2
  Area 51 Routing for Networks
  10.10.10.0/0

Routing Protocol is "bgp 1"
  Cluster Id is set to 10.10.10.0
  Router Id is set to 10.10.10.0
  Fast-external-fallover enabled
  Regular expression evaluation optimization enabled
  Capable of ROUTE_REFRESH
  For Address Family IPv4 Unicast
  BGP table version is 0, main routing table version 0
```
bgp router-id

Assign a user-given ID to a BGP router.

Z9000

Syntax  
```
bgp router-id ip-address
```

To delete a user-assigned IP address, use the `no bgp router-id` command.

Parameters  
- `ip-address`: Enter an IP address in dotted decimal format to reset only that BGP neighbor.

Defaults  
The router ID is the highest IP address of the Loopback interface or, if no Loopback interfaces are configured, the highest IP address of a physical interface on the router.

Command Modes  
- ROUTER BGP

Command History  
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information  
- Peering sessions are reset when you change the router ID of a BGP router.
- This command automatically restarts the BGP instance for the configuration to take effect.

clear ip bgp

Reset BGP sessions. The soft parameter (BGP Soft Reconfiguration) clears the policies without resetting the TCP connection.

Z9000

Syntax  
```
clear ip bgp [* | <1-4294967295> | <0.1-65535.65535> | A.B.C.D {soft {in | out}} | X:X:X:X:iX {soft {in | out}} | dampening | flap-statistics | ipv4 | ipv6 | peer-group]
```

Parameters  
- `*`: Enter an asterisk (`*`) to reset all BGP sessions.
- `<1-4294967295>`: Enter `<1-4294967295>` to clear peers with the AS number.
Enter `<0.1-65535.65535>` to clear peers with the AS number in dot format.

**A.B.C.D**
Enter the BGP neighbor address in the A.B.C.D format to clear.

**X:X:X::X**
Enter the BGP neighbor address in the X:X:X::X format to clear.

**soft**
(Optional) Enter the keyword `soft` to configure and activate policies without resetting the BGP TCP session, that is, BGP Soft Reconfiguration.

> **NOTE:** If you enter the `clear ip bgp ip-address soft` command, both inbound and outbound policies are reset.

**in**
(Optional) Enter the keyword `in` to activate only inbound policies.

**out**
(Optional) Enter the keyword `out` to activate only outbound policies.

> **NOTE:** You must execute the `clear ip bgp soft out` command when ever there is a change in the local policy. If you do not run this command after a local policy change, then these policy changes are not reflected in the responses to the peer’s route refresh messages.

**dampening**
Enter the keyword `dampening` to clear the flap dampening information.

**flap-statistics**
Enter the keywords `flap-statistics` to clear the flap statistics information.

**ipv4**
Enter the ipv4 address family to clear.

**ipv6**
Enter the ipv6 address family to clear.

**peer-group**
Enter the peer-group to clear all members of the peer-group.

**Command Modes**
**EXEC Privilege**

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>6.5.1.0</td>
<td>Expanded to include the <code>as-number</code> option.</td>
</tr>
</tbody>
</table>

**Related Commands**
- bgp recursive-bgp-next-hop — disables next-hop resolution through other routes learned by the BGP.

### clear ip bgp dampening

Clear information on route dampening and return the suppressed route to the Active state.

**Z9000**

**Syntax**
```
clear ip bgp [ipv4 [multicast | unicast] | ipv6 unicast] [dampening [ipv4-address mask | ipv6-address mask]]
```
Parameters

**ipv4-address**

(OPTIONAL) Enter an IPv4 address in dotted decimal format and the prefix mask in slash format (/x) to clear dampening information only that BGP neighbor.

**ipv6-address**

(OPTIONAL) Enter the IPv6 address and the network mask to clear information on IPv6 route dampening.

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>

<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

After you enter this command, the software deletes the history routes and returns the suppressed routes to the Active state.

The clear ip bgp dampening command does not clear the history paths.

clear ip bgp flap-statistics

Clear BGP flap statistics, which includes number of flaps and the time of the last flap.

Z9000

**Syntax**

```
clear ip bgp [ipv4 [multicast | unicast] | ipv6 unicast] [flap-statistics [ipv4-address mask | ipv6-address mask] | filter-list as-path-name | regexp regular-expression]
```

**Parameters**

**ipv4-address**

(OPTIONAL) Enter an IPv4 address in dotted decimal format and the prefix mask in slash format (/x) to reset only that prefix.

**ipv6-address**

(OPTIONAL) Enter the IPv6 address followed by the network mask to reset only that prefix.

**filter-list as-path-name**

(OPTIONAL) Enter the keywords filter-list then the name of a configured AS-PATH list.

**regexp regular-expression**

(OPTIONAL) Enter the keyword regexp then regular expressions. Use one or a combination of the following:

- . = (period) any single character (including a white space).
- * = (asterisk) the sequences in a pattern (0 or more sequences).
- + = (plus) the sequences in a pattern (1 or more sequences).
- ? = (question mark) sequences in a pattern (either 0 or 1 sequences).

**NOTE:** Enter an escape sequence (CTRL+v) prior to entering the regular expression.

- [ ] = (brackets) a range of single-character patterns.
- ( ) = (parenthesis) groups a series of pattern elements to a single element.
- { } = (braces) minimum and the maximum match count.
clear ip bgp peer-group

Reset a peer-group’s BGP sessions.

Z9000

clear ip bgp peer-group peer-group-name [ipv4 [multicast | unicast] | ipv6 unicast] [soft {in | out}]

Parameters

- **peer-group-name**: Enter the peer group name to reset the BGP sessions within that peer group.
- **ipv4 multicast** (OPTIONAL): Enter the keyword ipv4 followed by the keyword multicast to reset ipv4 multicast routes.
- **ipv4 unicast** (OPTIONAL): Enter the keyword ipv4 followed by the keyword unicast to reset ipv4 unicast routes.
- **ipv6 unicast** (OPTIONAL): Enter the keyword ipv6 followed by the keyword unicast to reset ipv6 unicast routes.
- **soft** (OPTIONAL): Enter the keyword soft to reset soft configuration.
- **in** Enter the keyword in to re-configure soft inbound updates.
- **out** Enter the keyword out to re-configure soft outbound updates.

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

If you enter the `clear ip bgp flap-statistics` command without any parameters, all statistics are cleared.

Related Commands

- `show debugging` — views the enabled debugging operations.
- `show ip bgp flap-statistics` — views the BGP flap statistics.
- `undebug all` — disables all debugging operations.
**Version** | **Description**  
--- | ---  
8.3.19.0 | Introduced on the S4820T.  
8.3.11.1 | Introduced on the Z9000.  
8.3.7.0 | Introduced on the S4810.  
7.8.1.0 | Introduced on the S-Series.  
7.7.1.0 | Introduced on the C-Series.

## debug ip bgp

Display all information on BGP, including BGP events, keepalives, notifications, and updates.

### Z9000

**Syntax**

d debug ip bgp [A.B.C.D | X:X:X:X::X | peer-group peer-group-name] [in | out]  
To disable all BGP debugging, use the no debug ip bgp command.

**Parameters**

- **A.B.C.D**  
Enter the IPv4 address of the neighbor in dotted decimal format.
- **X:X:X:X::X**  
(Optional) Enter an IPv6 address.
- **peer-group peer-group-name**  
Enter the keywords peer-group then the name of the peer group to debug.
- **in**  
(Optional) Enter the keyword in to view only information on inbound BGP routes.
- **out**  
(Optional) Enter the keyword out to view only information on outbound BGP routes.
- **A.B.C.D**  
Enter the IP address of peer in the A.B.C.D format.
- **X:X:X:X::X**  
Enter the IPv6 IP address of peer in the X:X:X:X::X format.
- **dampening**  
Enter the keyword dampening to view BGP dampening.
- **events**  
Enter the keyword events to view BGP protocol events.
- **ipv4**  
Enter the ipv4 IP address to view the IPv4 route information.
- **ipv6**  
Enter the ipv6 IP address to view the IPv6 route information.
- **keepalives**  
Enter the keyword keepalives to view BGP keepalives.
- **notifications**  
Enter the keyword notifications to view BGP notifications.
- **soft-reconfiguration**  
Enter the keywords soft-reconfiguration to view only information on inbound BGP soft reconfiguration.
- **updates**  
Enter the keyword updates to view BGP updates.

**Command Modes**  
EXEC Privilege

**Command History**  
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **9.0.2.0**  
  Introduced on the S6000.
- **8.3.19.0**  
  Introduced on the S4820T.
- **8.3.11.1**  
  Introduced on the Z9000.
- **8.3.7.0**  
  Introduced on the S4810.
7.8.1.0  Introduced on the S-Series.
7.7.1.0  Introduced on the C-Series.

Usage Information
To view information on both incoming and outgoing routes, do not include the in and out parameters in the debugging command. The in and out parameters cancel each other; for example, if you enter the debug ip bgp in command and then enter the debug ip bgp out command, you do not see information on the incoming routes.

Entering a no debug ip bgp command removes all configured debug commands for BGP.

Related Commands
dbg ip bgp events — views information about BGP events.
dbg ip bgp keepalives — views information about BGP keepalives.
dbg ip bgp notifications — views information about BGP notifications.
dbg ip bgp updates — views information about BGP updates.
show debugging — views enabled debugging operations.

dbg ip bgp dampening
View information on routes being dampened.

Z9000

Syntax
dbg ip bgp [ipv4 (unicast | multicast) | ipv6 unicast] dampening

Parameters
ipv4 multicast  (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view dampened-route information related only to ipv4 multicast routes.
ipv4 unicast    (OPTIONAL) Enter the keyword ipv4 followed by the keyword unicast to view dampened-route information related only to ipv4 unicast routes.
ipv6 unicast    (OPTIONAL) Enter the keyword ipv4 followed by the keyword unicast to view dampened-route information related only to ipv6 unicast routes.

**debug ip bgp events**

Display information on local BGP state changes and other BGP events.

**Z9000**

**Syntax**

dep g ip bgp [A.B.C.D | X:X:X::X | peer-group peer-group-name] events [in | out]

To disable debugging, use the `no debug ip bgp [A.B.C.D | X:X:X::X | peer-group peer-group-name] events [in | out]` command.

**Parameters**

- **A.B.C.D** (OPTIONAL) Enter the IPv4 address of the neighbor.
- **X:X:X::X** (OPTIONAL) Enter an IPv6 address.
- **peer-group peer-group-name** (OPTIONAL) Enter the keyword peer-group then the name of the peer group.
- **in** (OPTIONAL) Enter the keyword `in` to view only events on inbound BGP messages.
- **out** (OPTIONAL) Enter the keyword `out` to view only events on outbound BGP messages.

<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

To remove all configured debug commands for BGP, enter the `no debug ip bgp` command.

**debug ip bgp keepalives**

Display information about BGP keepalive messages.

**Z9000**

**Syntax**

dep g ip bgp [A.B.C.D | X:X:X::X | peer-group peer-group-name] keepalives [in | out]

To disable debugging, use the `no debug ip bgp [A.B.C.D | X:X:X::X | peer-group peer-group-name] keepalives [in | out]` command.

**Parameters**

- **A.B.C.D** (OPTIONAL) Enter the IPv4 address of the neighbor.
- **X:X:X::X** (OPTIONAL) Enter an IPv6 address.
debug ip bgp notifications

Allows you to view information about BGP notifications received from neighbors.

Z9000

Syntax
debag ip bgp [A.B.C.D | X::X::X::X | peer-group peer-group-name] notifications [in | out]

To disable debugging, use the no debug ip bgp [A.B.C.D | X::X::X::X | peer-group peer-group-name] notifications [in | out] command.

Parameters

- **A.B.C.D**: (OPTIONAL) Enter the IPv4 address of the neighbor.
- **X::X::X::X**: (OPTIONAL) Enter an IPv6 address.
- **peer-group peer-group-name**: (OPTIONAL) Enter the keyword peer-group then the name of the peer group.
- **in**: (OPTIONAL) Enter the keyword in to view BGP notifications received from neighbors.
- **out**: (OPTIONAL) Enter the keyword out to view BGP notifications sent to neighbors

To remove all configured debug commands for BGP, enter the `no debug ip bgp` command.

**debug ip bgp soft-reconfiguration**

Enable soft-reconfiguration debug.

**Z9000**

**Syntax**

```
debug ip bgp [A.B.C.D | X:X:X:X::X | peer-group-name] soft-reconfiguration
```

To disable, use the `debug ip bgp [A.B.C.D | X:X:X:X::X | peer-group-name] soft-reconfiguration` command.

**Parameters**

- `A.B.C.D` (OPTIONAL) Enter the IPv4 address of the neighbor in dotted decimal format.
- `X:X:X:X::X` (OPTIONAL) Enter an IPv6 address.
- `peer-group-name` (OPTIONAL) Enter the name of the peer group to disable or enable all routers within the peer group.

</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.2.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command turns on BGP soft-reconfiguration inbound debugging. If no neighbor is specified, debug turns on for all neighbors.
debug ip bgp updates

Allows you to view information about BGP updates.

Z9000

default-metric number

Allows you to change the metric of redistributed routes to locally originated routes. Use this command with the redistribute command.

Usage Information

To remove all configured debug commands for BGP, enter the no debug ip bgp command.
To return to the default setting, use the `no default-metric` command.

<table>
<thead>
<tr>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>number</td>
<td>Enter a number as the metric to be assigned to routes from other protocols. The range is from 1 to 4294967295.</td>
</tr>
</tbody>
</table>

**Defaults**

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `default-metric` command in BGP sets the value of the BGP MULTI_EXIT_DISC (MED) attribute for redistributed routes only.

**Related Commands**

- `bgp always-compare-med` — enables comparison of all BGP MED attributes.
- `redistribute` — redistributes routes from other routing protocols into BGP.

**description**

Enter a description of the BGP routing protocol

**Z9000**

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- `description` Enter a description to identify the BGP protocol (80 characters maximum).

**Defaults**

</tbody>
</table>
distance bgp

Define an administrative distance for routes.

Z-Series

distance bgp external-distance internal-distance local-distance

To return to default values, use the no distance bgp command.

Parameters

- **external-distance** Enter a number to assign to routes learned from a neighbor external to the AS. The range is from 1 to 255. The default is **20**.
- **internal-distance** Enter a number to assign to routes learned from a router within the AS. The range is from 1 to 255. The default is **200**.
- **local-distance** Enter a number to assign to routes learned from networks listed in the network command. The range is from 1 to 255. The default is **200**.

Defaults

- external-distance = **20**
- internal-distance = **200**
- local-distance = **200**

Command Modes

- ROUTER BGP (conf-router_bgp_af)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>

<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced IPv6 MGBP on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

⚠️ **CAUTION:** Dell Networking recommends that you do not change the administrative distance of internal routes. Changing the administrative distances may cause routing table inconsistencies.

The higher the administrative distance assigned to a route means that your confidence in that route is low. Routes assigned an administrative distance of 255 are not installed in the routing table. Routes from confederations are treated as internal BGP routes.
deny bandwidth

Enables you to specify link band width extended-community attribute as the matching criteria to deny incoming or outgoing traffic.

Syntax

deny bandwidth

To disable this setting, enter the no deny bandwidth command.

Parameters

bandwidth

Enter the keyword bandwidth to specify extended-community attribute as the matching criteria for denying traffic. The range is from 0 to 102400.

Defaults

N/A

Command Modes

EXTENDED COMMUNITY LIST

Command History

Version Description
9.7(0.0) Introduced on the S-Series.

Related Commands

permit bandwidth – specify link band width extended-community attribute as the matching criteria to permitting incoming or outgoing traffic.

maximum-paths

Configure the maximum number of parallel routes (multipath support) BGP supports.

Z-Series

Syntax

maximum-paths {ebgp | ibgp} number

To return to the default values, enter the no maximum-paths command.

Parameters

ebgp

Enter the keyword ebgp to enable multipath support for External BGP routes.

ibgp

Enter the keyword ibgp to enable multipath support for Internal BGP routes.

number

Enter a number as the maximum number of parallel paths.

Defaults

none

Command Modes

ROUTER BGP

neighbor activate

This command allows the specified neighbor/peer group to be enabled for the current AFI/SAFI (Address Family Identifier/Subsequent Address Family Identifier).

Z-Series

Syntax

neighbor [ip-address | peer-group-name] activate

To disable, use the no neighbor [ip-address | peer-group-name] activate command.

Parameters

- `ip-address` (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` (OPTIONAL) Enter the name of the peer group.
- `activate` Enter the keyword activate to enable the neighbor/peer group in the new AFI/SAFI.

Defaults

Disabled

Command Modes

<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

By default, when you create a neighbor/peer group configuration in the Router BGP context, this enables IPv4/Unicast AFI/SAFI. When you use activate in the new context, the neighbor/peer group enables for AFI/SAFI.

It is not possible to de-activate a peer from the IPv4 unicast address family.

neighbor add-path

This command allows the specified neighbor/peer group to send/receive multiple path advertisements.

Z-Series

Syntax

neighbor [ip-address | peer-group-name] add-path [send | receive | both] path-count

Parameters

- `ip-address` (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
peer-group-name  (OPTIONAL) Enter the name of the peer group.
send          Enter the keyword send to indicate that the system sends multiple paths to peers.
receive       Enter the keyword receive to indicate that the system accepts multiple paths from peers.
both          Enter the keyword both to indicate that the system sends and accepts multiple paths from peers.
path-count    Enter the number paths supported. The range is from 2 to 64.

Defaults
none

Related Commands
bgp add-path — allows the advertisement of multiple paths for the same address prefix without the new paths implicitly replacing any previous ones.

neighbor advertisement-interval

Set the advertisement interval between BGP neighbors or within a BGP peer group.

Z-Series

Syntax
neighbor \{ip-address \| peer-group-name\} advertisement-interval seconds

To return to the default value, use the no neighbor \{ip-address \| peer-group-name\}
advertisement-interval command.

Parameters
ip-address       (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
peer-group-name  Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
seconds          Enter a number as the time interval, in seconds, between BGP advertisements. The range is from 0 to 600 seconds. The default is 5 seconds for internal BGP peers and 30 seconds for external BGP peers.

Defaults
- seconds = 5 seconds (internal peers)
- seconds = 30 seconds (external peers)

Command Modes
ROUTER BGP

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Border Gateway Protocol
neighbor advertisement-start

To send BGP routing updates, set the minimum interval before starting.

Z-Series

**Syntax**

```
neighbor {ip-address} advertisement-start seconds
```

To return to the default value, use the `no neighbor {ip-address} advertisement-start` command.

**Parameters**

- **ip-address** (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- **seconds** Enter a number as the time interval, in seconds, before BGP route updates are sent. The range is from 0 to 3600 seconds.

**Defaults**

none

neighbor allowas-in

Set the number of times an AS number can occur in the AS path.

Z-Series

**Syntax**

```
neighbor {ip-address | peer-group-name} allowas-in number
```

304  Border Gateway Protocol
To return to the default value, use the `no neighbor {ip-address | peer-group-name} allowas-in` command.

**Parameters**
- `ip-address` (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
- `number` Enter a number of times to allow this neighbor ID to use the AS path. The range is from 1 to 10.

**Defaults**
- Not configured.

**Command Modes**
- ROUTER BGP

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
You cannot set this configuration for a peer that is associated with a peer group. Similarly, you cannot associate a peer to a peer group if that peer is already configured with these settings.

**Related Commands**
- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.

### neighbor default-originate

Inject the default route to a BGP peer or neighbor.

**Z-Series**

**Syntax**

```plaintext
neighbor {ip-address | peer-group-name} default-originate [route-map map-name]
```

To remove a default route, use the `no neighbor {ip-address | peer-group-name} default-originate` command.

**Parameters**
- `ip-address` (OPTIONAL) Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` Enter the name of the peer group to set the default route of all routers in that peer group.
- `route-map map-name` (OPTIONAL) Enter the keyword `route-map` then the name of a configured route map.

**Defaults**
- Not configured.

**Command Modes**
- ROUTER BGP

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

```plaintext

<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you apply a route map to a BGP peer or neighbor with the `neighbor default-originate` command configured, the software does not apply the set filters in the route map to that BGP peer or neighbor.

When you configure a route-map for a BGP peer or peer group with the `neighbor default-originate` command, the command checks for the existence of the route in BGP RIB.

Route-map configuration on a BGP peer or peer group works only when the LOC-RIB contains at least one route.

When you apply a default route to a BGP peer or peer group using the `neighbor default-originate` command, changes to the configured default route-map are applied to the BGP peer or peer group only after a delay of 15 seconds. As a result, you must wait for a period of 15 seconds before manually resetting BGP using the `clear ip bgp` command.

In case of eBGP, the `neighbor default-originate` command does not support extended-community as a non-transitive route-map attribute.

You cannot set this configuration for a peer that is associated with a peer group. Similarly, you cannot associate a peer to a peer group if that peer is already configured with these settings.

In order that settings corresponding to the `neighbor default-originate` command take effect, you must execute the `clear ip bgp` command immediately after you execute the `neighbor default-originate` command.

**neighbor description**

Assign a character string describing the neighbor or group of neighbors (peer group).

**Z-Series**

**Syntax**

```plaintext
neighbor {ip-address | peer-group-name} description text
```

To delete a description, use the `no neighbor {ip-address | peer-group-name} description` command.

**Parameters**

- `ip-address` Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` Enter the name of the peer group.
- `text` Enter a continuous text string up to 80 characters.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
### neighbor distribute-list

Distribute BGP information via an established prefix list.

#### Z-Series

**Syntax**

```
neighbor {ip-address | peer-group-name} distribute-list prefix-list-name {in | out}
```

To delete a neighbor distribution list, use the `no neighbor {ip-address | peer-group-name} distribute-list prefix-list-name {in | out}` command.

**Parameters**

- **ip-address**
  - Enter the IP address of the neighbor in dotted decimal format.

- **peer-group-name**
  - Enter the name of the peer group to apply the distribute list filter to all routers in the peer group.

- **prefix-list-name**
  - Enter the name of an established prefix list.
    - If the prefix list is not configured, the default is `permit` (to allow all routes).

- **in**
  - Enter the keyword `in` to distribute only inbound traffic.

- **out**
  - Enter the keyword `out` to distribute only outbound traffic.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Other BGP filtering commands include:
- `neighbor filter-list` and `ip as-path access-list`
- `neighbor route-map`

**Related Commands**

- `neighbor route-map` — assigns a route map to a neighbor or peer group.
neighbor ebgp-multihop

Attempt and accept BGP connections to external peers on networks that are not directly connected.

Z-Series

Syntax

neighbor {ip-address | peer-group-name} ebgp-multihop [ttl]

To disallow and disconnect connections, use the no neighbor {ip-address | peer-group-name} ebgp-multihop command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group.
- **ttl** (OPTIONAL): Enter the number of hops as the Time to Live (ttl) value. The range is from 1 to 255. The default is 255.

Defaults

Disabled.

Command Modes

ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

To prevent loops, the neighbor ebgp-multihop command does not install the default routes of the multihop peer. Networks not directly connected are not considered valid for best-path selection.

neighbor fall-over

Enable or disable fast fall-over for BGP neighbors.

Z-Series

Syntax

neighbor {ipv4-address | peer-group-name} fall-over

To disable, use the no neighbor {ipv4-address | peer-group-name} fall-over command.

Parameters

- **ipv4-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group.

Defaults

Disabled.

Command Modes

ROUTER BGP
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>

</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

Usage Information

When you enable failover, BGP keeps track of IP or IPv6 ability to reach the peer remote address and the peer local address. Whenever either address becomes unreachable (for example, no active route exists in the routing table for the peer IP or IPv6 destination/local address), BGP brings down the session with the peer.

Related Commands

show ip bgp neighbors — displays information on the BGP neighbors.

neighbor filter-list

Configure a BGP filter based on the AS-PATH attribute.

Z-Series

Syntax

neighbor {ip-address | peer-group-name} filter-list as-path-name {in | out}

To delete a BGP filter, use the no neighbor {ip-address | peer-group-name} filter-list as-path-name {in | out} command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to apply the filter to all routers in the peer group.
- **as-path-name**: Enter the name of an established AS-PATH access list (up to 140 characters). If the AS-PATH access list is not configured, the default is permit (allow routes).
- **in**: Enter the keyword in to filter inbound BGP routes.
- **out**: Enter the keyword out to filter outbound BGP routes.

Defaults

Not configured.

Command Modes

- ROUTER BGP
- ROUTER BGP-address-family

Command History

</tbody>
</table>

Border Gateway Protocol 309
To accept external routes from neighbors with a local AS number in the AS number path, configure Internal BGP (IBGP) routers.

**Z-Series**

**Syntax**

```
neighbor {ip-address | peer-group-name} local-as as-number [no-prepend]
```

To return to the default value, use the `no neighbor {ip-address | peer-group-name} local-as` command.

**Parameters**

- `ip-address` Enter the IP address of the neighbor in dotted decimal format.
- `peer-group-name` Enter the name of the peer group to set the advertisement interval for all routers in the peer group.
- `as-number` Enter the AS number to reset all neighbors belonging to that AS. The range is from 0 to 65535 (2 byte), from 1 to 4294967295 (4 byte) or from 0.1 to 65535.65535 (dotted format).
- `no prepend` Specifies that local AS values do not prepend to announcements from the neighbor.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If a local-as is configured, BGP does not allow for the configuration of BGP confederation. Similarly, if BGP confederation is configured, then BGP does not allow the configuration of local-as.

This command automatically restarts the neighbor session for the configuration to take effect.

**Related Commands**

- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.
neighbor maximum-prefix

Control the number of network prefixes received.

Z-Series

Syntax

neighbor {ip-address | peer-group-name} maximum-prefix maximum [threshold] [warning-only]

To return to the default values, use the no neighbor {ip-address | peer-group-name} maximum-prefix maximum command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group.
- **maximum**: Enter a number as the maximum number of prefixes allowed for this BGP router. The range is from 1 to 4294967295.
- **threshold**: (OPTIONAL) Enter a number to be used as a percentage of the maximum value. When the number of prefixes reaches this percentage of the maximum value, the E-Series software sends a message. The range is from 1 to 100 percent. The default is 75.
- **warning-only**: (OPTIONAL) Enter the keyword warning-only to set the router to send a log message when the maximum value is reached. If this parameter is not set, the router stops peering when the maximum number of prefixes is reached.

NOTE: When you set this option, the router accepts BGP prefixes only until the maximum configured value. After the maximum number is reached, the router drops any additional prefixes that it receives.

Defaults

threshold = 75

Command Modes

ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

If you configure the neighbor maximum-prefix command and the neighbor receives more prefixes than the neighbor maximum-prefix command configuration allows, the neighbor goes down and the show ip bgp summary command displays (prfxd) in the State/PfxRcd column for that neighbor. The neighbor remains down until you enter the clear ip bgp command for the neighbor or the peer group to which the neighbor belongs or you enter the neighbor shutdown and neighbor no shutdown commands.

Related Commands

- show ip bgp summary — displays the current BGP configuration.
**neighbor next-hop-self**

Allows you to configure the router as the next hop for a BGP neighbor. (This command is used for IBGP).

**Z-Series**

**Syntax**

```
neighbor {ip-address | peer-group-name} next-hop-self
```

To return to the default setting, use the `no neighbor {ip-address | peer-group-name} next-hop-self` command.

**Parameters**

- **ipv6-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: (OPTIONAL) Enter the name of the peer group.

**Defaults**

Disabled.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant FTOS Command Line Reference Guide.

The following is a list of the FTOS version history for this command.

- **Version 8.3.11.1**: Introduced on the Z9000.
- **Version 7.8.1.0**: Introduced on the S-Series.
- **Version 7.7.1.0**: Introduced on the C-Series.

**Usage Information**

If you configure the `set next-hop command in ROUTE-MAP mode, its configuration takes precedence over the `neighbor next-hop-self (C-, E-, and S-Series) command.

**neighbor password**

Enable message digest 5 (MD5) authentication on the TCP connection between two neighbors.

**Z-Series**

**Syntax**

```
neighbor {ip-address | peer-group-name} password [encryption-type] password
```

To delete a password, use the `no neighbor {ip-address | peer-group-name} password` command.

**Parameters**

- **ip-address**: Enter the IP address of the router to be included in the peer group.
- **peer-group-name**: Enter the name of a configured peer group.
- **encryption-type**: (OPTIONAL) Enter 7 as the encryption type for the password entered. 7 means that the password is encrypted and hidden.
- **password**: Enter a text string up to 80 characters long. The first character of the password must be a letter. You cannot use spaces in the password.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
This command automatically restarts the neighbor session for the configuration to take effect.

Configure the same password on both BGP peers or a connection does not occur. When you configure MD5 authentication between two BGP peers, each segment of the TCP connection between them is verified and the MD5 digest is checked on every segment sent on the TCP connection.

Configuring a password for a neighbor causes an existing session to be torn down and a new one established.

If you specify a BGP peer group by using the `peer-group-name` parameter, all the members of the peer group inherit the characteristic configured with this command.

If you configure a password on one neighbor, but you have not configured a password for the neighboring router, the following message appears on the console while the routers attempt to establish a BGP session between them:

```
%RPM0-P:RP1 %KERN-6-INT: No BGP MD5 from [peer's IP address]:179 to [local router's IP address]:65524
```

Also, if you configure different passwords on the two routers, the following message appears on the console:

```
%RPM0-P:RP1 %KERN-6-INT: BGP MD5 password mismatch from [peer's IP address]:11502 to [local router's IP address]:179
```

### neighbor peer-group (assigning peers)

Allows you to assign one peer to an existing peer group.

#### Z-Series

**Syntax**

```
neighbor {ip-address | peer-group peer-group-name} dmzlink-bw
```

To delete a peer from a peer group, use the `no neighbor {ip-address | peer-group peer-group-name}` command.

To disable dmzlink-dw for the peer group, use the `no neighbor ip-address dmzlink-dw` command.

**Parameters**

- `ip-address`: Enter the IP address of the router to be included in the peer group.
- `peer-group-name`: Enter the name of a configured peer group.
- `dmzlink-bw`: Enter the keyword `dmzlink-bw` to attach a link bandwidth to received routes.

**Defaults**

Not configured.

**NOTE:** If dmzlink-bw is configured for a peer, in order for the BGP peer to advertise the prefixes with dmzlink-bw attached to it, you must reset the the peer or peer-group using the `clear ip bgp session` command.
Command Modes

</tr>
</tbody>
</table>

Usage Information

You can assign up to 256 peers to one peer group.

When you add a peer to a peer group, it inherits all the peer group’s configured parameters. A peer cannot become part of a peer group if any of the following commands are configured on the peer:

- neighbor advertisement-interval
- neighbor distribute-list
- neighbor route-map
- neighbor route-reflector-client

If a neighbor’s configuration is more specific than its peer group’s configuration, the neighbor may retain its configuration after it is added to the peer group. The neighbor’s configuration does not affect outgoing updates.

A peer group must exist (be enabled) before you add a peer to it. If the peer group is disabled (shutdown), the peers within that group are also disabled (shutdown).

In BGP, you cannot associate a peer to a peer-group without configuring the remote-as for Internal BGP (IBGP) or External BGP (EBGP).

This command automatically restarts the neighbor session for the configuration to take effect.

Related Commands

- clear ip bgp — resets BGP sessions.
- neighbor peer-group (creating group) — creates a peer group.
- show ip bgp peer-group — views BGP peers.
- show ip bgp neighbors — views BGP neighbors configurations.

neighbor peer-group (creating group)

Allows you to create a peer group and assign it a name.

Z-Series

Syntax

neighbor peer-group-name peer-group

To delete a peer group, use the no neighbor peer-group-name peer-group command.

Parameters

- peer-group-name: Enter a text string up to 16 characters long as the name of the peer group.

Defaults

Not configured.

Command Modes

ROUTER BGP
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information
When you create a peer group, it is disabled (Shut mode).

Related Commands
neighbor peer-group (assigning peers) — assigns routers to a peer group.
neighbor remote-as — assigns a indirectly connected AS to a neighbor or peer group.
neighbor shutdown — disables a peer or peer group.

neighbor peer-group passive

Enable passive peering on a BGP peer group, that is, the peer group does not send an OPEN message, but responds to one.

Z-Series

Syntax
neighbor peer-group-name peer-group passive [sessions]

Parameters
peer-group-name Enter a text string up to 16 characters long as the name of the peer group.

Defaults
Not configured.

Command Modes
ROUTER BGP

</table>
After you configure a peer group as passive, assign it a subnet using the `neighbor soft-reconfiguration inbound` command.

For passive eBGP limits, the Remote AS must be different from the AS for this neighbor.

**Usage Information**

**Related Commands**

- `neighbor soft-reconfiguration inbound` — assigns a subnet to a dynamically configured BGP neighbor.
- `neighbor remote-as` — assigns an indirectly connected AS to a neighbor or peer group.

### neighbor remote-as

Create and specify the remote peer to the BGP neighbor.

**Z-Series**

**Syntax**

```plaintext
neighbor {ip-address | peer-group-name} remote-as number
```

To delete a remote AS entry, use the `no neighbor {ip-address | peer-group-name} remote-as number` command.

**Parameters**

- **ip-address**
  - Enter the IP address of the neighbor to enter the remote AS in its routing table.
- **peer-group-name**
  - Enter the name of the peer group to enter the remote AS into routing tables of all routers within the peer group.
- **number**
  - Enter a number of the AS. The range is from 0 to 65535 (2 byte) or from 1 to 4294967295 (4 byte).

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

To accept 4-byte formats before entering a 4 byte AS Number, configure your system. If the `number` parameter is the same as the AS number used in the `router bgp` command, the remote AS entry in the neighbor is considered an internal BGP peer entry.

This command creates a peer and the newly created peer is disabled (Shutdown).

This command automatically restarts the neighbor session for the configuration to take effect.

**Related Commands**

- `router bgp` — enters ROUTER BGP mode and configures routes in an AS.
- `bgp four-octet-as-support` — enables 4-byte support for the BGP process.
neighbor remove-private-as

Remove private AS numbers from the AS-PATH of outgoing updates.

Z-Series

Syntax

neighbor {ip-address | peer-group-name} remove-private-as

To return to the default, use the no neighbor {ip-address | peer-group-name} remove-private-as command.

Parameters

- **ip-address**: Enter the IP address of the neighbor to remove the private AS numbers.
- **peer-group-name**: Enter the name of the peer group to remove the private AS numbers.

Defaults

Disabled (that is, private AS number are not removed).

Command Modes

ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series. Added 4-byte support.</td>
</tr>
</tbody>
</table>

Usage Information

- Applies to EBGP neighbors only.
- Configure your system to accept 4-byte formats before entering a 4 byte AS Number.
- If the AS-PATH contains both public and private AS number or contains AS numbers of an EBGP neighbor, the private AS numbers are not removed.
- If a confederation contains private AS numbers in its AS-PATH, the software removes the private AS numbers only if they follow the confederation numbers in the AS path.
- Private AS numbers are from 64512 to 65535 (2 byte).

neighbor route-map

Apply an established route map to either incoming or outbound routes of a BGP neighbor or peer group.

Z-Series

Syntax

neighbor {ip-address | peer-group-name} route-map map-name {in | out}

To remove the route map, use the no neighbor {ip-address | peer-group-name} route-map map-name {in | out} command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group.
map-name

Enter the name of an established route map.

If the Route map is not configured, the default is deny (to drop all routes).

in

Enter the keyword in to filter inbound routes.

out

Enter the keyword out to filter outbound routes.

**NOTE:** This command sends routes to peers only if an outbound policy is configured and if there is a change in the existing outbound policy.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you apply a route map to outbound routes, only routes that match at least one section of the route map are permitted.

If you identify a peer group by name, the peers in that peer group inherit the characteristics in the Route map used in this command. If you identify a peer by IP address, the Route map overwrites either the inbound or outbound policies on that peer.

**neighbor route-reflector-client**

Configure the router as a route reflector and the specified neighbors as members of the cluster.

**Z-Series**

**Syntax**

```
neighbor {ip-address | peer-group-name} route-reflector-client
```

To remove one or more neighbors from a cluster, use the `no neighbor {ip-address | peer-group-name} route-reflector-client` command. If you delete all members of a cluster, you also delete the route-reflector configuration on the router.

**Parameters**

- **ip-address**
  
Enter the IP address of the neighbor in dotted decimal format.

- **peer-group-name**
  
Enter the name of the peer group.

  All routers in the peer group receive routes from a route reflector.

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

A route reflector reflects routes to the neighbors assigned to the cluster. Neighbors in the cluster do not need not to be fully meshed. By default, when you use no route reflector, the internal BGP (IBGP) speakers in the network must be fully meshed.

The first time you enter this command, the router configures as a route reflector and the specified BGP neighbors configure as clients in the route-reflector cluster.

When you remove all clients of a route reflector using the no neighbor route-reflector-client command, the router no longer functions as a route reflector.

If the clients of a route reflector are fully meshed, you can configure the route reflector to not reflect routes to specified clients by using the no bgp client-to-client reflection command.

This command automatically restarts the neighbor session for the configuration to take effect.

Related Commands

bgp client-to-client reflection — enables route reflection between the route reflector and the clients.

neighbor send-community

Send a COMMUNITY attribute to a BGP neighbor or peer group. A COMMUNITY attribute indicates that all routes with that attribute belong to the same community grouping.

Z-Series

Syntax

neighbor \{ip-address | peer-group-name\} send-community

To disable sending a COMMUNITY attribute, use the no neighbor \{ip-address | peer-group-name\} send-community command.

Parameters

- **ip-address**: Enter the IP address of the peer router in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to send a COMMUNITY attribute to all routers within the peer group.
- **extended**: Optional. Enter the keyword extended to send extended community attribute.
- **standard**: Optional. Enter the keyword standard to send standard community attribute.

Defaults

Not configured and COMMUNITY attributes are not sent to neighbors.

Command Modes

ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
Version 8.3.11.1   Introduced on the Z9000.
Version 7.8.1.0   Introduced on the S-Series.
Version 7.7.1.0   Introduced on the C-Series.

Usage Information
To configure a COMMUNITY attribute, use the set community command in ROUTE-MAP mode.
In order that settings corresponding to the neighbor send-community command take effect, you must execute the clear ip bgp command immediately after you execute the neighbor send-community command.

neighbor shutdown

Disable a BGP neighbor or peer group.

Z-Series

Syntax
neighbor {ip-address | peer-group-name} shutdown

To enable a disabled neighbor or peer group, use the neighbor {ip-address | peer-group-name} no shutdown command.

Parameters

ip-address
Enter the IP address of the neighbor in dotted decimal format.

peer-group-name
Enter the name of the peer group to disable or enable all routers within the peer group.

Defaults
Enabled (that is, BGP neighbors and peer groups are disabled.)

Command Modes
ROUTER BGP

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information
Peers that are enabled within a peer group are disabled when their peer group is disabled.
The neighbor shutdown command terminates all BGP sessions on the BGP neighbor or BGP peer group. Use this command with caution as it terminates the specified BGP sessions. When a neighbor or peer group is shut down, use the show ip bgp summary command to confirm its status.

Related Commands
show ip bgp summary — displays the current BGP configuration.
show ip bgp neighbors — displays the current BGP neighbors.
neighbor soft-reconfiguration inbound

Enable soft-reconfiguration for BGP.

Z-Series

Syntax

neighbor \{ip-address | peer-group-name\} soft-reconfiguration inbound
To disable, use the no neighbor \{ip-address | peer-group-name\} soft-reconfiguration inbound command.

Parameters

- **ip-address**: Enter the IP address of the neighbor in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to disable or enable all routers within the peer group.

Defaults

Disabled

Command Modes

ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>

</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

This command enables soft-reconfiguration for the BGP neighbor specified. BGP stores all the updates the neighbor receives but does not reset the peer-session.

You cannot set this configuration for a peer that is associated with a peer group. Similarly, you cannot associate a peer to a peer group if that peer is already configured with these settings.

⚠️ **CAUTION:** Inbound update storage is a memory-intensive operation. The entire BGP update database from the neighbor is stored in memory regardless of the inbound policy results applied on the neighbor.

ℹ️ **NOTE:** This command is supported in BGP Router Configuration mode for IPv4 Unicast address only.

Related Commands

- `show ip bgp neighbors` — displays routes received by a neighbor.
**neighbor subnet**

Enable passive peering so that the members of the peer group are dynamic.

**Z-Series**

**Syntax**

neighbor peer-group-name subnet subnet-number mask

To remove passive peering, use the no neighbor peer-group-name subnet subnet-number mask command.

**Parameters**

- **subnet-number** Enter a subnet number in dotted decimal format (A.B.C.D.) as the allowable range of addresses included in the Peer group.
  
  To allow all addresses, enter 0.0.0.0/0.

- **mask** Enter a prefix mask in / prefix-length format (/x).

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 8.3.11.1**
  
  Introduced on the Z9000.

- **Version 7.8.1.0**
  
  Introduced on the S-Series.

- **Version 7.7.1.0**
  
  Introduced on the C-Series.

**neighbor timers**

Set keepalive and hold time timers for a BGP neighbor or a peer group.

**Z-Series**

**Syntax**

neighbor {ip-address | peer-group-name} timers keepalive holdtime

To return to the default values, use the no neighbor {ip-address | peer-group-name} timers command.

**Parameters**

- **ip-address** Enter the IP address of the peer router in dotted decimal format.

- **peer-group-name** Enter the name of the peer group to set the timers for all routers within the peer group.

- **keepalive** Enter a number for the time interval, in seconds, between keepalive messages sent to the neighbor routers. The range is from 1 to 65535. The default is 60 seconds.

- **holdtime** Enter a number for the time interval, in seconds, between the last keepalive message and declaring the router dead. The range is from 3 to 65535. The default is 180 seconds.

**Defaults**

- keepalive = 60 seconds
- holdtime = 180 seconds

**Command Modes**

ROUTER BGP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Timer values configured with the neighbor timers command override the timer values configured with any other command.

When two neighbors, configured with different keepalive and holdtime values, negotiate for new values, the resulting values are as follows:

- the lower of the holdtime value is the new holdtime value, and
- whichever is the lower value; one-third of the new holdtime value, or the configured keepalive value, is the new keepalive value.

neighbor update-source

Enable the E-Series software to use Loopback interfaces for TCP connections for BGP sessions.

Z-Series

Syntax

neighbor {ip-address | peer-group-name} update-source interface

To use the closest interface, use the no neighbor {ip-address | peer-group-name} update-source interface command.

Parameters

- **ip-address**: Enter the IP address of the peer router in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to disable all routers within the peer group.
- **interface**: Enter the keyword loopback then a number of the Loopback interface. The range is from 0 to 16383.

Defaults

Not configured.

Command Modes

ROUTER BGP

</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>
neighbor weight

Assign a weight to the neighbor connection, which is used to determine the best path.

Z-Series

Syntax

neighbor \{ip-address | peer-group-name\} weight weight

To remove a weight value, use the no neighbor \{ip-address | peer-group-name\} weight command.

Parameters

- **ip-address**: Enter the IP address of the peer router in dotted decimal format.
- **peer-group-name**: Enter the name of the peer group to disable all routers within the peer group.
- **weight**: Enter a number as the weight. The range is from 0 to 65535. The default is 0.

Defaults

0

Command Modes

</tr>
</tbody>
</table>

Usage Information

In the Dell Networking OS best path selection process, the path with the highest weight value is preferred.

**NOTE:** In the Dell Networking OS best-path selection process, the path with the highest weight value is preferred.

If you configure the set weight command in a route map applied to this neighbor, the weight set in that command overrides the weight set in the neighbor weight command.

Related Commands

- set weight — assigns a weight to all paths meeting the route map criteria.
network

Specify the networks for the BGP process and enter them in the BGP routing table.

Z-Series

Syntax

network ip-address mask [route-map map-name]

To remove a network, use the no network ip-address mask [route-map map-name] command.

Parameters

ip-address

Enter an IP address in dotted decimal format of the network.

mask

Enter the mask of the IP address in the slash prefix length format (for example, /24).

The mask appears in command outputs in dotted decimal format (A.B.C.D).

route-map map-name

(OPTIONAL) Enter the keyword route-map then the name of an established route map.

Only the following ROUTE-MAP mode commands are supported:

- match ip address
- set community
- set local-preference
- set metric
- set next-hop
- set origin
- set weight

If the route map is not configured, the default is deny (to drop all routes).

Defaults

Not configured.

<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Dell Networking OS software resolves the network address the network command configures with the routes in the main routing table to ensure that the networks are reachable using non-BGP routes and non-default routes.

As BGP does not query next-hop information corresponding to locally originated routes, a local route with an unreachable next-hop is chosen as the best route.

When a combination of locally originated and peer originated routes occurs, both these routes will exist in the RTM. However, only the best route is kept active in the RTM and the remaining route is rendered in-active.
It is possible to keep only one locally originated route in the BGP database. Network command has preference over the re-distributed routes. When the locally originated route is no longer present in the database the other route is automatically installed.

In BGP, the next-hop for the route is calculated from the information that is acquired through IGP or static routes.

Related Commands

redistribute — redistributes routes into BGP.

**network backdoor**

Specify this IGP route as the preferred route.

**Z-Series**

**Syntax**

```
network ip-address mask backdoor
```

To remove a network, use the `no network ip-address mask backdoor` command.

**Parameters**

- **ip-address**
  - Enter an IP address in dotted decimal format of the network.

- **mask**
  - Enter the mask of the IP address in the slash prefix length format (for example, /24).
  - The mask appears in command outputs in dotted decimal format (A.B.C.D).

**Defaults**

Not configured.

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Although Dell Networking OS does not generate a route due to the backdoor config, there is an option for injecting/sourcing a local route in the presence of network backdoor config on a learned route.

**permit bandwidth**

Enables you to specify link band width extended-community attribute as the matching criteria to permit incoming or outgoing traffic.

**Syntax**

```
permit bandwidth
```

To disable this setting, enter the `no permit bandwidth` command.
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>bandwidth</td>
<td>Enter the keyword bandwidth to specify extended-community attribute as the matching criteria for permitting traffic. The range is from 0 to 102400.</td>
</tr>
</tbody>
</table>

### Defaults

N/A

### Command Modes

EXTENDED COMMUNITY LIST

### Related Commands

deny bandwidth – link band width extended-community attribute as the matching criteria to deny incoming or outgoing traffic.

---

### redistribute

Redistribute routes into BGP.

**Z-Series**

**Syntax**

redistribute {connected | static} [route-map map-name]

To disable redistribution, use the no redistribution {connected | static} command.

**Parameters**

- **connected**
  - Enter the keyword connected to redistribute routes from physically connected interfaces.

- **static**
  - Enter the keyword static to redistribute manually configured routes.
  - These routes are treated as incomplete routes.

- **route-map map-name**
  - (OPTIONAL) Enter the keyword route-map then the name of an established route map.

  Only the following ROUTE-MAP mode commands are supported:
  - match ip address
  - set community
  - set local-preference
  - set metric
  - set next-hop
  - set origin
  - set weight

  If the route map is not configured, the default is deny (to drop all routes).

**Defaults**

Not configured.

**Command Modes**

ROUTER BGP

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
Version | Description
--- | ---
8.3.1.0 | Introduced the ability to substitute IGP cost for MED when a peer/peer-group outbound route-map is set as internal.
7.8.1.0 | Introduced on the S-Series.
7.7.1.0 | Introduced on the C-Series.

Usage Information

You can use the redistribute command to advertise the IGP cost as the MED on redistributed routes. When you set the route-map with metric-type internal and applied outbound to an EBGP peer/peer-group, the advertised routes corresponding to those peer/peer-groups have the IGP cost set as MED.

If you do not configure the default-metric command, in addition to the redistribute command, or there is no route map to set the metric, the metric for redistributed static and connected is "0".

To redistribute the default route (0.0.0.0/0), configure the neighbor default-originate command.

As BGP does not query next-hop information corresponding to locally originated routes, a local route with an unreachable next-hop is chosen as the best route.

When a combination of locally originated and peer originated routes occurs, both these routes will exist in the RTM. However, only the best route is kept active in the RTM and the remaining route is rendered in-active.

It is possible to keep only one locally originated route in the BGP database. Network command has preference over the re-distributed routes. When the locally originated route is no longer present in the database the other route is automatically installed.

Related Commands

neighbor default-originate — injects the default route.

redistribute ospf

Redistribute OSPF routes into BGP.

Z-Series

Syntax

redistribute ospf process-id [[match external {1 | 2}] [match internal]] [route-map map-name]

Parameters

process-id Enter the number of the OSPF process. The range is from 1 to 65535.
match external {1 | 2} (OPTIONAL) Enter the keywords match external to redistribute OSPF external routes. You can specify 1 or 2 to redistribute those routes only.
match internal (OPTIONAL) Enter the keywords match internal to redistribute OSPF internal routes only.
route-map map-name (OPTIONAL) Enter the keywords route-map then the name of a configured route map.

Defaults

Not configured.

Command Modes

ROUTER BGP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
### router bgp

To configure and enable BGP, enter ROUTER BGP mode.

#### Z-Series

**Syntax**

```
router bgp as-number
```

To disable BGP, use the `no router bgp as-number` command.

**Parameters**

- `as-number`  
  Enter the AS number. The range is from 1 to 65535 (2 byte), from 1 to 4294967295 (4 byte), or from 0.1 to 65535.65535 (dotted format).

**Defaults**  
Not enabled.

At least one interface must be in Layer 3 mode for the `router bgp` command to be accepted. If no interfaces are enabled for Layer 3, an error message appears:

```
% Error: No router id configured
```

BGP does not allow 23456 (AS-TRANS) as a configured AS number.

```
Dell(conf)#router bgp 3
Dell(conf-router_bgp)#
```

### set extcommunity bandwidth

Enables you to set extended community bandwidth.

**Syntax**

```
set extcommunity bandwidth
```

To disable extended community bandwidth, enter the `no set extcommunity bandwidth` command.

**Parameters**

- **bandwidth**: Enter the keyword `bandwidth` to enable extended community bandwidth. The range is from 0 to 102400.

**Defaults**

N/A

**Command Modes**

ROUTER MAP

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

A new policy command is introduced in order to attach the Link Bandwidth extended community only to the prefixes that are received from a neighbor that satisfy the desired conditions. This command is relevant for both inbound as well as outbound policy handling (for received prefixes). Also, there is no change to the set of supported conditions or filters.

During configuration, the bandwidth is specified in Mbps, not in bytes/second. While creating the actual LB extended community, the system will attach the AS number and encode the bandwidth in floating point format.

### show capture bgp-pdu neighbor

Display BGP packet capture information for an IPv4 address on the system.

**Z-Series**

**Syntax**

```
show capture bgp-pdu neighbor ipv4-address
```

**Parameters**

- **ipv4-address**: Enter the IPv4 address (in dotted decimal format) of the BGP address to display packet information for that address.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

  PDU[3] : len 19, captured 00:34:50 ago
       ffffffff ffffffff ffffffff ffffffff 00130400

[. . .]
Dell#
```
show ip bgp

View the current BGP IPv4 routing table for the system.

**Z-Series**

**Syntax**

```
show ip bgp [ipv4 unicast] [network [network-mask] [longer-prefixes]]
```

**Parameters**

- `ipv4 unicast` (OPTIONAL) Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.
- `network` (OPTIONAL) Enter the network address (in dotted decimal format) of the BGP network to view information only on that network.
- `network-mask` (OPTIONAL) Enter the network mask (in slash prefix format) of the BGP network address.
- `longer-prefixes` (OPTIONAL) Enter the keywords `longer-prefixes` to view all routes with a common prefix.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Added the add-path option to the S4810. Output on the S4810 shows the ADDPATH parameters.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you enable the `bgp non-deterministic-med` command, the `show ip bgp` command output for a BGP route does not list the INACTIVE reason.
In BGP, this command displays the exact reason why the route is discarded.

The following describes the `show ip bgp` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>
</tr>
<tr>
<td>Metric</td>
<td>Displays the BGP route’s metric, if assigned.</td>
</tr>
<tr>
<td>LocPrf</td>
<td>Displays the BGP LOCAL_PREF attribute for the route.</td>
</tr>
<tr>
<td>Weight</td>
<td>Displays the route’s weight.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

The `show ip bgp` command displays the `dmzlink-dw` details only if `dmzlink-bw` is enabled using the `bgp dmzlink-dw` command.

**Example**

```
Dell#show ip bgp
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
           n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

    Network            Next Hop            Metric     LocPrf Weight Path
*>  55.0.0.0/24        172.16.0.2                                 0 200 i
*>  66.0.0.0/24        172.16.0.2                                 0 200 i
```

All the show and debugs commands display the link band width extended-community prefixed with DMZ-Link-bw along with other extended communities.

```
Dell#show ip bgp 3.3.3.0/24
BGP routing table entry for 3.3.3.0/24
Paths: (1 available, table Default-IP-Routing-Table.)
Not advertised to any peer
Received from : 1.1.1.2 (3.3.3.1) Best
   AS_PATH :
   Next-Hop : 1.1.1.2, Cost : 0
   Origin IGP, Metric 0, LocalPref 100, Weight 0, internal
   Extended Communities : DMZ-Link Bw: 2000 kbytes*
```

**Related Commands**

- `show ip bgp community` — views the BGP communities.
- `neighbor maximum-prefix` — controls the number of network prefixes received.

### show ip bgp cluster-list

View BGP neighbors in a specific cluster.

**Z-Series**

| Syntax | show ip bgp [ipv4 {multicast | unicast} | ipv6 unicast] cluster-list [cluster-id] |

Border Gateway Protocol
Parameters

**ipv4 multicast** (OPTIONAL) Enter the keywords `ipv4` followed by the keyword `multicast` to view information related only to ipv4 multicast routes.

**ipv4 unicast** (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `unicast` to view information related only to ipv4 multicast routes.

**ipv6 unicast** (OPTIONAL) Enter the keyword `ipv6` followed by the keyword `unicast` to view information related to only to the ipv6 unicast routes.

**cluster-id** (OPTIONAL) Enter the cluster id in dotted decimal format. The range is 1 — 4294967295.

Command Modes

Usage Information

The following describes the `show ip bgp cluster-list` command shown in the following example.

**Field** | **Description**
----------|--------------------------------------------------|
Network    | Displays the destination network prefix of each BGP route. |
Next Hop   | Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table. |
Metric     | Displays the BGP route’s metric, if assigned. |
LocPrf     | Displays the BGP LOCAL_PREF attribute for the route. |
Weight     | Displays the route’s weight. |
Path       | Lists all the ASs the route passed through to reach the destination network. |

Example

```
Dell#show ip bgp cluster-list
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.6
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
            n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

                Network     Next Hop         Metric  LocPrf  Weight Path
*>I 55.0.0.0/24  172.16.0.2 0        0     400
500 600 i
*>I 66.0.0.0/24  172.16.0.2 0        0     500 i
*>I 77.0.0.0/24  172.16.0.2 0        0     1

Dell#show ip bgp cluster-list 4.4.4.4
```
show ip bgp community

View information on all routes with Community attributes or view specific BGP community groups.

Z-Series

Syntax

show ip bgp [ipv4 {multicast | unicast} | ipv6 unicast] community [community-number] [local-as] [no-export] [no-advertise]

Parameters

- **ipv4 unicast** (OPTIONAL) Enter the keywords ipv4 followed by the keyword unicast to view information related only to ipv4 unicast routes.
- **ipv4 multicast** (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.
- **ipv6 unicast** (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.
- **community-number** Enter the community number in AA:NN format where AA is the AS number (2 bytes) and NN is a value specific to that autonomous system. You can specify up to eight community numbers to view information on those community groups.
- **local-AS** Enter the keywords local-AS to view all routes with the COMMUNITY attribute of NO_EXPORT_SUBCONFED. All routes with the NO_EXPORT_SUBCONFED (0xFFFFFF03) community attribute must not be advertised to external BGP peers.
- **no-advertise** Enter the keywords no-advertise to view all routes containing the well-known community attribute of NO_ADVERTISE. All routes with the NO_ADVERTISE (0xFFFFFF02) community attribute must not be advertised to other BGP peers.
- **no-export** Enter the keywords no-export to view all routes containing the well-known community attribute of NO_EXPORT. All routes with the NO_EXPORT (0xFFFFFF01) community attribute must not be advertised outside a BGP confederation boundary.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
Version       Description
9.7(0.0)      Added the ipv4 multicast and ipv6 unicast parameters.
9.0.2.0       Introduced on the S6000.
8.3.19.0      Introduced on the S4820T.
8.3.11.1      Introduced on the Z9000.
8.3.7.0       Introduced on the S4810.
7.8.1.0       Introduced on the S-Series.
7.7.1.0       Introduced on the C-Series.

Usage Information
To view the total number of COMMUNITY attributes found, use the show ip bgp summary command. The text line above the route table states the number of COMMUNITY attributes found.
The show ip bgp community command without any parameters lists BGP routes with at least one BGP community attribute and the output is the same as for the show ip bgp command output.
The following describes the show ip bgp community command shown in the following example.

Field          Description
Network        Displays the destination network prefix of each BGP route.
Next Hop       Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.
Metric         Displays the BGP route’s metric, if assigned.
LocPrf         Displays the BGP LOCAL_PREF attribute for the route.
Weight         Displays the route’s weight.
Path           Lists all the ASs the route passed through to reach the destination network.

Example
Dell#show ip bgp community
local-AS                Do not export outside local AS (well-known community)
noc-advertise           Do not advertise to any peer (well-known community)
noc-export              Do not export to next AS (well-known community)
aa:nn                    Community number in aa:nn format
|                       Pipe through a command

Dell#show ip bgp community
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
            n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

            n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete
show ip bgp community-list

View routes that a specific community list affects.

Z-Series

Syntax

```
show ip bgp [ipv4 {unicast | multicast} | ipv6 unicast] community-list community-list-name [exact-match]
```

Parameters

- `ipv4 unicast` (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.
- `ipv4 multicast` (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.
- `ipv6 unicast` (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.
- `community-list-name` Enter the name of a configured IP community list (maximum 140 characters).
- `exact-match` Enter the keyword for an exact match of the communities.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The `show ip bgp community-list` command without any parameters lists BGP routes matching the Community List and the output is the same as for the `show ip bgp` command output.

The following describes the `show ip bgp community-list pass` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the destination network prefix of each BGP route.</td>
</tr>
<tr>
<td>Next Hop</td>
<td>Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.</td>

<tr>
<td>Metric</td>
<td>Displays the BGP route’s metric, if assigned.</td>
</tr>
<tr>
<td>LocPrf</td>
<td>Displays the BGP LOCAL_PREF attribute for the route.</td>
</tr>
<tr>
<td>Weight</td>
<td>Displays the route’s weight.</td>
</tr>
</tbody>
</table>
Field | Description
--- | ---
Path | Lists all the ASs the route passed through to reach the destination network.

**Example**

Dell(conf)#ip community-list cl1
Dell(config-community-list)#permit 1000:1
Dell(config-community-list)#end
Dell#show ip bgp community-list cl1

**show ip bgp dampened-paths**

View BGP routes that are dampened (non-active).

**Z-Series**

**Syntax**

```
show ip bgp [ipv4 {multicast | unicast} | ipv6 unicast] dampened-paths
```

**Parameters**

- **ipv4 unicast** (OPTIONAL) Enter the keywords ipv4 followed by the keyword unicast to view information related only to ipv4 unicast routes.
- **ipv6 unicast** (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Added the ipv4 multicast and ipv6 unicast parameters.
**Version** | **Description**
---|---
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Introduced on the S-Series.
7.7.1.0 | Introduced on the C-Series.

**Usage Information**

To determine a BGP session flap, both a route-down event and a subsequent route-up event corresponding to a single route are considered. As a result, a flap event is penalized only one time during the route-down event. The subsequent route-up event corresponding to the same route is not considered as a flap and is not penalized.

The history paths that the `show ip bgp` command displays contain only the prefix and the next-hop information. The next-hop information shows the IP address of the neighbor. It does not show the actual next-hop details.

The following describes the `show ip bgp damp` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the network ID to which the route is dampened.</td>
</tr>
<tr>
<td>From</td>
<td>Displays the IP address of the neighbor advertising the dampened route.</td>
</tr>
<tr>
<td>Reuse</td>
<td>Displays the hour:minutes:seconds until the dampened route is available.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the dampened route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip bgp dampened-paths
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
          n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

          Network    From    Reuse     Path
          55.0.0.0/24  172.16.0.2  00:36:23  200

Dell#
```

### show ip bgp detail

Display BGP internal information for the IPv4 Unicast address family.

**Z-Series**

**Syntax**

```
show ip bgp [ipv4 unicast] detail
```

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>

Border Gateway Protocol
show ip bgp extcommunity-list

View information on all routes with Extended Community attributes.

Z-Series

Syntax

```
show ip bgp [ipv4 {multicast | unicast} | ipv6 unicast] extcommunity-list [list name]
```

Parameters

- `ipv4 multicast` (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.
- `ipv4 unicast` (OPTIONAL) Enter the keywords ipv4 unicast to view information only related to ipv4 unicast routes.
- `ipv6 unicast` (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.
- `list name` Enter the extended community list name you wish to view. The range is 140 characters.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Added the ipv4 multicast and ipv6 unicast parameters.</td>
</tr>
</tbody>
</table>
## show ip bgp filter-list

View the routes that match the filter lists.

### Z-Series

#### Syntax

```
show ip bgp [ipv4 {multicast | unicast} | ipv6 unicast] filter-list as-path-name
```

#### Parameters

- **ipv4 multicast** *(OPTIONAL)* Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.
- **ipv4 unicast** *(OPTIONAL)* Enter the keyword ipv4 followed by the keyword unicast to view information related only to ipv4 unicast routes.
- **ipv6 unicast** *(OPTIONAL)* Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.
- **as-path-name** Enter an AS-PATH access list name. The range is 140 characters.

#### Command Modes

- EXEC
- EXEC Privilege
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

The following describes the `show ip bgp filter-list hello` command shown in the following example.

**Field** | **Description**
---|---
Path source codes | Lists the path sources shown to the right of the last AS number in the Path column:
- i = internal route entry
- a = aggregate route entry
- c = external confederation route entry
- n = network route entry
- r = redistributed route entry

Next Hop | Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.

Metric | Displays the BGP route’s metric, if assigned.

LocPrf | Displays the BGP LOCAL_PREF attribute for the route.

Weight | Displays the route’s weight.

Path | Lists all the ASs the route passed through to reach the destination network.

**Example**

```
Dell#show run as-path a1
!
ip as-path access-list a1
   permit 500
Dell#

Dell#show ip bgp filter-list a1
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
           n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

<table>
<thead>
<tr>
<th>Network</th>
<th>Next Hop</th>
<th>Metric</th>
<th>LocPrf</th>
<th>Weight</th>
<th>Path</th>
</tr>

<td>200</td>
<td></td>
<td></td>
</tr>
<tr>
<td>500</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
```
**show ip bgp flap-statistics**

View flap statistics on BGP routes.

### Z-Series

**Syntax**

```
show ip bgp [ipv4 {multicast | unicast} | ipv6 unicast] flap-statistics [ip-address [mask]] [filter-list as-path-name] [regexp regular-expression]
```

**Parameters**

- `ipv4 multicast` (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `multicast` to view information related only to ipv4 multicast routes.
- `ipv4 unicast` (OPTIONAL) Enter the keyword `ipv4` followed by the keyword `unicast` to view information related only to ipv4 unicast routes.
- `ipv6 unicast` (OPTIONAL) Enter the keyword `ipv6` followed by the keyword `unicast` to view information related only to ipv6 unicast routes.
- `ip-address` (OPTIONAL) Enter the IP address (in dotted decimal format) of the BGP network to view information only on that network.
- `mask` (OPTIONAL) Enter the network mask (in slash prefix (/x) format) of the BGP network address.
- `filter-list as-path-name` (OPTIONAL) Enter the keyword `filter-list` then the name of a configured AS-PATH ACL. The range is 140 characters.
- `regexp regular-expression` Enter a regular expression then use one or a combination of the following characters to match. The range is 256 characters.
  - `.` = (period) any single character (including a white space).
  - `*` = (asterisk) the sequences in a pattern (zero or more sequences).
  - `+` = (plus) the sequences in a pattern (one or more sequences).
  - `?` = (question mark) sequences in a pattern (either zero or one sequences).

**NOTE:** Enter an escape sequence (CTRL+v) prior to entering the regular expression.
  - `[ ]` = (brackets) a range of single-character patterns.
  - `{ }` = (parenthesis) groups a series of pattern elements to a single element.
  - `{ }` = (braces) minimum and the maximum match count.
  - `^` = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
  - `$` = (dollar sign) the end of the output string.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Added the ipv4 multicast and ipv6 unicast parameters.</td>
</tr>

</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>
The following describes the `show ip bgp flap` command shown in the following example.

### Field Description

- **Network**: Displays the network ID to which the route is flapping.
- **From**: Displays the IP address of the neighbor advertising the flapping route.
- **Flaps**: Displays the number of times the route flapped.
- **Duration**: Displays the hours:minutes:seconds since the route first flapped.
- **Reuse**: Displays the hours:minutes:seconds until the flapped route is available.
- **Path**: Lists all the ASs the flapping route passed through to reach the destination network.

### Example

```
Dell#show ip bgp flap-statistics
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
    n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

```

### show ip bgp inconsistent-as

View routes with inconsistent originating autonomous system (AS) numbers; that is, prefixes that are announced from the same neighbor AS but with a different AS-Path.

#### Z-Series

**Syntax**

```
show ip bgp [ipv4 unicast] inconsistent-as
```

**Parameters**

- `ipv4 unicast` (OPTIONAL) Enter the keywords `ipv4 unicast` to view information only related to ipv4 unicast routes.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
### Version Description
- **8.3.19.0**: Introduced on the S4820T.
- **8.3.11.1**: Introduced on the Z9000.
- **8.3.7.0**: Introduced on the S4810.
- **7.8.1.0**: Introduced on the S-Series.
- **7.7.1.0**: Introduced on the C-Series.

### Usage Information
The following describes the `show ip bgp inconsistent-as` command shown in the following example.

**Field** | **Description**
--- | ---
 Network | Displays the destination network prefix of each BGP route.
 Next Hop | Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then local routes exist in the routing table.
 Metric | Displays the BGP route’s metric, if assigned.
 LocPrf | Displays the BGP LOCAL_PREF attribute for the route.
 Weight | Displays the route’s weight.
 Path | Lists all the ASs the route passed through to reach the destination network.

### Example
```
Dell>show ip bgp inconsistent-as
BGP table version is 280852, local router ID is 10.1.2.100
Status codes: s suppressed, d damped, h history, * valid, > best
Path source: I - internal, c - confed-external, r - redistributed, n - network
Origin codes: i - IGP, e - EGP, ? - incomplete

346 Border Gateway Protocol
show ip bgp neighbors

Allows you to view the information BGP neighbors exchange.

Z-Series

Syntax

show ip bgp [ipv4 {multicast | unicast} | ipv6 unicast] neighbors [ip-address [advertised-routes | dampened-routes | detail | flap-statistics | routes | {received-routes [network [network-mask]]} | {denied-routes [network [network-mask]]}]

Parameters

ipv4 multicast (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.

ipv4 unicast (OPTIONAL) Enter the keyword ipv4 followed by the keyword unicast to view information related only to ipv4 unicast routes.

ipv6 unicast (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.

ip-address (OPTIONAL) Enter the IP address of the neighbor to view only BGP information exchanged with that neighbor.

advertised-routes (OPTIONAL) Enter the keywords advertised-routes to view only the routes the neighbor sent.

dampened-routes (OPTIONAL) Enter the keywords dampened-routes to view information on dampened routes from the BGP neighbor.

detail (OPTIONAL) Enter the keyword detail to view neighbor-specific internal information for the IPv4 Unicast address family.

flap-statistics (OPTIONAL) Enter the keywords flap-statistics to view flap statistics on the neighbor’s routes.

routes (OPTIONAL) Enter the keyword routes to view only the neighbor’s feasible routes.

received-routes [network [network-mask]] (OPTIONAL) Enter the keywords received-routes then either the network address (in dotted decimal format) or the network mask (in slash prefix format) to view all information received from neighbors. 

**NOTE:** Configure the neighbor soft-reconfiguration inbound command prior to viewing all the information received from the neighbors.

denied-routes [network [network-mask]] (OPTIONAL) Enter the keywords denied-routes then either the network address (in dotted decimal format) or the network mask (in slash prefix format) to view all information on routes denied via neighbor inbound filters.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
After a peer reset, the contents of the notification log messages is displayed in hex values for debugging.

The neighbor information that this command displays does not include counts corresponding to ignored prefixes and updates. However, the martian case is an exception where neighbor information corresponding to ignored updates is displayed.

BGP shows the exact information that is exchanged between the BGP peers. It also indicates whether or not this information is received by the BGP peer.

The following describes the show ip bgp neighbors command shown in the following examples.

The Lines Beginning with:

BGP neighbor Displays the BGP neighbor address and its AS number. The last phrase in the line indicates whether the link between the BGP router and its neighbor is an external or internal one. If they are located in the same AS, the link is internal; otherwise the link is external.

BGP version Displays the BGP version (always version 4) and the remote router ID.

BGP state Displays the neighbor’s BGP state and the amount of time in hours:minutes:seconds it has been in that state.

Last read This line displays the following information:

- last read is the time (hours:minutes:seconds) the router read a message from its neighbor
- hold time is the number of seconds configured between messages from its neighbor
- keepalive interval is the number of seconds between keepalive messages to help ensure that the TCP session is still alive.

Received messages This line displays the number of BGP messages received, the number of notifications (error messages), and the number of messages waiting in a queue for processing.

Sent messages The line displays the number of BGP messages sent, the number of notifications (error messages), and the number of messages waiting in a queue for processing.

Received updates This line displays the number of BGP updates received and sent.

Soft reconfiguration This line indicates that soft reconfiguration inbound is configured.

Minimum time Displays the minimum time, in seconds, between advertisements.
The Lines
Beginning with:
(list of inbound and outbound policies)
Displays the policy commands configured and the names of the Route map, AS-PATH ACL, or Prefix list configured for the policy.

For address family:
Displays the IPv4 Unicast as the address family.

BGP table version
Displays which version of the primary BGP routing table the router and the neighbor are using.

accepted prefixes
Displays the number of network prefixes the router accepts and the amount of memory used to process those prefixes.

Prefix advertised
Displays the number of network prefixes advertised, the number rejected, and the number withdrawn from the BGP routing table.

Connections established
Displays the number of TCP connections established and dropped between the two peers to exchange BGP information.

Last reset
Displays the amount of time since the peering session was last reset. Also states if the peer resets the peering session. If the peering session was never reset, the word never is displayed.

Local host:
Displays the peering address of the local router and the TCP port number.

Foreign host:
Displays the peering address of the neighbor and the TCP port number.

Example
Dell#show ip bgp neighbors 172.16.0.2
BGP neighbor is 172.16.0.2, remote AS 200, external link
Member of peer-group port0 for session parameters
BGP remote router ID 172.16.0.2
BGP state ESTABLISHED, in this state for 00:13:55
Last read 00:00:03, Last write 00:00:55
Hold time is 180, keepalive interval is 60 seconds
Received 50 messages, 0 in queue
  1 opens, 0 notifications, 34 updates
  15 keepalives, 0 route refresh requests
Sent 18 messages, 0 in queue
  1 opens, 0 notifications, 0 updates
  16 keepalives, 0 route refresh requests

Route refresh request: received 0, sent messages 1
Minimum time between advertisement runs is 30 seconds
Minimum time before advertisements start is 0 seconds

Capabilities received from neighbor for IPv4 Unicast:
MULTIPROTO_EXT(1)
ROUTE_REFRESH(2)

Capabilities advertised to neighbor for IPv4 Unicast:
MULTIPROTO_EXT(1)
ROUTE_REFRESH(2)
ADD_PATH(69)
CISCO_ROUTE_REFRESH(128)

For address family: IPv4 Unicast
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
InQ : Added 0, Replaced 0, Withdrawn 0
OutQ : Added 0, Replaced 0, Withdrawn 0
Allow local AS number 0 times in AS-PATH attribute
Prefixes accepted 2, withdrawn 15 by peer, martian prefixes ignored 0
Prefixes advertised 0, denied 0, withdrawn 0 from peer
Connections established 1; dropped 0
Last reset never
Local host: 172.16.0.1, Local port: 58145
Foreign host: 172.16.0.2, Foreign port: 179

Related Commands

show ip bgp — views the current BGP routing table.

**show ip bgp next-hop**

View all next hops (using learned routes only) with current reachability and flap status. This command only displays one path, even if the next hop is reachable by multiple paths.

**Z-Series**

**Syntax**

show ip bgp next-hop

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the show ip bgp next-hop command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Next-hop</td>
<td>Displays the next-hop IP address.</td>
</tr>
<tr>
<td>Via</td>
<td>Displays the IP address and interface used to reach the next-hop.</td>
</tr>
<tr>
<td>RefCount</td>
<td>Displays the number of BGP routes using this next hop.</td>
</tr>
<tr>
<td>Cost</td>
<td>Displays the cost associated with using this next hop.</td>
</tr>
<tr>
<td>Flaps</td>
<td>Displays the number of times the next hop has flapped.</td>
</tr>
<tr>
<td>Time Elapsed</td>
<td>Displays the time elapsed since the next hop was learned. If the route is down, this field displays time elapsed since the route went down.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell# show ip bgp next-hop
    Next-hop     Resolved
    172.16.0.2     YES
Dell#
```
show ip bgp paths

View all the BGP path attributes in the BGP database.

Syntax

```
show ip bgp paths [regexp regular-expression]
```

Parameters

**regexp regular-expression**
Enter a regular expression then use one or a combination of the following characters to match:
- . = (period) any single character (including a white space).
- * = (asterisk) the sequences in a pattern (zero or more sequences).
- + = (plus) the sequences in a pattern (one or more sequences).
- ? = (question mark) sequences in a pattern (either zero or one sequences).

**NOTE:** Enter an escape sequence (CTRL+v) prior to entering the ? regular expression.
- [ ] = (brackets) a range of single-character patterns.
- ( ) = (parenthesis) groups a series of pattern elements to a single element.
- { } = (braces) minimum and the maximum match count.
- ^ = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
- $ = (dollar sign) the end of the output string.

Command Modes

- EXEC
- EXEC Privilege

Example

Dell#show ip bgp paths community
Total 2 communities
Reaccess Community
1 NO-ADVERTISE
1 200:1 1000:1 3000:1
show ip bgp peer-group

Allows you to view information on the BGP peers in a peer group.

Z-Series

Syntax

```
show ip bgp [ipv4 {multicast | unicast} | ipv6 unicast] peer-group [peer-group-name [detail | summary]]
```

Parameters

- `ipv4 multicast` (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.
- `ipv4 unicast` (OPTIONAL) Enter the keyword ipv4 followed by the keyword unicast to view information related only to ipv4 unicast routes.
- `ipv6 unicast` (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.
- `peer-group-name` (OPTIONAL) Enter the name of a peer group to view information about that peer group only.
- `detail` (OPTIONAL) Enter the keyword detail to view detailed status information of the peers in that peer group.
- `summary` (OPTIONAL) Enter the keyword summary to view status information of the peers in that peer group. The output is the same as that found in the `show ip bgp summary` command.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Added the <code>add-path</code> option to the S4810. Output on the S4810 shows the <code>ADDPATH</code> parameters.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the `show ip bgp peer-group` command shown in the following example.

**Line beginning with:**

- `Peer-group`: Displays the peer group’s name.
- `Administratively shut`: Displays the peer group’s status if the peer group is not enabled. If you enable the peer group, this line is not displayed.
- `BGP version`: Displays the BGP version supported.
- `Minimum time`: Displays the time interval between BGP advertisements.
- `For address family`: Displays IPv4 Unicast as the address family.
- `BGP neighbor`: Displays the name of the BGP neighbor.
Line beginning with:

Number of peers: Displays the number of peers currently configured for this peer group.

Peer-group members: Lists the IP addresses of the peers in the peer group. If the address is outbound optimized, an * is displayed next to the IP address.

Example

Dell#show ip bgp peer-group
Peer-group port0, remote AS 200
BGP version 4
Minimum time between advertisement runs is 30 seconds
For address family: IPv4 Unicast
Update packing has 4_OCTER_AS support enabled

Number of peers in this group 1
Maximum limit on the accepted connections 256

Peer-group members (* - outbound optimized):
172.16.0.2
Dell#

Related Commands

neighbor peer-group (assigning peers) — assigns a peer to a peer-group.
neighbor peer-group (creating group) — creates a peer group.

show ip bgp regexp

Display the subset of the BGP routing tables matching the regular expressions specified.

Z-Series

Syntax

show ip bgp regexp regular-expression [character]

Parameters

regular-expression [character] Enter a regular expression then use one or a combination of the following characters to match:

● . = (period) any single character (including a white space).
● * = (asterisk) the sequences in a pattern (zero or more sequences).
● + = (plus) the sequences in a pattern (one or more sequences).
● ? = (question mark) sequences in a pattern (either zero or one sequences).

NOTE: Enter an escape sequence (CTRL+v) prior to entering the ? regular expression.

● [ ] = (brackets) a range of single-character patterns.
● { } = (parenthesis) groups a series of pattern elements to a single element.
● { } = (braces) minimum and the maximum match count.
● ^ = (caret) the beginning of the input string. If you use the caret at the beginning of a sequence or range, it matches on everything BUT the characters specified.
● $ = (dollar sign) the end of the output string.

Command Modes

● EXEC
● EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
show ip bgp regexp

Usage Information

The following describes the show ip bgp regexp command shown in the following example.

Field Description
Network Displays the destination network prefix of each BGP route.
Next Hop Displays the next hop address of the BGP router. If 0.0.0.0 is listed in this column, then non-BGP routes exist in the router’s routing table.
Metric Displays the BGP router’s metric, if assigned.
LocPrf Displays the BGP LOCAL_PREF attribute for the route.
Weight Displays the route’s weight
Path Lists all the AS paths the route passed through to reach the destination network.

Example

Dell#show ip bgp regexp ^200
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, > best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
n - network, D - denied, S - stale
Origin codes: i - IGP, e - EGP, ? - incomplete

<table>

<td>172.16.0.2</td>
<td></td>
<td></td>
<td>200</td>
<td>i</td>
</tr>
</tbody>
</table>

show ip bgp summary

Allows you to view the status of all BGP connections.

Z-Series

Syntax

show ip bgp [ipv4 {multicast | unicast} | ipv6 unicast] summary

Parameters

ipv4 multicast (OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view information related only to ipv4 multicast routes.
ipv4 unicast (OPTIONAL) Enter the keyword ipv4 followed by the keyword unicast to view information related only to ipv4 unicast routes.
ipv6 unicast (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.

Command Modes

- EXEC
- EXEC Privilege
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</tr>
</tbody>
</table>

In BGP, route attributes are maintained at different locations. When attributes that correspond to multiple routes change, then attribute counts that the `show ip bgp summary` command displays are calculated as summations of attributes corresponding to all the associated routes. For example, if `cluster_id` is an attribute associated with thousand routes that contain exactly the same set of attributes, then the `cluster_id` count is 1. If these thousand routes are set with different attribute values with the same `cluster_id`, then the `cluster_id` count is 1000, since the same value is stored for thousand different attribute records.

The attribute next-hop is a part of the BGP attribute data structure.

If two peers send the same route that contains similar path attributes, then two entries are maintained in the back-end, as both these entries have different next-hops. If this same route is sent to a different peer, an entry for each peer is created, as the next-hop is different. As a result, the BGP attributes count in the summary output will differ accordingly.

The following describes the `show ip bgp summary` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BGP router identifier</td>
<td>Displays the local router ID and the AS number.</td>
</tr>
<tr>
<td>BGP table version</td>
<td>Displays the BGP table version and the main routing table version.</td>
</tr>
<tr>
<td>network entries</td>
<td>Displays the number of network entries, route paths, and the amount of memory used to process those entries.</td>
</tr>
<tr>
<td>paths</td>
<td>Displays the number of paths and the amount of memory used.</td>
</tr>
<tr>
<td>denied paths</td>
<td>Displays the number of denied paths and the amount of memory used.</td>
</tr>
<tr>
<td>BGP path attribute entries</td>
<td>Displays the number of BGP path attributes and the amount of memory used to process them.</td>
</tr>
<tr>
<td>BGP AS-PATH entries</td>
<td>Displays the number of BGP AS_PATH attributes processed and the amount of memory used to process them.</td>
</tr>
<tr>
<td>BGP community entries</td>
<td>Displays the number of BGP COMMUNITY attributes processed and the amount of memory used to process them. The <code>show ip bgp community</code> command provides more details on the COMMUNITY attributes.</td>
</tr>
<tr>
<td>Dampening enabled</td>
<td>Displayed only when you enable dampening. Displays the number of paths designated as history, dampened, or penalized.</td>
</tr>
<tr>
<td>Neighbor</td>
<td>Displays the BGP neighbor address.</td>
</tr>
<tr>
<td>AS</td>
<td>Displays the AS number of the neighbor.</td>
</tr>
<tr>
<td>MsgRcvd</td>
<td>Displays the number of BGP messages that neighbor received.</td>
</tr>
<tr>
<td>MsgSent</td>
<td>Displays the number of BGP messages that neighbor sent.</td>
</tr>
<tr>
<td>TblIVer</td>
<td>Displays the version of the BGP table that was sent to that neighbor.</td>
</tr>
</tbody>
</table>
Field Description
InQ Displays the number of messages from that neighbor waiting to be processed.
OutQ Displays the number of messages waiting to be sent to that neighbor. If a number appears in parentheses, the number represents the number of messages waiting to be sent to the peer group.
Up/Down Displays the amount of time that the neighbor is in the Established stage. If the neighbor has never moved into the Established stage, the word never is displayed. The output format is:

<table>
<thead>
<tr>
<th>Time</th>
<th>Display Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 1 day</td>
<td>00:12:23 (hours:minutes:seconds)</td>
</tr>
<tr>
<td>&lt; 1 week</td>
<td>1d21h (DaysHours)</td>
</tr>
<tr>
<td>&gt; 1 week</td>
<td>11w2d (WeeksDays)</td>
</tr>
</tbody>
</table>

State/Pfxrcd If the neighbor is in Established stage, the number of network prefixes received.
If a maximum limit was configured with the neighbor maximum-prefix command, (prfxd) appears in this column.
If the neighbor is not in Established stage, the current stage is displayed (Idle, Connect, Active, OpenSent, OpenConfirm). When the peer is transitioning between states and clearing the routes received, the phrase (Purging) may appear in this column.
If the neighbor is disabled, the phrase (Admin shut) appears in this column.

Example

```
Dell#show ip bgp summary
BGP router identifier 192.168.11.5, local AS number 100
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
2 network entrie(s) using 152 bytes of memory
2 paths using 208 bytes of memory
BGP-RIB over all using 210 bytes of memory
2 BGP path attribute entrie(s) using 144 bytes of memory
1 BGP AS-PATH entrie(s) using 10 bytes of memory
2 neighbor(s) using 16384 bytes of memory
Neighbor  AS    MsgRcvd  MsgSent TblVer  InQ  OutQ  State/Pfx
Up/Down  State/Pfx
172.16.0.2 200    10       8     0    0    0
00:05:34 2
192.168.10.2 100  0       22     0    0    0
00:00:00 (shut)
Dell#
```

**show running-config bgp**

To display the current BGP configuration, use this feature.

**Z-Series**

Syntax `show running-config bgp`

Defaults none

Command Modes EXEC Privilege
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>

**Example**

```
Dell#show running-config bgp
!
router bgp 100
 network 1.1.11.1/32
 network 1.1.12.1/32
 network 1.1.13.1/32
 neighbor 10.1.1.2 remote-as 200
 neighbor 10.1.1.2 no shutdown
Dell#
```

**timers bgp**

Adjust the BGP Keep Alive and Hold Time timers.

**Z-Series**

**Syntax**

```
timers bgp keepalive holdtime
```

To return to the default, use the `no timers bgp` command.

**Parameters**

- `keepalive` Enter a number for the time interval, in seconds, between keepalive messages sent to the neighbor routers. The range is from 1 to 65535. The default is 60 seconds.

- `holdtime` Enter a number for the time interval, in seconds, between the last keepalive message and declaring the router dead. The range is from 3 to 65535. The default is 180 seconds.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

</tbody>
</table>
### MBGP Commands

Multiprotocol BGP (MBGP) is an enhanced BGP that enables multicast routing policy throughout the internet and connecting multicast topologies between BGP and autonomous systems (ASs).

Dell Networking OS MBGP is implemented as per IETF RFC 1858.

BGPv4 is supported in the following:

<table>
<thead>
<tr>
<th>Dell Networking OS Version</th>
<th>Platform Support</th>
</tr>
</thead>
<tbody>
<tr>
<td>7.8.1.0, MBGP for IPv4 Multicast Only</td>
<td>S-Series</td>
</tr>
</tbody>
</table>

#### debug ip bgp dampening

View information on routes being dampened.

**Z9000**

**Syntax**

dbg ip bgp [ipv4 (unicast | multicast) | ipv6 unicast] dampening

To disable debugging, use the no debug ip bgp dampening command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ipv4 multicast</td>
<td>(OPTIONAL) Enter the keyword ipv4 followed by the keyword multicast to view dampened-route information related only to ipv4 multicast routes.</td>
</tr>
<tr>
<td>ipv4 unicast</td>
<td>(OPTIONAL) Enter the keyword ipv4 followed by the keyword unicast to view dampened-route information related only to ipv4 unicast routes.</td>
</tr>
<tr>
<td>ipv6 unicast</td>
<td>(OPTIONAL) Enter the keyword ipv4 followed by the keyword unicast to view dampened-route information related only to ipv6 unicast routes.</td>
</tr>
</tbody>
</table>

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>
distance bgp

Configure three administrative distances for routes.

Syntax
distance bgp external-distance internal-distance local-distance

To return to default values, use the no distance bgp command.

Parameters
- **external-distance** Enter a number to assign to routes learned from a neighbor external to the AS. The range is from 1 to 255. The default is 20.
- **internal-distance** Enter a number to assign to routes learned from a router within the AS. The range is from 1 to 255. The default is 200.
- **local-distance** Enter a number to assign to routes learned from networks listed in the network command. The range is from 1 to 255. The default is 200.

Defaults
- external-distance = 20
- internal-distance = 200
- local-distance = 200

Command Modes
- ROUTER BGP

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.7.0** Introduced on the S4810.
- **Version 7.8.1.0** Introduced on the S-Series.
- **Version 7.7.1.0** Introduced on the C-Series.
- **Version 7.6.1.0** Introduced IPv6 MGBP support for the E-Series.

Usage Information

⚠️ **CAUTION:** Dell Networking recommends not changing the administrative distance of internal routes. Changing the administrative distances may cause routing table inconsistencies.

The higher the administrative distance assigned to a route means that your confidence in that route is low. Routes assigned an administrative distance of 255 are not installed in the routing table. Routes from confederations are treated as internal BGP routes.

Related Commands
- `router bgp` — enters ROUTER mode on the switch.
show ip bgp dampened-paths

View BGP routes that are dampened (non-active).

Z-Series

Syntax

show ip bgp [ipv4 {multicast | unicast} | ipv6 unicast] dampened-paths

Parameters

ipv4 unicast (OPTIONAL) Enter the keywords ipv4 followed by the keyword unicast to view information related only to ipv4 unicast routes.

ipv6 unicast (OPTIONAL) Enter the keyword ipv6 followed by the keyword unicast to view information related only to ipv6 unicast routes.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Added the ipv4 multicast and ipv6 unicast parameters.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

To determine a BGP session flap, both a route-down event and a subsequent route-up event corresponding to a single route are considered. As a result, a flap event is penalized only one time during the route-down event. The subsequent route-up event corresponding to the same route is not considered as a flap and is not penalized.

The history paths that the show ip bgp command displays contain only the prefix and the next-hop information. The next-hop information shows the ip address of the neighbor. It does not show the actual next-hop details.

The following describes the show ip bgp damp command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Network</td>
<td>Displays the network ID to which the route is dampened.</td>
</tr>
<tr>
<td>From</td>
<td>Displays the IP address of the neighbor advertising the dampened route.</td>
</tr>
<tr>
<td>Reuse</td>
<td>Displays the hour:minutes:seconds until the dampened route is available.</td>
</tr>
<tr>
<td>Path</td>
<td>Lists all the ASs the dampened route passed through to reach the destination network.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show ip bgp dampened-paths
BGP local RIB : Routes to be Added 0, Replaced 0, Withdrawn 0
BGP local router ID is 192.168.11.5
Status codes: s suppressed, S stale, d dampened, h history, * valid, >
best
Path source: I - internal, a - aggregate, c - confed-external, r - redistributed
```
BGP Extended Communities (RFC 4360)

BGP Extended Communities, as defined in RFC 4360, is an optional transitive BGP attribute.
BGP Extended Communities provides two major advantages over Standard Communities:
- The range is extended from 4-octet (AA:NN) to 8-octet (Type:Value) to provide enough number communities.
- Communities are structured using a new “Type” field (1 or 2-octets), allowing you to provide granular control/filter routing information based on the type of extended communities.

deny

To reject (deny) from the two types of extended communities, route origin (rt) or site-of-origin (soo), use this feature.

Z-Series

deny {rt | soo} {as4 ASN4:NN | ASN:NNNN | IPADDR:NN}

To remove (delete) the rule, use the no deny {rt | soo} {as4 ASN4:NN | ASN:NNNN | IPADDR:NN} command.

Parameters
- **as4 ASN4:NN**: Enter the keyword as4 then the 4-octet AS specific extended community number in the format ASN4:NN (4-byte AS number:2-byte community value).
- **ASN:NNNN**: Enter the 2-octet AS specific extended community number in the format ASN:NNNN (2-byte AS number:4-byte community value).
- **IPADDR:NN**: Enter the IP address specific extended community in the format IPADDR:NN (4-byte IPv4 Unicast Address:2-byte community value).

Defaults
Not configured.

Command Modes
- **CONFIGURATION (conf-ext-community-list)**

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 7.8.1.0** Introduced on the S-Series.
- **Version 7.7.1.0** Introduced on the C-Series.
- **Version 7.6.1.0** Introduced on the E-Series.

Related Commands
- **permit** — configures to add (permit) rules.
- **show ip extcommunity-list** — displays the extended community list.
deny regex

This feature allows you to specify an extended community to reject (deny) using a regular expression (regex).

Z-Series

Syntax

deny regex {regex}

To remove, use the no deny regex {regex} command.

Parameters

regex Enter a regular expression.

Defaults

Not configured.

Command Modes

CONFIGURATION (conf-ext-community-list)

Command

History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 7.8.1.0 Introduced on the S-Series.
Version 7.7.1.0 Introduced on the C-Series.
Version 7.6.1.0 Introduced on the E-Series.

Usage

Duplicate commands are silently accepted.

Information

Example

Dell(conf-ext-community-list)#deny regexp 123
Dell(conf-ext-community-list)#

Related
Commands

permit regex — permits a community using a regular expression.

description

To designate a meaningful description to the extended community, use this feature.

Z-Series

Syntax
description {line}

To remove the description, use the no description {line} command.

Parameters

line Enter a description (maximum 80 characters).

Defaults

Not configured.

Command Modes

CONFIGURATION (conf-ext-community-list)

Command

History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 7.8.1.0 Introduced on the S-Series.
Version 7.7.1.0 Introduced on the C-Series.
Version 7.6.1.0 Introduced on the E-Series.
**ip extcommunity-list**

To enter the Extended Community-list mode, use this feature.

### Z-Series

**Syntax**

```
ip extcommunity-list word
```

To exit from this mode, use the `exit` command.

**Parameters**

- `word`
  
Enter a community list name (maximum 16 characters).

**Defaults**

None

**Command Modes**

CONFIGURATION (conf-ext-community-list)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 7.8.1.0**
  
  Introduced on the S-Series.

- **Version 7.7.1.0**
  
  Introduced on the C-Series.

- **Version 7.6.1.0**
  
  Introduced on the E-Series.

**Usage Information**

This mode changes the prompt.

**Example**

```
Dell(conf)#ip extcommunity-list test
Dell(conf-ext-community-list)#
```

---

**match extcommunity**

To match an extended community in the Route Map mode, use this feature.

### Z-Series

**Syntax**

```
match extcommunity {extended community list name}
```

To change the match, use the `no match extcommunity {extended community list name}` command.

**Parameters**

- `extended community list name`
  
Enter the name of the extended community list.

**Defaults**

None

**Command Modes**

ROUTE MAP (config-route-map)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 7.8.1.0**
  
  Introduced on the S-Series.

- **Version 7.7.1.0**
  
  Introduced on the C-Series.

- **Version 7.6.1.0**
  
  Introduced on the E-Series.
Like standard communities, you can use extended communities in the route-map to match the attribute.

Example

```plaintext
Dell(config-route-map)#match extcommunity Freedombird
Dell(config-route-map)#
```

**permit**

To add rules (permit) from the two types of extended communities, Route Origin (rt) or Site-of-Origin (soo), use this feature.

### Z-Series

**Syntax**

```plaintext
permit {rt | soo} {as4 ASN4:NN | ASN:NNNN | IPADDR:NN}
```

Example:

```plaintext
permit rt soo {as4 ASN4:NN | ASN:NNNN | IPADDR:NN}
```

**Parameters**

- **rt**: Enter the keyword `rt` to designate a Route Origin community.
- **soo**: Enter the keyword `soo` to designate a Site-of-Origin community (also known as Route Origin).
- **as4 ASN4:NN**: Enter the keyword `as4` then the 4-octet AS specific extended community number in the format ASN4:NN (4-byte AS number:2-byte community value).
- **ASN:NNNN**: Enter the 2-octet AS specific extended community number in the format ASN:NNNN (2-byte AS number:4-byte community value).
- **IPADDR:NN**: Enter the IP address specific extended community in the format IPADDR:NN (4-byte IPv4 Unicast Address:2-byte community value).

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION (conf-ext-community-list)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 7.8.1.0**: Introduced on the S-Series.
- **Version 7.7.1.0**: Introduced on the C-Series.
- **Version 7.6.1.0**: Introduced on the E-Series.

**Related Commands**

- **deny**: configures to delete (deny) rules.
- **show ip bgp extcommunity-list**: displays the extended community list.

**permit regex**

This feature allows you specify an extended community to forward (permit) using a regular expression (regex).

### Z-Series

**Syntax**

```plaintext
permit regex {regex}
```

Example:

```plaintext
permit regex {regex}
```

**Parameters**

- **regex**: Enter a regular expression.
set extcommunity rt

To set Route Origin community attributes in Route Map, use this feature.

Z-Series

Syntax

set extcommunity rt {as4 ASN4:NN [non-trans] | ASN:NNNN [non-trans] | IPADDR:NN [non-trans]} [additive]

To delete the Route Origin community, use the no set extcommunity command.

Parameters

- **as4 ASN4:NN**: Enter the keyword as4 then the 4-octet AS specific extended community number in the format ASN4:NN (4-byte AS number:2-byte community value).
- **ASN:NNNN**: Enter the 2-octet AS specific extended community number in the format ASN:NNNN (2-byte AS number:4-byte community value).
- **IPADDR:NN**: Enter the IP address specific extended community in the format IPADDR:NN (4-byte IPv4 Unicast Address:2-byte community value).
- **additive**: (OPTIONAL) Enter the keyword additive to add to the existing extended community.
- **non-trans**: (OPTIONAL) Enter the keywords non-trans to indicate a non-transitive BGP extended community.

Defaults

none

Command Modes

ROUTE MAP (config-route-map)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 8.3.19.0**: Introduced on the S4820T
- **Version 8.3.11.1**: Introduced on the Z-9000.
- **Version 8.3.7.0**: Introduced on the S4810.
- **Version 7.8.1.0**: Introduced on the S-Series.

Usage Information

Duplicate commands are silently accepted.

Example

Dell(conf-ext-community-list)#permit regexp 123
Dell(conf-ext-community-list)#

Related Commands

deny regex — denies a community using a regular expression.
set extcommunity soo

To set extended community site-of-origin in Route Map, use this feature.

Z-Series

Syntax

set extcommunity soo {as4 ASN4:NN | ASN:NNNN | IPADDR:NN [non-trans]}

To delete the site-of-origin community, use the no set extcommunity command.

Parameters

- **as4 ASN4:NN**: Enter the keyword as4 then the 4-octet AS specific extended community number in the format ASN4:NN (4-byte AS number:2-byte community value).
- **ASN:NNNN**: Enter the 2-octet AS specific extended community number in the format ASN:NNNN (2-byte AS number:4-byte community value).
- **IPADDR:NN**: Enter the IP address specific extended community in the format IPADDR:NN (4-byte IPv4 Unicast Address:2-byte community value).
- **non-trans** (OPTIONAL) Enter the keywords non-trans to indicate a non-transitive BGP extended community.

Defaults

none

Command Modes

ROUTE MAP (config-route-map)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 8.3.19.0**: Introduced on the S4820T.
- **Version 8.3.11.1**: Introduced on the Z9000.
- **Version 8.3.7.0**: Introduced on the S4810.
- **Version 7.8.1.0**: Introduced on the S-Series.
- **Version 7.7.1.0**: Introduced on the C-Series.
- **Version 7.6.1.0**: Introduced on the E-Series.

Usage Information

If the set community rt and soo are in the same route-map entry, the behavior defines as:

- If the rt option comes before soo, with or without the additive option, soo overrides the communities rt sets.
- If the rt option comes after soo, without the additive option, rt overrides the communities soo sets.
- If the rt with the additive option comes after soo, rt adds the communities soo sets.
show ip bgp ipv4 extcommunity-list

To display the IPv4 routes matching the extended community list name, use this feature.

Z-Series

Syntax

show ip bgp [ipv4 [multicast | unicast] | ipv6 unicast] extcommunity-list name

Parameters

- multicast: Enter the keyword multicast to display the multicast route information.
- unicast: Enter the keyword unicast to display the unicast route information.
- ipv6 unicast: Enter the keywords ipv6 unicast to display the IPv6 unicast route information.
- name: (OPTIONAL) Enter the name of the extcommunity-list.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- Version 9.0.2.0: Introduced on the S6000.
- Version 7.8.1.0: Introduced on the S-Series.
- Version 7.7.1.0: Introduced on the C-Series.
- Version 7.6.1.0: Introduced on the E-Series.

Usage Information

If there is a type or sub-type that is not well-known, it is displayed as:TTSS:XX:YYYY.

Where TT is type, SS is sub-type displayed in hexadecimal format, XX:YYYY is the value divided into 2-byte and 4-byte values in decimal format. This format is consistent with other vendors.

For example, if the extended community has type 0x04, sub-type 0x05, value 0x20 00 00 00 10 00, it displays as:0x0405:8192:4096.

Non-transitive extended communities are marked with an asterisk.

Example

Dell#show ip bgp ipv4 multicast extcommunity-list
BGP routing table entry for 192.168.1.0/24, version 2
Paths: (1 available, table Default-IP-Routing-Table.)
Not advertised to any peer
Received from :
  100.100.1.2 (2.4.0.1) Best
    AS_PATH : 200
    Next-Hop : 100.100.1.2, Cost : 0
    Origin IGP, Metric 4294967295 (Default), LocalPref 100, Weight 0,
    external
    Communities :
      300:400 500:600

Extended Communities :
  SoO:38:50529045 SoO:0.0.0.2:33 SoO:506.62106:34 0x0303:254:11223*
show ip bgp paths extcommunity

To display all BGP paths having extended community attributes, use this feature.

Z-Series

Syntax

show ip bgp paths extcommunity

Command Modes

● EXEC
● EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:

Version 9.0.2.0  Introduced on the S6000.
Version 8.3.19.0  Introduced on the S4820T.
Version 8.3.7.0  Introduced on the S4810.
Version 7.8.1.0  Introduced on the S-Series.
Version 7.7.1.0  Introduced on the C-Series.
Version 7.6.1.0  Introduced on the E-Series.

Usage Information

The following describes the show ip bgp paths extcommunity command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Displays the internal address where the path attribute is stored.</td>
</tr>
<tr>
<td>Hash</td>
<td>Displays the hash bucket where the path attribute is stored.</td>
</tr>
<tr>
<td>Refcount</td>
<td>Displays the number of BGP routes using these extended communities.</td>
</tr>
<tr>
<td>Community</td>
<td>Displays the extended community attributes in this BGP path.</td>
</tr>
</tbody>
</table>

Example

Dell#show ip bgp paths extcommunity
Total 1 Extended Communities
Address    Hash   Refcount Extended Community
0x41d57024  12272  1       RT:7:200 SoO:5:300 SoO:0.0.0.3:1285

show ip extcommunity-list

Display the IP extended community list.

Z-Series

Syntax

show ip extcommunity-list [word]
Parameters

| word | Enter the name of the extended community list you want to view. |

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.7.0** Introduced on the S4810.
- **Version 7.8.1.0** Introduced on the S-Series.
- **Version 7.7.1.0** Introduced on the C-Series.
- **Version 7.6.1.0** Introduced on the E-Series.

Example

```
Dell#show ip extcommunity-list test
ip extcommunity-list test
  deny RT:1234:12
  permit regexp 123
  deny regexp 234
  deny regexp 123
Dell#
```

**show running-config extcommunity-list**

To display the current configuration of the extended community lists, use this feature.

**Z-Series**

**Syntax**

```
show running-config extcommunity-list [word]
```

**Parameters**

| word | Enter the name of the extended community list you want to view. |

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 7.8.1.0** Introduced on the S-Series.
- **Version 7.7.1.0** Introduced on the C-Series.
- **Version 7.6.1.0** Introduced on the E-Series.

**Example**

```
Dell#show running-config extcommunity-list test
ip extcommunity-list test
  permit rt 65033:200
  deny soo 101.11.11.2:23
  permit rt as4 110212:340
  deny regex ^\{65001_\}$
Dell#
```
IPv6 BGP Commands

IPv6 border gateway protocol (IPv6 BGP) is supported on the Z-Series platform.

BGP is an external gateway protocol that transmits interdomain routing information within and between Autonomous Systems (AS). Basically, two routers (called neighbors or peers) exchange information including full routing tables and periodically send messages to update those routing tables.

clear ip bgp ipv6 unicast soft

Clear and reapply policies for IPv6 unicast routes without resetting the TCP connection; that is, perform BGP soft reconfiguration.

Z9000

Syntax

clear ip bgp {* | as-number | ipv4-neighbor-addr | ipv6-neighbor-addr | peer-group name} ipv6 unicast soft [in | out]

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>*</td>
<td>Clear and reapply policies for all BGP sessions.</td>
</tr>
<tr>
<td>as-number</td>
<td>Clear and reapply policies for all neighbors belonging to the AS. The range is from 0 to 65535 (2 Byte), from 1 to 4294967295 (4 Byte), or from 0.1 to 0.65535.65535 (Dotted format).</td>
</tr>
<tr>
<td>ipv4-neighbor-addr</td>
<td>Clear and reapply policies for a neighbor.</td>
</tr>
<tr>
<td>ipv6-neighbor-addr</td>
<td>Clear and reapply policies for a neighbor.</td>
</tr>
<tr>
<td>peer-group name</td>
<td>Clear and reapply policies for all BGP routers in the specified peer group.</td>
</tr>
<tr>
<td>ipv6 unicast</td>
<td>Clear and reapply policies for all IPv6 unicast routes.</td>
</tr>
<tr>
<td>in</td>
<td>Reapply only inbound policies.</td>
</tr>
<tr>
<td>out</td>
<td>Reapply only outbound policies.</td>
</tr>
</tbody>
</table>

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>8.4.1.0</td>
<td>Added support for IPv4 multicast and IPv6 unicast routes.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.2.1.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
</tbody>
</table>
debug ip bgp ipv6 unicast soft-reconfiguration

Enable soft-reconfiguration debugging for IPv6 unicast routes.

Z9000

Syntax
debug ip bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration

To disable debugging, use the no debug ip bgp [ipv4-address | ipv6-address | peer-group-name] ipv6 unicast soft-reconfiguration command.

Parameters
- ipv4-address | ipv6-address: Enter the IP address of the neighbor on which you want to enable soft-reconfiguration debugging.
- peer-group-name: Enter the name of the peer group on which you want to enable soft-reconfiguration debugging.
- ipv6 unicast: Debug soft reconfiguration for IPv6 unicast routes.

Defaults
Disabled.

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>

</tr>
<tr>
<td>7.2.1.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
</tbody>
</table>

Usage Information
This command turns on BGP soft-reconfiguration inbound debugging for IPv6 unicast routes. If no neighbor is specified, debug is turned on for all neighbors.

ipv6 prefix-list

Configure an IPv6 prefix list.

Z-Series

Syntax
ipv6 prefix-list prefix-list name

Parameters
- prefix-list name: Enter the name of the prefix list.

Defaults
none

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant FTOS Command Line Reference Guide.
The following is a list of the FTOS version history for this command.
**neighbor soft-reconfiguration inbound**

Enable a BGP soft-reconfiguration and start storing updates for inbound IPv6 unicast routes.

**Z9000**

**Syntax**

```
neighbor {ipv4-address | ipv6-address | peer-group-name} soft-reconfiguration inbound
```

**Parameters**

- `ipv4-address`  | Enter the IP address of the neighbor for which you want to start storing inbound routing updates.
- `ipv6-address`  | Enter the IP address of the neighbor for which you want to start storing inbound routing updates.
- `peer-group-name`  | Enter the name of the peer group for which you want to start storing inbound routing updates.

**Defaults**

Disabled.

**Command Modes**

ROUTER BGPv6 ADDRESS FAMILY (conf-router_bgpv6_af)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.4.1.0</td>
<td>Added support for IPv4 multicast and IPv4 unicast address families.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

**Usage Information**

This command enables soft-reconfiguration for the specified BGP neighbor. BGP stores all updates for inbound IPv6 unicast routes the neighbor receives but does not reset the peer-session.

⚠️ **CAUTION:** Inbound update storage is a memory-intensive operation. The entire BGP update database from the neighbor is stored in memory regardless of the inbound policy results applied on the neighbor.

**show ipv6 prefix-list**

Displays the specified IPv6 prefix list.

**Z9000**

**Syntax**

```
show ipv6 prefix-list detail {prefix-list name} | summary
```

**Parameters**

- `detail`  | Display a detailed description of the selected IPv6 prefix list.
**prefix-list name**

Enter the name of the prefix list.

**NOTE:** There is a 140-character limit for prefix list names.

**summary**

Display a summary of RPF routes.

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant FTOS Command Line Reference Guide.

The following is a list of the FTOS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.10.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Related Commands**

ipv6 prefix-list — configures an IPv6 prefix-list.

## IPv6 MBGP Commands

Multiprotocol BGP (MBGP) is an enhanced BGP that enables the multicast routing policy throughout the internet and connecting multicast topologies between BGP and autonomous systems (AS). FTOS MBGP is implemented as per IETF RFC 1858.

### show ipv6 mbgproutes

Display the selected IPv6 MBGP route or a summary of all MBGP routes in the table.

**Z-Series**

**Syntax**

```
show ipv6 mbgproutes ipv6-address prefix-length | summary
```

**Parameters**

- **ipv6-address**
- **prefix-length**
  
  (OPTIONAL) Enter the IPv6 address in the x:x::x format then the prefix length in the /x format. The range is from /0 to /128.

  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **summary**
  
  Display a summary of RPF routes.

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant FTOS Command Line Reference Guide.

</tbody>
</table>
Content Addressable Memory (CAM)

Content addressable memory (CAM) commands are supported on the Dell Networking Z9000 platform.

**NOTE:** Not all CAM commands are supported on all platforms. Be sure to note the platform when looking for a command.

**NOTE:** If you are using these features for the first time, contact Dell Networking Technical Assistance Center (TAC) for guidance.

Topics:
- CAM Profile Commands

### CAM Profile Commands

The CAM profiling feature allows you to partition the CAM to best suit your application. For example:

- Configure more Layer 2 forwarding information base (FIB) entries when the system is deployed as a switch.
- Configure more Layer 3 FIB entries when the system is deployed as a router.
- Configure more access control lists (ACLs) (when IPv6 is not employed).
- Hash multi-protocol label switching (MPLS) packets based on source and destination IP addresses for link aggregation groups (LAGs).
- Hash based on bidirectional flow for LAGs.
- Optimize the virtual local area network (VLAN) ACL Group feature, which permits group VLANs for IP egress ACLs.

### Important Points to Remember

- Dell Networking OS supports CAM allocations on the C-Series and S-Series.
- All line cards within a single system must have the same CAM profile (including CAM sub-region configurations); this profile must match the system CAM profile (the profile on the primary route processor module [RPM]).
- Dell Networking OS automatically reconfigures the CAM profile on line cards and the secondary RPM to match the system CAM profile by saving the correct profile on the card and then rebooting it.
- The CAM configuration is applied to the entire system when you use the CONFIGURATION mode commands. Save the running-configuration to affect the change.
- When budgeting your CAM allocations for ACLs and quality of service (QoS) configurations, remember that ACL and QoS rules might consume more than one CAM entry depending on complexity. For example, transmission control protocol (TCP) and user datagram protocol (UDP) rules with port range options might require more than one CAM entry.
- After you install a secondary RPM, copy the running-configuration to the startup-configuration so that the new RPM has the correct CAM profile.
- You MUST save your changes and reboot the system for CAM profiling or allocations to take effect.

### cam-acl (Configuration)

Select the default CAM allocation settings or reconfigure a new CAM allocation for Layer 2, IPv4, and IPv6 ACLs, Layer 2 and Layer 3 (IPv4) QoS, Layer 2 Protocol Tunneling (L2PT), IP and MAC source address validation for DHCP, Ethernet Connectivity Fault Management (CFM) ACLs, OpenFlow, and Policy-based Routing (PBR).

**Syntax**

```
cam-acl {default | l2acl number ipv4acl number ipv6acl number ipv4qos number l2qos number l2pt number ipmacacl number [vman-qos | vman-dual-]
```
Parameters

**default**

Use the default CAM profile settings and set the CAM as follows:

- L2Acl : 6
- IPV4Acl : 4
- IPV6Acl : 0
- IPV4Qos : 2
- L2Qos : 1
- L2PT : 0
- IpMacAcl : 0
- VmanQos : 0
- VmanDualQos : 0
- EcfmAcl : 0
- nlbclusteracl: 0
- FcoeAcl : 0
- iscsiOptAcl : 0
- ipv4pbr : 0
- Openflow : 0
- fedgovacl : 0

**l2acl number**

Enter the keyword l2acl and then the number of l2acl blocks. The range is from 1 to 8.

**ipv4acl number**

Enter the keyword ipv4acl and then the number of FP blocks for IPv4. The range is from 0 to 8.

**ipv6acl number**

Enter the keyword ipv6acl and then the number of FP blocks for IPv6. The range is from 0 to 4.

**ipv4qos number**

Enter the keyword ipv4qos and then the number of FP blocks for IPv4. The range is from 0 to 8.

**l2qos number**

Enter the keyword l2qos and then the number of FP blocks for l2 qos. The range is from 0 to 8.

**l2pt number**

Enter the keyword l2pt and then the number of FP blocks for l2 protocol tunnelling. The range is from 0 to 1.

**ipmacacl number**

Enter the keyword ipmacacl and then the number of FP blocks for IP and MAC ACL. The range is from 0 to 6.

**ecfmacl number**

Enter the keyword ecfmacl and then the number of FP blocks for ECFM ACL. The range is from 0 to 5.

**nlbclusteracl number**

Enter the keyword nlbclusteracl and then the number of FP blocks for nlbcluster ACL. The range is from 0 to 2. By default the value is 0 and it supports 8 NLB arp entries reserved for internal functionality.

**Vman-qos|vman-dual-qos number**

Enter the keyword vman-qos and then the number of FP blocks for VMAN QoS. The range is from 0 to 6.

**vman-dual-qos number**

Enter the keyword vman-dual-qos and then the number of FP blocks for VMAN dual QoS. The range is from 0 to 4.

**ipv4pbr number**

Enter the keyword ipv4pbr and then the number of FP blocks for ipv4pbr ACL. The range is from 0 to 8.

**Openflow number**

Enter the keyword openflow and then the number of FP blocks for open flow (multiples of 4). The range is from 0 to 8.

**fcoeacl number**

Enter the keyword fcoeacl and then the number of FP blocks for FCOE ACL. The range is from 0 to 2.

**iscsioptacl number**

Enter the keyword iscsioptacl and then the number of FP blocks for iSCSI optimization ACL. The range is from 0 to 2.
Allocate space to each CAM region.

Enter 4 or 8 for the number of OpenFlow FP blocks.

- 4: Creates 242 entries for use by the OpenFlow controller (256 total entries minus the 14 entries reserved for internal functionality)
- 8: Creates 498 entries for use by the OpenFlow controller (512 total entries minus the 14 entries reserved for internal functionality)

The fcoe range is 0–6 groups. Each group has 128 entries; the value given must be an even number. This information is stored in the NVRAM and is effective after rebooting the switch.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Added the nlbcluster ACL keyword. Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Added support for PBR and VRF.</td>
</tr>
<tr>
<td>9.2(0.2)</td>
<td>Added support for fcoe.</td>
</tr>
<tr>
<td>9.1(0.0)</td>
<td>Added support for OpenFlow.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.10.2</td>
<td>Clarified block information for the S4810.</td>
</tr>
<tr>
<td>8.3.10.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Added the keywords ecfmacl, vman-qos, and vman-dual-qos.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Save the new CAM settings to the startup-config (write-mem or copy run start) then reload the system for the new settings to take effect.

The total amount of space allowed is 16 FP Blocks. System flow requires three blocks; these blocks cannot be reallocated. Only 13 number of blocks can be configured by the user.

The ipv6acl allocation must be a factor of 2.

If allocation values are not entered for the CAM regions, the value is 0.

If you enable BMP, to perform a reload on the chassis to upgrade any configuration changes that have changed the NVRAM content, use the command reload conditional nvram-cfg-change.
**cam-acl-egress**

Allocate CAM for egress ACLs.

**Z9000**

**Syntax**

```
cam-acl-egress default | l2acl number ipv4acl number ipv6acl number
```

**Parameters**

- `default`  
  Reset egress CAM ACL entries to default settings.
- `l2acl number`  
  Allocate space to each CAM region. The total space allocated must equal 4. The ipv6acl range must be a factor of 2.

**Command Modes**  
`CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**cam-optimization**

Optimize CAM utilization for QoS Entries by minimizing require policy-map CAM space.

**Z9000**

**Syntax**

```
cam-optimization [qos]
```

**Parameters**

- `qos`  
  Optimize CAM usage for QoS.

**Defaults**  
Disabled.

**Command Modes**  
`CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:

<tr>
<td>8.2.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>
When you enable this command, if a Policy Map containing classification rules (ACL and/or dscp/ ip-precedence rules) is applied to more than one physical interface on the same port pipe, only a single copy of the policy is written (only one FP entry is used).

**NOTE:** An ACL itself may still require more that a single FP entry, regardless of the number of interfaces. For more information, refer to the “IP Access Control Lists”, “Prefix Lists”, and “Route-map” sections in the Dell Networking OS Configuration Guide.

### show cam-acl

Display the details of the CAM profiles on the chassis and all stack units.

**Z9000**

**Syntax**

```
show cam-acl
```

**Defaults**

`none`

**Command Modes**

`EXEC Privilege`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>

</tr>
<tr>
<td>nlbclusteracl</td>
<td>0</td>
</tr>
</tbody>
</table>

**test cam-usage**

Verify that enough CAM space is available for the IPv6 ACLs you have created.

**Z9000**

**Syntax**

```
test cam-usage service-policy input input policy name stack-unit {number | all}
```

**Parameters**

- `policy-map name` Enter the name of the policy-map to verify. Maximum is 32 characters.
- `number` Enter all to get information for all the linecards/stack-units or enter the linecard/stack-unit to get information for a specific card. The range is 0-7 for all other S-Series.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
This command applies to both IPv4 and IPv6 CAM Profiles, but is best used when verifying QoS optimization for IPv6.

QoS Optimization for IPv6 ACLs does not impact the CAM usage for applying a policy on a single (or the first of several) interfaces. It is most useful when a policy is applied across multiple interfaces; it can reduce the impact to CAM usage across subsequent interfaces.

The following describes the `test cam-usage` command shown in the following example.

<table>
<thead>
<tr>
<th>Term</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stack-Unit</td>
<td>Lists the stack unit or units that are checked. Entering all shows the status for all stacks.</td>
</tr>
<tr>
<td>Portpipe</td>
<td>Lists the portpipe (port-set) or port pipes (port-sets) that are checked. Entering all shows the status for linecards or stack units and port-pipes in the chassis.</td>
</tr>
<tr>
<td>CAM Partition</td>
<td>Shows the CAM profile of the CAM.</td>
</tr>
<tr>
<td>Available CAM</td>
<td>Identifies the amount of CAM space remaining for that profile.</td>
</tr>
<tr>
<td>Estimated CAM per Port</td>
<td>Estimates the amount of CAM space the listed policy will require.</td>
</tr>
<tr>
<td>Status</td>
<td>Indicates whether or not the policy will be allowed in the CAM.</td>
</tr>
</tbody>
</table>

```bash
Dell#test cam-usage service-policy input In stack-unit all
Stack-Unit | Portpipe | CAM Partition | Available CAM | Estimated CAM per Port | Status
-------------|----------|---------------|---------------|-------------------------|----------
0 | 0 | IPv4Flow | 102 | 0 | Allowed
0 | 0 | IPv4Flow | 102 | 0 | Allowed
Dell#
```

The following describes the `test cam-usage` command shown in the Example below.

<table>
<thead>
<tr>
<th>Term</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stack-Unit</td>
<td>Lists the stack unit or units that are checked. Entering all shows the status for all stacks.</td>

| 0 | 0 | IPv4Flow | 102 | 0 | Allowed

Dell#
Control Plane Policing (CoPP)

The CoPP commands are supported on the Dell Networking Z9000 platform.

**Topics:**
- control-plane-cpuqos
- ip unknown-unicast
- ipv6 unknown-unicast
- service-policy rate-limit-cpu-queues
- service-policy rate-limit-protocols
- show cpu-queue rate cp
- show ip protocol-queue-mapping
- show ipv6 protocol-queue-mapping
- show mac protocol-queue-mapping

**control-plane-cpuqos**

To manage control-plane traffic, enter control-plane mode and configure the switch.

**Z9000**

**Syntax**
```
control-plane-cpuqos
```

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**ip unknown-unicast**

Enable IPv4 catch-all route.

**Z9000**

**Syntax**
```
ip unknown-unicast
```
To remove the IPv4 catch-all route (0.0.0.0/0) from the LPM route forwarding table in hardware which gets added as a default configuration after the initialization of FIB Agent module, use the `no ip unknown-unicast` command.

**Defaults**
None

**Command Modes**
CONFIGURATION

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S-Series and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**
Use this command to add the IPv4 catch-all route (0.0.0.0/0) in the LPM route forwarding table if it was deleted using the `no ip unknown-unicast` command previously. This will be the default configuration after reload.

### ipv6 unknown-unicast

Disable soft forwarding of unknown IPv6 destination packets.

**Z9000**

**Syntax**

```
[no] ipv6 unknown-unicast
```

**Defaults**
Soft forwarding is enabled.

**Command Modes**
CONFIGURATION

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**
All the default catch-all entries in the longest prefix match (LPM) table collect and transmit all unresolved IPv6 packets to the CPU, even if they are destined for unknown destinations.

### service-policy rate-limit-cpu-queues

Apply a policy map for the system to rate limit control traffic on a per-queue basis.

**Z9000**

**Syntax**

```
service-policy rate-limit-cpu-queues policy-name
```

**Parameters**

- `policy-name` Enter the service-policy name, using a string up to 32 characters.

**Defaults**
Not configured.

**Command Modes**
CONTROL-PLANE-CPUQOS

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
Create a policy-map by associating a queue number with the qos-policy. Create QoS policies prior to enabling this command. For CoPP, use the keyword cpu-qos when creating qos-policy-input.

**Related Commands**

- `qos-policy-input` — creates a QoS input policy map.
- `policy-map-input` — creates an input policy map.

## service-policy rate-limit-protocols

Apply a policy for the system to rate limit control protocols on a per-protocol basis.

### Z9000

```
service-policy rate-limit-protocols policy-name
```

**Parameters**

- `policy-name` Enter the service-policy name, using a string up to 32 characters.

**Defaults**

Not configured.

**Command Modes**

CONTROL-PLANE-CPUQOS

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</tbody>
</table>

**Usage Information**

This command applies the service-policy based on the type of protocol defined in the ACL rules. Create ACL and QoS policies prior to enabling this command. For CoPP, use the keyword cpu-qos when creating qos-policy-input.

**Related Commands**

- `ip access-list extended` — creates an extended IP ACL.
- `mac access-list extended` — creates an extended MAC ACL.
- `qos-policy-input` — creates a QoS input policy map.
- `class-map` — creates a QoS class map.
- `policy-map-input` — creates an input policy map.
show cpu-queue rate cp

Display the rates for each CPU queue.

Z9000

Syntax:
show cpu-queue rate cp

Defaults:
Not configured.

Command Modes:
EXEC Privilege

Command History:
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

</tr>
</tbody>
</table>

Usage Information:
This command applies the service-policy based on the type of protocol defined in the ACL rules.
Create ACL and QoS policies prior to enabling this command.

Example:
```
Dell#show cpu-queue rate cp

Service-Queue       Rate (PPS)  Burst ()
-------             -----------  -----
Q0                 1300       512
Q1                 300        50
Q2                 300        50
Q3                 400        50
Q4                 2000       50
Q5                 300        50
Q6                 400        50
Q7                 400        50
Q8                 400        50
Q9                 600        50
Q10                300        50
Q11                300        50
```

show ip protocol-queue-mapping

Display the queue mapping for each configured protocol.

Z9000

Syntax:
show ip protocol-queue-mapping

Defaults:
Not configured.

Command Modes:
EXEC Privilege

Dell#
The debugging and diagnostics commands are supported on the Dell Networking OS platform.

This chapter contains the following sections:
- Diagnostics and Monitoring Commands
- Offline Diagnostic Commands
- Buffer Tuning Commands
- Hardware Commands

Topics:
- Diagnostics and Monitoring Commands
- Offline Diagnostic Commands
- Buffer Tuning Commands
- Hardware Commands

Diagnostics and Monitoring Commands

The following section describes the diagnostics and monitoring commands.

For similar commands, refer to the Control and Monitoring chapter.

logging coredump stack-unit

Enable coredump on a stack.

Syntax
logging coredump stack-unit {stack-unit-number | all}

Parameters
- **stack-unit stack-unit-number**
  - Enter the stack-unit id.
  - For Z9000 - 0
- **all**
  - Enable coredump on all stack-unit.

Defaults
Enabled by default on customer builds.

Command Modes
CONFIGURATION

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

The Kernel core dump can be large and may take up to 5 to 30 minutes to upload. Dell Networking OS does not overwrite application core dumps so you should delete them as necessary to conserve space on the flash; if the flash is out of memory, the coredump is aborted. On the S-Series, if the FTP server is not reachable, the application coredump is aborted. Dell Networking OS completes the coredump process and wait until the upload is complete before rebooting the system.
Offline Diagnostic Commands

The offline diagnostics test suite is useful for isolating faults and debugging hardware. While tests are running, Dell Networking OS results are saved as a text file (TestReport-SU-X.txt) in the flash directory. This show file command is available only on master and standby.

Important Points to Remember

- Offline diagnostics can only be run when the unit is offline.
- You can only run offline diagnostics on a unit to which you are connected via the console. In other words, you cannot run diagnostics on a unit to which you are connected to via a stacking link.
- Diagnostic results are printed to the screen. Dell Networking OS does not write them to memory.
- Diagnostics only test connectivity, not the entire data path.

**diag stack-unit**

Run offline diagnostics on a stack unit.

**Syntax**

```plaintext
diag stack-unit number [alllevels | level0 | level1 | level2] verbose testname
```

**Parameters**

- `number` Enter the stack-unit id.
  - Z9000 - 0 to 7.
- `alllevels` Enter the keyword `alllevels` to run the complete set of offline diagnostic tests.
- `level0` Enter the keyword `level0` to run Level 0 diagnostics. Level 0 diagnostics check for the presence of various components and perform essential path verifications. In addition, they verify the identification registers of the components on the board.
- `level1` Enter the keyword `level1` to run Level 1 diagnostics. Level 1 diagnostics is a smaller set of diagnostic tests with support for automatic partitioning. They perform status/self test for all the components on the board and test their registers for appropriate values. In addition, they perform extensive tests on memory devices (for example, SDRAM, flash, NVRAM, EEPROM, and CPLD) wherever possible. There are no tests on 10G links. At this level, stack ports are shut down automatically.
- `level2` Enter the keyword `level2` to run Level 2 diagnostics. Level 2 diagnostics are a full set of diagnostic tests with no support for automatic partitioning. Level 2 diagnostics are used primarily for on-board loopback tests and more extensive component diagnostics. Various components on the board are put into Loopback mode and test packets are transmitted through those components. These diagnostics also perform snake tests using VLAN configurations. To test 10G links, physically remove the unit from the stack.
- `verbose` Enter the keyword `verbose` to run the diagnostic in Verbose mode. Verbose mode gives more information in the output than Standard mode.
- `testname` Enter the keyword `level2` to run a specific test case. Enclose the test case name in double quotes (" "). For example: `diag stack-unit 1 level1 testname "first"`.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
### offline stack-unit

Place a stack unit in the offline state.

**Syntax**

```
offline stack-unit number
```

**Parameters**

- `number`  
Enter the stack-unit id.

  - Z9000 - 0 to 7.

**Defaults**

- none

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Introduced the <code>verbose</code> option.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

- You cannot enter this command on a Master or Standby unit.
- The system reboots when the off-line diagnostics complete. This reboot is an automatic process. A warning message appears when the offline stack-unit command is implemented.
- Warning: Diagnostic execution will cause stack-unit to reboot after completion of diags.

```
Proceed with Offline-Diags [confirm yes/no]:y
```

### online stack-unit

Place a stack unit in the online state.

**Syntax**

```
online stack-unit number
```

**Parameters**

- `number`  
Enter the stack-unit number. The Z9000 range is from 0 to 7.
Buffer Tuning Commands

The following sections detail the buffer tuning commands.

NOTE: Altering the buffer allocations is a sensitive operation. Do not use any buffer tuning commands without first contacting the Dell Networking Technical Assistance Center (TAC).

buffer-profile (Configuration)

Create a buffer profile that can be applied to an interface.

Z9000

Syntax

buffer-profile {fp | csf} profile-name {global {1Q | 4Q}}

Parameters

- **fp**: Enter the keyword fp to create a buffer profile for the Field Processor.
- **csf**: Enter the keyword csf to create a buffer profile for the Switch Fabric Processor.
- **profile-name**: Create a name for the buffer profile.
- **global**: Apply one of two pre-defined buffer profiles to all of the port-pipes in the system.
- **1Q**: Enter the keyword 1Q to choose a pre-defined buffer profile for single queue (for example, non-QoS) applications.
- **4Q**: Enter the keyword 4Q to choose a pre-defined buffer profile for four queue (for example, QoS) applications.

Defaults

Dynamic

Command Modes

CONFIGURATION
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.2)</td>
<td>Changed the default value from global 4q to Dynamic.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added the global keyword.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

The buffer-profile global command fails if you have already applied a custom buffer-profile on an interface. Similarly, when you configure buffer-profile global, you cannot apply buffer-profile on any interface.

If the default buffer-profile is active, Dell Networking OS displays an error message instructing you to remove the default configuration using the no buffer-profile global command. Reload the system for the global buffer-profile to take effect.

## Hardware Commands

These commands display information from a hardware sub-component or ASIC.

### clear hardware stack-unit

Clear statistics from selected hardware components.

**Syntax**

```plaintext
clear hardware stack-unit id {counters | unit 0-0 counters | cpu data-plane statistics | cpu i2c statistics | cpu party-bus statistics | cpu sata-interface statistics | stack-port 0-127}
```

**Parameters**

- `stack-unit id` Enter the keywords stack-unit then a number to select a particular stack member and then enter one of the following command options to clear a specific collection of data. The range is from 0 to 7.
- `counters` Enter the keyword counters to clear the counters on the selected stack member.
- `unit number counters` Enter the keyword unit along with a port-pipe number, then the keyword counters to clear the counters on the selected port-pipe. The range is from 0 to 1 for the Z9000.
- `cpu data-plane statistics` Enter the keywords cpu data-plane statistics to clear the data plane statistics.
- `cpu party-bus statistics` Enter the keywords cpu party-bus statistics to clear the management statistics.
- `stack-port` Enter the keywords stack-port then the port number of the stacking port to clear the statistics of the particular stacking port. The range is from 0 to 52.

**Defaults**

none

**Command Modes**

EXEC Privilege
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**clear hardware system-flow**

Clear system-flow statistics from selected hardware components.

**Syntax**

```
clear hardware system-flow layer2 stack-unit number port-set 0-0 counters
```

**Parameters**

- `stack-unit number` Enter the keywords `stack-unit` then a number to select a particular stack member and then enter one of the following command options to clear a specific collection of data. The range is from 0 to 7.
- `port-set 0-0` Enter the keywords `port-set` along with a port-pipe number, then the keyword `counters` to clear the system-flow counters on the selected port-pipe. The range is from 0 to 1.

**Defaults**

none

**Command Modes**

EXEC Privilege

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Related Commands**

- `show hardware stack-unit` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.

**clear hardware vlan-counters**

Clear VLAN statistics.

**Syntax**

```
clear hardware vlan-counters vlan-id
```

394 Debugging and Diagnostics
Parameters  

- **vlan-id**: Enter the interface VLAN number. The range is from 1 to 4094.

Defaults  

- none

Command Modes  

- EXEC Privilege

Command History  

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>

<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**  

This command enables a hardware watchdog mechanism that automatically reboots an Dell Networking OS switch/ router with a single unresponsive unit. This behavior is a last-resort mechanism intended to prevent a manual power cycle.

**show hardware layer2**

Display Layer 2 ACL or eg data for the selected stack member and stack member port-pipe.

**Syntax**  

```
show hardware layer2 {eg-acl | in-acl} stack-unit id port-set 0-0
```

**Parameters**  

- **eg-acl | in-acl**: Enter either the keyword eg-acl or the keyword in-acl to select between ingress or egress ACL data.
- **stack-unit id**: Enter the keyword stack-unit to select a stack ID. The unit ID range is 0 for the Z9000.
- **port-set 0-0**: Enter the keywords port-set with a port-pipe number. The range is from 0 or 3.

**Defaults**  

- none

**Command Modes**  

- EXEC Privilege
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>

</tbody>
</table>

The unit numbers given are internal port numbers. For a cross reference of the internal and user port numbers, refer to the Z9000 Debugging and Diagnostics chapter in the Dell Networking OS Configuration Guide for the Z9000 System.

**show hardware layer3**

Display Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.

**Syntax**

```
show hardware layer3 {acl | qos} stack-unit number port-set 0-0
```

**Parameters**

- `acl | qos` : Enter either the keyword acl or the keyword qos to select between ACL or QoS data.
- `stack-unit number` : Enter the keywords stack-unit then a number to select a stack ID. The range is from 0 to 7.
- `port-set 0-0` : Enter the keyword port-set with a port-pipe number. The range is from 0 to 1.

**Defaults**

**show hardware stack-unit**

Display the data plane or management plane input and output statistics of the designated component of the designated stack member.

**Syntax**

```
stack-unit <id> {cpu data-plane statistics | cpu management statistics | [ drops [unit number [port 1-104] | user-port 0-127] | fpga register |...}
```

396 Debugging and Diagnostics
Parameters

stack-unit stack-unit {command-option}
Enter the keywords stack-unit to select a particular stack member and then enter one of the following command options to display a collection of data based on the option entered. The range is from 0 to 7.

buffer
Enter the keyword buffer. To display the total buffer statistics for the stack unit, enter the keyword total-buffer. To display the buffer statistics for a specific unit, enter the keyword unit and a unit number from 0 to 5.

To display the buffer statistics for a specific port, enter the keyword port and a port number from 1 to 128.

To display total buffer information for the port, enter the keywords buffer-info. To display a queue range, enter 0 to 14 for a specific queue or all.

cpu data-plane statistics
(Optional) Enter the keywords cpu data-plane statistics then the keywords stack port and its number, from 0 to 52 to display the data plane statistics, which shows the High Gig (Higig) port raw input/output counter statistics to which the stacking module is connected.

cpu i2c statistics
Z9000 only: Enter the keywords cpu i2c statistics to display active i2c address statistics.

cpu management statistics
Enter the keywords cpu management statistics to display the counters of the management port.

cpu sata-interface statistics
Enter the keywords cpu sata-interface statistics to display the sata interface error counter statistics.

drops [unit unit-number [port port-number | no]]
Enter the keyword drops to display internal drops on the selected stack member.
Enter the drops keyword to display internal drops on the selected stack member.
Option unit 0 followed by port 1-104 (in S6000) is based on internal/hardware port number and “option user-port 0-127 is to see the drop using user port numbering convention.

fpga register
Enter the keyword to display the register value of fpga register details in S4810, Z9000 and S6000.

stack-port port-number
Enter the keywords stack-port and a stacking port number to select a stacking port for which to display statistics. The range is 0.

unit unit-number {counters | details | port-stats [detail] | register}
Enter the keyword unit then 0 to 5 and then enter one of the following keywords to troubleshoot errors on the selected port-pipe and to give status on why a port is not coming up to register level: counters, details, port-stats [detail], or register.

TI monitor
Enter the unit keyword to show information regarding the TI register.

Defaults
none

</tbody>
</table>
### Version Description

- **8.3.19.0**: Introduced on the S4820T.
- **8.3.11.5**: Added i2c statistics and sata-interfaces statistics.
- **8.3.11.4**: Added user port information.
- **8.3.11.1**: Introduced on the Z9000.
- **8.3.7.0**: Introduced on the S4810.
- **7.7.1.0**: Introduced on the S-Series.

### Example (Data-Plane)

```
Dell#show hardware stack-unit 1 cpu data-plane statistics
Input Statistics:
  1856 packets, 338262 bytes
  141 64-byte pkts, 1248 over 64-byte pkts, 11 over 127-byte pkts
  222 over 255-byte pkts, 236 over 511-byte pkts, 0 over 1023-byte pkts
  919 Multicasts, 430 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  325 packets, 27629 bytes, 0 underruns
  9 64-byte pkts, 310 over 64-byte pkts, 1 over 127-byte pkts
  1 over 255-byte pkts, 2 over 511-byte pkts, 2 over 1023-byte pkts
  0 Multicasts, 3 Broadcasts, 322 Unicasts
  0 throttles, 0 discarded, 0 collisions
Rate info (interval 299 seconds):
  Input 00.00 Mbits/sec
  Output 00.00 Mbits/sec
Dell#
```

### Example (Party-Bus)

```
Dell#show hardware stack-unit 1 cpu party-bus statistics
Input Statistics:
  8189 packets, 8076608 bytes
  0 dropped, 0 errors
Output Statistics:
  366 packets, 133100 bytes
  0 errors
Dell#
```

### Example (Drops)

```
Dell#sh hard stack-unit 1 drops
UNIT No: 0
  Total Ingress Drops: 0
  Total IngMacDrops: 0
  Total MmuDrops: 0
  Total EgMacDrops: 0
  Total Egress Drops: 0

Example (Total-Buffer)

Dell#show hardware stack-unit 1 buffer total-buffer
Dell#show hardware stack-unit 1 buffer total-buffer
----- Buffer Details for Stack-Unit 1 -----  
Total Buffers allocated per Stack-Unit 46080

Example (Buffer-Info)

Dell# show hardware stack-unit 1 buffer unit 0 port 1 buffer-info
----- Buffer Stats for Unit 1 Port 1 -----  
Maximum Shared Limit for the Port: 30720
Default Packet Buffer allocate for the Port: 120
Used Packet Buffer for the Port: 0
Example (Queue/Buffer-Info)

```
Dell#show hardware stack-unit 1 buffer unit 0 port 1 queue 2 buffer-info

----- Buffer Stats for Unit 1 Port 1 Queue 2 -----
Maximum Shared Limit: 30720
Default Packet Buffer allocate for the Queue: 8
Used Packet Buffer: 0
```

Related Commands

- clear hardware system-flow — clears the statistics from selected hardware components.
- show interfaces stack-unit — displays information on all interfaces on a specific S-Series stack member.
- show system (S-Series and Z-Series) — displays the current status of all the stack members or a specific member.

show hardware system-flow

Display Layer 3 ACL or QoS data for the selected stack member and stack member port-pipe.

Syntax

```
show hardware system-flow layer2 stack-unit id port-set number [counters]
```

Parameters

- **acl | qos**
  
  For the selected stack member and stack member port-pipe, display which system flow entry the packet hits and what queue the packet takes as it dumps the raw system flow tables.

- **stack-unit id**
  
  Enter the keywords stack-unit to select a stack member ID. The unit ID range for Z9000 is 0.

- **port-set number**
  
  Enter the keywords port-set with a port-pipe number.
  
  The range is from 0 to 1.
  
  (OPTIONAL) Enter the keyword counters to display hit counters for the selected ACL or QoS option.

Defaults

none

**Debugging and Diagnostics**

403
show hardware vlan-counters

Display the hardware VLAN statistics.

**Syntax**

\[ \text{show hardware vlan-counters \_vlan-id} \]

**Parameters**

\[ \text{vlan-id} \]

Enter the interface VLAN number. The range is from 1 to 4094.

**Defaults**

None

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced this command.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show hardware vlan-counters 1
Counters for vlanid: 1
------------------------
Total number of inpackets: 0
Total number of inbytes: 0
Total number of outpackets: 0
Total number of outbytes: 0
Dell#
```

**Related Commands**

- clear hardware system-flow — clears the statistics from selected hardware components.

404 Debugging and Diagnostics
Dynamic host configuration protocol (DHCP) is an application layer protocol that dynamically assigns IP addresses and other configuration parameters to network end-stations (hosts) based on the configuration policies the network administrators determine.

The Dell Networking operating system supports the basic DHCP commands on the Z9000 platform.

This chapter contains the following sections:
- Commands to Configure the System to be a DHCP Server
- Commands to Configure Secure DHCP

Topics:
- Commands to Configure the System to be a DHCP Server
- Commands to Configure Secure DHCP
- Commands to Configure DNS

Commands to Configure the System to be a DHCP Server

To configure the system to be a DHCP server, use the following commands.

**clear ip dhcp**

Reset the DHCP counters.

**Z9000**

**Syntax**

```
clear ip dhcp [binding {address | conflict | server statistics}]
```

**Parameters**

- `binding`: Enter the keyword `binding` to delete all entries in the binding table.
- `address`: Enter the IP address to clear the binding entry for a single IP address.
- `conflicts`: Enter the keyword `conflicts` to delete all of the log entries created for IP address conflicts.
- `server statistics`: Enter the keywords `server statistics` to clear all the server counter information.

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
</tbody>
</table>
### debug ip dhcp server

Display FTOS debugging messages for DHCP.

**Syntax**
```
debug ip dhcp server [events | packets]
```

**Parameters**
- `events` Enter the keyword `events` to display the DHCP state changes.
- `packet` Enter the keyword `packet` to display packet transmission/reception.

**Defaults**
`none`

**Command Modes**
`EXEC Privilege`

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
</tbody>
</table>

### debug ipv6 dhcp

To enable debug logs for DHCPv6 relay agent transactions.

**Syntax**
```
debug ipv6 dhcp
```

To disable the debug logs for dhcpv6 relay agent transactions, use the `debug ipv6 dhcp` command.

**Defaults**
`none`

**Command Modes**
`EXEC Privilege`

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command-Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
</tbody>
</table>
**default-router**

Assign a default gateway to clients based on the address pool.

**Z9000**

**Syntax**

```
default-router address [address2...address8]
```

**Parameters**

- `address` Enter a list of routers that may be the default gateway for clients on the subnet. You may specify up to eight routers. List them in order of preference.

**Defaults**

none

**Command Modes**

DHCP <POOL>

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

</tbody>
</table>
dns-server

Assign a DNS server to clients based on address pool.

Z9000

Syntax
dns-server address [address2...address8]

Parameters
address

Enter a list of DNS servers that may service clients on the subnet. You may list up to eight servers, in order of preference.

Defaults
none

Command Modes
DHCP <POOL>

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.2.1.0 Introduced on the C-Series and S-Series.

domain-name

Assign a domain to clients based on the address pool.

Z9000

Syntax
domain-name name

Parameters
name

Give a name to the group of addresses in a pool.

Defaults
none

Command Modes
DHCP <POOL>
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
</tbody>
</table>

excluded-address

Prevent the server from leasing an address or range of addresses in the pool.

**Z9000**

**Syntax**

excluded-address [address | low-address high-address]

**Parameters**

- **address**: Enter a single address to be excluded from the pool.
- **low-address**: Enter the lowest address in a range of addresses to be excluded from the pool.
- **high-address**: Enter the highest address in a range of addresses to be excluded from the pool.

**Defaults**

none

**Command Modes**

DHCP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<td>Introduced on the C-Series and S-Series.</td>
</tr>
</tbody>
</table>

host

For manual (rather than automatic) configurations, assign a host to a single-address pool.

Z9000

Syntax

host address

Parameters

address/mask

Enter the host IP address and subnet mask.

Defaults

none

Command Modes

DHCP <POOL>

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
</tbody>
</table>
lease

Specify a lease time for the addresses in a pool.

Z9000

Syntax

```
lease {days [hours] [minutes] | infinite}
```

Parameters

- **days**: Enter the number of days of the lease. The range is from 0 to 31.
- **hours**: Enter the number of hours of the lease. The range is from 0 to 23.
- **minutes**: Enter the number of minutes of the lease. The range is from 0 to 59.
- **infinite**: Specify that the lease never expires.

Defaults

24 hours

Command Modes

DHCP <POOL>

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

</tr>
</tbody>
</table>

netbios-name-server

Specify the NetBIOS Windows Internet Naming Service (WINS) name servers, in order of preference, that are available to Microsoft Dynamic Host Configuration Protocol (DHCP) clients.

Z9000

Syntax

```
netbios-name-server address [address2...address8]
```

Parameters

- **address**: Enter the address of the NetBIOS name server. You may enter up to eight, in order of preference.

Defaults

none

Command Modes

DHCP <POOL>

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
netbios-node-type

Specify the NetBIOS node type for a Microsoft DHCP client. Dell Networking recommends specifying clients as hybrid.

Z9000

Syntax

netbios-node-type type

Parameters

type

Enter the NETBIOS node type:

- Broadcast: Enter the keyword b-node.
- Hybrid: Enter the keyword h-node.
- Mixed: Enter the keyword m-node.
- Peer-to-peer: Enter the keyword p-node.

Defaults

Hybrid

Command Modes

DHCP <POOL>

Commands to Configure Secure DHCP

DHCP, as defined by RFC 2131, provides no authentication or security mechanisms. Secure DHCP is a suite of features that protects networks that use dynamic address allocation from spoofing and attacks.

arp inspection

Enable dynamic arp inspection (DAI) on a VLAN.

Z-Series

Syntax
arp inspection

Defaults
Disabled
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

Related Commands

arp inspection — enables dynamic ARP inspection on a VLAN.
clear ip dhcp snooping

Clear the DHCP binding table.

Syntax

```
clear ip dhcp snooping {binding | source-address-validation discard-counters [interface interface]}
```

Parameters

- **binding**: Clears the binding table.
- **source-address-validation discard-counters**: Clears discard counters from all the interfaces configured with IP Source Guard.
- **interface interface** *(OPTIONAL)*: Specifies an interface to clear the discard counters.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

Defaults

**none**

Command Modes

**EXEC Privilege**

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.6(0.0) | Added the keywords discard-counters, interface, and the variable interface on the S4810, S4820T, S5000, S6000, Z9000, Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.3.1.0 | Introduced on the E-Series.
8.2.1.0 | Introduced on the C-Series and S-Series.

Example

The following example shows how to clear the discard counters globally:

```
Dell> clear ip dhcp snooping source-address-validation discard-counters
```

The following example shows how to clear the discard counters on an interface:

```
Dell> clear ip dhcp snooping source-address-validation discard-counters interface TenGigE 1/10
```

The following example shows how to clear the discard counters on a port channel interface:

```
Dell> clear ip dhcp snooping source-address-validation discard-counters interface portchannel 1
```

Related Commands

- `show ip dhcp snooping` — displays the contents of the DHCP binding table.

Dynamic Host Configuration Protocol (DHCP) 417

</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series and S-Series on Layer 3 interfaces.</td>
</tr>
</tbody>
</table>

**Usage Information**

When enabled, no learning takes place until you enable snooping on a VLAN. After disabling DHCP snooping, the binding table deletes and Option 82, IP Source Guard, and Dynamic ARP Inspection are disabled.

Introduced in Dell Networking OS version 7.8.1.0, DHCP snooping was available for Layer 3 only and dependent on DHCP Relay Agent (ip helper-address). Dell Networking OS version 8.2.1.0 extends DHCP Snooping to Layer 2. You do not have to enable relay agent to snoop on Layer 2 interfaces.

**ipv6 dhcp snooping**

Enable DHCPv6 snooping globally for ipv6.

<table>
<thead>

ip dhcp snooping binding

Create a static entry in the DHCP binding table.

**Z-Series**

**Syntax**

```
[no] ip dhcp snooping binding mac address <mac-address> vlan-id <vlan-id> ip <ip-address> interface type slot/port lease <number>
```

**Parameters**

- `<mac-address>`: Enter the keyword `mac` then the MAC address of the host to which the server is leasing the IP address.
- `<vlan-id>`: Enter the keywords `vlan-id` then the VLAN to which the host belongs. The range is from 2 to 4094.
- `<ip-address>`: Enter the keyword `ip` then the IP address that the server is leasing.
- `<interface type>`: Enter the keyword `interface` then the type of interface to which the host is connected:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- `<slot/port>`: Enter the slot and port number of the interface.
- `<lease time>`: Enter the keyword `lease` then the amount of time the IP address are leased. The range is from 1 to 4294967295.

**Defaults**

none

The following is a list of the Dell Networking OS version history for this command.
IPv6 DHCP Snooping Binding

Create a static DHCP snooping binding entry in the snooping database.

Syntax

```
[no] ipv6 dhcp snooping binding mac address vlan-id vlan-id ipv6-ipv6-address interface interface-type | interface-number lease value
```

Parameters

- **mac address**: Enter the keyword `mac` then the MAC address of the host to which the server is leasing the IPv6 address.
- **vlan-id**: Enter the keywords `vlan-id` then the VLAN to which the host belongs. The range is from 2 to 4094.
- **ipv6 ipv6-address**: Enter the keyword `ipv6` then the IPv6 address that is leased to the client.
- **interface type**: Enter the keyword `interface` then the type of interface to which the host is connected:
  - For a 10/100 Ethernet interface, enter the keyword `fastethernet`.
  - For a Gigabit Ethernet interface, enter the keyword `gigabitethernet`.
  - For a Ten-Gigabit Ethernet interface, enter the keyword `tengigabitethernet`.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE`.
- **interface number**: Enter the number of the interface.
- **lease value**: Enter the keyword `lease` then the amount of time the IPv6 address are leased. The range is from 1 to 4294967295.

Defaults

- none

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
</tbody>
</table>
**Version**  |  **Description**  
---|---  
**9.6(0.0)**  |  Added the `vlan` keyword and the `vlan-id` variable. Introduced support for SAV on port channels interfaces.  
**9.0.2.0**  |  Introduced on the S6000.  
**8.3.19.0**  |  Introduced on the S4820T.  
**8.3.11.1**  |  Introduced on the Z9000.  
**8.3.7.0**  |  Introduced on the S4810.  
**8.3.1.0**  |  Introduced on the E-Series.  
**8.2.1.0**  |  Added the keyword `ipmac`.  
**7.8.1.0**  |  Introduced on the C-Series and S-Series.  

**Usage Information**  
Allocate at least one FP block to `ipmacacl` before you can enable IP+MAC Source Address Validation and SAV with VLAN option.

1. Use the `cam-acl 12acl` command from CONFIGURATION mode.
2. Save the running-config to the startup-config.
3. Reload the system.

### ip dhcp relay information-option

**Enable Option 82.**

**Z9000**

**Syntax**

```
ip dhcp relay information-option [trust-downstream] [vpn]
```

**Parameters**

- `trust-downstream`  
  Configure the system to trust Option 82 when it is received from the previous-hop router.
- `vpn`  
  Enter the keyword `vpn` to add VPN/VRF related sub-option to relay agent information Option 82.
  
  **NOTE:** Adds the VPN/VRF related sub-options into the relay agent information option(82). When DHCP broadcasts are forwarded by the relay agent from clients to DHCP server.

**Default**

Disabled.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.4.(0.0)** Introduced on the S-Series and Z-Series.

**Usage Information**

Use this command on the interfaces where the DHCP clients are connected to forward the packets from clients to DHCP server and vice-versa.

**Example**

```
Dell(conf-if-te-1/12)#ip helper-address vrf jay 10.0.0.2
```

---

**ipv6 helper-address**

Configures the ipv6 DHCP helper addresses without VRF.

**Syntax**

```
ipv6 helper-address ipv6-address
```

To delete the ipv6 helper address, use the `[no]` ipv6 helper-address ipv6-address command.

**Parameters**

- `ipv6-address` Enter the keyword `ipv6-address` through which the server address can be reached.

**Default**

Disabled.

**Command Modes**

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.7(0.0)** Introduced on the S4810, S4820T, S6000, S6000-ON, Z9000, and Z9500.

**Usage Information**

Use this command on the interfaces where the DHCP clients are connected to forward the packets from clients to DHCP server and vice-versa.

**Example**

```
Dell(conf-if-te-0/0)#ipv6 helper-address X:X:X:X::X  IPv6 helper address
```
show ip dhcp snooping

Display the contents of the DHCP binding table or display the interfaces configured with IP Source Guard.

Syntax

```
show ip dhcp snooping [binding | source-address-validation [discard-counters [interface interface]]]
```

Parameters

- **binding**: Display the binding table.
- **source-address-validation**: Display the interfaces configured with IP Source Guard.
- **discard-counters**: (OPTIONAL) Display the number of dropped packets.
- **interface interface**: (OPTIONAL) Specifies an interface to show the discard counters.

Enter any of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.6(0.0)**: Added the `discard-counters`, `interface` keywords, and the `interface` variable.
- **Version 9.0.2.0**: Introduced on the S6000.
- **Version 8.3.19.0**: Introduced on the S4820T.
- **Version 8.3.11.1**: Introduced on the Z9000.
- **Version 8.3.7.0**: Introduced on the S4810.
- **Version 8.3.1.0**: Introduced on the E-Series.
- **Version 7.8.1.0**: Introduced on the C-Series and S-Series.

Example

The following example displays the interfaces configured with IP Source Guard:

```
Dell> show ip dhcp snooping source-address-validation
ip sav access-list on TenGigabitEthernet 1/1
Total cam count 3
  permit host 0.0.0.0 count (0 packets)
  permit host 10.1.1.252 count (0 packets)
  permit host 10.1.1.253 count (0 packets)
ipmac-vlan sav access-list on TenGigabitEthernet 1/2
Total cam count 4
  permit host 0.0.0.0 host 00:00:00:00:00:00 count (0 packets)
  permit host 10.1.1.1 host 00:00:00:aa:00:01 count (0 packets)
  permit host 10.1.1.2 host 00:00:00:aa:00:02 count (0 packets)
```
permit vlan 20 host 10.2.2.1 host 00:00:00:aa:00:03 count (0 packets)
permit vlan 20 host 10.2.2.2 host 00:00:00:aa:00:04 count (0 packets)

The following example displays the port channel interfaces configured with IP Source Guard:

Dell> show ip dhcp snooping source-address-validation interface portchannel 10
ipmac-vlan sav access-list on Port-channel 10 on stack-unit 0
Total cam count 5
permit host 0.0.0.0 host 00:00:00:00:00:00 count (0 packets)
permit vlan 10 host 1.1.1.1 host 00:00:00:00:01:01 count (0 packets)
permit vlan 10 host 1.1.1.2 host 00:00:00:00:01:02 count (0 packets)
permit vlan 10 host 1.1.1.3 host 00:00:00:00:01:03 count (0 packets)
ipmac-vlan sav access-list on Port-channel 10 on stack-unit 1
Total cam count 5
permit host 0.0.0.0 host 00:00:00:00:00:00 count (0 packets)
permit vlan 10 host 1.1.1.1 host 00:00:00:00:01:01 count (0 packets)
permit vlan 10 host 1.1.1.2 host 00:00:00:00:01:02 count (0 packets)
permit vlan 10 host 1.1.1.3 host 00:00:00:00:01:03 count (0 packets)
ipmac-vlan sav access-list on Port-channel 10 on stack-unit 2
Total cam count 5
permit host 0.0.0.0 host 00:00:00:00:00:00 count (0 packets)
permit vlan 10 host 1.1.1.1 host 00:00:00:00:01:01 count (0 packets)
permit vlan 10 host 1.1.1.2 host 00:00:00:00:01:02 count (0 packets)
permit vlan 10 host 1.1.1.3 host 00:00:00:00:01:03 count (0 packets)

NOTE: The output for port-channel interfaces does not display the physical interface.

The following example displays the SAV discard counters on all interfaces:

Dell> show ip dhcp snooping source-address-validation discard-counters
deny access-list on TenGigabitEthernet 1/1
Total cam count 1
deny count (0 packets)
deny access-list on TenGigabitEthernet 1/2
Total cam count 2
deny vlan 10 count (0 packets)
deny vlan 20 count (0 packets)

The following example displays the SAV discard counters on a particular interface:

Dell> show ip dhcp snooping source-address-validation discard-counters
interface TenGigabitEthernet 1/1
deny access-list on TenGigabitEthernet 1/1
Total cam count 2
deny vlan 10 count (0 packets)
deny vlan 20 count (0 packets)

The following example displays the SAV discard counters on a port channel interface:

Dell> show ip dhcp snooping source-address-validation discard-counters
interface portchannel 10
deny access-list on Port-channel 10 on stack-unit 0
Total cam count 1
deny vlan 10 count (0 packets)
deny access-list on Port-channel 10 on stack-unit 1
Total cam count 1
deny vlan 10 count (0 packets)
deny access-list on Port-channel 10 on stack-unit 2
Total cam count 1
deny vlan 10 count (0 packets)

NOTE: The output for port-channel interfaces does not display the physical interface. If the LAG member interfaces belong to different stack-units, the counters are displayed per stack-unit for that port channel.
**show ipv6 dhcp snooping**

Display the DHCPv6 snooping binding database.

**Syntax**

show ipv6 dhcp snooping

**Defaults**

none

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Binding Entry lease expired               : 0
Dell#
```

**Commands to Configure DNS**

To configure the Domain Names Systems (DNS) on the system, use the following commands:

**ip name-server**

Configures the name server IP addresses for VRF. Using this command, you can configure up to a maximum of six IP addresses per VRF.

**Z9000**

**Syntax**

```
ip name-server [vrf vrf-name] ip-address [ip-address2] [ip-address3] [ip-address4] [ip-address5] [ip-address6]
```

To undo the name server ip address configuration for VRF, use the `no ip name-server [vrf vrf-name]` command.

**Parameters**

- **vrf vrf-name**  (Optional) Enter the key word `vrf` and then the name of the VRF to configure the name server IP addresses for that VRF.
- **ip-address [ip-address2] [ip-address3] [ip-address4] [ip-address5] [ip-address6]**  Enter the IP address of the name server in dotted decimal format.

**NOTE:** Use the additional `ip-address` parameters (`ip-address2 to ip-address6`) in a sequential order to specify up to a maximum of six IP addresses per VRF.
ip domain-name

Configures the default domain corresponding to a specific VRF. This domain is appended to the incomplete DNS requests corresponding to the specified VRF.

### Z9000

**Syntax**

```
ip domain-name [vrf vrf-name] name
```

To undo the domain name configuration corresponding to a specific VRF, use the `no ip domain-name [vrf vrf-name] name` command.

**Parameters**

- `vrf vrf-name` (Optional) Enter the key word `vrf` and then the name of the VRF to configure the domain corresponding to that VRF.
- `name` Enter the name of the domain to be appended to the incomplete DNS requests corresponding to the specified VRF.

**Defaults**

None

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
</tbody>
</table>
| 9.4.(0.0)| Introduced on the S-Series and Z-Series.

**Usage Information**

Use this command to configure a domain name corresponding to a VRF. This domain is appended to the incomplete DNS requests corresponding to the specified VRF.

**Example**

```
Dell(conf)#ip domain-name vrf jay dell.com
```
**ip domain-list**

Adds a domain name to the DNS list. This domain name is appended to incomplete host names in DNS requests corresponding to a specific VRF.

**Z9000**

**Syntax**

```
ip domain-list [vrf vrf-name] name
```

To remove a domain name from DNS list, use the `no ip domain-list [vrf vrf-name] name` command.

**Parameters**

- `vrf vrf-name` (Optional) Enter the key word `vrf` and then the name of the VRF to add a domain name to the DNS list corresponding to that VRF.
- `name` Enter the name of the domain to be appended to the DNS list corresponding to the VRF.

**Defaults**

None

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4.(0.0)</td>
<td>Introduced on the S-Series and Z-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to add domain names to the DNS lists corresponding to a specific VRF. You can add up to a maximum of six domain names to the DNS list corresponding to a VRF. This domain is used to complete the unqualified host names.

**Example**

```
Dell(conf)#ip domain-list  vrf jay dell.com
Dell(conf)#ip domain-list  vrf jay force10.com
```

**ip host**

Configures a mapping between the host name server and the IP address for a specific VRF. This mapping information is used by the name-to-IP address table to resolve host names.

**Z9000**

**Syntax**

```
ip host [vrf vrf-name] name ip-address
```

To undo the host name server to IP address mapping for VRFs, use the `no ip host [vrf vrf-name] name ip-address` command.

**Parameters**

- `vrf vrf-name` (Optional) Enter the key word `vrf` and then the name of the VRF to configure the name server to IP address mapping for that VRF.
- `name` Enter the name of the host to be associated with an IP address.
- `ip-address` Enter the IP address of the name server in dotted decimal format.

**Defaults**

None

**Command Modes**

<td>Introduced on the S-Series and Z-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Use this command to create a mapping between a host name server and its IP addresses for a specific VRF.

Example

Dell(conf)#ip host vrf jay dell 1.1.1.1

clear host

Removes one or all dynamically learned host table entries for a specific VRF.

Z9000

clear host

Syntax

clear host [vrf vrf-name] {* | host-name}  

Parameters

- **vrf vrf-name**: (Optional) Enter the key word vrf and then the name of the VRF to delete dynamically learned host table entries corresponding to that VRF.
- **host-name**: Enter the name of the host corresponding to which you want to delete the dynamically learnt host table entries.
- *****: Enter * to delete all host table entries.

Defaults

None

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

Usage Information

Use this command to delete one or all dynamically learned host table entries corresponding to a specific VRF.

Example

Dell#clear host vrf jay dell
Dell#clear host vrf jay *

Dynamic Host Configuration Protocol (DHCP)
Equal Cost Multi-Path (ECMP)

Equal cost multi-path (ECMP) is supported on the Dell Networking OS.

Topics:
- `ecmp-group`
- `hash-algorithm`
- `hash-algorithm ecmp`
- `hash-algorithm hg`
- `hash-algorithm hg-seed`
- `hash-algorithm seed`
- `ip ecmp-group`
- `ip ecmp weighted`
- `link-bundle-distribution trigger-threshold`
- `link-bundle-monitor enable`
- `show config`
- `show link-bundle distribution`

**ecmp-group**

Provides a mechanism to monitor traffic distribution on an ECMP link bundle. A system log is generated when the standard deviation of traffic distribution on a member link exceeds a defined threshold.

### Z9000

**Syntax**

```
ecmp-group {ecmp-group-id interface interface | link-bundle-monitor}
```

To remove the selected interface, use the `ecmp-group no interface` command.

To disable link bundle monitoring, use the `ecmp-group no link-bundle-monitor` command.

**Parameters**

- `ecmp-group ID` Enter the identifier number for the ECMP group. The range is from 2 to 64.
- `interface` Enter the following keywords and slot/port to add the interface to the ECMP group:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a LAG interface, enter the keywords `port-channel` then the slot/port information. The range is from 1 to 128.

**Defaults**

Off

**Command Modes**

- CONFIGURATION
- CONFIGURATION ECMP-GROUP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
9.0.0.0 Introduced on the Z9000.
8.3.19.0 Introduced on the S4820T.
8.3.10.0 Introduced on the S4810.

Usage Information
Using CONFIGURATION mode, create an ECMP group ID. You can then assign interfaces to the ECMP group using CONFIGURATION ECMP-GROUP mode. You can also enable on the port-channel configuration using the CONFIGURATION ECMP-GROUP command mode.

hash-algorithm

Changes the hash algorithm used to distribute traffic flows across a Port Channel. The ECMP and LAG options are supported on the Z-Series.

Z9000

Syntax
hash-algorithm {algorithm-number | {ecmp {crc16 | crc16cc | crc32MSB | crc32LSB | crc-upper | dest-ip | lsb | xor1 | xor2 | xor4 | xor8 | xor16} [number] hg {crc16 | crc16cc | crc32MSB | crc32LSB | xor1 | xor2 | xor4 | xor8 | xor16} stack-unit stack-unit-number | port-set port-pipe | hg-seed seed-value stack-unit | lag {checksum | crc | xor} [number] nh-ecmp {checksum | crc | xor}{number} stack-unit number ip-sa-mask value | seed seed-value }

To return to the default hash algorithm, use the no hash-algorithm command.

To return to the default ECMP hash algorithm, use the no hash-algorithm ecmp algorithm-value command.

To remove the hash algorithm on a particular stack-unit, use the no hash-algorithm linecard number command.

Parameters

algorithm-number

terms: Enter the algorithm number. The range is from 0 to 47.

TeraScale and ExaScale Only: Enter the keyword ecmp then one of the following options:
  - crc16: Use CRC16_BISYNC — 16 bit CRC16-bisync polynomial (default)
  - crc16cc: Use CRC16_CCITT — 16 bit CRC16 using CRC16-CCITT polynomial
  - crc32MSB: Use CRC32_UPPER — MSB 16 bits of computed CRC32
  - crc32LSB: Use CRC32_LOWER — LSB 16 bits of computed CRC32
  - crc-upper: Uses the upper 32 bits of the key for the hash computation
  - dest-ip: Uses the destination IP for ECMP hashing
  - lsb: Returns the LSB of the key as the hash
  - xor1: Use CRC16_BISYNC_AND_XOR1 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor1
  - xor2: Use CRC16_BISYNC_AND_XOR2 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor2
  - xor4: Use CRC16_BISYNC_AND_XOR4 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor4
  - xor8: Use CRC16_BISYNC_AND_XOR8 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor8
  - xor16: Use CR16 — 16 bit XOR
hg {crc16 | crc16cc | crc32MSB | crc32LSB | xor1 | xor2 | xor4 | xor8 | xor16} stack-unit stack-unit-number | port-set port-pipe

Z-Series only: Enter the keyword hg then one of the following options:
- crc16: Use CRC16_BISYNC — 16 bit CRC16-bisync polynomial (default)
- crc16cc: Use CRC16_CCITT — 16 bit CRC16 using CRC16-CCITT polynomial
- crc32MSB: Use CRC32_UPPER — MSB 16 bits of computed CRC32
- crc32LSB: Use CRC32_LOWER — LSB 16 bits of computed CRC32
- xor1: Use CRC16_BISYNC_AND_XOR1 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor1
- xor2: Use CRC16_BISYNC_AND_XOR2 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor2
- xor4: Use CRC16_BISYNC_AND_XOR4 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor4
- xor8: Use CRC16_BISYNC_AND_XOR8 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor8
- xor16: Use CR16 — 16 bit XOR

Enter the keywords stack-unit, then a stack-unit number, to specify a stack-unit. The range is from 0 to 7.

Enter the keywords port-set port-pipe then the port pipe number. The range is from 0 to 5.

hg-seed seed-value stack-unit

Z-Series only: Enter the keywords hg-seed then the hash algorithm seed value. The range is from 0 to 2147483646.

Enter the keywords stack-unit then the stack unit number.

Enter the keywords port-set then the stack-unit port-pipe number.

lag hash algorithm

Z-Series only: Enter the keywords hg-seed. The range is from 0 to 47.

nh-ecmp hashalgorithm value

(Optional) Enter the keyword nh-ecmp followed by the ECMP hash algorithm value.

stack-unit number

(Optional) : Enter the keywords stack—unit followed by the stack—unit slot number.

ip-sa-mask value

(Optional) Enter the keyword ip-sa-mask followed by the ECMP/LAG hash mask value. The range is from 0 to FF.

ip-da-mask value

(Optional) Enter the keyword ip-da-mask followed by the ECMP/LAG hash mask value. The range is from 0 to FF.

Defaults
IPSA and IPDA mask value is FF for the stack-unit.

Command Modes
CONFIGURATION

Command History

<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added the nh-ecmp option.</td>
</tr>
</tbody>
</table>
Version  Description
7.7.1.1  Added the nh-ecmp option.

Usage Information
To ensure that CRC is not used for LAG, set the default hash-algorithm method on ExaScale systems. For example, `hash-algorithm ecmp xor lag checksum nh-ecmp checksum`.

The hash value calculated with the `hash-algorithm` command is unique to the entire chassis. The hash algorithm command with the stack-unit option changes the hash for a particular stack-unit by applying the mask specified in the IPSA and IPDA fields.

The stack-unit option is applicable with the lag-hash-align microcode only. Any other microcode returns an error message as follows:

- Dell(conf)#hash-algorithm linecard 5 ip-sa-mask ff ip-da-mask ff
- % Error: This command is not supported in the current microcode configuration

In addition, the `linecard number ip-sa-mask value ip-da-mask value` option has the following behavior to maintain bi-directionality:

- When hashing is done on both IPSA and IPDA, the `ip-sa-mask` and `ip-da-mask` values must be equal. (Single Linecard).
- When hashing is done only on IPSA or IPDA, Dell Networking OS maintains bi-directionality with masks set to XX 00 for stack-unit 1 and 00 XX for stack-unit 2 (`ip-sa-mask` and `ip-da-mask`). The mask value must be the same for both stack-units when using multiple stack-units as ingress (where XX is any value from 00 to FF for both stack-units). For example, assume that traffic is flowing between linecard 1 and linecard 2:
  - `hash-algorithm linecard 1 ip-sa-mask aa ip-da-mask 00`
  - `hash-algorithm linecard 2 ip-sa-mask 00 ip-da-mask aa`

The different hash algorithms are based on the number of Port Channel members and packet values. The default hash algorithm (number 0) yields the most balanced results in various test scenarios, but if the default algorithm does not provide a satisfactory distribution of traffic, use the `hash-algorithm` command to designate another algorithm.

When a Port Channel member leaves or is added to the Port Channel, the hash algorithm is recalculated to balance traffic across the members.

hash-algorithm ecmp

Change the hash algorithm used to distribute traffic flows across an ECMP (equal-cost multipath routing) group.

Z9000

Term heading  Description heading
Syntax  `hash-algorithm ecmp {crc-upper} | {dest-ip} | {lsb}`
To return to the default hash algorithm, use the `no hash-algorithm ecmp` command.

Parameters  
- `crc-upper`  Uses the upper 32 bits of the key for the hash computation. The default is `crc-lower`.
- `dest-ip`  Uses the destination IP for ECMP hashing. The default is `enabled`.
- `lsb`  Returns the LSB of the key as the hash. The default is `crc-lower`.

Defaults  
- `crc-lower`
- `dest-ip enabled`

Command Modes  CONFIGURATION

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The hash value calculated with the hash-algorithm command is unique to the entire chassis. The default ECMP hash configuration is crc-lower. This command takes the lower 32 bits of the hash key to compute the egress port and is the “fall-back” configuration if you have not configured anything else.

The different hash algorithms are based on the number of ECMP group members and packet values. The default hash algorithm yields the most balanced results in various test scenarios, but if the default algorithm does not provide satisfactory distribution of traffic, use this command to designate another algorithm.

When a member leaves or is added to the ECMP group, the hash algorithm is recalculated to balance traffic across the members.

hash-algorithm hg

To distribute traffic flows across different internal HiGig links, change the hash algorithm.

Z9000

Syntax

hash-algorithm hg {crc16 | xor1 | xor2 | xor4 | xor8 | xor16 | crc16cc | crc32MSB | crc32LSB} stack-unit number port-set number

Parameters

crc16  Use CRC16_BISYNC — 16 bit CRC16-bisync polynomial (default).
xor1  Use CRC16_BISYNC_AND_XOR1 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor1.
xor2  Use CRC16_BISYNC_AND_XOR2 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor2.
xor4  Use CRC16_BISYNC_AND_XOR4 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor4.
xor8  Use CRC16_BISYNC_AND_XOR8 — Upper 8 bits of CRC16-BISYNC and lower 8 bits of xor8.
xor16  Use CR16 — 16 bit XOR.
crc16cc  Use CRC16_CCITT — 16 bit CRC16 using CRC16-CCITT polynomial.
crc32MSB  Use CRC32_UPPER — MSB 16 bits of computed CRC32.
crc32LSB  Use CRC32_LOWER — LSB 16 bits of computed CRC32.
stack-unit unit number  Enter the keywords stack-unit then the stack unit number. The range is from 0 to 7.
port-set port-pipe  Enter the keywords port-set then the port pipe number. The range is from 0 to 5.

Defaults  crc16 algorithm
hash-algorithm hg-seed

Select the seed value used in HiGig hashing.

Z9000

Syntax

[no] hash-algorithm hg-seed number | stack-unit unit number port-set port-pipe

Parameters

hg-seed number Enter the keywords hg-seed then the hash algorithm seed value. The range is from 0 to 2147483646.

stack-unit unit number Enter the keywords stack-unit then the stack unit number. The range is from 0 to 7.

port-set port-pipe Enter the keywords port-set then the line card’s port-pipe number. The range is from 0 to 5.

Defaults

32-bit chassis MAC and system time

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 8.3.11.4 Introduced on the Z9000.

hash-algorithm seed

Select the seed value for the ECMP, LAG, and NH hashing algorithm.

Z9000

Syntax

hash-algorithm seed value [linecard slot] [port-set number]

Parameters

seed value Enter the keyword seed then the seed value. The range is from 0 to 4095.

linecard slot Enter the keyword linecard then the linecard slot number.

port-set number Enter the keyword port-set then the linecard port-pipe number.

Defaults

none

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 8.3.11.4 Introduced on the Z9000.
Deterministic ECMP sorts ECMPs in order even though RTM provides them in a random order. However, the hash algorithm uses as a seed the lower 12 bits of the chassis MAC, which yields a different hash result for every chassis. This behavior means that for a given flow, even though the prefixes are sorted, two unrelated chassis select different hops.

FTOS provides a CLI-based solution for modifying the hash seed to ensure that on each configured system, the ECMP selection is same. When configured, the same seed is set for ECMP, LAG, and NH, and is used for incoming traffic only.

**NOTE:** While the seed is stored separately on each port-pipe, the same seed is used across all CAMs. You cannot separate LAG and ECMP but you can use different algorithms across the chassis with the same seed. If LAG member ports span multiple port-pipes and line cards, set the seed to the same value on each port-pipe to achieve deterministic behavior.

If the hash algorithm configuration is removed, the hash seed does not go to the original factory default setting.

### ip ecmp-group

Enable and specify the maximum number of ecmp that the L3 CAM hold for a route. By default, when maximum paths are not configured, the CAM can hold a maximum of 16 ecmp per route.

**Z9000**

**Syntax**

```
ip ecmp-group {maximum-paths | {number} {path-fallback}}
```

To negate a command, use the `no ip ecmp-group maximum-paths {number}` command.

**Parameters**

- `maximum-paths`  Specify the maximum number of ECMP for a route. The range is 2 to 64.
- `path-fallback`  Use the keywords `path-fallback` to enable this feature. If you enable the feature, re-enter this keyword to disable the feature.

**Defaults**

16

**Command Modes**

- `CONFIGURATION`

**Command History**

- **Version**  **Description**
  - 9.7(0.0)  Introduced on the S6000-ON.
  - 8.3.19.0  Introduced on the S4820T.
  - 8.3.11.1  Introduced on the Z9000.
  - 8.3.7.0  Introduced on the S4810.
  - 8.3.1.0  Introduced on the E-Series.

**Usage Information**

You must save the new ECMP settings to the startup-config (write-mem) then reload the system for the new settings to take effect.

**Related Commands**

- `show ip cam stack-unit` – Display content-addressable memory (CAM) entries for an S-Series switch.
ip ecmp weighted

Enables weighted ECMP calculations.

Syntax

    ip ecmp weighted

To disable weighted ECMP calculations, enter the no ip ecmp weighted command.

Defaults

    N/A

Command Modes

    CONFIGURATION

Command History

    Version 9.7(0.0)    Introduced on the S-Series.

Usage Information

    Enabling this CLI would inform the FIB to re-program the destination prefix paths with weights in the
    HW/CAM on the fly.
    If disabled, the CLI would inform the FIB to re-program the destination prefix paths with no weights or
    regular ECMP.

Example

    Dell(conf)#ip ecmp ?
    weighted                Enables Weighted ECMP
    Dell(conf)#ip ecmp weighted
    Dell(conf)#do show running-config | grep ecmp
    ip ecmp weighted
    Dell(conf)#
    Dell(conf)#no ip ecmp ?
    weighted                Disables Weighted ECMP
    Dell(conf)#no ip ecmp weighted
    Dell(conf)#do show running-config | grep ecmp

link-bundle-distribution trigger-threshold

Provides a mechanism to set the threshold to trigger when traffic distribution begins being monitored on an ECMP link bundle.

Z-Series

Syntax

    link-bundle-distribution trigger-threshold [percent]

To exit from ecmp group mode, use the exit command.

Parameters

    percent

    Indicate the threshold value when traffic distribution starts being monitored on an ECMP link bundle. The range is from 1 to 90%. The default is 60%.

Command Modes

    EXEC Privilege

ssh

Open an SSH connection specifying the hostname, username, port number, and version of the SSH client.

Syntax

```
ssh {hostname|ipv4 address|ipv6 address} [-c encryption cipher|-l username|-m HMAC algorithm|-p port-number|-v {1|2}]
```

Parameters

- **hostname** (OPTIONAL) Enter the IP address or the hostname of the remote device.
- **ipv4 address** (OPTIONAL) Enter the IP address in dotted decimal format A.B.C.D.
- **ipv6 addressprefix** (OPTIONAL) Enter the IPv6 address in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **-c encryption cipher** Enter the following encryption cipher to use. (For v2 clients only.)
  - 3des-cbc: Force ssh to use 3des-cbc encryption cipher.
  - aes192-cbc: Force ssh to use aes192-cbc encryption cipher.
  - aes256-cbc: Force ssh to use aes256-cbc encryption cipher.
  - aes128-ctr: Force ssh to use aes128-ctr encryption cipher.
  - aes192-ctr: Force ssh to use aes192-ctr encryption cipher.
  - aes256-ctr: Force ssh to use aes256-ctr encryption cipher.

- **-l username** (OPTIONAL) Enter the keyword -l then the user name used in this SSH session. The default is the user name of the user associated with the terminal.

- **-m HMAC algorithm** Enter one of the following HMAC algorithms to use. (For v2 clients only.)
  - hmac-shal: Force ssh to use the hmac-sha1 HMAC algorithm.
  - hmac-shal-96: Force ssh to use the hmac-sha1–96 HMAC algorithm.
  - hmac-md5: Force ssh to use the hmac-md5 HMAC algorithm.
  - hmac-md5-96: Force ssh to use the hmac-md5–96 HMAC algorithm.

FIPS mode is enabled or disabled:

- 3des-cbc: Force ssh to use 3des-cbc encryption cipher.
- aes192-cbc: Force ssh to use aes256–cbc encryption cipher.
- aes192-ctr: Force ssh to use aes256–cbc encryption cipher.
- aes256-ctr: Force ssh to use aes256–cbc encryption cipher.

Without the FIPS mode enabled:

- hmac-shal: Force ssh to use the hmac-sha1 HMAC algorithm.
- hmac-shal-96: Force ssh to use the hmac-sha1–96 HMAC algorithm.
- hmac-md5: Force ssh to use the hmac-md5 HMAC algorithm.
- hmac-md5-96: Force ssh to use the hmac-md5–96 HMAC algorithm.

With the FIPS mode enabled:

- hmac-md5: Force ssh to use the hmac-md5 HMAC algorithm.
- hmac-md5-96: Force ssh to use the hmac-md5–96 HMAC algorithm.
- hmac-shal: Force ssh to use the hmac-sha1 HMAC algorithm.
-p port-number (OPTIONAL) Enter the keyword -p then the port number.
The range is 1 to 65535.

-v {1|2} (OPTIONAL) Enter the keyword -v then the SSH version 1 or 2.
The default: The version from the protocol negotiation.

NOTE: If the FIPS mode is enabled, this option does not display in the output.

Defaults
As indicated above.

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

Version 9.1(0.0) Introduced on the Z9000.
Version 8.3.19.0 Introduced on the S4820T.
Version 8.3.12.0 Introduced on the S4810.

Related Commands
ip ssh server Configure an SSH server.
show ip ssh client-pub-keys Display the client-public keys.

Usage Information
Dell Networking OS supports both inbound and outbound SSH sessions using IPv4 or IPv6 addressing.
Inbound SSH supports accessing the system through the management interface as well as through a
physical Layer 3 interface.

NOTE: Some of the parameters in this command require licensing to access. For more information,
contact your Dell Networking representative.

Example
If FIPS mode is not enabled:

```
Dell#ssh 10.10.10.10 ?
-c Encryption cipher to use (for v2 clients only)
-l User name option
-m HMAC algorithm to use (for v2 clients only)
-p SSH server port option (default 22)
-v SSH protocol version
<cr>
Dell#ssh 10.10.10.10 -c ?
3des-cbc Force ssh to use 3des-cbc encryption cipher
aes128-cbc Force ssh to use aes128-cbc encryption cipher
aes192-cbc Force ssh to use aes192-cbc encryption cipher
aes256-cbc Force ssh to use aes256-cbc encryption cipher
aes128-ctr Force ssh to use aes128-ctr encryption cipher
aes192-ctr Force ssh to use aes192-ctr encryption cipher
aes256-ctr Force ssh to use aes256-ctr encryption cipher
Dell#ssh 10.10.10.10 -m ?
hmac-md5 Force ssh to use hmac-md5 HMAC algorithm
hmac-md5-96 Force ssh to use hmac-md5-96 HMAC algorithm
hmac-shal Force ssh to use hmac-shal HMAC algorithm
hmac-shal-96 Force ssh to use hmac-shal-96 HMAC algorithm
hmac-sha2-256 Force ssh to use hmac-sha2-256 HMAC algorithm
hmac-sha2-256-96 Force ssh to use hmac-sha2-256-96 HMAC algorithm
```
With FIPS mode enabled:

Dell#ssh 10.10.10.10 ?
-c Encryption cipher to use (for v2 clients only)
-l User name option
-m HMAC algorithm to use (for v2 clients only)
-p SSH server port option (default 22)

Dell#ssh 10.10.10.10 -c ?
3des-cbc Force ssh to use 3des-cbc encryption cipher
aes128-cbc Force ssh to use aes128-cbc encryption cipher
aes192-cbc Force ssh to use aes192-cbc encryption cipher
aes256-cbc Force ssh to use aes256-cbc encryption cipher
aes128-ctr Force ssh to use aes128-ctr encryption cipher
aes192-ctr Force ssh to use aes192-ctr encryption cipher
aes256-ctr Force ssh to use aes256-ctr encryption cipher

Dell#ssh 10.10.10.10 -m ?
hmac-sha1 Force ssh to use hmac-sha1 HMAC algorithm
hmac-sha1-96 Force ssh to use hmac-sha1-96 HMAC algorithm
hmac-sha2-256 Force ssh to use hmac-sha2-256 HMAC algorithm
hmac-sha2-256-96 Force ssh to use hmac-sha2-256-96 HMAC algorithm
Force10 Resilient Ring Protocol (FRRP)

Force10 resilient ring protocol (FRRP) is supported on Dell Networking OS.

FRRP is a proprietary protocol for that offers fast convergence in a Layer 2 network without having to run the spanning tree protocol (STP). The resilient ring protocol is an efficient protocol that transmits a high-speed token across a ring to verify the link status. All the intelligence is contained in the master node with practically no intelligence required of the transit mode.

Important Points to Remember

- FRRP is media- and speed-independent.
- FRRP is a Dell Networking proprietary protocol that does not interoperate with any other vendor.
- Spanning Tree must be disabled on both primary and secondary interfaces before Resilient Ring protocol is enabled.
- A VLAN configured as the control VLAN for a ring cannot be configured as a control or member VLAN for any other ring.
- Member VLANs across multiple rings are not supported in Master nodes.
- If multiple rings share one or more member VLANs, they cannot share any links between them.
- Each ring can have only one Master node; all others are Transit nodes.

Topics:
- `clear frrp`
- `debug frrp`
- `description`
- `disable`
- `interface`
- `member-vlan`
- `mode`
- `protocol frrp`
- `show frrp`
- `timer`

**clear frrp**

Clear the FRRP statistics counters.

**Z9000**

**Syntax**

```
clear frrp [ring-id]
```  

**Parameters**

- `ring-id`  
  (Optional) Enter the ring identification number. The range is from 1 to 255.

**Defaults**

`none`

**Command Modes**

`EXEC`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
</tbody>
</table>
Version | Description
---|---
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.2.1.0 | Introduced on the C-Series.
7.5.1.0 | Introduced.

Usage Information
Executing this command without the optional \texttt{ring-id} command clears the statistics counters on all the available rings. Dell Networking OS requires a command line confirmation before the command executes. This command clears the following counters:

- hello Rx and Tx counters
- Topology change Rx and Tx counters
- The number of state change counters

Example

Dell#clear frrp
Clear frrp statistics counter on all ring [confirm] yes
Dell#clear frrp 4
Clear frrp statistics counter for ring 4 [confirm] yes
Dell#

Related Commands
- \texttt{show frrp} — displays the Resilient Ring Protocol configuration.

\section*{debug frrp}

Clear the FRRP statistics counters.

\subsection*{Z9000}

Syntax

\texttt{debug frrp \{event | packet | detail\} \{ring-id\} \{count number\}}

To disable debugging, use the \texttt{no debug frrp \{event | packet | detail\} \{ring-id\} \{count number\}} command.

Parameters

- \texttt{event} | \texttt{packet} | \texttt{detail}: Enter the keyword to display debug information related to ring protocol transitions, control packets, or detailed ring protocol packets.
- \texttt{ring-id}: (Optional) Enter the ring identification number. The range is from 1 to 255.
- \texttt{count number}: Enter the keyword \texttt{count} then the number of debug outputs. The range is from 1 to 65534.

Defaults

- \texttt{Disabled.}

Command Modes

- \texttt{CONFIGURATION (conf-frrp)}
description

Enter an identifying description of the ring.

Z9000

description Word

To remove the ring description, use the no description [Word] command.

Parameters

Defaults

none

Command Modes

CONFIGURATION (conf-frrp)

interface

Configure the primary, secondary, and control-vlan interfaces.

Z9000

Syntax

interface {primary interface secondary interface control-vlan vlan-id}

To return to the default, use the no interface {primary interface secondary interface control-vlan vlan-id} command.

Parameters

primary interface Enter the keyword primary to configure the primary interface then one of the following interfaces and slot/port information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

secondary interface Enter the keyword secondary to configure the secondary interface then one of the following interfaces and slot/port information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
For a port channel interface, enter the keywords `port-channel` then a number.

```
control-vlan
```

Enter the keyword `control-vlan` then the VLAN ID. The range is from 1 to 4094.

Defaults

none

<tr>
<td>7.4.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

This command causes the Ring Manager to take ownership of the two ports after IFM validates the configuration. Ownership is relinquished for a port only when the interface does not play a part in any control VLAN, that is, the interface does not belong to any ring.

Related Commands

```
show frrp  — displays the Resilient Ring Protocol configuration information.
```

```
member-vlan
```

Specify the member VLAN identification numbers.

```

```

```
member-vlan
```

```
vlan-range
```

Specify the member VLAN identification numbers.

To return to the default, use the `no member-vlan [vlan-range]` command.

```
Parameters
```

```
vlan-range
```

Enter the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 5-10. Combination: 3, 4, 5-10, 8.

Defaults

none

</tbody>
</table>

**Usage Information**

This command places you into the resilient ring protocol. After executing this command, the command line prompt changes to `conf-frrp`.

**show frrp**

Display the resilient ring protocol configuration.

**Z9000**

**Syntax**

`show frrp [ring-id [summary]] | [summary]`

**Parameters**

- `ring-id` Enter the ring identification number. The range is from 1 to 255
- `summary` (OPTIONAL) Enter the keyword `summary` to view just a summarized version of the Ring configuration.

**Defaults**

none

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</table>

Related Commands
protocol frrp — enters the resilient ring protocol and designate a ring identification.

timer

Set the hello interval or dead interval for the Ring control packets.

Z9000

Syntax
timer {hello-interval milliseconds} | {dead-interval milliseconds}

To remove the timer, use the no timer {hello-interval [milliseconds]} | {dead-interval milliseconds} command.

Parameters
- **hello-interval milliseconds**
  Enter the keyword hello-interval then the time, in milliseconds, to set the hello interval of the control packets. The milliseconds must be entered in increments of 50 millisecond; for example, 50, 100, 150, and so on. If an invalid value is entered, an error message is generated. The range is from 50 to 2000 ms. Default: 500 ms.
dead-interval milliseconds

Enter the keyword dead-interval then the time, in milliseconds, to set the dead interval of the control packets. The range is from 50 to 6000 ms. Default: 1500 ms.

**NOTE:** The configured dead interval must be at least three times the hello interval.

**Defaults**

- 500 ms for hello-interval milliseconds
- 1500 ms for dead-intervalmilliseconds

</table>

**Usage Information**

The **hello-interval command** is the interval at which ring frames are generated from the primary interface of the master node. The **dead-interval command** is the time that elapses before a time-out occurs.
The Dell Networking operating system supports the basic GVRP commands on the Dell Networking OS.

The generic attribute registration protocol (GARP) mechanism allows the configuration of a GARP participant to propagate through a network quickly. A GARP participant registers or de-registers its attributes with other participants by making or withdrawing declarations of attributes. At the same time, based on received declarations or withdrawals, GARP handles attributes of other participants.

GVRP enables a device to propagate local VLAN registration information to other participant devices and dynamically update the VLAN registration information from other devices. The registration information updates local databases regarding active VLAN members and through which port the VLANs can be reached.

GVRP ensures that all participants on a bridged LAN maintain the same VLAN registration information. The VLAN registration information propagated by GVRP includes both manually configured local static entries and dynamic entries from other devices.

GVRP participants have the following components:

- The GVRP application
- GARP information propagation (GIP)
- GARP information declaration (GID)

**Important Points to Remember**

- GVRP is supported on Layer 2 ports only.
- All VLAN ports added by GVRP are tagged.
- GVRP is supported on untagged ports belonging to a default VLAN and tagged ports.
- GVRP cannot be enabled on untagged ports belonging to a non-default VLAN unless native VLAN is turned on.
- GVRP requires end stations with dynamic access NICs.
- Based on updates from GVRP-enabled devices, GVRP allows the system to dynamically create a port-based VLAN (unspecified) with a specific VLAN ID and a specific port.
- On a port-by-port basis, GVRP allows the system to learn about GVRP updates to an existing port-based VLAN with that VLAN ID and IEEE 802.1Q tagging.
- GVRP allows the system to send dynamic GVRP updates about your existing port-based VLAN.
- GVRP updates are not sent to any blocked spanning tree protocol (STP) ports. GVRP operates only on ports that are in the forwarding state.
- GVRP operates only on ports that are in the STP forwarding state. If you enable GVRP, a port that changes to the STP Forwarding state automatically begin to participate in GVRP. A port that changes to an STP state other than forwarding no longer participates in GVRP.
- VLANs created dynamically with GVRP exist only as long as a GVRP-enabled device is sending updates. If the devices no longer send updates, or GVRP is disabled, or the system is rebooted, all dynamic VLANs are removed.
- GVRP manages the active topology, not non-topological data such as VLAN protocols. If a local bridge must classify and analyze packets by VLAN protocols, manually configure protocol-based VLANs, and simply rely on GVRP for VLAN updates. But if the local bridge must know only how to reach a given VLAN, then GVRP provides all necessary information.
- The VLAN topologies that GVRP learns are treated differently from VLANs that are statically configured. The GVRP dynamic updates are not saved in NVRAM, while static updates are saved in NVRAM. When GVRP is disabled, the system deletes all VLAN interfaces that were learned through GVRP and leaves unchanged all VLANs that were manually configured.

GARP VLAN Registration (GVRP)
clear gvrp statistics

Clear GVRP statistics on an interface.

Z9000

clear gvrp statistics interface interface

Parameters

interface Enter the following keywords and slot/port or number information:
  • For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  • For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  • For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

Defaults

none

Related Commands

show gvrp statistics — displays the GVRP statistics.

dbg gvrp

Enable debugging on GVRP.

Z9000

deb gvrp {config | events | pdu}

To disable debugging, use the no debug gvrp {config | events | pdu} command.

Parameters

config Enter the keyword config to enable debugging on the GVRP configuration.

event Enter the keyword event to enable debugging on the JOIN/LEAVE events.
Enter the keyword `pdu` then one of the following Interface keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

**Defaults**

Disabled.

**Related Commands**

- `gvrp enable` — enables GVRP on physical interfaces and LAGs.
garp timers

Set the intervals (in milliseconds) for sending GARP messages.

Z9000

garp timers {join | leave | leave-all}

To return to the previous setting, use the no garp timers {join | leave | leave-all} command.

Parameters

- **join**: Enter the keyword `join` then the number of milliseconds to configure the join time. The range is from 100 to 147483647 milliseconds. The default is 200 milliseconds.
  - **NOTE**: Designate the milliseconds in multiples of 100.

- **leave**: Enter the keyword `leave` then the number of milliseconds to configure the leave time. The range is from 100 to 2147483647 milliseconds. The default is 600 milliseconds.
  - **NOTE**: Designate the milliseconds in multiples of 100.

- **leave-all**: Enter the keywords `leave-all` then the number of milliseconds to configure the leave-all time. The range is from 100 to 2147483647 milliseconds. The default is 1000 milliseconds.
  - **NOTE**: Designate the milliseconds in multiples of 100.

Defaults

As above.

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on C-Series, E-Series, and S-Series</td>
</tr>
</tbody>
</table>

Usage Information

- **Join Timer** — Join messages announce the willingness to register some attributes with other participants. For reliability, each GARP application entity sends a Join message twice and uses a join timer to set the sending interval.
- **Leave Timer** — Leave announces the willingness to de-register with other participants. Together with Join, Leave messages help GARP participants complete attribute reregistration and de-registration. The leave timer starts after receipt of a leave message sent for de-registering some attribute information. If a Join message is not received before the Leave time expires, the GARP application entity removes the attribute information as requested.
• Leave All Timer — The Leave All timer starts when a GARP application entity starts. When this timer expires, the entity sends a Leave-all message so that other entities can reregister their attribute information. Then the Leave-all time begins again.

Related Commands
  show garp timers — displays the current GARP times.

**gvrp enable**

Enable GVRP on physical interfaces and LAGs.

**Z9000**

**Syntax**

gvrp enable

To disable GVRP on the interface, use the no gvrp enable command.

**Defaults**

Disabled.

</tr>
</tbody>
</table>

Usage Information

Fixed registration prevents an interface, configured using the command line, to belong to a VLAN (static configuration) from being unconfigured when it receives a Leave message. Therefore, Registration mode on that interface is fixed.

Normal registration is the default registration. The port’s membership in the VLAN depends on GVRP. The interface becomes a member of a VLAN after learning about the VLAN through GVRP. If the VLAN is removed from the port that sends GVRP advertisements to this device, the port stops being a member of the VLAN.

To advertise or learn about VLANs through GVRP, use the forbidden command when you do not want the interface.

Related Commands

protocol gvrp — accesses the GVRP protocol.

show garp timers

Display the GARP timer settings for sending GARP messages.

Z9000

Syntax

show garp timers

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>
**show gvrp**

Display the GVRP configuration.

```
show gvrp [brief | interface]
```

**Syntax**

`show gvrp [brief | interface]`

**Parameters**

- **brief** *(OPTIONAL)* Enter the keyword brief to display a brief summary of the GVRP configuration.
- **interface** *(OPTIONAL)* Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

**Defaults**

```
none
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

```
<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3(9.0)</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3(11.1)</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3(7.0)</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6(1.0)</td>
<td>Introduced on C-Series, E-Series, and S-Series</td>
</tr>
</tbody>
</table>
```

**Usage Information**

If no ports are GVRP participants, the message output changes from **GVRP Participants running on <port_list>** to **GVRP Participants running on no ports.**
Example

```
R3#show gvrp brief
GVRP Feature is currently enabled.
Port               GVRP Status     Edge-Port
-------------------+----------------+---------
Te 3/1             Disabled        No
Te 3/2             Enabled         No
Te 3/3             Disabled        No
Te 3/4             Disabled        No
Te 3/5             Disabled        No
Te 3/6             Disabled        No
Te 3/7             Disabled        No
Te 3/8             Disabled        No
```

Related Commands

- `show gvrp statistics` — displays the GVRP statistics.

---

### show gvrp statistics

Display the GVRP configuration statistics.

#### Z9000

**Syntax**

```
show gvrp statistics {interface interface | summary}
```

**Parameters**

- `interface` (OPTIONAL) Enter the keyword `interface` then one of the interface keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- `summary` Enter the keyword `summary` to display just a summary of the GVRP statistics.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on C-Series, E-Series, and S-Series</td>
</tr>
</tbody>
</table>

**Usage Information**

Invalid messages/attributes skipped can occur in the following cases:

- The incoming GVRP PDU has an incorrect length.
- "End of PDU" was reached before the complete attribute could be parsed.
- The Attribute Type of the attribute that was being parsed was not the GVRP VID Attribute Type (0x01).
- The attribute that was being parsed had an invalid attribute length.
- The attribute that was being parsed had an invalid GARP event.
- The attribute that was being parsed had an invalid VLAN ID. The valid range is from 1 to 4095.

A failed registration can occur for the following reasons:

- Join requests were received on a port that was blocked from learning dynamic VLANs (GVRP Blocking state).
- An entry for a new GVRP VLAN could not be created in the GVRP database.

### Example

```
Dell#show gvrp statistics int tengigabitethernet 1/1
Join Empty Received: 0
Join In Received: 0
Empty Received: 0
LeaveIn Received: 0
Leave Empty Received: 0
Leave All Received: 40
Join Empty Transmitted: 156
Join In Transmitted: 0
Empty Transmitted: 0
Leave In Transmitted: 0
Leave Empty Transmitted: 0
Leave All Transmitted: 41
Invalid Messages/Attributes skipped: 0
Failed Registrations: 0
Dell#
```

### Related Commands

- `show gvrp` — displays the GVRP configuration.
GRUB commands are supported on the Z9000 platform only.

To access this mode, press the ESC key when the following line appears on the console during a system boot:

Press ESC key to stop autoreboot...

Select Force10 Boot on the screen and press C. You enter the GRUB mode immediately, as indicated by the grub> prompt.

**NOTE:** This chapter describes only a few commands available in GRUB.

**NOTE:** You cannot use the Tab key to complete commands in this mode.

**Topics:**
- clear
- list_env
- reboot
- save_env
- set

### clear

Clears the grub screen.

**Z9000**

**Syntax**
clear

**Command Modes**
grub

**Command History**
Version 8.3.11.1  Introduced on the Z9000.

**Example**
grub>clear

### list_env

Lists all the environment variables.

**Z9000**

**Syntax**
list_env

**Command Modes**
grub

**Command History**
Version 8.3.11.1  Introduced on the Z9000.

**Example**
grub>list_env
serverip=10.11.200.241
reboot
Reboots the unit.

Z9000

Syntax  reboot
Command Modes  grub
Command History  Version 8.3.11.1  Introduced on the Z9000.
Usage Information  Save the environment variables before giving the reboot command or the changed variables are lost.
Example  

save_env
Saves the environment variables set using the set command.

Z9000

Syntax  save_env environment variable
Parameters  

| environment variable | Enter the environment variable to be saved. |

Command Modes  grub
Command History  Version 8.3.11.1  Introduced on the Z9000.
Usage Information  The environment variables are listed under the list_env command. You must save the environment variables before rebooting. The save_env command must be used for each variable set using the set command.
set

Sets the environment variables.

Z9000

Syntax

```
set [serverip=address | ipaddr=address | netmask=subnet-mask | gatewayip = address | primary_boot='f10boot location' | secondary_boot='f10boot location' | default_boot='f10boot location' | macaddr=mac-address | baudrate=rate | enablepwdignore | stconfigignore}
```

Parameters

- **serverip**: Set the IP address of the server.
- **ipaddr**: Set the Management IP address of the unit.
- **netmask**: Set the subnet mask of the Management IP address.
- **gatewayip**: Set the IP address of the gateway.
- **primary_boot**: Set the primary boot parameter. The location must be flash0, flash1 or any valid tftp location. The primary boot parameter must be in the following syntax:
  ```
  set primary_boot='f10boot flash0 | flash1 | tftp://ip-addr/file'
  ```
- **secondary_boot**: Set the secondary boot parameter. The location must be flash0, flash1 or any valid tftp location. The secondary boot parameter must be in the following syntax:
  ```
  set secondary_boot='f10boot flash0 | flash1 | tftp://ip-addr/file'
  ```
- **default_boot**: Set the default boot parameter. The location must be flash0, flash1 or any valid tftp location. The default boot parameter must be in the following syntax:
  ```
  set default_boot='f10boot flash0 | flash1 | tftp://ip-addr/file'
  ```
- **macaddr**: Set the MAC address of the unit.
- **baudrate**: Set the baud rate of the console connection.
- **enablepwdignore**: To reload the system software with or without the Enable Password set. Use the following syntax:
  ```
  set enablepwdignore=true|false
  ```
- **stconfigignore**: To enable/disable applying the startup-config during bootup. Use the following syntax:
  ```
  set stconfigignore=true|false
  ```

Command Modes

**grub**

Command History

**Version 8.3.11.1** Introduced on the Z9000.

Usage Information

After setting the values, save the variables that you set using the `save_env` command before rebooting to ensure the variables are saved.

The IP address and the MAC addresses must be a standard IPv4 and MAC address, respectively.
NOTE: The enablepwdignore and stconfigignore GRUB commands, when set as true are applicable only for the first time when the unit boots up. The next time the unit boots up, these variables are set to False and must be set to True in GRUB.

Example

```
grub>set ipaddr=10.11.196.143
grub>set primary_boot='f10boot tftp://10.11.200.241/z9000_image'
grub>set stconfigignore=true
grub>set secondary_boot = 'f10boot flash0'
grub>save_env ipaddr
grub>save_env primary_boot
grub>save_env stconfigignore
grub>save_env secondary_boot
```
This chapter lists and describes the possible ICMP message type resulting from a ping. The first three columns list the possible symbol or type/code. For example, you would receive a ! or 03 as an echo reply from your ping.

### ICMP Messages and Their Definitions.

Internet Group Management Protocol (IGMP)

The IGMP commands are supported by the Dell Networking operating software on the Dell Networking OS.

This chapter contains the following sections:

- IGMP Commands
- IGMP Snooping Commands

Topics:

- IGMP Commands
- IGMP Snooping Commands

IGMP Commands

Dell Networking OS supports IGMPv1/v2/v3 and is compliant with RFC-3376.

Important Points to Remember

- Dell Networking OS supports protocol-independent multicast-sparse (PIM-SM) and protocol-independent source-specific multicast (PIM-SSM) include and exclude modes.
- IGMPv2 is the default version of IGMP on interfaces. You can configure IGMPv3 on interfaces. It is backward compatible with IGMPv2.
- The Z9000 supports up to 95 interfaces.
- There is no hard limit on the maximum number of groups supported.
- IGMPv3 router interoperability with IGMPv2 and IGMPv1 routers on the same subnet is not supported.
- An administrative command (ip igmp version) is added to manually set the IGMP version.
- All commands previously used for IGMPv2 are compatible with IGMPv3.

**clear ip igmp groups**

Clear entries from the group cache table.

**Z9000**

**Syntax**

```
clear ip igmp groups [group-address | interface]
```

**Parameters**

- `group-address` *(OPTIONAL)*: Enter the IP multicast group address in dotted decimal format.
- `interface` *Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.*
Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

debug ip igmp

Enable debugging of IGMP packets.

Z9000

devon ip igmp [group address | interface]

Syntax

● To disable IGMP debugging, use the no debug ip igmp [group address | interface] command.
● To disable all debugging, use the undebug all command.

Parameters

- **group-address** (OPTIONAL) Enter the IP multicast group address in dotted decimal format.
- **interface** Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.

Defaults

Disabled.

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

Internet Group Management Protocol (IGMP)  475
**Version** | **Description**
--- | ---
E-Series legacy command

**Usage Information**
IGMP commands accept only non-VLAN interfaces — specifying VLAN does not yield results. This command displays packets for IGMP and IGMP snooping.

### ip igmp access-group

To specify access control for packets, use this feature.

**Z9000**

**Syntax**
```
ip igmp access-group access-list
```

To remove the feature, use the `no ip igmp access-group access-list` command.

**Parameters**
- `access-list`
Enter the name of the extended ACL (16 characters maximum).

**Defaults**
Not configured

**Command Modes**
INTERFACE (conf-if-interface-slot/port)

**Command History**
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
The access list accepted is an extended ACL. To block IGMP reports from hosts, on a per-interface basis based on the group address and source address that you specify in the access list, use this feature.

### ip igmp group-join-limit

To limit the number of IGMP groups that can be joined in a second, use this feature.

**Z9500**

**Syntax**
```
ip igmp group-join-limit number
```

**Parameters**
- `number`Enter the number of IGMP groups permitted to join in a second. The range is from 1 to 10000.

**Defaults**
none

**Command Modes**
CONFIGURATION (conf-if-interface-slot/port)
ip igmp immediate-leave

Enable IGMP immediate leave.

Z9000

Syntax

ip igmp immediate-leave [group-list prefix-list-name]

To disable ip igmp immediate leave, use the no ip igmp immediate-leave command.

Parameters

group-list prefix-list-name Enter the keywords group-list then a string up to 16 characters long of the prefix-list-name.

Defaults

Not configured.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.6.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Querier normally sends some group-specific queries when a leave message is received for a group prior to deleting a group from the membership database. There may be situations when you require
immediate deletion of a group from the membership database. This command provides a way to achieve the immediate deletion. In addition, this command provides a way to enable immediate-leave processing for specified groups.

**ip igmp last-member-query-interval**

Change the last member query interval, which is the Max Response Time inserted into Group-Specific Queries sent in response to Leave Group messages. This interval is also the interval between Group-Specific Query messages.

**Z9000**

**Syntax**

```
ip igmp last-member-query-interval milliseconds
```

To return to the default value, use the `no ip igmp last-member-query-interval` command.

**Parameters**

- `milliseconds`: Enter the number of milliseconds as the interval. For IGMP version 2, the range is from 100 to 25599. For IGMP version 3, the range is from 100 to 65535. The default value is **1000 milliseconds**.

**Defaults**

1000 milliseconds

**Command Modes**

</table>

**ip igmp querier-timeout**

Change the interval that must pass before a multicast router decides that there is no longer another multicast router that should be the querier.

**Syntax**

```
ip igmp querier-timeout seconds
```

To return to the default value, use the `no ip igmp querier-timeout` command.

**Parameters**

- `seconds`: Enter the number of seconds the router must wait to become the new querier. The range is from 60 to 300. The default is **125 seconds**.

**Defaults**

125 seconds
Command Modes

- INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series in Interface VLAN mode only to enable the system to act as an IGMP Proxy Querier.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series in Interface VLAN mode only to enable the system to act as an IGMP Proxy Querier.</td>
</tr>
</tbody>
</table>

E-Series legacy command.

**ip igmp query-interval**

Change the transmission frequency of IGMP general queries the Querier sends.

**Z9000**

**Syntax**

```
ip igmp query-interval seconds
```n

To return to the default values, use the `no ip igmp query-interval` command.

**Parameters**

- `seconds` Enter the number of seconds between queries sent out. The range is from 1 to 18000. The default is **60 seconds**.

**Defaults**

60 seconds

**Command Modes**

</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.</td>
</tr>
</tbody>
</table>
### ip igmp query-max-resp-time

Set the maximum query response time advertised in general queries.

**NOTE:** The IGMP query-max-resp-time value must be less than the IGMP query-interval value.

**Syntax**

```
ip igmp query-max-resp-time seconds
```

To return to the default values, use the `no ip igmp query-max-resp-time` command.

**Parameters**

- `seconds` Enter the number of seconds for the maximum response time. The range is from 1 to 25. The default is 10 seconds.

**Defaults**

10 seconds

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>
ip igmp ssm-map

To translate (*,G) memberships to (S,G) memberships, use a statically configured list.

**Z9000**

**Syntax**

```
ip igmp ssm-map std-access-list source-address
```

Undo this configuration, that is, remove SSM map (S,G) states and replace them with (*,G) state, use the `ip igmp ssm-map std-access-list source-address` command.

**Parameters**

- **std-access-list** Specify the standard IP access list that contains the mapping rules for multicast groups.
- **source-address** Specify the multicast source address to which the groups are mapped.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Mapping applies to both v1 and v2 IGMP joins; any updates to the ACL are reflected in the IGMP groups. You may not use extended access lists with this command. When you configure a static SSM map and the router cannot find any matching access lists, the router continues to accept (*,G) groups.

**Related Commands**

- `ip access-list standard` — creates a standard access list to filter based on IP address.
### ip igmp static-group

Configure an IGMP static group.

#### Z9000

**Syntax**

```plaintext
ip igmp static-group {group address [exclude [source address]] | [include {source address}]}
```

To delete a static address, use the `no ip igmp static-group {group address [exclude [source address]] | [include {source address}]}` command.

**Parameters**

- **group address**
  - Enter the group address in dotted decimal format (A.B.C.D).

- **exclude source address**
  - (OPTIONAL) Enter the keyword `exclude` then the source address, in dotted decimal format (A.B.C.D), for which a static entry is added.

- **include source address**
  - (OPTIONAL) Enter the keyword `include` then the source address, in dotted decimal format (A.B.C.D), for which a static entry is added.

**Defaults**

```
none
```

**Command Modes**

```
INTERFACE
```

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Expanded to support the exclude and include options.</td>
</tr>
</tbody>
</table>

**E-Series legacy command**

### Usage Information

A group in `include` mode must have at least one source address defined. In `exclude` mode, if you do not specify a source address, Dell Networking OS implicitly assumes all sources are included. If you do not specify either `include` or `exclude`, Dell Networking OS implicitly assumes a IGMPv2 static join.

**Command Limitations**

- Only one mode (`include` or `exclude`) is permitted per multicast group per interface. To configure another mode, all sources belonging to the original mode must be unconfigured.
- If a static configuration is present and a packet for the same group arrives on an interface, the dynamic entry completely overwrites all the static configuration for the group.

**Related Commands**

- `show ip igmp groups` — displays IGMP group information.
### ip igmp version

Manually set the version of the router to IGMPv2 or IGMPv3.

**Z9000**

**Syntax**

```
ip igmp version {2 | 3}
```

**Parameters**

- **2**
  - Enter the number 2 to set the IGMP version number to IGMPv2.
- **3**
  - Enter the number 3 to set the IGMP version number to IGMPv3.

**Defaults**

2 (that is, IGMPv2)

<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

### show ip igmp groups

View the IGMP groups.

**Z9000**

**Syntax**

```
show ip igmp groups [group-address [detail] | detail | interface [group-address [detail]]]
```

**Parameters**

- **group-address**
  - (OPTIONAL) Enter the group address in dotted decimal format to view information on that group only.
- **interface**
  - (OPTIONAL) Enter the interface type and slot/port information:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
    - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
For a port channel interface, enter the keywords `port-channel` then a number.
For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**detail**

(Optional) Enter the keyword `detail` to display the IGMPv3 source information.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series and C-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Expanded to support the <code>detail</code> option.</td>
</tr>
</tbody>
</table>

**E-Series legacy command.**

**Usage Information**

This command displays the IGMP database, including configured entries for either all groups on all interfaces, all groups on specific interfaces, or specific groups on specific interfaces.

The following describes the `show ip igmp groups` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group Address</td>
<td>Lists the multicast address for the IGMP group.</td>
</tr>
<tr>
<td>Interface</td>
<td>Lists the interface type, slot and port number.</td>
</tr>
<tr>
<td>Mode</td>
<td>Displays the IGMP version used.</td>
</tr>
<tr>
<td>Uptime</td>
<td>Displays the amount of time the group has been operational.</td>
</tr>
<tr>
<td>Expires</td>
<td>Displays the amount of time until the entry expires.</td>
</tr>
<tr>
<td>Last Reporter</td>
<td>Displays the IP address of the last host to be a member of the IGMP group.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip igmp groups
Total Number of Groups: 5
IGMP Connected Group Membership
Group Address  Interface  Uptime   Expires
225.0.0.0     Vlan 100   00:00:05 00:02:04
225.0.0.1     Vlan 100   00:00:05 00:02:04
225.0.0.2     Vlan 100   00:00:05 00:02:04
225.0.0.3     Vlan 100   00:00:05 00:02:04
225.0.0.4     Vlan 100   00:00:05 00:02:04
```
Example (VLT)  

**NOTE:** The asterisk (*) after the port channel number (Po 2) highlighted in the following example indicates the port channel is VLT, that the local VLT port channel is down and the remote VLT port is up.

Dell#show ip igmp groups  
Total Number of Groups: 5  
IGMP Connected Group Membership  
Group Address Interface Mode Uptime Expires Last Reporter  
225.0.0.0 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51  
225.0.0.1 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51  
225.0.0.2 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51  
225.0.0.3 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51  
225.0.0.4 Vlan 100 IGMPv2 00:00:05 00:02:04 3.0.0.51

Example (Details)  

Dell#show ip igmp group details  
Interface Vlan 20  
Group 232.1.1.5  
Uptime 00:11:22  
Expires Never  
Router mode INCLUDE  
Last reporter 35.0.0.2  
Group source list  
Source address Expires  
65.0.0.1 00:01:22  
65.0.0.2 00:01:22  
65.0.0.3 00:01:22  
65.0.0.4 00:01:22  
65.0.0.5 00:01:22

**show ip igmp interface**  

View information on the interfaces participating in IGMP.

**Z9000**  

**Syntax**  

```
show ip igmp interface [interface]
```

**Parameters**  

**interface**  

(OPTIONAL) Enter the interface type and slot/port information:  
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.  
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.  
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.  
  - For a port channel interface, enter the keywords port-channel then a number.  
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**Command Modes**  

- EXEC  
- EXEC Privilege

**Command History**  

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
IGMP commands accept only non-VLAN interfaces — specifying VLAN does not yield results.
The `show ip igmp interface` command does not display information corresponding to the loop-
back interfaces.

**Example**

```
Dell#show ip igmp interface
TenGigabitEthernet 1/1 is down, line protocol is down
  Internet protocol processing disabled
TenGigabitEthernet 1/5 is down, line protocol is down
  Internet protocol processing disabled
TenGigabitEthernet 1/6 is down, line protocol is down
  Internet protocol processing disabled
TenGigabitEthernet 1/7 is up, line protocol is down
  Internet protocol processing disabled
Vlan 20
  Inbound IGMP access group is not set
  Internet address is 35.0.0.1/24
  IGMP is enabled on interface
  IGMP query interval is 60 seconds
  IGMP querier timeout is 125 seconds
  IGMP max query response time is 10 seconds
  IGMP last member query response interval is 1000 ms
  IGMP immediate-leave is enabled for all groups
  IGMP activity: 0 joins
  IGMP querying router is 35.0.0.1 (this system)
  IGMP version is 2
```

**show ip igmp ssm-map**

Display is a list of groups that are currently in the IGMP group table and contain SSM mapped sources.

**Z-Series**

**Syntax**

```
show ip igmp ssm-map [group]
```

**Parameters**

`group`  
(OPTIONAL) Enter the multicast group address in the form A.B.C.D to display the list of sources to which this group is mapped.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
### IGMP Snooping Commands

Dell Networking OS supports IGMP Snooping version 2 and 3 on all Dell Networking systems.

#### Important Points to Remember for IGMP Snooping

- Dell Networking OS supports version 1, version 2, and version 3 hosts.
- Dell Networking OS IGMP snooping implementation is based on IP multicast address (not based on Layer 2 multicast mac address) and the IGMP snooping entries are in Layer 3 flow table not in Layer 2 forwarding information base (FIB).
- Dell Networking OS IGMP snooping implementation is based on draft-ietf-magma-snoop-10.
- Dell Networking OS supports IGMP snooping on JUMBO-enabled cards.
- IGMP snooping is not enabled by default on the switch.
- A maximum of 1800 groups and 600 VLAN are supported.
- IGMP snooping is not supported on a default VLAN interface.
- IGMP snooping is not supported over VLAN-Stack-enabled VLAN interfaces (you must disable IGMP snooping on a VLAN interface before configuring VLAN-Stack-related commands).
- IGMP snooping does not react to Layer 2 topology changes triggered by spanning tree protocol (STP).
- IGMP snooping reacts to Layer 2 topology changes multiple spanning tree protocol (MSTP) triggers by sending a general query on the interface that comes in the FWD state.

#### Important Points to Remember for IGMP Querier

- The IGMP snooping Querier supports version 2.
- You must configure an IP address to the VLAN interface for IGMP snooping Querier to begin. The IGMP snooping Querier disables itself when a VLAN IP address is cleared, and then it restarts itself when an IP address is reassigned to the VLAN interface.
- When enabled, IGMP snooping Querier does not start if there is a statically configured multicast router interface in the VLAN.
- When enabled, IGMP snooping Querier starts after one query interval in case no IGMP general query (with IP SA lower than its VLAN IP address) is received on any of its VLAN members.
When enabled, IGMP snooping Querier periodically sends general queries with an IP source address of the VLAN interface. If it receives a general query on any of its VLAN member, it checks the IP source address of the incoming frame.

If the IP SA in the incoming IGMP general query frame is lower than the IP address of the VLAN interface, the switch disables its IGMP snooping Querier functionality.

If the IP SA of the incoming IGMP general query is higher than the VLAN IP address, the switch continues to work as an IGMP snooping Querier.

clear ip igmp snooping groups

Clear snooping entries from the group cache table.

Z9000

clear ip igmp snooping groups [group-address interface | interface]

Parameters

- **group-address** (OPTIONAL) Enter the IP multicast group address in dotted decimal format.
- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
    - For a port channel interface, enter the keywords port-channel then a number.

Command Modes

- **EXEC**

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on S-Series and Z-Series.</td>
</tr>
</tbody>
</table>

Usage Information

IGMP commands accept only non-VLAN interfaces — specifying VLAN does not yield results.

debug ip igmp snooping

Enable debugging of IGMP snooping packets on interfaces and groups.

Z9000

debug ip igmp snooping [group address | interface]

- To disable debugging of IGMP snooping, use the no debug ip igmp snooping [group address | interface] command.
- To disable all debugging, use the undebug all command.

Parameters

- **snooping** Enter the keyword snooping to enable debugging of IGMP snooping.
- **group-address** (OPTIONAL) Enter the IP multicast group address in dotted decimal format.
- **interface** Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

- For a port channel interface, enter the keywords port-channel then a number.

**Defaults**

Disabled.

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, Z9000, and Z9500.</td>
</tr>
</tbody>
</table>

**Usage Information**

IGMP commands accept only non-VLAN interfaces — specifying VLAN does not yield results. This command displays packets for IGMP and IGMP snooping.

### ip igmp snooping enable

Enable IGMP snooping on all or a single VLAN. This command is the master on/off switch to enable IGMP snooping.

**Syntax**

```plaintext
ip igmp snooping enable
```

To disable IGMP snooping, use the `no ip igmp snooping enable` command.

**Defaults**

Disabled.

**Command Modes**

- **CONFIGURATION**
- **INTERFACE VLAN**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>

<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

To enable IGMP snooping, enter this command. When you enable this command from CONFIGURATION mode, IGMP snooping enables on all VLAN interfaces (except the default VLAN).  

- **NOTE:** Execute the `no shutdown` command on the VLAN interface for IGMP Snooping to function.
ip igmp snooping fast-leave

Enable IGMP snooping fast-leave for this VLAN.

Syntax

ip igmp snooping fast-leave

To disable IGMP snooping fast leave, use the no igmp snooping fast-leave command.

Defaults

Not configured.

Command Modes

INTERFACE VLAN — (conf-if-vl-)

Command History

</tbody>
</table>

Usage Information

Queriers normally send some queries when a leave message is received prior to deleting a group from the membership database. There may be situations when you require a fast deletion of a group. When you enable IGMP fast leave processing, the switch removes an interface from the multicast group as soon as it detects an IGMP version 2 leave message on the interface.

ip igmp snooping flood

This command controls the flooding behavior of unregistered multicast data packets.

Syntax

ip igmp snooping flood

To undo this configuration, use the no ip igmp snooping flood command.

Defaults

Enabled.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>Version</td>
<td>Description</td>
</tr>
<tr>
<td>----------</td>
<td>------------------------------</td>

<td>8.2.1.0</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

On the C-Series and S-Series, unregistered multicast data traffic drops when you disable flooding; they do not forward the packets to multicast router ports. On the C-Series and S-Series, in order to disable Layer 2 multicast flooding, disable Layer 3 multicast (no ip multicast-routing).

### ip igmp snooping last-member-query-interval

The last member query interval is the maximum response time inserted into Group-Specific queries sent in response to Group-Leave messages.

**Syntax**

```
ip igmp snooping last-member-query-interval milliseconds
```

To return to the default value, use the `no ip igmp snooping last-member-query-interval milliseconds` command.

**Parameters**

- `milliseconds`: Enter the interval in milliseconds. The range is from 100 to 65535. The default is 1000 milliseconds.

**Defaults**

1000 milliseconds

**Command Modes**

INTERFACE VLAN

**E-Series legacy command**

Internet Group Management Protocol (IGMP) | 491
ip igmp snooping mrouter

Statically configure a VLAN member port as a multicast router interface.

Z9000

Syntax

```
ip igmp snooping mrouter interface interface
```

To delete a specific multicast router interface, use the `no igmp snooping mrouter interface` command.

Parameters

- `interface`
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

Defaults

Not configured.

Command Modes

INTERFACE VLAN — (conf-if-vl-n)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<td>E-Series legacy command.</td>
</tr>
</tbody>
</table>

Usage Information

Dell Networking OS provides the capability of statically configuring the interface to which a multicast router is attached. To configure a static connection to the multicast router, enter the `ip igmp snooping mrouter interface` command in the VLAN context. The interface to the router must be a part of the VLAN where you are entering the command.
ip igmp snooping querier

Enable IGMP querier processing for the VLAN interface.

Syntax

ip igmp snooping querier

To disable IGMP querier processing for the VLAN interface, use the no ip igmp snooping querier command.

Defaults

Not configured.

Command Modes

INTERFACE VLAN — (conf-if-vl-n)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

E-Series legacy command

Usage Information

This command enables the IGMP switch to send General Queries periodically. This behavior is useful when there is no multicast router present in the VLAN because the multicast traffic is not routed. Assign an IP address to the VLAN interface for the switch to act as a querier for this VLAN.

show ip igmp snooping groups

Display snooping related information for all the IGMP groups, interface or one group of one interface.

Z9000

Syntax

show ip igmp snooping groups [group-address [detail] | detail | interface [group-address [detail]]]

Parameters

group-address (OPTIONAL) Enter the group address in dotted decimal format to view information on that group only.

interface (OPTIONAL) Enter the interface type and slot/port information:
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.

For a port channel interface, enter the keywords `port-channel` then a number.

For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**detail** (OPTIONAL) Enter the keyword `detail` to display the IGMPv3 source information.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S4810, S4820T, S5000, S6000, Z9000, and Z9500.</td>
</tr>
</tbody>
</table>

**Usage Information**
This command displays the IGMP database, including configured entries for either all groups on all interfaces, all groups on specific interfaces, or specific groups on specific interfaces.

The following describes the `show ip igmp groups` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Group Address</td>
<td>Lists the multicast address for the IGMP group.</td>
</tr>
<tr>
<td>Interface</td>
<td>Lists the interface type, slot and port number.</td>
</tr>
<tr>
<td>Mode</td>
<td>Displays the IGMP version used.</td>
</tr>
<tr>
<td>Uptime</td>
<td>Displays the amount of time the group has been operational.</td>
</tr>
<tr>
<td>Expires</td>
<td>Displays the amount of time until the entry expires.</td>
</tr>
<tr>
<td>Last Reporter</td>
<td>Displays the IP address of the last host to be a member of the IGMP group.</td>
</tr>
<tr>
<td>Member Ports</td>
<td>Indicates the port channel. If the port channel is VLT, an asterisk (*) after the port channel number indicates the port channel is locally down and that a remote VLT port is up.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip igmp snooping groups
Total Number of Groups: 1
IGMP Connected Group Membership
Group Address    Interface      Mode          Uptime    Expires   Last Reporter
225.1.1.1        Vlan 10       IGMPv2-Compat  00:00:07  00:02:09  1.1.1.2
Member Ports: Te 1/17
Dell#
```

**show ip igmp snooping mrouter**

Display multicast router interfaces.

**Syntax**
```
show ip igmp snooping mrouter [vlan number]
```

**Parameters**
- `vlan number` Enter the keyword `vlan` then the vlan number. The range is from 1 to 4094.

**Command Modes**
- EXEC
- EXEC Privilege
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

E-Series legacy command.

Usage Information

If the port channel is a VLT port channel, an asterisk (*) after the port channel number (Po 100*) indicates the port channel is locally down and that a remote VLT port is up.

Example

```
Dell# show ip igmp snooping mrouter
Interface Router Ports
Vlan 2 Te 1/3, Po 1
Dell#
```

Related Commands

- `ip igmp snooping mrouter` — configures a static connection to the multicast router.
- `show ip igmp groups` — view groups.
The commands in this chapter are supported by Dell Networking operating software on the Z9000 platform.

This chapter contains the following sections:

- Basic Interface Commands
- Port Channel Commands
- Time Domain Reflectometer (TDR)
- UDP Broadcast

Topics:

- Basic Interface Commands
- Egress Interface Selection (EIS) Commands
- Port Channel Commands
- Time Domain Reflectometer (TDR)
- UDP Broadcast
- Enhanced Validation of Interface Ranges
- ip http source-interface

## Basic Interface Commands

The following commands are for Physical, Loopback, and Null interfaces.

### clear counters

Clear the counters used in the show interfaces commands for all virtual router redundancy protocol (VRRP) groups, virtual local area networks (VLANs), and physical interfaces, or selected ones.

#### Z9000

**Syntax**

```
clear counters [interface] [vrrp [ipv6 {vrid} | learning-limit | vlan vlan-id]]
```

**Parameters**

- **interface** (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:
  - For IPv4 access-group counters, enter the keyword `ip`.
  - For IPv6 access-group counters, enter the keyword `ipv6`.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For MAC access-group counters, enter the keyword `mac`.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For the management interface on the RPM, enter the keyword `ManagementEthernet` then slot/port information. The slot range is from 0 to 1 and the port range is 0.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
For a tunnel interface, enter the keyword `tunnel`. The range is from 1 to 16383.

```plaintext
vrrp [ipv6] vrid
```

(Optional) Enter the keyword `vrrp` to clear the counters of all VRRP groups. To clear the counters of VRRP groups on all IPv6 interfaces, enter `ipv6`. To clear the counters of a specified group, enter a VRID number from 1 to 255.

```plaintext
learning-limit
```

(Optional) Enter the keywords `learning-limit` to clear unknown source address (SA) drop counters when MAC learning limit is configured on the interface.

```plaintext
vlan vlan-id
```

Enter the keyword `vlan` followed by the interface VLAN number. The range is from 1 to 4094.

**Defaults**

Without an interface specified, the command clears all interface counters.

**Command Modes**

`EXEC Privilege`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

</table>

**Example**

```plaintext
Dell(conf)#clear counters
Clear counters on all interfaces [confirm]
```

**Related Commands**

- `show interfaces` — displays information on the interfaces.

---

**clear dampening**

Clear the dampening counters on all the interfaces or just the specified interface.

**Z9000**

**Syntax**

```
clear dampening [interface]
```
Parameters

interface (OPTIONAL) Enter any of the following keywords and slot/port or number to clear counters from a specified interface:

- For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

Defaults

Without an interface specified, the command clears all interface dampening counters.

Command Modes

EXEC Privilege

Command History

Clear dampening counters on TeGi 1/10 [confirm] y
Dell#

Related Commands

show interfaces dampening — displays interface dampening information.
dampening — configures dampening on an interface.

**dampening**

Configure dampening on an interface.

**Z9000**

**Syntax**

dampening [[[half-life] [reuse-threshold]] [suppress-threshold]] [max-suppress-time]]

**Parameters**

- **half-life**
  Enter the number of seconds after which the penalty is decreased. The penalty decreases half after the half-life period expires. The range is from 1 to 30 seconds. The default is 5 seconds.

- **reuse-threshold**
  Enter a number as the reuse threshold, the penalty value below which the interface state is changed to “up”. The range is from 1 to 20000. The default is 750.
suppress-threshold

Enter a number as the suppress threshold, the penalty value above which the interface state is changed to “error disabled”. The range is from 1 to 20000. The default is 2500.

max-suppress-time

Enter the maximum number for which a route can be suppressed. The default is four times the half-life value. The range is from 1 to 86400. The default is 20 seconds.

Defaults

Disabled.

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

With each flap, Dell Networking OS penalizes the interface by assigning a penalty (1024) that decays exponentially depending on the configured half-life. After the accumulated penalty exceeds the suppress threshold value, the interface moves to the Error-Disabled state. This interface state is deemed as “down” by all static/dynamic Layer 2 and Layer 3 protocols. The penalty is exponentially decayed based on the half-life timer. After the penalty decays below the reuse threshold, the interface enables. The configured parameters are as follows:

- suppress-threshold should be greater than reuse-threshold
- max-suppress-time should be at least 4 times half-life

**NOTE:** You cannot apply dampening on an interface that is monitoring traffic for other interfaces.

Example

```bash
Dell(conf-if-te-1/10)#dampening 20 800 4500 120
Dell(conf-if-te-1/10)#
```

Related Commands

- clear dampening — clears the dampening counters on all the interfaces or just the specified interface.
- show interfaces dampening — displays interface dampening information.

description

Assign a descriptive text string to the interface.

Z9000

Syntax

description desc_text

To delete a description, use the no description command.
Parameters

`desc_text` Enter a text string up to 240 characters long.

Defaults

none

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Usage Information

Important Points to Remember:

- To use special characters as a part of the description string, you must enclose the whole string in double quotes.
- Spaces between characters are not preserved after entering this command unless you enclose the entire description in quotation marks ("desc_text").
- Entering a text string after the description command overwrites any previous text string that you previously configured as the description.
- The shutdown and description commands are the only commands that you can configure on an interface that is a member of a port-channel.
- Use the show interfaces description command to display descriptions configured for each interface.

**duplex (Management)**

Set the mode of the Management interface.

**Z9000**

**Syntax**

`duplex {half | full}`

To return to the default setting, use the no duplex command.

**Parameters**

`half` Enter the keyword half to set the Management interface to transmit only in one direction.

`full` Enter the keyword full to set the Management interface to transmit in both directions.

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

- **Version 9.0.2.0** Introduced on the S6000.
- **Version 8.3.11.1** Introduced on the Z9000.
- **Version 8.1.1.0** Introduced on the E-Series ExaScale.
- **Version 7.5.1.0** Introduced on the C-Series.
- **Version 7.4.1.0** Documentation modified—added Management to distinguish from duplex (10/100 Interfaces).

**Usage Information**

This command applies only to the Management interface on the route processor modules (RPMs).

**Related Commands**

- `interface ManagementEthernet` — configures the Management port on the system (either the Primary or Standby RPM).
- `duplex (Management)` — sets the mode of the Management interface.
- `management route` — configures a static route that points to the Management interface or a forwarding router.
- `speed (Management interface)` — sets the speed on the Management interface.

### duplex (10/100 Interfaces)

Configure duplex mode on any physical interfaces where the speed is set to 10/100.

**Syntax**

duplex {half | full}

To return to the default setting, use the no duplex command.

**Parameters**

- **half**
  - Enter the keyword half to set the physical interface to transmit only in one direction.
- **full**
  - Enter the keyword full to set the physical interface to transmit in both directions.

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

</tr>
</tbody>
</table>
This command applies to any physical interface with speed set to 10/100.

**NOTE:** Starting with Dell Networking OS version 7.8.1.0, when you use a copper SFP2 module with catalog number GP-SFP2-1T in the S25P model of the S-Series, you can manually set its speed with the `speed` command. When you set the speed to 10 Mbps or 100 Mbps, you can also execute the `duplex` command.

### Related Commands

- `negotiation auto` — enables or disables auto-negotiation on an interface.

---

**flowcontrol**

Control how the system responds to and generates 802.3x pause frames on 10 Gig ports.

**Syntax**

```
flowcontrol rx {off | on} tx {off | on}
```

**Parameters**

- `rx on`  
  Enter the keywords `rx on` to process the received flow control frames on this port. This is the default value for the receive side.

- `rx off`  
  Enter the keywords `rx off` to ignore the received flow control frames on this port.

- `tx on`  
  Enter the keywords `tx on` to send control frames from this port to the connected device when a higher rate of traffic is received.

- `tx off`  
  Enter the keywords `tx off` so that flow control frames are not sent from this port to the connected device when a higher rate of traffic is received.

**Defaults**

- Z9000: `rx off tx off`

**Command Modes**

- INTERFACE

**Command History**

</tbody>
</table>
| 7.8.1.0     | Introduced on the C-Series and S-Series with the thresholds option.

**Usage Information**

The globally assigned 48-bit Multicast address 01-80-C2-00-00-01 is used to send and receive pause frames. To allow full-duplex flow control, stations implementing the pause operation instruct the MAC to enable the reception of frames with a destination address equal to this multicast address.

When a port receives traffic at a higher rate than it can process, the frames are stored in the port buffer. As a result, buffer usage increases. When the buffer usage reaches the value specified in the “pause-threshold” argument, the port sends PAUSE frame to the connected link partner to stop sending the traffic. Eventually this reduces the buffer usage. When the buffer usage drops by the value specified in the “resume-threshold”, the port again sends a PAUSE frame with 0 as wait-time. This results in resume of the paused traffic flow.

**Important Points to Remember**
Do not enable tx pause when buffer carving is enabled. For information and assistance, consult Dell Networking TAC.

The only configuration applicable to half duplex ports is rx off tx off. The following error is returned:

Can’t configure flowcontrol when half duplex is configue, config ignored

Half duplex cannot be configured when the flow control configuration is on (default is rx on tx on). The following error is returned:

Can’t configure half duplex when flowcontrol is on, config ignored

**NOTE:** The flow control must be off (rx off tx off) before configuring the half duplex.

Speeds less than 1 Gig cannot be configured when the asymmetric flow control configuration is on. The following error is returned:

Can’t configure speed <1G when Asymmetric flowcontrol is on, config ignored

Dell Networking OS only supports rx on tx on and rx off tx off for speeds less than 1 Gig (Symmetric).

**NOTE:** If you use the disable rx flow control command, Dell Networking recommends rebooting the system.

**Example**

```
Dell(conf-if-Te-1/1)#show config
!
interface TenGigabitEthernet 1/1
no ip address
switchport
no negotiation auto
flowcontrol rx off tx on
no shutdown
...
```

**Example (Values)**

This Example shows how Dell Networking OS negotiates the flow control values between two Dell Networking chassis connected back-to-back using 1G copper ports.

Related Commands

show running-config — displays the flow configuration parameters (non-default values only).
show interfaces — displays the negotiated flow control parameters.

interface

Configure a physical interface on the switch.

Z9000

Syntax

interface interface range

Parameters

interface Enter one of the following keywords and slot/port or number information:
- For a null interface, enter the keyword null then the slot/port information. The Null interface number is 0.
- For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1. The port range is 0.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a Tunnel interface, enter the keyword tunnel then the tunnel ID. The range is from 1 to 16383.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

range (Optional) Enter the keyword range to configure an interface range.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

</tr>
</tbody>
</table>
Version | Description
--------|-------------
8.3.7.0 | Introduced on the S4810.
8.5.1.0 | Added support for 4-port 40G line cards on ExaScale.
8.1.1.0 | Introduced on the E-Series ExaScale.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
6.4.1.0 | Introduced

Usage Information

You cannot delete a physical interface.

By default, physical interfaces are disabled (shutdown) and are not assigned to an IP address or switchport. To place an interface in Layer 2 mode, ensure that the interface’s configuration does not contain an IP address and enter the switchport command.

You can create up to 64 tunnel interfaces. The tunnel is added as a logical interface with no default configuration. To delete a tunnel interface, use the no interface tunnel tunnel-id command.

The tunnel interface operates as an ECMP (equal cost multi path) only when the next hop to the tunnel destination is over a physical interface. If you select any other interface as the next hop to the tunnel destination, the tunnel interface does not operate as an ECMP.

Example

```
Dell(conf)#int tengigabitethernet 1/10
Dell(conf-if-te-1/10)#exit
Dell(conf)#
```

Related Commands

interface loopback — configures a Loopback interface.
interface null — configures a Null interface.
interface port-channel — configures a port channel.
interface vlan — configures a VLAN.
show interfaces — displays the interface configuration.

interface group

Create or delete group of VLANs with a single command. You can also use this command to apply a set of configurations on a group of interfaces.

Z9000

Syntax

```
interface group [fortyGigE slot/port { - port } | tengigabitethernet slot/port { - port } | vlan vlanid { - vlanid } ]
```

To delete a range of VLANs, use the following command: no interface group vlan vlanid {-vlanid}

Parameters

- `interface`, `interface,...` Enter the keywords interface group and one of the interfaces — slot/port or VLAN number. Select the range of interfaces for bulk configuration. Spaces are not required between the commas. Comma-separated ranges can include VLANs and physical interfaces.
- Enter the member VLANs using VLAN IDs (separated by commas), a range of VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (separated by a hyphen), a single VLAN ID, or a combination. For example: VLAN IDs (comma-separated): 3, 4, 6. Range (hyphen-separated): 3-10.
- Slot/Port information need not contain a space before and after the dash. For example, both of the following commands are valid: interface
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Command Modes

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, Z9000, and MXL Switch.</td>
</tr>
</tbody>
</table>

Usage Information

The `interface group` command will create all the non-existent VLANs specified in the range. On successful command execution, the CLI switches to the interface group context.

The configuration commands inside the group context will be the similar to that of the existing range command.

Note: For release 9.4(0.0), the group command is supported only for VLANs and physical interfaces.

Example

```sh
Dell(conf)#interface group ?
fortyGigE       FortyGigabit Ethernet interface
gigabitethernet GigabitEthernet interface IEEE 802.3z
tengigabitethernet TenGigabit Ethernet interface
vlan            VLAN keyword

Dell(conf)# interface group vlan 1 - 2 , tengigabitethernet 1/10
Dell(conf-if-group-vl-1-2,te-1/10)# no shutdown
Dell(conf-if-group-vl-1-2,te-1/10)# end
```

Related Commands

- **interface range** — Configures a range of interfaces.
- **interface vlan** — Configures a VLAN.

### interface loopback

Configure a Loopback interface.

**Z9000**

**Syntax**

```
interface loopback number
```

To remove a loopback interface, use the `no interface loopback number` command.

**Parameters**

- **number**
  
Enter a number as the interface number. The range is from 0 to 16383.

**Defaults**

Not configured.

**Command Modes**

- **CONFIGURATION**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

506 Interfaces
Example

Dell(conf)#interface loopback 1655
Dell(conf-if-lo-1655)#

Related Commands

interface — configures a physical interface.
interface null — configures a Null interface.
interface port-channel — configures a port channel.
interface vlan — configures a VLAN.

interface ManagementEthernet

Configure the Management port on the system (either the Primary or Standby RPM).

Z9000

Syntax

interface ManagementEthernet slot/port

Parameters

slot/port Enter the keyword ManagementEthernet, then the slot number (0 or 1) and port number zero (0).

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.4.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

Usage Information

You cannot delete a Management port.

The Management port is enabled by default (no shutdown). To assign an IP address to the Management port, use the ip address command.

If your system has two RPMs installed, use the show redundancy command to display which RPM is the Primary RPM.
Example

Dell(conf)#interface management ethernet 0/0
Dell(conf-if-ma-0/0)#

Related Commands

management route — configures a static route that points to the Management interface or a forwarding router.
speed (Management interface) — clears the FIB entries on a specified line card.

interface null

Configure a Null interface on the switch.

Z9000

Syntax

interface null number

Parameters

number Enter zero (0) as the Null interface number.

Defaults

Not configured; number = 0

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.4.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

Usage Information

You cannot delete the Null interface. The only configuration command possible in a Null interface is ip unreachables.

Example

Dell(conf)#interface null 0
Dell(conf-if-nu-0)#

Related Commands

interface — configures a physical interface.
interface loopback — configures a Loopback interface.
interface port-channel — configures a port channel.
interface vlan — configures a VLAN.
ip unreachables — enables generation of internet control message protocol (ICMP) unreachable messages.
interface range

This command permits configuration of a range of interfaces to which subsequent commands are applied (bulk configuration).

Using the interface range command, you can enter identical commands for a range of interface.

Z9000

Syntax

interface range interface {slot/port | port} — port}, interface {slot/port | port} — port},...

Parameters

interface {slot/port | port} — port}, interface {slot/port | port} — port},... Enter interface range and one of the interfaces and then slot/port, port-channel, or VLAN number information. Select the range of interfaces for bulk configuration. You can enter up to six comma-separated ranges. Spaces are not required between the commas. The ranges can include VLANs, port-channels, and physical interfaces.

- For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
- For a Tunnel interface, enter the keyword Tunnel then a number from 1 to 16383.

Defaults

None

</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-Version</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

When creating an interface range, interfaces appear in the order they are entered; they are not sorted. The command verifies that interfaces are present (physical) or configured (logical).

Important Points to Remember:

- Bulk configuration is created if at least one interface is valid.
- Non-existing interfaces are excluded from the bulk configuration with a warning message.
The interface range prompt includes interface types with slot/port information for valid interfaces. The prompt allows for a maximum of 32 characters. If the bulk configuration exceeds 32 characters, it is represented by an ellipsis (...).

When the interface range prompt has multiple port ranges, the smaller port range is excluded from the prompt.

If overlapping port ranges are specified, the port range is extended to the smallest start port and the biggest end port.

Example (Bulk)

Dell(conf)# interface range tengigabitethernet 2/1 - 11, fortyGigE 3/3, tengigabitethernet 3/10
% Warning: Non-existing ports (not configured) are ignored by interface-range

Example (Multiple Ports)

Dell(conf)# interface range tengigabitethernet 2/10 - 23, tengigabitethernet 2/12 - 17
Dell(conf-if-range-te-2/10-23)#

Example (Overlapping Ports)

Dell(conf)# interface range tengigabitethernet 2/3 - 11, tengigabitethernet 2/3 - 23
Dell(conf-if-range-te-2/3-23)#

Usage Information

Only VLAN and port-channel interfaces created using the interface vlan and interface port-channel commands can be used in the interface range command.

Use the show running-config command to display the VLAN and port-channel interfaces. VLAN or port-channel interfaces that are not displayed in the show running-config command cannot be used with the bulk configuration feature of the interface range command. You cannot create virtual interfaces (VLAN, Port-channel) using the interface range command.

NOTE: If a range has VLAN, physical and port-channel interfaces, only commands related to physical interfaces can be bulk configured. To configure commands specific to VLAN and port-channel only those respective interfaces should be configured in a particular range.

Example (Single Range)

This example shows a single range bulk configuration.

Dell(config)# interface range tengigabitethernet 5/3 - 23
Dell(config-if-range-te-5/3-23)# no shutdown
Dell(config-if-range-te-5/3-23)#

Example (Multiple Range)

This example shows how to use commas to add different interface types to the range enabling all Tengigabit Ethernet interfaces in the range 5/1 to 5/23 and both Tengigabit Ethernet interfaces 1/1 and 1/2.

Dell(config-if)# interface range tengigabitethernet 5/1 - 5/23, tengigabitethernet 1/1 - 1/2
Dell(config-if-range-te-1/1-2,te-5/1-23)# no shutdown
Dell(config-if-range-te-1/1-2,te-5/1-23)#

Example (Multiple Range)

This example shows how to use commas to add VLAN and port-channel interfaces to the range.

Dell(config-if)# interface range tengigabitethernet 5/1 - 23, tengigabitethernet 1/1 - 2, Vlan 2-100, Port 1-25
Dell(config-if-range-te-1/1-2,te-5/1-23,vl-2-100,po-1-25)# no shutdown
Dell(config-if-range-te-5/1-24,te-1/1-2,vl-2-100,po-1-25)#

Related Commands

interface port-channel — configures a port channel group.
interface vlan — configures a VLAN interface.
show config (from INTERFACE RANGE mode) — shows the bulk configuration interfaces.
**interface range macro (define)**

Defines a macro for an interface range and then saves the macro in the running configuration.

**Z9000**

**Syntax**

```
define interface range macro name interface , interface , ...
```

**Parameters**

- `name`
  - Enter up to 16 characters for the macro name.
- `interface, interface, ...
  - Enter the keywords `interface range` and one of the interfaces — slot/port, port-channel, or VLAN number. Select the range of interfaces for bulk configuration. You can enter up to six comma-separated ranges. Spaces are not required between the commas. Comma-separated ranges can include VLANs, port-channels, and physical interfaces.
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Tunnel interface, enter the keyword `tunnel` then the tunnel ID. The range is from 1 to 16383.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

`none`

</tr>
<tr>
<td>6.2.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

**Example (Single Range)**
This example shows the macro named test that was defined earlier.

```
Dell(config)#interface range macro test
Dell(config-if-range-te-1/1-3,te-5/1-47,te-13/1-89)#
Dell
```

**Related Commands**
- `interface range` — configures a range of command (bulk configuration).
- `interface range macro (define)` — defines a macro for an interface range (bulk configuration).
interface vlan

Configure a VLAN. You can configure up to 4094 VLANs.

Z9000

Syntax

```
interface vlan vlan-id [of-instance(of-id)]
```

Parameters

```
of-instance(of-id)
```
Enter the keyword `of-instance` then the OpenFlow instance ID to add the VLAN to the specified OpenFlow instance. The range is from 1 to 8.

**NOTE:** Associate the OpenFlow instance with the VLAN when the VLAN is created. An existing VLAN cannot be associated with an OpenFlow instance.

Defaults

Not configured, except for the Default VLAN, which is configured as VLAN 1.

Command Modes

`CONFIGURATION`

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>

<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

For more information about VLANs and the commands to configure them, refer to the Virtual LAN (VLAN) Commands section of the Layer 2 chapter.

FTP, TFTP, and SNMP operations are not supported on a VLAN. MAC ACLs are not supported in VLANs. IP ACLs are supported. For more information, refer to the Access Control Lists (ACL) chapter.

The following features are not supported on VLANs associated with an OpenFlow instance:

- IPv4
- IPv6
- MTU

If OpenFlow VLANs are configured on the switch, spanning-tree protocols cannot be enabled simultaneously.

Example (Single Range)

```
Dell(conf)#int vlan 3
Dell(conf-if-vl-3)#
```

Related Commands

- `interface` — configures a physical interface.
- `interface loopback` — configures a loopback interface.
- `interface null` — configures a null interface.
- `interface port-channel` — configures a port channel group.
- `show vlan` — displays the current VLAN configuration on the switch.
- `shutdown` — disables/enables the VLAN.
- `tagged` — adds a Layer 2 interface to a VLAN as a tagged interface.
- `untagged` — adds a Layer 2 interface to a VLAN as an untagged interface.
**intf-type cr4 autoneg**

Set the interface type as CR4 with auto-negotiation enabled.

**Z9000**

**Syntax**

```
intf-type cr4 autoneg
```

If you configure `intf-type cr4 autoneg`, use the `no intf-type cr4 autoneg` command to set the interface type as cr4 with autonegotiation disabled.

**Defaults**

Not configured

**Command Modes**

CONFIGURATION

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.16.1</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you configure interface type as CR4 with auto-negotiation enabled, also configure CR4 with autonegotiation. Many DAC cable link issues are resolved by setting the interface type as CR4.

**Related Commands**

- `interfaces` — configures a physical interface.
- `interface loopback` — configures a loopback interface.
- `interface null` — configures a null interface.
- `interface port-channel` — configures a port channel group.

**keepalive**

Send keepalive packets periodically to keep an interface alive when it is not transmitting data.

**Z9000**

**Syntax**

```
keepalive
```

To stop sending keepalive packets, use the `no keepalive` command.

**Defaults**

Enabled.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>

<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
### Description

When you configure keepalive, the system sends a self-addressed packet out of the configured interface to verify that the far end of a WAN link is up. When you configure no keepalive, the system does not send keepalive packets and so the local end of a WAN link remains up even if the remote end is down.

### intf-type cr4 autoneg

Set the interface type as CR4 with auto-negotiation enabled.

**Syntax**

```
intf-type cr4 autoneg
```

If you configure `intf-type cr4 autoneg`, use the `no intf-type cr4 autoneg` command to set the interface type as cr4 with autonegotiation disabled.

**Defaults**

Not configured

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
This command is supported on C-Series, S-Series, and E-Series (TeraScale and ExaScale) 10/100/1000 Base-T Ethernet interfaces.

The no negotiation auto command is only available if you first manually set the speed of a port to 10Mbits or 100Mbits.

The negotiation auto command provides a mode option for configuring an individual port to forced-master/forced slave after you enable auto-negotiation.

NOTE: The mode option is not available on non-10/100/1000 Base-T Ethernet line cards.

If you do not use the mode option, the default setting is slave. If you do not configure forced-master or forced-slave on a port, the port negotiates to either a master or a slave state. Port status is one of the following:

- Forced-master
- Force-slave
- Master
- Slave
- Auto-neg Error — typically indicates that both ends of the node are configured with forced-master or forced-slave.

CAUTION: Ensure that one end of your node is configured as forced-master and one is configured as forced-slave. If both are configured the same (that is, forced-master or forced-slave), the show interfaces command flaps between an auto-neg-error and forced-master/slave states.

You can display master/slave settings with the show interfaces command.

Example (Master/Slave)

```
Dell(conf)# interface tengigabitethernet 1/1
Dell(conf-if)#neg auto
Dell(conf-if-autoneg)# ?
end          Exit from configuration mode
exit         Exit from autoneg configuration mode
mode         Specify autoneg mode
no           Negate a command or set its defaults
show         Show autoneg configuration information
Dell(conf-if-autoneg)#mode ?
forced-master Force port to master mode
forced-slave Force port to slave mode
Dell(conf-if-autoneg)#
```
Dell#show interfaces configured
TenGigabitEthernet 13/18 is up, line protocol is up
Hardware is Force10Eth, address is 00:01:e8:05:f7:fc
  Current address is 00:01:e8:05:f7:fc
Interface index is 474791997
Internet address is 1.1.1.1/24
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 1000 Mbit, Mode full duplex, Master
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interfaces" counters 00:12:42
Queueing strategy: fifo
Input Statistics:
...
For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Interfaces

m - Change mode c - Clear screen
l - Page up a - Page down
T - Increase refresh interval t - Decrease refresh interval
q - Quit
**mtu**

Set the link maximum transmission unit (MTU) (frame size) for an Ethernet interface.

**Z9000**

**Syntax**

```
mtu value
```

To return to the default MTU value, use the `no mtu` command.

**Parameters**

`value` Enter a maximum frame size in bytes. The range is from 594 to 9252 for the Z9000. The default is **1554**.

**Defaults**

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>

<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-Version 6.2.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the packet includes a Layer 2 header, the difference between the link MTU and IP MTU (`ip mtu` command) must be enough bytes to include the Layer 2 header.

When you enter the `no mtu` command, Dell Networking OS reduces the IP MTU value to 1536 bytes.

Link MTU and IP MTU considerations for port channels and VLANs are as follows.

**port channels:**

- All members must have the same link MTU value and the same IP MTU value.
- The port channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU 2000, the port channel’s MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

**VLANs:**

- All members of a VLAN must have same IP MTU value.
- Members can have different Link MTU values. Tagged members must have a link MTU 4 bytes higher than untagged members to account for the packet tag.
- The VLAN link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the VLAN members. For example, the VLAN contains tagged members with Link MTU of 1522 and IP MTU of 1500 and untagged members with Link MTU of 1518 and IP MTU of 1500. The VLAN’s Link MTU cannot be higher than 1518 bytes and its IP MTU cannot be higher than 1500 bytes.

The following shows the difference between Link MTU and IP MTU.
**Layer 2 Overhead**

<table>
<thead>
<tr>
<th>Ethernet (untagged)</th>
<th>18 bytes</th>
</tr>
</thead>
<tbody>
<tr>
<td>VLAN Tag</td>
<td>22 bytes</td>
</tr>
<tr>
<td>Untagged Packet with VLAN-Stack Header</td>
<td>22 bytes</td>
</tr>
<tr>
<td>Tagged Packet with VLAN-Stack Header</td>
<td>26 bytes</td>
</tr>
</tbody>
</table>

**portmode hybrid**

To accept both tagged and untagged frames, set a physical port or port-channel. A port configured this way is identified as a hybrid port in report displays.

**Z9000**

**Syntax**

```
portmode hybrid
```

To return a port to accept either tagged or untagged frames (non-hybrid), use the **no portmode hybrid** command.

**Defaults**

non-hybrid

**Command Modes**

INTERFACE (conf-if-interface-slot/port)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

</tr>
</tbody>
</table>

**Usage Information**

The following describes the **interface** command shown in the following example. This example sets a port as hybrid, makes the port a tagged member of VLAN 20, and an untagged member of VLAN 10, which becomes the native VLAN of the port. The port now accepts:

- untagged frames and classify them as VLAN 10 frames
- VLAN 20 tagged frames

The following describes the **do show interfaces** command shown in the following example. This example shows output with "Hybrid" as the newly added value for 802.1QTagged. The options for this field are:

- True — port is tagged
The following describes the `interface vlan` command shown in the following example. This example shows unconfiguration of the hybrid port using the `no portmode hybrid` command.

**NOTE:** Remove all other configurations on the port before you can remove the hybrid configuration from the port.

```
Example
Dell(conf)#interface tengigabitethernet 7/1
Dell(conf-if-gi-7/0)#portmode hybrid
Dell(conf-if-gi-7/0)#interface vlan 10
Dell(conf-if-vl-10)#untagged tengigabitethernet 7/1
Dell(conf-if-vl-10)#interface vlan 20
Dell(conf-if-vl-20)#tagged tengigabitethernet 7/1
Dell(conf-if-vl-20)#

Example
Dell(conf-if-vl-20)#do show interfaces switchport
Name: TenGigabitEthernet 7/1
802.1QTagged: Hybrid
Vlan membership:
Vlan 10, Vlan 20
Native VlanId: 10
Dell(conf-if-vl-20)#

Example (Vlan)
Dell(conf-if-vl-20)#interface vlan 10
Dell(conf-if-vl-10)#no untagged tengigabitethernet 7/1
Dell(conf-if-vl-10)#interface vlan 20
Dell(conf-if-vl-20)#no tagged tengigabitethernet 7/1
Dell(conf-if-vl-20)#interface tengigabitethernet 7/1
Dell(conf-if-gi-7/0)#no portmode hybrid
Dell(conf-if-vl-20)#
```

**Related Commands**
- `show interfaces switchport` — displays the configuration of switchport (Layer 2) interfaces on the switch.
- `switchport` — places the interface in a Layer 2 mode.
- `vlan-stack trunk` — specifies an interface as a trunk port to the Stackable VLAN network.

### rate-interval

Configure the traffic sampling interval on the selected interface.

**Z9000**

**Syntax**

```
rates-interval seconds
```

**Parameters**

- `seconds` Enter the number of seconds for which to collect traffic data. The range is from 5 to 299 seconds.

**Defaults**

- `299 seconds`

**Command Modes**

- INTERFACE
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.1.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

The output of the show interfaces command displays the configured rate interval, along with the collected traffic data.

**Related Commands**

- show interfaces — displays information on physical and virtual interfaces.

### show config

Display the interface configuration.

**Z9000**

**Syntax**

```
show config
```

**Command Modes**

INTERFACE

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>

interface TenGigabitEthernet 1/1
  no ip address
  switchport
  no shutdown
!
interface TenGigabitEthernet 1/2
  no ip address
  switchport
  no shutdown
Dell(conf-if-range-gi-1/1-2)#

show interfaces

Display information on a specific physical interface or virtual interface.

Z9000

Syntax
show interfaces interface

Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
</tr>
</thead>
<tbody>
<tr>
<td>interface</td>
</tr>
</tbody>
</table>
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For stack-units, enter the keywords `stack-unit` then the slot/port information. The range is from 0 to 11.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- For a tunnel interface, enter the keyword `tunnel` then the tunnel ID. The range is from 1 to 16383.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.2(0.2)</td>
<td>Added support for the tunnel interface type.</td>
</tr>
<tr>
<td>9.1(0.0)</td>
<td>Updated Management Ethernet output to include two global IPv6 addresses on S4810 and Z9000 and added output example showing OpenFlow instance ID.</td>
</tr>
<tr>
<td>8.3.12.1</td>
<td>Updated command output to support multiple IPv6 addresses on S4810.</td>
</tr>
<tr>
<td>8.3.11.4</td>
<td>Output expanded to support eSR4 optics in Z9000.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.5.1.0</td>
<td>Added support for 4-port 40G line cards on ExaScale.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.2.1.2</td>
<td>Included SFP and SFP+ optics power detail in the E-Series and C-Series output.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Added support for 4093 VLANs on the E-Series ExaScale. Prior releases supported 2094.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Output expanded to include SFP+ media on the C-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.4.1.0</td>
<td>Changed the organization of the display output.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Added the Pluggable Media Type field in the E-Series TeraScale output.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use the `show interfaces` command for details on a specific interface.

**NOTE:** In the CLI output, the power value is rounded to a 3-digit value. For receive/transmit power that is less than 0.000, an `snmp query` returns the corresponding dbm value even though the CLI displays as 0.000.

**NOTE:** After the counters are cleared, the line-rate continues to increase until it reaches the maximum line rate. When the maximum line rate is reached, there is no change in the line-rate.

**User Information**

The following table describes the `show interfaces` command shown in the 10G (TeraScale) Example.
<table>
<thead>
<tr>
<th>Line</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet 1/1...</td>
<td>Interface type, slot/port, and administrative and line protocol status.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Interface hardware information, assigned MAC address, and current address.</td>
</tr>
</tbody>
</table>
| Pluggable media present... | Present pluggable media wavelength, type, and rate. The error scenarios are:  
  ● Wavelength, Non-qualified — Dell Force10 ID is not present, but wavelength information is available from XFP or SFP serial data  
  ● Wavelength, F10 unknown — Dell Force10 ID is present, but not able to determine the optics type  
  ● Unknown, Non-qualified — if wavelength is reading error, and F10 ID is not present  
Dell Networking allows unsupported SFP and XFP transceivers to be used, but Dell Networking OS might not be able to retrieve some data about them. In that case, typically when the output of this field is “Pluggable media present, Media type is unknown”, the Medium and the XFP/SFP receive power reading data might not be present in the output. |
| Interface index... | Displays the interface index number the SNMP uses to identify the interface. |
| Internet address... | States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed. |
| MTU 1554... | Displays link and IP MTU information. |
| LineSpeed | Displays the interface’s line speed, duplex mode, and negotiation mode. |
| ARP type:... | Displays the ARP type and the ARP timeout value for the interface. |
| Last clearing... | Displays the time when the show interfaces counters where cleared. |
| Queueing strategy... | States the packet queueing strategy. FIFO means first in first out. |
| Input Statistics: | Displays all the input statistics including:  
  ● Number of packets and bytes into the interface  
  ● Number of packets with VLAN tagged headers  
  ● Packet size and the number of those packets inbound to the interface  
  ● Number of Multicast and Broadcast packets:  
    ○ Multicasts = number of MAC multicast packets  
    ○ Broadcasts = number of MAC broadcast packets  
  ● Number of runts, giants, and throttles packets:  
    ○ runts = number of packets that are less than 64B  
    ○ giants = packets that are greater than the MTU size  
    ○ throttles = packets containing PAUSE frames  
  ● Number of CRC, overrun, and discarded packets:  
    ○ CRC = packets with CRC/FCS errors  
    ○ overrun = number of packets discarded due to FIFO overrun conditions  
    ○ discarded = the sum of runts, giants, CRC, and overrun packets discarded without any processing |
| Output Statistics: | Displays output statistics sent out of the interface including:  
  ● Number of packets, bytes, and underruns out of the interface  
  ● Packet size and the number of the packets outbound to the interface  
  ● Number of Multicast, Broadcast, and Unicast packets:  
    ○ Multicasts = number of MAC multicast packets  
    ○ Broadcasts = number of MAC broadcast packets  
    ○ Unicasts = number of MAC unicast packets  
  ● Number of VLANs, throttles, discards, and collisions:  
    ○ Vlans = number of VLAN tagged packets  
    ○ throttles = packets containing PAUSE frames |
<table>
<thead>
<tr>
<th>Line</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>○ discarded = number of packets discarded without any processing</td>
<td></td>
</tr>
<tr>
<td>○ collisions = number of packet collisions</td>
<td></td>
</tr>
<tr>
<td>○ wred=count both packets discarded in the MAC and in the hardware-based queues</td>
<td></td>
</tr>
</tbody>
</table>

| Rate information... | Estimate of the input and output traffic rate over a designated interval (30 to 299 seconds). Traffic rate is displayed in bits, packets per second, and percent of line rate. |

| Time since... | Elapsed time since the last interface status change (hh:mm:ss format). |

### Example

Dell#show interfaces
TenGigabitEthernet 2/1 is down, line protocol is down
Hardware is DellForce10Eth, address is 00:01:e8:8b:3d:e7
Current address is 00:01:e8:8b:3d:e7
Pluggable media present, Media type is unknown
Wavelength unknown
Interface index is 100992002
Internet address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed auto
Flowcontrol rx on tx off
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 3d17h53m
Queueing strategy: fifo
Input Statistics:
0 packets, 0 bytes
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts
0 runts, 0 giants, 0 throttles
0 CRC, 0 overrun, 0 discarded
Output Statistics:
0 packets, 0 bytes, 0 underruns
0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
0 Multicasts, 0 Broadcasts, 0 Unicasts
0 throttles, 0 discarded, 0 collisions, 0 wreddrops
Rate info (interval 299 seconds):
Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Time since last interface status change: 3d17h51m

### Usage Information

The Management port is enabled by default (no shutdown). If necessary, use the `ip address` command to assign an IP address to the Management port. If two RPMs are installed in your system, use the `show redundancy` command to display which RPM is the Primary RPM.

On the Z9000, you can configure two global IPv6 addresses. To view the addresses, use the `show interface managementethernet` command. If you try to configure a third IPv6 address, a message displays. If auto-configuration is enabled, all IPv6 addresses on that management interface are auto-configured. The first IPv6 address that is configured on the management interface is the primary address. If deleted, it must be re-added; the secondary address is not promoted.

### Example (1G SFP)

Dell#show interfaces tengigabitethernet 2/1
TenGigabitEthernet 2/1 is up, line protocol is down
Hardware is Force10Eth, address is 00:01:e8:41:77:95
Current address is 00:01:e8:41:77:95
Pluggable media present, SFP type is 1000BASE-SX
Wavelength is 850nm
Interface index is 100974648
Port will not be disabled on partial SFM failure
Internet address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 1000 Mbit
Flowcontrol rx on tx on
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 1w0d5h
Queueing strategy: fifo
Input Statistics:
  0 packets, 0 bytes
  0 Vlans
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts
  0 runts, 0 giants, 0 throttles
  0 CRC, 0 overrun, 0 discarded
Output Statistics:
  0 packets, 0 bytes, 0 underruns
  0 64-byte pkts, 0 over 64-byte pkts, 0 over 127-byte pkts
  0 over 255-byte pkts, 0 over 511-byte pkts, 0 over 1023-byte pkts
  0 Multicasts, 0 Broadcasts, 0 Unicasts
  0 Vlans, 0 throttles, 0 discarded, 0 collisions, 0 wreddrops
Rate info (interval 299 seconds):
  Input 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
  Output 00.00 Mbits/sec, 0 packets/sec, 0.00% of line-rate
Time since last interface status change: 1w0d5h
Dell#

Example (Management Ethernet)

Dell#show interfaces managementethernet 0/0
ManagementEthernet 0/0 is up, line protocol is up
  Hardware is Force10Eth, address is 00:01:e8:0b:a9:4c
  Current address is 00:01:e8:0b:a9:4c
  Pluggable media not present
  Interface index is 503595208
  Internet address is 10.11.201.5/16
  Link local IPv6 address: fe80::201:e8ff:fe0b:a94c/64
  Global IPv6 address: 2222::5/64
  Virtual-IP is not set
  Virtual-IP IPv6 address is not set
  MTU 1554 bytes, IP MTU 1500 bytes
  LineSpeed 10 Mbit, Mode half duplex
  ARP type: ARPA, ARP Timeout 04:00:00
  Last clearing of "show interface" counters 04:01:08
  Queueing strategy: fifo
  Input 943 packets, 78347 bytes, 190 multicast
  Received 0 errors, 0 discarded
  Output 459 packets, 102388 bytes, 15 multicast
  Output 0 errors, 0 invalid protocol
  Time since last interface status change: 00:03:09
Dell#

Example (Management Ethernet, two IPv6 addresses)

Dell#show interfaces managementethernet 0/0
ManagementEthernet 0/0 is up, line protocol is up
  Hardware is DellForce10Eth, address is 00:01:e8:a0:bf:f3
  Current address is 00:01:e8:a0:bf:f3
  Pluggable media not present
  Interface index is 302006472
  Internet address is 10.16.130.5/16
  Link local IPv6 address: fe80::201:e8ff:fe0b:a94c/64
  Global IPv6 address: 1::1/
  Global IPv6 address: 2::1/64
  Virtual-IP is not set
  Virtual-IP IPv6 address is not set
  MTU 1554 bytes, IP MTU 1500 bytes
  LineSpeed 1000 Mbit, Mode full duplex
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 00:06:14
Queueing strategy: fifo
Input 791 packets, 62913 bytes, 775 multicast
Received 0 errors, 0 discarded
Output 21 packets, 3300 bytes, 20 multicast
Output 0 errors, 0 invalid protocol
Time since last interface status change: 00:06:03

Example
(OpenFlow instance)
Dell#show interfaces vlan 6
Vlan 6 is down, line protocol is down
Address is 00:01:e8:8a:e1:8c, Current address is 00:01:e8:8a:e1:8c
Interface index is 1107525638
of-instance: 2
Internet address is not set
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed auto
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 00:05:12
Queueing strategy: fifo
Time since last interface status change: 00:05:12

Related Commands
show interfaces configured – displays any interface with a non-default configuration.
show interfaces switchport – displays Layer 2 information about the interfaces.
show inventory (S-Series and Z-Series) – displays the S-Series and Z-Series switch types, components (including media), Dell Networking OS version including hardware identification numbers, and configured protocols.
show range – displays all interfaces configured using the interface range command.

show interfaces configured

Display any interface with a non-default configuration.

Z9000

Syntax
show interfaces configured

Dell#

### Related Commands

- **show interfaces** — displays information on a specific physical interface or virtual interface.

### show interfaces dampening

Display interface dampening information.

#### Z9000

**Syntax**

```
show interfaces dampening [[interface] [summary] [detail]]
```

**Parameters**

- **interface**  (Optional) Enter one of the following keywords and slot/port or number information:
  - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

- **summary**  (OPTIONAL) Enter the keyword summary to display the current summary of dampening data, including the number of interfaces configured and the number of interfaces suppressed, if any.
**show interfaces phy**

Display auto-negotiation and link partner information.

### Z9000

**Syntax**

```
show interfaces gigabitethernet slot/port phy
```

**Parameters**

- `tengigabitethernet` Enter the keyword `tengigabitethernet` then the slot or port information.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version**  | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.5.1.0 | Added support for 4-port 40G line cards on ExaScale.
8.1.1.0 | Introduced on the E-Series ExaScale.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
7.4.1.0 | Introduced

**Example**

```
Dell#show interfaces gigabitethernet 3/2 phy
Interface       Supp Flaps Penalty Half-Life Reuse Suppress Max-Sup
State          State         
Te 3/2          Up  0  0         20  800  4500  120
Te 3/10         Up  0  0         5   750  2500  20
Dell#
```

**Related Commands**

- `dampening` — configures dampening on an interface.
- `show interfaces` — displays information on a specific physical interface or virtual interface.
- `show interfaces configured` — displays any interface with a non-default configuration.

8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series ExaScale.
7.6.1.0 | Introduced on the C-Series and S-Series.
6.5.4.0 | Introduced on the E-Series.

The following describes the `show interfaces gigabitethernet` command following example.

**Mode Control**
Indicates if auto negotiation is enabled. If so, indicates the selected speed and duplex.

**Mode Status**
Displays auto negotiation fault information. When the interface completes auto negotiation successfully, the `autoNegComplete` field and the `linkstatus` field read “True.”

**AutoNegotiation Advertise**
Displays the control words the local interface advertises during negotiation. Duplex is either half or full. Asym- and Sym Pause is the types of flow control the local interface supports.

**AutoNegotiation Remote Partner’s Ability**
Displays the control words the remote interface advertises during negotiation. Duplex is either half or full. Asym- and Sym Pause is the types of flow control the remote interface supports.

**AutoNegotiation Expansion**
ParallelDetectionFault is the handshaking scheme in which the link partner continuously transmit an “idle” data packet using the Fast Ethernet MLT-3 waveform. Equipment that does not support auto-negotiation must be configured to exactly match the mode of operation as the link partner or else no link can be established.

**1000Base-T Control**
1000Base-T requires auto-negotiation. The IEEE Ethernet standard does not support setting a speed to 1000 Mbps with the `speed` command without auto-negotiation. E-Series line cards support both full-duplex and half-duplex 1000BaseT.

**Phy Specific Control**
Values are:
- 0 - Manual MDI
- 1 - Manual MDIX
- 2 - N/A
- 3 - Auto MDI/MDIX

**Phy Specific Status**
Displays PHY-specific status information. Cable length represents a rough estimate in meters:
- 0 - < 50 meters
- 1 - 50 - 80 meters
- 2 - 80 - 110 meters
- 3 - 110 - 140 meters
- 4 - 140 meters

Link Status: Up or Down
Speed:
- Auto
- 1000MB
- 100MB
- 10MB

**Example**

```bash
dell#show interfaces tengigabitethernet 1/0 phy
Mode Control:
   SpeedSelection: 10b
```
### show interfaces stack-unit

Display information on all interfaces on a specific S-Series or Z-Series stack member.

**Z9000**

**Syntax**

```
show interfaces stack-unit unit-number
```

**Parameters**

- **unit-number**
  
Enter the stack member number. The range is from 0 to 7 for the Z9000.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show interfaces stack-unit 1
TenGigabitEthernet 1/1 is down, line protocol is down
Hardware is Force10Eth, address is 00:01:e8:4c:f2:82
```
show interfaces status

To display status information on a specific interface only, display a summary of interface information or specify a line card slot and interface. To display status information on a specific interface only, display a summary of interface information or specify a stack-unit slot and interface.

Z9000

show interfaces [interface status]

Parameters

interface (OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a Loopback interface, enter the keyword loopback then the slot/port information. The range is from 0 to 16383.
- For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

Related Commands

show hardware stack-unit — displays data plane and management plane input/output statistics.

show interfaces — displays information on a specific physical interface or virtual interface.

  Te 1/15              Down    Auto      Auto    --
  Te 1/16              Down    Auto      Auto    --
  Dell#
```

Related Commands

- `show interfaces` — displays information on a specific physical interface or virtual interface.

**show interfaces switchport**

Display only virtual and physical interfaces in Layer 2 mode. This command displays the Layer 2 mode interfaces’ IEEE 802.1Q tag status and VLAN membership.

**Z9000**

**Syntax**

```
show interfaces switchport [interface | stack-unit unit-id ]
```

**Parameters**

- `interface`  
  (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a backup interface for this interface, enter the keyword `backup`.

- `stack-unit unit-id`  
  Enter the keywords `stack-unit` then the stack unit ID of the interface.

**Example**

```
show interfaces switchport
  Interface      Status  VLAN
  Te 1/1          Up      1502,1504,1506-1508,1602
  Te 1/2          Down    1
  Te 1/3          Down    1
  Te 1/4          Down    --
  Te 1/5          Up      30-130
  Te 1/6          Down    --
  Te 1/7          Down    --
  Te 1/8          Down    --
  Te 1/9          Down    1502,1504,1506-1508,1602
  Te 1/10         Down    --
  Te 1/11         Down    --
  Te 1/12         Down    --
  Te 1/13         Down    --
  Te 1/14         Down    --
  Te 1/15         Down    --
  Te 1/16         Down    --

**E-Series legacy command**

The following describes the `show interfaces switchport` command for the following example.

**Items**

- **Name**
  - Displays the interface’s type, slot/port number.
- **802.1QTagged**
  - Displays whether if the VLAN tagged (“True”), untagged (“False”), or hybrid (“Hybrid”), which supports both untagged and tagged VLANs by port 13/0.
- **Vlan membership**
  - Lists the VLANs to which the interface is a member. Starting with Dell Networking
    OS version 7.6.1, this field can display native VLAN membership by port 13/0.

**Example**

```
Dell#show interfaces switchport
Name: TenGigabitEthernet 13/1
  802.1QTagged: Hybrid
  Vlan membership:
    Vlan   2, Vlan 20
    Native VlanId: 20

Name: TenGigabitEthernet 13/2
  802.1QTagged: True
  Vlan membership:
    Vlan   2

Name: TenGigabitEthernet 13/3
  802.1QTagged: True
  Vlan membership:
    Vlan   2

Name: TenGigabitEthernet 13/4
  802.1QTagged: True
  Vlan membership:
    Vlan   2
--More--
```

**Related Commands**

- `interface` — configures a physical interface on the switch.
- `show ip interface` — displays Layer 3 information about the interfaces.
- `show interfaces` — displays information on a specific physical interface or virtual interface.
show interfaces transceiver — displays the physical status and operational status of an installed transceiver. The output also displays the transceiver’s serial number.

show interfaces transceiver

Display the physical status and operational status of an installed transceiver. The output also displays the transceiver’s serial number.

Z9000

Syntax

```
show interfaces [tengigabitethernet slot/port | fortyGigE slot/port] transceiver
```

Parameters

- **tengigabitethernet** For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- **fortyGigE** For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

Command Modes

- EXEC
- EXEC Privilege

</thead>
<tbody>
<tr>
<td>Rx Power measurement type</td>
<td>Output depends on the vendor, typically either “Average” or “OMA” (Receiver optical modulation amplitude).</td>
</tr>
<tr>
<td>Temp High Alarm threshold</td>
<td>Factory-defined setting, typically in Centigrade. Value differs between SFPs and SFP+.</td>
</tr>
<tr>
<td>Voltage High Alarm threshold</td>
<td>Displays the interface index number used by SNMP to identify the interface.</td>
</tr>
<tr>
<td>Bias High Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Line</td>
<td>Description</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>TX Power High Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>RX Power High Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Temp Low Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Voltage Low Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Bias Low Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>TX Power Low Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>RX Power Low Alarm threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Temp High Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Voltage High Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Bias High Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>TX Power High Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>RX Power High Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Temp Low Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Voltage Low Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Bias Low Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>TX Power Low Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Power Low Warning threshold</td>
<td>Factory-defined setting. Value can differ between SFP and SFP+.</td>
</tr>
<tr>
<td>Temperature</td>
<td>Current temperature of the SFPs. If this temperature crosses Temp High alarm/warning thresholds, the temperature high alarm/warning flag is set to true.</td>
</tr>
<tr>
<td>Voltage</td>
<td>Current voltage of the SFPs. If this voltage crosses voltage high alarm/warning thresholds, the voltage high alarm/warning flag is set to true.</td>
</tr>
<tr>
<td>Tx Bias Current</td>
<td>Present transmission (Tx) bias current of the SFP. If this crosses bias high alarm/warning thresholds, the TX bias high alarm/warning flag is set to true. If it falls below the low alarm/warning thresholds, the TX bias low alarm/warning flag is set to true.</td>
</tr>
<tr>
<td>Line</td>
<td>Description</td>
</tr>
<tr>
<td>-----------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Tx Power</td>
<td>Present Tx power of the SFP. If this crosses Tx power alarm/warning thresholds, the Tx power high alarm/warning flag is set to true. If it falls below the low alarm/warning thresholds, the Tx power low alarm/warning flag is set to true.</td>
</tr>
<tr>
<td>Rx Power</td>
<td>Present receiving (Rx) power of the SFP. This value is either average Rx power or OMA. This depends on the Rx Power measurement type displayed above. If this crosses Rx power alarm/warning thresholds, the Rx power high alarm/warning flag is set to true. If it falls below the low alarm/warning thresholds, the Rx power low alarm/warning flag is set to true.</td>
</tr>
<tr>
<td>Data Ready state Bar</td>
<td>This field indicates that the transceiver has achieved power up and data is ready. This is set to true if data is ready to be sent and set to false if data is being transmitted.</td>
</tr>
<tr>
<td>Rx LOS state</td>
<td>This is the digital state of the Rx_LOS output pin. This is set to true if the operating status is down.</td>
</tr>
<tr>
<td>Tx Fault state</td>
<td>This is the digital state of the Tx Fault output pin.</td>
</tr>
<tr>
<td>Rate Select state</td>
<td>This is the digital state of the SFP rate_select input pin.</td>
</tr>
<tr>
<td>RS state</td>
<td>This is the reserved digital state of the pin AS(1) per SFF-8079 and RS(1) per SFF-8431.</td>
</tr>
<tr>
<td>Tx Disable state</td>
<td>If the admin status of the port is down then this flag is set to true.</td>
</tr>
<tr>
<td>Temperature High Alarm Flag</td>
<td>This can be either true or false, depending on the Current voltage value displayed above.</td>
</tr>
<tr>
<td>Voltage High Alarm Flag</td>
<td>This can be either true or false, depending on the Current Temperature value displayed above.</td>
</tr>
<tr>
<td>Tx Bias High Alarm Flag</td>
<td>This can be either true or false, depending on the present Tx bias current value displayed above.</td>
</tr>
<tr>
<td>Tx Power High Alarm Flag</td>
<td>This can be either true or false, depending on the Current Tx bias power value displayed above.</td>

Related Commands

- **interface** — configures a physical interface on the switch.
- **show ip interface** — displays Layer 3 information about the interfaces.
- **show interfaces** — displays information on a specific physical interface or virtual interface.
- **show inventory (S-Series and Z-Series)** — displays the switch type, components (including media), Dell Networking OS version including hardware identification numbers and configured protocols.

### show interfaces vlan

Display VLAN statistics.

**Z9000**

**Syntax**

```
show interfaces vlan {vlan-id} [LINE] {description}
```

**Parameters**

- **vlan-id**
  - Enter the interface VLAN number. The range is from 1 to 4094.
- **LINE**
  - (OPTIONAL) Enter the name of the VLAN.
- **description**
  - Displays the VLAN interface information with description.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- **Version 9.7(0.0)** Introduced this command.

**Example**

```
Dell#show interfaces vlan 10
Vlan 10 is up, line protocol is down
Address is 90:b1:1c:f4:99:ce, Current address is 90:b1:1c:f4:99:ce
Interface index is 1107787786
Internet address is not set
Mode of IPv4 Address Assignment: NONE
DHCP Client-ID: 90b11cf499ce
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed auto
ARP type: ARPA, ARP Timeout 04:00:00
Last clearing of "show interface" counters 2d17h26m
Queueing strategy: fifo
Time since last interface status change: 2d17h26m
```
show range

Display all interfaces configured using the `interface range` command.

Z9000

**Syntax**
```
show range
```

**Command Modes**
INTERFACE RANGE (config-if-range)

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Added support for 4093 VLANs on E-Series ExaScale.</td>

<tr>
<td>6.1.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Example**
```
Dell(conf-if-range-te-2/2,fo-2/56)#show range
2/2 - 0
2/56 - 0
Dell(conf-if-range-te-2/2,fo-2/56)#
```

**Related Commands**
- `interface` — configures a physical interface on the switch.
- `show ip interface` — displays Layer 3 information about the interfaces.
- `show interfaces` — displays information on a specific physical interface or virtual interface.
show running-config ecmp-group

Display interfaces, LAG, or LAG link bundles being monitored for uneven traffic distribution using the ecmp-group monitoring enable command. The ECMP group could have a LAG or a list of 10G/40 interfaces (not just LAG link-bundles).

Z9000

Syntax

show running-config ecmp-group

Defaults

Disabled.

Command Modes

CONFIGURATION

</tbody>
</table>
The `shutdown` command marks a physical interface as unavailable for traffic. To discover if an interface is disabled, use the `show ip interface brief` command. Disabled interfaces are listed as down.

Disabling a VLAN or a port channel causes different behavior. When a VLAN is disabled, the Layer 3 functions within that VLAN are disabled. Layer 2 traffic continues to flow. Entering the `shutdown` command on a port channel disables all traffic on the port channel and the individual interfaces within the port channel. To enable a port channel, enter `no shutdown` on the port channel interface and at least one interface within that port channel.

The `shutdown` and `description` commands are the only commands that you can configure on an interface that is a member of a port channel.

**Related Commands**

- `interface port-channel` — creates a port channel interface.
- `interface vlan` — creates a VLAN.
- `show ip interface` — displays the interface routing status. Add the keyword `brief` to display a table of interfaces and their status.

**speed (for 10/100/1000 interfaces)**

Set the speed for 10/100/1000 Base-T Ethernet interfaces. Set both sides of a link to the same speed (10/100/1000) or to auto or the link may not come up.

**Syntax**

```
speed {10 | 100 | 1000 | auto}
```

To return to the default setting, use the `no speed {10 | 100 | 1000}` command.

**Parameters**

- `10`  
  - Enter the keyword `10` to set the interface’s speed to 10 Mb/s.
  - **NOTE:** This interface speed is not supported on the LC-EH-GE-50P or the LC-EJ-GE-50P card. If the command is entered for these interfaces, an error message appears.

- `100`  
  - Enter the keyword `100` to set the interface’s speed to 10/100 Mb/s.
  - **NOTE:** When this setting is enabled, only 100Base-FX optics are supported on the LC-EH-GE-50P or the LC-EJ-GE-50P card.

- `1000`  
  - Enter the keyword `1000` to set the interface’s speed to 1000 Mb/s. Auto-negotiation is enabled. For more information, refer to `negotiation auto`.
  - **NOTE:** When this setting is enabled, only 1000Base-X optics are supported on the LC-EH-GE-50P or the LC-EJ-GE-50P card.

- `auto`  
  - Enter the keyword `auto` to set the interface to auto-negotiate its speed. Auto-negotiation is enabled. For more information, refer to `negotiation auto`.

**Defaults**

- `auto`

**Command Modes**

- `INTERFACE`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is found on the 10/100/1000 Base-T Ethernet interfaces.

When you enable auto, the system performs an automatic discovery to determine the optics installed and configure the appropriate speed.

When you configure a speed for the 10/100/1000 interface, confirm the negotiation auto command setting. Both sides of the link must have auto-negotiation either enabled or disabled. For speed settings of 1000 or auto, the software sets the link to auto-negotiation and you cannot change that setting.

**NOTE:** Starting with Dell Networking OS version 7.8.1.0, when you use a copper SFP2 module with catalog number GP-SFP2-1T in the S25P model of the S-Series, you can manually set its speed with the `speed` command. When you set the speed to 10 or 100 Mbps, you can also use the `duplex` command.

**Related Commands**
- `duplex (10/100 Interfaces)` — configures duplex mode on physical interfaces with the speed set to 10/100.
- `negotiation auto` — enables or disables auto-negotiation on an interface.

### speed (Management interface)

Set the speed for the Management interface.

**Z9000**

**Syntax**

```
speed {10 | 100 | 1000 | auto}
```

To return to the default setting, use the no speed command.

**Parameters**

- **10**
  - Enter the keyword 10 to set the interface’s speed to 10 Mb/s.
- **100**
  - Enter the keyword 100 to set the interface’s speed to 10/100 Mb/s.
- **1000**
  - Enter the keyword 1000 to set the interface to auto-negotiate its speed.
- **auto**
  - Enter the keyword auto to set the interface to auto-negotiate its speed.

**Defaults**

`auto`

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
Version | Description
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.11.1 | Introduced on the S55, S60, and S4810
8.1.1.0 | Introduced on the E-Series ExaScale.
7.5.1.0 | Introduced on the C-Series.
pre-Version | Introduced on the E-Series.
6.2.1.0 | 

Usage Information

This command is found on the Management interface only.

Related Commands

- `interface ManagementEthernet` — configures the Management port on the system (either the Primary or Standby RPM).
- `duplex (10/100 Interfaces)` — configures duplex mode on physical interfaces with the speed set to 10/100.
- `management route` — configures a static route that points to the Management interface or a forwarding router.

**stack-unit portmode**

You can split a single 40G port into four-10G ports.

**Z9000**

**Syntax**

```
stack-unit stack-unit port number portmode quad
```

**Parameters**

- `stack-unit` Enter the stack member unit identifier of the stack member to reset. For the Z9000, the range is from 0 to 7.
- `number` Enter the port number of the 40G port to be split. The range is from 0 to 124 in multiples of 4 (0, 4, 8, 12, ... 120 124).

**Defaults**

Disabled.

**Command Modes**

- `CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Added support for dynamically fanning-out of interfaces on S6000. Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.1 | Introduced on the S4810.
Splitting a 40G port into 4x10G port is supported on standalone and stacked units. `stack-unit stack-unit port number portmode quad` dynamically fan-out 40G ports to 10G ports and vice-versa without reload in switch.

The quad port must be in a default configuration before it can be split into 4x10G ports. The 40G port is lost in the config when the port is split, so be sure that the port is also removed from other L2/L3 feature configurations.

The system must be reloaded after issuing the CLI for the change to take effect. This command cannot be used if LR4 optics are inserted on the 40G interface.

**Example (stack unit – Warning message when 13 ports are configured in any port range)**

Dell(conf)#stack-unit 0 port 48 portmode quad

Maximum number of ports that can be made Quad mode in the range <0-63> is configured. Ports 52,56,60, will be disabled on reload. Do you wish to continue? [confirm yes/no]:yes

Please save and reset unit 0 for the changes to take effect.

Dell(conf)#

### switchport

Place an interface in Layer 2 mode.

**Z9000**

**Syntax**

```
switchport [backup interface {gigabit slot/port | tengigabit slot/port | fortyGigE slot/port | port-channel number}]
```

To remove an interface from Layer 2 mode and place it in Layer 3 mode, enter the `no switchport` command. If a switchport backup interface is configured, first remove the backup configuration. To remove a switchport backup interface, enter the `no switchport backup interface {gigabit slot/port | tengigabit slot/port | fortyGigE slot/port | port-channel number}` command.

**Parameters**

- **backup interface**
  - Use this option to configure a redundant Layer 2 link without using Spanning Tree. The keywords `backup interface` configures a backup port so that if the primary port fails, the backup port changes to the up state. If the primary later comes up, it becomes the backup.

- **tengigabit**
  - Enter the keyword `tengigabit` if the backup port is a 10G port.

- **fortyGigE**
  - Enter the keyword `fortyGigE` if the backup port is a 40G port.

- **port-channel**
  - Enter the keywords `port-channel` if the backup port is a static or dynamic port channel.

- **slot/port**
  - Specify the line card and port number of the backup port.

**Defaults**

Disabled (The interface is in Layer 3 mode.)

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-Version</td>
<td>Introduced on the E-Series.</td>
</tr>
<tr>
<td>6.2.1.0</td>
<td></td>
</tr>
</tbody>
</table>

**Usage Information**

If an IP address or VRRP group is assigned to the interface, you cannot use the `switchport` command on the interface. To use the `switchport` command on an interface, only the `no ip address` and `no shutdown` statements must be listed in the `show config` output.

When you enter the `switchport` command, the interface is automatically added to the default VLAN.

To use the `switchport backup interface` command on a port, first enter the `switchport` command. For more information, refer to the “Configuring Redundant Links” section in the “Layer 2” chapter of the *Dell Networking OS Configuration Guide*.

**Related Commands**

- `interface port-channel` — creates a port channel interface.
- `show interfaces switchport` — displays information about switchport interfaces.

## Egress Interface Selection (EIS) Commands

The following commands are Egress Interface Selection (EIS) commands.

### application

Configure the management egress interface selection.

**Z9000**

**Syntax**

```
application {all | application-type}
```

To remove a management application configuration, use the `no application {all | application-type}` command.

**Parameters**

- `application-type` Enter any of the following keywords:
  - For DNS, enter the keyword `dns`.
  - For FTP, enter the keyword `ftp`.
  - For NTP, enter the keyword `ntp`.
  - For Radius, enter the keyword `radius`.
  - For sFlow collectors, enter the keyword `sflow-collector`.
  - For SNMP (traps and MIB responses), enter the keywords `snmp`.
  - For SSH, enter the keyword `ssh`.
  - For Syslog, enter the keyword `syslog`.
  - For TACACS, enter the keyword `tacacs`.
  - For Telnet, enter the keyword `telnet`.
  - For TFTP, enter the keyword `tftp`.
application (for HTTP and ICMP)

Configure the management egress interface selection for HTTP and ICMP.

**NOTE:** Only the options that have been newly introduced are described here. For a complete description on all of the keywords and variables that are available with this command, refer the respective Command Reference Guide of the applicable platform of the Release 9.2(0.0) documentation set.

**Z9000**

**Syntax**

```
application {all | application-type}
```

To remove a management application configuration, use the `no application {all | application-type}` command.

**Parameters**

- `application-type` Enter any of the following keywords:
  - For HTTP, enter the keyword `http`.
  - For ICMP, enter the keyword `icmp`.

- `all` Configure all applications.

**Defaults**

None.

**Command Modes**

EIS Mode (conf-mgmt-eis)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.3.(0.0)</td>
<td>Added support for the HTTP and ICMP traffic on the Z9000, S4810, and S4820T.</td>
</tr>
</tbody>
</table>

**clear management application pkt-cntr**

Clear management application packet counters for all management application types.

**Z9000**

**Syntax**

```
clear management application pkt-cntr
```

**Defaults**

None.

**Command Modes**

EXEC Privilege
### clear management application pkt-fallback-cntr

Clear management application packet fallback counters for all management application types.

#### Z9000

- **Syntax:**
  
  `clear management application pkt-fallback-cntr`

- **Defaults:** None.

- **Command Modes:** EXEC Privilege

- **Command History:**
  
  This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
  
  The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2.(0.0)</td>
<td>Introduced on the Z9000, S4810, and S4820T.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show management application pkt-cntr
  dns :   2
  ftp :   0
  ntp :   0
  radius :   0
  sflow-collector :   0
  snmp :   0
  ssh :   0
  syslog :   0
  tacacs :   0
  telnet :   0
  tftp :   0
```
**show management application pkt-fallback-cntr**

Display the number of packets for each application type that have been rerouted to the default routing table due to management port or route lookup failure.

### Z9000

**Syntax**

```
show management application pkt-fallback-cntr
```

**Defaults**

None.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

**Example**

```
Dell#show management application pkt-fallback-cntr

dns : 0
ftp  : 0
ntp : 0
radius : 0
sflow-collector : 0
snmp : 0
ssh : 2
syslog : 0
tacacs : 0
telnet : 0
tftp : 0
```

---

**Port Channel Commands**

A Link Aggregation Group (LAG) is a group of links that appear to a MAC client as if they were a single link according to IEEE 802.3ad. In Dell Networking OS, a LAG is referred to as a Port Channel.

- For the S-Series and Z9000, the maximum port channel ID is 128 and the maximum members per port channel is 16.

Because each port can be assigned to only one Port Channel, and each Port Channel must have at least one port, some of those nominally available Port Channels might have no function because they could have no members if there are not enough ports installed. In the S-Series, stack members can provide those ports.

**NOTE:** The Dell Networking OS implementation of LAG or Port Channel requires that you configure a LAG on both switches manually. For information about Dell Networking OS link aggregation control protocol (LACP) for dynamic LAGs, refer to the Link Aggregation Control Protocol (LACP) chapter. For more information about configuring and using Port Channels, refer to the Dell Networking OS Configuration Guide.

### channel-member

Add an interface to the Port Channel, while in INTERFACE PORTCHANNEL mode.

#### Z9000

**Syntax**

```
channel-member interface
```

**To delete an interface from a Port Channel, use the no channel-member interface command.**
Parameters  

**interface**  

(OPTIONAL) Enter any of the following keywords and slot/port or number information:

- For a 100/1000 Ethernet interface, enter the keyword `GigabitEthernet` then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults  

Not configured.

Command Modes  

INTERFACE PORTCHANNEL

Command History  

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

Usage Information  

Use the `interface port-channel` command to access this command.

You cannot add an interface to a Port Channel if the interface contains an IP address in its configuration. Only the `shutdown`, `description`, `mtu`, and `ip mtu` commands can be configured on an interface if it is added to a Port Channel. The `mtu` and `ip mtu` commands are only available when the chassis is in Jumbo mode.

Link MTU and IP MTU considerations for Port Channels are:

- All members must have the same Link MTU value and the same IP MTU value.
- The Port Channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU of 2000, the Port Channel’s MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

When an interface is removed from a Port Channel with the `no channel-member` command, the interface reverts to its configuration prior to joining the Port Channel.

An interface can belong to only one Port Channel.

You can have 16 interfaces per Port Channel on the S-Series and Z-Series. The interfaces can be located on different line cards but must be the same physical type and speed (for example, all 1-Gigabit Ethernet interfaces). However, you can combine 100/1000 interfaces and GE interfaces in the same Port Channel.

If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match the speed of the first interface configured and enabled in the Port Channel. If that first interface goes down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel or change the order of the channel members configuration to change the designated speed. If the Port Channel contains a mix of interfaces with 100 Mb/s speed and 1000 Mb/s speed, the software disables those interfaces whose speed does not match...
the speed of the first interface configured and enabled in the Port Channel. If that first interface goes
down, the Port Channel does not change its designated speed; disable and re-enable the Port Channel
or change the order of the channel members configuration to change the designated speed. For more
information about Port Channels, refer to the Dell Networking OS Configuration Guide.

Related
Commands

description — assigns a descriptive text string to the interface.
interface port-channel — creates a Port Channel interface.
shutdown — disables/enables the port channel.

group

Group two LAGs in a supergroup (“fate-sharing group” or “failover group”).

Z9000

Syntax

```
group group_number port-channel number port-channel number
```

To remove an existing LAG supergroup, use the no group group_number command.

Parameters

- **group_number**
  - Enter an integer from 1 to 32 that uniquely identifies this LAG fate-sharing group.

- **port-channel number**
  - Enter the keywords port-channel then an existing LAG number. Enter this
    keyword/variable combination twice, identifying the two paired LAGs.

Defaults

none

Command Modes

PORT-CHANNEL FAILOVER-GROUP (conf-po-failover-grp)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell

<td>Introduced on E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Port Channel interfaces are logical interfaces and can be either in Layer 2 mode (by using the `switchport` command) or Layer 3 mode (by configuring an IP address). You can add a Port Channel in Layer 2 mode to a VLAN.

The `shutdown`, `description`, and `name` commands are the only commands that you can configure on an interface while it is a member of a Port Channel. To add a physical interface to a Port Channel, the interface can only have the `shutdown`, `description`, and `name` commands configured. The Port Channel's configuration is applied to the interfaces within the Port Channel.

A Port Channel can contain both 100/1000 interfaces and GE interfaces. Based on the first interface configured in the Port Channel and enabled, Dell Networking OS determines if the Port Channel uses 100 Mb/s or 1000 Mb/s as the common speed. For more information, refer to `channel-member`.

If the line card is in a Jumbo mode chassis, you can also configure the `mtu` and `ip mtu` commands. The Link MTU and IP MTU values configured on the channel members must be greater than the Link MTU and IP MTU values configured on the Port Channel interface.

**NOTE:** In a Jumbo-enabled system, all members of a Port Channel must be configured with the same link MTU values and the same IP MTU values.

**Example**

```
Dell(conf)#int port-channel 2
Dell(conf-if-po-2)#
```

**Related Commands**

- `channel-member` — adds a physical interface to the LAG.
- `interface` — configures a physical interface.
- `interface loopback` — configures a Loopback interface.
- `interface null` — configures a null interface.
- `interface vlan` — configures a VLAN.
- `shutdown` — disables/enables the port channel.
**minimum-links**

Configure the minimum number of links in a LAG (Port Channel) that must be in "oper up" status for the LAG to be also in "oper up" status.

### Z9000

**Syntax**

```
minimum-links number
```

**Parameters**

- `number` Enter the number of links in a LAG that must be in "oper up" status. The range is from 1 to 16. The default is 1.

**Defaults**

1

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-Version 6.2.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you use this command to configure the minimum number of links in a LAG that must be in "oper up" status, the LAG must have at least that number of "oper up" links before it can be declared as up. For example, if the required minimum is four, and only three are up, the LAG is considered down.

**port-channel failover-group**

To configure a LAG failover group, access PORT-CHANNEL FAILOVER-GROUP mode.

### Z9000

**Syntax**

```
port-channel failover-group
```

To remove all LAG failover groups, use the `no port-channel failover-group` command.

**Defaults**

none

Version 8.3.19.0 Introduced on the S4820T.
Version 8.3.11.1 Introduced on the Z9000.
Version 8.3.7.0 Introduced on the S4810.
Version 7.6.1.0 Introduced on the S-Series.
Version 7.5.1.0 Introduced on the C-Series.
pre-Version 6.2.1.0 Introduced on the E-Series.

Example

Dell(conf-if-po-1)#show config
!
interface Port-channel 1
  no ip address
  shutdown
Dell(conf-if-po-1)#
show interfaces port-channel

Display information on configured Port Channel groups.

**Z9000**

**Syntax**

```
show interfaces port-channel [channel-number] [brief]
```

**Parameters**

- `channel-number` For a Port Channel interface, enter the keyword `port-channel` then a number. For the C-Series and S-Series, the range is from 1 to 128.
- `brief` (OPTIONAL) Enter the keyword `brief` to display only the port channel number, the state of the port channel, and the number of interfaces in the port channel.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**E-Series legacy command**

**Usage Information**

The following describes the `show interfaces port-channel` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Port-Channel 1...</td>
<td>Displays the LAG’s status. In the Example, the status of the LAG’s LAG fate-sharing group (“Failover-group”) is listed.</td>
</tr>
<tr>
<td>Hardware is...</td>
<td>Displays the interface’s hardware information and its assigned MAC address.</td>
</tr>
<tr>
<td>Port-channel is part...</td>
<td>Indicates whether the LAG is part of a LAG fate-sharing group (“Failover-group”).</td>
</tr>
<tr>
<td>Internet address...</td>
<td>States whether an IP address is assigned to the interface. If an IP address is assigned, that address is displayed.</td>
</tr>
<tr>
<td>MTU 1554...</td>
<td>Displays link and IP MTU.</td>
</tr>
<tr>
<td>LineSpeed</td>
<td>Displays the interface’s line speed. For a port channel interface, it is the line speed of the interfaces in the port channel.</td>
</tr>
<tr>
<td>Members in this...</td>
<td>Displays the interfaces belonging to this port channel.</td>
</tr>
<tr>
<td>ARP type:...</td>
<td>Displays the ARP type and the ARP timeout value for the interface.</td>
</tr>
<tr>
<td>Last clearing...</td>
<td>Displays the time when the <code>show interfaces counters</code> were cleared.</td>
</tr>
</tbody>
</table>
### Field Description

**Queueing strategy.** States the packet queuing strategy. FIFO means first in first out.

**packets input...** Displays the number of packets and bytes into the interface.

**Input 0 IP packets...** Displays the number of packets with IP headers, VLAN tagged headers, and MPLS headers. The number of packets may not add correctly because a VLAN tagged IP packet counts as both a VLAN packet and an IP packet.

**0 64-byte...** Displays the size of packets and the number of those packets entering that interface. This information is displayed over two lines.

**Received 0...** Displays the type and number of errors or other specific packets received. This information is displayed over three lines.

**Output 0...** Displays the type and number of packets sent out the interface. This information is displayed over three lines.

**Rate information...** Displays the traffic rate information into and out of the interface. Traffic rate is displayed in bits and packets per second.

**Time since...** Displays the time since the last change in the configuration of this interface.

### Example

Dell#show interfaces port-channel 20
Port-channel 20 is up, line protocol is up (Failover-group 1 is down)
Hardware address is 00:01:e8:01:46:fa
Port-channel is part of failover-group 1
Internet address is 1.1.120.1/24
MTU 1554 bytes, IP MTU 1500 bytes
LineSpeed 2000 Mbit
Members in this channel: Gi 2/5 Gi 2/18
ARP type: ARPA, ARP timeout 04:00:00
Last clearing of "show interfaces" counters 00:00:00
Queueing strategy: fifo
44507301 packets input, 3563070343 bytes
Input 44506754 IP Packets, 0 Vlans 0 MPLS
41 64-byte pkts, 44502871 over 64-byte pkts, 249 over 127-byte pkts
407 over 255-byte pkts, 3127 over 511-byte pkts, 606 over 1023-byte pkts
Received 0 input symbol errors, 0 runts, 0 giants, 0 throttles
0 CRC, 0 IP Checksum, 0 overrun, 0 discarded
1218120 packets output, 100745130 bytes, 0 underruns
Output 5428 Multicasts, 4 Broadcasts, 1212688 Unicasts
1216142 IP Packets, 0 Vlans, 0 MPLS
0 throttles, 0 discarded
Rate info (interval 299 sec):
Input 01.50Mbits/sec, 2433 packets/sec
Output 00.02Mbits/sec, 4 packets/sec
Time since last interface status change: 00:22:34
Dell#

### User Information

The following describes the show interfaces port-channel brief command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LAG</td>
<td>Lists the port channel number.</td>
</tr>
</tbody>
</table>
| Mode  | Lists the mode:  
|       | • L3 — for Layer 3  
|       | • L2 — for Layer 2 |
| Status| Displays the status of the port channel:  
|       | • down — if the port channel is disabled (shutdown)  
|       | • up — if the port channel is enabled (no shutdown) |
| Uptime| Displays the age of the port channel in hours:minutes:seconds. |
**Field** | **Description**
--- | ---
**Ports** | Lists the interfaces assigned to this port channel.

**(untitled)** | Displays the status of the physical interfaces (up or down).

- In Layer 2 port channels, an * (asterisk) indicates which interface is the primary port of the port channel. The primary port sends out interface PDU.
- In Layer 3 port channels, the primary port is not indicated.

**Example**

```
Dell#show interfaces port-channel 1 brief
LAG Mode Status Uptime    Ports
1   L2   up     00:00:08  Te 3/1  (Up) *
     Te 3/2 (Down)
     Te 3/3 (Up)
Dell#
```

**Related Commands**

- `show lacp` — displays the LACP matrix.

---

**show port-channel-flow**

Display an egress port in a given port-channel flow.

**Z9000**

```
show port-channel-flow outgoing-port-channel number incoming-interface interface {source-ip address destination-ip address} | {source-port number destination-port number} | {source-mac address destination-mac address} {vlan vlanid | ether-type})
```

**Parameters**

- **outgoing-port-channel number**
  - Enter the keywords `outgoing-port-channel` then the number of the port channel to display flow information.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

- **incoming-interface interface**
  - Enter the keywords `incoming-interface` then the interface type and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- **source-ip address**
  - Enter the keywords `source-ip` then the IP source address in IP address format.

- **destination-ip address**
  - Enter the keywords `destination-ip` then the IP destination address in IP address format.

- **source-port number**
  - Enter the keywords `source-port` then the source port number. The range is from 1 to 65536. The default is None.

- **destination-port number**
  - Enter the keywords `destination-port` then the destination port number. The range is from 1 to 65536. The default is None.

- **source-mac address**
  - Enter the keywords `source-mac` then the MAC source address in the nn:nn:nn:nn:nn:nn format.

- **destination-mac address**
  - Enter the keywords `destination-mac` then the MAC destination address in the nn:nn:nn:nn:nn:nn format.

- **vlan vlanid**
  - Enter the keywords `vlan` then the VLAN-id. The range is from 0 to 4094.
ether-type    Enter the keywords ether-type in the XX:XX format.

**Command Modes**

**EXEC**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.10.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

Because this command calculates based on a Layer 2 hash algorithm, use this command to display flows for switched Layer 2 packets, not for routed packets (use the show ip flow command to display routed packets).

The show port-channel-flow command returns the egress port identification in a given port-channel if a valid flow is entered. A mismatched flow error occurs if MAC-based hashing is configured for a Layer 2 interface and you are trying to display a Layer 3 flow.

The output displays three entries:
- Egress port for unfragmented packets.
- In the event of fragmented packets, the egress port of the first fragment.
- In the event of fragmented packets, the egress port of the subsequent fragments.

**NOTE:** In the show port channel flow command output, the egress port for an unknown unicast, multicast, or broadcast traffic is not displayed.

The following example shows the show port-channel-flow outgoing-port-channel number incoming-interface interface source-mac address destination-mac address

**Example**

```
Dell#show port-channel-flow outgoing-port-channel 1 incoming-interface te 3/3
source-mac 00:00:50:00:00:00 destination-mac 00:00:a0:00:00:00
Egress Port for port-channel 1, for the given flow, is Te 13/2
```

**Time Domain Reflectometer (TDR)**

TDR is useful for troubleshooting an interface that is not establishing a link; either it is flapping or not coming up at all. TDR detects open or short conditions of copper cables on 100/1000 Base-T modules.

**Important Points to Remember**

- The interface and port must be enabled (configured—refer to the interface command) before running TDR. An error message is generated if you have not enabled the interface.
- The interface on the far-end device must be shut down before running TDR.
- Because TDR is an intrusive test on an interface that is not establishing a link, do not run TDR on an interface that is passing traffic.
- When testing between two devices, do not run the test on both ends of the cable.
**tdr-cable-test**

Test the condition of copper cables on 100/1000 Base-T modules.

**Z9000**

**Syntax**

```
tdr-cable-test interface
```

**Parameters**

`interface` Enter the keyword TenGigabitEthernet then the slot/port information for the 100/1000 Ethernet interface.

**Defaults**

none

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.7.0.0** Introduced on the S5000.
- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.11.1** Introduced on the Z9000.
- **Version 8.3.7.0** Introduced on the S4810.
- **Version 8.2.1.0** Introduced on the E-Series ExaScale.
- **Version 7.7.1.0** Introduced on the S Series.
- **Version 7.6.1.0** Introduced on the C-Series.
- **Version 6.1.1.0** Introduced on the E-Series.

**Usage Information**

The interface must be enabled to run the test or an error message is generated:

```
Dell#tdr-cable-test tengigabitethernet 11/1
% Error: Interface is disabled Te 11/1.
```

Syslog messages are generated when the link flaps during TDR tests.

**Related Commands**

- `show tdr` — displays the results of the TDR test.

---

**show tdr**

Display the TDR test results.

**Z9000**

**Syntax**

```
show tdr interface
```

**Parameters**

`interface` Enter the keyword TenGigabitEthernet then the slot/port information for the 100/1000 Ethernet interface.

**Defaults**

none

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
If the TDR test has not been run, an error message is generated:

%Error: Please run the TDR test first

The following describes the TDR test status.

<table>
<thead>
<tr>
<th>Status</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>OK Status:</strong></td>
<td>TDR test is complete, no fault is detected on the cable, and the test is terminated.</td>
</tr>
<tr>
<td>Terminated</td>
<td>Length: 92 (+/- 1) meters, Status: Shorted</td>
</tr>
<tr>
<td></td>
<td>A short is detected on the cable. The location, in this Example is 92 meters. The short is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td></td>
<td>Length: 93 (+/- 1) meters, Status: Open</td>
</tr>
<tr>
<td></td>
<td>An opening is detected on the cable. The location, in this Example is 93 meters. The open is accurate to plus or minus one meter.</td>
</tr>
<tr>
<td>Status: Impedance Mismatch</td>
<td>There is an impedance mismatch in the cables.</td>
</tr>
</tbody>
</table>

Example

Dell#show tdr tengigabitethernet 11/2
Time since last test: 00:00:11
  Pair A, Length: OK Status: Terminated
  Pair B, Length: OK Status: Terminated
  Pair C, Length: OK Status: Terminated
  Pair D, Length: OK Status: Terminated

Related Commands

tdr-cable-test — runs the TDR test.

UDP Broadcast

The user datagram protocol (UDP) broadcast feature is a software-based method to forward low throughput (not to exceed 200 pps) IP/UDP broadcast traffic arriving on a physical or VLAN interface.

Important Points to Remember

- This feature is available only on the Z9000 platform.
- Routing information protocol (RIP) is not supported with the UDP Broadcast feature.
- If you configure this feature on an interface using the ip udp-helper udp-port command, the ip directed-broadcast command becomes ineffective on that interface.
- The existing show interface command has been modified to display the configured broadcast address.
**debug ip udp-helper**

Enable UDP debug and display the debug information on a console.

### Z9000

**Syntax**

d debug ip udp-helper

To disable debug information, use the no debug ip udp-helper command.

**Defaults**

Debug disabled.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>Pre-version</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#debug ip udp-helper
UDP helper debugging is on

01:20:22: Pkt rcvd on Gi 5/0 with IP DA (0xffffffff) will be sent on Gi 5/1 Gi 5/2 Vlan 3

01:44:54: Pkt rcvd on Gi 7/0 is handed over for DHCP processing.
```

**Related Commands**

- ip udp-broadcast-address — configures a UDP IP address for broadcast.
- ip udp-helper udp-port — enables the UDP broadcast feature on an interface.
- show ip udp-helper — displays the configured UDP helper(s) on all interfaces.

**ip udp-broadcast-address**

Configure an IP UDP address for broadcast.

**Syntax**

```
ip udp-broadcast-address address
```

To delete the configuration, use the no ip udp-broadcast-address address command.

**Parameters**

- **address**
  
Enter an IP broadcast address in dotted decimal format (A.B.C.D).

**Defaults**

Not configured.

**Command Modes**

INTERFACE (conf-if)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

564 Interfaces
ip udp-helper udp-port

Enable the UDP broadcast feature on an interface either for all UDP ports or a specified list of UDP ports.

Syntax

ip udp-helper udp-port [udp-port-list]

To disable the UDP broadcast on a port, use the no ip udp-helper udp-port [udp-port-list] command.

Parameters

- **udp-port-list**: (OPTIONAL) Enter up to 16 comma-separated UDP port numbers.

  **NOTE**: If you do not use this option, all UDP ports are considered by default.

Defaults

none

Command Modes

INTERFACE (config-if)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>Pre-version</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>

Usage Information

When you configure the ip helper-address command and ip udp-helper udp-port command, the behavior is that the UDP broadcast traffic with port numbers 67/68 is unicast relayed to the DHCP server per the ip helper-address configuration. This occurs regardless if the ip udp-helper udp-port command contains port numbers 67/68 or not.

If you only configure the ip udp-helper udp-port command, all the UDP broadcast traffic is flooded, including ports 67/68 traffic if those ports are part of the udp-port-list.

Related Commands

- ip helper-address — configures the destination broadcast or host address for the DHCP server.
- debug ip udp-helper — enables debug and displays the debug information on a console.
- show ip udp-helper — displays the configured UDP helpers on all interfaces.
**show ip udp-helper**

Display the configured UDP helpers on all interfaces.

**Z9000**

**Syntax**

```
show ip udp-helper
```

**Defaults**

none

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>

<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>Pre-version</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip udp-helper
--------------------------------------------------
Port    UDP  port  list
--------------------------------------------------
Te 10/2  656, 658
Te 10/3  All
```

**Related Commands**

- `debug ip udp-helper` — enables debug and displays the debug information on a console.
- `ip udp-broadcast-address` — configures a UDP IP address for broadcast.
- `ip udp-helper udp-port` — enables the UDP broadcast feature on an interface either for all UDP ports or a specified list of UDP ports.

---

**Enhanced Validation of Interface Ranges**

This functionality is supported on the Z9000 platform.

You can avoid specifying spaces between the range of interfaces, separated by commas, that you configure by using the `interface range` command. For example, if you enter a list of interface ranges, such as `interface range fo 2/0-1, te 10/0, gi 3/0, fa 0/0`, this configuration is considered valid. The comma-separated list is not required to be separated by spaces in between the ranges. You can associate multicast MAC or hardware addresses to an interface range and VLANs by using the `mac-address-table static multicast-mac-address vlan vlan-id output-range interface` command.

---

**ip http source-interface**

Specify an interface as the source interface for HTTP connections.

This feature is supported on Z9000 platform.

**Syntax**

```
ip http source-interface interface
```

To delete an interface, use the `no ip http source-interface interface` command.
**Parameters**

Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

The IP address on the system that is closest to the Telnet address is used in the outgoing packets.

**Related Commands**

- `ip ftp source interface`
  
  Configuring source interface for ftp communications.
Internet Protocol Security (IPSec)

Internet protocol security (IPSec) is an end-to-end security scheme for securing IP communications by authenticating and encrypting all packets in a session. Use IPSec between hosts, gateways, or hosts and gateways.

IPSec uses a series of protocol functions to achieve information security:

- **Authentication Headers (AH)** — Connectionless integrity and origin authentication for IP packets.
- **Encapsulating Security Payloads (ESP)** — Confidentiality, authentication, and data integrity for IP packets.
- **Security Associations (SA)** — Algorithm-provided parameters required for AH and ESP protocols.

IPSec capability is available on control (protocol) and management traffic; end-node support is required.

IPSec supports two operational modes: Transport and Tunnel.
- Transport is the default mode for IPSec and encrypts only the payload of the packet. Routing information is unchanged.
- Tunnel mode is used to encrypt the entire packet, including the routing information in the IP header. Tunnel mode is typically used in creating virtual private networks (VPNs).

Transport mode provides IP packet payload protection using ESP. You can use ESP alone or in combination with AH to provide additional authentication. AH protects data from modification but does not provide confidentiality.

SA is the configuration information that specifies the type of security provided to the IPSec flow. The SA is a set of algorithms and keys used to authenticate and encrypt the traffic flow. The AH and ESP use SA to provide traffic protection for the IPSec flow.

**NOTE:** Due to performance limitations on the control processor, you cannot enable IPSec on all packets in a communication session.

- match
- session-key
- show crypto ipsec transform-set
- show crypto ipsec policy
- transform-set

**crypto ipsec transform-set**

Create a transform set, or combination of security algorithms and protocols, of cryptos.

**Z9000**

**Syntax**

```
crypto ipsec transform-set name {ah-authentication {md5|sha1|null} | esp-authentication {md5|sha1|null} | esp-encryption {3des|cbc|des|null}}
```

To delete a transform set, use the `no crypto ipsec transform-set name {ah-authentication {md5|sha1|null} | esp-authentication {md5|sha1|null} | esp-encryption {3des|cbc|des|null}}` command.

**Parameters**

- `name` Enter the name for the transform set.
ah-authentication

Enter the keywords ah-authentication then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.

- md5 — Use Message Digest 5 (MD5) authentication.
- sha1 — Use Secure Hash Algorithm 1 (SHA-1) authentication.
- null — Causes an encryption policy configured for the area to not be inherited on the interface.

 esp-authentication

Enter the keywords esp-authentication then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.

- md5 — Use Message Digest 5 (MD5) authentication.
- sha1 — Use Secure Hash Algorithm 1 (SHA-1) authentication.
- null — Causes an encryption policy configured for the area to not be inherited on the interface.

 esp-encryption

Enter the keywords esp-encryption then the transform type of operation to apply to traffic. The transform type represents the encryption or authentication applied to traffic.

- 3des — Use 3DES encryption.
- cbc — Use CDC encryption.
- des — Use DES encryption.
- null — Causes an encryption policy configured for the area to not be inherited on the interface.

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description

9.2(0.2) Introduced on the Z9000, S4810, and S4820T.

Usage Information

- Both sides of the link must specify the same transform set.
- You can create up to 64 transform sets.

Example

Dell(conf)#do show crypto ipsec transform-set
Transform-Set Name     : ts1
Transform-Set refCnt   : 0
AH Transform          : md5
ESP Auth Transform    :
ESP Encry Transform   :

Dell(conf)#

crypto ipsec policy

Create a crypto policy used by ipsec.

Z9000

crypto ipsec policy name seq-num ipsec-manual

To delete a crypto policy entry, use the no crypto ipsec policy name seq-num ipsec-manual command.
Parameters

- **name**: Enter the name for the crypto policy set.
- **seq-num**: Enter the sequence number assigned to the crypto policy entry.

Defaults

- none

Command Modes

</tbody>
</table>

Usage Information

This command creates a crypto policy entry and enters the crypto policy configuration mode for configuring the flow parameters.

Example

Dell(conf)#crypto ipsec policy West 10 ipsec-manual
Dell(conf-crypto-policy)#

management crypto-policy

Apply the crypto policy to management traffic.

Z9000

Syntax

management crypto-policy name

To remove the management traffic crypto policy, use the no management crypto-policy name command.

Parameters

- **name**: Enter the name for the crypto policy.

Defaults

- none

Command Modes

- CONFIGURATION

<tr>
<td>9.2(0.2)</td>
<td>Introduced on the Z9000, S4810, and S4820T.</td>
</tr>
</tbody>
</table>

match

Apply an match filter to the crypto policy.

Z9000

Syntax

match seq-num tcp [source ip address | ipv6 address (mask) [source-port number]] [destination ip address | ipv6 address [mask] [destination-port number]]
To remove the match filter for the crypto map, use the `no match seq-num tcp [source ip address | ipv6 address {mask} {source-port number}] [destination ip address | ipv6 address {mask} {destination-port number}]` command.

**Parameters**

- `seq-num` Enter the match command sequence number.
- `source ip-address | ipv6 address` Enter the keyword `source` then the IPv4 or IPv6 address for the source.
- `mask` Enter the mask prefix length in /nn format.
- `source-port number` Enter the source port number.
- `destination-port number` Enter the destination port number.

**Defaults**

none

**Command Modes**

CONFIG-CRYPTO-POLICY

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.2)</td>
<td>Introduced on the Z9000, S4810, and S4820T.</td>
</tr>
</tbody>
</table>

**Usage Information**

- IPv4 addresses support only /32 mask types.
- IPv6 addresses support only /128 mask types.
- Configure match for bi-directional traffic for optimal routing.
- Only TCP is supported.

**Example**

```plaintext
match 0 tcp a::1 /128 0 a::2 /128 23
match 1 tcp a::1 /128 23 a::2 /128 0
match 2 tcp a::1 /128 0 a::2 /128 21
match 3 tcp a::1 /128 21 a::2 /128 0
match 4 tcp 1.1.1.1 /32 0 1.1.1.2 /32 23
match 5 tcp 1.1.1.1 /32 23 1.1.1.2 /32 0
match 6 tcp 1.1.1.1 /32 0 1.1.1.2 /32 21
match 7 tcp 1.1.1.1 /32 21 1.1.1.2 /32 0
```

### session-key

Specify the session keys used in the crypto policy entry.

#### Z9000

**Syntax**

```
session-key {inbound | outbound} {ah spi hex-key-string | esp spi encrypt hex-key-string auth hex-key-string}
```

To delete the session key information from the crypto policy, use the `no session-key {inbound | outbound} {ah | esp} command.

**Parameters**

- `name` Enter the name for the transform set.
- `inbound` Specify the inbound session key for IPSec.
- `outbound` Specify the outbound session key for IPSec.
- `ah` Use the AH protocol when you select the AH transform set in the crypto policy.
Use the ESP protocol when you select the ESP transform set in the crypto policy.

*spi*

Enter the security parameter index number.

*hex-key-string*

Enter the session key in hex format (a string of 8, 16, or 20 bytes). For DES algorithms, specify at least 16 bytes per key. For SHA algorithms, specify at least 20 bytes per key.

*encrypt*

Indicates the ESP encryption transform set key string.

*auth*

Indicates the ESP authentication transform set key string.

**Defaults**

none

arp

To associate an IP address with a MAC address in the switch, use address resolution protocol (ARP).

Z9000

taxonomy

topic

**Syntax**

```
arp ip-address mac-address interface
```

To remove an ARP address, use the `no arp ip-address` command.

**Parameters**

- **ip-address**
  - Enter an IP address in dotted decimal format.
- **mac-address**
  - Enter a MAC address in nnnn.nnnn.nnnn format.
- **interface**
  - (OPTIONAL) Enter any of the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For the Management interface on the stack-unit, enter the keyword `ManagementEthernet` then the slot/port information. The slot range is from 0 to 1. The port range is 0.
    - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

This timer is an exponential backoff timer. Over the specified period, the time between ARP requests increases. This behavior reduces the potential for the system to slow down while waiting for a multitude of ARP responses.

Related Commands

show arp retries — displays the configured number of ARP retries.

arp learn-enable

Enable ARP learning using gratuitous ARP.

Z9000

Syntax

arp learn-enable

Defaults

Disabled
Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

In Dell Networking OS versions prior to 8.3.1.0, if a gratuitous ARP is received some time after an ARP request is sent, only RP2 installs the ARP information. For example:

1. At time t=0, Dell Networking OS sends an ARP request for IP A.B.C.D.
2. At time t=1, Dell Networking OS receives an ARP request for IP A.B.C.D.
3. At time t=2, Dell Networking OS installs an ARP entry for A.B.C.D only on RP2.

Beginning with Dell Networking OS version 8.3.1.0, when a gratuitous ARP is received, Dell Networking OS installs an ARP entry on all three CPUs.

arp max-entries

Enables you to configure the maximum number of ARP entries per VRF that are allowed for IPv4.

Syntax

```plaintext
arp max-entries [vrf vrf-name] max-number
```

Parameters

- `vrf vrf-name` Enter the name of a specific VRF for which you want to configure maximum number of ARP entries that IPv4 allows.
- `max-number` Enter the maximum number of ARP entries that a VRF RTM can hold. The range is from 0 to 65535.

Defaults

Not configured.

Usage Information

Retries are 20 seconds apart.

Related Commands

show arp retries — displays the configured number of ARP retries.

arp timeout

Set the time interval for an ARP entry to remain in the ARP cache.

Z9000

Syntax

arp timeout minutes

Parameters

minutes Enter the number of minutes. The range is from 0 to 35790. The default is 240 minutes.

Defaults

240 minutes (4 hours)

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
clear arp-cache

Clear the dynamic ARP entries from a specific interface or optionally delete (no-refresh) ARP entries from the content addressable memory (CAM).

Syntax

```
clear arp-cache [interface | ip ip-address] [no-refresh]
```  

Parameters

- **interface**: (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1. The port range is 0.
  - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

- **ip ip-address**: (OPTIONAL) Enter the keyword ip then the IP address of the ARP entry you wish to clear.

- **no-refresh**: (OPTIONAL) Enter the keywords no-refresh to delete the ARP entry from CAM. Or use this option with interface or ip ip-address to specify which dynamic ARP entries you want to delete.

**NOTE:** Transit traffic may not be forwarded during the period when deleted ARP entries are resolved again and re-installed in CAM. Use this option with extreme caution.

Command Modes

EXEC Privilege

**clear ip fib stack-unit**

Clear all FIB entries in the specified stack unit (use this command with caution, refer to Usage Information.)

**Syntax**

clear ip fib stack-unit unit-number vrf vrf-name

**Parameters**

- unit-number
  - Enter the number of the stack unit. The range is from 0 to 11.
vrf vrf-name

Enter the keyword vrf followed by the name of the VRF to clear all FIB entries corresponding to that VRF.

Command Modes
- EXEC Privilege

Command History

</tbody>
</table>

Usage Information
To clear Layer 3 CAM inconsistencies, use this command.

⚠️ CAUTION: Executing this command causes traffic disruption.

Related Commands
- show ip fib stack-unit — shows FIB entries on a specified stack-unit.

clear ip route

Clear one or all routes in the routing table.

Z9000

Syntax

```
clear ip route { * | ip-address mask }
```

Parameters

- `*` Enter an asterisk (*) to clear all learned IP routes.
- `ip-address mask` Enter a specific IP address and mask in dotted decimal format to clear that IP address from the routing table.

Command Modes
- EXEC Privilege

Command History

clear tcp statistics

Clear TCP counters.

Z9000

Syntax

clear tcp statistics [all | cp | rp1 | rp2]

Parameters

all Enter the keyword all to clear all TCP statistics maintained on all switch processors.

(cp (OPTIONAL) Enter the cp to clear only statistics from the Control Processor.

rp1 (OPTIONAL) Enter the keyword rp1 to clear only the statistics from Route Processor 1.

rp2 (OPTIONAL) Enter the keyword rp2 to clear only the statistics from Route Processor 2.

**debug arp**

View information on ARP transactions.

**Z9000**

**Syntax**

```
debug arp [interface] [count value]
```

To stop debugging ARP transactions, use the **no debug arp** command.

**Parameters**

- **interface** *(OPTIONAL)* Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For the Management interface on the stack-unit, enter the keyword `ManagementEthernet` then the slot/port information. The slot range is from 0 to 1. The port range is 0.
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

- **count value** *(OPTIONAL)* Enter the keyword `count` then the count value. The range is from 1 to 65534.

**Defaults**

Related Commands
ip helper-address – specifies the destination broadcast or host address for the DHCP server request.
ip helper-address hop-count disable – disables the hop-count increment for the DHCP relay agent.

dbg ip icmp

View information on the internal control message protocol (ICMP).

Z9000

dbg ip icmp [interface] [count value]

To disable debugging, use the no debug ip icmp command.

Parameters
interface (OPTIONAL) Enter the following keywords and slot/port or number information:
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1. The port range is 0.
- For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

count value (OPTIONAL) Enter the keyword count then the count value. The range is from 1 to 65534. The default is Infinity.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.5.1.0 Added support for 4-port 40G line cards on ExaScale.
8.3.7.0 Introduced on the S4810.
8.2.1.0 Added support for 4094 VLANs on the E-Series ExaScale (the prior limit was 2094).
**Version** | **Description**
--- | ---
8.1.1.0 | Introduced on the E-Series ExaScale.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
6.3.1.0 | Added the `count` option.

**Example**

```
ICMP: echo request rcvd from src 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40
ICMP: echo request rcvd from src 40.40.40.40
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: src 40.40.40.40, dst 40.40.40.40, echo reply
ICMP: echo request sent to dst 40.40.40.40
```

**Usage Information**

To stop packets from flooding the user terminal when debugging is turned on, use the `count` option.

### debug ip packet

View a log of IP packets sent and received.

**Z9000**

**Syntax**

```
debug ip packet [access-group name] [count value] [interface]
```

To disable debugging, use the `no debug ip packet [access-group name] [count value] [interface]` command.

**Parameters**

- **access-group name**
  - Enter the keyword `access-group` then the access list name (maximum 16 characters) to limit the debug output based on the defined rules in the ACL.

- **count value**
  - (OPTIONAL) Enter the keyword `count` then the count value. The range is from 1 to 65534. The default is `Infinity`.

- **interface**
  - (OPTIONAL) Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet then the slot/port information.`
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE then the slot/port information.`
    - For the Management interface on the stack-unit, enter the keyword `ManagementEthernet then the slot/port information`. The slot range is from 0 to 1. The port range is 0.
    - For a port channel interface, enter the keywords `port-channel then a number`. The range is from 1 to 128.
    - For a VLAN interface, enter the keyword `vlan then a number from 1 to 4094.`

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
### Version Description

9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.5.1.0 Added support for 4-port 40G line cards on ExaScale.
8.3.7.0 Introduced on the S4810.
8.2.1.0 Added support for 4094 VLANs on the E-Series ExaScale (the prior limit was 2094).
8.1.1.0 Introduced on the E-Series ExaScale.
7.6.1.0 Added the access-group option.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
6.3.1.0 Added the count option.

### Usage Information

The following describes the `debug ip packet` command in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>s=</code></td>
<td>Lists the source address of the packet and the name of the interface (in parentheses) that received the packet.</td>
</tr>
<tr>
<td><code>d=</code></td>
<td>Lists the destination address of the packet and the name of the interface (in parentheses) through which the packet is being sent out on the network.</td>
</tr>
<tr>
<td><code>len</code></td>
<td>Displays the packet’s length.</td>
</tr>
<tr>
<td><code>sending, rcvd, fragment, sending broad/multicast proto, unroutable</code></td>
<td>The last part of each line lists the status of the packet.</td>
</tr>
<tr>
<td>TCP <code>src=</code></td>
<td>Displays the source and destination ports, the sequence number, the acknowledgement number, and the window size of the packets in that TCP packets.</td>
</tr>
<tr>
<td>UDP <code>src=</code></td>
<td>Displays the source and destination ports for the UDP packets.</td>
</tr>
<tr>
<td>ICMP <code>type=</code></td>
<td>Displays the ICMP type and code.</td>
</tr>
<tr>
<td>IP Fragment</td>
<td>States that it is a fragment and displays the unique number identifying the fragment (Ident) and the offset (in 8-byte units) of this fragment (fragment offset) from the beginning of the original datagram.</td>
</tr>
</tbody>
</table>

#### Example

```
IP: s=10.1.2.62 (local), d=10.1.2.206 (Ma 0/0), len 54, sending
   TCP src=23, dst=40869, seq=2112994894, ack=606901739, win=8191 ACK
   PUSH
IP: s=10.1.2.206 (Ma 0/0), d=10.1.2.62, len 40, rcvd
   TCP src=0, dst=0, seq=0, ack=0, win=0
IP: s=10.1.2.62 (local), d=10.1.2.206 (Ma 0/0), len 226, sending
   TCP src=23, dst=40869, seq=2112994896, ack=606901739, win=8192 ACK
   PUSH
IP: s=10.1.2.216 (Ma 0/0), d=10.1.2.255, len 78, rcvd
   UDP src=0, dst=0
IP: s=10.1.2.62 (local), d=10.1.2.255 (Ma 0/0), len 1500, sending fragment
   IP Fragment, Ident = 4741, fragment offset = 0
   ICMP type=0, code=0
IP: s=10.1.2.62 (local), d=10.1.2.255 (Ma 0/0), len 1500, sending fragment
   IP Fragment, Ident = 4741, fragment offset = 1480
IP: s=40.40.40.40 (local), d=224.0.0.5 (Gi 4/11), len 64, sending broad/multicast
```
Usage
Information
To stop packets from flooding the user terminal when debugging is turned on, use the count option.

The access-group option supports only the equal to (eq) operator in TCP ACL rules. Port operators not equal to (neq), greater than (gt), less than (lt), or range are not supported in access-group option (refer to the following example). ARP packets (arp) and Ether-type (ether-type) are also not supported in the access-group option. The entire rule is skipped to compose the filter.

The access-group option pertains to:
- IP protocol number: from 0 to 255
- Internet control message protocol (icmp) but not the ICMP message type (from 0 to 255)
- Any internet protocol (ip)
- Transmission Control Protocol (tcp) but not on the rst, syn, or urg bits
- User Datagram Protocol (udp)

In the case of ambiguous access control list rules, the debug ip packet access-control command is disabled. A message appears identifying the error (refer to the Example below).

Example (Error Messages)
Dell#debug ip packet access-group test
%Error: port operator GT not supported in access-list debug
%Error: port operator LT not supported in access-list debug
%Error: port operator RANGE not supported in access-list debug
%Error: port operator NEQ not supported in access-list debug
Dell#00:10:45: %RPM0-P:CP
%IPMGR-3-DEBUG_IP_PACKET_ACL_AMBIGUOUS_EXP: Ambiguous rules not supported in access-list debug, access-list debugging is turned off
Dell#

ip address

Assign a primary and secondary IP address to the interface.

Z9000

Syntax

ip address ip-address mask [secondary]

To delete an IP address from an interface, use the no ip address [ip-address] command.

Parameters

- **ip-address**: Enter an IP address in dotted decimal format.
- **mask**: Enter the mask of the IP address in slash prefix format (for example, /24).
- **secondary**: (OPTIONAL) Enter the keyword secondary to designate the IP address as the secondary address.

Defaults

Not configured.

</tr>
</tbody>
</table>

**Usage Information**

You must be in INTERFACE mode before you add an IP address to an interface. Assign an IP address to an interface prior to entering ROUTER OSPF mode.

**ip directed-broadcast**

Enables the interface to receive directed broadcast packets.

**Z9000**

**Syntax**

ip directed-broadcast

To disable the interface from receiving directed broadcast packets, use the no ip directed-broadcast command.

**Defaults**

Disabled (that is, the interface does not receive directed broadcast packets)

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

</table>
**ip domain-list**

Configure names to complete unqualified host names.

**Z9000**

**Syntax**

```
ip domain-list name
```

To remove the name, use the `no ip domain-list name` command.

**Parameters**

- `name`: Enter a domain name to be used to complete unqualified names (that is, incomplete domain names that cannot be resolved).

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

To configure a list of possible domain names, configure the `ip domain-list` command up to six times.

If you configure both the `ip domain-name` and `ip domain-list` commands, the software tries to resolve the name using the `ip domain-name` command. If the name is not resolved, the software goes through the list of names configured with the `ip domain-list` command to find a match.

To enable dynamic resolution of hosts, use the following steps:

- specify a domain name server with the `ip name-server` command
- enable DNS with the `ip domain-lookup` command

To view current bindings, use the `show hosts` command. To view a DNS-related configuration, use the `show running-config resolve` command.

**Related Commands**

- `ip domain-name` — specifies a DNS server.

---

**ip domain-lookup**

To address resolution (that is, DNS), enable dynamic host-name.

**Z9000**

**Syntax**

```
ip domain-lookup
```

IPv4 Routing  591
To disable DNS lookup, use the `no ip domain-lookup` command.

**Defaults**
- Disabled.

**Command Modes**
- CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>

<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
To fully enable DNS, also specify one or more domain name servers with the `ip name-server` command.

Dell Networking OS does not support sending DNS queries over a VLAN. DNS queries are sent out all other interfaces, including the Management port.

To view current bindings, use the `show hosts` command.

**Related Commands**
- `ip name-server` — specifies a DNS server.
- `show hosts` — Views the current bindings.

### ip domain-name

Configure one domain name for the switch.

**Z9000**

**Syntax**

```
ip domain-name name
```

To remove the domain name, use the `no ip domain-name` command.

**Parameters**
- `name` Enter one domain name to be used to complete unqualified names (that is, incomplete domain names that cannot be resolved).

**Defaults**
- Not configured.

**Command Modes**
- CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
You can only configure one domain name with the `ip domain-name` command. To configure more than one domain name, configure the `ip domain-list` command up to six times.

To enable dynamic resolution of hosts, use the following steps:
- specify a domain name server with the `ip name-server` command
- enable DNS with the `ip domain-lookup` command

To view current bindings, use the `show hosts` command.

**Related Commands**

- `ip domain-list` — configures additional names.

**ip helper-address**

Specify the address of a DHCP server so that DHCP broadcast messages can be forwarded when the DHCP server is not on the same subnet as the client.

**Z9000**

**Syntax**

```
ip helper-address ip-address
```

To remove a DHCP server address, use the `no ip helper-address` command.

**Parameters**

`ip-address` Enter an IP address in dotted decimal format (A.B.C.D).

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
9.0.0.0 | Added support for IPv6.
8.3.19.0 |Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series ExaScale.
7.9.1.0 | Introduced VRF on the E-Series.
7.6.1.0 | Introduced on the S-Series.
You can add multiple DHCP servers by entering the `ip helper-address` command multiple times. If multiple servers are defined, an incoming request is sent simultaneously to all configured servers and the reply is forwarded to the DHCP client.

Dell Networking OS uses standard DHCP ports, that is UDP ports 67 (server) and 68 (client) for DHCP relay services. It listens on port 67 and if it receives a broadcast, the software converts it to unicast, and forwards to it to the DHCP-server with source port=68 and destination port=67.

The server replies with source port=67, destination port=67 and Dell Networking OS forwards to the client with source port=67, destination port=68.

```
ip helper-address hop-count disable
```

Disables the hop-count increment for the DHCP relay agent.

**Z9000**

**Syntax**

`ip helper-address hop-count disable`

To re-enable the hop-count increment, use the `no ip helper-address hop-count disable` command.

**Defaults**

Enabled; the hops field in the DHCP message header is incremented by default.

**Command Modes**

`CONFIGURATION`

**Command History**

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Introduced for the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command disables the incrementing of the hops field when boot requests are relayed to a DHCP server through Dell Networking OS. If the incoming boot request already has a non-zero hops field, the message is relayed with the same value for hops. However, the message is discarded if the hops field exceeds 16, to comply with the relay agent behavior specified in RFC 1542.

**Related Commands**

- `ip helper-address` — specifies the destination broadcast or host address for DHCP server requests.
- `show running-config` — displays the current configuration and changes from the default values.
ip host

Assign a name and an IP address to the host-to-IP address mapping table.

Z9000

Syntax

ip host name ip-address

To remove an IP host, use the no ip host name [ip-address] command.

Parameters

- **name**: Enter a text string to associate with one IP address.
- **ip address**: Enter an IP address, in dotted decimal format, to be mapped to the name.

Defaults

Not configured.

ip icmp source-interface

Enable the ICMP error and unreachable messages to be sent with the source interface IP address, such as the loopback address, instead of the hops of the preceding devices along the network path to be used for easy debugging and diagnosis of network disconnections and reachability problems with IPv4 packets.

Syntax

ip icmp source-interface interface

Parameters

- **interface**: Enter one of the following keywords and slot/port or number information:
  - For a Management Ethernet interface, enter the keyword managementethernet.

**NOTE:** When you configure the capability to enable the loopback IP address to be sent for easy debugging and diagnosis (IP addresses of the devices for which the ICMP source interface is configured), the source IP address of the outgoing ICMP error message is modified, although the packets are not sent out using the configured interface. Because the management interface is configured without any parameters such as the IP address, it is treated to the management interface of the primary unit or the existing unit.
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a port channel interface, enter the keywords port-channel then a number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, and Z9000 platforms.</td>
</tr>
</tbody>
</table>

**Usage Information**
You can enable the mechanism to configure the source or the originating interface from which the packet (the device that generates the ICMP error messages) is received by the switch to send the loopback address instead of its source IP address to be used in the ICMP unreachable messages and in the traceroute command output. The loopback address must be unique in a particular domain.

In network environments that contain a large number of devices, ranging up to thousands of systems, and with each device configured for equal-cost multipath (ECMP) links, you cannot effectively and optimally use the traceroute and ping applications to examine the network reachability and identify any broken links for diagnostic purposes. In such cases, if the reply that is obtained from each hop on the network path contains the IP address of the adjacent, neighboring interface from which the packet is received, it is difficult to employ the ping and traceroute utilities. You can enable the ICMP unreachable messages to contain the loopback address of the source device instead of the previous hop's IP address to be able to easily and quickly identify the device and devices along the path because the DNS server maps the loopback IP address to the hostname and does not translate the IP address of every interface of the switch to the hostname.

**Example**

```
Dell(conf)#ip icmp source-interface tengigabitethernet 1/1
```

```
Dell(conf)#
```

### `ipv6 icmp source-interface`

Enable the ICMP error and unreachable messages to be sent with the source interface IP address, such as the loopback address, instead of the hops of the preceding devices along the network path to be used for easy debugging and diagnosis of network disconnections and reachability problems with IPv6 packets.

**Syntax**

```
ipv6 icmp source-interface interface
```

**Parameters**

- `interface`
  - Enter one of the following keywords and slot/port or number information:
    - For a Management Ethernet interface, enter the keyword managementethernet.

**NOTE:** When you configure the capability to enable the loopback IP address to be sent for easy debugging and diagnosis (IP addresses of the devices for which the ICMP source interface is configured), the source IP address of the outgoing ICMP error message is modified, although the packets are not sent out using the configured interface. Because the management interface is configurable only without any parameters such as the IP address, it is treated to the management interface of the primary unit or the existing unit.
For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.

For a port channel interface, enter the keywords `port-channel` then a number.

For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, and Z9000 platforms.</td>
</tr>
</tbody>
</table>

**Usage Information**
You can enable the mechanism to configure the source or the originating interface from which the packet (the device that generates the ICMP error messages) is received by the switch to send the loopback address instead of its source IP address to be used in the ICMP unreachable messages and in the `traceroute` command output. The loopback address must be unique in a particular domain.

In network environments that contain a large number of devices, ranging up to thousands of systems, and with each device configured for equal-cost multipath (ECMP) links, you cannot effectively and optimally use the `traceroute` and `ping` applications to examine the network reachability and identify any broken links for diagnostic purposes. In such cases, if the reply that is obtained from each hop on the network path contains the IP address of the adjacent, neighboring interface from which the packet is received, it is difficult to employ the `ping` and `traceroute` utilities. You can enable the ICMP unreachable messages to contain the loopback address of the source device instead of the previous hop's IP address to be able to easily and quickly identify the device and devices along the path because the DNS server maps the loopback IP address to the hostname and does not translate the IP address of every interface of the switch to the hostname.

**Example**

```
Dell(conf)#ipv6 icmp source-interface tengigabitethernet 1/1
Dell(conf)#
```

---

**ip max-frag-count**

Set the maximum number of fragments allowed in one packet for packet re-assembly.

**Z9000**

**Syntax**

```
ip max-frag-count count
```

To place no limit on the number of fragments allowed, use the `no ip max-frag-count` command.

**Parameters**

- `count` Enter a number for the number of fragments allowed for re-assembly. The range is from 2 to 256.

**Defaults**
No limit is set on number of fragments allowed.

**Command Modes**
CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
### ip max-routes

Enables you to configure the maximum number of protocol routes per VRF that are allowed for IPv4.

**Syntax**

```
ip max-routes [vrf vrf-name] max-number
```

**Parameters**

- `vrf vrf-name` Enter the keyword vrf and then the name of the VRF for which you want to configure maximum number of protocol routes that IPv4 allows.
- `max-number` Enter the maximum number of protocol routes that a VRF RTM can hold. The range is from 0 to 7500.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant **Dell Networking OS Command Line Reference Guide**.

The following is a list of the Dell Networking OS version history for this command.

- **Version 9.4.(0.0)** Introduced on the S4810 and S4820T.

**Usage Information**

Use this command to specify the maximum number of protocol routes that the Route Table Manager can hold for a specific VRF. This command does not apply to the management VRFs.

**Related Commands**

- `show ip route` — views the switch routing table.
- `show ipv6 route` — displays the IPv6 routes.

### ip mtu

Set the IP MTU (frame size) of the packet the RPM transmits for the line card interface. If the packet must be fragmented, Dell Networking OS sets the size of the fragmented packets to the size specified in this command.

**Syntax**

```
ip mtu value
```

**Usage Information**

To return to the default IP MTU value, use the `no ip mtu` command.

**Parameters**

<table>
<thead>
<tr>
<th>value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Enter the maximum MTU size if the IP packet is fragmented. The range is from 576 to 9234. The default is <strong>1500 bytes</strong>.</td>
</tr>
</tbody>
</table>

**Defaults**

<table>
<thead>
<tr>
<th>1500 bytes</th>
</tr>
</thead>
</table>

**Command Modes**

<table>
<thead>
<tr>
<th>INTERFACE (Gigabit Ethernet and 10-Gigabit Ethernet interfaces)</th>
</tr>
</thead>
</table>

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 8.3.19.0**
  - Introduced on the S4820T.

- **Version 8.3.7.0**
  - Introduced on the S4810.

- **Version 8.1.1.0**
  - Introduced on the E-Series ExaScale.

- **pre-Version 6.1.1.0**
  - Introduced on the E-Series.

**Usage Information**

When you enter the `no mtu` command, Dell Networking OS reduces the `ip mtu` value to 1536 bytes. To return the IP MTU value to the default, use the `no ip mtu` command.

Starting with Dell Networking OS Release 9.2(0.2), the `ip mtu` command is not supported to configure the IP MTU value that is used when the IP packet is fragmented. Instead of having to configure the IP MTU value, this value is automatically computed by the software when you configure an interface. As a result, the ip mtu command is not available for configuration. However, you can continue to specify the link MTU value by using the mtu command.

Compensate for Layer 2 header when configuring link MTU on an Ethernet interface or Dell Networking OS may not fragment packets. If the packet includes a Layer 2 header, the difference between the link MTU and IP MTU (the `ip mtu` command) must be enough bytes to include for the Layer 2 header.

Link MTU and IP MTU considerations for Port Channels and VLANs are as follows:

**Port Channels:**

- All members must have the same link MTU value and the same IP MTU value.
- The Port Channel link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the channel members. For example, if the members have a link MTU of 2100 and an IP MTU 2000, the Port Channel’s MTU values cannot be higher than 2100 for link MTU or 2000 bytes for IP MTU.

**VLANs:**

- All members of a VLAN must have same IP MTU value.
- Members can have different Link MTU values. Tagged members must have a link MTU 4 bytes higher than untagged members to account for the packet tag.
- The VLAN link MTU and IP MTU must be less than or equal to the link MTU and IP MTU values configured on the VLAN members. For example, the VLAN contains tagged members with Link MTU of 1522 and IP MTU of 1500 and untagged members with Link MTU of 1518 and IP MTU of 1500. The VLAN’s Link MTU cannot be higher than 1518 bytes and its IP MTU cannot be higher than 1500 bytes.

The following describes the difference between Link MTU and IP MTU.

<table>
<thead>
<tr>
<th>Layer 2 Overhead</th>
<th>Difference between Link MTU and IP MTU</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ethernet (untagged)</td>
<td>18 bytes</td>
</tr>
<tr>
<td>VLAN Tag</td>
<td>Tag 22 bytes</td>
</tr>
<tr>
<td>Untagged Packet with VLAN-Stack Header</td>
<td>22 bytes</td>
</tr>
<tr>
<td>Tagged Packet with VLAN-Stack Header</td>
<td>26 bytes</td>
</tr>
</tbody>
</table>

**IPv4 Routing**

599
ip name-server

Enter up to six IPv4 addresses of name servers. The order you enter the addresses determines the order of their use.

Z9000

Syntax

```
ip name-server ipv4-address [ipv4-address2...ipv4-address6]
```

To remove a name server, use the `no ip name-server ip-address` command.

Parameters

- `ipv4-address` Enter the IPv4 address, in dotted decimal format, of the name server to be used.
- `ipv4-address2...ipv4-address6` (OPTIONAL) Enter up to five more IPv4 addresses, in dotted decimal format, of name servers to be used. Separate the addresses with a space.

Defaults

No name servers are configured.

Command Modes

`CONFIGURATION`

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Dell Networking OS does not support sending DNS queries over a VLAN. DNS queries are sent out on all other interfaces, including the Management port.

You can separately configure both IPv4 and IPv6 domain name servers.

ip proxy-arp

Enable proxy ARP on an interface.

Z9000

Syntax

```
ip proxy-arp
```

To disable proxy ARP, use the `no ip proxy-arp` command.

Defaults

Enabled.
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

Related Commands

- `show ip interface` — displays the interface routing status and configuration.

**ip route**

Assign a static route to the switch.

**Z9000**

**Syntax**

```
ip route ip-address mask {ip-address | interface [ip-address]} [distance] [permanent] [tag tag-value] [vrf vrf-name] [weight weight-value]
```

To delete a specific static route, use the `no ip route destination mask` command.

To delete all routes matching a certain route, use the `no ip route destination mask` command.

**Parameters**

- **destination**
  - Enter the IP address in dotted decimal format of the destination device.
- **mask**
  - Enter the mask in the slash prefix format (/x) of the destination IP address.
- **ip-address**
  - Enter the IP address of the forwarding router in dotted decimal format.
- **interface**
  - Enter one of the following keyword followed by the slot/port number:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For the Management interface on the stack-unit, enter the keyword `ManagementEthernet` then the slot/port information. The slot range is from 0 to 1. The port range is 0.
    - For a port channel interface, enter the keywords `port-channel` then a number.
    - For a Null interface, enter the keyword `null` then the Null interface number.
    - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
    - For a tunnel interface, enter the keyword `tunnel` then the tunnel interface number. The range is from 1 to 16383.
If you configure a static IPv6 route using an egress interface and enter the ping command to reach the destination IPv6 address, the ping operation may not work. Configure the IPv6 route using a next-hop IPv6 address in order for the ping command to detect the destination address.

```
interface ip-address

distance

permanent

tag tag-value

vrf vrf-name

weight weight-value
```

- **interface ip-address**: Enter the keyword interface then the IP address.
- **distance**: (OPTIONAL) Enter the value of the distance metric assigned to the route. The range is from 1 to 255.
- **permanent**: (OPTIONAL) Enter the keyword permanent to specify that the route must not be removed even if the interface assigned to that route goes down. The route must be currently active to be installed in the routing table. If you disable the interface, the route is removed from the routing table.
- **tag tag-value**: (OPTIONAL) Enter the keyword tag then a number to assign to the route. The range is from 1 to 4294967295.
- **vrf vrf-name**: Enter the keyword vrf followed by the name of the VRF. Use this VRF option after the next hop to specify which VRF the next hop belongs to. This setting is used in route leaking cases. Refer to the Route Leaking VRFs section in the Virtual Routing and Forwarding (VRF) chapter of the Configuration guide.
- **weight weight-value**: Enter the keyword weight followed by a weight value. The range is from 0 to 255.

**Defaults**
Not configured.

</tr>
</tbody>
</table>

**Usage Information**
Using the following example of a static route: ip route 33.33.33.0 /24 tengigabitethernet 1/1 172.31.5.43
- The software installs a next hop that is not on the directly connected subnet but which recursively resolves to a next hop on the interface’s configured subnet. In the example, if tengig 1/1 has an ip address on subnet 2.2.2.0 and if 172.31.5.43 recursively resolves to 2.2.2.0, Dell Networking OS installs the static route.
● When the interface goes down, Dell Networking OS withdraws the route.
● When the interface comes up, Dell Networking OS re-installs the route.
● When recursive resolution is “broken,” Dell Networking OS withdraws the route.
● When recursive resolution is satisfied, Dell Networking OS re-installs the route.

You can specify a weight for an IPv4 or IPv6 static route. If the weight value of a path is 0, then that path is not used for forwarding when weighted ECMP is in effect. Also, if a path corresponding to a static route (destination) has a non-zero weight assigned to it and other paths do not have any weight configured, then regular ECMP is used for forwarding.

You can specify the weight value only to destination address and not on the egress port.

A route is considered for weighted ECMP calculations only if each paths corresponding to that route is configured with a weight.

**Example**

```
Dell(conf)#ip route 1.1.1.0/24 4.4.4.2 weight 100
Dell(conf)#ip route 1.1.1.0/24 6.6.6.2 weight 200
Dell(conf)#do show running-config | grep route ip route 1.1.1.0/24 4.4.4.2 weight 100 ip route 1.1.1.0/24 6.6.6.2 weight 200
Dell(conf)#ip route vrf test 1.1.1.0/24 4.4.4.2 weight 100
Dell(conf)#ip route vrf test 1.1.1.0/24 6.6.6.2 weight 200
Dell(conf)#
Dell(conf)#do show running-config | grep route ip route vrf test 1.1.1.0/24 4.4.4.2 weight 100 ip route vrf test 1.1.1.0/24 6.6.6.2 weight 200
```

**Related Commands**

- `show ip route` — views the switch routing table.

**ip source-route**

Enable Dell Networking OS to forward IP packets with source route information in the header.

**Z9000**

**Syntax**

```
ip source-route
```

To drop packets with source route information, use the `no ip route-source` command.

**Defaults**

Enabled.

</table>
ip tcp initial-time

Define the wait duration in seconds for the TCP connection to be established. This command is supported on the , , , and Z9000 platforms.

Syntax

```
ip tcp initial-time <8-75>
```

To restore the default behavior, which causes the wait period to be set as 8 seconds, use the `no ip tcp initial-time` command.

Parameters

- `<8-75>`: Wait duration in seconds for the TCP connection to be established.

Command Modes

- CONFIGURATION

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, and Z9000 platforms.</td>
</tr>
</tbody>
</table>

Usage Information

You can configure the amount of time for which the device must wait before it attempts to establish a TCP connection. Using this capability, you can limit the wait times for TCP connection requests. Upon responding to the initial SYN packet that requests a connection to the router for a specific service (such as SSH or BGP) with a SYN ACK, the router waits for a period of time for the ACK packet to be sent from the requesting host that will establish the TCP connection.

show ip tcp initial-time

Displays the interval that you configured for the device to wait before the TCP connection is attempted to be established.

Syntax

```
show ip tcp initial-time
```

Command Modes

- EXEC
- EXEC Privilege

</tr>
</tbody>
</table>

ip unreachables

Enable the generation of internet control message protocol (ICMP) unreachable messages.

Z9000

Syntax

```
ip unreachables
```

To disable the generation of ICMP messages, use the `no ip unreachables` command.

Defaults

Disabled.

Command Modes

- INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
load-balance

By default, for C-Series and S-Series, Dell Networking OS uses an IP 4-tuple (IP SA, IP DA, Source Port, and Destination Port) to distribute IP traffic over members of a Port Channel as well as equal-cost paths. To designate another method to balance traffic over Port Channel members, use the load-balance command.

Z9000

Syntax

```
load-balance {ip-selection [dest-ip | source-ip]} | {mac [dest-mac | source-dest-mac | source-mac]} | {tcp-udp | ingress-port [enable]}
```

To return to the default setting (IP 4-tuple), use the no load-balance {ip-selection [dest-ip | source-ip]} | {mac [dest-mac | source-dest-mac | source-mac]} | {tcp-udp | ingress-port [enable]} command.

Parameters

- **ip-selection**
  - `dest-ip`
  - `source-ip`

  Enter the keywords to distribute IP traffic based on the following criteria:
  - `dest-ip` — Uses destination IP address and destination port fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.
  - `source-ip` — Uses source IP address and source port fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.

- **mac**
  - `dest-mac`
  - `source-dest-mac`
  - `source-mac`

  Enter the keywords to distribute MAC traffic based on the following criteria:
  - `dest-mac` — Uses the destination MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.
  - `source-dest-mac` — Uses the destination and source MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.
  - `source-mac` — Uses the source MAC address, VLAN, Ethertype, source module ID and source port ID fields to hash. The hashing mechanism returns a 3-bit index indicating which port the packet should be forwarded.

- **tcp-udp enable**

  Enter the keywords to distribute traffic based on the following:
  - `enable` — Takes the TCP/UDP source and destination ports into consideration when doing hash computations. This option is enabled by default.

- **ingress-port enable**

  Enter the keywords to distribute traffic based on the following:
  - `enable` — Takes the source port into consideration when doing hash computations. This option is disabled by default.
Defaults: IP 4-tuple (IP SA, IP DA, Source Port, Destination Port)

Command Modes: CONFIGURATION

Command History:
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information:
By default, Dell Networking OS distributes incoming traffic based on a hash algorithm using the following criteria:
- IP source address
- IP destination address
- TCP/UDP source port
- TCP/UDP destination port

load-balance hg

Choose the traffic flow parameters the hash calculation uses while distributing the traffic across internal higig links.

Syntax:
```
```

Parameters:
- `ip-selection` To use IPv4 key fields in hash computation, enter the keyword `ip-selection` then one of the parameters. To use IPv6 key fields in hash computation, enter the keyword `ipv6-selection` then one of the parameters:
  - source-ip — Use IPv4 src-ip field in hash calculation.
  - source-ipv6 — Use IPv6 src-ip field in hash calculation.
  - source-port-id — Use src-port-id field in hash calculation.
  - source-module-id — Use src-module-id field in hash calculation.
  - dest-ip — Use IPv4 dest-ip field in hash calculation.
  - dest-ipv6 — Use IPv6 dest-ip field in hash calculation.
  - dest-port-id — Use dest-port-id field in hash calculation.
  - dest-module-id — Use dest-module-id field in hash calculation.
  - protocol — Use IPv4 protocol field in hash calculation.
  - vlan — Use vlan field in hash calculation.
  - L4-source-port — Use IPv4 L4-source-port field in hash calculation.
  - L4-dest-port — Use IPv4 L4-dest-port field in hash calculation.

- `ipv6-selection`

- `mac`
  - source-mac — Use source-mac field in hash calculation.
  - source-port-id
  - source-module-id

606 IPv4 Routing
### management route

Configure a static route that points to the Management interface or a forwarding router.

**Z9000**

<table>
<thead>
<tr>
<th>Syntax</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>`management route {{ip-address mask</td>
<td>{ipv6-address prefix-length}}} {forwarding-router-address</td>
</tr>
</tbody>
</table>

**Parameters**

- **ip-address mask**
  - Enter an IP address (dotted decimal format) and mask (/prefix format) of the destination subnet.

- **ipv6-address prefix-length**
  - Enter an IPv6 address (x:x:x::x format) and mask (/prefix format) of the destination subnet. Enter the IPv6 address in the x:x:x::x format followed by the prefix length in the /x format.
  - The range is from /0 to /128.

**NOTE:** The :: notation specifies successive hexadecimal fields of zeros.
**forwarding-router-address**

Enter an IP address (dotted decimal format) or an IPv6 address (x:x:x:x format) of a forwarding router.

**managementethernet**

Enter the keyword `managementethernet` for the Management interface on the Primary RPM.

**fortyGigE**

Enter the keyword `fortyGigE` to specify a forty Gigabit Ethernet interface.

**vlan**

Enter the keyword `vlan` to specify a vlan interface.

**tengigabitethernet**

Enter the keyword `tengigabitethernet` to specify a ten Gigabit Ethernet interface.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Added support for forty gigabit, vlan, and tengigabit ethernet interfaces. Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000 and added support for IPv6.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

When a static route (or a protocol route) overlaps with Management static route, the static route (or a protocol route) is preferred over the Management Static route. Also, Management static routes and the Management Connected prefix are not reflected in the hardware routing tables. Separate routing tables are maintained for IPv4 and IPv6 management routes. This command manages both tables.

**Related Commands**

- `interface ManagementEthernet` — configures the Management port on the system (either the Primary or Standby RPM).
- `speed (Management interface)` — sets the speed for the Management interface.

### show arp

Display the ARP table.

**Z9000**

**Syntax**

```
show arp [interface interface | ip ip-address [mask] | macaddress mac-address [mac-address-mask]] [retries] [static | dynamic] [inspection {database | statistics}] [summary]
```

**Parameters**

- `interface` *(OPTIONAL)* Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

### show arp

Display the ARP table.
• For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1. The port range is 0.
• For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
• For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

ip ip-address
mask (OPTIONAL) Enter the keyword ip then an IP address in the dotted decimal format. Enter the optional IP address mask in the slash prefix format (/x).

inspection
Enter the keyword inspection with one of the following keywords to view ARP entries:
  • database — view a list of ARP entries learned using DAI
  • statistics — view DAI statistics

macaddress mac-address
mask (OPTIONAL) Enter the keyword macaddress then a MAC address in nn:nn:nn:nn:nn:nn format. Enter the optional MAC address mask in nn:nn:nn:nn:nn format also.

static (OPTIONAL) Enter the keyword static to view entries entered manually.

retries (OPTIONAL) Enter the keyword retries to show the number of ARP retries before a 20-second back off.

dynamic (OPTIONAL) Enter the keyword dynamic to view dynamic entries.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information The following example shows two VLANs that are associated with a private VLAN (PVLAN) (refer to Private VLAN (PVLAN)).

If you have entered the clear arp-cache command to remove a large number of ARP entries and the command is still being processed in the background, an error message display if you attempt to enter the show arp command:
Clear arp in-progress. Please try after sometime!

The following describes the `show arp` command shown in the following example.

**Description**

- **Protocol**
  - Displays the protocol type.

- **Address**
  - Displays the IP address of the ARP entry.

- **Age(min)**
  - Displays the age (in minutes) of the ARP entry.

- **Hardware Address**
  - Displays the MAC address associated with the ARP entry.

- **Interface**
  - Displays the first two letters of the interfaces type and the slot/port associated with the ARP entry.

- **VLAN**
  - Displays the VLAN ID, if any, associated with the ARP entry.

- **CPU**
  - Lists which CPU the entries are stored on.

**Example**

```
Dell>show arp
Protocol  Address  Age(min)  Hardware Address  Interface  VLAN  CPU
-------------------------------------------------------------
Internet  192.2.1.254  1  00:00:c0:02:01:02  Te 2/13  -    CP
Internet  192.2.1.253  1  00:00:c0:02:01:02  Te 2/13  -    CP
Internet  192.2.1.252  1  00:00:c0:02:01:02  Te 2/13  -    CP
Internet  192.2.1.251  1  00:00:c0:02:01:02  Te 2/13  -    CP
Internet  192.2.1.250  1  00:00:c0:02:01:02  Te 2/13  -    CP
Internet  192.2.1.249  1  00:00:c0:02:01:02  Te 2/13  -    CP
Internet  192.2.1.248  1  00:00:c0:02:01:02  Te 2/13  -    CP
Internet  192.2.1.247  1  00:00:c0:02:01:02  Te 2/13  -    CP
Internet  192.2.1.246  1  00:00:c0:02:01:02  Te 2/13  -    CP
Internet  192.2.1.245  1  00:00:c0:02:01:02  Te 2/13  -    CP
```

**Example (Private VLAN)**

**NOTE:** In this example, Line 1 shows community VLAN 200 (in primary VLAN 10) in a PVLAN. Line 2 shows primary VLAN 10.

```
Dell#show arp
Protocol  Address  Age(min)  Hardware Address  Interface  VLAN  CPU
---------------------------------------------------------------
Internet  5.5.5.1  -  00:01:e8:43:96:5e  -      Vl 10pv 200 CP
Internet  5.5.5.10 -  00:01:e8:44:99:55  -      Vl 10        CP
Internet  10.1.2.4  1  00:01:e8:d5:9e:e2  Ma 0/0 -            CP
Internet  10.1.10.4  1  00:01:e8:d5:9e:e2  Ma 0/0 -            CP
Internet  10.16.127.53  1  00:01:e8:d5:9e:e2  Ma 0/0 -            CP
Internet  10.16.134.254  20  00:01:e8:d5:9e:e2  Ma 0/0 -            CP
Internet  133.33.33.4  1  00:01:e8:d5:9e:e2  Ma 0/0 -            CP
```

**Usage Information**

The following describes the `show arp summary` command shown in the following example.

**Description**

- **Total Entries**
  - Lists the total number of ARP entries in the ARP table.

- **Static Entries**
  - Lists the total number of configured or static ARP entries.

- **Dynamic Entries**
  - Lists the total number of learned or dynamic ARP entries.

- **CPU**
  - Lists which CPU the entries are stored on.

**Example (Summary)**

```
#show arp summary

TotalEntries Static Entries Dynamic Entries CPU
--------------------------------------------------
```
show arp retries

Display the configured number of ARP retries.

Z9000

Syntax
show arp retries

Command Modes
- EXEC
- EXEC Privilege

Related Commands
arp retries — sets the number of ARP retries in case the system does not receive an ARP reply in response to an ARP request.

show hosts

View the host table and DNS configuration.

Z9000

Syntax
show hosts

Command Modes
- EXEC
- EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

</tbody>
</table>
### Version Description

**8.3.19.0**  
Introduced on the S4820T.

**8.3.11.1**  
Introduced on the Z9000.

**8.1.1.0**  
Introduced on the E-Series ExaScale.

**7.6.1.0**  
Introduced on the S-Series.

**7.5.1.0**  
Introduced on the C-Series.

**pre-6.1.1.0**  
Introduced on the E-Series.

The following describes the `show hosts` command in the following example.

### Field Description

**Default domain is not set**

Displays the domain name (if configured).

**Name/address lookup uses static mappings**

States if DNS is enabled on the system.

- If DNS is enabled, the Name/Address lookup is domain service.
- If DNS is not enabled, the Name/Address lookup is static mapping.

**Name servers are not set**

Lists the name servers, if configured.

**Host**

Displays the host name assigned to the IP address.

**Flags**

Classifies the entry as one of the following:

- perm — the entry was manually configured and will not time out.
- temp — the entry was learned and will time out after 72 hours of inactivity.

Also included in the flag is an indication of the validity of the route:

- ok — the entry is valid.
- ex — the entry expired.
- ?? — the entry is suspect.

**TTL**

Displays the amount of time until the entry ages out of the cache. For dynamically learned entries only.

**Type**

Displays IP as the type of entry.

**Address**

Displays the IP addresses assigned to the host.

```
Dell#show hosts
Default domain is not set
Name/address lookup uses static mappings
Name servers are not set
Host     Flags     TTL   Type   Address
-------- -----     ----  ----   -------
ks      (perm, OK) -     IP     2.2.2.2
4200-1  (perm, OK) -     IP     192.68.69.2
1230-3  (perm, OK) -     IP     192.68.99.2
ZZr     (perm, OK) -     IP     192.71.18.2
Z10-3   (perm, OK) -     IP     192.71.23.1
Dell#
```

**Related Commands**

- `traceroute` — views the DNS resolution.
- `ip host` — configures a host.
show ip cam linecard

View CAM entries for a port pipe on a line card.

Syntax

```
show ip cam linecard number port-set pipe-number [ip-address mask [longer-prefixes] | index index-number | summary | vrf vrf instance]
```

Parameters

- `number` Enter the number of the line card.
- `pipe-number` Enter the number of the line card’s port-pipe. The range is from 0 to 1.
- `ip-address mask [longer-prefix]` (OPTIONAL) Enter the IP address and mask of a route to CAM entries for that route only. Enter the keyword `longer-prefixes` to view routes with a common prefix.
- `index index-number` (OPTIONAL) Enter the keyword `index` then the CAM index number. The range depends on CAM size.
- `summary` (OPTIONAL) Enter the keyword `summary` to view a table listing route prefixes and the total number of routes that can be entered into the CAM.
- `vrf instance` (OPTIONAL) E-Series Only: Enter the keyword `vrf` then the VRF instance name to show CAM information as it applies to that VRF instance.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.7.0** Introduced on the S4810.
- **Version 8.1.1.2** Introduced on the E-Series ExaScale E600i.
- **Version 8.1.1.0** Introduced on the E-Series ExaScale.
- **Version 7.9.1.0** Introduced VRF on the E-Series.
- **Version 7.5.1.0** Introduced on the C-Series.
- **pre-Version 6.1.1.0** Introduced on the E-Series.

Usage Information

The following describes the `show ip cam` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Index</td>
<td>Displays the CAM index number of the entry.</td>
</tr>
<tr>
<td>Destination</td>
<td>Displays the destination route of the index.</td>
</tr>
<tr>
<td>EC</td>
<td>Displays the number of equal cost multipaths (ECMP) available for the default route for non-Jumbo line cards. For Jumbo line cards, displays 0,1 when ECMP is more than eight.</td>
</tr>
<tr>
<td>CG</td>
<td>Displays 0.</td>
</tr>
<tr>
<td>V</td>
<td>Displays a 1 if the entry is valid and a 0 if the entry is for a line card with Catalog number beginning with LC-EF.</td>
</tr>
<tr>
<td>C</td>
<td>Displays the CPU bit. 1 indicates that a packet hitting this entry is forwarded to the CP or RP2, depending on Egress port.</td>
</tr>
<tr>
<td>Next-Hop</td>
<td>Displays the next hop IP address of the entry.</td>
</tr>
<tr>
<td>VId</td>
<td>Displays the VLAN ID. If the entry is 0, the entry is not part of a VLAN.</td>
</tr>
</tbody>
</table>
### Field Description

**Mac Addr**  
Displays the next-hop router’s MAC address.

**Port**  
Displays the egress interface. Use the second half of the entry to determine the interface. For example, in the entry 17c1 CP, the CP is the pertinent portion.
- CP = control processor
- RP2 = route processor 2
- Gi = Gigabit Ethernet interface
- So = SONET interface
- Te = 10-Gigabit Ethernet interface

#### Example

```
Dell#show ip cam linecard 13 port-set 0
Index  Destination EC CG V C  Next-Hop  VId Mac-Addr    Port
------ ----------------------------------- ---- --------------
3276   6.6.6.2   0 0 1 1  0.0.0.0 0 00:00:00:00:00:00 17c1 CP
3277   5.5.5.2   0 0 1 1  0.0.0.0 0 00:00:00:00:00:00 17c1 CP
3278   4.4.4.2   0 0 1 1  0.0.0.0 0 00:00:00:00:00:00 17c1 CP
3279   3.3.3.2   0 0 1 1  0.0.0.0 0 00:00:00:00:00:00 17c1 CP
3280   2.2.2.2   0 0 1 1  0.0.0.0 0 00:00:00:00:00:00 17c1 CP
11144  6.6.6.0   0 0 1 1  0.0.0.0 6 00:00:00:00:00:00 17c5 RP2
11145  5.5.5.0   0 0 1 1  0.0.0.0 5 00:00:00:00:00:00 17c5 RP2
11146  4.4.4.0   0 0 1 1  0.0.0.0 4 00:00:00:00:00:00 17c5 RP2
11147  3.3.3.0   0 0 1 1  0.0.0.0 3 00:00:00:00:00:00 17c5 RP2
11148  2.2.2.0   0 0 1 1  0.0.0.0 2 00:00:00:00:00:00 17c5 RP2
65535  0.0.0.0   0 0 1 1  0.0.0.0 0 00:00:00:00:00:00 17c5 RP2
Dell#
```

### Usage Information

The following describes the `show ip cam summary` command shown in the following example.

#### Field Description

**Prefix Length**  
Displays the prefix-length or mask for the IP address configured on the linecard 0 port pipe 0.

**Current Use**  
Displays the number of routes currently configured for the corresponding prefix or mask on the linecard 0 port pipe 0.

**Initial Size**  
Displays the CAM size Dell Networking OS allocates for the corresponding mask. Dell Networking OS adjusts the CAM size if the number of routes for the mask exceeds the initial allocation.

#### Example (Summary)

```
Dell#show ip cam linecard 4 port-set 0 summary
Total Number of Routes in the CAM is 13
Total Number of Routes which can be entered in CAM is 131072
Prefix Len  Current Use  Initial Sz
---------  ------------  -----------
 32       7            37994
 31       0            1312
 30       0            3932
 29       0            1312
 28       0            1312
 27       0            1312
 26       0            1312
 25       0            1312
 24       6            40610
 23       0            3932
 22       0            2622
 21       0            2622
 20       0            2622
 19       0            2622
 18       0            1312
 17       0            1312
 16       0            3932
 15       0            1312
 14       0            1312
```
show ip cam stack-unit

Display CAM entries for a port-pipe of a stack-unit on a S-Series or Z-Series switch.

Syntax

```
show ip cam stack-unit {id} [port-set {pipe-number} {ip-address mask [longer-prefixes [ecmp-group detail]]}]| ecmp-group {detail | member-info [detail [group-index index-number]]}| summary
```

Parameters

- **id**: Enter the stack-unit ID. The unit ID range is from 0 to 7 for the Z9000.
- **port-set pipe-number**: Enter the keyword port-set then the number of the stack unit’s port-pipe. The unit ID range is from 0 to 3 for the Z9000.
- **network mask [longer-prefixes [ecmp-group detail]]**: Enter the keyword network mask (OPTIONAL) Enter the IP address and mask of a route to CAM entries for that route only. You can enter one of the following keywords to filter results.
  - Enter the keyword longer-prefixes to view routes with a common prefix.
  - Enter the keyword ecmp-group detail to view the ECMP group index.
- **ecmp-group {detail | member-info [detail [group-index index-number]]}**: Enter the keyword ecmp-group then one of the following keywords to filter results.
  - Enter the keyword detail to view the ECMP group index.
  - Enter the keyword member-info to view the member information for the ECMP group.
  - Enter the keyword member-info detail to view detailed ECMP membership and n-hop information.
  - Enter the keyword group-index then the index number to show ECMP membership per group. The range is from 0 to 1022.
- **summary**: (OPTIONAL) Enter the keyword summary to view a table listing route prefixes and the total number which can be entered in to CAM.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>
The following describes the `show ip cam` command shown in the following example.

**Field**  **Description**

**Destination**  Displays the destination route of the index.

**EC**  Displays 1 if the route is an ECMP route. Else, displays 0.

**C**  This is the CPU bit. If it displays 1, then it indicates that a packet hitting this entry will be forwarded to the CPU.

**V Id**  Displays the VLAN ID. If the entry is 0, the entry is not part of a VLAN.

**Mac Addr**  Displays the next-hop router’s MAC address.

**Port**  Displays the egress interface.
  - CP = control processor
  - Gi = Gigabit Ethernet interface
  - Te = 10–Gigabit Ethernet interface

**Example**

```
Dell#show ip cam stack-unit 3 po 0 1.1.1.0/24 longer-prefixes

<table>
<thead>
<tr>
<th>Destination</th>
<th>EC</th>

</tr>
</tbody>
</table>

Dell#
```

**show ip fib linecard**

View all forwarding information base (FIB) entries.

**Syntax**

```
show ip fib linecard slot-number [vrf vrf instance | ip-address/prefix-list | summary]
```

**Parameters**

- `vrf instance`  (OPTIONAL) E-Series Only: Enter the keyword `vrf` then the VRF instance name to show the FIB cache entries tied to that VRF instance.
**slot-number** Enter the number of the line card slot.

**ip-address mask** (OPTIONAL) Enter the IP address of the network destination to view only information on that destination. Enter the IP address is dotted decimal format (A.B.C.D). Enter the mask in slash prefix format (/X).

**longer-prefixes** (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.

**summary** (OPTIONAL) Enter the keyword summary to view the total number of prefixes in the FIB.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version 8.3.19.0** Introduced on the S4820T.
- **Version 8.3.7.0** Introduced on the S4810.
- **Version 8.1.1.0** Introduced on the E-Series ExaScale.
- **Version 7.9.1.0** Introduced VRF on the E-Series.
- **Version 7.5.1.0** Introduced on the C-Series.
- **pre-Version 6.1.1.0** Introduced on the E-Series.

**Usage Information**
The following describes the `show ip fib` command shown in the following example.

**Field** | **Description**
--- | ---
Destination | Lists the destination IP address.
Gateway | Displays either the word “direct” and an interface for a directly connected route or the remote IP address used to forward the traffic.
First-Hop | Displays the first hop IP address.
Mac-Addr | Displays the MAC address.
Port | Displays the egress-port information.
Vld | Displays the VLAN ID. If no VLAN is assigned, zero (0) is listed.
Index | Displays the internal interface number.
EC | Displays the number of ECMP paths.

**Example**
```
Dell>show ip fib linecard 12

+-----------------+-----------------+-----------------+-----------+-----------------+-----------------+------------+
| Destination     | Gateway         | First-Hop       | Mac-Addr  | Port            | VId  | Index    |
|-----------------+-----------------+-----------------+-----------+-----------------+-------+----------+
| 3.0.0.0/8       | via 100.10.10.10, So 2/8 100.10.10.10 00:01:e8:00:03:ff So 2/8 60260 0 | | | | | |
| 3.0.0.0/8       | via 101.10.10.10, So 2/9 00:00:00:00:00:00 CP | | | | | |
| 0.0.0.0/8       | Direct, So 2/8 0.0.0.0 00:01:e8:00:03:ff So 2/8 | | | | | |
| 100.10.10.0/24  | 127.0.0.1 127.0.0.1 00:00:00:00:00:00 CP | | | | | |
| 100.10.10.1/32  | 127.0.0.1 127.0.0.1 00:00:00:00:00:00 CP | | | | | |
| 100.10.10.10/32 | 101.10.10.10, So 2/9 101.10.10.10 00:00:00:00:00:00 CP 0 | | | | | |
| 0.0.0.0/8       | Direct, So 2/9 0.0.0.0 00:00:00:00:00:00 CP 0 | | | | | |
| 101.10.10.0/24  | via 100.10.10.10, So 2/8 100.10.10.10 00:01:e8:00:03:ff So 2/8 60260 0 | | | | | |
```

IPv4 Routing
show ip fib stack-unit

View all Forwarding Information Base (FIB) entries of a specific stack-unit.

Z9000

Syntax
show ip fib stack-unit

Parameters

- **id**: Enter the S-Series stack unit ID. The unit ID range is from 0 to 7 for the Z9000.
- **ip-address mask**: (OPTIONAL) Enter the IP address of the network destination to view only information on that dotted decimal format (A.B.C.D). Enter the mask in slash prefix format (/X).
- **longer-prefixes**: (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.
- **summary**: (OPTIONAL) Enter the keyword summary to view the total number of prefixes in the FIB.

Command Modes
- EXEC
- EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>

If weighted ECMP is enabled, then the show ip fib stack-unit command display a new column named W-EC (Weighted ECMP). This column displays either a value of 1 or 0 depending on whether or not a route is assigned with a weight.

Example

```
Dell#show ip fib stack-unit 1
Destination Gateway First-Hop Mac-Addr Port VId EC
------------------------------------------------------------
```
Example (Show command output with Weighted ECMP Enabled)

```
Dell#show ip route
S    10.1.1.0/24        via 1.1.1.2, Vl 10
via 2.1.1.2, Vl 20
S    20.1.1.0/24        via 3.1.1.2, Vl 30
S    100.1.1.0/24       via 10.1.1.0, weight 7
via 20.1.1.0, weight 1
```

```
Dell#show ip fib stack-unit 1
```

</table>

The RC and W columns in the show output appear only if the weighted ECMP is enabled using the `ip ecmp weighted` command.

**Related Commands**
- `clear ip fib stack-unit` — clear FIB entries on a specified stack-unit.
- `ip ecmp weighted` — enables weighted ECMP calculations.

### show ip flow

Show how a Layer 3 packet is forwarded when it arrives at a particular interface.

**Z9000**

**Syntax**

```
show ip flow interface {source-ip address destination-ip address} {protocol number [tcp | udp]} {src-port number destination-port number}
```

**Parameters**

- **interface**
  - Enter the keyword `interface` then one of the following interface keywords.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- **source-ip address**
  - Enter the keywords `source-ip` then the IP source address in IP address format.

- **destination-ip address**
  - Enter the keywords `destination-ip` then the IP destination address in IP address format.

- **protocol number [tcp | udp]**
  - Enter the keyword `protocol` then one of the protocol type keywords: `tcp`, `udp`, or `protocol number` Where the protocol number range is from 0 to 255.

- **src-port number**
  - Enter the keywords `src-port` then the source port number.

- **destination-port number**
  - Enter the keywords `destination-port` then the destination port number.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command provides egress port information for a given IP flow. This information is useful in identifying which interface the packet follows in the case of Port-channel and Equal Cost Multi Paths. Use this command for routed packets only. For switched packets, use the `show port-channel-flow` command.

The `show ip flow` command does not compute the egress port information when `load-balance mac hashing` is also configured due to insufficient information (the egress MAC is not available).

S-Series produces the following error message: %Error: Unable to read IP route table.

**Example**

```
dell#show ip flow interface te 2/42 20.1.1.1 100.1.1.2 protocol tcp
Flow: 20.1.1.1 100.1.1.2 6
Ingress interface: Te 2/42
Egress Interface: Te 2/43
dell#
```

---

**show ip interface**

View IP-related information on all interfaces.

**Z9000**

**Syntax**

```
show ip interface [interface | brief] [configured]
```

**Parameters**

- `interface` (OPTIONAL)
  
  Enter the following keywords and slot/port or number information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For the Management interface on the stack-unit, enter the keyword `ManagementEthernet` then the slot/port information. The slot range is from 0 to 1. The port range is 0.
For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

For a Null interface, enter the keyword null then the Null interface number.

For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

For a stack-unit interface, enter the keyword stack-unit then the stack unit number.

For a tunnel interface, enter the keyword tunnel then the tunnel interface number. The range is from 1 to 16383.

brief (OPTIONAL) Enter the keyword brief to view a brief summary of the interfaces and whether an IP address is assigned.

configured (OPTIONAL) Enter the keyword configured to display the physical interfaces with non-default configurations only.

**Command Modes**

- EXEC
- EXEC Privilege

<td>States if ICMP unreachable messages are sent.</td>
</tr>
</tbody>
</table>

IPv4 Routing 621
show ip management-route

View the IP addresses assigned to the Management interface.

Z9000

**Syntax**

```
show ip management-route [all | connected | summary | static]
```

**Parameters**

- **all**  
  (OPTIONAL) Enter the keyword all to view all IP addresses assigned to all Management interfaces on the switch.
- **connected**  
  (OPTIONAL) Enter the keyword connected to view only routes directly connected to the Management interface.
- **summary**  
  (OPTIONAL) Enter the keyword summary to view a table listing the number of active and non-active routes and their sources.
- **static**  
  (OPTIONAL) Enter the keyword static to view non-active routes also.

**Command Modes**

- EXEC
- EXEC Privilege
show ipv6 management-route

Display the IPv6 static routes configured for the management interface.

Z9000

Syntax

show ipv6 management-route [all | connected | summary | static]

Parameters

- **all** (OPTIONAL) Enter the keyword all to view all IP addresses assigned to all Management interfaces on the switch.
- **connected** (OPTIONAL) Enter the keyword connected to view only routes directly connected to the Management interface.
- **summary** (OPTIONAL) Enter the keyword summary to view a table listing the number of active and non-active routes and their sources.
- **static** (OPTIONAL) Enter the keyword static to view non-active routes also.

Command Modes

- EXEC Privilege

Command History

Example

```
Dell#show ip protocols
Routing Protocol is "bgp 1"
    Cluster Id is set to 20.20.20.3
    Router Id is set to 20.20.20.3
    Fast-external-fallover enabled
    Regular expression evaluation optimization enabled
    Capable of ROUTE_REFRESH
    For Address Family IPv4 Unicast
    BGP table version is 0, main routing table version 0
    Distance: external 20 internal 200 local 200
    Neighbor(s):
    Address : 20.20.20.2  Filter-list in : foo  Route-map in : foo
```
show ip route

View information, including how they were learned, about the IP routes on the switch.

Z9000

Syntax

```
show ip route [hostname] [ip-address [mask]] [longer-prefixes] [list prefix-list] [protocol [process-id | routing-tag]] [all | connected | static | summary]
```

Parameters

- **ip-address**: (OPTIONAL) Specify a name of a device or the IP address of the device to view more detailed information about the route.
- **mask**: (OPTIONAL) Specify the network mask of the route. Use this parameter with the IP address parameter.
- **longer-prefixes**: (OPTIONAL) Enter the keywords longer-prefixes to view all routes with a common prefix.
- **list prefix-list**: (OPTIONAL) Enter the keyword list and the name of a configured prefix list. For more information, refer to the `show ip route list` command.
- **protocol**: (OPTIONAL) Enter the name of a routing protocol (bgp, isis, ospf, rip) or the keywords connected or static. **NOTE**: bgp, isis, ospf, and rip.
  - If you enter bgp, you can include the BGP as-number.
  - If you enter isis, you can include the ISIS routing-tag.
  - If you enter ospf, you can include the OSPF process-id.
- **process-id**: (OPTIONAL) Specify that only OSPF routes with a certain process ID must be displayed.
- **routing-tag**: (OPTIONAL) Specify that only ISIS routes with a certain routing tag must be displayed.
- **connected**: (OPTIONAL) Enter the keyword connected to view only the directly connected routes.
- **all**: (OPTIONAL) Enter the keyword all to view both active and non-active routes.
- **static**: (OPTIONAL) Enter the keyword static to view only routes the ip route command configures.
- **summary**: (OPTIONAL) Enter the keyword summary. For more information, refer to the `show ip route summary` command.

Command Modes

- EXEC
- EXEC Privilege

</table>

### Usage Information

The following describes the `show ip route all` command in the following example.

#### Field Description

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(undefined)</td>
<td>Identifies the type of route:</td>
</tr>
<tr>
<td></td>
<td>● C = connected</td>
</tr>
<tr>
<td></td>
<td>● S = static</td>
</tr>
<tr>
<td></td>
<td>● R = RIP</td>
</tr>
<tr>
<td></td>
<td>● B = BGP</td>
</tr>
<tr>
<td></td>
<td>● IN = internal BGP</td>
</tr>
<tr>
<td></td>
<td>● EX = external BGP</td>
</tr>
<tr>
<td></td>
<td>● LO = Locally Originated</td>
</tr>
<tr>
<td></td>
<td>● O = OSPF</td>
</tr>
<tr>
<td></td>
<td>● IA = OSPF inter area</td>
</tr>
<tr>
<td></td>
<td>● N1 = OSPF NSSA external type 1</td>
</tr>
<tr>
<td></td>
<td>● N2 = OSPF NSSA external type 2</td>
</tr>
<tr>
<td></td>
<td>● E1 = OSPF external type 1</td>
</tr>
<tr>
<td></td>
<td>● E2 = OSPF external type 2</td>
</tr>
<tr>
<td></td>
<td>● i = IS-IS</td>
</tr>
<tr>
<td></td>
<td>● L1 = IS-IS level-1</td>
</tr>
<tr>
<td></td>
<td>● L2 = IS-IS level-2</td>
</tr>
<tr>
<td></td>
<td>● IA = IS-IS inter-area</td>
</tr>
<tr>
<td></td>
<td>● * = candidate default</td>
</tr>
<tr>
<td></td>
<td>● &gt; = non-active route</td>
</tr>
<tr>
<td></td>
<td>● + = summary routes</td>
</tr>
</tbody>
</table>

| Destination   | Identifies the route’s destination IP address |
| Gateway       | Identifies whether the route is directly connected and on which interface the route is configured. |
| Dist/Metric   | Identifies if the route has a specified distance or metric. |
| Last Change   | Identifies when the route was last changed or configured. |

The weight for weighted ECMP route calculations is displayed for each path in the route in the `show ip route` command. The ECMP weight is displayed only if weighted ECMP is enabled using the `ip ecmp weighted` command is enabled.

If weighted ECMP is disabled, the `show ip route` command does not show the weighted ECMP route information.

### Example

```
Dell#show ip route all
Codes:C- connected, S - static, R - RIP
       B= BGP, IN = internal BGP, EX = external BGP, LO = Locally Originated
```
O - OSPF, IA - OSPF inter area N1 - OSPF NSSA external type 1
N2 - OSPF NSSA external type 2, E1 - OSPF external type 1
E2 - OSPF external type 2, i - IS-IS, L1 - IS-IS level-1
L2 - IS-IS level-2, IA - IS-IS inter area, * - candidate default
> - non-active route + - summary route

Gateway of last resort is not set

<table>
<thead>
<tr>
<th>Destination</th>

- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description

9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
8.1.1.0 Introduced on the E-Series ExaScale.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
pre-6.1.1.0 Introduced on the E-Series.
Usage Information
The following describes the `show ip route summary` shown in the following example.

<table>
<thead>
<tr>
<th>Column Heading</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Route Source</td>
<td>Identifies how the route is configured in Dell Networking OS.</td>
</tr>
<tr>
<td>Active Routes</td>
<td>Identifies the best route if a route is learned from two protocol sources.</td>
</tr>
<tr>
<td>Non-active Routes</td>
<td>Identifies the back-up routes when a route is learned by two different protocols. If the best route or active route goes down, the non-active route becomes the best route.</td>
</tr>
<tr>
<td>ospf 100</td>
<td>If routing protocols (OSPF, RIP) are configured and routes are advertised, then information on those routes is displayed.</td>
</tr>
<tr>
<td>Total 1388 active...</td>
<td>Displays the number of active and non-active routes and the memory usage of those routes. If there are no routes configured in the Dell Networking OS, this line does not appear.</td>
</tr>
</tbody>
</table>

Example

```
Dell>show ip route summary
Route Source   Active Routes   Non-active Routes
connected      17              0
static         3               0
ospf 100       1368            2
Intra-area: 762 Inter-area: 1 External-1: 600 External-2: 5
Total 1388     2
Total 1388 active route(s) using 222440 bytes
Total 2 non-active route(s) using 128 bytes
Dell>
```

Related Commands
- `show ip route` — displays information about the routes found in the switch.

show ip traffic

View IP, ICMP, UDP, TCP and ARP traffic statistics.

Z9000

Syntax

```
show ip traffic [all | cp | rp1 | rp2]
```

NOTE: These options are supported only on the E-Series.

Parameters

- `all` (OPTIONAL) Enter the keyword `all` to view statistics from all processors. If you do not enter a keyword, you also view all statistics from all processors.
- `cp` (OPTIONAL) Enter the keyword `cp` to view only statistics from the Control Processor.
- `rp1` (OPTIONAL) Enter the keyword `rp1` to view only the statistics from Route Processor 1.
- `rp2` (OPTIONAL) Enter the keyword `rp2` to view only the statistics from Route Processor 2.

Command Modes

- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

630 IPv4 Routing
### Usage Information

The following describes the `show ip traffic summary` shown in the following example.

<table>
<thead>
<tr>
<th>Keyword</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>unknown protocol...</td>
<td>No receiver for these packets. Counts packets whose protocol type field is not</td>
</tr>
<tr>
<td></td>
<td>recognized by Dell Networking OS.</td>
</tr>
<tr>
<td>not a gateway...</td>
<td>Packets cannot be routed; the host/network is unreachable.</td>
</tr>
<tr>
<td>security failures...</td>
<td>Counts the number of received unicast/multicast packets that could not be</td>
</tr>
<tr>
<td></td>
<td>forwarded due to:</td>
</tr>
<tr>
<td></td>
<td>● route not found for unicast/multicast; ingress interfaces do not belong to</td>
</tr>
<tr>
<td></td>
<td>the destination multicast group</td>
</tr>
<tr>
<td></td>
<td>● destination IP address belongs to reserved prefixes; the host/network is</td>
</tr>
<tr>
<td></td>
<td>unreachable</td>
</tr>
<tr>
<td>bad options...</td>
<td>Unrecognized IP option on a received packet.</td>
</tr>
<tr>
<td>Frags:</td>
<td>IP fragments received.</td>
</tr>
<tr>
<td>... reassembled</td>
<td>Number of IP fragments that were reassembled.</td>
</tr>
<tr>
<td>... timeouts</td>
<td>Number of times a timer expired on a reassembled queue.</td>
</tr>
<tr>
<td>... too big</td>
<td>Number of invalid IP fragments received.</td>
</tr>
<tr>
<td>... couldn’t fragment</td>
<td>Number of packets that could not be fragmented and forwarded.</td>
</tr>
<tr>
<td>...encapsulation failed</td>
<td>Counts packets which could not be forwarded due to ARP resolution failure.</td>
</tr>
<tr>
<td></td>
<td>Dell Networking OS sends an arp request prior to forwarding an IP packet.</td>
</tr>
<tr>
<td></td>
<td>If a reply is not received, Dell Networking OS repeats the request three</td>
</tr>
<tr>
<td></td>
<td>times. These packets are counted in encapsulation failed.</td>
</tr>
<tr>
<td>Rcvd:</td>
<td></td>
</tr>
<tr>
<td>...short packets</td>
<td>The number of bytes in the packet are too small.</td>
</tr>
<tr>
<td>...bad length</td>
<td>The length of the packet was not correct.</td>
</tr>
<tr>
<td>...no port broadcasts</td>
<td>The incoming broadcast/multicast packet did not have any listener.</td>
</tr>
<tr>
<td>...socket full</td>
<td>The applications buffer is full and the incoming packet are dropped.</td>
</tr>
</tbody>
</table>

The Dell Monitoring MIB provides access to the following statistics.

- IP Statistics: Bcast: Received: Object = f10BcastPktRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.1
- IP Statistics: Bcast: Sent: Object = f10BcastPktSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.2
- IP Statistics: Mcast: Received: Object = f10McastPktRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.3
- IP Statistics: Mcast: Sent: Object = f10McastPktSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.1.4
- ARP Statistics: Rcvd: Request: Object = f10ArpReqRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.1
ARP Statistics: Rcvd: Replies: Object = f10ArpReplyRecv, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.3
ARP Statistics: Sent: Request: Object = f10ArpReqSent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.2
ARP Statistics: Sent: Replies: Object = f10ArpReplySent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.4
ARP Statistics: Sent: Proxy: Object = f10ArpProxySent, OIDs = 1.3.6.1.4.1.6027.3.3.5.2.5

Example

Dell#show ip traffic
Control Processor IP Traffic:

IP statistics:
  Rcvd: 23857 total, 23829 local destination
    0 format errors, 0 checksum errors, 0 bad hop count
    0 unknown protocol, 0 not a gateway
    0 security failures, 0 bad options
    Frags: 0 reassembled, 0 timeouts, 0 too big
    0 fragmented, 0 couldn't fragment
  Bcast: 28 received, 0 sent; Mcast: 0 received, 0 sent
  Sent: 16048 generated, 0 forwarded
    21 encapsulation failed, 0 no route
ICMP statistics:
  Rcvd: 0 format errors, 0 checksum errors, 0 redirects, 0 unreachable
    0 echo, 0 echo reply, 0 mask requests, 0 mask replies, 0 quench
    0 parameter, 0 timestamp, 0 info request, 0 other
  Sent: 0 redirects, 0 unreachable, 0 echo, 0 echo reply
    0 mask requests, 0 mask replies, 0 quench, 0 timestamp
    0 info reply, 0 time exceeded, 0 parameter problem
UDP statistics:
  Rcvd: 0 total, 0 checksum errors, 0 no port
  0 short packets, 0 bad length, 0 no port broadcasts, 0 socket full
  Sent: 0 total, 0 forwarded broadcasts
TCP statistics:
  Rcvd: 23829 total, 0 checksum errors, 0 no port
  Sent: 16048 total
ARP statistics:
  Rcvd: 156 requests, 11 replies
  Sent: 21 requests, 10 replies (0 proxy)
Routing Processor1 IP Traffic:

show tcp statistics

View information on TCP traffic through the switch.

Z9000

Syntax

show tcp statistics {all | cp | rp1 | rp2}

Parameters

all
  Enter the keyword all to view all TCP information.

cp
  Enter the keyword cp to view only TCP information from the Control Processor.

rp1
  Enter the keyword rp1 to view only TCP statistics from Route Processor 1.

rp2
  Enter the keyword rp2 to view only TCP statistics from Route Processor 2.

Command Modes

EXEC Privilege

Command History

</tbody>
</table>
Example

Dell#show tcp stat cp

Control Processor TCP:
Rcvd: 10585 Total, 0 no port
  0 checksum error, 0 bad offset, 0 too short
  329 packets (1263 bytes) in sequence
  17 dup packets (6 bytes)
  0 partially dup packets (0 bytes)
  7 out-of-order packets (0 bytes)
  0 packets ( 0 bytes) with data after window
  0 packets after close
  0 window probe packets, 41 window update packets
  41 dup ack packets, 0 ack packets with unsend data
  10184 ack packets (12439508 bytes)
Sent: 12007 Total, 0 urgent packets
  25 control packets (including 24 retransmitted)
  11603 data packets (12439677 bytes)
  24 data packets (7638 bytes) retransmitted
  355 ack only packets (41 delayed)
  0 window probe packets, 0 window update packets
  7 Connections initiated, 8 connections accepted, 15 connections established
  14 Connections closed (including 0 dropped, 0 embryonic dropped)
  20 Total rxmt timeout, 0 connections dropped in rxmt timeout
  0 Keepalive timeout, 0 keepalive probe, 0 Connections dropped in keepalive
Dell#

Related Commands

show ip cam stack-unit — displays the CAM table.
IPv6 Access Control Lists (IPv6 ACLs)

IPv6 ACLs and IPv6 Route Map commands are supported on Dell Networking Z9000 platform.

**NOTE:** For IPv4 ACL commands, refer to the Access Control Lists (ACL) chapter.

### Important Points to Remember

- Certain platforms require manual CAM usage space allotment. For more information, refer to the `cam-acl` command.
- Egress IPv6 ACL and IPv6 ACL on the Loopback interface is not supported.
- Reference to an empty ACL permits any traffic.
- ACLs are not applied to self-originated traffic (for example, Control Protocol traffic not affected by IPv6 ACL because the routed bit is not set for Control Protocol traffic and for egress ACLs the routed bit must be set).
- You can use the same access list name for both IPv4 and IPv6 ACLs.
- You can apply both IPv4 and IPv6 ACLs on an interface at the same time.
- You can apply IPv6 ACLs on physical interfaces and a logical interfaces (Port-channel/VLAN).
- Non-contiguous masks are not supported in source or destination addresses in IPv6 ACL entries.
- Because the prefix mask is specified in /x format in IPv6 ACLs, inverse mask is not supported.

### Topics:

- `show cam-acl-egress`
- `show cam-acl`
- `permit icmp`
- `permit`
- `ipv6 control-plane egress-filter`
- `ipv6 access-list`
- `cam-acl-egress`
- `cam-acl`

### show cam-acl-egress

Show information on FP groups allocated for egress ACLs.

**Syntax**

```
show cam-acl-egress
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

Dell#

Related Commands

cam-acl — configures CAM profiles to support IPv6 ACLs.
permit icmp

To allow all or specific internet control message protocol (ICMP) messages, configure a filter.

Syntax

    permit icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} [message-type] [count [byte]] [log] [monitor]

To remove this filter, you have two choices:

- Use the no seq sequence-number command if you know the filter’s sequence number.
- Use the no permit icmp {source address mask | any | host ipv6-address} {destination address | any | host ipv6-address} command.

Parameters

Defaults
Not configured.

Command Modes
ACCESS-LIST

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the E-Series TeraScale. Added the monitor option.</td>
</tr>
</tbody>
</table>

permit

To configure a filter that matches the filter criteria, select an IPv6 protocol number, ICMP, IPv6, TCP, or UDP.

Syntax

    permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp}

To remove this filter, you have two choices:

- Use the no seq sequence-number command syntax if you know the filter’s sequence number.
- Use the no permit {ipv6-protocol-number | icmp | ipv6 | tcp | udp} command

Parameters

| ip-protocol-number | Enter an IPv6 protocol number. The range is from 0 to 255. |
| icmp | Enter the keyword icmp to filter internet Control Message Protocol version 6. |
| ipv6 | Enter the keyword ipv6 to filter any internet Protocol version 6. |
| tcp | Enter the keyword tcp to filter the Transmission Control protocol. |
| udp | Enter the keyword udp to filter the User Datagram Protocol. |

Defaults
Not configured.

Command Modes
ACCESS-LIST
ipv6 control-plane egress-filter

Enable egress Layer 3 ACL lookup for IPv6 CPU traffic.

Z9000

Syntax
ipv6 control-plane egress-filter

Defaults
Not enabled.

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

ipv6 access-list

Configure an access list based on IPv6 addresses or protocols.

Z9000

Syntax
ipv6 access-list access-list-name cpu-qos {permit | deny} ospfv3

To delete an access list, use the no ipv6 access-list access-list-name command.

Parameters
- **access-list-name**: Enter the access list name as a string, up to 140 characters.
- **cpu-qos**: Enter the keyword cpu-qos to assign this ACL to control plane traffic only (CoPP).
- **permit**: Enter the keyword permit to configure a filter to forward packets meeting this condition.
deny Enter the keyword deny to configure a filter to drop packets meeting this condition.

ospfv3 Specify that this ACL is for OSPFv3 control plane traffic

**Defaults**

All access lists contain an implicit "deny any": that is, if no match occurs, the packet is dropped.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Added support for CoPP for OSPFv3 on the S4810, S4820T, S6000, and Z9000 platforms.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.2.1</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series. Increased the name string to accept up to 140 characters. Prior to version 7.8.1.0, names are up to 16 characters long.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
</tbody>
</table>

**Usage Information**

The number of entries allowed per ACL is hardware-dependent. For detailed specification on entries allowed per ACL, refer to your line card documentation. You can create an IPv6 ACL for control-plane traffic policing for OSPFv3, in addition to the CoPP support for VRRP, BGP, and ICMP.

---

**cam-acl-egress**

Allocate space for IPv6 egress ACLs.

**Z9000**

**Syntax**

```
cam-acl-egress {default | l2acl 1-4 ipv4acl 1-4 ipv6acl 0-4}
```

**Parameters**

- `default` Use the default CAM profile settings, and set the CAM as follows:
  - L2 ACL(l2acl): 1
  - L3 ACL (ipv4acl): 1
  - IPv6 L3 ACL (ipv6acl): 2

- `l2acl 1-4 ipv4acl 1-4 ipv6acl 0-4` Allocate space to support IPv6 ACLs. Enter all of the profiles and a range. Enter the CAM profile name then the amount to be allotted. The total space allocated must equal 4. The ipv6acl range must be a factor of 2.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
Version | Description
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.4.2.0 | Introduced on the E-Series TeraScale.
8.2.1.0 | Introduced on the S-Series.
7.8.1.0 | Introduced on the C-Series.

Usage Information

For the new settings to take effect, save the new CAM settings to the startup-config (write-mem or copy run start), then reload the system.

The total amount of space allowed is 4 FP Blocks.

Example

Dell# configure
Dell(conf)# cam-acl-egress ?
default Reset Egress CAM ACL entries to default setting
l2acl Set L2-ACL entries
Dell(conf)# cam-acl-egress l2acl ?
<1-4> Number of FP blocks for l2acl
Dell(conf)# cam-acl-egress l2acl 1 ?
ipv4acl Set IPV4-ACL entries
Dell(conf)# cam-acl-egress l2acl 1 ipv4acl 1 ?
ipv6acl Set IPV6-ACL entries
Dell(conf)# cam-acl-egress l2acl 1 ipv4acl 1 ipv6acl ?
<0-4> Number of FP blocks for IPV6 (multiples of 2)
Dell(conf)# cam-acl-egress l2acl 1 ipv4acl 1 ipv6acl 2

**cam-acl**

Allocate space for IPv6 ACLs.

Z9000

Syntax

```
cam-acl {default | l2acl 1-10 ipv4acl 1-10 ipv6acl 0-10 ipv4qos 1-10 12qos 1-10}
```

Parameters

- **default**: Use the default CAM profile settings, and set the CAM as follows:
  - L3 ACL (ipv4acl): 6
  - L2 ACL(l2acl): 5
  - IPv6 L3 ACL (ipv6acl): 0
  - L3 QoS (ipv4qos): 1
  - L2 QoS (12qos): 1

- **l2acl 1-10 ipv4acl 1-10 ipv6acl 0-10 ipv4qos 1-10 12qos 1-10**: Allocate space to support IPv6 ACLs. Enter all of the profiles and a range. Enter the CAM profile name then the amount to be allotted. The total space allocated must equal 13. The ipv6acl range must be a factor of 2.

</tr>
</tbody>
</table>

**Usage Information**

For the new settings to take effect, save the new CAM settings to the startup-config (write-mem or copy run start), then reload the system.

The total amount of space allowed is 16 FP blocks. System flow requires three blocks and these blocks cannot be reallocated.

When configuring space for IPv6 ACLs, the total number of Blocks must equal 13.

Ranges for the CAM profiles are from 1 to 10, except for the ipv6acl profile which is from 0 to 10. The ipv6acl allocation must be a factor of 2 (2, 4, 6, 8, 10).
IPv6 basic commands are supported on the Dell Networking OS.

**NOTE:** For information about the Dell Networking operating software version and platform that supports IPv6 in each software feature, refer to the IPv6 Addressing chapter of the *Dell Networking OS Configuration Guide*.

- trust ipv6-diffserv

### clear ipv6 fib

Clear (refresh) all forwarding information base (FIB) entries on a linecard or stack unit.

**Syntax**

```plaintext
clear ipv6 fib linecard slot | stack-unit unit-number
```

**Parameters**

- `slot`  
  Enter the slot number to clear the FIB for a linecard.
- `unit-number`  
  Enter the stack member number.
  The range is from 0 to 7 for the Z9000.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.
**clear ipv6 route**

Clear (refresh) all or a specific route from the IPv6 routing table.

**Syntax**
```
clear ipv6 route {* | ipv6-address prefix-length}
```

**Parameters**
- `{* | ipv6-address prefix-length}`: Enter the asterisk `*` to clear (refresh) all routes from the IPv6 routing table. Enter the IPv6 address in the `x:x:x:x::x` format then the prefix length in the `/x` format. The range is from `/0` to `/128`.

**Command Modes**
- EXEC Privilege

**Command History**

</table>
maximum dynamic-routes-ipv6

Specify the maximum number of dynamic (protocol) IPv6 routes a VRF can have.

Syntax

```
maximum dynamic-routes-ipv6 limit \{warn-threshold threshold-value \| warning-only\}
```

To remove the limit on the maximum number of IPv6 routes used, use the `no maximum dynamic-routes-ipv6` command.

Parameters

- **limit**: Maximum number of IPv6 routes allowed in a VRF. Valid range is from 1 to 8000 (or maximum allowable for that platform if smaller value).
- **warn-threshold** or **warning-only**: Warning threshold value is expressed as a percentage of the limit value. When the number of IPv6 routes reaches the specified percentage of the limit, a warning message is generated. Valid range is 1 to 100. When warn-threshold is used, once the limit is reached, additional routes will not be allowed into the RTM (route table manager) itself.
- **warning-only**: When the warning-only option is used, a syslog message will be thrown when maximum number of dynamic IPv6 routes reaches the limit. Additional dynamic IPv6 routes will still be allowed.

Defaults

No limit is set on the maximum number of dynamic IPv6 routes for a VRF.

Command Modes

- CONFIGURATION-VRF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S4810, S4820T, S5000, S6000, S6000-ON, and Z9500.</td>
</tr>
</tbody>
</table>

Usage Information

If the maximum IPv6 route limit is not specified for a VRF (valid range is from 1 to 8000), then it has unlimited space that extends to the maximum number of entries allowed for the system. This command is not applicable to the default and management VRFs.

ipv6 address autoconfig

Configure IPv6 address auto-configuration for the management interface.

Syntax

```
ipv6 address autoconfig
```

To disable the address autoconfig operation on the management interface, use the `no ipv6 address autoconfig` command.

Default

Disabled
Command Modes

INTERFACE (management interface only)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.(0.0)</td>
<td>Updated Usage Information.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>

<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

- SAA can configure up to two addresses. If any preferred prefix or valid timers time out, the corresponding address are deprecated or removed. If an address is removed due to a time-out, an address from the current unused prefix is used to create a new address. If there are no remaining prefixes, the software waits to receive a new prefix from the RA.
- If auto-configuration is enabled, all IPv6 addresses on that management interface are auto-configured. Manual and auto-configurations are not supported on a single management interface.
- Removing auto-configuration removes all auto-configured IPv6 addresses and the link-local IPv6 address from that management interface.
- IPv6 addresses on a single management interface cannot be members of the same subnet.
- IPv6 secondary addresses on management interfaces across a platform must be members of the same subnet.
- IPv6 secondary addresses on management interfaces should not match the virtual IP address and should not be in the same subnet as the virtual IP.

```
ipv6 address
```

Configure an IPv6 address to an interface.

Z9000

Syntax

```
ipv6 address {ipv6-address prefix-length}
```

To remove the IPv6 address, use the `no ipv6 address {ipv6-address prefix-length}` command.

Parameters

- **ipv6-address**: Enter the IPv6 address in the `x:x:x:x::x` format then the prefix length in the `/x` format. The range is from /0 to /128.

  **NOTE**: The :: notation specifies successive hexadecimal fields of zeros.

Defaults

- none

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.(0.0)</td>
<td>Updated Usage Information.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>
Version | Description
---|---
8.3.7.0 | Introduced on the S4810.
8.4.1.0 | Added support on the management Ethernet port.
8.2.1.0 | Introduced on the E-Series ExaScale.
7.8.1.0 | Introduced on the C-Series and S-Series.
7.4.1.0 | Introduced on the E-Series TeraScale.

**Usage Information**
- If two addresses are configured, delete an existing address before configuring a new address.
- If the last manually-configured global IPv6 address is removed using the "no" form of the command, the link-local IPv6 address is removed automatically.
- IPv6 addresses on a single management interface cannot be members of the same subnet.
- IPv6 secondary addresses on management interfaces across platform must be members of the same subnet.
- IPv6 secondary addresses on management interfaces should not match the virtual IP address and should not be in the same subnet as the virtual IP.

**Example**

```
Dell(conf)#interface tengigabitethernet 1/2
Dell(conf-if-te-1/2)#ipv6 address ?
X:X:X::X IPv6 address
Dell(conf-if-te-1/2)#ipv6 address 2002:1:2::3 ?
<0-128> Prefix length in bits
Dell(conf-if-te-1/2)#ipv6 address 2002:1:2::3 /96 ?
<cr>
Dell(conf-if-te-1/2)#ipv6 address 2002:1:2::3 /96
Dell(conf-if-te-1/2)#show config
!
interface TenGigabitEthernet 1/2
  no ip address
  ipv6 address 2002:1:2::3 /96
  no shutdown
```

**ipv6 address eui64**

Configure IPv6 EUI64 address configuration on the interface.

**Z9000**

**Syntax**

```
ipv6 address {ipv6-address prefix-length} eui64
```

To disable IPv6 EUI64 address autoconfiguration, use the `no ipv6 address {ipv6-address prefix-length} eui64` command.

**Parameters**

- `ipv6-address` Enter the IPv6 prefix in the `x:x:x::x` format then the prefix length in the `/x` format. The range is from `/0` to `/128`.
  
  **NOTE:** The '::' notation specifies successive hexadecimal fields of zeros.

**Defaults**

`none`

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
ipv6 control-plane icmp error-rate-limit

Configure the maximum number of ICMP error packets per second that can be sent per second.

Z9000

Syntax
ipv6 control-plane icmp error-rate-limit {1-200}

To restore the default value, use the no ipv6 control-plane icmp error-rate-limit command.

Parameters
pps

Enter the maximum number of error packets generated per second. The range is from 1 to 200, where 0 disables the rate-limiting.

Default
100 pps

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

ipv6 flowlabel-zero

Configure system to set the flow label field in the packets to zero.

Z9000

Syntax
ipv6 flowlabel-zero

To disable the 0 from being set in the field and allow the protocol operations to fill the field, use the no ipv6 flowlabel-zero command.

Default
Disabled
**ipv6 host**

Assign a name and IPv6 address the host-to-IPv6 address mapping table uses.

**Z9000**

**Syntax**

```plaintext
ipv6 host name ipv6-address
```

To remove an IP host, use the `no ipv6 host name {ipv6-address}`.

**Parameters**

- `name` Enter a text string to associate with one IP address.
- `ipv6-address` Enter the IPv6 address (X:X::X) to be mapped to the name.

**Defaults**

Not configured.

**Command Modes**

`CONFIGURATION`

---

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>

<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the flowlabel value is already set for BGP or SSH, the system defaults to the already configured value. All packets on the same connection are considered part of the same flow by the system. For new connections, set the new flowlabel to zero.

---

**ipv6 name-server**

Enter up to six IPv6 addresses of name servers. The order you enter the addresses determines the order of their use.

**Z9000**

**Syntax**

```plaintext
ipv6 name-server ipv6-address [ipv6-address2... ipv6-address6]
```

---

</tr>
</tbody>
</table>

**Usage Information**

You can separately configure both IPv4 and IPv6 domain name servers.

### ipv6 nd dad attempts

To perform duplicate address detection (DAD) on the management interface, configure the number of neighbor solicitation messages that are sent.

**Z9000**

**Syntax**

ipv6 nd dad attempts {number of attempts}

To restore the default value, use the no ipv6 nd dad attempts command.

**Parameters**

- **number of attempts**
  - Enter the number of attempts to be made to detect a duplicate address. The range is from 0 to 15. Setting the value to 0 disables DAD on the interface.

**Default**

3 attempts

**Command Modes**

INTERFACE (management interface only)

**Command History**

</tbody>
</table>
**ipv6 nd dns-server**

Configures Recursive DNS Server (RDNSS) addresses to be distributed via IPv6 router advertisements to an IPv6 device.

**Syntax**

```
ipv6 nd dns-server {ipv6-RDNSS-address} {lifetime | infinite}
```

To remove the IPv6 RDNSS configuration, use `no ipv6 nd dns-server {ipv6-RDNSS-address} {lifetime | infinite}`

**Parameters**

- **ipv6-RDNSS-address**: Enter the IPv6 Recursive DNS Server’s (RDNSS) address. You can specify up to 4 IPv6 RDNSS server addresses.
- **lifetime**: Enter the lifetime in seconds. The amount of time the IPv6 host can use the IPv6 RDNSS address for name resolution. The range is 0 to 4294967295 seconds. When you specify the maximum lifetime value of 4294967295 or `infinite`, the lifetime does not expire. A value of 0 indicates to the host that the RDNSS address should not be used. You must specify a lifetime using the `lifetime` or `infinite` parameter.
- **infinite**: Enter the keyword `infinite` to specify that the RDNSS lifetime does not expire.

**Defaults**

Not Configured

**Command Modes**

INTERFACE CONFIG

**Command History**

</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9000, S6000, S4810, S4820T, and MXL..</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to add, edit, or delete an IPv6 RDNSS address and lifetime value. You can configure up to four IPv6 RDNSS addresses. You must specify a lifetime using the `lifetime` or `infinite` parameter.

**Example**

```
Dell(conf-if-te-1/1)#ipv6 nd dns-server 1000::1 1
```

---

**ipv6 nd prefix**

Specify which IPv6 prefixes are included in Neighbor Advertisements.

**Z9000**

**Syntax**

```
ipv6 nd prefix {ipv6-prefix | prefix-length | default} [no-advertise] | [no-autoconfig] [no-rtr-address] [off-link] [lifetime {valid | infinite} {preferred | infinite}]}
```

**Parameters**

- **ipv6-prefix**: Enter an IPv6 prefix.
- **prefix-length**: Enter the prefix then the prefix length. The length range is from 0 to 128.
- **default**: Enter the keyword `default` to set default parameters for all prefixes.
- **no-advertise**: Enter the keyword `no-advertise` to prevent the specified prefix from being advertised.
- **no-autoconfig**: Enter the keywords `no-autoconfig` to disable Stateless Address Autoconfiguration.
- **no-rtr-address**: Enter the keyword `no-rtr-address` to exclude the full router address from router advertisements (the R bit is not set).
off-link

Enter the keywords off-link to advertise the prefix without stating to recipients that the prefix is either on-link or off-link.

valid-lifetime | infinite

Enter the amount of time that the prefix is advertised, or enter infinite for an unlimited amount of time. The range is from 0 to 4294967295. The default is 2592000. The maximum value means that the preferred lifetime does not expire for the valid-life time parameter.

preferred-lifetime | infinite

Enter the amount of time that the prefix is preferred, or enter infinite for an unlimited amount of time. The range is from 0 to 4294967295. The default is 604800. The maximum value means that the preferred lifetime and does not expire.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.2.0</td>
<td>Introduced on the E-Series TeraScale, C-Series, and S-Series.</td>
</tr>
</tbody>
</table>

Usage Information

By default, all prefixes configured as addresses on the interface are advertised. This command allows control over the individual parameters per prefix; you can use the default keyword to use the default parameters for all prefixes. If a prefix has been configured with lifetime parameter values, the default values cannot be applied using the ipv6 nd prefix default no-autoconfig command.

ipv6 route

Establish a static IPv6 route.

Syntax

ipv6 route ipv6-address prefix-length {ipv6-address | interface | interface ipv6-address} [distance] [tag value] [permanent] [weight weight-value]

To remove the IPv6 route, use the no ipv6 route [vrf vrf-name]ipv6-address prefix-length {ipv6-address | interface | interface ipv6-address} [distance] [tag value] [permanent] [weight] command.

Parameters

ipv6-address prefix-length

Enter the IPv6 address in the x: x:: x format then the prefix length in the /x format. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

interface

(Optional) Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a port channel interface, enter the keywords port-channel then a number.
- For a Null interface, enter the keyword null then the Null interface number.
For a tunnel interface, enter the keyword `tunnel` then the tunnel interface number. The range is from 1 to 16383.

For a VLAN interface, enter the keyword `VLAN` then the vlan number. The range is from 1 to 4094.

If you configure a static IPv6 route using an egress interface and enter the `ping` command to reach the destination IPv6 address, the ping operation may not work. Configure the IPv6 route using a next-hop IPv6 address in order for the `ping` command to detect the destination address.

**ipv6-address** (OPTIONAL) Enter the forwarding router IPv6 address in the x:x:x:x::x format.

**distance** (OPTIONAL) Enter a number as the metric distance assigned to the route. The range is from 1 to 255.

**tag value** (OPTIONAL) Enter the keyword `tag` then a tag value number. The range is from 1 to 4294967295.

**permanent** (OPTIONAL) Enter the keyword `permanent` to specify that the route is not to be removed, even if the interface assigned to that route goes down.

NOTE: If you disable the interface with an IPv6 address associated with the keyword `permanent`, the route disappears from the routing table.

**weight weight-value** Enter the keyword `weight` followed by a weight value. The range is from 0 to 255.

NOTE: Weight for a static route can be added only for the destination address and not for the route pointing to destination a interface.

**Defaults**

none

**Command Modes**

CONFIGURATION

<td>Introduced on the C-Series and S-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
</tbody>
</table>

**Usage Information**

When the interface goes down, Dell Networking OS withdraws the route. The route is re-installed, by Dell Networking OS, when the interface comes back up. When a recursive resolution is “broken,” Dell Networking OS withdraws the route. The route is re-installed, by Dell Networking OS, when the recursive resolution is satisfied.

After an IPv6 static route interface is created, if an IP address is not assigned to a peer interface, the peer must be manually pinged to resolve the neighbor information.

You can specify a weight for an IPv4 or IPv6 static route. If the weight value of a path is 0, then that path is not used for forwarding when weighted ECMP is in effect. Also, if a path corresponding to a static route (destination) has a non-zero weight assigned to it and other paths do not have any weight configured, then regular ECMP is used for forwarding.

You can specify the weight value only to destination address and not on the egress port.
A route is considered for weighted ECMP calculations only if each path corresponding to that route is configured with a weight.

```plaintext
Example
Dell(conf)#ipv6 route 44::/64 33::1 weight 100
Dell(conf)#ipv6 route 44::/64 33::2 weight 200
Dell(conf)#do show running-config | grep ipv6 route
Dell(conf)#ipv6 route vrf vrf_test 44::/64 33::1 weight 100
Dell(conf)#ipv6 route vrf vrf_test 44::/64 33::2 weight 200
Dell(conf)#do show running-config | grep ipv6 route vrf
```

### Related Commands
- `show ipv6 route` — views the IPv6 configured routes.

**CONFIGURATION**

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.2.1</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
</tbody>
</table>

#### Usage Information

Because this command is enabled by default, it does not appear in the running configuration. When you disable unicast routing, the `no ipv6 unicast-routing` command is included in the running configuration. Whenever unicast routing is disabled or re-enabled, Dell Networking OS generates a syslog message indicating the action.

Disabling unicast routing on an E-Series chassis causes the following behavior:
- static and protocol learned routes are removed from RTM and from the CAM; packet forwarding to these routes is terminated
- connected routes and resolved neighbors remain in the CAM and new IPv6 neighbors are still discoverable
- additional protocol adjacencies (OSPFv3 and BGP4) are brought down and no new adjacencies are formed
- the IPv6 address family configuration (under router bgp) is deleted
- IPv6 Multicast traffic continues to flow unhindered
show ipv6 cam stack-unit

Displays the IPv6 CAM entries for the specified stack-unit.

Syntax

show ipv6 cam [vrf vrf-name] stack-unit unit-number port-set {0-1} [summary | index | ipv6 address]

Parameters

vrf vrf-name  (Optional) Enter the keyword vrf followed by the name of the VRF to display IPv6 CAM entries corresponding to that VRF.

NOTE: If you do not specify this option, IPv6 CAM entries corresponding to the default VRF are displayed.

unit-number  Enter the stack unit's ID number.

port-set  Enter the keyword Port Set.

summary  (OPTIONAL) Enter the keyword summary to display a table listing network prefixes and the total number prefixes which can be entered into the IPv6 CAM.

index  (OPTIONAL) Enter the index in the IPv6 CAM.

ipv6-address  Enter the IPv6 address in the x:x:x:x::x/n format to display networks that have more specific prefixes. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Added support for VRF.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.1</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.2.1</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

Usage Information

NOTE: If a route has a mask greater than 64, no output is displayed and no output is displayed for show ipv6 cam stack-unit unit-number port-set {0-1} ipv6-address, but an equivalent /64 entry would be listed in the show ipv6 cam stack-unit unit-number port-set {0-1} output. Similarly, if there is more than one ECMP object with a destination route that has a mask greater than 64, if the first 64 bits in the destination routes of the ECMP objects are the same, only one route is installed in CAM even though multiple ECMP path entries exist.
show ipv6 control-plane icmp

Displays the status of the icmp control-plane setting for the error eate limit setting.

Z9000

Syntax

show ipv6 control-plane icmp

Default

100

Command Modes

EXEC

Related Commands

ipv6 flowlabel-zero — Configure IPv6 address auto-configuration for the management interface.

show ipv6 fib stack-unit

View all FIB entries.

Syntax

show ipv6 fib [vrf vrf-name] stack-unit unit-number [summary | ipv6-address]

Parameters

vrf vrf-name (Optional) Enter the keyword vrf followed by the name of the VRF to display neighbors corresponding to that VRF.

slot-number Enter the number of the stack unit. The range is from 0 to 11.

summary (OPTIONAL) Enter the keyword summary to view a summary of entries in IPv6 cam.

ipv6-address Enter the IPv6 address in the x:x:x::x/n format to display networks that have more specific prefixes. The range is from /0 to /128.

NOTE: The :: notation specifies successive hexadecimal fields of zeros.

Related Commands
ipv6 nd dad attempts — Configure system to set the flow label field in the packets to zero.

show ipv6 interface

Display the status of interfaces configured for IPv6.

Z9000

Syntax
show ipv6 interface interface [brief] [configured] [loopback interface-number] [managementethernet slot/port] [port-channel number] [stack-unit id] [tengigabitethernet slot | slot/port] [fortyGigE slot | slot/port] [tunnel tunnel-id] [vlan vlan-id]

Parameters
interface

(OPTIONAL) Enter the following keywords and slot/port or number information:
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a port channel interface, enter the keyword port-channel then a number.
● For a Null interface, enter the keyword `null` then the Null interface number.
● For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
● For stacking, enter the keywords `stack-unit` then the stack-unit ID.
● For a tunnel interface, enter the keyword `tunnel` then the tunnel ID.

`brief`  
(Optional) View a summary of IPv6 interfaces.

`configured`  
(Optional) View information on all IPv6 configured interfaces.

`managementethernet slot/port`  
(Optional) View information on an IPv6 Management port. Enter the slot number (0-1) and port number zero (0).

`loopback`  
(Optional) View information for IPv6 Loopback interfaces.

`port-channel`  
(Optional) View information for IPv6 port channels.

`tengigabitethernet`  
(Optional) View information for an IPv6 tengigabitethernet interface.

`fortyGigE`  
(Optional) View information for an IPv6 fortygigabitethernet interface.

`stack-unit id`  
(Optional) View information for stacking.

`tunnel tunnel-id`  
(Optional) View information for a tunnel interface.

`vlan`  
(Optional) View information for IPv6 VLANs.

**Defaults**

`none`

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

</tr>
</tbody>
</table>

**Usage Information**

The Management port is enabled by default (*no shutdown*). If necessary, use the `ipv6 address` command to assign an IPv6 address to the Management port.

**Example**

```
Dell#show ipv6 interface tengigabit 1/12
TenGigabitEthernet 1/12 is up, line protocol is up
IPv6 is enabled
Link Local address: fe80::201:e8ff:fea7:497e
Global Unicast address(es):
    100::2, subnet is 100::/64 (MANUAL)
    Remaining lifetime: infinite
Global Anycast address(es):
    Joined Group address(es):
        ff02::1
        ff02::2
        ff02::1:ff00:2
```
IPv6 Basics

Example (ManagementEthernet)

Dell# show ipv6 interface management 0/0
ManagementEthernet 0/0 is up, line protocol is up
IPV6 is enabled
Link Local address: fe80::201:e8ff:fea7:497e
Global Unicast address(es):
  Actual address is 300::1, subnet is 300::/64 (MANUAL)
  Remaining lifetime: infinite
  Virtual-IP IPv6 address is not set
Global Anycast address(es):
  Joined Group address(es):
    ff02::1
    ff02::1:ff00:1
    ff02::1:ffa7:497e
ND MTU is 0
ICMP redirects are not sent
DAD is enabled, number of DAD attempts: 3
ND reachable time is 20410 milliseconds
ND base reachable time is 30000 milliseconds
ND retransmit interval is 1000 milliseconds
ND hop limit is 64
IPv6 hop limit for originated packets is 64
Dell#

Example (Brief)

Dell# show ipv6 interface brief
TenGigabitEthernet 1/2           [administratively down/down]
  fe80::201:e8ff:fea7:497e
  2002::2::3/96
TenGigabitEthernet 1/12          [up/up]
  fe80::201:e8ff:fea7:497e
  100::2/64
ManagementEthernet 1/0           [up/up]
  fe80::201:e8ff:fea7:497e
  300::1/64
Dell#

Example (tunnel)

Dell# show ipv6 interface tunnel 1
Tunnel 1 is up, line protocol is up
IPV6 is enabled
Link Local address: fe80::201:e8ff:fea7:497e
Global Unicast address(es):
  400::1, subnet is 400::/64 (MANUAL)
  Remaining lifetime: infinite
Global Anycast address(es):
  Joined Group address(es):
    ff02::1
    ff02::2
    ff02::1:ff00:1
    ff02::1:ffa7:497e
ND MTU is 0
ICMP redirects are not sent
DAD is enabled, number of DAD attempts: 3
ND reachable time is 20410 milliseconds
ND base reachable time is 30000 milliseconds
show ipv6 mld_host

Display the IPv6 MLD host counters.

Z9000

**Syntax**

```
show ipv6 mld_host
```

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show ipv6 mld-host` command shown in the following example.

- **Valid MLD Packets**: The total number of packets received and sent from the last time the elapsed time was cleared.
- **Reports**: The total number of reports (queries and unsolicited reports generated from joins or leaves) that have been received or sent.
- **Leaves**: The number of Multicast leaves that have been sent.
- **MLDv1 queries**: The number of MLDv1 queries that have been received.
- **MLDv2 queries**: The number of MLDv2 queries that have been received.
- **Malformed Packets**: The number of MLDv1 and MLDv2 packets that do not match the requirement for a valid MLD packet.

**Example**

```
MLD Host Traffic Counters
Elapsed time since counters cleared: 00:28:33:52

Received       Sent
Valid MLD Packets  97962  18036
Reports          79962  18034
Leaves           -----  0
MLDv2 Queries    18000  ----- 
MLDv1 Queries    0     ----- 
Errors:
Malformed Packets: 4510
```
show ipv6 route

Displays the IPv6 routes.

Syntax

```
show ipv6 route [ipv6-address prefix-length] [hostname] [all] [bgp as number] [connected] [isis tag] [list prefix-list name] [ospf process-id] [rip] [static] [summary]
```

Parameters

- `ipv6-address prefix-length` (OPTIONAL) Enter the IPv6 address in the x:x:x:x format then the prefix length in the /x format. The range is from /0 to /128.
  
  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- `hostname` (OPTIONAL) View information for this IPv6 routes with Host Name.

- `all` (OPTIONAL) View information for all IPv6 routes.

- `bgp` (OPTIONAL) View information for all IPv6 BGP routes.

- `connected` (OPTIONAL) View only the directly connected IPv6 routes.

- `isis` (OPTIONAL) View information for all IPv6 IS-IS routes.

- `list` (OPTIONAL) View the IPv6 prefix list.

- `ospf` (OPTIONAL) View information for all IPv6 OSPF routes.

- `rip` (OPTIONAL for E-Series only) View information for all IPv6 RIP routes.

- `static` (OPTIONAL) View only routes configured by the `ipv6 route` command.

- `summary` (OPTIONAL) View a brief list of the configured IPv6 routes.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the `show ipv6 route` command shown in the following examples.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(undefined)</td>
<td>Identifies the type of route:</td>
</tr>
<tr>
<td></td>
<td>• L = Local</td>
</tr>
<tr>
<td></td>
<td>• C = connected</td>
</tr>
<tr>
<td></td>
<td>• S = static</td>
</tr>
<tr>
<td></td>
<td>• R = RIP</td>
</tr>
<tr>
<td></td>
<td>• B = BGP</td>
</tr>
<tr>
<td></td>
<td>• IN = internal BGP</td>
</tr>
</tbody>
</table>
### Field Description
- **EX** = external BGP
- **LO** = Locally Originated
- **O** = OSPF
- **IA** = OSPF inter-area
- **N1** = OSPF NSSA external type 1
- **N2** = OSPF NSSA external type 2
- **E1** = OSPF external type 1
- **E2** = OSPF external type 2
- **i** = IS-IS
- **L1** = IS-IS level-1
- **L2** = IS-IS level-2
- **IA** = IS-IS inter-area
- *** = candidate default
- **> = non-active route
- **+ = summary routes

### Destination
Identifies the route’s destination IPv6 address.

### Gateway
Identifies whether the route is directly connected and on which interface the route is configured.

### Dist/Metric
Identifies if the route has a specified distance or metric.

### Last Change
Identifies when the route was last changed or configured.

---

**Example (S-Series)**

Dell#show ipv6 route

Codes:  C - connected,  L - local,  S - static,  R - RIP,
       0 - BGP,  IN - internal BGP,  EX - external BGP,LO - Locally
       Originated,
       O - OSPF,  IA - OSPF inter area,  N1 - OSPF NSSA external type 1,
       N2 - OSPF NSSA external type 2,  E1 - OSPF external type 1,
       E2 - OSPF external type 2,  i - IS-IS,  L1 - IS-IS level-1,
       L2 - IS-IS level-2,  IA - IS-IS inter area,  * - candidate default,
       Gateway of last resort is not set

Intermediate System to Intermediate System (IS-IS)

The intermediate system to intermediate system (IS-IS) protocol for IPv4 and IPv6 is supported on the Z9000 platform.

IS-IS is an interior gateway protocol that uses a shortest-path-first algorithm. IS-IS facilitates the communication between open systems, supporting routers passing both IP and OSI traffic.

A router is considered an intermediate system. Networks are partitioned into manageable routing domains, called areas. Intermediate systems send, receive, and forward packets to other routers within their area (Level 1 and Level 1-2 devices). Only Level 1-2 and Level 2 devices communicate with other areas.

IS-IS protocol standards are listed in the Standard Compliance chapter in the Dell Networking OS Configuration Guide.

NOTE: The fundamental mechanisms of IS-IS are the same between IPv4 and IPv6. Where there are differences between the two versions, they are identified and clarified in this chapter. Except where identified, the information in this chapter applies to both protocol versions.

adjacency-check

Verify that the "protocols supported" field of the IS-IS neighbor contains matching values to this router.

**Syntax**

```
adjacency-check
```

To disable adjacency check, use the `no adjacency-check` command.

**Defaults**

Enabled.

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>
Version | Description
---|---
8.3.12.0 | Introduced on the S4810.
8.3.11.1 | Introduced on the Z9000.
7.5.1.0 | Introduced on the E-Series.

Usage Information
To perform protocol-support consistency checks on hello packets, use this command. The adjacency-check is enabled by default.

If a BFD session goes down indicating that IPv4 or IPv6 connectivity to its neighbor is lost, it does not imply that the adjacency is lost altogether. The hello adjacency runs over Layer 2, and does not require IP connectivity. However, if IPv4 connectivity is lost to a neighbor, then when the next SPF calculation is performed, the system ensures that it does not calculate any IPv4 or IPv6 routes through that neighbor.

advertise

Leak routes between levels (distribute IP prefixes between Level 1 and Level 2 and vice versa).

Syntax
```plaintext
advertise {level1-into-level2 | level2-into-level1} prefix-list-name
```

To return to the default, use the `no advertise {level1-into-level2 | level2-into-level1}[prefix-list-name]` command.

Parameters
- **level1-into-level2**: Enter the keywords level1-into-level2 to advertise Level 1 routes into Level 2 LSPs. This setting is the default.
- **level2-into-level1**: Enter the keywords level2-into-level1 to advertise Level 2 inter-area routes into Level 1 LSPs. This behavior is described in RFC 2966.
- **prefix-list-name**: Enter the name of a configured IP prefix list. Routes meeting the criteria of the IP Prefix list are leaked.

Defaults
- **level1-into-level2**: (Level 1 to Level 2 leaking enabled.)

Command Modes
- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Added IPv6 ISIS support.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Version 6.3.1.0 Introduced</td>
</tr>
</tbody>
</table>

Usage Information
You cannot disable leaking from one level to another; however, you can regulate the rate flow from one level to another using an IP Prefix list. If you do not configure the IP Prefix list, all routes are leaked.

You can find more information in IETF RFC 2966, *Domain-wide Prefix Distribution with Two-Level IS-IS.*
area-password

Configure a hash message authentication code (HMAC) password for an area.

Syntax

```
area-password [hmac-md5 | encryption-type] password
```

To delete a password, use the `no area-password` command.

Parameters

- **hmac-md5** (OPTIONAL) Enter the keywords `hmac-md5` to encrypt the password.
- **encryption-type** (OPTIONAL) Enter `7` to encrypt the password using DES.
- **password** Enter a 1 to 16-character length alphanumeric string to prevent unauthorized access or incorrect routing information corrupting the link state database. The password is processed as plain text, which only provides limited security.

Defaults

Not configured.

Command Modes

`ROUTER ISIS`

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

To prevent the link state database from receiving incorrect routing information from unauthorized routers, use the `area-password` command on routers within an area.

The configured password injects into Level 1 LSPs, CSNPs, and PSNPs.

Related Commands

- `domain-password` — allows you to set the authentication password for a routing domain.
- `isis password` — allows you to configure an authentication password for an interface.

---

clear config

Clear IS-IS configurations that display under the `router isis` heading of the `show running-config` command output.

Syntax

```
clear config
```

Command Modes

`ROUTER ISIS`

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
Usage Information

CAUTION: Use caution when you enter this command. Back up your configuration prior to using this command or your IS-IS configuration will be erased.

**clear isis**

Restart the IS-IS process. All IS-IS data is cleared.

Z9000

**Syntax**

```
clear isis [tag] {* | database | traffic}
```

**Parameters**

- `tag` *(Optional)* Enter an alphanumeric string to specify the IS-IS routing tag area.
- `*` Enter the keyword `*` to clear all IS-IS information and restart the IS-IS process. This command removes IS-IS neighbor information and IS-IS LSP database information and the full SPF calculation is done.
- `database` Clears IS-IS LSP database information.
- `traffic` Clears IS-IS counters.

**Command Modes**

EXEC Privilege

**Command History**

</tbody>
</table>

**clns host**

Define a name-to-network service mapping point (NSAP) that you use with commands that require NSAPs and system IDs.

**Syntax**

```
clns host name nsap
```

**Parameters**

- `name` Enter an alphanumeric string to identify the name-to-NSAP mapping.
- `nsap` Enter a specific NSAP address that is associated with the name parameter.

**Defaults**

Not configured.

**Command Modes**

ROUTER ISIS

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

Entering debug isis enables all debugging parameters.

To display all debugging information in one output, use this command. To turn off debugging, you normally enter separate no forms of each command. To disable all debug messages for IS-IS at once, enter the no debug isis command.

**debug isis adj-packets**

Enable debugging on adjacency-related activity such as hello packets that are sent and received on IS-IS adjacencies.

**Z9000**

**Syntax**

dep isis adj-packets [interface]

To turn off debugging, use the no debug isis [vrf vrf-name]adj-packets [interface] command.

**Parameters**

- **interface** (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
For a port channel interface, enter the keywords `port-channel` then a number.
For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

### debug isis local-updates

To debug IS-IS local update packets, enable debugging on a specific interface and provides diagnostic information.

**Z9000**

**Syntax**

```
debug isis local-updates [interface]
```

To turn off debugging, use the `no debug isis [vrf vrf-name] updates [interface]` command.

**Parameters**

- `interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

EXEC Privilege

debug isis snp-packets

To debug IS-IS complete sequence number PDU (CSNP) and partial sequence number PDU (PSNP) packets, enable debugging on a specific interface and provides diagnostic information.

Z9000

Syntax  
```
depend isis snp-packets [interface]
```

To turn off debugging, use the `no debug isis [vrf vrf-name] snp-packets [interface]` command.

Parameters
```
interface (OPTIONAL) Identifies the interface type slot/port as one of the following:
  ● For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  ● For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  ● For a port channel interface, enter the keywords port-channel then a number.
  ● For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
```

</tr>
</tbody>
</table>
```

deploy isis spf-triggers

Enable debugging on the events that triggered IS-IS shortest path first (SPF) events for debugging purposes.

Z9000

Syntax  
```
depend isis spf-triggers
```

To turn off debugging, use the `no debug isis [vrf vrf-name] spf-triggers` command.

Command Modes
```
EXEC Privilege
```

Command History
```
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
**debug isis update-packets**

Enable debugging on link state PDUs (LSPs) that a router detects.

**Z9000**

**Syntax**
```
default-information originate [always] [metric metric] [route-map map-name]
```

To disable the generation of a default route into the specified IS-IS routing domain, use the no default-information originate [always] [metric metric] [route-map map-name] command.

**Parameters**
- **always**
  - (OPTIONAL) Enter the keyword always to have the default route always advertised.

**Command Modes**
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

</tr>
<tr>
<td>6.3.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**default-information originate**

Generates a default route into an IS-IS routing domain and controls the distribution of default information.

**Syntax**
```
default-information originate [always] [metric metric] [route-map map-name]
```

To disable the generation of a default route into the specified IS-IS routing domain, use the no default-information originate [always] [metric metric] [route-map map-name] command.

**Parameters**
- **always**
  - (OPTIONAL) Enter the keyword always to have the default route always advertised.
metric metric  (OPTIONAL) Enter the keyword metric then a number to assign to the route. The range is from 0 to 16777215.

route-map map-name  (OPTIONAL) A default route the routing process generates if the route map is satisfied.

Defaults
Not configured.

Command Modes
- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Added IPv6 ISIS support.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information
When you use this command to redistribute routes into a routing domain, the router becomes an autonomous system (AS) boundary router. An AS boundary router does not always generate a default route into a routing domain. The router still requires its own default route before it can generate one.

How a metric value assigned to a default route advertises depends on the metric-style command configuration. If the metric-style command is set for Narrow mode and the metric value in the default-information originate command is set to a number higher than 63, the metric value advertised in the LSPs is 63. If the metric-style command is set for Wide mode, the metric value in the default-information originate command is advertised.

Related Commands
- redistribute — redistributes routes from one routing domain to another routing domain.
- isis metric — configures a metric for an interface.
- metric-style — sets the metric style for the router.
- show isis database — displays the IS-IS link state database.

description

Enter a description of the IS-IS routing protocol.

Syntax

```
description {description}
```

To remove the description, use the no description (description) command.

Parameters
description

Enter a description to identify the IS-IS protocol (80 characters maximum).

Defaults
none

Command Modes
ROUTER ISIS

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>

674  Intermediate System to Intermediate System (IS-IS)
Version Description
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.
8.3.11.1 Introduced on the Z9000.
pre-7.7.1.0 Introduced.

Related Commands
router isis — Enter ROUTER mode on the switch.

distance

Define the administrative distance for learned routes.

Syntax
distance weight [ip-address mask [prefix-list]]

To return to the default values, use the no distance weight command.

Parameters
weight The administrative distance value indicates the reliability of a routing information source. The range is from 1 to 255. (A higher relative value indicates lower reliability. Routes with smaller values are given preference.) The default is 115.

ip-address mask (OPTIONAL) Enter an IP address in dotted decimal format and enter a mask in either dotted decimal or /prefix format.

prefix-list (OPTIONAL) Enter the name of a prefix list name.

Defaults
weight = 115

Command Modes
- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.
8.3.11.1 Introduced on the Z9000.
6.3.1.0 Introduced.

Usage Information
The administrative distance indicates the trust value of incoming packets. A low administrative distance indicates a high trust rate. A high value indicates a lower trust rate. For example, a weight of 255 is interpreted that the routing information source is not trustworthy and should be ignored.

distribute-list in

Filter network prefixes received in updates.

Syntax
distribute-list prefix-list-name in [interface]
To return to the default values, use the no distribute-list prefix-list-name in [interface] command.

**Parameters**
- **prefix-list-name**: Specify the prefix list to filter prefixes in routing updates.
- **interface** *(OPTIONAL) Identifies the interface type slot/port as one of the following:*
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**Defaults**
Not configured.

**Command Modes**
- ROUTER ISIS *(for IPv4)*
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 *(for IPv6)*

**Command History**
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>

<td>Introduced.</td>
</tr>
</tbody>
</table>

**Related Commands**
- distribute-list out — suppresses networks from being advertised in updates.
- redistribute — redistributes routes from one routing domain to another routing domain.

**distribute-list out**

Suppress network prefixes from being advertised in outbound updates.

**Syntax**
```
distribute-list prefix-list-name out [connected | bgp as number | ospf process-id | rip | static]
```

To return to the default values, use the no distribute-list prefix-list-name out [bgp as number connected | ospf process-id | rip | static] command.

**Parameters**
- **prefix-list-name**: Specify the prefix list to filter prefixes in routing updates.
- **connected** *(OPTIONAL) Enter the keyword connected for directly connected routing process.*
- **ospf process-id** *(OPTIONAL) Enter the keyword ospf then the OSPF process-ID number. The range is from 1 to 65535.*
- **bgp as number** *(OPTIONAL) Enter the BGP then the AS Number. The range is from 1 to 65535.*
- **rip** *(OPTIONAL) Enter the keyword rip for RIP routes.*
- **static** *(OPTIONAL) Enter the keyword static for user-configured routing process.*

**Defaults**
Not configured.
distribute-list redistributed-override

Suppress flapping of routes when the same route is redistributed into IS-IS from multiple routers in the network.

Syntax

distribute-list redistributed-override in

To return to the default, use the no distribute-list redistributed-override in command.

Defaults

none

Command Modes

• ROUTER ISIS (for IPv4)
• CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added IPv6 ISIS support.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

When you execute this command, IS-IS does not download the route to the routing table if the same route was redistributed into IS-IS routing protocol on the same router.
domain-password

Set the authentication password for a routing domain.

Syntax

```
domain-password [hmac-md5 | encryption-type] password
```

To disable the password, use the no domain-password command.

Parameters

- **hmac-md5** (OPTIONAL) Enter the keywords `hmac-md5` to encrypt the password using MD5.
- **encryption-type** (OPTIONAL) Enter `7` to encrypt the password using DES.
- **password** Enter an alphanumeric string up to 16 characters long. If you do not specify an encryption type or `hmac-md5` keywords, the password is processed as plain text which provides limited security.

Defaults

No default password.

Command Modes

- ROUTER ISIS

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

The domain password is inserted in Level 2 link state PDUs (LSPs), complete sequence number PDUs (CSNPs), and partial sequence number PDUs (PSNPs).

Related Commands

- area-password — configures an IS-IS area authentication password.
- isis priority — configures the authentication password for an interface.

graceful-restart ietf

Enable graceful restart on an IS-IS router.

Syntax

```
graceful-restart ietf
```

To return to the default, use the no graceful-restart ietf command.

Parameters

- **ietf** Enter `ietf` to enable graceful restart on the IS-IS router.

Defaults

Graceful restart disabled.

Command Modes

- ROUTER ISIS

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
</tbody>
</table>
Every graceful restart enabled router’s HELLO PDUs includes a restart TLV. This restart enables (re)starting as well as the existing ISIS peers to detect the GR capability of the routers on the connected network. A flag in the Restart TLV contains restart request (RR), restart acknowledge (RA) and suppress adjacency advertisement (SA) bit flags.

The ISIS graceful restart-enabled router can co-exist in mixed topologies where some routers are graceful restart-enabled and others are not. For neighbors that are not graceful restart-enabled, the restarting router brings up the adjacency per the usual methods.

### graceful-restart interval

Set the graceful restart grace period, the time during that all graceful restart attempts are prevented.

**Syntax**

```
graceful-restart interval minutes
```

To return to the default, use the `no graceful-restart interval` command.

**Parameters**

- `minutes`: Enter the graceful-restart interval minutes. The range is from 1 to 20 minutes. The default is 5 minutes.

**Defaults**

5 minutes

**Command Modes**

</tbody>
</table>

### graceful-restart restart-wait

Enable the graceful restart maximum wait time before a restarting peer comes up.

**Syntax**

```
graceful-restart restart-wait seconds
```

To return to the default, use the `no graceful-restart restart-wait` command.

**NOTE:** Set the t3 timer to adjacency on the restarting router when implementing this command.
Parameters

<table>
<thead>
<tr>
<th>parameter</th>
<th>description</th>
</tr>
</thead>
<tbody>
<tr>
<td>seconds</td>
<td>Enter the graceful restart time in seconds. The range is from 5 to 300 seconds. The default is 30 seconds.</td>

Related Commands

graceful-restart t3 — configures the overall wait time before graceful restart completes.

graceful-restart t1

Set the graceful restart wait time before unacknowledged restart requests are generated. This wait time is the interval before the system sends a restart request (an IIH with RR bit set in Restart TLV) until the CSNP is received from the helping router.

Syntax

```
graceful-restart t1 {interval seconds | retry-times value}
```

To return to the default, use the `no graceful-restart t1` command.

Parameters

<table>
<thead>
<tr>
<th>parameter</th>
<th>description</th>
</tr>
</thead>
<tbody>
<tr>
<td>interval</td>
<td>Enter the keyword interval to set the wait time. The range is from 5 to 120 seconds. The default is 5 seconds.</td>
</tr>
<tr>
<td>retry-times</td>
<td>Enter the keywords retry-times to set the number of times the request interval is extended until a CSNP is received from the helping router. The range is from 1 to 10 attempts. The default is 1.</td>
</tr>
</tbody>
</table>

Defaults

Refer to Parameters.

</tbody>
</table>
**graceful-restart t2**

Configure the wait time for the graceful restart timer T2 that a restarting router uses as the wait time for each database to synchronize.

**Syntax**

```plaintext
graceful-restart t2 {level-1 | level-2} seconds
```

To return to the default, use the `no graceful-restart t2` command.

**Parameters**

- **level-1, level-2**: Enter the keywords level-1 or level-2 to identify the database instance type to which the wait interval applies.
- **seconds**: Enter the `graceful-restart t2` time in seconds. The range is from 5 to 120 seconds. The default is 30 seconds.

**Defaults**

- **30 seconds**

**Command Modes**

- **ROUTER ISIS**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**graceful-restart t3**

Configure the overall wait time before graceful restart completes.

**Syntax**

```plaintext
graceful-restart t3 {adjacency | manual} seconds
```

To return to the default, use the `no graceful-restart t3` command.

**Parameters**

- **adjacency**: Enter the keyword adjacency so that the restarting router receives the remaining time value from its peer and adjusts its T3 value so if you have configured this option.
- **manual**: Enter the keyword manual to specify a time value that the restarting router uses. The range is from 50 to 120 seconds. The default is 30 seconds.

**Defaults**

- **manual, 30 seconds**

**Command Modes**

- **ROUTER ISIS**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
**hello padding**

Use to turn ON or OFF padding for LAN and point-to-point hello PDUs or to selectively turn padding ON or OFF for LAN or point-to-point hello PDUs.

**Syntax**

```
hello padding [multi-point | point-to-point]
```

To return to the default, use the `no hello padding [multi-point | point-to-point]` command.

**Parameters**

- `multi-point` *(OPTIONAL)* Enter the keywords `multi-point` to pad only LAN hello PDUs.
- `point-to-point` *(OPTIONAL)* Enter the keywords `point-to-point` to pad only point-to-point PDUs.

**Defaults**

Both LAN and point-to-point hello PDUs are padded.

**Command Modes**

`ROUTER ISIS`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.12.0 | Introduced on the S4810.
8.3.11.1 | Introduced on the Z9000.

**Usage Information**

IS-IS hellos are padded to the full maximum transmission unit (MTU) size. Padding IS-IS Hellos (IIHS) to the full MTU provides early error detection of large frame transmission problems or mismatched MTUs on adjacent interfaces.

**Related Commands**

- `isis hello padding` — turns ON or OFF hello padding on an interface basis.
hostname dynamic

Enables dynamic learning of hostnames from routers in the domain and allows the routers to advertise the hostname in LSPs.

Syntax

```
hostname dynamic
```

To disable this command, use the `no hostname dynamic` command.

Defaults

Enabled.

Command Modes

ROUTER ISIS

Command

History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

To build name-to-systemID mapping tables through the protocol, use this command. All `show` commands that display systems also display the hostname.

Related Commands

- `clns host` — defines a name-to-NSAP mapping.

ignore-lsp-errors

Ignore LSPs with bad checksums instead of purging those LSPs.

Syntax

```
ignore-lsp-errors
```

To return to the default values, use the `no ignore-lsp-errors` command.

Defaults

In IS-IS, the default deletes LSPs with internal checksum errors (no `ignore-lsp-errors`).

Command Modes

ROUTER ISIS

Command

History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

IS-IS normally purges LSPs with an incorrect data link checksum causing the LSP source to regenerate the message. A cycle of purging and regenerating LSPs can occur when a network link continues to deliver accurate LSPs even though there is a link causing data corruption. This process could cause disruption to your system operation.
ip router isis

Configure IS-IS routing processes on an interface and attach an area tag name to the routing process.

Syntax

```
ip router isis [tag]
```

To disable IS-IS on an interface, use the `no ip router isis [tag]` command.

Parameters

- `tag` (OPTIONAL) The tag you specify identifies a specific area routing process. If you do not specify a tag, a null tag is assigned.

Defaults

No processes are configured.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

To assign a network entity title to enable IS-IS, use the `net` command.

This command accepts even if an IP address is not configured. This command is cached in the L3 Manager till the IP address is configured. When the IP address configuration reaches the L3Manager, the circuit add message is sent to IS-IS.

**NOTE:** IP address is not mandatory for forming IS-IS adjacency.

Related Commands

- `net` — configures an IS-IS network entity title (NET) for the routing process.
- `router isis` — enables the IS-IS routing protocol.

ipv6 router isis

Enable the IPv6 IS-IS routing protocol and specify an IPv6 IS-IS process.

Syntax

```
ipv6 router isis [tag]
```

To disable IS-IS routing, use the `no router isis [tag]` command.

Parameters

- `tag` (OPTIONAL) This parameter is a unique name for a routing process. A null tag is assumed if the tag option is not specified. The tag name must be unique for all IP router processes for a given router.

Defaults

Not configured.

Command Modes

ROUTER ISIS

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>
**Command**: `isis circuit-type`  

Configure the adjacency type on interfaces.

**Syntax**: `isis circuit-type {level-1 | level-1-2 | level-2-only}`  

To return to the default values, use the `no isis circuit-type` command.

**Parameters**:
- `level-1`: You can form a Level 1 adjacency if there is at least one common area address between this system and neighbors. You cannot form Level 2 adjacencies on this interface.
- `level-1-2`: You can form a Level 1 and Level 2 adjacencies when the neighbor is also configured as Level-1-2 and there is at least one common area. If not, a Level 2 adjacency is established. This setting is the default.
- `level-2-only`: You can form a Level 2 adjacencies when other Level 2 or Level 1-2 routers and their interfaces are configured for Level 1-2 or Level 2. Level 1 adjacencies cannot be established on this interface.

**Defaults**: `level-1-2`

**Command Modes**: `INTERFACE`

**Version**

- **9.7(0.0)**: Introduced on the S6000-ON.
- **9.0.2.0**: Introduced on the S6000.
- **8.3.19.0**: Introduced on the S4820T.
- **8.3.12.0**: Introduced on the S4810.
- **8.3.11.1**: Introduced on the Z9000.
- **7.5.1.0**: Introduced on the E-Series.

**Usage Information**

Configure a network entity title (the `net` command) to specify the area address and the router system ID.

To establish adjacencies and establish dynamic routing, enable routing on one or more interfaces.

You can configure only one IS-IS routing process to perform Level 2 routing. A `level-1-2` designation performs Level 1 and Level 2 routing at the same time.

**Related Commands**

- `net` — configures an IS-IS network entity title (NET) for the routing process.
- `is-type` — assigns a type for a given area.

Because the default establishes Level 1 and Level 2 adjacencies, you do not need to configure this command. Routers in an IS-IS system must be configured as a Level 1-only, Level 1-2, or Level 2-only system.
Only configure interfaces as Level 1 or Level 2 on routers that are between areas (for example, a Level 1-2 router) to prevent the software from sending unused hello packets and wasting bandwidth.

### isis csnp-interval

Configure the IS-IS complete sequence number PDU (CSNP) interval on an interface.

**Syntax**

```plaintext
isis csnp-interval seconds [level-1 | level-2]
```

To return to the default values, use the `no isis csnp-interval [seconds] [level-1 | level-2]` command.

**Parameters**

- `seconds` Interval of transmission time between CSNPs on multi-access networks for the designated intermediate system. The range is from 0 to 65535. The default is **10**.
- `level-1` (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 1.
- `level-2` (OPTIONAL) Independently configures the interval of time between transmission of CSNPs for Level 2.

**Defaults**

- `seconds = 10; level-1` (if not otherwise specified)

**Command Modes**

- **INTERFACE**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

The default values of this command are typically satisfactory transmission times for a specific interface on a designated intermediate system. To maintain database synchronization, the designated routers send CSNPs.

You can configure Level 1 and Level 2 CSNP intervals independently.

### isis hello-interval

Specify the length of time between hello packets sent.

**Syntax**

```plaintext
isis hello-interval seconds [level-1 | level-2]
```

To return to the default values, use the `no isis hello-interval [seconds] [level-1 | level-2]` command.

**Parameters**

- `seconds` Allows you to set the length of time between hello packet transmissions. The range is from 1 to 65535. The default is **10**.
- `level-1` (OPTIONAL) Select this value to configure the hello interval for Level 1. This value is the default.
- `level-2` (OPTIONAL) Select this value to configure the hello interval for Level 2.
Defaults

seconds = 10; level-1 (if not otherwise specified)

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

Hello packets are held for a length of three times the value of the hello interval. To conserve bandwidth and CPU usage, use a high hello interval seconds. Use a low hello interval seconds for faster convergence (but uses more bandwidth and CPU resources).

Related Commands

- `isis hello-multiplier` — specifies the number of IS-IS hello packets a neighbor must miss before the router declares the adjacency as down.

**isis hello-multiplier**

Specify the number of IS-IS hello packets a neighbor must miss before the router declares the adjacency down.

**Syntax**

```
isis hello-multiplier multiplier [level-1 | level-2]
```

To return to the default values, use the `no isis hello-multiplier [multiplier] [level-1 | level-2]` command.

**Parameters**

- `multiplier` Specifies an integer that sets the multiplier for the hello holding time. Never configure a hello-multiplier lower than the default (3). The range is from 3 to 1000. The default is 3.

- `level-1` (OPTIONAL) Select this value to configure the hello multiplier independently for Level 1 adjacencies. This value is the default.

- `level-2` (OPTIONAL) Select this value to configure the hello multiplier independently for Level 2 adjacencies.

**Defaults**

multiplier = 3; level-1 (if not otherwise specified)

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>

</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>
Usage Information

The holdtime (the product of the hello-multiplier multiplied by the hello-interval) determines how long a neighbor waits for a hello packet before declaring the neighbor is down so routes can be recalculated.

Related Commands

isis hello-interval — specifies the length of time between hello packets.

isis hello padding

Turn ON or OFF padding of hello PDUs from INTERFACE mode.

Syntax

isis hello padding

To return to the default, use the no isis hello padding command.

Defaults

Padding of hello PDUs is enabled (ON).

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.
8.3.11.1 Introduced on the Z9000.

Usage Information

Hello PDUs are “padded” only when both the global and interface padding options are ON. Turning either one OFF disables padding for the corresponding interface.

Related Commands

hello padding — turns ON or OFF padding for LAN and point-to-point hello PDUs.

isis ipv6 metric

Assign metric to an interface for use with IPv6 information.

Syntax

isis ipv6 metric default-metric [level-1 | level-2]

To return to the default values, use the no ipv6 isis metric [default-metric] [level-1 | level-2] command.

Parameters

default-metric Metric assigned to the link and used to calculate the cost from each other router via the links in the network to other destinations. You can configure this metric for Level 1 or Level 2 routing. The range is from 0 to 16777215. The default is 10.

level-1 (OPTIONAL) Enter the keywords level-1 to configure the shortest path first (SPF) calculation for Level 1 (intra-area) routing. This value is the default.

level-2 (OPTIONAL) Enter the keywords level-2 to configure the SPF calculation for Level 2 (inter-area) routing.

Defaults

default-metric = 10; level-1 (if not otherwise specified)

Command Modes

INTERFACE

<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Dell Networking recommends configuring metrics on all interfaces. Without configuring this command, the IS-IS metrics are similar to hop-count metrics.

### isis metric

Assign a metric to an interface.

**Syntax**

```plaintext
isis metric default-metric [level-1 | level-2]
```

To return to the default values, use the `no isis metric [default-metric] [level-1 | level-2]` command.

**Parameters**

- **default-metric**
  - Metric assigned to the link and used to calculate the cost from each other router via the links in the network to other destinations. You can configure this metric for Level 1 or Level 2 routing. The range is from 0 to 16777215 irrespective of the metric style. The default is 10.
  
  If metric value is configured to more than 63, system throughs the following warning: `Warning: for metrics greater than 63, 'metric-style wide' should be configured on level-1-2, or it will be capped at 63.`

  If the metric style is WIDE, the metric values that are greater than 63 are only effective.

- **level-1**
  - (OPTIONAL) Enter the keywords `level-1` to configure the shortest path first (SPF) calculation for Level 1 (intra-area) routing. This setting is the default.

- **level-2**
  - (OPTIONAL) Enter the keywords `level-2` to configure the SPF calculation for Level 2 (inter-area) routing.

**Defaults**

- `default-metric = 10`
- `level-1` (if not otherwise specified)

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>

</tbody>
</table>
Dell Networking recommends configuring metrics on all interfaces. Without configuring this command, the IS-IS metrics are similar to hop-count metrics.

### isis network point-to-point

Enable the software to treat a broadcast interface as a point-to-point interface.

**Syntax**

```
isis network point-to-point
```

To disable the feature, use the `no isis network point-to-point` command.

**Defaults**

Not enabled.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

### isis password

Configure an authentication password for an interface.

**Syntax**

```
isis password [hmac-md5] password [level-1 | level-2]
```

To delete a password, use the `no isis password [password] [level-1 | level-2]` command.

**Parameters**

- `encryption-type` (OPTIONAL) Enter 7 to encrypt the password using DES.
- `hmac-md5` (OPTIONAL) Enter the keywords `hmac-md5` to encrypt the password using MD5.
- `password` Assign the interface authentication password.
- `level-1` (OPTIONAL) Independently configures the authentication password for Level 1. The router acts as a station router for Level 1 routing. This setting is the default.
- `level-2` (OPTIONAL) Independently configures the authentication password for Level 2. The router acts as an area router for Level 2 routing.

**Defaults**

No default password. `level-1` (if not otherwise specified).

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>

</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
### isis priority

Set the priority of the designated router you select.

**Syntax**

```plaintext
isis priority value [level-1 | level-2]
```

To return to the default values, use the `no isis priority [value] [level-1 | level-2]` command.

**Parameters**

- **value**
  This value sets the router priority. The higher the value, the higher the priority. The range is from 0 to 127. The default is **64**.

- **level-1**
  (OPTIONAL) Specify the priority for Level 1. This setting is the default.

- **level-2**
  (OPTIONAL) Specify the priority for Level 2.

**Defaults**

value = **64**; level-1 (if not otherwise specified).

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can configure priorities independently for Level 1 and Level 2. Priorities determine which router on a LAN is the designated router. Priorities are advertised within hellos. The router with the highest priority becomes the designated intermediate system (DIS).

**NOTE:** Routers with a priority of 0 cannot be a designated router.

Setting the priority to 0 lowers the chance of this system becoming the DIS, but does not prevent it. If all the routers have priority 0, one with highest MAC address becomes DIS even though its priority is 0.
**is-type**

Configure IS-IS operating level for a router.

**Syntax**

```bash
is-type {level-1 | level-1-2 | level-2-only}
```

To return to the default values, use the `no is-type` command.

**Parameters**

- **level-1**
  - Allows a router to act as a Level 1 router.
- **level-1-2**
  - Allows a router to act as both a Level 1 and Level 2 router. This setting is the default.
- **level-2-only**
  - Allows a router to act as a Level 2 router.

**Defaults**

`level-1-2`

**Command Modes**

`ROUTER ISIS`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

The IS-IS protocol automatically determines area boundaries and are able to keep Level 1 and Level 2 routing separate. Poorly planned use of this feature may cause configuration errors, such as accidental area partitioning.

If you are configuring only one area in your network, you do not need to run both Level 1 and Level 2 routing algorithms. You can configure the IS type as Level 1.

**log-adjacency-changes**

Generate a log messages for adjacency state changes.

**Syntax**

```bash
log-adjacency-changes
```

To disable this function, use the `no log-adjacency-changes` command.

**Defaults**

Adjacency changes are not logged.

**Command Modes**

`ROUTER ISIS`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
Version Description
8.3.11.1 Introduced on the Z9000.

Usage Information
This command allows you to monitor adjacency state changes, which are useful when you monitor large networks. Messages are logged in the system’s error message facility.

lsp-gen-interval

Set the minimum interval between successive generations of link-state packets (LSPs).

Syntax
```
lsp-gen-interval [level-1 | level-2] interval seconds
[initial_wait_interval seconds [second_wait_interval seconds]]
```

To restore default values, use the `no lsp-gen-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]]` command.

Parameters
- `level-1` (OPTIONAL) Enter the keywords level-1 to apply the configuration to generation of Level-1 LSPs.
- `level-2` (OPTIONAL) Enter the keywords level-2 to apply the configuration to generation of Level-2 LSPs.
- `interval seconds` Enter the maximum number of seconds between LSP generations. The range is from 0 to 120 seconds. The default is 5 seconds.
- `initial_wait_interval seconds` (OPTIONAL) Enter the initial wait time, in seconds, before running the first LSP generation. The range is from 0 to 120 seconds. The default is 1 second.
- `second_wait_interval seconds` (OPTIONAL) Enter the wait interval, in seconds, between the first and second LSP generation. The range is from 0 to 120 seconds. The default is 5 seconds.

Defaults
Refer to Parameters.

Command Modes
ROUTER ISIS

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.12.0 Introduced on the S4810.
8.3.11.1 Introduced on the Z9000.
7.5.1.0 Added support for LSP Throttling Enhancement.

Usage Information
LSP throttling slows down the frequency at which LSPs are generated during network instability. Even though throttling LSP generations slows down network convergence, no throttling can result in a network not functioning as expected. If network topology is unstable, throttling slows down the scheduling of LSP generations until the topology regains its stability.

The first generation is controlled by the initial wait interval and the second generation is controlled by the second wait interval. Each subsequent wait interval is twice as long as the previous one until the wait interval reaches the maximum wait time specified (interval seconds). After the network calms down and there are no triggers for two times the maximum interval, fast behavior is restored (the initial wait time).
**lsp-mtu**

Set the maximum transmission unit (MTU) of IS-IS link-state packets (LSPs). This command only limits the size of LSPs this router generates.

**Syntax**

```plaintext
lsp-mtu size
```

To return to the default values, use the `no lsp-mtu` command.

**Parameters**

- `size` The maximum LSP size, in bytes. The range is from 512 to 16000 for Non-Jumbo mode and from 128 to 9195 for Jumbo mode. The default is **1497**.

**Defaults**

1497 bytes.

**Command Modes**

ROUTER ISIS

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Added support for LSP Throttling Enhancement.</td>
</tr>
</tbody>
</table>

**Usage Information**

- The link MTU and the LSP MTU size must be the same.
- Because each device can generate a maximum of 255 LSPs, consider carefully whether you use the `lsp-mtu` command.

**lsp-refresh-interval**

Set the link state PDU (LSP) refresh interval. LSPs must be refreshed before they expire. When the LSPs are not refreshed after a refresh interval, they are kept in a database until their `max-lsp-lifetime` reaches zero and then LSPs is purged.

**Syntax**

```plaintext
lsp-refresh-interval seconds
```

To restore the default refresh interval, use the `no lsp-refresh-interval` command.

**Parameters**

- `seconds` The LSP refresh interval, in seconds. This value must be 300 seconds less than the value specified in the `max-lsp-lifetime` command. The range is from 1 to 65535 seconds. The default is **900**.

**Defaults**

900 seconds

**Command Modes**

ROUTER ISIS

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Added support for LSP Throttling Enhancement.</td>
</tr>
</tbody>
</table>

Usage Information

The refresh interval determines the rate at which route topology information is transmitted preventing the information from becoming obsolete.

The refresh interval must be less than the LSP lifetime specified with the max-lsp-lifetime command. A low value reduces the amount of time that undetected link state database corruption can persist at the cost of increased link utilization. A higher value reduces the link utilization the flooding of refreshed packets causes.

max-area-addresses

Configure manual area addresses.

Syntax

max-area-addresses number

To return to the default values, use the no max-area-addresses command.

Parameters

number Set the maximum number of manual area addresses. The range is from 3 to 6. The default is 3.

Defaults

3 addresses

Command Modes

ROUTER ISIS

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Added support for LSP Throttling Enhancement.</td>
</tr>
</tbody>
</table>

Usage Information

To configure the number of area addresses on router, use this command. This value must be consistent with routers in the same area, otherwise the router forms only Level 2 adjacencies. The value must be same among all the routers to form Level 1 adjacencies.
max-lsp-lifetime

Set the maximum time that link-state packets (LSPs) exist without being refreshed.

**Syntax**

```
max-lsp-lifetime seconds
```

To restore the default time, use the `no max-lsp-lifetime` command.

**Parameters**

- **seconds**
  
The maximum lifetime of LSP in seconds. This value must be greater than the `lsp-refresh-interval` command. The higher the value the longer the LSPs are kept. The range is from 1 to 65535. The default is **1200**.

**Defaults**

- 1200 seconds

**Command Modes**

- **ROUTER ISIS**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

Change the maximum LSP lifetime with this command. The maximum LSP lifetime must always be greater than the LSP refresh interval.

The `seconds` parameter enables the router to keep LSPs for the specified length of time. If the value is higher, the overhead is reduced on slower-speed links.

**Related Commands**

- `lsp-refresh-interval` — sets the link-state packet (LSP) refresh interval.

maximum-paths

Allows you to configure the maximum number of equal cost paths allowed in a routing table.

**NOTE:** Enables you to configure a single system wide value that is common for both IPv4 and IPv6 addresses.

**Syntax**

```
maximum-paths number
```

To return to the default values, use the `no maximum-paths` command.

**Parameters**

- **number**
  
Enter a number as the maximum number of parallel paths an IP routing installs in a routing table. The range is from 1 to 16. The default is **4**.

**Defaults**

- 4

**Command Modes**

- **ROUTER ISIS (for IPv4)**
- **CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
To generate and accept old-style, new-style, or both styles of type, length, and values (TLV), configure a router.

**Syntax**

```
metric-style {narrow [transition] | transition | wide [transition]} [level-1 | level-2]
```

To return to the default values, use the `no metric-style {narrow [transition] | transition | wide [transition]} [level-1 | level-2]` command.

**Parameters**

- **narrow**: Allows you to generate and accept old-style TLVs. The metric range is from 0 to 63.
- **transition**: Allows you to generate both old-style and new-style TLVs. The metric range is from 0 to 63.
- **wide**: Allows you to generate and accept only new-style TLVs. The metric range is from 0 to 16777215.
- **level-1**: Enables the metric style on Level 1.
- **level-2**: Enables the metric style on Level 2.

**Defaults**
narrow, if no Level is specified, Level-1 and Level-2 are configured.

**Command Modes**

- ROUTER ISIS

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
---|---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.12.0 | Introduced on the S4810.
8.3.11.1 | Introduced on the Z9000.
7.8.1.0 | Added support for multi-topology ISIS.
6.3.1.0 | Introduced.

**Usage Information**

If you enter the `metric-style wide` command, the Dell Networking OS generates and accepts only new-style TLVs. The router uses less memory and other resources rather than generating both old-style and new-style TLVs.

The new-style TLVs have wider metric fields than old-style TLVs.

When wide transition is configured, narrow metric is sent for the narrow metric TLV and the actual wide metric is sent in wide metric TLV. The receiver can choose to use the metric that is required.

Intermediate System to Intermediate System (IS-IS) 697
**multi-topology**

Enables multi-topology IS-IS. It also allows enabling/disabling of old and new style TLVs for IP prefix information in the LSPs.

**Syntax**

```
multi-topology [transition]
```

To return to a single topology configuration, use the `no multi-topology [transition]` command.

**Parameters**

`transition`

**Defaults**

Disabled

**Command Modes**

CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

**net**

To configure an IS-IS network entity title (NET) for a routing process, use this mandatory command. If you did not configure a NET, the IS-IS process does not start.

**Syntax**

```
net network-entity-title
```

To remove a net, use the `no net network-entity-title` command.

**Parameters**

`network-entity-title`

Specify the area address and system ID for an IS-IS routing process. The first 1 to 13 bytes identify the area address. The next 6 bytes identify the system ID. The last 1 byte is the selector byte, always identified as zero zero (00). This argument can be applied to an address or a name.

**Defaults**

Not configured.

**Command Modes**

ROUTER ISIS

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>
**passive-interface**

Suppress routing updates on an interface. This command stops the router from sending updates on that interface.

**Syntax**

```
passive-interface interface
```

To delete a passive interface configuration, use the `no passive-interface interface` command.

**Parameters**

`interface` Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

ROUTER ISIS

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

Although the passive interface does not send nor receive routing updates, the network on that interface is still included in the IS-IS updates sent using other interfaces.

**redistribute**

Redistribute routes from one routing domain to another routing domain.

**Syntax**

```
redistribute {static | connected | rip} [level-1 | level-1-2 | level-2] [metric metric-value] [metric-type {external | internal}] [route-map map-name]
```

To end redistribution or disable any of the specified keywords, use the `no redistribute {static | connected | rip} [level-1 | level-1-2 | level-2] [metric metric-value] [metric-type {external | internal}] [level-1 | level-1-2 | level-2] [route-map map-name]` command.

**Parameters**

- `connected` Enter the keyword `connected` to redistribute active routes into IS-IS.
Enter the keyword rip to redistribute RIP routes into IS-IS.

Enter the keyword static to redistribute user-configured routes into IS-IS.

metric metric-value

(Optional) Assign a value to the redistributed route. The range is from 0 to 16777215. The default is 0. Use a value that is consistent with the destination protocol.

metric-type {external | internal}

(Optional) The external link type associated with the default route advertised into a routing domain. Specify one of the following:

- external
- internal

level-1

(Optional) Routes are independently redistributed into IS-IS as Level 1 routes.

level-1-2

(Optional) Routes are independently redistributed into IS-IS as Level-1-2 routes.

level-2

(Optional) Routes are independently redistributed into IS-IS as Level 2 routes. This setting is the default.

route-map map-name

(Optional) If you do not enter the route-map argument, all routes are redistributed. If a map-name value is not specified, no routers are imported.

Defaults

- metric metric-value = 0
- metric-type = internal; level-2

Command Modes

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.12.0</td>

<tr>
<td>6.3.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

To redistribute a default route (0.0.0.0/0), configure the default-information originate command.

Changing or disabling a keyword in this command does not affect the state of the other command keywords.

When an LSP with an internal metric is received, the Dell Networking OS considers the route cost while considering the advertised cost to reach the destination.

Redistributed routing information is filtered with the distribute-list out command to ensure that the routes are properly are passed to the receiving routing protocol.

How a metric value assigned to a redistributed route is advertised depends on how on the configuration of the metric-style command. If the metric-style command is set for Narrow or Transition mode and the metric value in the redistribute command is set to a number higher than 63, the metric value advertised in LSPs is 63. If the metric-style command is set for Wide mode, the metric value in the redistribute command is advertised.

Related Commands

- default-information originate — generates a default route for the IS-IS domain.
- distribute-list out — suppresses networks from being advertised in updates. This command filters redistributed routing information.
**redistribute bgp**

Redistribute routing information from a BGP process.

**Syntax**

```
redistribute bgp AS number [level-1 | level-1-2 | level-2] [metric metric-value] [metric-type {external | internal}] [route-map map-name]
```

To return to the default values, use the `no redistribute bgp` command with the appropriate parameters.

**Parameters**

- **AS number**
  
  Enter a number that corresponds to the autonomous system number. The range is from 1 to 65535.

- **level-1**
  
  (OPTIONAL) Routes are independently redistributed into IS-IS Level 1 routes only.

- **level-1-2**
  
  (OPTIONAL) Routes are independently redistributed into IS-IS Level 1 and Level 2 routes.

- **level-2**
  
  (OPTIONAL) Routes are independently redistributed into IS-IS as Level 2 routes only. This setting is the default.

- **metric metric-value**
  
  (OPTIONAL) The value used for the redistributed route. Use a metric value that is consistent with the destination protocol. The range is from 0 to 16777215. The default is 0.

- **metric-type {external | internal}**
  
  (OPTIONAL) The external link type associated with the default route advertised into a routing domain. The two options are:
  - `external`
  - `internal`

- **route-map map-name**
  
  map-name is an identifier for a configured route map. The route map filters imported routes from the source routing protocol to the current routing protocol.

  If you do not specify a map-name, all routes are redistributed. If you specify a keyword, but fail to list route map tags, no routes are imported.

**Defaults**

IS-IS Level 2 routes only

**Command Modes**

- `ROUTER ISIS (for IPv4)`
- `CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Added support for IPv6 ISIS.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

BGP to IS-IS redistribution supports “match” options using route maps. You can set the metric value, level, and metric-type of redistributed routes by the redistribution command. You can “set” more advanced options using route maps.

**Example**

```
FTOS(conf)#router is
FTOS(conf-router_isis)#redistribute bgp 1 level-1 metric 32 metric-type external route-map rmap-isis-to-bgp
FTOS(conf-router_bgp)#show running-config isis
```
redistribute ospf

Redistribute routing information from an OSPF process.

Syntax

redistribute ospf process-id [level-1 | level-1-2 | level-2] [match {internal | external}] [metric metric-value] [metric-type {external | internal}] [route-map map-name]

To return to the default values, use the no redistribute ospf process-id [level-1 | level-1-2 | level-2] [match {internal | external}] [metric metric-value] [metric-type {external | internal}] [route-map map-name] command.

Parameters

process-id

Enter a number that corresponds to the OSPF process ID to be redistributed. The range is from 1 to 65535.

metric metric-value

(OPTIONAL) The value used for the redistributed route. Use a metric value that is consistent with the destination protocol. The range is from 0 to 16777215. The default is 0.

metric-type {external | internal}

(OPTIONAL) The external link type associated with the default route advertised into a routing domain. The two options are:

- external
- internal

level-1

(OPTIONAL) Routes are independently redistributed into IS-IS as Level 1 routes.

level-1-2

(OPTIONAL) Routes are independently redistributed into IS-IS as Level-1-2 routes.

level-2

(OPTIONAL) Routes are independently redistributed into IS-IS as Level 2 routes. This setting is the default.

match {external | internal}

(OPTIONAL) The command used for OSPF to route and redistribute into other routing domains. The values are

- internal
- external

route-map map-name

map-name is an identifier for a configured route map. The route map should filter imported routes from the source routing protocol to the current routing protocol.

If you do not specify a map-name, all routes are redistributed. If you specify a keyword, but fail to list route map tags, no routes are imported.

Defaults

Refer to Parameters.

Command Modes

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>
How a metric value assigned to a redistributed route is advertised depends on how on the configuration of the metric-style command. If the metric-style command is set for Narrow mode and the metric value in the redistribute ospf command is set to a number higher than 63, the metric value advertised in LSPs is 63. If the metric-style command is set for wide mode, the metric value in the redistribute ospf command is advertised.

router isis

Allows you to enable the IS-IS routing protocol and to specify an IP IS-IS process.

Z9000

Syntax

```
router isis [tag]
```

To disable IS-IS routing, use the no router isis [tag] command.

Parameters

- `tag` (OPTIONAL) This is a unique name for a routing process. A null tag is assumed if the tag option is not specified. The tag name must be unique for all IP router processes for a given router.

Defaults

Not configured.

Command Modes

ROUTER ISIS

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

Configure a network entity title (the `net` command) to specify the area address and the router system ID.

Enable routing on one or more interfaces to establish adjacencies and establish dynamic routing.

You can configure only one IS-IS routing process to perform Level 2 routing. A `level-1-2` designation performs Level 1 and Level 2 routing at the same time.

Related Commands

- `ip router isis` — configures IS-IS routing processes for IP on interfaces and attaches an area designator to the routing process.
- `net` — configures an IS-IS network entity title (NET) for a routing process.
- `is-type` — assigns a type for a given area.
### set-overload-bit

To set the overload bit in its non-pseudonode LSPs, configure the router. This setting prevents other routers from using it as an intermediate hop in their shortest path first (SPF) calculations.

**Syntax**

```text
set-overload-bit
```

To return to the default values, use the `no set-overload-bit` command.

**Defaults**

Not set.

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added support for multi-topology ISIS.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

Set the overload bit when a router experiences problems, such as a memory shortage due to an incomplete link state database which can result in an incomplete or inaccurate routing table. If you set the overload bit in its LSPs, other routers ignore the unreliable router in their SPF calculations until the router has recovered.

**NOTE:** Enables you to configure a single system wide value that is common for both IPv4 and IPv6 address.

### show config

Display the changes you made to the IS-IS configuration. Default values are not shown.

**Syntax**

```text
show config
```

**Command Modes**

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

**Command History**

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>
**show isis database**

Display the IS-IS link state database.

### Z9000

#### Syntax

```
show isis database [level-1 | level-2] [local] [detail | summary] [lspid]
```

#### Parameters

- **level-1**  
  (OPTIONAL) Displays the Level 1 IS-IS link-state database.
- **level-2**  
  (OPTIONAL) Displays the Level 2 IS-IS link-state database.
- **local**  
  (OPTIONAL) Displays local link-state database information.
- **detail**  
  (OPTIONAL) Detailed link-state database information of each LSP displays when specified. If not specified, a summary displays.
- **summary**  
  (OPTIONAL) Summary of link-state database information displays when specified.
- **lspid**  
  (OPTIONAL) Display only the specified LSP.

#### Command Modes

- EXEC
- EXEC Privilege

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.2)</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.1</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

The following describes the `show isis database` command shown in the following example.

**Field**

**IS-IS Level-1/Level-2 Link State Database**

**LSPID**

Displays the LSP identifier.

The first six octets are the System ID of the originating router. The first six octets are the System ID of the originating router. The next octet is the pseudonode ID. If this byte is not zero, the LSP describes system links. If this byte is zero (0), the LSP describes the state of the originating router.

The designated router for a LAN creates and floods a pseudonode LSP and describes the attached systems.

The last octet is the LSP number. An LSP is divided into multiple LSP fragments if there is more data than cannot fit in a single LSP. Each fragment has a unique LSP number.

An * after the LSPID indicates that the system originates an LSP where this command was issued.

**LSP Seq Num**

This value is the sequence number for the LSP that allows other systems to determine if they have received the latest information from the source.

**LSP Checksum**

This is the checksum of the entire LSP packet.

**LSP Holdtime**

This value is the amount of time, in seconds, that the LSP remains valid. A zero holdtime indicates that this is a purged LSP and is being removed from the link state database. A value between brackets indicates the duration that the purged LSP stays in the database before being removed.

**ATT**

This value represents the Attach bit. This value indicates that the router is a Level 2 router and can reach other areas. Level 1-only routers and Level 1-2 routers that have lost connection to other Level 2 routers use the Attach bit to find the closest Level 2 router. They point a default route to the closest Level 2 router.

**P**

This value represents the P bit. This bit is always set to zero as Dell Networking does not support area partition repair.

**OL**

This value represents the overload bit, determining congestion. If the overload bit is set, other routers do not use this system as a transit router when calculating routes.

**Example**

The bold sections identify that MultiTopology IS-IS is enabled.

```
Dell#show isis database

IS-IS Level-1 Link State Database
LSPID    LSP Seq Num LSP Checksum LSP Holdtime ATT/P/OL

### Syntax

```
show isis graceful-restart detail
```

### Command Modes

- EXEC
- EXEC Privilege

### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

---

**show isis graceful-restart detail**

Display detailed IS-IS graceful restart related settings.

**Z9000**

**Syntax**

```
show isis graceful-restart detail
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

---
show isis hostname

Display IS-IS host names configured or learned on the switch.

**Z9000**

**Syntax**

```
show isis hostname
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.12.0 | Introduced on the S4810.
8.3.11.1 | Introduced on the Z9000.
8.3.1.0 | Introduced on the E-Series.

**Example**

```
Dell#show isis graceful-restart detail
Configured Timer Value
---------------------------------
Graceful Restart : Enabled
T3 Timer : Manual
T3 Timeout Value : 30
T2 Timeout Value : 30 (level-1), 30 (level-2)
T1 Timeout Value : 5, retry count: 1
Adjacency wait time : 30

Operational Timer Value
---------------------------------
Current Mode/State : Normal/RUNNING
T3 Time left : 0
T2 Time left : 0 (level-1), 0 (level-2)
Restart ACK rcv count : 0 (level-1), 0 (level-2)
Restart Req rcv count : 0 (level-1), 0 (level-2)
Suppress Adj rcv count : 0 (level-1), 0 (level-2)
Restart CSNP rcv count : 0 (level-1), 0 (level-2)
Database Sync count : 0 (level-1), 0 (level-2)

Dell#
**show isis interface**

Display detailed IS-IS interface status and configuration information.

**Z9000**

**Syntax**

```
show isis interface [interface]
```

**Parameters**

- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

--More--
```
show isis neighbors

Display information about neighboring (adjacent) routers.

Z9000

**Syntax**

```
show isis neighbors [level-1 | level-2] [detail] [interface]
```

**Parameters**

- `level-1` (OPTIONAL) Displays information about Level 1 IS-IS neighbors.
- `level-2` (OPTIONAL) Displays information about Level 2 IS-IS neighbors.
- `detail` (OPTIONAL) Displays detailed information about neighbors.
- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to confirm that the neighbor adjacencies are operating correctly. If you suspect that they are not, you can verify the specified area addresses of the routers by using the `show isis neighbors` command.

The following describes the `show isis neighbors` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>System Id</td>
<td>The value that identifies a system in an area.</td>
</tr>
<tr>
<td>Interface</td>
<td>The interface, slot, and port in which the router was discovered.</td>
</tr>
<tr>
<td>State</td>
<td>The value providing status about the adjacency state. The range is Up and Init.</td>
</tr>
<tr>
<td>Type</td>
<td>This value displays the adjacency type (Layer 2, Layer 2 or both).</td>
</tr>
<tr>
<td>Priority</td>
<td>IS-IS priority the neighbor advertises. The neighbor with highest priority becomes the designated router for the interface.</td>
</tr>
<tr>
<td>Uptime</td>
<td>Displays the interfaces uptime.</td>
</tr>
<tr>
<td>Circuit Id</td>
<td>The neighbor’s interpretation of the designated router for the interface.</td>
</tr>
</tbody>
</table>
The bold sections below identify that Multi-Topology IS-IS is enabled. This command displays only one IP address per line.

```
Dell#show isis neighbors
System Id Interface State Type Priority Uptime Circuit Id
TEST Te 7/1 Up L1L2(M) 127 09:28:01 TEST.02 |
```

```

```

```
Dell#show isis protocol
Display IS-IS routing information.

**Z9000**

**Syntax**
```
show isis protocol
```

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant **Dell Networking OS Command Line Reference Guide**.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.2)</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Example**
The bold section identifies that Multi-Topology IS-IS is enabled.

```
Dell#show isis protocol
IS-IS Router: <Null Tag>
   System Id: F100.E120.0013 IS-Type: level-1-2
   Manual area address(es):
   49.0000.0001
   Routing for area address(es):
   49.0000.0001
   Interfaces supported by IS-IS:
   TenGigabitEthernet 1/1 - IP - IPv6
   TenGigabitEthernet 1/2 - IP - IPv6
   TenGigabitEthernet 1/10 - IP - IPv6
   Loopback 0 - IP - IPv6
   Redistributing:
   Distance: 115
   Generate narrow metrics: level-1-2
   Accept narrow metrics: level-1-2
   Generate wide metrics: none
   Accept wide metrics: none
```
show isis traffic

This command allows you to display IS-IS traffic interface information.

Z9000

Syntax

show isis traffic [interface]

Parameters

interface  (OPTIONAL) Identifies the interface type slot/port as one of the following:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command:

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.2)</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the show isis traffic command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Level-1/Level-2 Hellos (sent/rcvd)</td>
<td>Displays the number of Hello packets sent and received.</td>
</tr>
<tr>
<td>PTP Hellos (sent/rcvd)</td>
<td>Displays the number of point-to-point Hellos sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs sourced (new/refresh)</td>
<td>Displays the number of new and refreshed LSPs.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs flooded (sent/rcvd)</td>
<td>Displays the number of flooded LSPs sent and received.</td>
</tr>
<tr>
<td>Level-1/Level-2 LSPs CSNPs (sent/ rcvd)</td>
<td>Displays the number of CSNP LSPs sent and received.</td>
</tr>
</tbody>
</table>
### Item Description

**Level-1/Level-2 LSPs PSNPs (sent/rcvd)**
Displays the number of PSNP LPSs sent and received.

**Level-1/Level-2 DR Elections**
Displays the number of times designated router elections ran.

**Level-1/Level-2 SPF Calculations**
Displays the number of shortest path first calculations.

**LSP checksum errors received**
Displays the number of checksum errors LSPs received.

**LSP authentication failures**
Displays the number of LSP authentication failures.

### Example
```
Dell#show is traffic
  IS-IS: Level-1 Hellos (sent/rcvd) : 0/721
  IS-IS: Level-2 Hellos (sent/rcvd) : 900/943
  IS-IS: PTP Hellos (sent/rcvd) : 0/0
  IS-IS: Level-1 LSPs sourced (new/refresh) : 0/0
  IS-IS: Level-2 LSPs sourced (new/refresh) : 1/3
  IS-IS: Level-1 LSPs flooded (sent/rcvd) : 0/0
  IS-IS: Level-2 LSPs flooded (sent/rcvd) : 5934/5217
  IS-IS: Level-1 LSPs CSNPs (sent/rcvd) : 0/0
  IS-IS: Level-2 LSPs CSNPs (sent/rcvd) : 472/238
  IS-IS: Level-1 LSPs PSNPs (sent/rcvd) : 0/0
  IS-IS: Level-2 LSPs PSNPs (sent/rcvd) : 10/337
  IS-IS: Level-1 DR Elections : 4
  IS-IS: Level-2 DR Elections : 4
  IS-IS: Level-1 SPF Calculations : 0
  IS-IS: Level-2 SPF Calculations : 389
  IS-IS: LSP checksum errors received : 0
  IS-IS: LSP authentication failures : 0
Dell#
```

### spf-interval
Specify the minimum interval between shortest path first (SPF) calculations.

**Syntax**
```
spf-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]]
```

To restore default values, use the no spf-interval [level-1 | level-2] interval seconds [initial_wait_interval seconds [second_wait_interval seconds]] command.

**Parameters**

- **level-1** (OPTIONAL) Enter the keyword level-1 to apply the configuration to Level-1 SPF calculations.
- **level-2** (OPTIONAL) Enter the keyword level-2 to apply the configuration to Level-2 SPF calculations.
- **interval seconds** Enter the maximum number of seconds between SPF calculations. The range is from 0 to 120 seconds. The default is **10 seconds**.
- **initial_wait_interval seconds** (OPTIONAL) Enter the initial wait time, in seconds, before running the first SPF calculations. The range is from 0 to 120 seconds. The default is **5 seconds**.
- **second_wait_interval seconds** (OPTIONAL) Enter the wait interval, in seconds, between the first and second SPF calculations. The range is from 0 to 120 seconds. The default is **5 seconds**.

**Defaults**
Refer to Parameters.
Command Modes

- ROUTER ISIS (for IPv4)
- CONFIGURATION-ROUTER-ISIS-ADDRESS-FAMILY-IPV6 (for IPv6)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added support for multi-topology ISIS.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Added support for SPF Throttling Enhancement.</td>
</tr>
</tbody>
</table>

Usage Information

This command spf-interval in CONFIG-ROUTER-ISIS-AF-IPV6 mode is used for IPv6 Multi-Topology route computation only. If using Single Topology mode, use the spf-interval command in CONFIG-ROUTER-ISIS mode for both IPv4 and IPv6 route computations.

SPF throttling slows down the frequency at which route calculations are performed during network instability. Even though throttling route calculations slows down network convergence, not throttling can result in a network not functioning as expected. If network topology is unstable, throttling slows down the scheduling of route calculations until the topology regains its stability.

The first route calculation is controlled by the initial wait interval and the second calculation is controlled by the second wait interval. Each subsequent wait interval is twice as long as the previous one until the wait interval reaches the maximum wait time specified (interval seconds). After the network calms down and there are no triggers for two times the maximum interval, fast behavior is restored (the initial wait time).

714 Intermediate System to Intermediate System (IS-IS)
This chapter contains commands for Dell Networks’s implementation of the link aggregation control protocol (LACP) for creating dynamic link aggregation groups (LAGs) — known as "port-channels" in the Dell Networking operating software. The LACP commands in this chapter are supported by Dell Networking OS on the Z9000 platform.

**NOTE:** For static LAG commands, refer to Port Channel Commands in the Interfaces chapter), based on the standards specified in the IEEE 802.3 Carrier sense multiple access with collision detection (CSMA/CD) access method and physical layer specifications.

### Topics:
- clear lacp counters
- debug lacp
- lacp long-timeout
- lacp port-priority
- lacp system-priority
- port-channel mode
- port-channel-protocol lacp
- show lacp
- hg-link-bundle-monitor
- hg-link-bundle-monitor trigger-threshold
- hg-link-bundle-monitor rate-interval
- show hg-link-bundle-distribution
- snmp-server enable traps (for High-Gigabit Port Channel)
- show hardware stack-unit (for high-Gigabit Ethernet ports)
- clear hardware stack-unit (for high-Gigabit Ethernet ports)

## clear lacp counters

Clear port channel counters.

### Z9000

**Syntax**
```
clear lacp port-channel-number counters
```

**Parameters**
- `port-channel-number` Enter a port-channel number. The range is from 1 to 128.

**Defaults**
Without a Port Channel specified, the command clears all Port Channel counters.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `show lACP` — displays the LACP configuration.

**debug lACP**

Debug LACP (configuration, events, and so on).

**Z9000**

**Syntax**

```
debug lACP [config | events | pdu [interface-type [in | out]]]
```

To disable LACP debugging, use the no [config | events | pdu [interface-type [in | out]]] command.

**Parameters**

- `config`  
  (OPTIONAL) Enter the keyword config to debug the LACP configuration.

- `events`  
  (OPTIONAL) Enter the keyword events to debug the LACP event information.

- `pdu`  
  (OPTIONAL) Enter the keyword pdu to debug the LACP Protocol Data Unit information.

- `interface-type [in | out]`  
  (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

  Optionally, enter an in or out parameter:
  - Receive enter in
  - Transmit enter out

**Defaults**

- none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Added support for 4-port 40G line cards on ExaScale.</td>
</tr>
</tbody>
</table>
lACP long-timeout

Configure a long timeout period (30 seconds) for an LACP session.

Z9000

Syntax

```
lacp long-timeout
```

To reset the timeout period to a short timeout (1 second), use the `no lacp long-timeout` command.

Defaults

1 second

Command Modes

Usage Information

This command applies to dynamic port-channel interfaces only. When applied on a static port-channel, this command has no effect.

Related Commands

- `show lacp` — displays the LACP configuration.

lACP port-priority

To influence which ports will be put in Standby mode when there is a hardware limitation that prevents all compatible ports from aggregating, configure the port priority.

Z-Series

Syntax

```
lacp port-priority priority-value
```

To return to the default setting, use the `no lacp port-priority priority-value` command.
**Parameters**

`priority-value`  
Enter the port-priority value. The higher the value number, the lower the priority. The range is from 1 to 65535. The default is 32768.

**Defaults**

32768

Related Commands

- show lacp — displays the LACP information.
- show interfaces port-channel — displays information on configured Port Channel groups.

show lacp

Display the LACP matrix.

Z9000

Syntax

show lacp port-channel-number [sys-id | counters]

Parameters

- port-channel-number: Enter a port-channel number. The range is from 1 to 128.
- sys-id: (OPTIONAL) Enter the keywords sys-id and the value that identifies a system.
- counters: (OPTIONAL) Enter the keyword counters to display the LACP counters.

Defaults

Without a Port Channel specified, the command clears all Port Channel counters.

Command Modes

- EXEC
- EXEC Privilege

Dell#
```

**Related Commands**
- `clear lacp counters` — clears the LACP counters.
- `show interfaces port-channel` — displays information on configured Port Channel groups.

**hg-link-bundle-monitor**

Enable the capability to examine the utilization and traffic distribution of high-Gigabit port channels. This command is supported on the Z9000 platform.

**Syntax**
```
hg-link-bundle-monitor slot slotId npuUnit npuUnitId hg-port-channel portChannelId enable
```

To disable this capability, use the `no` version of this command.
**Parameters**

- **slot slotId**
  Enter the keyword *slot* followed by the slot ID of the high-Gigabit port channel. For Z9000, the only valid slot number is 0.

- **npuUnit npuUnitId**
  Enter the keyword *npuUnit* followed by the NPU value. The range is from 0-5.

- **hg-port-channel portChannelId**
  Enter the keyword *hg-port-channel* followed by the unique ID of the port channel. Number of hg-port-channels vary for switch NPU and fabric NPUs.

- **enable**
  Enable the capability to examine the utilization and traffic distribution of high-Gigabit port channels.

**Command Modes**

**CONFIGURATION**

**Command History**

Version 9.3(0.0) Introduced on the Z9000 platform.

**Usage Information**

You can configure a mechanism to monitor a backplane high-Gigabit Ethernet port channel bundle gig link bundle and generate a system logging message or an SNMP trap when the traffic distribution and the handled data packets on the bundle is uneven or inconsistent. The formula or the computation parameter to determine the uneven or the inequal distribution of traffic is predefined and at a particular point in time, if you enable the capability to examine the efficiency of the member links of a port channel bundle, such an unbalanced segregation of traffic across the member links of the high-Gigabit Ethernet bundle is indicated using alarms and traps. Also, when the traffic is resumed to be handled in an equalized, proper manner, a notification using alarms and SNMP traps is generated.

**hg-link-bundle-monitor trigger-threshold**

Specify the threshold value for high-Gigabit Ethernet port channels or trunk groups, which is a checkpoint exceeding which the link bundle is marked as being overutilized and alarm is generated. This command is supported on the Z9000 platform.

**Syntax**

```
hg-link-bundle-monitor trigger-threshold <1-90>
```

**Parameters**

- `<1-90>`
  Trigger-threshold value in percentage

**Command Modes**

**CONFIGURATION**

**Command History**

Version 9.3(0.0) Introduced on the Z9000 platform.

**Defaults**

The default threshold value is 60.

**Usage Information**

Threshold for identifying when to start the link bundle utilization calculation trigger is fixed at a default of 60 percent. When overall utilization (mean) is below this value, link bundle distribution unevenness will not be reported. If unevenness is observed over 3 consecutive measurements, an alarm event shall be generated. The time interval between 2 measurements is defined by the rate interval for high statistics polling (default 15 seconds). Alarm clear is sent once evenness is observed for three successive rate interval periods. If individual link utilization information is not available for a given timestamp, link bundle utilization will not be calculated at that time stamp. The previous known record shall be used for the alarm calculation.

**hg-link-bundle-monitor rate-interval**

Specify the interval or frequency in seconds for polling the traffic statistics for member links of the high-Gigabit port channel. This command is supported on the Z9000 platform.

**Syntax**

```
hg-link-bundle-monitor rate-interval <10-299>
```

**Parameters**

- `<10-299>`
  Rate-interval value in seconds

**Command Modes**

**CONFIGURATION**

**Command History**

Version 9.3(0.0) Introduced on the Z9000 platform.

**Defaults**

The default rate-interval value is 15 seconds.
Parameters

<10-299> Interface rate interval in seconds

Command Modes

CONFIGURATION

Command History

Version 9.3(0.0) Introduced on the Z9000 platform.

Defaults

The default higig stats polling interval is 15 seconds.

Usage Information

This interval cannot be configured per high-Gigabit port channel and is applicable for all of the high-Gigabit port channels on the system.

show hg-link-bundle-distribution

Display the traffic-handling and utilization of the member interfaces of the high-Gigabit port channel or trunk group. This command is supported on the Z9000 platform.

Syntax

show hg-link-bundle-distribution slot slotId npuUnit npuUnitId hg-port-channel portChannelId

Parameters

slot slotId

Enter the keyword slot followed by the slot ID of the high-Gigabit port channel. For Z9000, the only valid slot number is 0.

npuUnit npuUnitId

Enter the keyword npuUnit followed by the NPU value. The range is from 0-5.

hg-port-channel portChannelId

Enter the keyword hg-port-channel followed by the unique ID of the port channel. Number of hg-port-channels vary for switch NPU and fabric NPUs.

Command Modes

EXEC, EXEC Privilege

Command History

Version 9.3(0.0) Introduced on the Z9000 platform.

Usage Information

The following table illustrates the fields displayed in the output of this command:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Link-bundle trigger threshold</td>
<td>Threshold value that is the checkpoint, exceeding which the link bundle is marked as being over utilized and alarm is generated</td>
</tr>
<tr>
<td>Slot</td>
<td>Slot number where the high-Gigabit port-channel resides</td>
</tr>
<tr>
<td>npuUnit</td>
<td>Network Process Sign Unit (NPU) number where the high-Gigabit port-channel resides</td>
</tr>
<tr>
<td>number</td>
<td>Number of the LAG bundle</td>
</tr>
<tr>
<td>Utilization (In Percent)</td>
<td>Traffic usage in percentage of the packets processed by the port channel</td>
</tr>
<tr>
<td>Alarm State</td>
<td>Indicates whether an alarm is generated if uneven utilization of the port channel occurred. Possible values are Active and Inactive</td>
</tr>
<tr>
<td>Interface</td>
<td>Slot and port number, and the type of the member interface of the port channel</td>
</tr>
<tr>
<td>Utilization (In Percent)</td>
<td>Traffic usage in percentage of the packets processed by the particular member interface</td>
</tr>
</tbody>
</table>
Example

```
Dell#show hg-link-bundle-distribution 0 npuUnit 5 hg-port-channel 0
hg-link-bundle trigger threshold - 60
Slot 0 npuUnit 5 hg-port-channel-0 Utilization [In Percent] - 0 Alarm
State - Inactive
Interface Utilization [In Percent]
0/5:hg0          10
0/5:hg1          10
0/5:hg2          10
0/5:hg3          10
```

**snmp-server enable traps (for High-Gigabit Port Channel)**

Enable the generation of SNMP traps and notifications when the capability to examine the traffic utilization and distribution of high-Gigabit port channel links or trunk groups is enabled. This command is supported on the Z9000 platform.

**Syntax**

```
snmp-server enable traps
```

**Parameters**

- **notification type**
  - Enter the keyword `hg-lbm` to enable high-Gigabit Link Bundle Monitoring traps

**Command Modes**

- CONFIGURATION mode

**Command History**

- **Version 9.3.0.0**
  - Introduced on the Z9000 platform.

**show hardware stack-unit (for high-Gigabit Ethernet ports)**

Display the data plane or management plane input and output statistics of the high-Gigabit Ethernet or backplane port of the designated stack unit or Z9000 unit.

**NOTE:** Only the parameters that are newly introduced with this command in Release 9.3(0.0) are explained here. For a complete description of all of the options that are available with this command, refer the relevant Command Reference Guide of the applicable platform of Release 9.2(0.0).

**Z9000**

**Syntax**

```
show hardware stack-unit {buffer unit {0–5} [port port-number] | cpu data-plane statistics | cpu i2c statistics | cpu party-bus statistics | cpu sata-interface statistics | drops [unit unit-number [port port-number]] | hg-stats [unit unit-number [port port-number]] | impc-replication | stack-port port-number | table-dump | unit unit-number {counters | details | port-stats [detail] | register}}
```

**Parameters**

- **hg-stats [unit unit-number [port port-number] [no]]**
  - Enter the keyword `hg-stats` to display high-Gigabit Ethernet or backplane port buffer and queue statistics on the selected stack member. Optionally, use the keyword `unit` with a number to select port-pipe 0 to 5, and then use `port` `port-number` to select a port on that port-pipe.
  
  For Z9000, valid backplane ports for leaf NPU units (units 0–3) range from 34-41 and for spine NPU units (units 4–5) range from 1-16.
**clear hardware stack-unit (for high-Gigabit Ethernet ports)**

Clear statistics from selected hardware components.

**NOTE:** Only the parameters that are newly introduced with this command in Release 9.3(0.0) are explained here. For a complete description of all of the options that are available with this command, refer the relevant Command Reference Guide of the applicable platform of Release 9.2(0.0).

### Z9000

**Syntax**

```
clear hardware stack-unit number {counters | unit number counters | hg-stats [unit number [port port-number]] | cpu data-plane statistics | cpu i2c statistics | stack-port number}
```

**Parameters**

- `hg-stats [unit unit-number [port port-number | no]]`
  - Enter the keyword `hg-stats` to display high-Gigabit Ethernet or backplane port buffer and queue statistics on the selected stack member. Optionally, use the `keyword unit` with a number to select port-pipe 0 to 5, and then use `port` `port-number` to select a port on that port-pipe.
  
  For Z9000, valid backplane ports for leaf NPU units (units 0–3) range from 34-41 and for spine NPU units (units 4–5) range from 1 -16.

**Defaults**

`none`

**Command Modes**

EXEC Privilege

---

**EXEC Privilege**

**Command History**

**Version 9.3.0.0** Added support for the `hg-stats` option on the Z9000 platform.

---

**Related Commands**

- `clear hardware system-flow` — clears the statistics from selected hardware components.
- `show interfaces stack-unit` — displays information on all interfaces on a specific S-Series stack member.
- `show system (S-Series and Z-Series)` — displays the current status of all the stack members or a specific member.

This chapter describes commands to configure Layer 2 features.

This chapter contains the following sections:
- MAC Addressing Commands
- Virtual LAN (VLAN) Commands
- Far-End Failure Detection (FEFD)

The VLAN commands are supported on all the Z9000 platform.

Topics:
- MAC Addressing Commands
- Virtual LAN (VLAN) Commands
- Far-End Failure Detection (FEFD)

## MAC Addressing Commands

The following commands are related to configuring, managing, and viewing MAC addresses.

### clear mac-address-table

Clear the MAC address table of all MAC address learned dynamically.

**Z9000**

**Syntax**

```
clear mac-address-table {dynamic | sticky }{address mac-address | all | interface interface | vlan vlan-id}
```

**Parameters**

- **dynamic**
  - Enter the keyword dynamic to specify dynamically-learned MAC addresses.
- **sticky**
  - Enter the keyword sticky to specify sticky MAC addresses.
- **address mac-address**
  - Enter the keyword address then a MAC address in nn:nn:nn:nn:nn:nn format.
- **all**
  - Enter the keyword all to delete all MAC address entries in the MAC address table.
- **interface interface**
  - Enter the following keywords and slot/port or number information:
    - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- **vlan vlan-id**
  - Enter the keyword vlan then a VLAN ID number from 1 to 4094.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
mac-address-table aging-time

Specify an aging time for MAC addresses to remove from the MAC address table.

Z9000

Syntax

mac-address-table aging-time seconds

Parameters

seconds Enter either zero (0) or a number as the number of seconds before MAC addresses are relearned. To disable aging of the MAC address table, enter 0. The range is from 10 to 1000000. The default is 1800 seconds.

Defaults

1800 seconds

Command Modes

CONFIGURATION

</table>

Related Commands

- mac learning-limit — sets the MAC address learning limits for a selected interface.
- show mac-address-table aging-time — displays the MAC aging time.
mac-address-table static

Associate specific MAC or hardware addresses to an interface and VLANs.

Z9000

Syntax

mac-address-table static mac-address {multicast vlan vlan-id output-range interface} | output interface vlan vlan-id}

To remove a MAC address, use the no mac-address-table static mac-address output interface vlan vlan-id command.

Parameters

mac-address

Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.

multicast

Enter a vlan port to where L2 multicast MAC traffic is forwarded.

NOTE: Use this option if you want multicast functionality in an L2 VLAN without IGMP protocols.

output interface

For a unicast MAC address, enter the keyword output then one of the following interfaces for which traffic is forwarded:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

output-range interface

For a multicast MAC address, enter the keyword output-range then one of the following interfaces to indicate a range of ports for which traffic is forwarded:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.

vlan vlan-id

Enter the keyword vlan then a VLAN ID number from 1 to 4094.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description

9.7(0.0)

Introduced on the S6000–ON.

9.0.2.0

Introduced on the S6000.

9.1(0.0)

Added support for output range parameter for S4810 and Z9000.

8.3.19.0

Introduced on the S4820T.

8.3.11.1

Introduced on the Z9000.

8.5.1.0

Added support for 4-port 40G line cards on ExaScale.

8.3.7.0

Introduced on the S4810.

7.6.1.0

Introduced on the S-Series.

7.5.1.0

Introduced on the C-Series.
mac-address-table station-move threshold

Change the frequency with which the MAC address station-move trap is sent after a MAC address changes in a VLAN. A trap is sent if a station move is detected above a threshold number of times in a given interval.

**Syntax**

```
[no] mac-address-table station-move threshold number interval count
```

**Parameters**

- `threshold number`: Enter the keyword `threshold` then the number of times MAC addresses in VLANs can change before an SNMP trap is sent. The range is from 1 to 10.
- `interval seconds`: Enter the keyword `interval` then the number of seconds. The range is from 5 to 60.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

For information about the specific trap sent and the corresponding Syslog, refer to the SNMP Traps chapter.

mac-address-table station-move refresh-arp

Ensure that address resolution protocol (ARP) refreshes the egress interface when a station move occurs due to a topology change.

**Z9000**

**Syntax**

```
[no] mac-address-table station-move refresh-arp
```

**Defaults**

`none`

**Command Modes**

CONFIGURATION
mac learning-limit

Limit the maximum number of MAC addresses (static + dynamic) learned on a selected interface.

Z9000

Syntax

mac learning-limit address_limit [vlan vlan-id] [station-move-violation [dynamic]] [dynamic [no-station-move| station-move]]

Parameters

- **address_limit**: Enter the maximum number of MAC addresses that can be learned on the interface. The range is from 1 to 1000000.
- **vlan vlan-id**: Enter the keyword then the VLAN ID. The range is from 1 to 4094.
- **dynamic**: (OPTIONAL) Enter the keyword dynamic to allow aging of MACs even though a learning limit is configured.
- **station-move-violation**: (OPTIONAL) Enter the keywords station-move to allow a station move on learned MAC addresses.
- **no-station-move**: (OPTIONAL) Enter the keywords no-station-move to internally the treat the MAC addresses as static and allow the MAC addresses learnt to be installed on all port-pipes.

Defaults

- On S-Series, the default behavior is dynamic.

**NOTE**: “Static” means manually entered addresses, which do not age.

Command Modes INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
### mac learning-limit learn-limit-violation

Configure an action for a MAC address learning-limit violation.

**Z9000**

**Syntax**

```
mac learning-limit learn-limit-violation {log | shutdown}
```

To return to the default, use the `no mac learning-limit learn-limit-violation {log | shutdown}` command.

**Parameters**

- **log**: Enter the keyword `log` to generate a syslog message on a learning-limit violation.
- **shutdown**: Enter the keyword `shutdown` to shut down the port on a learning-limit violation.

**Defaults**

- none

**Command Modes**

INTERFACE (conf-if-interface-slot/port)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

This command is supported on physical interfaces, static LAGs, and LACP LAGs.

Related Commands

- show mac learning-limit — displays details of the mac learning-limit.

mac learning-limit mac-address-sticky

Maintain the dynamically learned mac addresses as sticky MAC addresses on the selected port.

Z-Series

Syntax

mac learning-limit mac-address-sticky

To convert the sticky MAC addresses to dynamic MAC addresses, use the no mac learning-limit command.

Parameters

- mac-address-sticky
  - Configures the dynamic MAC addresses as sticky on an interface.

Defaults

none

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

If you configure mac-learn-limit and the sticky MAC feature is enabled, dynamically learned MAC addresses are converted to sticky for that port. Any new MAC address that is learned also becomes sticky for that port.

Related Commands

- show mac learning-limit — displays the details of the mac learning-limit.
mac learning-limit station-move-violation

Specify the actions for a station move violation.

Z9000

**Syntax**

```
mac learning-limit station-move-violation {log | shutdown-both | shutdown-offending | shutdown-original}
```

To disable a configuration, use the `no mac learning-limit station-move-violation` command, then the configured keyword.

**Parameters**

- **log**
  - Enter the keyword `log` to generate a syslog message on a station move violation.

- **shutdown-both**
  - Enter the keyword `shutdown` to shut down both the original and offending interface and generate a syslog message.

- **shutdown-offending**
  - Enter the keywords `shutdown-offending` to shut down the offending interface and generate a syslog message.

- **shutdown-original**
  - Enter the keywords `shutdown-original` to shut down the original interface and generate a syslog message.

**Defaults**

none

**Command Modes**

`INTERFACE (conf-if-interface-slot/port)`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

<td>7.8.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is supported on physical interfaces, static LAGs, and LACP LAGs.

**Related Commands**

- `show mac learning-limit` — displays details of the mac learning-limit.

mac learning-limit reset

Reset the MAC address learning-limit error-disabled state.

Z-Series

**Syntax**

```
mac learning-limit reset
```

**Defaults**

none
show cam mac linecard (count)

Display the content addressable memory (CAM) size and the portions allocated for MAC addresses and for MAC ACLs.

Syntax

```
show cam mac linecard slot port-set port-pipe count [vlan vlan-id] [interface interface]
```

Parameters

- **linecard slot** (REQUIRED) Enter the keyword linecard then a slot number to select the linecard for which to gather information.
- **port-set port-pipe** (REQUIRED) Enter the keywords port-set then a Port-Pipe number to select the Port-Pipe for which to gather information.
- **count** (REQUIRED) Enter the keyword count to display CAM usage by interface type.
- **interface interface** (OPTIONAL) Enter the keyword interface then the interface type, slot and port information:
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- **vlan vlan-id** (OPTIONAL) Enter the keyword vlan then the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

</tbody>
</table>
show cam mac linecard (dynamic or static)

Display the CAM size and the portions allocated for MAC addresses and for MAC ACLs.

**Syntax**

```
show cam mac linecard slot port-set port-pipe [address mac_addr | dynamic | interface interface | static | vlan vlan-id]
```

**Parameters**

- `linecard slot` (REQUIRED) Enter the keyword `linecard` then a slot number to select the linecard for which to gather information.
- `port-set port-pipe` (REQUIRED) Enter the keywords `port-set` then a Port-Pipe number to select the Port-Pipe for which to gather information. The range is from 0 or 1.
- `address mac_addr` (OPTIONAL) Enter the keyword `address` then a MAC address in the `nn:nn:nn:nn:nn:nn` format to display information on that MAC address.
- `dynamic` (OPTIONAL) Enter the keyword `dynamic` to display only those MAC addresses the switch dynamically learns.
- `interface interface` (OPTIONAL) Enter the keyword `interface` then the interface type, slot and port information:
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- `static` (OPTIONAL) Enter the keyword `static` to display only those MAC addresses specifically configured on the switch.
- `vlan vlan-id` (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show cam mac linecard 1 port-set 0
Port - (TableID) assignments:
00(01) 01(01) 02(01) 03(01) 04(01) 05(01) 06(01) 07(01) 08(01) 09(01)
10(01) 11(01)
```
### show mac-address-table

Display the MAC address table.

**Z9000**

**Syntax**

```plaintext
show mac-address-table \[
  \text{address mac-address} | \text{interface interface} | \text{vlan vlan-id}\] \[
  \text{aging-time} | \text{dynamic | static} | \text{count} \[
  \text{vlan vlan-id} | \text{interface interface-type} \[
  \text{slot} [/\text{port}]\]]
```

**Parameters**

- `address mac-address` *(OPTIONAL)*: Enter the keyword `address` then a MAC address in the `nn:nn:nn:nn:nn:nn` format to display information on that MAC address.
- `dynamic` *(OPTIONAL)*: Enter the keyword `dynamic` to display only those MAC addresses the switch dynamically learns. Optionally, you can also add one of these combinations: `address/mac-address`, `interface/interface`, or `vlan vlan-id`.
- `static` *(OPTIONAL)*: Enter the keyword `static` to display only those MAC addresses specifically configured on the switch. Optionally, you can also add one of these combinations: `address/mac-address`, `interface/interface`, or `vlan vlan-id`.
- `aging-time` *(OPTIONAL)*: Enter the keyword `aging-time` to display only aging-time information.
- `interface interface` *(OPTIONAL)*: Enter the keyword `interface` then the interface type, slot/port information:
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- `interface interface-type` *(OPTIONAL)*: Instead of entering the keyword `interface` then the interface type, slot/port information, as above, you can enter the interface type, then just a slot number.
- `vlan vlan-id` *(OPTIONAL)*: Enter the keyword `vlan` then the VLAN ID to display the MAC address assigned to the VLAN. The range is 1 to 4094.
count (OPTIONAL) Enter the keyword count, then optionally, by an interface or VLAN ID, to display total or interface-specific static addresses, dynamic addresses, and MAC addresses in use.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.12.0</td>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
The following describes the `show mac-address-table` command shown in the following example.

**Column** | **Description**
---|---
VlanId | Displays the VLAN ID number.
Type | Lists whether the MAC address was manually configured (Static), learned dynamically (Dynamic), or associated with a specific port (Sticky).
Interface | Displays the interface type and slot/port information. The following abbreviations describe the interface types:
- gi — Gigabit Ethernet then a slot/port.
- po — Port Channel then a number. The range is from 1 to 255 for TeraScale.
- te — 10 Gigabit Ethernet then a slot/port.
State | Lists if the MAC address is in use (Active) or not in use (Inactive).

**Example**
```
Dell(conf)#do show mac-address-table
Codes: *N - VLT Peer Synced MAC
VlanId  Mac Address          Type         Interface       State
2       00:00:00:00:00:01      Dynamic (N)    Po 128         Active
2       00:00:00:00:00:02      Dynamic (N)    Po 10          Active
2       00:00:00:00:00:03      Dynamic            Po 100         Active
2       00:00:00:00:00:04      Dynamic            Po 10          Active
```
### Column Heading

**Type**
- Lists whether the MAC address was manually configured (Static), learned (Dynamic), or associated with a specific port (Sticky). An (N) indicates that the specified MAC address has been learnt by a neighbor and is synced to the node.

**Interface**
- Displays the interface type and slot/port information. The following abbreviations describe the interface types:
  - gi — Gigabit Ethernet followed by a slot/port
  - po — Port Channel followed by a number. Range for Terascale is from 1 to 255.
  - te — 10-Gigabit Ethernet followed by a slot/port.

**State**
- Lists if the MAC address is in use (Active) or not in use (Inactive).

The following describes the `show mac-address-table count` command shown in the following example.

### Line Beginning With

**MAC Entries**
- Displays the number of MAC entries learned per VLAN.

**Dynamic Address**
- Lists the number of dynamically learned MAC addresses.

**Static Address**
- Lists the number of user-defined MAC addresses.

**Total MAC**
- Lists the total number of MAC addresses the switch uses.

### Example (Count)

```shell
Dell# show mac-address-table count
MAC Entries for all vlans:
Dynamic Address Count :               110
Static Address (User-defined) Count : 0
Sticky Address Count :                0
Total Synced Mac from Peer(N):        100
Total MAC Addresses in Use:           110
Dell#
```

### Related Commands

- `show mac-address-table aging-time` — displays MAC aging time.

### show mac-address-table aging-time

Display the aging times assigned to the MAC addresses on the switch.

#### Z9000

**Syntax**

```
show mac-address-table aging-time [vlan vlan-id]
```

**Parameters**

- `vlan vlan-id`  
  (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
### Version and Description

</tr>
<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

### Example

```
Dell#show mac-address-table aging-time
Mac-address-table aging time : 1800
Dell#
```

### Related Commands

- `show mac-address-table` — displays the current MAC address configuration.

### show mac accounting destination

Display destination counters for Layer 2 traffic (available on physical interfaces only).

#### Syntax

```
show mac accounting destination [mac-address vlan vlan-id] [interface interface [mac-address vlan vlan-id] [vlan vlan-id]] [vlan vlan-id]
```

#### Parameters

- **mac-address** (OPTIONAL) Enter the MAC address in the `nn:nn:nn:nn:nn:nn` format to display information on that MAC address.
- **interface** (OPTIONAL) Enter the keyword `interface` then the interface type, slot and port information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- **vlan vlan-id** (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display the MAC address assigned to the VLAN. The range is from 1 to 4094.

#### Command Modes

- EXEC
- EXEC Privilege

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
MAC Accounting information can be accessed using SNMP via the Force10 Monitor MIB. For more information about enabling SNMP, refer to the Dell Networking OS Configuration Guide.

NOTE: Currently, the Force10 MONITOR MIB does not return the MAC addresses in an increasing order using SNMP. As a workaround, you can use the -C c option in snmpwalk or snmpbulkwalk to access the Force10 MONITOR MIB. For example: % snmpwalk -C c -v 2c -c public 133.33.33.131 enterprise.6027.3.3.3

Example

Dell-1#show mac accounting destination interface tengigabitethernet 2/1

Dell-1#

Related Commands

show mac accounting access-list — displays the MAC access list configurations and counters (if configured).

show mac learning-limit

Display MAC address learning limits set for various interfaces.

Z9000

Syntax

show mac learning-limit [violate-action] [detail] [interface interface]

Parameters

violate-action (OPTIONAL) Enter the keywords violate-action to display the MAC learning limit violation status.

detail (OPTIONAL) Enter the keyword detail to display the MAC learning limit in detail.

interface (OPTIONAL) Enter the keyword interface with the following keywords and slot/port or number information:

- For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
Virtual LAN (VLAN) Commands

The following commands configure and monitor virtual LANs (VLANs). VLANs are a virtual interface and use many of the same commands as physical interfaces.

You can configure an IP address and Layer 3 protocols on a VLAN called Inter-VLAN routing. FTP, TFTP, ACLs and SNMP are not supported on a VLAN.

Occasionally, while sending broadcast traffic over multiple Layer 3 VLANs, the VRRP state of a VLAN interface may continually switch between Master and Backup.

NOTE: For more information, refer to VLAN Stacking and VLAN-related commands, such as portmode hybrid in the Interfaces chapter.

default vlan-id

Specify a VLAN as the Default VLAN.

Z9000

default vlan-id vlan-id

To remove the default VLAN status from a VLAN and VLAN 1 does not exist, use the no default vlan-id vlan-id syntax.

Parameters

vlan-id Enter the VLAN ID number of the VLAN to become the new Default VLAN. The range is from 1 to 4094. The default is 1.

Defaults

The Default VLAN is VLAN 1.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description

9.7(0.0) Introduced on the S6000-ON.
To return VLAN 1 as the Default VLAN, use this command syntax (default-vlan-id 1).

The Default VLAN contains only untagged interfaces.

Related Commands
interface vlan — configures a VLAN.

default-vlan disable

Disable the default VLAN so that all switchports are placed in the Null VLAN until they are explicitly configured as a member of another VLAN.

Z9000

Defaults
Enabled.

Command Modes
CONFIGURATION

Usage Information
The no default vlan disable command is not listed in the running-configuration, but when the default VLAN is disabled, default-vlan disable is listed in the running-configuration.

name

Assign a name to the VLAN.

Z9000

Syntax
name vlan-name

To remove the name from the VLAN, use the no name command.
Parameters

- **vlan-name**: Enter up to 32 characters as the name of the VLAN.

Defaults

Not configured.

Command Modes

- INTERFACE VLAN

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

show vlan

Display the current VLAN configurations on the switch.

Z9000

Syntax
show vlan [brief | id vlan-id | name vlan-name]

Parameters
brief  (OPTIONAL) Enter the keyword brief to display the following information:
  ● VLAN ID
  ● VLAN name (left blank if none is configured)
  ● Spanning Tree Group ID
  ● MAC address aging time
  ● IP address

id vlan-id  (OPTIONAL) Enter the keyword id then a number from 1 to 4094. Only
            information on the VLAN specified is displayed.

name vlan-name  (OPTIONAL) Enter the keyword name then the name configured for the VLAN.
                Only information on the VLAN named is displayed.

Command Modes
● EXEC
● EXEC Privilege

| 7.8.1.0     | Augmented to display PVLAN data for the C-Series and S-Series and revised the
              output to include the Description field to display a user-entered VLAN description. |
| 7.6.1.0     | Introduced on the S-Series and revised the output to display Native VLAN.  |
| 7.5.1.0     | Introduced on the C-Series.                                                |
| pre-6.2.1.1 | Introduced on the E-Series.                                                |

Usage Information
The following describes the show vlan command shown in the following example.
### Column Heading

**NUM**  Displays existing VLAN IDs.

**Status**  Displays the word *Inactive* for inactive VLANs and the word *Active* for active VLANs.

**Q**  
- Displays G for GVRP tagged
- M for member of a VLAN-Stack VLAN
- T for tagged interface
- U for untagged interface
- x (not capitalized x) for Dot1x untagged
- X (capitalized X) for Dot1x tagged
- o (not capitalized o) for OpenFlow untagged
- O (capitalized O) for OpenFlow tagged
- H for VSN tagged
- i (not capitalized i) for Internal untagged
- I (capitalized I) for Internal tagged
- v (not capitalized v) for VLT untagged
- V (capitalized V) for VLT tagged

### Ports

- Po = port channel
- Gi = gigabit Ethernet
- Te = ten-gigabit Ethernet

### Example

**Dell#show vlan**

**Codes:**  
- * - Default VLAN
- G - GVRP VLANs
- P - Primary
- C - Community
- I - Isolated

**Q:**  
- U - Untagged
- T - Tagged
- O - Openflow
- x - Dot1x untagged
- X - Dot1x tagged
- o - OpenFlow untagged
- O - OpenFlow tagged
- G - GVRP tagged
- M - Vlan-stack
- i - Internal untagged
- I - Internal tagged
- v - VLT untagged
- V - VLT tagged

### Related Commands

- `vlan-stack compatible` — enables the Stackable VLAN feature on the selected VLAN.
interface vlan — configures a VLAN.

**tagged**

Add a Layer 2 interface to a VLAN as a tagged interface.

**Z9000**

**Syntax**

`tagged interface`

To remove a tagged interface from a VLAN, use the `no tagged interface` command.

**Parameters**

`interface` Enter the following keywords and slot/port or number information:

- For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**

All interfaces in Layer 2 mode are untagged.

**Command Modes**

INTERFACE VLAN

**Command History**

</tr>
</tbody>
</table>

**Usage Information**

When you use the `no tagged` command, the interface is automatically placed in the Default VLAN as an untagged interface unless the interface is a member of another VLAN. If the interface belongs to several VLANs, remove it from all VLANs to change it to an untagged interface.

Tagged interfaces can belong to multiple VLANs, while untagged interfaces can only belong to one VLAN at a time.

**Related Commands**

- `interface vlan` — configures a VLAN.
- `untagged` — specifies which interfaces in a VLAN are untagged.
track ip

Track the Layer 3 operational state of a Layer 3 VLAN, using a subset of the VLAN member interfaces.

Z9000

Syntax

track ip interface

To remove the tracking feature from the VLAN, use the no track ip interface command.

Parameters

interface Enter the following keywords and slot/port or number information:
- For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

Defaults

Not configured.

Command Modes

INTERFACE VLAN

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

When this command is configured, the VLAN is operationally UP if any of the interfaces specified in the track ip command are operationally UP, and the VLAN is operationally DOWN if none of the tracking interfaces are operationally UP.

If the track ip command is not configured, the VLAN's Layer 3 operational state depends on all the members of the VLAN.

The Layer 2 state of the VLAN, and hence the Layer 2 traffic, is not affected by the track ip command configuration.

Related Commands

- interface vlan — configures a VLAN.
- tagged — specifies which interfaces in a VLAN are tagged.
Add a Layer 2 interface to a VLAN as an untagged interface.

Z9000

Syntax
untagged interface

To remove an untagged interface from a VLAN, use the no untagged interface command.

Parameters

- **interface**: Enter the following keywords and slot/port or number information:
  - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

Defaults
All interfaces in Layer 2 mode are untagged.

Command Modes
- INTERFACE VLAN

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
Untagged interfaces can only belong to one VLAN.

In the Default VLAN, you cannot use the no untagged interface command. To remove an untagged interface from all VLANs, including the Default VLAN, enter INTERFACE mode and use the no switchport command.

Related Commands
- interface vlan — configures a VLAN.
- tagged — specifies which interfaces in a VLAN are tagged.

Far-End Failure Detection (FEFD)

The Dell Networking operating software supports far-end failure detection (FEFD) on the Ethernet interfaces of the Z9000 platform.

The FEFD feature detects and reports far-end link failures.

- FEFD is not supported on the Management interface.
- During an RPM failover, FEFD is operationally disabled for approximately 8 to 10 seconds.
By default, FEFD is disabled.

**debug fefd**

Enable debugging of FEFD.

### Z9000

**Syntax**

```
debug fefd {events | packets} [interface]
```

To disable debugging of FEFD, use the `no debug fefd {events | packets} [interface]` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>events</td>
<td>Enter the keyword <code>events</code> to enable debugging of FEFD state changes.</td>
</tr>
<tr>
<td>packets</td>
<td>Enter the keyword <code>packets</code> to enable debugging of FEFD to view information on packets sent and received.</td>
</tr>
<tr>
<td>interface</td>
<td>(OPTIONAL) Enter the following keywords and slot/port or number information:</td>
</tr>
<tr>
<td></td>
<td>● For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</td>
</tr>
<tr>
<td></td>
<td>● For a 40-Gigabit Ethernet interface, enter the keyword <code>fortyGigE</code> then the slot/port information.</td>
</tr>
</tbody>

</tbody>
</table>

Legacy E-Series command.

**Related Commands**

- `fefd` — enables far-end failure detection on an interface.
- `fefd reset` — enables FEFD globally on the system.

### fefd

Enable Far-End Failure Detection on an interface, set the FEFD interval, or select the FEFD mode.

**Z9000**

**Syntax**

```
fefd {disable|interval|mode {aggressive|normal}}
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>disable</td>
<td>Enter the keyword <code>disable</code> to disable FEFD for the specified interface.</td>
</tr>
<tr>
<td>interval</td>
<td>Enter the keyword <code>interval</code>, followed by a value to specify the FEFD interval in seconds. Range is from 3 to 300. Default is 15.</td>
</tr>
<tr>
<td>mode</td>
<td>Enter the keyword <code>mode</code> followed by the mode type to specify the FEFD mode.</td>
</tr>
</tbody>
</table>
● **normal**: Change the link state to “unknown” when a far-end failure is detected by the software on that interface. When the interface is placed in an “unknown” state, the software brings down the line protocol.

● **aggressive**: Change the link state to “error-disabled” when a far-end failure is detected by the software on that interface. When an interface is placed in an “error-disabled” state, you must enter the `fefd reset` command to reset the interface state. Range is normal or aggressive. Default is normal.

**Defaults**
Disabled.

**Command Modes**
INTERFACE

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**
When you enter `no fefd` for an interface and `fefd-global`, FEFD is enabled on the interface because the `no fefd` command is not retained in the configuration file. To keep the interface FEFD disabled when the global configuration changes, use the `fefd reset` command.

**Related Commands**
- `fefd disable` — disables far-end failure detection on an interface.
- `fefd reset` — enables FEFD globally on the system.
- `fefd mode` — changes FEFD mode on an interface.

### `fefd disable`
Disable FEFD on an interface only. This command overrides the `fefd reset` command for the interface.

#### Z9000

**Syntax**
```
fefd disable
```

**To re-enable FEFD on an interface, use the `no fefd disable` command.**

**Defaults**
Not configured.

**Command Modes**
INTERFACE

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
**Version**

Legacy E-Series command.

**Usage Information**

When you enter `no fefd` for an interface and fefd-global, FEFD is enabled on the interface because the `no fefd` command is not retained in the configuration file. To keep the interface FEFD disabled when the global configuration changes, use the `fefd reset` command.

**Related Commands**

- `fefd reset` — enables FEFD globally on the system.
- `fefd mode` — changes FEFD mode on an interface.

## fefd interval

Set an interval between control packets.

### Z9000

**Syntax**

```plaintext
fefd interval seconds
```

To return to the default value, use the `no fefd interval` command.

**Parameters**

- `seconds` Enter a number as the time between FEFD control packets. The range is from 3 to 300 seconds. The default is 15 seconds.

**Defaults**

15 seconds

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Legacy E-Series command.

**Related Commands**

- `fefd` — enables far-end failure detection.

## fefd mode

Change the FEFD mode on an interface.

### Z9000

**Syntax**

```plaintext
fefd mode {normal | aggressive}
```

To return the FEFD mode to the default of normal, use the `no fefd mode` command.
Parameters

- **normal** (OPTIONAL) Enter the keyword `normal` to change the link state to “unknown” when a far-end failure the software detects on that interface. When the interface is placed in “unknown” state, the software brings down the line protocol.

- **aggressive** (OPTIONAL) Enter the keyword `aggressive` to change the link state to “error-disabled” when a far-end failure the software detects on that interface. When an interface is placed in “error-disabled” state, enter the `fefd reset` command to reset the interface state.

Defaults

`normal`

**Related Commands**

- `fefd` — enables far-end failure detection.
- `fefd-global` — enables FEFD globally on the system.

---

**fefd-global**

Enable FEFD globally on the system.

**Z9000**

**Syntax**

```
fefd-global [interval seconds][mode {normal | aggressive}]
```

To disable FEFD globally, use the `no fefd-global [interval seconds][mode {normal | aggressive}]` command.

**Parameters**

- `interval seconds` Enter the keyword `interval` followed by the number of seconds to wait between FEFD control packets. Range is from 3 to 300 seconds. Default is 15 seconds.
normal  (OPTIONAL) Enter the keywords `mode normal` to change the link state to "unknown" when a far-end failure the software detects on that interface. When the interface is placed in "unknown" state, the software brings down the line protocol. The default is Normal mode.

aggressive  (OPTIONAL) Enter the keywords `mode aggressive` to change the link state to "error-disabled" when a far-end failure the software detects on that interface. When an interface is placed in "error-disabled" state, enter the `fefd reset` command to reset the interface state.

Defaults
Disabled.

</tbody>
</table>

Legacy E-Series command.

Usage Information
If you enter only the `fefd-global` syntax, the mode is normal and the default interval is 15 seconds.

If you disable FEFD globally (`no fefd-global`), the system does not remove the FEFD interface configuration.

Related Commands
- `fefd` — enables far-end failure detection.
- `fefd-global interval` — configures an interval between FEFD control packets.
- `show fefd` — shows the FEFD command output.

show fefd
View FEFD status globally or on a specific interface.

Z9000

Syntax
`show fefd [interface]`

Parameters
- `interface`  (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

756 Layer 2
The following describes the `show fefd` command shown in the following example.

### Field Description

**Interface**
Displays the interfaces type and number.

**Mode**
Displays the mode (aggressive or normal) or NA if the interface contains `fefd reset` in its configuration.

**Interval**
Displays the interval between FEFD packets.

**State**
Displays the state of the interface and can be one of the following:
- bi-directional (interface is up, connected and hearing neighbor’s echoes).
- err-disabled (only found when FEFD mode is aggressive and when the interface has not hearing its neighbor’s echoes for three times the message interval. To reset an interface in this state, use the `fefd reset` command.)
- unknown (only found when FEFD mode is normal.
- locally disabled (interface contains the `fefd reset` command in its configuration).
- Admin Shutdown (interface is disabled with the `shutdown` command).

### Example

```
Dell#show fefd
FEFD is globally 'ON', interval is 10 seconds, mode is 'Aggressive'.

INTERFACE     MODE   INTERVAL (second)   STATE
------------- ------ --------------- ---------
Te 5/1        Aggressive 10         Admin Shutdown
Te 5/2        Aggressive 10         Admin Shutdown
Te 5/3        Aggressive 10         Admin Shutdown
Te 5/4        Aggressive 10         Admin Shutdown
Te 5/5        Aggressive 10         Admin Shutdown
Te 5/6        Aggressive 10         Admin Shutdown
Te 5/7        Aggressive 10         Admin Shutdown
Te 5/8        Aggressive 10         Admin Shutdown
Te 5/9        Aggressive 10         Admin Shutdown
Te 5/10       NA          NA         Locally disabled
Te 5/11       Aggressive 10         Err-disabled

Dell#
```

### Related Commands
- `fefd` — enables far-end failure detection.
- `fefd disable` — disables FEFD on an interface only.
- `fefd-global` — enables FEFD globally on the system.
- `fefd reset` — resets all interfaces or a single interface that was in “error-disabled” mode.
The link layer discovery protocol (LLDP) advertises connectivity and management from the local station to the adjacent stations on an IEEE 802 LAN.

This chapter contains the following sections:

- LLDP Commands
- LLDP-MED Commands

LLDP facilitates multi-vendor interoperability by using standard management tools to discover and make available a physical topology for network management. The Dell Networking operating software implementation of LLDP is based on IEEE standard 801.1ab.

The Dell Networking OS supports the basic LLDP commands on Z9000 platform.

The starting point for using LLDP is invoking LLDP with the `protocol lldp` command in either CONFIGURATION or INTERFACE mode.

The information LLDP distributes is stored by its recipients in a standard management information base (MIB). You can access the information by a network management system through a management protocol such as simple network management protocol (SNMP).

### Topics:

- LLDP Commands
- LLDP-MED Commands

## LLPD Commands

The following are LLDP commands.

### advertise dot1-tlv

Advertise dot1 TLVs (Type, Length, Value).

**Z9000**

**Syntax**

```
advertise dot1-tlv {port-protocol-vlan-id | port-vlan-id | vlan-name}
```

To remove advertised dot1-tlv, use the `no advertise dot1-tlv {port-protocol-vlan-id | port-vlan-id | vlan-name}` command.

**Parameters**

- **port-protocol-vlan-id**
  - Enter the keywords `port-protocol-vlan-id` to advertise the port protocol VLAN identification TLV.

- **port-vlan-id**
  - Enter the keywords `port-vlan-id` to advertise the port VLAN identification TLV.

- **vlan-name**
  - Enter the keywords `vlan-name` to advertise the vlan-name TLV. This keyword is only supported on the C-Series and S-Series.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

Related Commands

- `protocol lldp (Configuration)` — enables LLDP globally.
- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.

**advertise dot3-tlv**

Advertise dot3 TLVs (Type, Length, Value).

**Z9000**

**Syntax**

```
advertise dot3-tlv {max-frame-size}
```

To remove advertised dot3-tlv, use the `no advertise dot3-tlv {max-frame-size}` command.

**Parameters**

- `max-frame-size` Enter the keywords `max-frame-size` to advertise the dot3 maximum frame size.

**Defaults**

none

**Command Modes**

- CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
advertise management-tlv

Advertise management TLVs (Type, Length, Value).

Z9000

Syntax

advertise management-tlv {management-address | system-capabilities | system-description | system-name}

To remove advertised management TLVs, use the no advertise management-tlv {management-address | system-capabilities | system-description | system-name} command.

Parameters

management-address Enter the keyword management-address to advertise the management IP address TLVs to the LLDP peer.

system-capabilities Enter the keywords system-capabilities to advertise the system capabilities TLVs to the LLDP peer.

system-description Enter the keywords system-description to advertise the system description TLVs to the LLDP peer.

system-name Enter the keywords system-name to advertise the system name TLVs to the LLDP peer.

Defaults

none

</table>

Usage Information

The command options management-address, system-capabilities, system-description, and system-name can be invoked individually or together, in any sequence.

advertise management-tlv (Interface)

Advertise management type, length, values (TLVs) to the specified interface.

Z9000

Syntax

advertise management-tlv {management-address | system-capabilities | system-description | system-name}
To remove advertised management TLVs, use the `no advertise management-tlv {management-address | system-capabilities | system-description | system-name}` command.

**Parameters**

- `management-address` Enter the keywords `management-address` to advertise the management IP address TLVs to the specified interface.
- `system-capabilities` Enter the keywords `system-capabilities` to advertise the system capabilities TLVs to the specified interface.
- `system-description` Enter the keywords `system-description` to advertise the system description TLVs to the specified interface.
- `system-name` Enter the keywords `system-name` to advertise the system name TLVs to the specified interface.

**Defaults**
none

**Command Modes**
INTERFace (conf-interface-lldp)

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

**clear lldp counters**

Clear LLDP transmitting and receiving counters for all physical interfaces or a specific physical interface.

**Z9000**

**Syntax**
clear lldp counters interface

**Parameters**

- `interface` Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

**Defaults**
none

</tbody>
</table>
### clear lldp neighbors

Clear LLDP neighbor information for all interfaces or a specific interface.

**Z9000**

**Syntax**
```
clear lldp neighbors {interface}
```

**Parameters**
- `interface`
  - Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

### debug lldp interface

To display timer events, neighbor additions or deletions, and other information about incoming and outgoing packets, enable LLDP debugging.

**Z9000**

**Syntax**
```
dump lldp interface {interface | all} {events | packet {brief | detail} {tx | rx | both}}
```

To disable debugging, use the `no debug lldp interface {interface | all} {events | packet {brief | detail} {tx | rx | both}}` command.

**Parameters**
- `interface`
  - Enter the following keywords and slot/port or number information:
For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

```
all
```
(OPTIONAL) Enter the keyword `all` to display information on all interfaces.

```
events
```
(OPTIONAL) Enter the keyword `events` to display major events such as timer events.

```
packet
```
(OPTIONAL) Enter the keyword `packet` to display information regarding packets coming in or going out.

```
brief
```
(OPTIONAL) Enter the keyword `brief` to display brief packet information.

```
detail
```
(OPTIONAL) Enter the keyword `detail` to display detailed packet information.

```
rx
```
(OPTIONAL) Enter the keyword `rx` to display receive-only packet information.

```
both
```
(OPTIONAL) Enter the keyword `both` to display both receive and transmit packet information.

```
disable
```

Enable or disable LLDP.

```
Z9000
```

```
Syntax
disable
```
To enable LLDP, use the no disable command.

```
Defaults
```
Enabled, that is no disable.

```
Command Modes
```
CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

**Related Commands**
- `protocol lldp (Configuration)` — enables LLDP globally.
- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.

**hello**

Configure the rate at which the LLDP control packets are sent to its peer.

**Z9000**

**Syntax**

```
hello seconds
```

To revert to the default, use the `no hello seconds` command.

**Parameters**

- `seconds` Enter the rate, in seconds, at which the control packets are sent to its peer. The rate is from 5 to 180 seconds. The default is **30 seconds**.

**Defaults**

- **30 seconds**

**Command Modes**

- Configuration (conf-lldp)
- Interface (conf-if-interface-lldp)

Usage Information

To enable LLDP on the management interface, use the no disable command in LLDP-MANAGEMENT-INTERFACE mode (conf-lldp-mgmtIf).

mode

To receive or transmit, set LLDP.

Z9000

Syntax

mode {tx | rx}

To return to the default, use the no mode {tx | rx} command.

Parameters

- **tx**: Enter the keyword tx to set the mode to transmit.
- **rx**: Enter the keyword rx to set the mode to receive.

Defaults

Both transmit and receive.

Command Modes

CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

Related Commands
- `protocol lldp (Configuration)` — enables LLDP globally.
- `show lldp neighbors` — displays the LLDP neighbors.

### multiplier

Set the number of consecutive misses before LLDP declares the interface dead.

**Z9000**

**Syntax**
```
multiplier integer
```

To return to the default, use the `no multiplier integer` command.

**Parameters**
- `integer`
  - Enter the number of consecutive misses before the LLDP declares the interface dead. The range is from 2 to 10.

**Defaults**
- 4 x hello

**Command Modes**
- CONFIGURATION (conf-lldp) and INTERFACE (conf-if-interface-lldp)

### protocol lldp (Configuration)

Enable the LLDP globally on the switch.

**Z9000**

**Syntax**
```
protocol lldp
```

To disable LLDP globally on the chassis, use the `no protocol lldp` command.

**Defaults**
- Enabled.

**Command Modes**
- CONFIGURATION (conf-lldp)

**Command History**
The following is a list of the Dell Networking OS version history for this command.
# protocol lldp (Interface)

Enter the LLDP protocol in INTERFACE mode.

## Z9000

### Syntax

```
[no] protocol lldp
```

To return to the global LLDP configuration mode, use the `no protocol lldp` command from Interface mode.

### Defaults

LLDP is not enabled on the interface.

### Command Modes

INTERFACE (conf-if-interface-lldp)

### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

### Usage Information

Before LLDP can be configured on an interface, it must be enabled globally from CONFIGURATION mode. This command places you in LLDP mode on the interface; it does not enable the protocol.

When you enter the LLDP protocol in the Interface context, it overrides global configurations. When you execute the `no protocol lldp` from INTERFACE mode, interfaces begin to inherit the configuration from global LLDP CONFIGURATION mode.
show lldp neighbors

Display LLDP neighbor information for all interfaces or a specified interface.

Syntax

```
show lldp neighbors [interface] [detail]
```

Parameters

- `interface` (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- `detail` (OPTIONAL) Enter the keyword `detail` to display all the TLV information, remote management IP addresses, timers, and LLDP tx and rx counters.

Defaults

none

Command Modes

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>7.6.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Omitting the keyword `detail` displays only the remote chassis ID, Port ID, and Dead Interval.

Example

```
R1(conf-if-te-1/31)#do show lldp neighbors
Loc PortID Rem Host Name       Rem Port Id Rem Chassis Id
-----------------------------------------------
Te  1/21    R2  TenGigabitEthernet  2/11 00:01:e8:06:95:3e
Te  1/31    R3  TenGigabitEthernet  3/11 00:01:e8:09:c2:4a
```

show lldp statistics

Display the LLDP statistical information.
show lldp statistics

Total number of neighbors: 300
Last table change time : Mon Oct 02 16:00:52 2006
Number of Table Inserts : 1621
Number of Table Deletes  : 200
Number of Table Drops   : 0
Number of Table Age Outs: 400

Dell#show lldp

show management-interface

Display LLDP management interface configuration information.

Z9000

Syntax

show management-interface

Defaults

none

show running-config lldp

Display the current global LLDP configuration.

Z9000

Syntax

show running-config lldp

Defaults

none

   advertise dot3-tlv max-frame-size
   advertise management-tlv system-capabilities system-description
   hello 15
   multiplier 3
   no disable
Dell#
```

**LLDP-MED Commands**

The following are the LLDP-MED (Media Endpoint Discovery) commands.

Dell Networking OS LLDP-MED commands are an extension of the set of LLDP TLV advertisement commands. The C-Series and S-Series support all commands.

The E-Series generally supports the commands. However, LLDP-MED commands are more useful on the C-Series and the S50V model of the S-Series, because they support Power over Ethernet (PoE) devices.

As defined by ANSI/TIA-1057, LLDP-MED provides organizationally specific TLVs (Type Length Value), so that endpoint devices and network connectivity devices can advertise their characteristics and configuration information. The Organizational Unique Identifier (OUI) for the Telecommunications Industry Association (TIA) is 00-12-BB.

- **LLDP-MED Endpoint Device** — any device that is on an IEEE 802 LAN network edge, can communicate using IP, and uses the LLDP-MED framework.
- **LLDP-MED Network Connectivity Device** — any device that provides access to an IEEE 802 LAN to an LLDP-MED endpoint device, and supports IEEE 802.1AB (LLDP) and TIA-1057 (LLDP-MED). The Dell Networking system is an LLDP-MED network connectivity device.

Regarding connected endpoint devices, LLDP-MED provides network connectivity devices with the ability to:

- manage inventory
- manage Power over Ethernet (POE)
- identify physical location
- identify network policy
advertise med guest-voice

To advertise a separate limited voice service for a guest user with their own IP telephony handset or other appliances that support interactive voice services, configure the system.

Z9000

Syntax

advertise med guest-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}

To return to the default, use the no advertise med guest-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number} command.

Parameters

vlan-id Enter the VLAN ID. The range is from 1 to 4094.
layer2_priority Enter the Layer 2 priority. The range is from 0 to 7.
DSCP_value Enter the DSCP value. The range is from 0 to 63.
priority-tagged number Enter the keywords priority-tagged followed the Layer 2 priority. The range is from 0 to 7.

Defaults

Unconfigured.

show lldp neighbors — displays the LLDP neighbors.

advertise med guest-voice-signaling

To advertise a separate limited voice service for a guest user when the guest voice control packets use a separate network policy than the voice data, configure the system.

Z9000

Syntax

advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number}

To return to the default, use the no advertise med guest-voice-signaling {vlan-id layer2_priority DSCP_value} | {priority-tagged number} command.
advertise med location-identification

To advertise a location identifier, configure the system.

Z9000

Syntax
advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value}

To return to the default, use the no advertise med location-identification {coordinate-based value | civic-based value | ecs-elin value} command.

Parameters
- **coordinate-based value**: Enter the keywords coordinate-based then the coordinated based location in hexadecimal value of 16 bytes.
- **civic-based value**: Enter the keywords civic-based then the civic based location in hexadecimal format. The range is from 6 to 255 bytes.
- **ecs-elin value**: Enter the keywords ecs-elin then the Emergency Call Service (ecs) Emergency Location Identification Number (elin) numeric location string. The range is from 10 to 25 characters.

Defaults
unconfigured.

**Usage Information**

Advertise the Extended Power via MDI on all ports that are connected to an 802.3af powered, LLDP-MED endpoint device.

**Related Commands**

- `debug lldp interface` — debugs LLDP.
- `show lldp neighbors` — displays the LLDP neighbors.
advertise med softphone-voice

To advertise softphone to enable IP telephony on a computer so that the computer can be used as a phone, configure the system.

Z9000

Syntax

advertise med softphone-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number}

To return to the default, use the no advertise med softphone-voice {vlan-id layer2_priority DSCP_value} | {priority-tagged number} command.

Parameters

vlan-id

Enter the VLAN ID. The range is from 1 to 4094.

layer2_priority

Enter the Layer 2 priority (C-Series and E-Series only). The range is from 0 to 7.

DSCP_value

Enter the DSCP value (C-Series and E-Series only). The range is from 0 to 63.

priority-tagged number

Enter the keywords priority-tagged then the Layer 2 priority. The range is from 0 to 7.

Defaults

unconfigured.

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.7.1.0 Introduced on the S-Series.
7.6.1.0 Introduced on the C-Series and E-Series.

Related Commands

debug lldp interface — debugs LLDP.
show lldp neighbors — displays the LLDP neighbors.

advertise med streaming-video

To advertise streaming video services for broadcast or multicast-based video, configure the system. This command does not include video applications that rely on TCP buffering.

Z9000

Syntax

advertise med streaming-video {vlan-id layer2_priority DSCP_value} | {priority-tagged number}

To return to the default, use the no advertise med streaming-video {vlan-id layer2_priority DSCP_value} | {priority-tagged number} command.
**Parameters**

- `vlan-id` Enter the VLAN ID. The range is from 1 to 4094.
- `layer2_priority` Enter the Layer 2 priority (C-Series and E-Series only). The range is from 0 to 7.
- `DSCP_value` Enter the DSCP value (C-Series and E-Series only). The range is from 0 to 63.
- `priority-tagged number` Enter the keywords `priority-tagged` then the Layer 2 priority. The range is from 0 to 7.

**Defaults**

unconfigured.

---

### advertise med video-conferencing

To advertise dedicated video conferencing and other similar appliances that support real-time interactive video, configure the system.

**Z9000**

**Syntax**

```
advertise med video-conferencing {vlan-id layer2_priority DSCP_value} | {priority-tagged number}
```

To return to the default, use the `no advertise med video-conferencing {vlan-id layer2_priority DSCP_value} | {priority-tagged number}` command.

**Parameters**

- `vlan-id` Enter the VLAN ID. The range is from 1 to 4094.
- `layer2_priority` Enter the Layer 2 priority (C-Series and E-Series only). The range is from 0 to 7.
- `DSCP_value` Enter the DSCP value (C-Series and E-Series only). The range is from 0 to 63.
- `priority-tagged number` Enter the keywords `priority-tagged` then the Layer 2 priority. The range is from 0 to 7.

**Defaults**

unconfigured.

Microsoft Network Load Balancing

Network Load Balancing (NLB) is a clustering functionality that is implemented by Microsoft on Windows 2000 Server and Windows Server 2003 operating systems. Microsoft NLB clustering allows multiple servers running Microsoft Windows to be represented by one MAC and one IP address to provide transparent failover and load-balancing. The Dell Networking OS does not recognize server clusters by default; you must configure NLB functionality on a switch to support server clusters. The maximum NLB entry limit from 8 to 11 is increased and support for more CAM-ACL to increase.

Topics:
- arp (for Multicast MAC Address)
- mac-address-table static (for Multicast MAC Address)
- ip vlan-flooding

arp (for Multicast MAC Address)

To associate an IP address with a multicast MAC address in the switch when you configure multicast mode of network load balancing (NLB), use address resolution protocol (ARP).

**Syntax**
```
arp ip-address multicast-mac-address interface
```

To remove an ARP address, use the
```
no arp ip-address
```
command.

**Parameters**
- **ip-address**
  Enter an IP address in dotted decimal format.
- **multicast-mac-address**
  Enter a 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format for the static MAC address to be used to switch multicast traffic.
- **interface**
  Enter any of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
  - The interface specified here must be one of the interfaces configured using the \{output-range | output\} interface option with the mac-address-table static command.

**Defaults**
Not configured.

**Command Modes**
CONFIGURATION

**Command History**
- **Version 9.3(0.0)** Added support for association of an IP address with multicast MAC address on the S4810, S4820T, S6000, and Z9000 platforms.

**Usage Information**
For multicast mode of NLB, to associate an IP address with a multicast MAC address in the switch, use address resolution protocol (ARP) by entering the
```
arp ip-address multicast-mac-address
```
cmd in Global configuration mode. This setting causes the multicast MAC address to be mapped to the cluster IP address for NLB mode of operation of the switch.

**Related Commands**
- clear arp-cache — clears dynamic ARP entries from the ARP table.
- show arp — displays the ARP table.
mac-address-table static (for Multicast MAC Address)

For multicast mode of network load balancing (NLB), configure a static multicast MAC address, associate the multicast MAC address with the VLAN used to switch Layer 2 multicast traffic, and add output ports that will receive multicast streams on the VLAN. To delete a configured static multicast MAC address from the MAC address table on the router, enter the `no mac-address-table static multicast-mac-address` command.

**Syntax**
```
mac-address-table static multicast-mac-address multicast vlan vlan-id range-output {single-interface | interface-list | interface-range}
```

To remove a MAC address, use the `no mac-address-table static multicast-mac-address output interface vlan vlan-id` command.

**Parameters**
- `multicast` Enter a vlan port to where L2 multicast MAC traffic is forwarded.
  - **NOTE:** Use this option if you want multicast functionality in an L2 VLAN without IGMP protocols.
- `output interface` For a multicast MAC address, enter the keyword `output` then one of the following interfaces for which traffic is forwarded:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- `output-range interface` For a multicast MAC address, enter the keyword `output-range` then one of the following interfaces to indicate a range of ports for which traffic is forwarded:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.
- `vlan vlan-id` Enter the keyword `vlan` then a VLAN ID number from 1 to 4094.

**Defaults**
Not configured.

**Command Modes**
- **CONFIGURATION**

**Command History**
The following is a list of the Dell Networking OS version history for this command.

**Version 9.3(0.0)** Added support for multicast MAC address on the MXL platform.

**Example**
```
mac-address-table static 01:00:5E:01:00:01 {multicast vlan 2 output-range Te 1/2,Te 1/3}
```

ip vlan-flooding

Enable unicast data traffic flooding on VLAN member ports.

**Syntax**
```
ip vlan-flooding
```

To disable, use the `no ip vlan-flooding` command.

**Command Modes**
- **CONFIGURATION**
Command History

Version 9.3(0.0) Introduced on the S4810, S4820T, S6000, Z9000, and MXL platforms

Default

Disabled

Usage Information

By default this command is disabled. There might be some ARP table entries which are resolved through ARP packets which had Ethernet MAC SA different from MAC information inside the ARP packet. This unicast data traffic flooding occurs only for those packets which use these ARP entries.
Multicast Source Discovery Protocol (MSDP)

Multicast source discovery protocol (MSDP) connects multiple PIM Sparse-Mode (PIM-SM) domains together. MSDP peers connect using TCP port 639. Peers send keepalives every 60 seconds. A peer connection is reset after 75 seconds if no MSDP packets are received. MSDP connections are parallel with MBGP connections.

The Dell Networking operating system supports MSDP commands on the Z9000 platform.

Topics:

- clear ip msdp peer
- clear ip msdp sa-cache
- clear ip msdp statistic
- debug ip msdp
- ip msdp cache-rejected-sa
- ip msdp default-peer
- ip msdp log-adjacency-changes
- ip msdp mesh-group
- ip msdp originator-id
- ip msdp peer
- ip msdp redistribute
- ip msdp sa-filter
- ip msdp sa-limit
- ip msdp shutdown
- ip multicast-msdp
- show ip msdp
- show ip msdp sa-cache rejected-sa

### clear ip msdp peer

Reset the TCP connection to the peer and clear all the peer statistics.

**Z9000**

**Syntax**

clear ip msdp peer {peer address}

**Parameters**

- **peer address**
  
Enter the peer address in a dotted decimal format (A.B.C.D.)

**Defaults**

- Not configured.

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
clear ip msdp sa-cache

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

Z9000

clear ip msdp sa-cache [group-address | rejected-sa | local]

Parameters

- **group-address**: Enter the group IP address in dotted decimal format (A.B.C.D.).
- **rejected-sa**: Enter the keywords rejected-sa to clear the cache source-active entries that are rejected because the RPF check failed, an SA filter or limit is configured, the RP or MSDP peer is unreachable, or because of a format error.
- **local**: Enter the keyword local to clear out local PIM advertised entries. It applies the redistribute filter (if present) while adding the local PIM SA entries to the SA cache.

Defaults

Without any options, this command clears the entire source-active cache.

Command Modes

- EXEC Privilege

</tbody>
</table>
clear ip msdp statistic

Clears the entire source-active cache, the source-active entries of a particular multicast group, rejected, or local source-active entries.

Z9000

**Syntax**
clear ip msdp statistic peer peer-address

**Parameters**
- **peer**
  - Enter the keyword peer to clear the MSDP peer entries.
- **peer-address**
  - Enter the IP address of the MSDP peer.

**Defaults**
Without any options, this command clears the entire source-active cache.

**Command Modes**
EXEC Privilege

</tr>
</tbody>
</table>

debug ip msdp

Turn on MSDP debugging.

Z9000

**Syntax**
dump ip msdp {event peer address | packet peer address | pim}

To turn debugging off, use the no debug ip msdp {event peer address | packet peer address | pim} command.

**Parameters**
- **event peer address**
  - Enter the keyword event then the peer address in a dotted decimal format (A.B.C.D.).
- **packet peer address**
  - Enter the keyword packet then the peer address in a dotted decimal format (A.B.C.D.).
- **pim**
  - Enter the keyword pim to debug advertisement from PIM.

**Defaults**
Not configured.

**Command Modes**
EXEC Privilege

### ip msdp cache-rejected-sa

Enable an MSDP cache for the rejected source-active entries.

#### Z9000

**Syntax**

```
ip msdp cache-rejected-sa {number}
```

To clear the MSDP rejected source-active entries, use the `no ip msdp cache-rejected-sa {number}` command then the `ip msdp cache-rejected-sa {number}` command.

**Parameters**

- **number**
  - Enter the number of rejected SA entries to cache. The range is from 0 to 32766.

**Defaults**

none

**Command Modes**

**Related Commands**

- `show ip msdp sa-cache rejected-sa` — displays the rejected SAs in the SA cache.
ip msdp default-peer

Define a default peer from which to accept all source-active (SA) messages.

Z9000

Syntax

`ip msdp default-peer peer address [list name]`

To remove the default peer, use the `no ip msdp default-peer (peer address) list name` command.

Parameters

- **peer address**: Enter the peer address in a dotted decimal format (A.B.C.D.)
- **list name**: Enter the keywords `list name` and specify a standard access list that contains the RP address that should be treated as the default peer. If no access list is specified, then all SAs from the peer are accepted.

Defaults

Not configured.

Usage Information

If a list is not specified, all SA messages received from the default peer are accepted. You can enter multiple `default peer` commands.

ip msdp log-adjacency-changes

Enable logging of MSDP adjacency changes.

Z9000

Syntax

`ip msdp log-adjacency-changes`

To disable logging, use the `no ip msdp log-adjacency-changes` command.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Usage Information

If a list is not specified, all SA messages received from the default peer are accepted. You can enter multiple `default peer` commands.
ip msdp mesh-group

To be a member of a mesh group, configure a peer.

Z9000

Syntax

```
ip msdp mesh-group {name} {peer address}
```

To remove the peer from a mesh group, use the `no ip msdp mesh-group {name} {peer address}` command.

Parameters

- **name**: Enter a string of up to 16 characters long for the mesh group name.
- **peer address**: Enter the peer address in a dotted decimal format (A.B.C.D.).

Defaults

Not configured.

Command Modes

</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

Usage Information

An MSDP mesh group is a mechanism for reducing SA flooding, typically in an intra-domain setting. When some subset of a domain’s MSDP speakers are fully meshed, they can be configured into a mesh-group. If member X of a mesh-group receives a SA message from an MSDP peer that is also a member of the mesh-group, member X accepts the SA message and forwards it to all of its peers that are not part of the mesh-group. However, member X cannot forward the SA message to other members of the mesh-group.
**ip msdp originator-id**

Configure the MSDP Originator ID.

**Z9000**

**Syntax**

```
ip msdp originator-id {interface}
```

To remove the originator-id, use the `no ip msdp originator-id {interface}` command.

**Parameters**

- `interface` Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

</tbody>
</table>

**ip msdp peer**

Configure an MSDP peer.

**Z9000**

**Syntax**

```
ip msdp peer peer address [connect-source] [description] [sa-limit number]
```

To remove the MSDP peer, use the `no ip msdp peer peer address [connect-source interface] [description name] [sa-limit number]` command.

**Parameters**

- `peer address` Enter the peer address in a dotted decimal format (A.B.C.D).
- `connect-source interface` Enter the keywords `connect-source` then one of the interfaces and slot/port or number information:
For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.

For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.

For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**description name** (OPTIONAL) Enter the keyword description then a description name (maximum 80 characters) to designate a description for the MSDP peer.

**sa-limit number** (OPTIONAL) Enter the maximum number of SA entries in SA-cache. The range is from 1 to 100000.

**Defaults**
As described in the Parameters section.

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.5.1.0</td>
<td>Added support for 4-port 40G line cards on ExaScale.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Added option for SA upper limit and the description option.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

**Usage Information**
The connect-source option is used to supply a source IP address for the TCP connection. When an interface is specified using the connect-source option, the primary configured address on the interface is used.

If the total number of SA messages received from the peer is already larger than the limit when this command is applied, those SA messages continue to be accepted. To enforce the limit in such situation, use the clear ip msdp peer command to reset the peer.

**Related Commands**
- `ip msdp sa-limit` — configures the MSDP SA Limit.
- `clear ip msdp peer` — clears the MSDP peer.
- `show ip msdp` — displays the MSDP information.

### ip msdp redistribute

Filter local PIM SA entries in the SA cache. SAs which the ACL denies time out and are not refreshed. Until they time out, they continue to reside in the MSDP SA cache.

**Z9000**

**Syntax**
```
ip msdp redistribute [list acl-name]
```
Parameters

| list acl-name | Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked. |

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>

</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

Usage Information

Modifications to the ACL do not have an immediate effect on the sa-cache.

To apply the redistribute filter to entries already present in the SA cache, use the clear ip msdp sa-cache local command.

**ip msdp sa-filter**

Permit or deny MSDP source active (SA) messages based on multicast source and/or group from the specified peer.

**Z9000**

Syntax

ip msdp sa-filter {in | out} peer-address list [access-list name]

Remove this configuration using the no ip msdp sa-filter {in | out} peer address list [access-list name] command.

Parameters

| in          | Enter the keyword in to enable incoming SA filtering. |
| out         | Enter the keyword out to enable outgoing SA filtering. |
| peer-address| Enter the peer address of the MSDP peer in a dotted decimal format (A.B.C.D.). |
| access-list name | Enter the name of an extended ACL that contains permitted SAs. If you do not use this option, all local entries are blocked. |

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

</tr>
</tbody>
</table>
ip msdp sa-limit

Configure the upper limit of source-active (SA) entries in SA-cache.

Z9000

Syntax

```plaintext
ip msdp sa-limit number
```

To return to the default, use the `no ip msdp sa-limit number` command.

Parameters

- **number**: Enter the maximum number of SA entries in SA-cache. The range is from 1 to 500000.

Defaults

50000

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Dell Networking OS counts the SA messages originated by itself and those messages received from the MSDP peers. When the total SA messages reach this limit, the subsequent SA messages are dropped (even if they pass RPF checking and policy checking).

If the total number of SA messages is already larger than the limit when this command is applied, those SA messages that are already in Dell Networking OS continue to be accepted. To enforce the limit in such situation, use the `clear ip msdp sa-cache` command.

Related Commands

- `ip msdp peer` — configures the MSDP peer.
- `clear ip msdp peer` — clears the MSDP peer.
- `show ip msdp` — displays the MSDP information.
**ip msdp shutdown**

Administratively shut down a configured MSDP peer.

**Z9000**

**Syntax**

```
ip msdp shutdown {peer address}
```

**Parameters**

- **peer address**
  
Enter the peer address in a dotted decimal format (A.B.C.D.).

**Defaults**

Not configured.

**show ip msdp**
Display the MSDP peer status, SA cache, or peer summary.

**Z9000**

**Syntax**

```
show ip msdp {peer peer address | sa-cache | summary}
```

**Parameters**

- `peer peer address`
  - Enter the keyword `peer` then the peer address in a dotted decimal format (A.B.C.D.).
- `sa-cache`
  - Enter the keywords `sa-cache` to display the Source-Active cache.
- `summary`
  - Enter the keyword `summary` to display an MSDP peer summary.

Multiple Spanning Tree Protocol (MSTP)

Multiple spanning tree protocol (MSTP), as implemented by the Dell Networking operating system, conforms to IEEE 802.1s.

This command supports the Dell Networking Z9000 platform.

Topics:

- debug spanning-tree mstp
- disable
- forward-delay
- hello-time
- max-age
- max-hops
- msti
- name
- protocol spanning-tree mstp
- revision
- show config
- show spanning-tree mst configuration
- show spanning-tree msti
- spanning-tree
- spanning-tree msti
- spanning-tree mstp edge-port
- tc-flush-standard

debug spanning-tree mstp

Enable debugging of the multiple spanning tree protocol and view information on the protocol.

Z9000

Syntax

debug spanning-tree mstp [all | bpdu interface {in | out} | events]

To disable debugging, enter no debug spanning-tree mstp

Parameters

- all
- bpdu interface
  - (OPTIONAL) Enter the keyword all to debug all spanning tree operations.
  - interface
  - (OPTIONAL) Enter the keyword bpdu to debug bridge protocol data units (BPDU).
  - (OPTIONAL) Enter the interface keyword along with the type slot/port of the interface you want displayed. Type slot/port options are the following:
    - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - Optionally, enter an in or out parameter with the optional interface:
    - For Receive, enter the keyword in.
    - For Transmit, enter the keyword out.
events  (OPTIONAL) Enter the keyword events to debug MSTP events.

**Command Modes**  
EXEC Privilege

**Command History**  
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

</tbody>
</table>

**Example**

```
Dell#debug spanning-tree mstp bpdu tengigabitethernet 2/1 ?
in Receive (in)
out Transmit (out)
```

## disable

Globally disable the multiple spanning tree protocol on the switch.

**Z9000**

**Syntax**

```
disable
```

To enable MSTP, enter the `no disable` command.

**Defaults**

disabled.

forward-delay

The amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.

Z9000

Syntax

forward-delay seconds

To return to the default setting, use the no forward-delay command.

Parameters

seconds

Enter the number of seconds the interface waits in the Blocking State and the Learning State before transiting to the Forwarding State. The range is from 4 to 30. The default is 15 seconds.

Defaults

15 seconds

Command Modes

MULTIPLE SPANNING TREE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description

9.7(0.0) Introduced on the S6000-ON.

9.0.2.0 Introduced on the S6000.

8.3.19.0 Introduced on the S4820T.

8.3.11.1 Introduced on the Z9000.

8.3.7.0 Introduced on the S4810.

7.6.1.0 Introduced on the S-Series.

7.5.1.0 Introduced on the C-Series.

6.5.1.0 Introduced.

Related Commands

max-age — changes the wait time before MSTP refreshes protocol configuration information.

hello-time — changes the time interval between bridge protocol data units (BPDUs).

hello-time

Set the time interval between generation of MSTB bridge protocol data units (BPDUs).

Z9000

Syntax

hello-time seconds
To return to the default value, use the `no hello-time` command.

**Parameters**

- **seconds**
  
  Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10. The default is 2 seconds.

**Defaults**

- 2 seconds

**Command Modes**

- MULTIPLE SPANNING TREE

**Related Commands**

- `forward-delay` — the amount of time the interface waits in the Blocking State and the Learning State before transitioning to the Forwarding State.
- `max-age` — changes the wait time before MSTP refreshes protocol configuration information.

## max-age

To maintain configuration information before refreshing that information, set the time interval for the MSTB.

**Z9000**

**Syntax**

```plaintext
max-age seconds
```

To return to the default value, use the `no max-age` command.

**Parameters**

- **max-age**
  
  Enter a number of seconds the Dell Networking OS waits before refreshing configuration information. The range is from 6 to 40. The default is 20 seconds.

**Defaults**

- 20 seconds

**Command Modes**

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

The max-hops command is a configuration command that applies to both the IST and all MST instances in the MSTP region. The BPDUs sent out by the root switch set the remaining-hops parameter to the configured value of max-hops. When a switch receives the BPDU, it decrements the received value of the remaining hops and uses the resulting value as remaining-hops in the BPDUs. If the remaining-hops reach zero, the switch discards the BPDU and ages out any information that it holds for the port.
msti

Configure multiple spanning tree instance, bridge priority, and one or multiple VLANs mapped to the MST instance.

Z9000

Syntax

msti instance {vlan range | bridge-priority priority}

To disable mapping or bridge priority, use the no msti instance {vlan range | bridge-priority priority} command.

Parameters

- **msti instance**: Enter the MSTP instance. The range is from zero (0) to 63.
- **vlan range**: Enter the keyword vlan then the identifier range value. The range is from 1 to 4094.
- **bridge-priority priority**: Enter the keywords bridge-priority then a value in increments of 4096 as the bridge priority. The range is from zero (0) to 61440. Valid priority values are: 0, 4096, 8192, 12288, 16384, 20480, 24576, 28672, 32768, 36864, 40960, 45056, 49152, 53248, 57344, and 61440. All other values are rejected.

Defaults
default bridge-priority is 32768.

</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information
By default, all VLANs are mapped to MST instance zero (0) unless you use the vlan range command to map it to a non-zero instance.

name

The name you assign to the multiple spanning tree region.

Z9000

Syntax

name region-name

To remove the region name, use the no name command.
Parameters

**region-name** Enter the MST region name. The range is 32 character limit.

Defaults

- no default name.

------------------------------------
Te 1/1  5         INCON(Root)  Rootguard
Te 1/2  5         FWD          Loopguard
Te 1/3  5         EDS(Shut)    Bpduguard

spanning-tree
Enable the multiple spanning tree protocol on the interface.

Z9000
Syntax
spanning-tree
To disable the multiple spanning tree protocol on the interface, use the no spanning-tree command.

Parameters
spanning-tree Enter the keywords spanning-tree to enable the MSTP on the interface.

Defaults
spanning-tree Enable.

Command Modes INTERFACE

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
spanning-tree msti

Configure multiple spanning tree instance cost and priority for an interface.

Z9000

Syntax
spanning-tree msti instance {cost cost | priority priority}

Parameters
- **msti instance**: Enter the keyword **msti** and the MST instance number. The range is from zero (0) to 63.
- **cost cost**: (OPTIONAL) Enter the keyword **cost** then the port cost value. The range is from 1 to 200000. The defaults are:
  - 100 Mb/s Ethernet interface = 200000
  - 1-Gigabit Ethernet interface = 20000
  - 10-Gigabit Ethernet interface = 2000
  - Port Channel interface with one 100Mb/s Ethernet = 200000
  - Port Channel interface with one 1 Gigabit Ethernet = 20000
  - Port Channel interface with one 10 Gigabit Ethernet = 2000
  - Port Channel with two 1 Gigabit Ethernet = 18000
  - Port Channel with two 10 Gigabit Ethernet = 1800
  - Port Channel with two 100 Mbps Ethernet = 180000
- **priority priority**: Enter keyword **priority** then a value in increments of 16 as the priority. The range is from 0 to 240. The default is 128.

Defaults
- cost = depends on the interface type
- priority = 128

Command Modes

</table>

**Usage Information**

On an MSTP switch, a port configured as an edge port immediately transitions to the Forwarding state. Only configure ports connected to end-hosts as edge ports. Consider an edge port similar to a port with spanning-tree portfast enabled.

If you do not enable `shutdown-on-violation`, BPDUs are still sent to the RPM CPU.
**tc-flush-standard**

Enable the MAC address flushing after receiving every topology change notification.

**Z9000**

**Syntax**

```markdown
tc-flush-standard
```

To disable, use the `no tc-flush-standard` command.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant `Dell Networking OS Command Line Reference Guide`.

<tr>
<td>6.5.1.0</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, Dell Networking OS implements an optimized flush mechanism for MSTP. This mechanism helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, this knob command can be turned on to enable flushing MAC addresses after receiving every topology change notification.
The multicast commands are supported by Dell Networking operating system (OS) on all Z9000 platform.

This chapter contains the following sections:
● IPv4 Multicast Commands

Topics:
● IPv4 Multicast Commands
● IPv6 Multicast Commands

IPv4 Multicast Commands

The following section contains the IPv4 multicast commands.

clear ip mroute

Clear learned multicast routes on the multicast forwarding table. To clear the protocol-independent multicast (PIM) tree information base, use the `clear ip pim tib` command.

Z9000

**Syntax**

`clear ip mroute {group-address [source-address] | * | snooping}`

**Parameters**

- `group-address` Enter the multicast group address and source address (if desired), in dotted decimal format, to clear information on a specific group.
- `source-address` Enter the multicast group address in dotted decimal format.
- `*` Enter * to clear all multicast routes.
- `snooping` Enter the keyword snooping to delete multicast snooping route table entries.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**E-Series legacy command**

**Related Commands**

- `show ip pim tib` — shows the PIM tree information base.
ip mroute

Assign a static mroute.

Z9000

Syntax

ip mroute destination mask {ip-address | null 0| {{bgp| ospf} process-id | isis | rip | static} {ip-address | tag | null 0}} [distance]

To delete a specific static mroute, use the no ip mroute destination mask {ip-address | null 0| {{bgp| ospf} process-id | isis | rip | static} {ip-address | tag | null 0}} [distance] command.

To delete all mroutes matching a certain mroute, use the no ip mroute destination mask command.

Parameters

- **destination**: Enter the IP address in dotted decimal format of the destination device.
- **mask**: Enter the mask in slash prefix formation (/x) or in dotted decimal format.
- **null 0** (OPTIONAL) Enter the keyword null then zero (0).
- **[protocol [process-id | tag] ip-address]** (OPTIONAL) Enter one of the routing protocols:
  - Enter the BGP as-number then the IP address in dotted decimal format of the reverse path forwarding (RPF) neighbor. The range is from 1 to 65535.
  - Enter the OSPF process identification number then the IP address in dotted decimal format of the RPF neighbor. The range is from 1 to 65535.
  - Enter the IS-IS alphanumeric tag string then the IP address in dotted decimal format of the RPF neighbor.
  - Enter the RIP IP address in dotted decimal format of the RPF neighbor.
- **static ip-address** (OPTIONAL) Enter the Static IP address in dotted decimal format of the RPF neighbor.
- **ip-address** (OPTIONAL) Enter the IP address in dotted decimal format of the RPF neighbor.
- **distance** (OPTIONAL) Enter a number as the distance metric assigned to the mroute. The range is from 0 to 255.

Defaults

Not configured.

Command Modes

E-Series legacy command

Related Commands

- show ip mroute — displays the routing table.
**ip multicast-limit**

To limit the number of multicast entries on the system, use this feature.

**Z9000**

**Syntax**

```plaintext
ip multicast-limit limit
```

**Parameters**

- `limit`: Enter the desired maximum number of multicast entries on the system. The S-Series range is from 1 to 16000.

**Defaults**

The S-Series default is **4000**.

**Command Modes**

- **CONFIGURATION**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

This feature allows you to limit the number of multicast entries on the system. This number is the total of all the multicast entries on all line cards in the system. On each line card, the multicast module only installs the maximum number of entries, depending on the configured CAM profile.

To store multicast routes, use the IN-L3-McastFib CAM partition. It is a separate hardware limit that exists per port-pipe. This hardware space limitation can supersede any software-configured limit. The opposite is also true, the CAM partition might not be exhausted at the time the system-wide route limit set by the `ip multicast-limit` command is reached.

**Related Commands**

- `show ip igmp groups` — shows the IGMP groups.

**ip multicast-routing**

Enable IP multicast forwarding.

**Z9000**

**Syntax**

```plaintext
ip multicast-routing
```

To disable multicast forwarding, use the `no ip multicast-routing` command.

**Defaults**

Disabled.

**Command Modes**

- **CONFIGURATION**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- **Version** | **Description** |
  - 9.0.2.0   | Introduced on the S6000. |
  - 8.3.19.0  | Introduced on the S4820T. |
  - 8.3.7.0   | Introduced on the S4810. |
  - 7.8.1.0   | Introduced on the C-Series. |
  - 7.6.1.0   | Introduced on the E-Series. |

812  Multicast
After you enable multicast, you can enable IGMP and PIM on an interface. In INTERFACE mode, enter the `ip pim sparse-mode` command to enable IGMP and PIM on the interface.

**Related Commands**

- `ip pim sparse-mode` — enables IGMP and PIM on an interface.

**show ip mroute**

View the multicast routing table.

**Syntax**

```
show ip mroute [static | group-address [source-address] | count | snooping [vlan vlan-id] | summary | vlt [group-address [source-address] | count]
```

**Parameters**

- `static` (OPTIONAL) Enter the keyword static to view static multicast routes.
- `group-address [source-address]` (OPTIONAL) Enter the multicast group-address to view only routes associated with that group. Enter the source-address to view routes with that group-address and source-address.
- `count` (OPTIONAL) Enter the keyword count to view the number of multicast routes and packets.
- `snooping [vlan vlan-id] [group-address [source-address]]` Enter the keyword snooping to display information on the multicast routes PIM-SM snooping discovers.
  - Enter a VLAN ID to limit the information displayed to the multicast routes PIM-SM snooping discovers on a specified VLAN. The VLAN ID range is from 1 to 4094.
  - Enter a multicast group address and, optionally, a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes PIM-SM snooping discovers for a specified multicast group and source.
- `summary` (OPTIONAL) Enter the keyword summary to view a summary of all routes.
- `vlt` (OPTIONAL) Enter the keyword vlt to view multicast routes with a spanned incoming interface. Enter a multicast group address in dotted decimal format (A.B.C.D) to limit the information displayed to the multicast routes for a specified multicast group and optionally a source multicast address in dotted decimal format (A.B.C.D) to limit the information displayed for a specified multicast source. Enter the keyword count to display the total number of multicast routes with the spanned IIF.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
### Version Description

- **9.0.2.0**: Introduced on the S6000.
- **9.2.(0.0)**: Added support for keyword vlt to the Z9000, S4810, and S4820T.
- **8.4.1.1**: Support for the keyword snooping and the optional \( vlan \) \( vlan-id \), \( group-address \), and \( source-address \) parameters were added on E-Series ExaScale.
- **8.3.19.0**: Introduced on the S4820T.
- **8.3.7.0**: Introduced on the S4810.
- **7.6.1.0**: Introduced on the S-Series.
- **7.5.1.0**: Introduced on the C-Series.

### E-Series legacy command

**Usage Information**

The following describes the `show ip mroute` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>((S, G))</td>
<td>Displays the forwarding entry in the multicast route table.</td>
</tr>
<tr>
<td><code>uptime</code></td>
<td>Displays the amount of time the entry has been in the multicast forwarding table.</td>
</tr>
</tbody>
</table>
Field | Description
--- | ---
Incoming interface | Displays the reverse path forwarding (RPF) information towards the source for (S,G) entries and the RP for (*,G) entries.
Outgoing interface list: | Lists the interfaces that meet one of the following:
- a directly connected member of the Group
- statically configured member of the Group
- received a (*,G) or (S,G) Join message

**Example**

Dell#show ip mroute

IP Multicast Routing Table

(*, 224.10.10.1), uptime 00:05:12  
Incoming interface: TenGigabitEthernet 3/12  
Outgoing interface list:  
TenGigabitEthernet 3/13

(1.13.1.100, 224.10.10.1), uptime 00:04:03  
Incoming interface: TenGigabitEthernet 3/4  
Outgoing interface list:  
TenGigabitEthernet 3/12  
TenGigabitEthernet 3/13

(*, 224.20.20.1), uptime 00:05:12  
Incoming interface: TenGigabitEthernet 3/12  
Outgoing interface list:  
TenGigabitEthernet 3/4

**show ip rpf**

View reverse path forwarding.

**Z9000**

**Syntax**

```
show ip rpf
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.1</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>E-Series legacy command</td>
<td></td>
</tr>
</tbody>
</table>

**Usage Information**

Network administrators use static mroutes to control the reach-ability of the multicast sources. If a PIM-registered multicast source is reachable using static mroute as well as unicast route, the distance of each route is examined and the route with shorter distance is the one the PIM selects for reach-ability.
NOTE: The default distance of mroutes is zero (0) and is CLI configurable on a per route basis.

Example

Dell#show ip rpf
RPF information for 10.10.10.9
  RPF interface: Te 3/4
  RPF neighbor: 165.87.31.4
  RPF route/mask: 10.10.10.9/255.255.255.255
  RPF type: unicast

IPv6 Multicast Commands

The following section contains the IPv6 multicast commands.

debug ipv6 mld_host

Enable the collection of debug information for MLD host transactions.

Z9000

Syntax

[no] debug ipv6 mld_host [int-count | interface type] [slot/port-range]

To discontinue collection of debug information for the MLD host transactions, use the no debug ipv6 mld_host command.

Parameters

  int-count
    Enter the keyword count to indicate the number of required debug messages.

  interface type
    Enter the following keywords and slot/port information:
    ● For a 10G Ethernet interface, enter the keyword tengigabitethernet then the slot/port information.
    ● For a 40G interface, enter the keyword fortyGigE then the slot/port information.
    ● For a management interface, enter the keyword managementinterface then the slot/port information.
    ● For a port-channel interface, enter the keywords port-channel then the slot/port information.
    ● For a VLAN interface, enter the keyword vlan then the slot/port information.

Default

Disabled

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version 8.3.19.0  Introduced on the S4820T.
Version 8.3.11.1  Introduced on the Z9000.
Version 8.3.7.1  Introduced on the S4810.

Usage Information

To debug the MLD protocol for all ports or for specified ports, use the debug ipv6 mld_host command. Displayed information includes when a query is received, when a report is sent, when a mcast joins or leaves a group, and some reasons why an MLD query is rejected.
**ip multicast-limit**

To limit the number of multicast entries on the system, use this feature.

### Z9000

**Syntax**

```
ip multicast-limit limit
```

**Parameters**

- `limit` Enter the desired maximum number of multicast entries on the system. The S-Series range is from 1 to 16000.

**Defaults**

The S-Series default is **4000**.

**Usage Information**

This feature allows you to limit the number of multicast entries on the system. This number is the total of all the multicast entries on all line cards in the system. On each line card, the multicast module only installs the maximum number of entries, depending on the configured CAM profile.

To store multicast routes, use the IN-L3-McastFib CAM partition. It is a separate hardware limit that exists per port-pipe. This hardware space limitation can supersede any software-configured limit. The opposite is also true, the CAM partition might not be exhausted at the time the system-wide route limit set by the `ip multicast-limit` command is reached.

**Related Commands**

- `show ip igmp groups` — shows the IGMP groups.
Neighbor Discovery Protocol (NDP)

The neighbor discovery protocol for IPv6 is defined in RFC 2461 as part of the Stateless Address Autoconfiguration protocol. It replaces the Address Resolution Protocol used with IPv4. NDP defines mechanisms for solving the following problems:

- Router discovery: Hosts can locate routers residing on a link
- Prefix discovery: Hosts can discover address prefixes for the link
- Parameter discovery
- Address autoconfiguration — configuration of addresses for an interface
- Address resolution — mapping from IP address to link-layer address
- Next-hop determination
- Neighbor unreachability detection (NUD): Determine that a neighbor is no longer reachable on the link.
- Duplicate address detection (DAD): Allow a node to check whether a proposed address is already in use.
- Redirect: The router can inform a node about a better first-hop.

NDP uses the following five ICMPv6 packet types in its implementation:

- Router Solicitation
- Router Advertisement
- Neighbor Solicitation
- Neighbor Advertisement
- Redirect

Topics:

- IPv6 Router Advertisement (RA) Guard

IPv6 Router Advertisement (RA) Guard

The IPv6 RA guard provides support to perform conditional forwarding or blocking of the router advertisement messages that are received at the network device platform. This functionality analyzes and filters the RAs sent by the devices and compares the configuration information on the layer 2 device with the RA frame. Once the layer 2 device validates the content of the RA frame against the configuration, it forwards the RA to its unicast or multicast destination. On failure to validate the RA frame content, the RA frame is dropped.

The IPv6 RA guard supports two different modes:

- Host mode — When a policy with device role as host is applied on an interface, all the RA packets are dropped without validation. You can also configure the host mode policy with VLAN option to drop the RA packets on that specific VLAN and port.
- Router mode — When a policy with device role as router is applied on an interface, all the RA packets are validated based on the configuration information in the policy. Similarly, you can also apply this mode over any specific VLAN and the validation is performed only for that particular VLAN RA packets.

To configure the IPv6 RA guard, use the following Dell Networking OS commands.

**clear ipv6 neighbors**

Delete all entries in the IPv6 neighbor discovery cache or neighbors of a specific interface. Static entries are not removed using this command.

**Syntax**

```
clear ipv6 neighbors [ipv6-address | interface]
```

**Parameters**

- `ipv6-address` Enter the IPv6 address of the neighbor in the x:x:x::x format to remove a specific IPv6 neighbor.
interface

To remove all neighbor entries learned on a specific interface, enter the keyword `interface` then the interface type and slot/port or number information of the interface:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

</tbody>
</table>

debug ipv6 nd ra-guard

Enable debugging for IPv6 RA guard snooping information.

Syntax  
`debug ipv6 nd ra-guard [interface_type slot/port | count value]`

Parameters

- `interface_type` Enter the one of the following interfaces and slot/port information:
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- `count value` Enter the keyword `count` then the number of debug outputs. The range is from 1 to 65534. The default is infinity.

Defaults  
none

Command Modes

EXEC Privilege

hop-limit

Enable the verification of the advertised hop count limit. If this command is not configured, the verification process is bypassed.

Syntax
hop-limit {maximum | minimum limit}

To reset the hop count limit, use the no hop-limit {maximum | minimum limit} command.

Parameters
- maximum limit
  - Enter the keyword maximum then the hop limit value. The range is from 0 to 254.
- minimum limit
  - Enter the keyword minimum then the hop limit value. The range is from 0 to 254.

**ipv6 nd ra-guard policy**

Define the RA guard policy name and enter the RA guard policy list configuration mode.

**Syntax**

```
ipv6 nd ra-guard policy policy-name
```

**Parameters**

- `policy policy-name`: Enter the keyword `policy` then the policy-name. The policy name allows a maximum of 140 characters.

**Defaults**

None

**Command Modes**

CONFIGURATION
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S4810, S4820T, S5000, S6000, and Z9000 switches.</td>
</tr>
</tbody>
</table>

**Related Commands**

ipv6 nd ra-guard enable — Allows you to configure the RA guard related commands.

**ipv6 neighbor**

Configure a static entry in the IPv6 neighbor discovery.

**Syntax**

ipv6 neighbor {ipv6-address} {interface interface} {hardware_address}

To remove a static IPv6 entry from the IPv6 neighbor discovery, use the no ipv6 neighbor {ipv6-address} {interface interface} command.

**Parameters**

- **ipv6-address**
  - Enter the IPv6 address of the neighbor in the x:x:x:x::x format.
  
  **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

- **interface interface**
  - Enter the keyword interface then the interface type and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
    - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
    - For a port channel interface, enter the keywords port-channel then a number.
    - For a Null interface, enter the keyword null then the Null interface number.
    - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
    - For a tunnel interface, enter the keyword tunnel then the tunnel interface number. The range is from 1 to 16383.

- **hardware_address**

**Defaults**

none

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.1</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
managed-config-flag

Set the managed address configuration flag.

**Syntax**

```markdown
managed-config-flag {on | off}
```

To clear the flag, use the `no managed-config-flag {on | off}` command.

**Parameters**

- **on**
  - Enter the keyword `on` to set the managed-config-flag value as ON.
- **off**
  - Enter the keyword `off` to set the managed-config flag value as OFF.

**Defaults**

none

**Related Commands**

- `ipv6 nd ra-guard enable` — Allows you to configure the RA guard related commands.
- `ipv6 nd raguard policy policy-name` — Defines the router advertisement (RA) guard policy name and enter the RA guard policy configuration mode.

match ra

Enable verifying either of the configured source IPv6 address or prefix address or the source MAC address in the inspected messages. If this command is not configured, the verification process is bypassed.

**Syntax**

```markdown
match ra {ipv6-access-list name | ipv6-prefix-list name | mac-access-list name}
```

To reset the access list, use the `no match ra{ipv6-access-list | ipv6-prefix-list | mac-access-list}command.

**Parameters**

- **ipv6-access-list name**
  - Enter the keywords `ipv6-access-list` then the access-list name. The access-list name allows a maximum of 140 characters.
- **ipv6-prefix-list name**
  - Enter the keywords `ipv6-prefix-list` then the prefix-list name. The prefix-list name allows a maximum of 140 characters.
- **mac-access-list name**
  - Enter the keywords `ipv6-mac-access-list` then the mac-access-list name. The mac-access-list name allows a maximum of 140 characters.

**Defaults**

none

</tr>
</tbody>
</table>
**mtu**

Enable the verification of the configured maximum transmission unit (MTU) value in the received RA packets.

**Syntax**

```
mtu value
```

To reset the MTU value, use the `no mtu value` command.

**Parameters**

- `value` Enter the maximum transmission unit value in bytes. The range is from 1,280 to 11,982 bytes.

**Defaults**

0

**other-config-flag**

Enable the verification of the advertised other configuration parameter. If this command is not configured, the verification process is bypassed.

**Syntax**

```
other-config-flag {on | off}
```

To reset the other configuration parameter, use the `no other-config-flag {on | off}` command.

**Parameters**

- `on` Enter the keyword `on` to set the other-config-flag value as ON.
- `off` Enter the keyword `off` to set the other-config flag value as OFF.

reachable-time

Enable the verification of the configured reachability time in the received RA packets.

Syntax

reachable-time value

To reset the advertised reachability time, use the no reachable-time value command.

Parameters

value

Enter the advertised reachability time in milliseconds. The range is from 0 to 3,600,000 milliseconds.

Defaults

none

Related Commands

- ipv6 nd ra-guard enable — Allows you to configure the RA guard related commands.
- ipv6 nd raguard policy policy-name — Defines the RA guard policy name and enter the RA guard policy configuration mode.

retrans-time

Enable the verification of the configured retransmission timer value in the received RA packets.

Syntax

retrans-time value

To reset the advertised retransmission interval, use the no retrans-timer value command.

Parameters

value

Enter the advertised retransmission time interval in milliseconds. The range is from 100 to 4,294,967,295 milliseconds.

Defaults

none

Related Commands

- ipv6 nd ra-guard enable — Allows you to configure the RA guard related commands.
- ipv6 nd ra-guard policy policy-name — Defines the router advertisement (RA) guard policy name and enter the RA guard policy configuration mode.

router-preference maximum

Enable the verification of the advertised default router preference (DRP) value. The preference value is lower than or equal to the specified limit. If this command is not configured, the verification process is bypassed.

Syntax

router-preference maximum {high | low | medium}

To reset the default router preference value, use the no router-preference maximum {high | low | medium} command.

Parameters

- high Enter the keyword high to set the DRP value as high.
- low Enter the keyword low to set the DRP value as low.
- medium Enter the keyword medium to set the DRP value as medium.

Defaults

none

</table>

Example

Dell(conf)#ipv6 nd ra-guard policy test
Dell(conf-ra.guard_policy_list)#show config
!
ipv6 nd ra-guard policy test
device-role router
hop-limit maximum 251
mtu 1350
other-config-flag on
reachable-time 540
retrans-timer 101
router-preference maximum medium
trusted-port
Dell(conf-ra.guard_policy_list)#

Related Commands
- `ipv6 nd ra-guard enable` — Allows you to configure the RA guard related commands.
- `ipv6 nd ra-guard policy` — Defines the RA guard policy name and enter the RA guard policy list configuration mode.
- `device-role` — Specifies the role of the device attached to the port.
- `hop-limit` — Enables the verification of the advertised hop count limit.
- `mtu` — Sets the maximum transmission unit (MTU) value.
- `other-config-flag` — Enables the verification of the advertised other configuration parameter.
- `reachable-time` — Sets the advertised reachability time.
- `retrans-timer` — Sets the advertised retransmission time.
- `router-preference maximum` — Enables the verification of the advertised default router preference (DRP) value.
- `trusted-port` — Applies the policy to trusted ports.

show ipv6 nd ra-guard policy

Display the configurations applied on all the RA guard policies or a specific RA guard policy.

Syntax
show ipv6 nd ra-guard policy policy-name

Parameter
- `policy policy-name` Enter the keyword policy then the policy name. The policy name allows a maximum of 140 characters.

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

Neighbor Discovery Protocol (NDP) 827
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S4810, S4820T, S5000, S6000, and Z9000 switches.</td>
</tr>
</tbody>
</table>

Example

```plaintext
Dell#show ipv6 nd ra-guard policy test
ipv6 nd ra-guard policy test
  device-role router
  hop-limit maximum 1
  match ra ipv6-access-list access
  other-config-flag on
  router-preference maximum medium
  trusted-port
  Interfaces :
  Te 1/1
Dell#
```

Related Commands
- `ipv6 nd ra-guard enable` — Allows you to configure the RA guard related commands.
- `ipv6 nd ra-guard policy` — Defines the RA guard policy name and enter the RA guard policy list configuration mode.
- `device-role` — Specifies the role of the device attached to the port.
- `hop-limit` — Enables the verification of the advertised hop count limit.
- `mtu` — Sets the maximum transmission unit (MTU) value.
- `other-config-flag` — Enables the verification of the advertised other configuration parameter.
- `reachable-time` — Sets the advertised reachability time.
- `retrans-timer` — Sets the advertised retransmission time.
- `router-preference maximum` — Enables the verification of the advertised default router preference (DRP) value.
- `trusted-port` — Applies the policy to trusted ports.
- `ipv6 nd raguard attach-policy` — Applies the IPv6 RA guard to a specific interface.

**show ipv6 neighbors**

Display IPv6 discovery information. Entering the command without options shows all IPv6 neighbor addresses stored on the control processor (CP).

**Syntax**

```plaintext
show ipv6 neighbors [ipv6-address] interface interface
```

**Parameters**

- `ipv6-address` — Enter the IPv6 address of the neighbor in the x:x:x:x::x format. (Note: The :: notation specifies successive hexadecimal fields of zero.

- `interface interface` — Enter the keyword `interface` then the interface type and slot/port or number information:
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

```
none
```

**Command Modes**

```
EXEC
```
trusted-port

Allow bypassing the configured RA guard validation and forwards the RA packets received on the interface, which has the trusted port policy attached.

Syntax

trusted-port

To reset the policy applied to the trusted port, use the no trusted-port command.

Defaults

none

Command Modes

POLICY LIST CONFIGURATION

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S4810, S4820T, S5000, S6000, and Z9000 switches.</td>
</tr>
</tbody>
</table>

Usage Information

Use this command to disable all the RA guard policies.

Related Commands

- ipv6 nd ra-guard enable — Allows you to configure the RA guard related commands.
- ipv6 nd raguard policy policy-name — Defines the router advertisement (RA) guard policy name and enter the RA guard policy configuration mode.
Object Tracking

Object Tracking supports IPv4 and IPv6, and is available on the Dell Networking, C-Series, E-Series, S-Series, and S4810 platforms.

Object tracking allows you to define objects of interest, monitor their state, and report to a client when a change in an object’s state occurs. The following tracked objects are supported:

- Link status of Layer 2 interfaces
- Routing status of Layer 3 interfaces (IPv4 and IPv6)
- Reachability of IPv4 and IPv6 routes
- Metric thresholds of IPv4 and IPv6 routes

You can configure client applications, such as virtual router redundancy protocol (VRRP), to receive a notification when the state of a tracked object changes.

This chapter contains the following sections:

- IPv4 Object Tracking Commands
- IPv6 Object Tracking Commands

Topics:

- IPv4 Object Tracking Commands
- IPv6 Object Tracking Commands

IPv4 Object Tracking Commands

The following section describes the IPv4 VRRP commands.

debug track

Enables debugging for tracked objects.

Syntax

debug track [all | notifications | object-id]

Parameters

- **all**: Enables debugging on the state and notifications of all tracked objects.
- **notifications**: Enables debugging on the notifications of all tracked objects.
- **object-id**: Enables debugging on the state and notifications of the specified tracked object. The range is 1 to 500.

Defaults

Enable debugging on the state and notifications of all tracked objects (debug track all).

Command Modes

- EXEC
- EXEC Privilege

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Example

Dell#debug track all
04:35:04: %RPM0-P:RP2 %OTM-5-STATE: track 6 - Interface
TenGigabitEthernet 1/2
line-protocol DOWN
04:35:04: %RPM0-P:RP2 %OTM-5-NOTIF: VRRP notification: resource ID 6 DOWN

delay

Configure the time delay used before communicating a change in the status of a tracked object to clients.

Syntax
delay {[up seconds] [down seconds]}
To return to the default setting, use the no delay command.

Parameters
seconds Enter the number of seconds the object tracker waits before sending a notification about the change in the UP and/or DOWN state of a tracked object to clients. The range is 0 to 180. The default is 0 seconds.

Defaults
0 seconds

Command Modes
OBJECT TRACKING (conf_track_object-id)

Command History
Version Description
9.7(0.0) Introduced on the S6000-ON.
8.3.12.0 Introduced on the S4810.
8.4.1.0 Introduced.

Usage Information
You can configure an UP and/or DOWN timer for each tracked object to set the time delay before a change in the state of a tracked object is communicated to clients. The configured time delay starts when the state changes from UP to DOWN or vice-versa.

If the state of an object changes back to its former UP/DOWN state before the timer expires, the timer is cancelled and the client is not notified. For example, if the DOWN timer is running when an interface goes down and comes back up, the DOWN timer is cancelled and the client is not notified of the event.

If the timer expires and an object’s state has changed, a notification is sent to the client. If no delay is configured, a notification is sent immediately after a change in the state of a tracked object is detected. The time delay in communicating a state change is specified in seconds.

Related Commands
- track interface ip routing – configures object tracking on the routing status of an IPv4 Layer 3 interface.
- track interface line-protocol – configures object tracking on the line-protocol state of a Layer 2 interface.
- track ip route metric threshold – configures object tracking on the threshold of an IPv4 route metric.
- track ip route reachability – configures object tracking on the reachability of an IPv4 route.

description

Enter a description of a tracked object.

Syntax
description {text}
To remove the description, use the no description {text} command.

Parameters
text Enter a description to identify a tracked object (80 characters maximum).

Defaults
none

Command Modes
OBJECT TRACKING (conf_track_object-id)
show running-config track

Display the current configuration of tracked objects.

Syntax
show running-config track [object-id]

Parameters
object-id (OPTIONAL) Display information on the specified tracked object. The range is 1 to 500.

Command Modes
EXEC Privilege

Command History

<table>
<thead>
<tr>
<th>Version</th>

</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Example

Dell#show running-config track
track 1 ip route 23.0.0.0/8 reachability
track 2 ipv6 route 2040::/64 metric threshold
delay down 3
delay up 5
threshold metric up 200
track 3 ipv6 route 2050::/64 reachability
track 4 interface TenGigabitEthernet 1/2 ip routing
track 5 ip route 192.168.0.0/24 reachability vrf red
track resolution ip route isis 20
track resolution ip route ospf 10

Example (Object-id)

Dell#show running-config track 300
track 300 ip route 10.0.0.0/8 metric threshold
delay down 3
delay up 5
threshold metric up 100

Related Commands

- show track – displays information about tracked objects, including configuration, current state, and clients which track the object.
- track interface ip routing – configures object tracking on the routing status of an IPv4 Layer 3 interface.
● `track interface line-protocol` – configures object tracking on the line-protocol state of a Layer 2 interface.
● `track ip route metric threshold` – configures object tracking on the threshold of an IPv4 route metric.
● `track ip route reachability` – configures object tracking on the reachability of an IPv4 route.

**show track**

Display information about tracked objects, including configuration, current tracked state (UP or DOWN), and the clients which are tracking an object.

**Syntax**

```
show track [object-id [brief] | interface [brief] [vrf vrf-name] | ip route [brief] [vrf vrf-name] | resolution | vrf vrf-name [brief] | brief]
```

**Parameters**

- **object-id** (OPTIONAL) Display information on the specified tracked object. The range is 1 to 500.
- **interface** (OPTIONAL) Display information on all tracked interfaces (Layer 2 and IPv4 Layer 3).
- **ip route** (OPTIONAL) Display information on all tracked IPv4 routes.
- **resolution** (OPTIONAL) Display information on the configured resolution values used to scale protocol-specific route metrics. The range is 0 to 255.
- **brief** (OPTIONAL) Display a single line summary of the tracking information for a specified object, object type, or all tracked objects.
- **vrf vrf-name** (OPTIONAL) E-Series only: Display information on only the tracked objects that are members of the specified VRF instance. The maximum is 32 characters. If you do not enter a VRF name, information on the tracked objects from all VRFs displays.

**Command Modes**

EXEC Privilege

**Command History**

- **Version**
  - **9.7(0.0)** Introduced on the S6000-ON.
  - **8.3.12.0** Introduced on the S4810.
  - **8.4.1.0** Introduced.

**Usage Information**

The following describes the `show track` command shown in the Example below.

- **Output**
- **Description**

  - **Track object-id** Displays the number of the tracked object.
  - **Interface type slot/port, IP route ip-address, IPv6 route ipv6-address** Displays the interface type and slot/port number or address of the IPv4/IPv6 route that is being tracked.
  - **object is Up/Down** Up/Down state of tracked object; for example, IPv4 interface, reachability or metric threshold of an IP route.
  - **number changes, last change time** Number of times that the state of the tracked object has changed and the time since the last change in hours:minutes:seconds.
  - **First hop interface** Displays the type and slot/port number of the first-hop interface of the tracked route.
  - **Tracked by** Client that is tracking an object’s state; for example, VRRP.

**Example**

```
Dell#show track
Track 1
```
IP route 23.0.0.0/8 reachability
Reachability is Down (route not in route table)
2 changes, last change 00:16:08
Tracked by:

Track 2
IPv6 route 2040::/64 metric threshold
Metric threshold is Up (STATIC/0/0)
5 changes, last change 00:02:16
Metric threshold down 255 up 254
First-hop interface is TenGigabitEthernet 1/2
Tracked by:
VRRP TenGigabitEthernet 2/3 IPv6 VRID 1

Track 3
IPv6 route 2050::/64 reachability
Reachability is Up (STATIC)
5 changes, last change 00:02:16
First-hop interface is TenGigabitEthernet 1/2
Tracked by:
VRRP TenGigabitEthernet 2/3 IPv6 VRID 1

Usage Information
The following describes the `show track brief` command shown in the Example below.

Example (Brief)
```
Dell>show track brief
ResId Resource               Parameter   State       LastChange
1     IP route reachability   10.16.0.0/16 Up   00:01:08
2     Interface line-protocol Ethernet0/2  Down 00:05:00
3     Interface ip routing VLAN100      Up   01:10:05
```

Related Commands
- `show running-config track` – displays configuration information about tracked objects.
- `track interface ip routing` – configures object tracking on the routing status of an IPv4 Layer 3 interface.
- `track interface line-protocol` – configures object tracking on the line-protocol state of a Layer 2 interface.
- `track ip route metric threshold` – configures object tracking on the threshold of an IPv4 route metric.
- `track ip route reachability` – configures object tracking on the reachability of an IPv4 route.

threshold metric

Configure the metric threshold used to determine the UP and/or DOWN state of a tracked IPv4 or IPv6 route.

Syntax
```
threshold metric {up number | down number}
```

To return to the default setting, use the `no threshold metric {up number | down number}` command.

Parameters
- `up number` Enter a number for the UP threshold to be applied to the scaled metric of an IPv4 or IPv6 route. The default UP threshold is 254. The routing state is UP if the scaled route metric is less than or equal to the UP threshold.
Enter a number for the DOWN threshold to be applied to the scaled metric of an IPv4 or IPv6 route. The default DOWN threshold is 255. The routing state is DOWN if the scaled route metric is greater than or equal to the DOWN threshold.

**Defaults**

none

**Command Modes**

OBJECT TRACKING (conf_track_object-id)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to configure the UP and/or DOWN threshold for the scaled metric of a tracked IPv4 or IPv6 route.

Determine the UP/DOWN state of a tracked route by the threshold for the current value of the route metric in the routing table. To provide a common tracking interface for different clients, route metrics are scaled in the range 0 to 255, where 0 is connected and 255 is inaccessible. The scaled metric value communicated to a client always considers a lower value to have priority over a higher value.

The resulting scaled value is compared against the configured threshold values to determine the state of a tracked route as follows:

- If the scaled metric for a route entry is less than or equal to the UP threshold, the state of a route is UP.
- If the scaled metric for a route is greater than or equal to the DOWN threshold or the route is not entered in the routing table, the state of a route is DOWN.

Configure the UP and DOWN thresholds for each tracked route with the threshold metric command. The default UP threshold is 254; the default DOWN threshold is 255. The notification of a change in the state of a tracked object is sent when a metric value crosses a configured threshold.

The tracking process uses a protocol-specific resolution value to convert the actual metric in the routing table to a scaled metric in the range 0 to 255. You can configure the resolution value used to scale route metrics for supported protocols with the track resolution ip route and track resolution ipv6 route commands.

**Related Commands**

- track ip route metric threshold — configures object tracking on the threshold of an IPv4 route metric.
- track resolution ip route — configures the protocol-specific resolution value used to scale an IPv4 route metric.

### track interface ip routing

Configure object tracking on the routing status of an IPv4 Layer 3 interface.

**Syntax**

```plaintext
track object-id interface interface ip routing
```

To return to the default setting, use the no track object-id command.

**Parameters**

- **object-id**
  - Enter the ID number of the tracked object. The range is 1 to 500.

- **interface**
  - Enter one of the following values:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
    - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
    - For a port channel interface, enter the keywords port-channel then a number.
    - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
track interface line-protocol

Configure object tracking on the line-protocol state of a Layer 2 interface.

**Syntax**
```
track object-id interface interface line-protocol
```

To return to the default setting, use the `no track object-id` command.

**Parameters**
- **object-id**
  Enter the ID number of the tracked object. The range is 1 to 500.
- **interface**
  Enter one of the following values:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**
none

**Command Modes**
CONFIGURATION

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to create an object that tracks the line-protocol state of a Layer 2 interface:
- The status of the IPv4 interface is UP only if the Layer 2 status of the interface is UP and the interface has a valid IP address.
- The Layer 3 status of an IPv4 interface goes DOWN when its Layer 2 status goes down (for a Layer 3 VLAN, all VLAN ports must be down) or the IP address is removed from the routing table.

**Related Commands**
- `show track` — displays information about tracked objects, including configuration, current state, and clients which track the object.
- `track interface ip routing` — configures object tracking on the routing status of an IPv4 Layer 3 interface.
track ip route metric threshold

Configure object tracking on the threshold of an IPv4 route metric.

**Syntax**

```
track object-id ip route ip-address/prefix-len metric threshold [vrf vrf-name]
```

To return to the default setting, use the `no track object-id` command.

**Parameters**

- **object-id**: Enter the ID number of the tracked object. The range is 1 to 500.
- **ip-address/prefix-len**: Enter an IPv4 address in dotted decimal format. The valid IPv4 prefix lengths are from /0 to /32.
- **vrf vrf-name**: (Optional) E-Series only: You can configure a VPN routing and forwarding (VRF) instance to specify the virtual routing table to which the tracked route belongs.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

- **Version 9.7(0.0)**: Introduced on the S6000-ON.
- **Version 8.3.12.0**: Introduced on the S4810.
- **Version 8.4.1.0**: Introduced.

**Usage Information**

Use this command to create an object that tracks the UP and/or DOWN threshold of an IPv4 route metric. In order for a route’s metric to be tracked, the route must appear as an entry in the routing table.

A tracked IPv4 route is considered to match an entry in the routing table only if the exact IPv4 address and prefix length match a table entry. For example, when configured as a tracked route, 10.0.0.0/24 does not match the routing table entry 10.0.0.0/8. If no route-table entry has the exact IPv4 address and prefix length, the status of the tracked route is considered to be DOWN.

When you configure the threshold of an IPv4 route metric as a tracked object, the UP/DOWN state of the tracked route is also determined by the current metric for the route in the routing table.

To provide a common tracking interface for different clients, route metrics are scaled in the range 0 to 255, where 0 is connected and 255 is inaccessible. The scaled metric value communicated to a client always considers a lower value to have priority over a higher value. The resulting scaled value is compared against the configured threshold values to determine the state of a tracked route as follows:

- If the scaled metric for a route entry is less than or equal to the UP threshold, the state of a route is UP.
- If the scaled metric for a route is greater than or equal to the DOWN threshold or the route is not entered in the routing table, the status of the tracked route is considered to be DOWN.

You configure the UP and DOWN thresholds for each tracked route by using the `threshold metric` command. The default UP threshold is 254; the default DOWN threshold is 255. The notification of a change in the state of a tracked object is sent when a metric value crosses a configured threshold.

**Related Commands**

- `show track` – displays information about tracked objects, including configuration, current state, and clients which track the object.
- `threshold metric` – configures the metric threshold used to determine the UP and/or DOWN state of a tracked route.
- `track resolution ip route` – configures the protocol-specific resolution value used to scale an IPv4 route metric.

**track ip route reachability**

Configure object tracking on the reachability of an IPv4 route.

**Syntax**

```
track object-id ip route ip-address/prefix-len reachability [vrf vrf-name]
```

Object Tracking 837
To return to the default setting, use the `no track object-id` command.

**Parameters**

- **object-id**
  - Enter the ID number of the tracked object. The range is 1 to 500.

- **ip-address/prefix-len**
  - Enter an IPv4 address in dotted decimal format. The valid IPv4 prefix lengths are from /0 to /32.

- **vrf vrf-name**
  - (Optional) E-Series only: You can configure a VPN routing and forwarding (VRF) instance to specify the virtual routing table to which the tracked route belongs.

**Defaults**

- None

**Command Modes**

- **CONFIGURATION**

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to create an object that tracks the reachability of an IPv4 route. In order for a route's reachability to be tracked, the route must appear as an entry in the routing table.

A tracked IPv4 route is considered to match an entry in the routing table only if the exact IPv4 address and prefix length match a table entry. For example, when configured as a tracked route, 10.0.0.0/24 does not match the routing table entry 10.0.0.0/8. If no route-table entry has the exact IPv4 address and prefix length, the status of the tracked route is considered to be DOWN.

When you configure IPv4 route reachability as a tracked object, the UP/DOWN state of the tracked route is also determined by the entry of the next-hop address in the ARP cache. A tracked route is considered to be reachable if there is an ARP cache entry for the route's next-hop address.

If the next-hop address in the ARP cache ages out for a route tracked for its reachability, an attempt is made to regenerate the ARP cache entry to determine the next-hop address before considering the route DOWN.

**Related Commands**

- `show track` — displays information about tracked objects, including configuration, current state, and clients which track the object.
- `track ip route metric threshold` — configures object tracking on the threshold of an IPv4 route metric.

### track resolution ip route

Configure the protocol-specific resolution value used to scale an IPv4 route metric.

**Syntax**

```
track resolution ip route {isis resolution-value | ospf resolution-value}
```

To return to the default setting, use the `no track object-id` command.

**Parameters**

- **object-id**
  - Enter the ID number of the tracked object. The range is 1 to 500.

- **isis resolution-value**
  - Enter the resolution used to convert the metric in the routing table for ISIS routes to a scaled metric.

- **ospf resolution-value**
  - Enter the resolution used to convert the metric in the routing table for OSPF routes to a scaled metric.

**Defaults**

- None

**Command Modes**

- **CONFIGURATION**

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
Use this command to configure the protocol-specific resolution value that converts the actual metric of an IPv4 route in the routing table to a scaled metric in the range 0 to 255.

The UP/DOWN state of a tracked IPv4 route is determined by a user-configurable threshold (the threshold metric command) for the route’s metric in the routing table. To provide a common tracking interface for different clients, route metrics are scaled in the range 0 to 255, where 0 is connected and 255 is inaccessible.

The protocol-specific resolution value calculates the scaled metric by dividing a route’s cost by the resolution value set for the route protocol:

- For ISIS, you can set the resolution in the range 1 to 1000, where the default is 10.
- For OSPF, you can set the resolution in the range 1 to 1592, where the default is 1.
- The resolution value used to map static routes is not configurable. By default, Dell Networking OS assigns a metric of 0 to static routes.
- The resolution value used to map RIP routes is not configurable. The RIP hop-count is automatically multiplied by 16 to scale it. For example, a RIP metric of 16 (unreachable) scales to 256, which considers the route to be DOWN.

**Related Commands**

- `threshold metric` – configures the metric threshold used to determine the UP and/or DOWN state of a tracked route.
- `track ip route metric threshold` – configures object tracking on the threshold of an IPv4 route metric.

### IPv6 Object Tracking Commands

The following section describes the IPv6 object tracking commands.

The following object tracking commands apply to IPv4 and IPv6:

- `debug track`
- `delay`
- `description`
- `show running-config track`
- `threshold metric`
- `track interface line-protocol`

### show track ipv6 route

Display information about all tracked IPv6 routes, including configuration, current tracked state (UP or DOWN), and the clients which are tracking an object.

**Syntax**

```
show track ipv6 route [brief]
```

**Parameters**

`brief` (OPTIONAL) Display a single line summary of information for tracked IPv6 routes.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

<table>

<tr>
<td>8.4.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show track ipv6 route` command shown in the Example below.
### Output

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Track object-id</strong></td>
</tr>
<tr>
<td><strong>Interface type slot/port, IP route ip-address, IPv6 route ipv6-address</strong></td>
</tr>
<tr>
<td><strong>object is Up/Down</strong></td>
</tr>
<tr>
<td><strong>number changes, last change time</strong></td>
</tr>
<tr>
<td><strong>First hop interface</strong></td>
</tr>
<tr>
<td><strong>Tracked by</strong></td>
</tr>
</tbody>
</table>

### Example

Dell#show track ipv6 route

Track 2
IPv6 route 2040::/64 metric threshold
Metric threshold is Up (STATIC/0/0)
5 changes, last change 00:02:30
Metric threshold down 255 up 254
First-hop interface is TenGigabitEthernet 1/2
Tracked by:
VRRP TenGigabitEthernet 2/4 IPv6 VRID 1

Track 3
IPv6 route 2050::/64 reachability
Reachability is Up (STATIC)
5 changes, last change 00:02:30
First-hop interface is TenGigabitEthernet 1/2
Tracked by:
VRRP TenGigabitEthernet 2/4 IPv6 VRID 1

### Usage Command

The following describes the show track ipv6 route brief command shown in the Example below.

<table>
<thead>
<tr>
<th>Output</th>
<th>Description</th>

- **track ipv6 route metric threshold** – configures object tracking on the threshold of an IPv6 route metric.
- **track ipv6 route reachability** – configures object tracking on the reachability of an IPv6 route.
track interface ipv6 routing

Configure object tracking on the routing status of an IPv6 Layer 3 interface.

**Syntax**

```
track object-id interface interface ipv6 routing
```

To return to the default setting, use the `no track object-id` command.

**Parameters**

- **object-id**
  - Enter the ID number of the tracked object. The range is 1 to 500.
- **interface**
  - Enter one of the following values:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a port channel interface, enter the keywords `port-channel` then a number.
    - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

none

</tr>
</tbody>
</table>

**Usage Information**

Use this command to create an object that tracks the routing state of an IPv6 Layer 3 interface:

- The status of the IPv6 interface is UP only if the Layer 2 status of the interface is UP and the interface has a valid IP address.
- The Layer 3 status of an IPv6 interface goes DOWN when its Layer 2 status goes down (for a Layer 3 VLAN, all VLAN ports must be down) or the IP address is removed from the routing table.

**Related Commands**

- `show track ipv6 route` — displays information about tracked IPv6 routes, including configuration, current state, and clients which track the route.
- `track interface ip routing` — configures object tracking on the routing status of an IPv4 Layer 3 interface.

track ipv6 route metric threshold

Configure object tracking on the threshold of an IPv4 route metric.

**Syntax**

```
track object-id ipv6 route ipv6-address/prefix-len metric threshold
```

To return to the default setting, use the `no track object-id` command.

**Parameters**

- **object-id**
  - Enter the ID number of the tracked object. The range is 1 to 500.
- **ipv6-address/prefix-len**
  - Enter an IPv6 address in X:X::X format. The valid IPv6 prefix lengths are from /0 to /128.

**Defaults**

none

</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to create an object that tracks the reachability of an IPv6 route. In order for a route’s reachability to be tracked, the route must appear as an entry in the routing table.
A tracked route is considered to match an entry in the routing table only if the exact IPv6 address and prefix length match a table entry. For example, when configured as a tracked route, 3333:100:200:300:400::/80 does not match routing table entry 3333:100:200:300::/64. If no route-table entry has the exact IPv6 address and prefix length, the tracked route is considered to be DOWN.

When you configure IPv6 route reachability as a tracked object, the UP/DOWN state of the tracked route is also determined by the entry of the next-hop address in the ARP cache. A tracked route is considered to be reachable if there is an ARP cache entry for the route’s next-hop address.

If the next-hop address in the ARP cache ages out for a route tracked for its reachability, an attempt is made to regenerate the ARP cache entry to if the next-hop address appears before considering the route DOWN.

### Related Commands
- `show track ipv6 route` – displays information about tracked IPv6 routes, including configuration, current state, and clients which track the route.
- `track ipv6 route reachability` – configures object tracking on the reachability of an IPv6 route.

### track resolution ipv6 route

Configure the protocol-specific resolution value used to scale an IPv6 route metric.

**Syntax**
```
track resolution ipv6 route {isis resolution-value | ospf resolution-value}
```

To return to the default setting, use the `no track object-id` command.

**Parameters**
- `object-id` Enter the ID number of the tracked object. Use the range to 1 to 500.
- `isis resolution-value` Enter the resolution used to convert the metric in the routing table for ISIS routes to a scaled metric.
- `ospf resolution-value` Enter the resolution used to convert the metric in the routing table for OSPF routes to a scaled metric.

**Defaults**
- `none`

**Command Modes**
- `CONFIGURATION`

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>

</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to configure the protocol-specific resolution value that converts the actual metric of an IPv6 route in the routing table to a scaled metric in the range 0 to 255.

The UP/DOWN state of a tracked IPv6 route is determined by the user-configurable threshold (the `threshold metric` command) for a route’s metric in the routing table. To provide a common tracking interface for different clients, route metrics are scaled in the range 0 to 255, where 0 is connected and 255 is inaccessible.

The protocol-specific resolution value calculates the scaled metric by dividing a route's cost by the resolution value set for the route protocol:
- For ISIS, you can set the resolution in the range 1 to 1000, where the default is 10.
- For OSPF, you can set the resolution in the range 1 to 1592, where the default is 1.
- The resolution value used to map static routes is not configurable. By default, Dell Networking OS assigns a metric of 0 to static routes.
- The resolution value used to map RIP routes is not configurable. The RIP hop-count is automatically multiplied by 16 to scale it. For example, a RIP metric of 16 (unreachable) scales to 256, which considers the route to be DOWN.

**Related Commands**
- `threshold metric` – configures the metric threshold used to determine the UP and/or DOWN state of a tracked route.
- `track ipv6 route metric threshold` – configures object tracking on the threshold of an IPv6 route metric.
Open Shortest Path First (OSPFv2 and OSPFv3)

Open Shortest Path First version 2 for IPv4 is supported on platform.

OSPF is an Interior Gateway Protocol (IGP), which means that it distributes routing information between routers in a single Autonomous System (AS). OSPF is also a link-state protocol in which all routers contain forwarding tables derived from information about their links to their neighbors.

The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) are the same for OSPFv2 and OSPFv3. OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis.

This chapter is divided into two sections. There is no overlap between the two sets of commands. You cannot use an OSPFv2 command in the IPv6 OSPFv3 mode.

- **Open Shortest Path First (OSPFv2)**

  **NOTE:** Dell Networking Operating System (OS) version 7.8.1.0 introduces Multi-Process OSPF on IPv4 (OSPFv2) only. It is not supported on OSPFv3 (IPv6).

  The CLI requires that you include the Process ID when entering ROUTER-OSPF mode. Each command entered applies to the specified OSPFv2 process only.

**Topics:**

- OSPFv2 Commands
- OSPFv3 Commands

**OSPFv2 Commands**

The Dell Networking implementation of OSPFv2 is based on IETF RFC 2328.

---

**area default-cost**

Set the metric for the summary default route the area border router (ABR) generates into the stub area. Use this command on the border routers at the edge of a stub area.

**Z9000**

**Syntax**

```
area area-id default-cost cost
```

To return default values, use the `no area area-id default-cost` command.

**Parameters**

- **area-id** Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
- **cost** Specifies the stub area’s advertised external route metric. The range is from zero (0) to 65535.

**Defaults**

cost = 1; no areas are configured.

**Command Modes**

- ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

</tr>
</tbody>
</table>

Usage Information

In the Dell Networking operating software (OS), cost is defined as reference bandwidth/bandwidth.

Related Commands

area stub — creates a stub area.

area nssa

Specify an area as a not so stubby area (NSSA).

Syntax

area area-id nssa [default-information-originate] [no-redistribution] [no-summary]

To delete an NSSA, use the no area area-id nssa command.

Parameters

- **area-id**: Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
- **no-redistribution**: (OPTIONAL) Specify that the redistribute command does not distribute routes into the NSSA. Only use this command in an NSSA area border router (ABR).
- **default-information-originate**: (OPTIONAL) Allows external routing information to be imported into the NSSA by using Type 7 default.
- **no-summary**: (OPTIONAL) Specify that no summary LSAs should be sent into the NSSA.

Defaults

Not configured.

Command Modes

ROUTER OSPF

Command History

<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>
area range

Summarize routes matching an address/mask at an area border router (ABR).

Z9000

Syntax

area area-id range ip-address mask [not-advertise]

To disable route summarization, use the no area area-id range ip-address mask command.

Parameters

area-id Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.

ip-address Specify an IP address in dotted decimal format.

mask Specify a mask for the destination prefix. Enter the full mask (for example, 255.255.255.0).

not-advertise (OPTIONAL) Enter the keywords not-advertise to set the status to DoNotAdvertise (that is, the Type 3 summary-LSA is suppressed and the component networks remain hidden from other areas.)

Defaults

Not configured.

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Only the routes within an area are summarized, and that summary is advertised to other areas by the ABR. External routes are not summarized.
area stub

Configure a stub area, which is an area not connected to other areas.

Z9000

Syntax

area area-id stub [no-summary]

To delete a stub area, use the no area area-id stub command.

Parameters

- **area-id**: Specify the OSPF area in dotted decimal format (A.B.C.D.) or enter a number from zero (0) to 65535.
- **no-summary**: (OPTIONAL) Enter the keywords no-summary to prevent the ABR from sending summary Link State Advertisements (LSAs) into the stub area.

Defaults

Disabled.

Usage Information

To configure all routers and access servers within a stub, use this command.

Related Commands

- **router ospf** — enters ROUTER OSPF mode to configure an OSPF instance.

auto-cost

Specify how the OSPF interface cost is calculated based on the reference bandwidth method.

Z9000

Syntax

auto-cost [reference-bandwidth ref-bw]
To return to the default bandwidth or to assign cost based on the interface type, use the `no auto-cost [reference-bandwidth]` command.

**Parameters**

- **ref-bw** (OPTIONAL) Specify a reference bandwidth in megabits per second. The range is from 1 to 4294967. The default is 100 megabits per second.

**Defaults**

- 100 megabits per second.

**Command Modes**

- ROUTER OSPF

**clear ip ospf**

Clear all OSPF routing tables.

**Z9000**

**Syntax**

```
clear ip ospf process-id [process]
```

**Parameters**

- **process-id**
  - Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.

- **process** (OPTIONAL) Enter the keyword process to reset the OSPF process.

**Command Modes**

- EXEC Privilege

**Command History**

clear ip ospf statistics

Clear the packet statistics in interfaces and neighbors.

Z9000

clear ip ospf [process-id] [vrf vrf-name] statistics [interface name {neighbor router-id}]

Syntax

process-id Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.
vrf vrf-name Enter the keyword vrf followed by the name of the VRF to clear all OSPF routing tables corresponding to that VRF.
statistics Enter the keyword statistics to clear the packet statistics in interfaces and neighbors.
interface name (OPTIONAL) Enter the keyword interface then one of the following interface keywords and slot/port or number information:
  ● For Port Channel groups, enter the keywords port-channel then a number. For the C-Series and S-Series, the range is from 1 to 128.
  ● For a SONET interface, enter the keyword sonet then the slot/ port information.
  ● For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/ port information.
  ● For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/ port information.
  ● For a VLAN, enter the keyword vlan then a number from 1 to 4094.
neighbor router-id (OPTIONAL) Enter the keyword neighbor then the neighbor’s router-id in dotted decimal format (A.B.C.D.).

Defaults

none

Version | Description
--- | ---
7.5.1.0 | Introduced on the C-Series.
pre- 6.1.1.1 | Introduced on the E-Series.

Related Commands
- `show ip ospf statistics` — displays the OSPF statistics.

**debug ip ospf**

Display debug information on OSPF. Entering the `debug ip ospf` commands enables OSPF debugging for the first OSPF process.

**Z9000**

**Syntax**
```
debug ip ospf [process-id] [vrf vrf-name] [bfd |event | packet | spf | database-timer rate-limit]
```

To cancel the debug command, use the `no debug ip ospf` command.

**Parameters**
- `process-id` Enter the OSPF Process ID to clear a specific process. If no Process ID is entered, all OSPF processes are cleared.
- `bfd` (OPTIONAL) Enter the keyword `bfd` to debug only OSPF BFD information.
- `event` (OPTIONAL) Enter the keyword `event` to debug only OSPF event information.
- `packet` (OPTIONAL) Enter the keyword `packet` to debug only OSPF packet information.
- `spf` (OPTIONAL) Enter the keyword `spf` to display the Shortest Path First information.
- `database-timer rate-limit` (OPTIONAL) Enter the keywords `database-timer rate-limit` to display the LSA throttling timer information. This applies to the S4810 platform only.

**Command Modes**
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.8.0 | Added the `database-timer rate-limit` option for the S4810.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Added support for the Multi-Process OSPF.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre- 6.1.1.1 | Introduced on the E-Series.

**Usage Information**
The following describes the `debug ip ospf` command shown in the Example below.

**Field**

**Description**
- `8:14` Displays the time stamp.

Open Shortest Path First (OSPFv2 and OSPFv3) 851
**Field** | **Description**
--- | ---
OSPF | Displays the OSPF process ID: instance ID.
v: | Displays the OSPF version. Dell Networking OS supports version 2 only.
t: | Displays the type of packet sent:
• 1 - Hello packet
• 2 - database description
• 3 - link state request
• 4 - link state update
• 5 - link state acknowledgement
l: | Displays the packet length.
rid: | Displays the OSPF router ID.
aid: | Displays the Autonomous System ID.
chk: | Displays the OSPF checksum.
aut: | States if OSPF authentication is configured. One of the following is listed:
• 0 - no authentication configured
• 1 - simple authentication configured using the `ip ospf authentication-key` command
• 2 - MD5 authentication configured using the `ip ospf message-digest-key` command
auk: | If the `ip ospf authentication-key` command is configured, this field displays the key used.
keyid: | If the `ip ospf message-digest-key` command is configured, this field displays the MD5 key
to: | Displays the interface to which the packet is intended.
dst: | Displays the destination IP address.
netmask: | Displays the destination IP address mask.
pri: | Displays the OSPF priority
N, MC, E, T | Displays information available in the Options field of the HELLO packet:
• N + (N-bit is set)
• N - (N-bit is not set)
• MC+ (bit used by MOSPF is set and router is able to forward IP multicast packets)
• MC- (bit used by MOSPF is not set and router cannot forward IP multicast packets)
• E + (router is able to accept AS External LSAs)
• E - (router cannot accept AS External LSAs)
• T + (router can support TOS)
• T - (router cannot support TOS)
hi: | Displays the amount of time configured for the HELLO interval.
di: | Displays the amount of time configured for the DEAD interval.
Dr: | Displays the IP address of the designated router.
Bdr: | Displays the IP address of the Border Area Router.

**Example**

```
Dell# debug ip ospf 1 packet
OSPF process 90, packet debugging is on

Dell#
08:14:24 : OSPF(100:00):
Xmt. v:2 t:1(HELLO) l:44 rid:192.1.1.1
    aid:0.0.0.1 chk:0xa098 aut:0 auk: keyid:0 to:Te 4/3 dst:224.0.0.5
```
**default-information originate**

To generate a default external route into an OSPF routing domain, configure Dell Networking Operating System (OS).

**Syntax**

```
default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]
```

To return to the default values, use the `no default-information originate` command.

**Parameters**

- **always** (OPTIONAL) Enter the keyword `always` to specify that default route information must always be advertised.
- **metric metric-value** (OPTIONAL) Enter the keyword `metric` then a number to configure a metric value for the route. The range is from 1 to 16777214.
- **metric-type type-value** (OPTIONAL) Enter the keywords `metric-type` then an OSPF link state type of 1 or 2 for default routes. The values are:
  - 1 = Type 1 external route
  - 2 = Type 2 external route
- **route-map map-name** (OPTIONAL) Enter the keywords `route-map` then the name of an established route map.

**Defaults**

Disabled.

**Command Modes**

**Related Commands**

- `redistribute` — redistributes routes from other routing protocols into OSPF.

**default-metric**

Change the metrics of redistributed routes to a value useful to OSPF. Use this command with the `redistribute` command.

**Z9000**

**Syntax**

```
default-metric number
```
To return to the default values, use the `no default-metric [number]` command.

**Parameters**

- **number**
  
Enter a number as the metric. The range is from 1 to 16777214.

**Defaults**

Disabled.

**Command Modes**

ROUTER OSPF

---

### description

Add a description about the selected OSPF configuration.

**Z9000**

**Syntax**

```
description description
```

To remove the OSPF description, use the `no description` command.

**Parameters**

- **description**
  
Enter a text string description to identify the OSPF configuration (80 characters maximum).

**Defaults**

none

distance

Define an administrative distance for particular routes to a specific IP address.

**Z9000**

distance weight [ip-address mask access-list-name]

To delete the settings, use the no distance weight [ip-address mask access-list-name] command.

**Parameters**

- **weight** Specify an administrative distance. The range is from 1 to 255. The default is 110.
- **ip-address** (OPTIONAL) Enter a router ID in the dotted decimal format. If you enter a router ID, include the mask for that router address.
- **mask** (OPTIONAL) Enter a mask in dotted decimal format or /n format.
- **access-list-name** (OPTIONAL) Enter the name of an IP standard access list, up to 140 characters.

**Defaults**

- 110

distance ospf

Configure an OSPF distance metric for different types of routes.

Z9000

Syntax

distance ospf [external dist3] [inter-area dist2] [intra-area dist1]

To delete these settings, use the no distance ospf command.

Parameters

- **external dist3** (OPTIONAL) Enter the keyword external then a number to specify a distance for external type 5 and 7 routes. The range is from 1 to 255. The default is 110.
- **inter-area dist2** (OPTIONAL) Enter the keywords inter-area then a number to specify a distance metric for routes between areas. The range is from 1 to 255. The default is 110.
- **intra-area dist1** (OPTIONAL) Enter the keywords intra-area then a number to specify a distance metric for all routes within an area. The range is from 1 to 255. The default is 110.

Defaults

- external dist3 = 110
- inter-area dist2 = 110
- intra-area dist1 = 110

Usage Information

To specify a distance for routes learned from other routing domains, use the redistribute command.

distribute-list in

Apply a filter to incoming routing updates from OSPF to the routing table.

Z9000

Syntax

distribute-list prefix-list-name in [interface]

To delete a filter, use the no distribute-list prefix-list-name in [interface] command.
Parameters

prefix-list-name Enter the name of a configured prefix list.

interface (OPTIONAL) Enter one of the following keywords and slot/port or number information:

- For Port Channel groups, enter the keywords port-channel then a number. For the C-Series, S-Series, and Z9000, the range is from 1 to 128. For Z9500, the range is from 1 to 512.
- For a SONET interface, enter the keyword sonet then the slot/port information.
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a VLAN, enter the keyword vlan then a number from 1 to 4094.

Defaults
Not configured.

distribute-list out

To restrict certain routes destined for the local routing table after the SPF calculation, apply a filter.

Z-Series

Syntax
distribute-list prefix-list-name out [bgp | connected | isis | rip | static]

To remove a filter, use the no distribute-list prefix-list-name out [bgp | connected | isis | rip | static] command.

Parameters

prefix-list-name Enter the name of a configured prefix list.

bgp (OPTIONAL) Enter the keyword bgp to specify that BGP routes are distributed.

NOTE: BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.

connected (OPTIONAL) Enter the keyword connected to specify that connected routes are distributed.
isis (OPTIONAL) Enter the keyword isis to specify that IS-IS routes are distributed.

**NOTE:** BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.

rip (OPTIONAL) Enter the keyword rip to specify that RIP routes are distributed.

**NOTE:** BGP and ISIS routes are not available on the C-Series. BGP, ISIS, and RIP routes are not available on the S-Series.

static (OPTIONAL) Enter the keyword static to specify that only manually configured routes are distributed.

**Defaults**
Not configured.

**Command Modes**
ROUTER OSPF

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added support for the Multi-Process OSPF.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
The `distribute-list out` command applies to routes autonomous system boundary routers (ASBRs) redistributes into OSPF. It can be applied to external type 2 and external type 1 routes, but not to intra-area and inter-area routes.

### enable inverse-mask

By default, Dell Networking Operating System (OS) allows you to input the OSPF `network` command with a net-mask. This command provides a choice between inverse-mask or net-mask (the default).

#### Z9000

**Syntax**

```
enable inverse mask
```

To return to the default net-mask, use the `no enable inverse mask` command.

**Defaults**

net-mask

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
</tbody>
</table>
fast-convergence

This command sets the minimum LSA origination and arrival times to zero (0), allowing more rapid route computation so that convergence takes less time.

Z9000

Syntax

```
fast-convergence {number}
```

To cancel fast-convergence, use the no fast convergence command.

Parameters

- `number`: Enter the convergence level desired. The higher this parameter is set, the faster OSPF converge takes place. The range is from 1 to 4.

Defaults

none.

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.1</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The higher this parameter is set, the faster OSPF converge takes place.

**NOTE:** The faster the convergence, the more frequent the route calculations and updates. This behavior impacts CPU utilization and may impact adjacency stability in larger topologies.

Generally, convergence level 1 meets most convergence requirements. Higher convergence levels should only be selected following consultation with Dell Networking technical support.

graceful-restart grace-period

Specifies the time duration, in seconds, that the router’s neighbors continue to advertise the router as fully adjacent regardless of the synchronization state during a graceful restart.

**NOTE:** This command enables OSPFv2 graceful restart globally by setting the grace period (in seconds) that an OSPFv2 router’s neighbors continues to advertise the router as adjacent during a graceful restart.
graceful-restart grace-period seconds

To disable the grace period, use the no graceful-restart grace-period command.

Parameters

seconds

Time duration, in seconds, that specifies the duration of the restart process before OSPF terminates the process. The range is from 40 to 1800 seconds.

Defaults

Not Configured

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>

<tr>
<td>7.5.1.0</td>
<td>Added support for Multi-Process OSPF.</td>
</tr>
<tr>
<td>pre-6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The Helper mode is enabled by default on the device. To enable the restart mode also on the device, you must configure the grace period using this command. After you enable restart mode the router advertises the neighbor as fully adjacent during a restart.

graceful-restart helper-reject

Specify the OSPF router to not act as a helper during graceful restart.

Z9000

Syntax

graceful-restart helper-reject ip-address

To return to default value, use the no graceful-restart helper-reject command.

Parameters

ip-address

Enter the OSPF router-id, in IP address format, of the restart router that will not act as a helper during graceful restart.

Defaults

Not configured.

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
graceful-restart mode

Enable the graceful restart mode.

Z9000

graceful-restart mode [planned-only | unplanned-only]

To disable graceful restart mode, use the no graceful-restart mode command.

Parameters

planned-only (OPTIONAL) Enter the keywords planned-only to indicate graceful restart is supported in a planned restart condition only.

unplanned-only (OPTIONAL) Enter the keywords unplanned-only to indicate graceful restart is supported in an unplanned restart condition only.

Defaults

Support for both planned and unplanned failures.

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<tr>
<td>pre- 6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
graceful-restart role

Specify the role for your OSPF router during graceful restart.

Z9000

Syntax

graceful-restart role [helper-only | restart-only]

To disable graceful restart role, use the no graceful-restart role command.

Parameters

role helper-only (OPTIONAL) Enter the keywords helper-only to specify the OSPF router is a helper only during graceful restart.

role restart-only (OPTIONAL) Enter the keywords restart-only to specify the OSPF router is a restart only during graceful-restart.

Defaults

By default, OSPF routers are both helper and restart routers during a graceful restart.

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.12.0 Introduced on the S4810.
7.8.1.0 Added support for Multi-Process OSPF. Added Restart and Helper roles support on the S-Series.
7.7.1.0 Added Helper-Role support on the S-Series.
7.5.1.0 Introduced on the C-Series.
pre- 6.1.1.1 Introduced on the E-Series.

ip ospf auth-change-wait-time

OSPF provides a grace period while OSPF changes its interface authentication type. During the grace period, OSPF sends out packets with new and old authentication scheme until the grace period expires.

Z9000

Syntax

ip ospf auth-change-wait-time seconds

To return to the default, use the no ip ospf auth-change-wait-time command.

Parameters

seconds Enter the seconds. The range is from 0 to 300.

Defaults

zero (0) seconds.

Command Modes

</tbody>
</table>

**ip ospf authentication-key**

Enable authentication and set an authentication key on OSPF traffic on an interface.

**Z9000**

**Syntax**

```
ip ospf authentication-key [encryption-type] key
```

To delete an authentication key, use the `no ip ospf authentication-key` command.

**Parameters**

- `encryption-type` (OPTIONAL) Enter 7 to encrypt the key.
- `key` Enter an eight-character string. Strings longer than eight characters are truncated.

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Usage Information**

All neighboring routers in the same network must use the same password to exchange OSPF information.
**ip ospf cost**

Change the cost associated with the OSPF traffic on an interface.

**Z9000**

**Syntax**

```
ip ospf cost cost
```

To return to default value, use the `no ip ospf cost` command.

**Parameters**

- **cost**
  
  Enter a number as the cost. The range is from 1 to 65535.

**Defaults**

The default cost is based on the reference bandwidth.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre- 6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If this command is not configured, cost is based on the `auto-cost` command.

When you configure OSPF over multiple vendors, to ensure that all routers use the same cost, use the `ip ospf cost` command. Otherwise, OSPF routes improperly.

**Related Commands**

- `auto-cost` — controls how the OSPF interface cost is calculated.

**ip ospf dead-interval**

Set the time interval since the last hello-packet was received from a router. After the interval elapses, the neighboring routers declare the router dead.

**Z9000**

**Syntax**

```
ip ospf dead-interval seconds
```

To return to the default values, use the `no ip ospf dead-interval` command.

**Parameters**

- **seconds**
  
  Enter the number of seconds for the interval. The range is from 1 to 65535. The default is 40 seconds.

**Defaults**

40 seconds

**Command Modes**

INTERFACE
This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, the dead interval is four times the default hello-interval.

**Related Commands**

- `ip ospf hello-interval` — sets the time interval between the hello packets.

---

**ip ospf hello-interval**

Specify the time interval between the hello packets sent on the interface.

**Z9000**

**Syntax**

```
ip ospf hello-interval seconds
```

**To return to the default value, use the `no ip ospf hello-interval` command.**

**Parameters**

- `seconds` Enter the number of seconds for the interval. The range is from 1 to 65535. The default is **10 seconds**.

**Defaults**

- **10 seconds**

**Command Modes**

</tbody>
</table>
The time interval between the hello packets must be the same for routers in a network.

**Related Commands**

- `ip ospf dead-interval` — sets the time interval before a router is declared dead.

## ip ospf message-digest-key

Enable OSPF MD5 authentication and send an OSPF message digest key on the interface.

### Syntax

```
ip ospf message-digest-key keyid md5 key
```

To delete a key, use the `no ip ospf message-digest-key keyid` command.

### Parameters

- **keyid**
  
  Enter a number as the key ID. The range is from 1 to 255.

- **key**
  
  Enter a continuous character string as the password.

### Defaults

No MD5 authentication is configured.

### Command Modes

**INTERFACE**

### Command History

<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

### Usage Information

You can configure a maximum of six digest keys on an interface. Of the available six digest keys, the switches select the MD5 key that is common. The remaining MD5 keys are unused.

To change to a different key on the interface, enable the new key while the old key is still enabled. Dell Networking OS sends two packets: the first packet authenticated with the old key and the second packet authenticated with the new key. This process ensures that the neighbors learn the new key and communication is not disrupted by keeping the old key enabled.

After the reply is received and the new key is authenticated, delete the old key. Dell recommends keeping only one key per interface.

**NOTE:** The MD5 secret is stored as plain text in the configuration file with service password encryption. Write down or otherwise record the key. You cannot learn the key once it is configured. Use caution when changing the key.
ip ospf mtu-ignore

Disable OSPF MTU mismatch detection upon receipt of database description (DBD) packets.

Z9000

Syntax

    ip ospf mtu-ignore

To return to the default, use the no ip ospf mtu-ignore command.

Defaults

Enabled.

Command Modes

ip ospf network

Set the network type for the interface.

Z9000

Syntax

    ip ospf network {broadcast | point-to-point}

To return to the default, use the no ip ospf network command.

Parameters

    broadcast
    point-to-point

Enter the keyword broadcast to designate the interface as part of a broadcast network.

Enter the keywords point-to-point to designate the interface as part of a point-to-point network.

Defaults

Broadcast.

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

- Setting a priority of 0 makes the router ineligible for election as a designated router or backup designated router.
- Use this command for interfaces connected to multi-access networks, not point-to-point networks.
ip ospf retransmit-interval

Set the retransmission time between lost link state advertisements (LSAs) for adjacencies belonging to the interface.

Z9000

Syntax
ip ospf retransmit-interval seconds
To return to the default values, use the no ip ospf retransmit-interval command.

Parameters
seconds
Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is 5 seconds.
This interval must be greater than the expected round-trip time for a packet to travel between two routers.

Defaults
5 seconds

</table>

Usage Information
Set the time interval to a number large enough to prevent unnecessary retransmissions. For example, the interval must be larger for interfaces connected to virtual links.

ip ospf transmit-delay

To send a link state update packet on the interface, set the estimated time elapsed.

Z9000

Syntax
ip ospf transmit-delay seconds
To return to the default value, use the no ip ospf transmit-delay command.

Parameters
seconds
Enter the number of seconds as the interval between retransmission. The range is from 1 to 3600. The default is 1 second.
This value must be greater than the transmission and propagation delays for the interface.

Defaults
1 second

Command Modes
INTERFACE
log-adjacency-changes

To send a Syslog message about changes in the OSPF adjacency state, set Dell Networking OS.

Z9000

Syntax

log-adjacency-changes

To disable the Syslog messages, use the no log-adjacency-changes command.

Defaults

Disabled.

Command Modes

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<tr>
<td>pre- 6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
maximum-paths

Enable the software to forward packets over multiple paths.

Z9000

Syntax

```plaintext
maximum-paths number
```

To disable packet forwarding over multiple paths, use the `no maximum-paths` command.

Parameters

- **number**: Specify the number of paths. The range for OSPFv2 is from 1 to 64. The default for OSPFv2 is **4 paths**. The range for OSPFv3 is from 1 to 64. The default for OSPFv3 is **8 paths**.

Defaults

- **4**

Command Modes

- ROUTER OSPF for OSPFv2
- ROUTER OSPFv3 for OSPFv3

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

network area

Define which interfaces run OSPF and the OSPF area for those interfaces.

Z9000

Syntax

```plaintext
network ip-address mask area area-id
```

To disable an OSPF area, use the `no network ip-address mask area area-id` command.

Parameters

- **ip-address**: Specify a primary or secondary address in dotted decimal format. The primary address is required before adding the secondary address.
- **mask**: Enter a network mask in /prefix format. (/x)
- **area-id**: Enter the OSPF area ID as either a decimal value or in a valid IP address. Decimal value range is from 0 to 65535. IP address format is dotted decimal format A.B.C.D.
NOTE: If the area ID is smaller than 65535, it is converted to a decimal value. For example, if you use an area ID of 0.0.0.1, it is converted to 1.

Command Modes ROUTER OSPF

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>

<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre- 6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information To enable OSPF on an interface, the network area command must include, in its range of addresses, the primary IP address of an interface.

NOTE: An interface can be attached only to a single OSPF area.

If you delete all the network area commands for Area 0, the show ip ospf command output does not list Area 0.

passive-interface

Suppress both receiving and sending routing updates on an interface.

Z9000

Syntax passive-interface {default | interface}

To enable both the receiving and sending routing, use the no passive-interface interface command.

To return all OSPF interfaces (current and future) to active, use the no passive-interface default command.

Parameters

- **default**
  - Enter the keyword default to make all OSPF interfaces (current and future) passive.

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a Gigabit Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.
    - For Port Channel groups, enter the keywords port-channel then a number. For the C-Series, S-Series, and Z9000, the range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added support for Multi-Process OSPF.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Modified to include the keyword <code>default</code>.</td>
</tr>
<tr>
<td>pre- 6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Although the passive interface does not send or receive routing updates, the network on that interface is still included in OSPF updates sent using other interfaces.

The `default` keyword sets all interfaces as passive. You can then configure individual interfaces, where adjacencies are desired, using the `no passive-interface interface` command. The `no` form of this command is inserted into the configuration for individual interfaces when the `no passive-interface interface` command is issued while `passive-interface default` is configured.

This command behavior has changed as follows:

- **passive-interface interface**
  - The previous `no passive-interface interface` is removed from the running configuration.
  - The ABR status for the router is updated.
  - Save `passive-interface interface` into the running configuration.

- **passive-interface default**
  - All present and future OSPF interfaces are marked as `passive`.
  - Any adjacency is explicitly terminated from all OSPF interfaces.
  - All previous `passive-interface interface` commands are removed from the running configuration.
  - All previous `no passive-interface interface` commands are removed from the running configuration.

- **no passive-interface interface**
  - Remove the interface from the passive list.
  - The ABR status for the router is updated.
  - If `passive-interface default` is specified, then save `no passive-interface interface` into the running configuration.

- **no passive-interface default**
  - Clear everything and revert to the default behavior.
  - All previously marked passive interfaces are removed.
  - May update ABR status.

On configuring suppression using the `passive-interface command`, the state of the OSPF neighbor does not change to INIT; instead, the state of the OSPF neighbor changes to DOWN after the dead-timer expires.
redistribute

Redistribute information from another routing protocol throughout the OSPF process.

**Z9000**

```
redistribute {connected | isis | ospf | rip | static} [metric metric-value
| metric-type type-value] [route-map map-name] [tag tag-value]
To disable redistribution, use the no redistribute {connected | isis | rip | static}
command.
```

**Parameters**

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>connected</td>
<td>Enter the keyword connected to specify that information from active routes on</td>
</tr>
<tr>
<td>isis</td>
<td>Enter the keyword isis to specify that ISO IS-IS information is redistributed.</td>
</tr>
<tr>
<td>ospf</td>
<td>Enter the keyword ospf to specify that information corresponding to OSPF is</td>
</tr>
<tr>
<td>rip</td>
<td>Enter the keyword rip to specify that RIP routing information is redistributed.</td>
</tr>
<tr>
<td>static</td>
<td>Enter the keyword static to specify that information from static routes is</td>
</tr>
<tr>
<td></td>
<td>redistributed.</td>
</tr>
<tr>
<td>metric</td>
<td>(OPTIONAL) Enter the keyword metric then a number. The range is from 0</td>
</tr>
<tr>
<td>metric-value</td>
<td>(zero) to 16777214.</td>
</tr>
<tr>
<td>metric-type type-value</td>
<td>(OPTIONAL) Enter the keywords metric-type then one of the following:</td>
</tr>
<tr>
<td></td>
<td>● 1 = OSPF External type 1</td>
</tr>
<tr>
<td></td>
<td>● 2 = OSPF External type 2</td>
</tr>
<tr>
<td>route-map map-name</td>
<td>(OPTIONAL) Enter the keywords route-map then the name of the route map.</td>
</tr>
<tr>
<td>tag tag-value</td>
<td>(OPTIONAL) Enter the keyword tag then a number. The range is from 0 to</td>
</tr>
<tr>
<td></td>
<td>4294967295.</td>
</tr>
</tbody>
</table>

**Defaults**

Not configured.

**Command Modes**

ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added support for Multi-Process OSPF.</td>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre- 6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

To redistribute the default route (0.0.0.0/0), configure the default-information originate command.
Despite removing an OSPF process globally, the OSPF process is not completely removed from the BGP configuration.

Related Commands

default-information originate — generates a default route into the OSPF routing domain.

redistribute bgp

Redistribute BGP routing information throughout the OSPF instance.

Z9000

Syntax

redistribute bgp as number [metric metric-value] | [metric-type type-value] | [tag tag-value]

To disable redistribution, use the no redistribute bgp as number [metric metric-value] | [metric-type type-value] | [route-map map-name] | [tag tag-value] command.

Parameters

- **as number**: Enter the autonomous system number. The range is from 1 to 65535.
- **metric metric-value**: (OPTIONAL) Enter the keyword metric then the metric-value number. The range is from 0 to 16777214.
- **metric-type type-value**: (OPTIONAL) Enter the keywords metric-type then one of the following:
  - 1 = for OSPF External type 1
  - 2 = for OSPF External type 2
- **route-map map-name**: (OPTIONAL) Enter the keywords route-map then the name of the route map.
- **tag tag-value**: (OPTIONAL) Enter the keyword tag to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.

Defaults

none

</tr>
</tbody>
</table>
redistribute isis

Redistribute IS-IS routing information throughout the OSPF instance.

Z9000

Syntax

redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value]

To disable redistribution, use the no redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value | metric-type type-value] [route-map map-name] [tag tag-value] command.

Parameters

  tag  (OPTIONAL) Enter the name of the IS-IS routing process.
  level-1  (OPTIONAL) Enter the keywords level-1 to redistribute only IS-IS Level-1 routes.
  level-1-2  (OPTIONAL) Enter the keywords level-1-2 to redistribute both IS-IS Level-1 and Level-2 routes.
  level-2  (OPTIONAL) Enter the keywords level-2 to redistribute only IS-IS Level-2 routes.
  metric metric-value  (OPTIONAL) Enter the keyword metric then a number. The range is from 0 (zero) to 4294967295.
  metric-type type-value  (OPTIONAL) Enter the keywords metric-type then one of the following:
  ● 1 = for OSPF External type 1
  ● 2 = for OSPF External type 2
  route-map map-name  (OPTIONAL) Enter the keywords route-map then the name of the route map.
  tag tag-value  (OPTIONAL) Enter the keyword tag to set the tag for routes redistributed into OSPF. The range is from 0 to 4294967295.

Defaults

Not configured.

ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description

9.7(0.0)  Introduced on the S6000-ON.
9.0.2.0  Introduced on the S6000.
8.3.19.0  Introduced on the S4820T.
8.3.11.1  Introduced on the Z9000.
8.3.7.0  Introduced on the S4810.
7.8.1.0  Added support for Multi-Process OSPF.
7.5.1.0  Introduced on the C-Series.
pre- 6.1.1.1  Introduced on the E-Series.
**router-id**

To configure a fixed router ID, use this command.

**Z9000**

**Syntax**

```
router-id ip-address
```

To remove the fixed router ID, use the **no router-id ip-address** command.

**Parameters**

- `ip-address` Enter the router ID in the IP address format.

**Defaults**

none.

**Command Modes**

ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can configure an arbitrary value in the IP address format for each router. However, each router ID must be unique. If you use this command on an OSPF router process, which is already active (that is, has neighbors), a prompt reminding you that changing the router-id brings down the existing OSPF adjacency. The new router ID is effective at the next reload.

**Example**

```
Dell(conf)#router ospf 100
Dell(conf-router_ospf)#router-id 1.1.1.1
Changing router-id will bring down existing OSPF adjacency [y/n]:
Dell(conf-router_ospf)#show config
!
router ospf 100
router-id 1.1.1.1
Dell(conf-router_ospf)#no router-id
Changing router-id will bring down existing OSPF adjacency [y/n]:
Dell#
```
**router ospf**

To configure an OSPF instance, enter ROUTER OSPF mode.

**Z9000**

**Syntax**

```
routing ospf process-id
```

To clear an OSPF instance, use the `no router ospf process-id` command.

**Parameters**

- `process-id` Enter a number for the OSPF instance. The range is from 1 to 65535.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

Example

```
Dell#show ip ospf 10
Routing Process ospf 10 with ID 1.1.1.1 Virtual router default-vrf
Supports only single TOS (TOS0) routes
SPF schedule delay 5 secs, Hold time between two SPFs 10 secs
Convergence Level 0
Min LSA origination 0 msec, Min LSA arrival 1000 msec
Min LSA hold time 5000 msec, Max LSA wait time 5000 msec
Number of area in this router is 1, normal 1 stub 0 nssa 0
  Area BACKBONE (0)
    Number of interface in this area is 1
    SPF algorithm executed 205 times
    Area ranges are
Dell#
```

Related Commands

- `show ip ospf database` — displays information about the OSPF routes configured.
- `show ip ospf interface` — displays the OSPF interfaces configured.
- `show ip ospf neighbor` — displays the OSPF neighbors configured.

**show ip ospf asbr**

Display all autonomous system boundary router (ASBR) routers visible to OSPF.

**Z9000**

**Syntax**

```
show ip ospf [process-id] asbr
```

**Parameters**

- `process-id` Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

**Defaults**

- `none`

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

880  Open Shortest Path First (OSPFv2 and OSPFv3)
To isolate problems with external routes, use this command. In OSPF, external routes are calculated by adding the LSA cost to the cost of reaching the ASBR router. If an external route does not have the correct cost, use this command to determine if the path to the originating router is correct. The display output is not sorted in any order.

**NOTE:** ASBRs that are not in directly connected areas are also displayed.

You can determine if an ASBR is in a directly connected area (or not) by the flags. For ASBRs in a directly connected area, E flags are set. In the following example, router 1.1.1.1 is in a directly connected area since the Flag is E/-/-/. For remote ASBRs, the E flag is clear (-/-/-/).

```
Dell#show ip ospf 1 asbr
RouterID  Flags   Cost Nexthop   Interface Area
3.3.3.3   -/-/-/  2   10.0.0.2   Te 1/1    1
1.1.1.1   E/-/-/  0   0.0.0.0    -         0
```

### show ip ospf database

Display all LSA information. If you do not enable OSPF on the switch, no output is generated.

```
Dell#show ip ospf database
```

Version | Description
---|---
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.8.1.0 | Added support of Multi-Process OSPF.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-6.1.1.1 | Introduced on the E-Series.

### Usage Information
The following describes the `show ip ospf process-id database` command shown in the following example.

### Field | Description
---|---
Link ID | Identifies the router ID.
ADV Router | Identifies the advertising router’s ID.
Age | Displays the link state age.
Seq# | Identifies the link state sequence number. This number allows you to identify old or duplicate link state advertisements.
Checksum | Displays the Fletcher checksum of an LSA’s complete contents.
Link count | Displays the number of interfaces for that router.

### Example
```
Dell>show ip ospf 1 database

OSPF Router with ID (11.1.2.1) (Process ID 1)
Router (Area 0.0.0.0)
  Link ID     ADV Router   Age  Seq#       Checksum Link count

### Related Commands
- `show ip ospf database asbr-summary` — displays only ASBR summary LSA information.
show ip ospf database asbr-summary

Display information about autonomous system (AS) boundary LSAs.

Z9000

Syntax

```
show ip ospf [process-id] database asbr-summary [link-state-id] [adv-router ip-address]
```

Parameters

- **process-id** Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- **link-state-id** (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs
- **adv-router ip-address** (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

Usage Information

The following describes the show ip ospf database asbr-summary command shown in the following example.

**Field**

- **LS Age**
  - Displays the LSA’s age.
- **Options**
  - Displays the optional capabilities available on router. The following options can be found in this item:
    - TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.
    - DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.
    - E or No E is displayed on whether the originating router can accept AS External LSAs.
- **LS Type**
  - Displays the LSA’s type.
- **Link State ID**
  - Displays the Link State ID.
Field | Description
--- | ---
Advertising Router | Identifies the advertising router’s ID.
Checksum | Displays the Fletcher checksum of the LSA’s complete contents.
Length | Displays the length in bytes of the LSA.
Network Mask | Displays the network mask implemented on the area.
TOS | Displays the Type of Service (TOS) options. Option 0 is the only option.
Metric | Displays the LSA metric.

Example

Dell#show ip ospf 100 database asbr-summary

OSPF Router with ID (1.1.1.10) (Process ID 100)

Summary Asbr (Area 0.0.0.0)

LS age: 1437
Options: (No TOS-capability, No DC, E)
LS type: Summary Asbr
Link State ID: 103.1.50.1
Advertising Router: 1.1.1.10
LS Seq Number: 0x8000000f
Checksum: 0x8221
Length: 28
Network Mask: /0

TOS: 0 Metric: 2

LS age: 473
Options: (No TOS-capability, No DC, E)
LS type: Summary Asbr
Link State ID: 104.1.50.1
Advertising Router: 1.1.1.10
LS Seq Number: 0x80000010
Checksum: 0x4198
Length: 28

Related Commands

show ip ospf database — displays OSPF database information.

show ip ospf database external

Display information on the AS external (type 5) LSAs.

Syntax

```
show ip ospf [process-id] database external [link-state-id] [adv-router ip-address]
```

Parameters

process-id | Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

link-state-id | (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:

- the network’s IP address for Type 3 LSAs or Type 5 LSAs
- the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
- the default destination (0.0.0.0) for Type 5 LSAs

adv-router ip-address | (OPTIONAL) Enter the keywords adv-router and the ip-address to display only the LSA information about that router.

</tbody>
</table>
| Options  | Displays the optional capabilities available on router. The following options can be found in this item:
### Item | Description
---|---
● | TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.
● | DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.
● | E or No E is displayed on whether the originating router can accept AS External LSAs.

**LS Type**
Displays the LSA’s type.

**Link State ID**
Displays the Link State ID.

**Advertising Router**
Identifies the advertising router’s ID.

**Checksum**
Displays the Fletcher checksum of the LSA's complete contents.

**Length**
Displays the length in bytes of the LSA.

**Opaque Type**
Displays the Opaque type field (the first 8 bits of the Link State ID).

**Opaque ID**
Displays the Opaque type-specific ID (the remaining 24 bits of the Link State ID).

### Example
```
Dell>show ip ospf 1 database opaque-area

OSPF Router with ID (3.3.3.3) (Process ID 1)
Type-10 Opaque Link Area (Area 0)

LS age: 1133
Options: (No TOS-capability, No DC, E)
LS type: Type-10 Opaque Link Area
Link State ID: 1.0.0.1
Advertising Router: 10.16.1.160
Checksum: 0x376
Length: 28
Opaque Type: 1
Opaque ID: 1
Unable to display opaque data

LS age: 833
Options: (No TOS-capability, No DC, E)
LS type: Type-10 Opaque Link Area
Link State ID: 1.0.0.2
Advertising Router: 10.16.1.160
Checksum: 0x19c2
Length: 28
Opaque Type: 1
Opaque ID: 1
Unable to display opaque data
```

### Related Commands

### Syntax
```
show ip ospf process-id database opaque-as [link-state-id] [adv-router ip-address]
```

### Parameters
- **process-id**
  - Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **link-state-id**
  - (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
show ip ospf database opaque-link

Display the opaque-link (type 9) LSA information.

**Z9000**

**Syntax**

```
show ip ospf [process-id] database opaque-link [link-state-id] [adv-router ip-address]
```

**Parameters**

- `process-id` Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.
- `link-state-id` (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs
- `adv-router ip-address` (OPTIONAL) Enter the keywords adv-router then the IP address of an Advertising Router to display only the LSA information about that router.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

**Related Commands**

- `show ip ospf database` — displays OSPF database information.
show ip ospf database router

Display the router (type 1) LSA information.

Z9000

Syntax

show ip ospf [process-id] database router [link-state-id] [adv-router ip-address]

Parameters

- **process-id**  
Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **link-state-id**  
(Optional) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs

- **adv-router ip-address**  
(Optional) Enter the keywords adv-router followed by the IP address of an Advertising Router to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

</table>
| Options            | Displays the optional capabilities available on router. The following options can be found in this item:  
  
  - TOS-capability or No TOS-capability is displayed depending on whether the router can support Type of Service.  
  - DC or No DC is displayed depending on whether the originating router can support OSPF over demand circuits.  
  - E or No E is displayed on whether the originating router can accept AS External LSAs. |
| LS Type            | Displays the LSA type. |
| Link State ID      | Displays the Link State ID. |
| Advertising Router | Identifies the router ID of the LSA’s originating router. |
| LS Seq Number      | Displays the link state sequence number. This number detects duplicate or old LSAs. |
| Checksum           | Displays the Fletcher checksum of an LSA’s complete contents. |
| Length             | Displays the length in bytes of the LSA. |
| Number of Links    | Displays the number of active links to the type of router (Area Border Router or AS Boundary Router) listed in the previous line. |
| Link connected to: | Identifies the type of network to which the router is connected. |
| (Link ID)          | Identifies the link type and address. |
| (Link Data)        | Identifies the router interface address. |
| Number of TOS Metric | Lists the number of TOS metrics. |
| TOS 0 Metric       | Lists the number of TOS 0 metrics. |

### Example

```
Dell#show ip ospf 100 database router

OSPF Router with ID (1.1.1.10) (Process ID 100)

    Router (Area 0)

    LS age: 967
    Options: (No TOS-capability, No DC, E)
    LS type: Router
    Link State ID: 1.1.1.10
    Advertising Router: 1.1.1.10
    LS Seq Number: 0x8000012f
    Checksum: 0x3357
    Length: 144
    AS Boundary Router
    Area Border Router
    Number of Links: 10

    Link connected to: a Transit Network
    (Link ID) Designated Router address: 192.68.129.1
```
show ip ospf database summary

Display the network summary (type 3) LSA routing information.

Z9000

Syntax

show ip ospf [process-id] database summary [link-state-id] [adv-router ip-address]

Parameters

- **process-id**: Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **link-state-id**: (OPTIONAL) Specify LSA ID in dotted decimal format. The LSA ID value depends on the LSA type, and it can be one of the following:
  - the network’s IP address for Type 3 LSAs or Type 5 LSAs
  - the router’s OSPF router ID for Type 1 LSAs or Type 4 LSAs
  - the default destination (0.0.0.0) for Type 5 LSAs

- **adv-router ip-address**: (OPTIONAL) Enter the keywords adv-router then the IP address of an Advertising Router to display only the LSA information about that router.

Command Modes

- EXEC
- EXEC Privilege

Example

```
Dell#show ip ospf 100 database summary

    OSPF Router with ID (1.1.1.10) (Process ID 100)
    Summary Network (Area 0.0.0.0)
    LS age: 1551
    Options: (No TOS-capability, DC, E)
    LS type: Summary Network
    Link State ID: 192.68.16.0
    Advertising Router: 192.168.17.1
    LS Seq Number: 0x800000054
    Checksum: 0xb5a2
    Length: 28
    Network Mask: /24
    TOS: 0 Metric: 1
```
LS age: 9
Options: (No TOS-capability, No DC, E)
LS type: Summary Network
Link State ID: 192.68.32.0
Advertising Router: 1.1.1.10
LS Seq Number: 0x80000016
Checksum: 0x987c
Length: 28
Network Mask: /24
  TOS: 0 Metric: 1

LS age: 7
Options: (No TOS-capability, No DC, E)
LS type: Summary Network
Link State ID: 192.68.33.0
Advertising Router: 1.1.1.10
LS Seq Number: 0x80000016
Checksum: 0x1241
Length: 28
Network Mask: /26
  TOS: 0 Metric: 1

Dell#

Related Commands

**show ip ospf database** — displays OSPF database information.

**show ip ospf interface**

Display the OSPF interfaces configured. If OSPF is not enabled on the switch, no output is generated.

Z9000

**Syntax**

```plaintext
show ip ospf [process-id] interface [interface]
```

**Parameters**

- `process-id`  
Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- `interface` (OPTIONAL)  
Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a Null interface, enter the keyword `null` then the Null interface number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Command Modes**

- `EXEC`
- `EXEC Privilege`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
The following describes the `show ip ospf process-id interface` command shown in the following example.

**Item** | **Description**
--- | ---
GigabitEthernet.. . | This line identifies the interface type slot/port and the status of the OSPF protocol on that interface.
Internet Address... | This line displays the IP address, network mask and area assigned to this interface.
Process ID... | This line displays the OSPF Process ID, Router ID, Network type and cost metric for this interface.
Transmit Delay... | This line displays the interface’s settings for Transmit Delay, State, and Priority. In the State setting, BDR is Backup Designated Router.
Designated Router... | This line displays the ID of the Designated Router and its interface address.
Backup Designated... | This line displays the ID of the Backup Designated Router and its interface address.
Timer intervals... | This line displays the interface’s timer settings for Hello interval, Dead interval, Transmit Delay (Wait), and Retransmit interval.
Hello due... | This line displays the amount time until the next Hello packet is sent out this interface.
Neighbor Count... | This line displays the number of neighbors and adjacent neighbors. Listed below this line are the details about each adjacent neighbor.

**Example**

```c
Dell>show ip ospf int

TenGigabitEthernet 1/7 is up, line protocol is up
  Internet Address 192.168.1.2/30, Area 0.0.0.1
  Process ID 1, Router ID 192.168.253.2, Network Type BROADCAST, Cost: 1
  Transmit Delay is 1 sec, State DR, Priority 1
  Designated Router (ID) 192.168.253.2, Interface address 192.168.1.2
  Backup Designated Router (ID) 192.168.253.1, Interface address 192.168.1.1
  Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
  Hello due in 00:00:02
  Neighbor Count is 1, Adjacent neighbor count is 1
    Adjacent with neighbor 192.168.253.1 (Backup Designated Router)

TenGigabitEthernet 1/8 is up, line protocol is up
  Internet Address 192.168.0.1/24, Area 0.0.0.1
  Process ID 1, Router ID 192.168.253.2, Network Type BROADCAST, Cost: 1
  Transmit Delay is 1 sec, State BROTHER, Priority 1
  Designated Router (ID) 192.168.253.5, Interface address 192.168.0.4
  Backup Designated Router (ID) 192.168.253.3, Interface address 192.168.0.2
  Timer intervals configured, Hello 10, Dead 40, Wait 40, Retransmit 5
  Hello due in 00:00:08
  Neighbor Count is 3, Adjacent neighbor count is 2
```
show ip ospf neighbor

Display the OSPF neighbors connected to the local router.

Z9000

**Syntax**

```
show ip ospf [process-id] neighbor
```

**Parameters**

- `process-id` Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

**Command Modes**

- EXEC Privilege

<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series and E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

This command is useful in isolating routing problems between the OSPF and the RTM. For example, if a route is missing from the RTM/FIB but is visible from the display output of this command, the problem is with downloading the route to the RTM.

This command has the following limitations:
- The display output is sorted by prefixes; intra-area ECMP routes are not displayed together.
- For Type 2 external routes, Type 1 cost is not displayed.

NOTE: Starting with Version 9.4(0.0), the loopback IP address advertised to the neighbor is not displayed in the output because they are not accounted as inactive OSPF routes, whereas the loopback IP address is displayed until Dell Networking OS Version 9.3(0.0). Starting with Version 9.4(0.0), the show ip ospf routes command displays the interface and area ID information of connected networks in addition to the other settings, whereas these details are not displayed until Dell Networking OS Version 9.3(0.0). Starting with Version 9.4(0.0), the metric of E2 routes in the output is displayed as an external metric, whereas until Dell Networking OS Version 9.3(0.0), the number of hops to the ASBR for E2 routes are displayed in the output.
Example

```
Dell#show ip ospf 100 route
Prefix    Cost Nexthop   Interface Area  Type
1.1.1.1    1   0.0.0.0   Lo 0      0     Intra-Area
3.3.3.3    2   13.0.0.3  Te 1/47   1     Intra-Area
13.0.0.0   1   0.0.0.0   Te 1/47   0     Intra-Area
150.150.150.0  2   13.0.0.3  Te 1/47   -     External
172.30.1.0  2   13.0.0.3  Te 1/47   1     Intra-Area
Dell#
```

### show ip ospf statistics

Display OSPF statistics.

#### Z9000

**Syntax**

```
show ip ospf [process-id] statistics global | [interface name {neighbor router-id}]
```

**Parameters**

- **process-id**
  
  Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

- **global**
  
  Enter the keyword `global` to display the packet counts received on all running OSPF interfaces and packet counts OSPF neighbors receive and transmit.

- **interface name** (OPTIONAL)
  
  Enter the keyword `interface` then one of the following interface keywords and slot/port or number information:
  
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

- **neighbor router-id** (OPTIONAL)
  
  Enter the keyword `neighbor` then the neighbor’s router-id in dotted decimal format (A.B.C.D.).

**Defaults**
none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

- Socket Errors 0

Dell#

### Usage Information

The `show ip ospf process-id statistics` command displays the error packet count received on each interface as:

- The hello-timer remaining value for each interface
- The wait-timer remaining value for each interface
- The grace-timer remaining value for each interface
- The packet count received and transmitted for each neighbor
- Dead timer remaining value for each neighbor
- Transmit timer remaining value for each neighbor
- The LSU Q length and its highest mark for each neighbor
- The LSR Q length and its highest mark for each neighbor

### Example (Statistics)

Dell(conf-if-te-1/6)#do show ip ospf statistics

Interface TenGigabitEthernet 1/6
- Error packets (Receive statistics)

  - LSU-Q-Len 0 LSU-Q-Wmark 1
  - LSR-Q-Len 0 LSR-Q-Wmark 1

Dell(conf-if-te-1/6)#
show ip ospf timers rate-limit

Show the LSA currently in the queue waiting for timers to expire.

Z9000

Syntax
show ip ospf [process-id] timers rate-limit

Parameters
- **process-id**: Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

Defaults
- none

Command Modes
- EXEC
- EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

</tbody>
</table>

Example

Dell#show ip ospf 10 timers rate-limit

List of LSAs in rate limit Queue
LSA id: 1.1.1.0 Type: 3 Adv Rtid: 3.3.3.3 Expiry time: 00:00:09.111
LSA id: 3.3.3.3 Type: 1 Adv Rtid: 3.3.3.3 Expiry time: 00:00:23.96

show ip ospf topology

Display routers in directly connected areas.

Z9000

Syntax
show ip ospf [process-id] topology

Parameters
- **process-id**: Enter the OSPF Process ID to show a specific process. If no Process ID is entered, command applies only to the first OSPF process.

Defaults
- none

Command Modes
- EXEC
- EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

Example

Dell#show ip ospf 10 topology
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added support for Multi-Process OSPF.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series and E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

To isolate problems with inter-area and external routes, use this command. In OSPF inter-area and external routes are calculated by adding LSA cost to the cost of reaching the router. If an inter-area or external route is not of correct cost, the display can determine if the path to the originating router is correct or not.

Example

```
Dell#show ip ospf 1 topology
  Router ID    Flags Cost Nexthop   Interface Area
  3.3.3.3      E/B/-/ 1    20.0.0.3  Gi 13/1   0
  1.1.1.1      E/-/-/ 1    10.0.0.1  Gi 7/1    1
Dell#
```

summary-address

To advertise one external route, set the OSPF ASBR.

Z9000

Syntax

```
summary-address ip-address mask [not-advertise] [tag tag-value]
```

To disable summary address, use the no summary-address ip-address mask command.

Parameters

- **ip-address**: Specify the IP address in dotted decimal format of the address to summarize.
- **mask**: Specify the mask in dotted decimal format of the address to summarize.
- **not-advertise**: (OPTIONAL) Enter the keywords not-advertise to suppress that match the network prefix/mask pair.
- **tag tag-value**: (OPTIONAL) Enter the keyword tag then a value to match on routes redistributed through a route map. The range is from 0 to 4294967295.

Defaults

Not configured.

Command Modes

- ROUTER OSPF

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
### Version Description
- **8.3.19.0** Introduced on the S4820T.
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **7.8.1.0** Added support for Multi-Process OSPF.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **pre-6.1.1.1** Introduced on the E-Series.

#### Usage Information
The *area range* command summarizes routes for the different areas.

With the *not-advertise* parameter configured, you can use this command to filter out some external routes. For example, if you want to redistribute static routes to OSPF, but you don't want OSPF to advertise routes with prefix *1.1.0.0*, you can configure the *summary-address 1.1.0.0 255.255.0.0 not-advertise* to filter out all the routes fall in range *1.1.0.0/16*.

#### Related Commands
- `area range` — summarizes routes within an area.

### timers spf
Set the time interval between when the switch receives a topology change and starts a shortest path first (SPF) calculation.

#### Z9000

**Syntax**
```
timers spf delay holdtime
```

To return to the default, use the `no timers spf` command.

**Parameters**
- `delay` Enter a number as the delay. The range is from 0 to 4294967295. The default is 5 seconds.
- `holdtime` Enter a number as the hold time. The range is from 0 to 4294967295. The default is 10 seconds.

**Defaults**
- `delay = 5 seconds`
- `holdtime = 10 seconds`

**Command Modes**
- ROUTER OSPF

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

</tr>
</tbody>
</table>
**timers throttle lsa all**

Configure LSA transmit intervals.

**Z9000**

**Syntax**

```plaintext
timers throttle lsa all {start-interval | hold-interval | max-interval}
```

To return to the default, use the `no timers throttle lsa` command.

**Parameters**

- **start-interval** Set the minimum interval between initial sending and resending the same LSA. The range is from 0 to 600,000 milliseconds.
- **hold-interval** Set the next interval to send the same LSA. This interval is the time between sending the same LSA after the start-interval has been attempted. The range is from 1 to 600,000 milliseconds.
- **max-interval** Set the maximum amount of time the system waits before sending the LSA. The range is from 1 to 600,000 milliseconds.

**Defaults**

- start-interval: 0 msec
- hold-interval: 5000 msec
- max-interval: 5000 msec

**Command Modes**

ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

LSAs are sent after the start-interval and then after hold-interval until the maximum interval is reached. In throttling, exponential backoff is used when sending same LSA, so that the interval is multiplied until the maximum time is reached. For example, if the `start-interval 5000` and `hold-interval 1000` and `max-interval 100,000`, the LSA is sent at 5000 msec, then 1000 msec, then 2000 msec, them 4000 until 100,000 msec is reached.
**timers throttle lsa arrival**

Configure the LSA acceptance intervals.

**Z-Series**

**Syntax**

```
timers throttle lsa arrival arrival-time
```

To return to the default, use the `no timers throttle lsa` command.

**Parameters**

- `arrival-time`
  
  Set the interval between receiving the same LSA repeatedly, to allow sufficient time for the system to accept the LSA. The range is from 0 to 600,000 milliseconds.

**Defaults**

1000 msec

**Command Modes**

ROUTER OSPF

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

**OSPFv3 Commands**

Open shortest path first version 3 (OSPFv3) for IPv6 is supported on the Z-Series platform.

The fundamental mechanisms of OSPF (flooding, DR election, area support, SPF calculations, and so on) remain unchanged. However, OSPFv3 runs on a per-link basis instead of on a per-IP-subnet basis. Most changes were necessary to handle the increased address size of IPv6.

The Dell Networking implementation of OSPFv3 is based on IETF RFC 2740.

**area authentication**

Configure an IPsec authentication policy for OSPFv3 packets in an OFSPFv3 area.

**Z-Series**

**Syntax**

```
area area-id authentication ipsec spi number {MD5 | SHA1} [key-encryption-type] key
```

**Parameters**

- `area area-id`  
  
  Area for which OSPFv3 traffic is to be authenticated. For area-id, you can enter a number. The range is from 0 to 4294967295.

- `ipsec spi number`  
  
  Security Policy index (SPI) value that identifies an IPsec security policy.
The range is from 256 to 4294967295.

**MD5 | SHA1**

Authentication type: Message Digest 5 (MD5) or Secure Hash Algorithm 1 (SHA-1).

**key-encryption-type**

(Optional) Specifies if the key is encrypted.
The values are 0 (key is not encrypted) or 7 (key is encrypted).

**key**

Text string used in authentication.
For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).
For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

**Defaults**

Not configured.

**Command Modes**

ROUTER OSPFv3

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.(0.0)</td>
<td>Introduced on the S4810 and Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.4.2.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
</tbody>
</table>

**Usage Information**

Before you enable IPsec authentication on an OSPFv3 area, you must first enable OSPFv3 globally on the router. Configure the same authentication policy (same SPI and key) on each interface in an OSPFv3 link.

An SPI number must be unique to one IPsec security policy (authentication or encryption) on the router.

If you have enabled IPsec encryption in an OSPFv3 area with the `area encryption` command, you cannot use the `area authentication` command in the area at the same time.

The configuration of IPsec authentication on an interface-level takes precedence over an area-level configuration. If you remove an interface configuration, an area authentication policy that has been configured is applied to the interface.

To remove an IPsec authentication policy from an OSPFv3 area, enter the `no area area-id authentication spi number` command.

**Related Commands**

- `ipv6 ospf authentication` — configures an IPsec authentication policy on an OSPFv3 interface.
- `show crypto ipsec policy` — displays the configuration of IPsec authentication policies.

**area encryption**

Configure an IPsec encryption policy for OSPFv3 packets in an OSPFv3 area.

**Z9000**

**Syntax**

```
area area-id encryption ipsec spi number esp encryption-algorithm [key-encryption-type] key authentication-algorithm [key-encryption-type] key
```

**Parameters**

- **area area-id**
  
  Area for which OSPFv3 traffic is to be encrypted. For `area-id`, enter a number.
  
  The range is from 0 to 4294967295.

- **ipsec spi number**
  
  Security Policy index (SPI) value that identifies an IPsec security policy.
The range is from 256 to 4294967295.

**esp encryption-algorithm**

Encryption algorithm used with ESP.
Valid values are: 3DES, DES, AES-CBC, and NULL.
For AES-CBC, only the AES-128 and AES-192 ciphers are supported.

**key-encryption-algorithm**

(Optional) Specifies if the key is encrypted.
Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

**key**

Text string used in encryption.
The required lengths of a non-encrypted or encrypted key are:
3DES - 48 or 96 hex digits; DES - 16 or 32 hex digits; AES-CBC -32 or 64 hex digits
for AES-128 and 48 or 96 hex digits for AES-192.

**authentication-algorithm**

Specifies the authentication algorithm to use for encryption.
Valid values are MD5 or SHA1.

**key-encryption-type**

(Optional) Specifies if the authentication key is encrypted.
Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

**key**

Text string used in authentication.
For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex
digits (encrypted).
For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex
digits (encrypted).

**null**

Causes an encryption policy configured for the area to not be inherited on the
interface.

**Defaults**

Not configured.

**Command Modes**

ROUTER OSPFv3

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.(0.0)</td>
<td>Introduced on the S4810 and Z9000.</td>
</tr>
<tr>
<td>8.4.2.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

**Usage Information**

Before you enable IPsec encryption on an OSPFv3 interface, first enable OSPFv3 globally on the router. Configure the same encryption policy (same SPI and keys) on each interface in an OSPFv3 link.
An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router.

When you configure encryption for an OSPFV3 area with the `area encryption` command, you enable both IPsec encryption and authentication. However, when you enable authentication on an area with the `area authentication` command, you do not enable encryption at the same time.

If you have enabled IPsec authentication in an OSPFV3 area with the `area authentication` command, you cannot use the `area encryption` command in the area at the same time.

The configuration of IPsec encryption on an interface-level takes precedence over an area-level configuration. If you remove an interface configuration, an area encryption policy that has been configured is applied to the interface.
To remove an IPsec encryption policy from an interface, enter the no area area-id encryption spi number command.

**Related Commands**
- `ipv6 ospf encryption` – configures an IPsec encryption policy on an OSPFv3 interface.
- `show crypto ipsec policy` – display the configuration of IPsec encryption policies.

## clear ipv6 ospf process

Reset an OSPFv3 router process without removing or re-configuring the process.

**Z-Series**

**Syntax**
```
clear ipv6 ospf process
```

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</table>

## debug ipv6 ospf bfd

Display debug information and interface types for bidirectional forwarding detection (BFD) on OSPF IPv6 packets.

**Z9000**

**Syntax**
```
[no] debug ipv6 ospf bfd [interface]
```

**Parameters**
- `interface` (OPTIONAL) Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**Command Modes**
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
debug ipv6 ospf packet

Display debug information and interface types on OSPF IPv6 packets.

Z-Series

**Syntax**

```
debug ipv6 ospf {packet | events} [interface]
```

**Parameters**

- **interface**
  - (OPTIONAL) Enter one of the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.

For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

default-information originate

Configure the Dell Networking OS to generate a default external route into an OSPFv3 routing domain.

Z-Series

Syntax
default-information originate [always] [metric metric-value] [metric-type type-value] [route-map map-name]

To return to the default values, use the no default-information originate command.

Parameters
always
(OPTIONAL) Enter the keyword always to specify that default route information must always be advertised.

metric metric-value
(Optional) Enter the keyword metric then a number to configure a metric value for the route. The range is from 1 to 16777214.

metric-type type-value
(Optional) Enter the keywords metric-type then an OSPFv3 link state type of 1 or 2 for default routes. The values are:

- 1 = Type 1 external route
- 2 = Type 2 external route

route-map map-name
(Optional) Enter the keywords route-map then the name of an established route map.

Defaults
Disabled.

Command Modes
ROUTER OSPFv3

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.1.(0.0) Introduced on the S4810 and Z9000.
8.3.19.0 Introduced on the S4820T.
7.8.1.0 Added support for C-Series.
7.4.1.0 Introduced on the E-Series.

Related Commands
redistribute — redistributes routes from other routing protocols into OSPFv3.

graceful-restart grace-period

Enable OSPFv3 graceful restart globally by setting the grace period (in seconds) that an OSPFv3 router’s neighbors continues to advertise the router as adjacent during a graceful restart.

Z-Series

Syntax
graceful-restart grace-period seconds

To disable OSPFv3 graceful restart, enter no graceful-restart grace-period.

Parameters
seconds
Time duration, in seconds, that specifies the duration of the restart process before OSPFv3 terminates the process. The range is from 40 to 1800 seconds.

Defaults
OSPFv3 graceful restart is disabled and functions in a helper-only role.
graceful-restart mode

Specify the type of events that trigger an OSPFv3 graceful restart.

**Z-Series**

**Syntax**
```
graceful-restart mode {planned-only | unplanned-only}
```

To disable graceful restart mode, enter `no graceful-restart mode`.

**Parameters**
- `planned-only` *(OPTIONAL)* Enter the keywords `planned-only` to indicate graceful restart is supported in a planned restart condition only.
- `unplanned-only` *(OPTIONAL)* Enter the keywords `unplanned-only` to indicate graceful restart is supported in an unplanned restart condition only.

**Defaults**
OSPFv3 graceful restart supports both planned and unplanned failures.

**Command Modes**
ROUTER OSPFv3

**History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.(0.0)</td>
<td>Introduced on the S4810 and Z9000.</td>
</tr>
<tr>
<td>8.4.2.2</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

**Usage Information**
OSPFv3 graceful restart supports planned-only and/or unplanned-only restarts. The default is support for both planned and unplanned restarts.

- A planned restart occurs when you enter the `redundancy force-failover rpm` command to force the primary RPM to switch to the backup RPM. During a planned restart, OSPF sends out a Type-11 Grace LSA before the system switches over to the backup RPM.
An unplanned restart occurs when an unplanned event causes the active RPM to switch to the backup RPM, such as when an active process crashes, the active RPM is removed, or a power failure happens. During an unplanned restart, OSPF sends out a Grace LSA when the backup RPM comes online.

By default, both planned and unplanned restarts trigger an OSPFv3 graceful restart. Selecting one or the other mode restricts OSPFv3 to the single selected mode.

### ipv6 ospf area

Enable IPv6 OSPF on an interface.

**Z-Series**

**Syntax**

```
ipv6 ospf process-id area area-id
```

To disable OSPFv6 routing for an interface, use the `no ipv6 ospf process-id area area-id` command.

**Parameters**

- `process-id` Enter the process identification number.
- `area area-id` Specify the OSPF area. The range is from 0 to 65535.

**Defaults**

none

**Command Modes**

INTERFACE

</tbody>
</table>

### ipv6 ospf authentication

Configure an IPsec authentication policy for OSPFv3 packets on an IPv6 interface.

**Z-Series**

**Syntax**

```
ipv6 ospf authentication {null | ipsec spi number (MD5 | SHA1) [key-encryption-type] key}
```

**Parameters**

- `null` Causes an authentication policy configured for the area to not be inherited on the interface.
- `ipsec spi number` Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.
- `MD5 | SHA1` Authentication type: Message Digest 5 (MD5) or Secure Hash Algorithm 1 (SHA-1).
- `key-encryption-type` (OPTIONAL) Specifies if the key is encrypted.
- `key` Text string used in authentication.
  - For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex digits (encrypted).
For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex digits (encrypted).

Defaults
Not configured.

Command Modes
INTERFACE

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.(0.0)</td>
<td>Introduced on S4810 and Z9000.</td>
</tr>
<tr>
<td>8.4.2.0</td>
<td>Introduced on the E-Series.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

Usage Information
Before you enable IPsec authentication on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router. Configure the same authentication policy (same SPI and key) on each OSPFv3 interface in a link.

To remove an IPsec authentication policy from an interface, enter the no ipv6 ospf authentication spi number command. To remove null authentication on an interface to allow the interface to inherit the authentication policy configured for the OSPFv3 area, enter the no ipv6 ospf authentication null command.

Related Commands
area authentication – configures an IPsec authentication policy for an OSPFv3 area.
show crypto ipsec policy – displays the configuration of IPsec authentication policies.
show crypto ipsec sa ipv6 – displays the security associations set up for OSPFv3 interfaces in authentication policies.

ipv6 ospf bfd all-neighbors

Establish BFD sessions with all OSPFv3 neighbors on a single interface or use non-default BFD session parameters.

Z9000

Syntax
ipv6 ospf bfd all-neighbors [disable | [interval interval min_rx min_rx multiplier value role {active | passive}]]

To disable all BFD sessions on an OSPFv3 interface implicitly, use the no ipv6 ospf bfd all-neighbors disable command in interface mode.

Parameters
disable
(interval milliseconds) (OPTIONAL) Enter the keyword disable to disable BFD on this interface.

interval milliseconds
(min_rx milliseconds)
Enter the keywords min_rx to specify the minimum rate at which the local system receives control packets from the remote system. The range is from 50 to 1000. The default is 100.

min_rx milliseconds
multiplier value
Enter the keyword multiplier to specify the number of packets that must be missed in order to declare a session down. The range is from 3 to 50. The default is 3.
role [active | passive] Enter the role that the local system assumes:
- Active — The active system initiates the BFD session. Both systems can be active for the same session.
- Passive — The passive system does not initiate a session. It only responds to a request for session initialization from the active system.

The default is Active.

Defaults See Parameters

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2.0.0</td>
<td>Introduced on the Z9000, S4820T, and S4810.</td>
</tr>
</tbody>
</table>

Usage Information This command provides the flexibility to fine-tune the timer values based on individual interface needs when you configure ipv6 ospf BFD in CONFIGURATION mode. Any timer values specified with this command overrides timers set using the bfd all-neighbors command. Using the no form of this command does not disable BFD if you configure BFD in CONFIGURATION mode.

To disable BFD on a specific interface while you configure BFD in CONFIGURATION mode, use the keyword disable.

ipv6 ospf cost

Explicitly specify the cost of sending a packet on an interface.

Z-Series

Syntax ipv6 ospf interface-cost

Parameters

- interface-cost Enter a unsigned integer value expressed as the link-state metric. The range is from 1 to 65535.

Defaults Default cost based on the bandwidth.

Command Modes INTERFACE

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.0.0</td>
<td>Introduced on the S4810 and Z9000.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added support for C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

Usage Information In general, the path cost is calculated as:

\[ 10^8 / \text{bandwidth} \]

Using this formula, the default path cost is calculated as:
ipv6 ospf dead-interval

Set the time interval since the last hello-packet was received from a router. After the time interval elapses, the neighboring routers declare the router down.

Z-Series

Syntax

ipv6 ospf dead-interval seconds

To return to the default time interval, use the no ipv6 ospf dead-interval command.

Parameters

seconds

Enter the time interval in seconds. The range is from 1 to 65535 seconds.

Defaults

40 seconds (Ethernet).

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.(0.0)</td>

<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

Usage Information

By default, the dead interval is four times longer than the default hello-interval.

Related Commands

ipv6 ospf hello-interval — specifies the time interval between hello packets.

ipv6 ospf encryption

Configure an IPsec encryption policy for OSPFv3 packets on an IPv6 interface.

Z-Series

Syntax

ipv6 ospf encryption {null | ipsec spi number esp encryption-algorithm [key-encryption-type] key [authentication-algorithm [key-encryption-type] key]}

Parameters

null

Causes an encryption policy configured for the area to not be inherited on the interface.

ipsec spi number

Security Policy index (SPI) value that identifies an IPsec security policy. The range is from 256 to 4294967295.

esp encryption-algorithm

Encryption algorithm used with ESP.
Valid values are: 3DES, DES, AES-CBC, and NULL.

For AES-CBC, only the AES-128 and AES-192 ciphers are supported.

`key-encryption-type` (OPTIONAL) Specifies if the key is encrypted.
Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

`key` Text string used in authentication.
The required lengths of a non-encrypted or encrypted key are:
3DES - 48 or 96 hex digits; DES - 16 or 32 hex digits; AES-CBC -32 or 64 hex digits
for AES-128 and 48 or 96 hex digits for AES-192.

`authentication-algorithm` Specifies the authentication algorithm to use for encryption. Valid values are MD5 or SHA1.

`key-encryption-type` (OPTIONAL) Specifies if the authentication key is encrypted.
Valid values: 0 (key is not encrypted) or 7 (key is encrypted).

`key` Text string used in authentication.
For MD5 authentication, the key must be 32 hex digits (non-encrypted) or 64 hex
digits (encrypted).
For SHA-1 authentication, the key must be 40 hex digits (non-encrypted) or 80 hex
digits (encrypted).

**Defaults**
Not configured.

**Command Modes**
INTERFACE

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.(0.0)</td>
<td>Introduced on the S4810 and Z9000.</td>
</tr>
<tr>
<td>8.4.2.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

**Usage Information**
Before you enable IPsec encryption on an OSPFv3 interface, first enable IPv6 unicast routing globally, configure an IPv6 address and enable OSPFv3 on the interface, and assign the interface to an area.

An SPI value must be unique to one IPsec security policy (authentication or encryption) on the router.

Configure the same encryption policy (same SPI and key) on each OSPFv3 interface in a link.

To remove an IPsec encryption policy from an interface, enter the no ipv6 ospf encryption spi
number command. To remove null authentication on an interface to allow the interface to inherit the
authentication policy configured for the OSPFV3 area, enter the no ipv6 ospf no ipv6 ospf
encryption null command.

**Related Commands**
- area encryption — configures an IPsec encryption policy for an OSPFV3 area.
- show crypto ipsec policy — displays the configuration of IPsec encryption policies.
- show crypto ipsec sa ipv6 — displays the security associations set up for OSPFV3 interfaces in encryption policies.
ipv6 ospf graceful-restart helper-reject

Configure an OSPFv3 interface to not act upon the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

Z-Series

Syntax

ipv6 ospf graceful-restart helper-reject
To disable the helper-reject role, enter no ipv6 ospf graceful-restart helper-reject.

Defaults
The helper-reject role is not configured.

Command Modes
INTERFACE

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.(0.0)</td>
<td>Introduced on the S4810 and Z9000.</td>
</tr>
<tr>
<td>8.4.2.2</td>
<td>Introduced on E-Series TeraScale.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>

Usage Information
By default, OSPFv3 graceful restart is disabled and functions only in a helper role to help restarting neighbor routers in their graceful restarts when it receives a Grace LSA.

When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

The graceful-restart role command is not supported in OSPFv3. When you enable the helper-reject role on an interface, you reconfigure an OSPFv3 router to function in a “restarting-only” role.

ipv6 ospf hello-interval

Specify the time interval between the hello packets sent on the interface.

Z-Series

Syntax

ipv6 ospf hello-interval seconds
To return to the default time interval, enter no ipv6 ospf hello-interval.

Parameters

seconds Enter the time interval in seconds as the time between hello packets. The range is from 1 to 65525 seconds.

Defaults
10 seconds (Ethernet).

Command Modes
INTERFACE

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
### ipv6 ospf priority

To determine the Designated Router for the OSPFv3 network, set the priority of the interface.

**Z-Series**

**Syntax**

```
ipv6 ospf priority number
```

To return to the default time interval, use the `no ipv6 ospf priority` command.

**Parameters**

- **number**
  
  Enter the number as the priority. The range is from 1 to 255.

**Defaults**

1

**Command Modes**

INTERFACE

**Version**

- 9.1.(0.0) Introduced on the S4810 and Z9000.
- 8.3.19.0 Introduced on the S4820T.
- 7.8.1.0 Added support for the C-Series.
- 7.4.1.0 Introduced on the E-Series.

**Usage Information**

Setting a priority of 0 makes the router ineligible for election as a Designated Router or Backup Designated Router.

Use this command for interfaces connected to multi-access networks, not point-to-point networks.

### ipv6 router ospf

Enable OSPF for IPv6 router configuration.

**Z-Series**

**Syntax**

```
ipv6 router ospf process-id
```

To exit OSPF for IPv6, use the `no ipv6 router ospf process-id` command.

**Parameters**

- **process-id**
  
  Enter the process identification number. The range is from 1 to 65535.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant **Dell Networking OS Command Line Reference Guide**.

The following is a list of the Dell Networking OS version history for this command.
maximum-paths

Enable the software to forward packets over multiple paths.

Z9000

Syntax

```
maximum-paths number
```

To disable packet forwarding over multiple paths, use the `no maximum-paths` command.

Parameters

- `number`: Specify the number of paths. The range is from 1 to 64. The default is 8 paths.

Defaults

8

Command Modes

```
ROUTER OSPF
```

Command History

- **Version** 8.3.19.0: Introduced on the S4820T.
- **Version** 8.3.11.1: Introduced on the Z9000.
- **Version** 8.3.7.0: Introduced on the S4810.
- **Version** 7.8.1.0: Added support for Multi-Process OSPF.
- **Version** 7.6.1.0: Introduced on the S-Series.
- **Version** 7.5.1.0: Introduced on the C-Series.
- **Version** pre-6.1.1.1: Introduced on the E-Series.

passive-interface

Disable (suppress) sending routing updates on an interface.

Z9000

Syntax

```
passive-interface interface
```

To enable sending routing updates on an interface, use the `no passive-interface interface` command.

Parameters

- `interface`: Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
For a VLAN interface, enter the keyword \texttt{vlan} then a number from 1 to 4094.

**Defaults**

Enabled, that is sending of routing updates are enabled by default.

**Command Modes**

- ROUTER OSPF for OSPFv2
- ROUTER OSPFv3 for OSPFv3

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.1.(0.0)</td>
<td>Introduced support for OSPFv3 on the S4810 and Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Added support for the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, no interfaces are \texttt{passive}. Routing updates are sent to all interfaces on which the routing protocol is enabled.

If you disable the sending of routing updates on an interface, the particular address prefix continues to be advertised to other interfaces, and updates from other routers on that interface continue to be received and processed.

OSPFv3 for IPv6 routing information is not sent or received through the specified router interface. The specified interface address appears as a stub network in the OSPFv3 for IPv6 domain.

On configuring suppression using the passive-interface command, the state of the OSPF neighbor does not change to \texttt{INIT}; instead, the state of the OSPF neighbor changes to \texttt{DOWN} after the dead-timer expires.

**redistribute**

Redistribute into OSPFv3.

**Z-Series**

**Syntax**

redistribute \{bgp as number\}|\{connected | static\}|\{metric metric-value \| metric-type type-value\} [\{route-map map-name\} |\{tag tag-value\}]

To disable redistribution, use the \texttt{no redistribute \{connected | static\}} command.

**Parameters**

- **bgp as number**
  
Enter the keyword \texttt{bgp} then the autonomous system number.
  
The range is from 1 to 65535.

- **connected**
  
Enter the keyword \texttt{connected} to redistribute routes from physically connected interfaces.

- **static**
  
Enter the keyword \texttt{static} to redistribute manually configured routes.

- **metric metric-value**
  
Enter the keyword \texttt{metric} then the metric value.
  
The range is from 0 to 16777214.
  
The default is 20.

- **metric-type type-value**
  
  (OPTIONAL) Enter the keywords \texttt{metric-type} then the OSPFv3 link state type of 1 or 2 for default routes. The values are:
  
  - 1 for a type 1 external route
  - 2 for a type 2 external route
  
The default is 2.
**route-map** map-name

(OPTIONAL) Enter the keywords route-map then the name of an established route map. If the route map is not configured, the default is deny (to drop all routes).

**tag** tag-value

(OPTIONAL) Enter the keyword tag to set the tag for routes redistributed into OSPFv3.

The range is from 0 to 4294967295

The default is 0.

**Defaults**

Not configured.

**Command Modes**

ROUTER OSPF for OSPFv2

ROUTER OSPFv3 for OSPFv3

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

</tr>
<tr>
<td>7.8.1.0</td>
<td>Added support for the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

To redistribute the default route (x:x:x:x::x), use the default-information originate command.

**Related Commands**

default-information originate – configures default external route into OSPFv3.

**router-id**

Designate a fixed router ID.

**Z-Series**

**Syntax**

router-id ip-address

To return to the previous router ID, use the no router-id ip-address command.

**Parameters**

ip-address

Enter the router ID in the dotted decimal format.

**Defaults**

The router ID is selected automatically from the set of IPv4 addresses configured on a router.

**Command Modes**

ROUTER OSPF for OSPFv2

ROUTER OSPFv3 for OSPFv3

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
show crypto ipsec policy

Display the configuration of IPsec authentication and encryption policies.

Z-Series

Syntax

show crypto ipsec policy [name name]

Parameters

name name  (OPTIONAL) Displays configuration details about a specified policy.

Defaults

No default behavior or values.

Command Modes

EXEC

EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version  Description
9.1.(0.0)  Introduced on the S4810 and Z9000.
8.4.2.0    Introduced on the E-Series TeraScale.
8.3.19.0   Introduced on the S4820T.

Usage Information

The show crypto ipsec policy command output displays the AH and ESP parameters configured in IPsec security policies, including the SPI number, keys, and algorithms used.

When configured in a helper-reject role, an OSPFv3 router ignores the Grace LSAs that it receives from a restarting OSPFv3 neighbor.

Related Commands

show crypto ipsec sa ipv6 – displays the IPsec security associations used on OSPFv3 interfaces.

Example

```
Dell#show crypto ipsec policy
Crypto IPSec client security policy data
Policy name : OSPFv3-1-502
Policy refcount : 1
Inbound ESP SPI : 502 (0x1F6)

show crypto ipsec sa ipv6

Display the IPsec security associations (SAs) used on OSPFv3 interfaces.

Z-Series

Syntax  
show crypto ipsec sa ipv6 [interface interface]
**Parameters**

interface (OPTIONAL) Displays information about the SAs used on a specified OSPFv3 interface, where interface is one of the following values:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a port channel interface, enter the keywords port-channel then a number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

**Defaults**

No default behavior or values.

**Command Modes**

EXEC

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the *Dell Networking OS version history for this command.*

<table>
<thead>
<tr>

show ipv6 ospf database

Display information in the OSPFv3 database, including link-state advertisements (LSAs).

**Syntax**

```
show ipv6 ospf [process-number] database [database-summary | grace-lsa]
```

**Parameters**

- `process-number` Enter the OSPF process number.
- `database-summary` (OPTIONAL) Enter the keywords `database-summary` to view a summary of database LSA information.
- `grace-lsa` (OPTIONAL) Enter the keywords `grace-lsa` to display the Type-11 Grace LSAs sent and received on an OSPFv3 router.

**Defaults**

none
Command Modes

Open Shortest Path First (OSPFv2 and OSPFv3)  929
show ipv6 ospf interface

View OSPFv3 interface information.

Syntax
show ipv6 ospf [process-number] [interface]

Parameters

- **process-number**: Enter the OSPF process number.
- **interface** (OPTIONAL): Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults
none

Command Modes
EXEC

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2.(0.0)</td>
<td>Added support for showing BFD status on the S4820T, S4810, and Z9000.</td>
</tr>
<tr>
<td>9.1.(0.0)</td>
<td>Added support for OSPFv3 on the S4810 and Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>

<tr>
<td>7.8.1.0</td>
<td>Added support for the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

If you enable BFD at the global level, `show ipv6 ospf interface` shows the BFD provisioning.

If you enable BFD at the interface level, `show ipv6 ospf interface` shows the BFD interval timers.

Example

```
Dell#show ipv6 ospf 3 interface tengigabitethernet 1/2

TenGigabitEthernet 1/2 is up, line protocol is up
Link Local Address fe80::201:e8ff:fe17:5bbd, Interface ID 67420217
Area 0, Process ID 1, Instance ID 0, Router ID 11.1.1.1
NetworkType BROADCAST, Cost: 1, Passive: No
```
Transmit Delay is 100 sec, State DR, Priority 1
Interface is using OSPF global mode BFD configuration.
Designated router on this network is 11.1.1.1 (local)
No backup designated router on this network
Timer intervals configured, Hello 10, Dead 40, Wait 1, Retransmit 5

Dell#

### show ipv6 ospf neighbor

Display the OSPF neighbor information on a per-interface basis.

<table>

Dell#
Policy-based routing (PBR) allows you to apply routing policies to specific interfaces. To enable PBR, create a redirect list and apply it to the interface. After the redirect list is applied to the interface, all traffic passing through the interface is subject to the rules defined in the redirect list. PBR is supported by the Dell Networking Operating System (OS).

You can apply PBR to physical interfaces and logical interfaces (such as a link aggregation group [LAG] or virtual local area network [VLAN]). Trace lists and redirect lists do not function correctly when you configure both in the same configuration.

**NOTE:** Apply PBR to Layer 3 interfaces only.

**NOTE:** For more information, refer to Content Addressable Memory (CAM) chapter.

---

**Topics:**
- description
- ip redirect-group
- ip redirect-list
- permit
- redirect
- seq
- show cam pbr
- show ip redirect-list

---

**description**

Add a description to this redirect list.

**Z9000**

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- **description**
  Enter a description to identify the IP redirect list (16 characters maximum).

**Defaults**

- none

**Command Modes**

- REDIRECT-LIST

**Command History**

- **Version**
  - 9.7(0.0) Introduced on the S6000-ON.
  - 9.4(0.0) Introduced on the S4810, S4820T, S6000, and Z9000.
  - 8.4.2.1 Introduced on the C-Series and S-Series.
  - 8.4.2.0 Introduced on the E-Series Tera Scale.
  - 7.7.1.0 Introduced on the E-Series ExaScale.

**Related Commands**

- ip redirect-list – enables an IP Redirect List.
ip redirect-group

Apply a redirect list (policy-based routing) on an interface. You can apply multiple redirect lists to an interface by entering this command multiple times.

Z9000

Syntax

```
ip redirect-group redirect-list-name
```

To remove a redirect list from an interface, use the `no ip redirect-group name` command.

Parameters

- `redirect-list-name` Enter the name of a configured redirect list.

Defaults

none

Command Modes

INTERFACE (conf-if-vl-)

Command History

<td>Introduced on the E-Series Tera Scale.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>

Usage Information

You can apply any number of redirect-groups to an interface. A redirect list can contain any number of configured rules. These rules includes the next-hop IP address where the incoming traffic is to be redirected.

If the next hop address is reachable, traffic is forwarded to the specified next hop. Otherwise, the normal routing table is used to forward traffic. When a redirect-group is applied to an interface and the next-hop is reachable, the rules are added into the PBR CAM region. When incoming traffic hits an entry in the CAM, the traffic is redirected to the corresponding next-hop IP address specified in the rule.

**NOTE:** Apply the redirect list to physical, VLAN, or LAG interfaces only.

Related Commands

- `show cam pbr` — displays the content of the PBR CAM.
- `show ip redirect-list` — displays the redirect-list configuration.

ip redirect-list

Configure a redirect list and enter REDIRECT-LIST mode.

Z9000

Syntax

```
ip redirect-list redirect-list-name
```

To remove a redirect list, use the `no ip redirect-list name` command.

Parameters

- `redirect-list-name` Enter the name of a redirect list.

Defaults

None

**permit**

Configure a permit rule. A permit rule excludes the matching packets from PBR classification and routes them using conventional routing.

### Z9000

**Syntax**

```
permit {ip-protocol-number | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operators]
```

To remove the rule, use one of the following:

- If you know the filter sequence number, use the `no seq sequence-number` syntax command.
- You can also use the `no permit {ip-protocol-number | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operators]` command.

**Parameters**

- `ip-protocol-number`  
Enter a number from 0 to 255 for the protocol identified in the IP protocol header.
- `protocol-type`  
Enter one of the following keywords as the protocol type:
  - `icmp` for internet control message protocol
  - `ip` for any internet protocol
  - `tcp` for transmission control protocol
  - `udp` for user datagram protocol
- `source`  
Enter the IP address of the network or host from which the packets were sent.
- `mask`  
Enter a network mask in /prefix format (/x).
- `any`  
Enter the keyword `any` to specify that all traffic is subject to the filter.
- `host ip-address`  
Enter the keyword `host` then the IP address to specify a host IP address.
- `destination`  
Enter the IP address of the network or host to which the packets are sent.
- `bit`  
(Optional) For the TCP protocol type only, enter one or a combination of the following TCP flags:
  - `ack` = acknowledgement
  - `fin` = finish (no more data from the user)
  - `psh` = push function
  - `rst` = reset the connection
  - `syn` = synchronize sequence number
  - `urg` = urgent field
- `operator`  
(Optional) For TCP and UDP parameters only. Enter one of the following logical operand:
  - `eq` = equal to
  - `neq` = not equal to
  - `gt` = greater than
redirect

Configure a rule for the redirect list.

Z9000

Syntax

```
redirect {ip-address | slot/port | tunnel tunnel-id}[track <obj-id>] {ip-protocol-number | protocol-type [bit]} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator]
```

To remove this filter, use one of the following:
- Use the no seq sequence-number command if you know the filter’s sequence number.
- You can also use the no redirect {ip-address | slot/port | tunnel tunnel-id}[track <obj-id>] {ip-protocol-number [bit] | protocol-type} {source mask | any | host ip-address} {destination mask | any | host ip-address} [operator] command.

Parameters

- **redirect**: Enter the keyword redirect to assign the sequence to the redirect list.
- **ip-address**: Enter the IP address of the forwarding router.
- **slot/port**: Enter the keyword slot / port followed by the slot/port information.
- **tunnel**: Enter the keyword tunnel to configure the tunnel setting.
- **tunnel-id**: Enter the keyword tunnel-id to redirect the traffic.
- **track**: Enter the keyword track to enable the tracking.
- **track <obj-id>**: Enter the keyword track <obj-id> to track object-id.
- **ip-protocol-number**: Enter a number from 0 to 255 for the protocol identified in the IP protocol header.
- **protocol-type**: Enter one of the following keywords as the protocol type:
  - icmp for internet control message protocol
  - ip for any internet protocol
  - tcp for transmission control protocol
  - udp for user datagram protocol
- **bit**: (OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags:
  - ack = acknowledgement
Configure a filter with an assigned sequence number for the redirect list.

Z9000

**Syntax**

```
seq sequence-number {permit | redirect {ip-address | tunnel tunnel-id} [track <obj-id>] | [ip-protocol-number | protocol-type] {source mask | any | host ip-address} {destination mask | any | host ip-address} [bit] [operator] [source-port source-port] [source-port-range start-port - end-port] [destination-port destination-port] [destination-port-range start-port - end-port] }
```

To delete a filter, use the `no seq sequence-number` command.

**Parameters**

- `sequence-number`: Enter a number from 1 to 65535.
- `permit`: Enter the keyword `permit` assign the sequence to the permit list.
- `redirect`: Enter the keyword `redirect` to assign the sequence to the redirect list.
| **ip-address** | Enter the keyword IP address of the forwarding router. |
| **tunnel** | Enter the keyword tunnel to configure the tunnel setting. |
| **tunnel-id** | Enter the keyword tunnel-id to redirect the traffic. |
| **track** | Enter the keyword track to enable the tracking. |
| **track <obj-id>** | Enter the keyword track <obj-id> to track object-id. |
| **ip-protocol-number** | Enter the keyword ip-protocol-number then the number from 0 to 255 for the protocol identified in the IP protocol header. |
| **protocol-type** | Enter one of the following keywords as the protocol type:  
  - `icmp` for internet control message protocol  
  - `ip` for any internet protocol  
  - `tcp` for transmission control protocol  
  - `udp` for user datagram protocol |
| **source** | Enter the IP address of the network or host from which the packets were sent. |
| **mask** | Enter a network mask in /prefix format (/x). |
| **any** | Enter the keyword any to specify that all traffic is subject to the filter. |
| **host ip-address** | Enter the keyword host then the IP address to specify a host IP address. |
| **destination** | Enter the IP address of the network or host to which the packets are sent. |
| **bit** | (OPTIONAL) For the TCP protocol type only, enter one or a combination of the following TCP flags:  
  - `ack` = acknowledgement  
  - `fin` = finish (no more data from the user)  
  - `psh` = push function  
  - `rst` = reset the connection  
  - `syn` = synchronize sequence number  
  - `urg` = urgent field |
| **operator** | (OPTIONAL) For the TCP and UDP parameters only. Enter one of the following logical operand:  
  - `eq` = equal to  
  - `neq` = not equal to  
  - `gt` = greater than  
  - `lt` = less than  
  - `range` = inclusive range of ports (you must specify two ports for the port command parameter.) |
| **source port** | Enter the keywords source-port then the port number to be matched in the ACL rule in the ICAP rule. |
| **destination-port** | Enter the keywords destination-port then the port number to be matched in the ACL rule in the ICAP rule. |
| **source-port-range** | Enter the keywords Source-port-range then the range of the start port to end port to be matched in the ACL rule in the ICAP rule. |
| **destination-port-range** | Enter the keywords destination-port-range then the range of the start port to end port to be matched in the ACL rule in the ICAP rule. |

```

Related Commands

- `ip redirect-group` – applies a redirect group to an interface.
- `show ip redirect-list` – displays the redirect-list configuration.
show ip redirect-list

View the redirect list configuration and the interfaces it is applied to.

Z9000

Syntax

show ip redirect-list redirect-list-name

Parameters

redirect-list-name Enter the name of a configured Redirect list.

Command Modes

- EXEC
- EXEC Privilege

Command History

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.4(0.0) Introduced on the S4810, S4820T, S6000, and Z9000.

Example

Dell#show ip redirect-list explicit_tunnel
IP redirect-list explicit_tunnel:
Defined as:
seq 5 redirect tunnel 1 track 1 tcp 155.55.2.0/24 222.22.2.0/24, Track 1 [up], Next-hop reachable (via Te 1/32)
seq 10 redirect tunnel 1 track 1 tcp any any, Track 1 [up], Next-hop reachable (via Te 1/32)
seq 15 redirect tunnel 2 udp 155.55.0.0/16 host 144.144.144.144, Track 1 [up], Next-hop reachable (via Te 1/32)
seq 35 redirect 155.1.1.2 track 5 ip 7.7.7.0/24 8.8.8.0/24, Track 5 [up], Next-hop reachable (via Po 5)
seq 30 redirect 155.1.1.2 track 6 icmp host 8.8.8.8 any, Track 5 [up], Next-hop reachable (via Po 5)
seq 35 redirect 42.1.1.2 icmp host 8.8.8.8 any, Next-hop reachable (via Vl 20)
seq 40 redirect 43.1.1.2 tcp 155.55.2.0/24 222.22.2.0/24, Next-hop reachable (via Vl 30)
seq 45 redirect 31.1.1.2 track 200 ip 12.0.0.0 255.0.0.197 13.0.0.0 255.0.0.197, Track 200 [up], Next-hop reachable (via Te 1/32)
, Track 200 [up], Next-hop reachable (via Vl 20)
, Track 200 [up], Next-hop reachable (via Po 5)
, Track 200 [up], Next-hop reachable (via Po 7)
, Track 200 [up], Next-hop reachable (via Te 2/18)
, Track 200 [up], Next-hop reachable (via Te 2/19)
PIM-Sparse Mode (PIM-SM)

The protocol-independent multicast (PIM) commands are supported by the Dell Networking operating software on the platform.

Topics:
- IPv4 PIM-Sparse Mode Commands
- IPv6 PIM-Sparse Mode Commands

IPv4 PIM-Sparse Mode Commands

The following describes the IPv4 PIM-sparse mode (PIM-SM) commands.

**clear ip pim rp-mapping**

The bootstrap router (BSR) feature uses this command to remove all or particular rendezvous point (RP) advertisement.

**Z9000**

**Syntax**

```
clear ip pim rp-mapping [rp-address]
```

**Parameters**

- **rp-address** (OPTIONAL) Enter the RP address in dotted decimal format (A.B.C.D).

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide. The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>

<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command re-applies the RP mapping logic for all the groups learnt by the node. Any stale information corresponding to the existing mapping configuration is updated. As a result, the existing BSR cache and the *.*,G's are deleted only if these entries are stale.
clear ip pim tib

Clear PIM tree information from the PIM database.

Z9000

**Syntax**
clear ip pim tib [group]

**Parameters**
group *(OPTIONAL)* Enter the multicast group address in dotted decimal format (A.B.C.D).

**Command Modes**
EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
If you use this command on a local VLT node, all multicast routes from the local PIM TIB, the entire multicast route table, and all the entries in the data plane are deleted. The local VLT node sends a request to the peer VLT node to download multicast routes learned by the peer. Both local and synced routes are removed from the local VLT node multicast route table. The peer VLT node clears synced routes from the node.

If you use this command on a peer VLT node, only the synced routes are deleted from the multicast route table.

debug ip pim

View IP PIM debugging messages.

Z9000

**Syntax**
debug ip pim [bsr | events | group | packet [in | out] | register | state | timer [assert | hello | joinprune | register]]

To disable PIM debugging, use the `no debug ip pim` command or use the `undebug all` to disable all debugging command.

**Parameters**
bsr *(OPTIONAL)* Enter the keyword `bsr` to view PIM Candidate RP/BSR activities.

events *(OPTIONAL)* Enter the keyword `events` to view PIM messages for a specific group.

group *(OPTIONAL)* Enter the keyword `group` to view PIM messages for a specific group.

packet [in | out] *(OPTIONAL)* Enter the keyword `packet` to view PIM packets. Enter one of the optional parameters:
- `in`: to view incoming packets
- `out`: to view outgoing packets
register (OPTIONAL) Enter the keyword register to view PIM register address in dotted decimal format (A.B.C.D).

state (OPTIONAL) Enter the keyword state to view PIM state changes.

time [assert | hello | joinprune | register] (OPTIONAL) Enter the keyword timer to view PIM timers. Enter one of the optional parameters:
  ● assert: to view the assertion timer
  ● hello: to view the PIM neighbor keepalive timer
  ● joinprune: to view the expiry timer (join/prune timer)
  ● register: to view the register suppression timer

Defaults Disabled.

</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>
This command is applied to the subsequent PIM-BSR. Existing BSR advertisements are cleaned up by time-out. To clean the candidate RP advertisements, use the clear ip pim rp-mapping command.

**ip pim bsr-candidate**

To join the Bootstrap election process, configure the PIM router.

**Z9000**

**Syntax**

```
ip pim bsr-candidate interface [hash-mask-length] [priority]
```

To return to the default value, use the no ip pim bsr-candidate command.

**Parameters**

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- **hash-mask-length** (OPTIONAL) Enter the hash mask length. The range is from zero (0) to 32. The default is 30.

- **priority** (OPTIONAL) Enter the priority used in Bootstrap election process. The range is from zero (0) to 255. The default is zero (0).

**Defaults**

Not configured.

</tr>
</tbody>
</table>

**ip pim dr-priority**

Change the designated router (DR) priority for the interface.

**Syntax**

```
ip pim dr-priority priority-value
```

To remove the DR priority value assigned, use the no ip pim dr-priority command.
Parameters

**priority-value**

Enter a number. Preference is given to larger/higher number. The range is from 0 to 4294967294. The default is 1.

Defaults

1

Usage Information

The router with the largest value assigned to an interface becomes the designated router. If two interfaces contain the same designated router priority value, the interface with the largest interface IP address becomes the designated router.

**ip pim join-filter**

Permit or deny PIM Join/Prune messages on an interface using an extended IP access list. This command prevents the PIM-SM router from creating state based on multicast source and/or group.

### Z9000

**Syntax**

```plaintext
ip pim join-filter ext-access-list
```

To remove the access list, use the `no ip pim join-filter ext-access-list` command.

**Parameters**

ext-access-list

Enter the name of an extended access list.

**Defaults**

none

**Command Modes**

</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
**Description**

- **Version**
  - **8.1.1.0**: Introduced on the E-Series ExaScale.
  - **7.8.1.0**: Introduced on the C-Series for the port-channels and the S-Series.
  - **7.7.1.0**: Introduced on the E-Series.

**Example**

```
Dell(conf)# ip access-list extended iptv-channels
Dell(config-ext-nacl)# permit ip 10.1.2.3/24 225.1.1.0/24
Dell(config-ext-nacl)# permit ip any 232.1.1.0/24
Dell(config-ext-nacl)# permit ip 100.1.1.0/16 any
```

**Related Commands**

- `ip access-list extended` — configure an access list based on IP addresses or protocols.

---

**ip pim ingress-interface-map**

When the Dell Networking system is the RP, statically map potential incoming interfaces to (*,G) entries to create a lossless multicast forwarding environment.

**Syntax**

```
ip pim ingress-interface-map std-access-list
```

**Parameters**

- `std-access-list` Enter the name of a standard access list.

**Defaults**

none

**Command Modes**

- **8.3.19.0**: Introduced on the S4820T.
- **8.3.12.0**: Introduced on the S4810.
- **8.4.1.0**: Introduced

**Example**

```
Dell(conf)# ip access-list standard map1
Dell(config-std-nacl)# permit 224.0.0.1/24
Dell(config-std-nacl)#exit
Dell(conf)#int tengig 1/1
Dell(config-if-te-1/1)# ip pim ingress-interface-map map1
```

---

**ip pim neighbor-filter**

To prevent a router from participating in protocol independent multicast (PIM), configure this feature.

**Z9000**

**Syntax**

```
ip pim neighbor-filter {access-list}
```

**To remove the restriction,** use the `no ip pim neighbor-filter {access-list}` command.
Parameters

access-list

Enter the name of a standard access list. Maximum 16 characters.

Defaults

none

</table>

Usage Information

Do not enter this command before creating the access-list.

ip pim query-interval

Change the frequency of PIM Router-Query messages.

Syntax

ip pim query-interval seconds

to return to the default value, use the no ip pim query-interval seconds command.

Parameters

seconds

Enter a number as the number of seconds between router query messages. The range is from 0 to 65535. The default is 30 seconds.

Defaults

30 seconds

**ip pim register-filter**

To prevent a PIM source DR from sending register packets to an RP for the specified multicast source and group, use this feature.

**Z9000**

**Syntax**

```
ip pim register-filter access-list
```

To return to the default, use the `no ip pim register-filter access-list` command.

**Parameters**

- `access-list`: Enter the name of an extended access list. Maximum 16 characters.

**Defaults**

Not configured.

<td>Introduced</td>
</tr>
</tbody>
</table>

**Usage Information**

The access name is an extended IP access list that denies PIM register packets to RP at the source DR based on the multicast and group addresses. Do not enter this command before creating the access-list.

**ip pim rp-address**

Configure a static PIM rendezvous point (RP) address for a group or access-list.

**Z9000**

**Syntax**

```
ip pim rp-address address [group-address group-address mask] [override]
```

To remove an RP address, use the `no ip pim rp-address address (group-address group-address mask) [override]` command.

**Parameters**

- `address`: Enter the RP address in dotted decimal format (A.B.C.D).
- `group-address`: Enter the keywords `group-address` then a group-address mask, in dotted decimal format (/xx), to assign that group address to the RP.
- `override`: Enter the keyword `override` to override the BSR updates with static RP. The override takes effect immediately during enable/disable.

**Defaults**

Not configured.

</tr>
</tbody>
</table>

Usage Information

First-hop routers use this address by to send register packets on behalf of source multicast hosts. The RP addresses are stored in the order in which they are entered. RP addresses learned using BSR take priority over static RP addresses. Without the override option, RPs advertised by the BSR updates take precedence over the statically configured RPs.

ip pim rp-candidate

To send out a Candidate-RP-Advertisement message to the bootstrap (BS) router or define group prefixes that are defined with the RP address to PIM BSR, configure a PIM router.

Syntax

```
ip pim rp-candidate {interface [priority]}
```

To return to the default value, use the `no ip pim rp-candidate {interface [priority]}` command.

Parameters

- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.
- **priority**
  - (OPTIONAL) Enter the priority used in Bootstrap election process. The range is zero (0) to 255. The default is 192.

Defaults

Not configured.

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The interface must be enabled (the `no shutdown` command) and not have the `switchport` command configured. Multicast must also be enabled globally (using the `ip multicast-lag-hashing` command). PIM is supported on the port-channel interface.

**ip pim sparse-mode sg-expiry-timer**

Enable expiry timers globally for all sources.

**Z9000**

**Syntax**

```
ip pim sparse-mode sg-expiry-timer seconds
```

To disable configured timers and return to default mode, use the `no ip pim sparse-mode sg-expiry-timer` command.
Parameters

seconds Enter the number of seconds the S, G entries are retained. The range is from 211 to 65535.

Defaults

Disabled. The default expiry timer (with no times configured) is 210 sec.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the C-Series for the port-channels and the S-Series.</td>
</tr>
<tr>
<td>7.7.1.1</td>
<td>Introduced</td>
</tr>
</tbody>
</table>

Usage Information

This command configures an expiration timer for all S,G entries, unless they are assigned to an Extended ACL.

Even though the FHR nodes act as RPs, these nodes still send Register encap messages to themselves and expect to receive a Register stop message (for Anycast RP support). As a result, if the DLT timer expires, SG is not deleted until the register state is deleted in the node. This register state expires 210 seconds after the last Null register is received.

### ip pim ssm-range

Specify the SSM group range using an access list.

**Syntax**

```
ip pim ssm-range {access_list_name}
```

**Parameters**

access_list_name Enter the name of the access list.

**Defaults**

Default SSM range is 232/8 and ff3x/32

**Command Modes**

CONFIGURATION

**Command History**

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON. Added support for VRF on S6000, S4810, S4820T, Z9000, Z9500, and S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>

<tr>
<td>8.3.7.1</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>
Dell Networking OS supports standard access lists for the SSM range. You cannot use extended ACLs for configuring the SSM range. If you configure an extended ACL and then used in the `ip pim ssm-range {access list name}` configuration, an error is reported. However, if you configure `ip pim ssm-range {access list name}` first and then you configure the ACL as an Extended ACL, an error is not reported and the ACL is not applied to the SSM range.

Dell Networking OS-recommended best-practices are to configure the standard ACL, and then apply the ACL to the SSM range. After the SSM range is applied, the changes are applied internally without requiring clearing of the tree information base (TIB).

When the ACL rules change, the ACL and protocol-independent multicast (PIM) modules apply the new rules automatically.

When you configure the SSM range, Dell Networking OS supports SSM for configured group range as well as the default SSM range.

When you remove the SSM ACL, PIM SSM is supported for the default SSM range only.

### ip pim spt-threshold

To switch to the shortest path tree when the traffic reaches the specified threshold value, configure the PIM router.

#### Z9000

**Syntax**

```
ip pim spt-threshold [infinity]
```

To return to the default value, use the `no ip pim spt-threshold [infinity]` command.

**Parameters**

- `infinity` (OPTIONAL) Enter the keyword `infinity` to never switch to the source-tree.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is applicable to last hop routers on the shared tree towards the rendezvous point (RP).

### no ip pim snooping dr-flood

Disable the flooding of multicast packets to the PIM designated router.

**Syntax**

```
no ip pim snooping dr-flood
```

PIM-Sparse Mode (PIM-SM) 951
To re-enable the flooding of multicast packets to the PIM designated router, use the `ip pim snooping dr-flood` command.

**Defaults**
Enabled.

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>

**Usage Information**
By default, when you enable PIM-SM snooping, a switch floods all multicast traffic to the PIM designated router (DR), including unnecessary multicast packets. To minimize the traffic sent over the network to the designated router, you can disable designated-router flooding.

When designated-router flooding is disabled, PIM-SM snooping only forwards the multicast traffic, which belongs to a multicast group for which the switch receives a join request, on the port connected towards the designated router.

If the PIM DR flood is not disabled (default setting):
- Multicast traffic is transmitted on the egress port towards the PIM DR if the port is not the incoming interface.
- Multicast traffic for an unknown group is sent on the port towards the PIM DR. When DR flooding is disabled, multicast traffic for an unknown group is dropped.

---

**show ip pim bsr-router**

View information on the Bootstrap router.

**Z9000**

**Syntax**
```
show ip pim bsr-router
```  

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

</tr>
</tbody>
</table>

Usage Information

The following describes the show ip pim interface command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Lists the IP addresses of the interfaces participating in PIM.</td>
</tr>
<tr>
<td>Interface</td>
<td>List the interface type, with either slot/port information or ID (VLAN or Port Channel), of the interfaces participating in PIM.</td>
</tr>
<tr>
<td>Ver/Mode</td>
<td>Displays the PIM version number and mode for each interface participating in PIM:</td>
</tr>
<tr>
<td></td>
<td>● v2 = PIM version 2</td>
</tr>
<tr>
<td></td>
<td>● S = PIM Sparse mode</td>
</tr>
<tr>
<td>Nbr Count</td>
<td>Displays the number of PIM neighbors discovered over this interface.</td>
</tr>
<tr>
<td>Query Intvl</td>
<td>Displays the query interval for Router Query messages on that interface</td>
</tr>
<tr>
<td></td>
<td>(configured with ip pim query-interval command).</td>
</tr>
<tr>
<td>DR Prio</td>
<td>Displays the Designated Router priority value configured on the interface (use the ip pim dr-priority command).</td>
</tr>
</tbody>
</table>

Example

```
Dell(conf)#show ip pim bsr-router
PIMv2 Bootstrap information
This system is the Bootstrap Router (v2)
BSR address: 7.7.7.7 (?)
BSR Priority: 0, Hash mask length: 30
Next bootstrap message in 00:00:08

This system is a candidate BSR
Candidate BSR address: 7.7.7.7, priority: 0, hash mask length: 30
```
Field | Description
--- | ---
DR | Displays the IP address of the Designated Router for that interface.

The `show ip pim interface` command does not display information corresponding to the loop-back interfaces.

Example

```
Dell#show ip pim interface
Address          Interface Ver/ Mode Nbr   Query DR       DR
                Mode   Count Intvl  Prio   DR
165.87.34.5      Te 1/10   v2/S   0      30     1        165.87.34.5
10.1.1.2         Vl 10     v2/S   1      30     1        10.1.1.2
20.1.1.5         Vl 20     v2/S   1      30     1        20.1.1.5
165.87.31.200    Vl 30     v2/S   1      30     1        165.87.31.201
```

**show ip pim neighbor**

View PIM neighbors.

**Z9000**

**Syntax**

```
show ip pim neighbor
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>

<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show ip pim neighbor` command shown in the following example.

**Field | Description**
--- | ---
**Neighbor address** | Displays the IP address of the PIM neighbor.
**Interface** | List the interface type, with either slot/port information or ID (VLAN or Port Channel), on which the PIM neighbor was found.
**Uptime/expires** | Displays the amount of time the neighbor has been up then the amount of time until the neighbor is removed from the multicast routing table (that is, until the neighbor hold time expires).
**Ver** | Displays the PIM version number.
  - v2 = PIM version 2
**DR prio/Mode** | Displays the Designated Router priority and the mode.
  - 1 = default Designated Router priority (use the `ip pim dr-priority` command)
### Field Description
- **DR** = Designated Router
- **S** = Sparse mode

### Example
```
Dell#show ip pim neighbor
Neighbor   Interface  Uptime/Expires    Ver   DR
Address                                       Prio/Mode
127.87.3.4 Te 1/16    09:44:58/00:01:24  v2   1 / S
Dell#
```

### show ip pim rp

View all multicast groups-to-RP mappings.

**Z9000**

**Syntax**
```
show ip pim rp [mapping | group-address]
```

**Parameters**
- **mapping** *(OPTIONAL)* Enter the keyword `mapping` to display the multicast groups-to-RP mapping and information on how RP is learnt.
- **group-address** *(OPTIONAL)* Enter the multicast group address mask in dotted decimal format to view RP for a specific group.

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.1.1.0</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

### Example
```
Dell#show ip pim rp
Group   RP
224.2.197.115  165.87.20.4
224.2.217.146  165.87.20.4
224.3.3.3     165.87.20.4
225.1.2.1     165.87.20.4
225.1.2.2     165.87.20.4
229.1.2.1     165.87.20.4
229.1.2.2     165.87.20.4
Dell#
```

### Example (Mapping)
```
Dell#show ip pim rp mapping
PIM Group-to-RP Mappings
Group(s): 224.0.0.0/4, Static
```
show ip pim snooping interface

Display information on VLAN interfaces with PIM-SM snooping enabled.

Syntax

```
show ip pim snooping interface [vlan vlan-id]
```

Parameters

- `vlan vlan-id` (OPTIONAL) Enter a VLAN ID to display information about a specified VLAN configured for PIM-SM snooping. The valid VLAN IDs range is from 1 to 4094.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.1</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the `show ip pim snooping interface` commands shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Displays the VLAN interfaces with PIM-SM snooping enabled.</td>
</tr>
<tr>
<td>Ver/Mode</td>
<td>Displays the PIM version number for each VLAN interface with PIM-SM snooping enabled:</td>
</tr>
<tr>
<td></td>
<td>- v2 = PIM version 2</td>
</tr>
<tr>
<td></td>
<td>- S = PIM Sparse mode</td>
</tr>
<tr>
<td>Nbr Count</td>
<td>Displays the number of neighbors learned through PIM-SM snooping on the interface.</td>
</tr>
<tr>
<td>DR Prio</td>
<td>Displays the Designated Router priority value configured on the interface (ip pim dr-priority command).</td>
</tr>
<tr>
<td>DR</td>
<td>Displays the IP address of the Designated Router for that interface.</td>
</tr>
</tbody>
</table>

Example (#2)

```
Dell#show ip pim snooping interface
Interface Ver Nbr     DR   DR
             Count Prio
Vlan 2  v2   3     1   165.87.32.2
```
**show ip pim snooping neighbor**

Display information on PIM neighbors learned through PIM-SM snooping.

**Syntax**

```
show ip pim snooping neighbor [vlan vlan-id]
```

**Parameters**

- **vlan vlan-id** (OPTIONAL) Enter a VLAN ID to display information about PIM neighbors that PIM-SM snooping discovered on a specified VLAN. The valid VLAN IDs range is from 1 to 4094.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

<tr>
<td></td>
<td>● v2 = PIM version 2</td>
</tr>
<tr>
<td></td>
<td>● DR = Designated Router</td>
</tr>
<tr>
<td></td>
<td>● S = Sparse mode</td>
</tr>
</tbody>
</table>

**Example**

```
Dell#show ip pim snooping neighbor

Neighbor Address  Interface       Uptime/Expires Ver DR Prio
165.87.32.2       Vl 2 [Te 1/13 ] 00:04:03/00:01:42 v2 1
165.87.32.10      Vl 2 [Te 1/11 ] 00:00:46/00:01:29 v2 0
165.87.32.12      Vl 2 [Te 2/20 ] 00:00:51/00:01:24 v2 0
```
show ip pim snooping tib

Display information from the tree information base (TIB) PIM-SM snooping discovered about multicast group members and states.

Syntax

```
show ip pim snooping tib [vlan vlan-id] [group-address [source-address]]
```

Parameters

- `vlan vlan-id` (OPTIONAL) Enter a VLAN ID to display TIB information PIM-SM snooping discovered on a specified VLAN. The valid VLAN IDs range is from 1 to 4094.
- `group-address` (OPTIONAL) Enter the group address in dotted decimal format (A.B.C.D) to display TIB information PIM-SM snooping discovered for a specified multicast group.
- `source-address` (OPTIONAL) Enter the source address in dotted decimal format (A.B.C.D) to display TIB information PIM-SM snooping discovered for a specified multicast source.

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.5(0.0)</td>

<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.1</td>
<td>Introduced on the E-Series ExaScale.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the `show ip pim snooping tib` commands shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(S, G)</td>
<td>Displays the entry in the PIM multicast snooping database.</td>
</tr>
<tr>
<td>uptime</td>
<td>Displays the amount of time the entry has been in the PIM multicast route table.</td>
</tr>
<tr>
<td>expires</td>
<td>Displays the amount of time until the entry expires and is removed from the database.</td>
</tr>
<tr>
<td>RP</td>
<td>Displays the IP address of the RP/source for this entry.</td>
</tr>
<tr>
<td>flags</td>
<td>List the flags to define the entries:</td>
</tr>
<tr>
<td></td>
<td>● S = PIM Sparse Mode</td>
</tr>
<tr>
<td></td>
<td>● C = directly connected</td>
</tr>
<tr>
<td></td>
<td>● L = local to the multicast group</td>
</tr>
<tr>
<td></td>
<td>● P = route was pruned</td>
</tr>
<tr>
<td></td>
<td>● R = the forwarding entry is pointing toward the RP</td>
</tr>
<tr>
<td></td>
<td>● F = Dell Networking OS is registering this entry for a multicast source</td>
</tr>
<tr>
<td></td>
<td>● T = packets were received via Shortest Tree Path</td>
</tr>
<tr>
<td></td>
<td>● J = first packet from the last hop router is received and the entry is ready to switch to SPT</td>
</tr>
<tr>
<td></td>
<td>● K=acknowledge pending state</td>
</tr>
</tbody>
</table>

Incoming interface

Displays the reverse path forwarding (RPF) interface towards the RP/source.

RPF neighbor

Displays the next hop from this interface towards the RP/source.

Outgoing interface list:

Lists the interfaces that meet one of the following criteria:

- a directly connect member of the Group
- statically configured member of the Group
**Field** | **Description**
--- | ---
- | received a (*,G) Join message

**Example**

```plaintext
Dell#show ip pim snooping tib

PIM Multicast Snooping Table

Usage Information

The following describes the show ip pim tib command shown in the following example.

Field Description
(S, G) Displays the entry in the multicast PIM database.
uptime Displays the amount of time the entry has been in the PIM route table.
expires Displays the amount of time until the entry expires and is removed from the database.
RP Displays the IP address of the RP/source for this entry.
flags List the flags to define the entries:
  - D = PIM Dense Mode
  - S = PIM Sparse Mode
  - C = directly connected
### Field Description
- **L**: local to the multicast group
- **P**: route was pruned
- **R**: the forwarding entry is pointing toward the RP
- **F**: Dell Networking OS is registering this entry for a multicast source
- **T**: packets were received via Shortest Tree Path
- **J**: first packet from the last hop router is received and the entry is ready to switch to SPT
- **K**: acknowledge pending state

### Incoming Interface
Displays the reverse path forwarding (RPF) interface towards the RP/source.

### RPF neighbor
Displays the next hop from this interface towards the RP/source.

### Outgoing Interface List:
Lists the interfaces that meet one of the following criteria:
- a directly connect member of the Group
- statically configured member of the Group
- received a (*,G) Join message

### Example
```
Dell#do show ip pim tib
PIM Multicast Routing Table
Flags: D - Dense, S - Sparse, C - Connected, L - Local, P - Pruned,
       R - RP-bit set, F - Register flag, T - SPT-bit set, J - Join SPT,
       M - MSDP created entry, A - Candidate for MSDP Advertisement
       K - Ack-Pending State
Timers: Uptime/Expires
Interface state: Interface, next-Hop, State/Mode
(*, 225.1.1.1), uptime 00:40:16, expires 00:00:00, RP 20.40.4.4, flags: SCJ
   Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
   Outgoing interface list:
      Vlan 2006  Forward/Sparse   00:06:21/Never

(20.10.4.9, 225.1.1.1), uptime 00:06:21, expires 00:02:06, flags: CT
   Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
   Outgoing interface list:
      Vlan 2006  Forward/Sparse   00:06:21/Never

(*, 225.1.1.2), uptime 00:40:15, expires 00:00:00, RP 20.40.4.4, flags: SCJ
   Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
   Outgoing interface list:
      Vlan 2006  Forward/Sparse   00:06:21/Never

(20.10.4.9, 225.1.1.2), uptime 00:06:21, expires 00:02:06, flags: CT
   Incoming interface: Vlan 2007, RPF neighbor 20.30.124.4
   Outgoing interface list:
      Vlan 2006  Forward/Sparse   00:06:21/Never
```

### show running-config pim
Display the current configuration of PIM-SM snooping.

#### Syntax
```
show running-config pim
```

#### Command Modes
EXEC Privilege

#### Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
IPv6 PIM-Sparse Mode Commands

The following describes the IPv6 PIM-sparse mode (PIM-SM) commands.

**ipv6 pim bsr-border**

Invoke IPv6 PIM debugging.

**Syntax**

```
debug ipv6 pim [bsr | events | group group | packet | register [group] | state | | timer [assert | hello | joinprune | register]]
```

To disable IPv6 PIM debugging, use the no debug ipv6 pim command.

**Parameters**

- **bsr** (OPTIONAL) Enter the keyword bsr to invoke debugging of IPv6 PIM Candidate RP/BSR activities.
- **events** (OPTIONAL) Enter the keyword events to invoke debugging of IPv6 PIM events.
- **group group** (OPTIONAL) Enter the keyword group then the group address to invoke debugging on that specific group.
- **packet** (OPTIONAL) Enter the keyword packet to invoke debugging of IPv6 PIM packets.
- **register [group]** (OPTIONAL) Enter the keyword register and optionally the group address to invoke debugging of IPv6 PIM register messages for a particular group.
- **state** (OPTIONAL) Enter the keyword state to view IPv6 PIM state changes.
- **timer [assert | hello | joinprune | register]** (OPTIONAL) Enter the keyword timer to view IPv6 PIM timers. Enter one of the optional parameters:
  - assert: to view the assertion timer
  - hello: to view the IPv6 PIM neighbor keepalive timer
  - joinprune: to view the expiry timer (join/prune timer)
  - register: to view the register suppression timer

**Defaults**

Disabled.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
### ipv6 pim bsr-candidate

Configure the router as a bootstrap (BSR) candidate.

**Syntax**
```
ipv6 pim bsr-candidate interface [hash-mask-length] [priority]
```

To disable the bootstrap candidate, use the `no ipv6 pim bsr-candidate` command.

**Parameters**
- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a Port Channel interface, enter the keywords `port-channel` then a number.
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- **hash-mask-length** *(OPTIONAL)*
  - Enter the hash mask length for RP selection. The range is from 0 to 128. The default is 126.

- **priority** *(OPTIONAL)*
  - Enter the priority value for Bootstrap election process. The range is from 0 to 255. The default is 0.

**Defaults**
Refer to Parameters.

**Command Modes**
- **CONFIGURATION**

**Command History**
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>

### ipv6 pim dr-priority

Change the designated router (DR) priority for the IPv6 interface.

**Syntax**
```
ipv6 pim dr-priority priority-value
```

To remove the DR priority value assigned, use the `no ipv6 pim dr-priority` command.
### Parameters

**priority-value**

Enter a number. Preference is given to larger/higher number. The range is from 0 to 4294967294. The default is 1.

### Defaults

1

### Command Modes

**INTERFACE**

### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>

### Usage Information

The router with the largest value assigned to an interface becomes the designated router. If two interfaces contain the same designated router priority value, the interface with the largest interface IP address becomes the designated router.

---

### ipv6 pim join-filter

Permit or deny PIM Join/Prune messages on an interface using an access list. This command prevents the PIM-SM router from creating state based on multicast source and/or group.

#### Syntax

```plaintext
ipv6 pim join-filter access-list
```

#### Parameters

**access-list**

Enter the name of an extended access list.

**in**

Enter the keyword *in* to apply the access list to inbound traffic.

**out**

Enter the keyword *out* to apply the access list to outbound traffic.

#### Defaults

none

#### Command Modes

**INTERFACE**

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.3.1.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>

#### Example

```plaintext
Dell(conf)#ipv6 access-list JOIN-FIL_ACL
Dell(conf-ipv6-acl)#permit ipv6 165:87:34::0/112 ff0e::225:1:2:0/112
Dell(conf-ipv6-acl)#permit ipv6 any ff0e::230:1:2:0/112
Dell(conf-ipv6-acl)#permit ipv6 any ff0e::230:1:2:0/112
Dell(conf-ipv6-acl)#exit
Dell(conf)#interface tengigabitethernet 1/1
```
ipv6 pim neighbor-filter

Prevent the system from forming a PIM adjacency with a neighboring system.

Syntax

```
ipv6 pim neighbor-filter {access-list}
```

Parameters

- **access-list**
  Enter the name of a standard access list. Maximum 16 characters.

Defaults

none

Command Modes

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>

Usage Information

Do not enter this command before creating the access-list.

ipv6 pim query-interval

Change the frequency of IPv6 PIM router-query messages.

Syntax

```
ipv6 pim query-interval seconds
```

To return to the default value, use the `no ipv6 pim query-interval seconds` command.

Parameters

- **seconds**
  Enter a number as the number of seconds between router query messages. The range is from 0 to 65535. The default is 30 seconds.

Defaults

30 seconds

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
ipv6 pim register-filter

Configure the source DR so that it does not send register packets to the RP for the specified sources and groups.

**Syntax**

```
ipv6 pim register-filter access-list
```

**Parameters**

- `access-list` Enter the name of the extended ACL that contains the sources and groups to filter.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell(conf)#ipv6 pim register-filter REG-FIL_ACL
Dell(conf)#ipv6 access-list REG-FIL_ACL
Dell(conf-ipv6-acl)#deny ipv6 165:87:34::10/128 ff0e::225:1:2:0/112
Dell(conf-ipv6-acl)#permit ipv6 any any
Dell(conf-ipv6-acl)#exit
```

ipv6 pim rp-address

Configure a static PIM rendezvous point (RP) address for a group. First-hop routers use this address to send register packets on behalf of the source multicast host.

**Syntax**

```
ipv6 pim rp-address address group-address group-address mask override
```

To remove an RP address, use the `no ipv6 pim re-address address group-address mask override` command.

**Parameters**

- `address` Enter the IPv6 RP address in the x:x:x:x format.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

- `group-address` Enter the keywords `group-address` then the group address in the x:x:x:x format and then the mask in /nn format to assign that group address to the RP.
  - **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

- `override` Enter the keyword `override` to override the BSR updates with static RP. The override takes effect immediately during enable/disable.
  - **NOTE:** This option is applicable to multicast group range.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
The RP addresses are stored in the order in which they are entered. RP addresses learned via BSR take priority over static RP addresses.

Without the override option, the BSR-advertised RPs updates take precedence over the statically configured RPs.

**ipv6 pim rp-candidate**

Specify an interface as an RP candidate.

**Syntax**

```
ipv6 pim rp-candidate interface [priority-value]
```

**Parameters**

- `interface` : Enter the following keywords and slot/port or number information:
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a Port Channel interface, enter the keywords `port-channel` then a number.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- `priority-value` : (OPTIONAL) Enter a number as the priority of this RP Candidate, which is included in the Candidate-RP-Advertisements. The range is 0 (highest) to 255 (lowest).

**Defaults**

```
none
```

**Command Modes**

```
CONFIGURATION
```

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>

**ipv6 pim sparse-mode**

Enable IPv6 PIM sparse mode on the interface.

**Syntax**

```
ipv6 pim sparse-mode
```
To disable IPv6 PIM sparse mode, use the `no ipv6 pim sparse-mode` command.

**Defaults**
- Disabled.

**Command Modes**
- INTERFACE

**Command History**
- This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
- The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>

**Usage Information**
- Enable the interface (use the `no shutdown` command) and not have the `switchport` command configured. Also enable Multicast globally. PIM is supported on the port-channel interface.

### `ipv6 pim spt-threshold`

Specifies when a PIM leaf router should join the shortest path tree.

**Syntax**

```
ipv6 pim spt-threshold {kbps | infinity}
```

To return to the default value, use the `no ipv6 pim spt-threshold` command.

**Parameters**

- **kbps**
  - Enter a traffic rate in kilobytes per second. The range is from 0 to 4294967 kbps.
  - The default is **10 kbps**.

- **infinity**
  - Enter the keyword `infinity` to have all sources for the specified group use the shared tree and never join shortest path tree (SPT).

**Defaults**
- 10 kbps

**Command Modes**
- CONFIGURATION

**Command History**
- This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>

**Usage Information**
- PIM leaf routers join the shortest path tree immediately after the first packet arrives from a new source.
**show ipv6 pim bsr-router**

View information on the bootstrap router (v2).

**Syntax**

```
show ipv6 pim bsr-router
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

**Example**

```
Dell#show ipv6 pim bsr-router
PIMv2 Bootstrap information
This system is the Bootstrap Router (v2)
   BSR address: 14::2
   Uptime: 00:02:54, BSR Priority: 0, Hash mask length: 126
   Next bootstrap message in 00:00:06

This system is a candidate BSR
   Candidate BSR address: 14::2, priority: 0, hash mask length: 126
Dell#
```

**show ipv6 pim interface**

Display IPv6 PIM enabled interfaces.

**Syntax**

```
show ipv6 pim interface
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>

**Example**

```
Dell#show ipv6 pim interface
Interface Ver/ Nbr   Query DR Mode Count Intvl Prio
Te 1/3   v2/S 1     30    1
```

970  PIM-Sparse Mode (PIM-SM)
show ipv6 pim neighbor

Displays IPv6 PIM neighbor information.

**Syntax**

```
show ipv6 pim neighbor [detail]
```

**Parameters**

- `detail` *(OPTIONAL)* Enter the keyword `detail` to displayed PIM neighbor detailed information.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Example**

```
Dell#show ipv6 pim neighbor detail
Neighbor Interface Uptime/Expires Ver DR
Address                               Prio/Mode
fe80::201:e8ff:fe00:6265 Gi 10/3 00:07:39/00:01:42 v2 1 / S
165:87:50::6                           
Dell#
```

show ipv6 pim rp

View all IPv6 multicast groups-to-rendezvous point (RP) mappings.

**Syntax**

```
show ipv6 pim rp [mapping | group-address]
```

**Parameters**

- `mapping` *(OPTIONAL)* Enter the keyword `mapping` to display the multicast groups-to-RP mapping and information on how RP is learned.
- `group-address` *(OPTIONAL)* Enter the multicast group address in the x::x::x format to view RP mappings for a specific group.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

**NOTE:** The :: notation specifies successive hexadecimal fields of zero.

Example

Dell#show ipv6 pim rp
Group RP
ff0e::225:1:2:1 14::1
ff0e::225:1:2:2 14::1
ff0e::226:1:2:1 14::1
ff0e::226:1:2:2 14::1
Dell#

Example (Mapping)

Dell#show ipv6 pim rp mapping
PIM Group-to-RP Mappings
Group(s): ff00::/8
  RP: 14::1, v2
    Info source: 14::1, via bootstrap, priority 192
    Uptime: 00:03:37, expires: 00:01:53
Group(s): ff00::/8, Static
  RP: 14::2, v2
Dell#

show ipv6 pim tib

View the IPv6 PIM multicast-routing database (tree information base — tib).

Syntax

show ipv6 pim tib [group-address [source-address]]

Parameters

- `group-address` (OPTIONAL) Enter the multicast group address in the x:x:x:x:x format to view RP mappings for a specific group.
  
  **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

- `source-address` (OPTIONAL) Enter the source address in the x:x:x:x:x format.
  
  **NOTE:** The :: notation specifies successive hexadecimal fields of zero.

Command Modes

- EXEC
- EXEC Privilege

Dell#
Port Monitoring

The port monitoring feature allows you to monitor network traffic by forwarding a copy of each incoming or outgoing packet from one port to another port.

Important Points to Remember

- Port monitoring is supported on physical ports and logical interfaces, such as port channels and virtual local area networks (VLANs).
- The monitoring (destination, "MG") and monitored (source, "MD") ports must be on the same switch.
- In general, a monitoring port should have no ip address and no shutdown as the only configuration; Dell Networking OS permits a limited set of commands for monitoring ports; display them using the ? command. A monitoring port also may not be a member of a VLAN.
- A total of 4 MG may be configured in a single port-pipe.
- MG and MD ports can be reside anywhere across a port-pipe.
- The Dell Networking OS supports multiple source ports to be monitored by a single destination port in one monitor session.
- One monitor session can have only one MG port.

**NOTE:** The monitoring port should not be a part of any other configuration.

Topics:

- description
- monitor session
- show config
- show monitor session
- show running-config monitor session
- source (port monitoring)

**description**

Enter a description of this monitoring session.

**Syntax**

```
description {description}
```

To remove the description, use the no description {description} command.

**Parameters**

- **description**
  
Enter a description regarding this session (80 characters maximum).

**Defaults**

- none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
Version | Description
--- | ---
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.1.1.0 | Introduced on the E-Series ExaScale.
7.7.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-7.7.1.0 | Introduced on the E-Series.

**Related Commands**

- **monitor session** — enables a monitoring session.

## monitor session

Create a session for monitoring traffic with port monitoring.

**Syntax**

```plaintext
monitor session session-ID [type { rpm | erpm [set ip dscp dscp_value | set ip ttl ttl_value]}]
```

To delete a session, use the `no monitor session session-ID` command.

To delete all monitor sessions, use the `no monitor session all` command.

**Parameters**

- **session-ID**: Enter a session identification number. The range is from 0 to 65535.
- **type**: Specifies one of the following type:
  - `rpm`
  - `erpm`
- **rpm**: Creates a remote port monitoring (rpm) session.
- **erpm**: Creates an encapsulated remote port monitoring (erpm) session.
- **set ip dscp**: Configures the Differentiated Services Code Point (DSCP) value of the packets in the Encapsulated Remote Switched Port Analyzer (ERSPAN) traffic. To revert to the default value, use the no form of this command.
  - **dscp_value**: DSCP value of the packets in the ERSPAN traffic. The range is from 0 to 63. The default value is 0.
- **set ip ttl**: Configures the IP time-to-live (TTL) value of the Encapsulated Remote Switched Port Analyzer (ERSPAN) traffic. To revert to the default configuration, use the no form of this command.
  - **ttl_value**: IP TTL value of the ERSPAN traffic. The range is from 1 to 255. The default value is 255.

**Defaults**

- none

**Command Modes**

- CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000-ON. Introduced the `set ip dscp` and `set ip ttl` parameters.
9.5(0.0) | Introduced on the Z9500.

### Usage Information

The `monitor` command is saved in the running configuration at Monitor Session mode level and can be restored after a chassis reload.

### Example

```
Dell#show monitor session
SessID  Source         Destination         Dir  Mode  Source IP
        -------         -----------         ---  ----  ---------
        --------        ----  ---        ------  ----  --------
  0   Te 1/12           remote-ip         rx   Flow 1.1.1.1
     0     255
  0   Po 1              remote-ip         tx   Flow 1.1.1.1
     0     255
  1   Vl 11             remote-ip         rx   Flow 5.1.1.1
     0     255
  3.1.1.2              ------         ---  ----  ---------
```

### Related Command

- `show monitor session` — displays the monitor session.
- `show running-config monitor session` — displays the running configuration of a monitor session.

---

### show config

Display the current monitor session configuration.

#### Syntax

```
show config
```

#### Defaults

none

#### Command Modes

MONITOR SESSION (conf-mon-sess-session-ID)

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

#### Example

```
Dell(conf-mon-sess-1)#show config
```
show monitor session

Display information about monitoring sessions.

Syntax

```
show monitor session {session-ID}
```

To display monitoring information for all sessions, use the `show monitor session` command.

Parameters

- **session-ID** (OPTIONAL) Enter a session identification number. The range is from 0 to 65535.

Defaults

none

Command Modes

- EXEC
- EXEC Privilege

------- ------ ----------- --- ---- --------- -------- ------ ----
 1 Te 1/2 remote-ip rx Port 0.0.0.0 0.0.0.0 0 255
99 NONE NONE N/A N/A N/A N/A N/A N/A
```

Related Commands

- `monitor session` — creates a monitoring session.

show running-config monitor session

Display the running configuration of all monitor sessions or a specific session.

Syntax

```
show running-config monitor session {session-ID}
```

Example

```
Dell#show running-config monitor session 1
monitor session 1
  source TenGigabitEthernet 1/1 destination Port-channel 1 direction rx
```

Related Commands

- `show monitor session` — displays monitoring information for all sessions.
To display the running configuration for all monitor sessions, use the `show running-config monitor session` command.

**Parameters**

<table>
<thead>
<tr>
<th>session-ID</th>
<th>(OPTIONAL) Enter a session identification number. The range from 0 to 65535.</th>
</tr>
</thead>
</table>

**Defaults**

none

**Usage Information**

The `monitoring` command is saved in the running configuration at the Monitor Session mode level and can be restored after a chassis reload.

**Example**

```
Dell# show running-config monitor session
!
monitor session 1
source TenGigabitEthernet 1/1 destination TenGigabitEthernet 1/2
direction rx
```

**Related Commands**

- `monitor session` — creates a monitoring session.
- `show monitor session` — displays a monitoring session.

---

**source (port monitoring)**

Configure a port monitor source.

**Syntax**

```
source interface | range destination interface direction {rx | tx | both}
```

To disable a monitor source, use the `no source interface destination interface direction {rx | tx | both} command`

**Parameters**

- **source interface**
  - Enter the one of the following keywords and slot/port information:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
    - For a VLAN interface enter the keyword VLAN followed by a number from 1 to 4094.
    - For a port channel interface, enter the keywords port-channel then a number.
range

Enter the keyword `range` to specify the list of interfaces.

destination

Enter the keyword `destination` to specify the destination interface.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number.

interface

Enter the one of the following keywords and slot/port information:
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- For a port channel interface, enter the keywords `port-channel` then a number.

direction {rx | tx | both}

Enter the keyword `direction` then one of the packet directional indicators.
- `rx`: to monitor receiving packets only.
- `tx`: to monitor transmitting packets only.
- `both`: to monitor both transmitting and receiving packets.

Defaults

none

Command Modes

MONITOR SESSION (conf-mon-sess-session-ID)

Example

Dell# monitor session 0
source Port-channel 10 destination TenGigabitEthernet 1/33 direction tx
The private VLAN (PVLAN) feature of the Dell Networking operating software is supported on the Z9000 platforms.

Private VLANs extend the Dell Networking OS security suite by providing Layer 2 isolation between ports within the same private VLAN. A private VLAN partitions a traditional VLAN into subdomains identified by a primary and secondary VLAN pair. The Dell Networking OS private VLAN implementation is based on RFC 3069.

For more information, refer to the following commands. The command output is augmented in Dell Networking OS version 7.8.1.0 at later to provide PVLAN data:

- show arp
- show vlan

Private VLAN Concepts

**Primary VLAN:**
The primary VLAN is the base VLAN and can have multiple secondary VLANs. There are two types of secondary VLAN — community VLAN and isolated VLAN:

- A primary VLAN can have any number of community VLANs and isolated VLANs.
- Private VLANs block all traffic to isolated ports except traffic from promiscuous ports. Traffic received from an isolated port is forwarded only to promiscuous ports or trunk ports.

**Community VLAN:**
A community VLAN is a secondary VLAN of the primary VLAN:

- Ports in a community VLAN can talk to each other. Also, all ports in a community VLAN can talk to all promiscuous ports in the primary VLAN and vice versa.
- Devices on a community VLAN can communicate with each other using member ports, while devices in an isolated VLAN cannot.

**Isolated VLAN:**
An isolated VLAN is a secondary VLAN of the primary VLAN:

- Ports in an isolated VLAN cannot talk to each other. Servers would be mostly connected to isolated VLAN ports.
- Isolated ports can talk to promiscuous ports in the primary VLAN, and vice versa.

**Port Types:**

- **Community port:** A community port is a port that belongs to a community VLAN and is allowed to communicate with other ports in the same community VLAN and with promiscuous ports.
- **Isolated port:** An isolated port is a port that, in Layer 2, can only communicate with promiscuous ports that are in the same PVLAN.
- **Promiscuous port:** A promiscuous port is a port that is allowed to communicate with any other port type.
- **Trunk port:** A trunk port carries VLAN traffic across switches:
  - A trunk port in a PVLAN is always tagged.
  - A trunk port in Tagged mode carries primary or secondary VLAN traffic. The tag on the packet helps identify the VLAN to which the packet belongs.
  - A trunk port can also belong to a regular VLAN (non-private VLAN).

**Topics:**

- ip local-proxy-arp
- private-vlan mode
- private-vlan mapping secondary-vlan
- switchport mode private-vlan
ip local-proxy-arp

Enable/disable Layer 3 communication between secondary VLANs in a private VLAN.

Z9000

Syntax

[no] ip local-proxy-arp

To disable Layer 3 communication between secondary VLANs in a private VLAN, use the no ip local-proxy-arp command in INTERFACE VLAN mode for the primary VLAN.

To disable Layer 3 communication in a particular secondary VLAN, use the no ip local-proxy-arp command in INTERFACE VLAN mode for the selected secondary VLAN.

**NOTE:** Even after you disable ip-local-proxy-arp (use no ip-local-proxy-arp) in a secondary VLAN, Layer 3 communication may happen between some secondary VLAN hosts, until the address resolution protocol (ARP) timeout happens on those secondary VLAN hosts.

Defaults
Layer 3 communication is disabled between secondary VLANs in a private VLAN.

Related Commands
private-vlan mode — sets the mode of the selected VLAN to community, isolated, or primary.
private-vlan mapping secondary-vlan — maps secondary VLANs to the selected primary VLAN.
show arp — displays the ARP table.
switchport mode private-vlan — sets PVLAN mode of the selected port.

private-vlan mode

Set PVLAN mode of the selected VLAN to community, isolated, or primary.

Z9000

Syntax

[no] private-vlan mode {community | isolated | primary}

To remove the PVLAN configuration, use the no private-vlan mode {community | isolated | primary} command syntax.

Parameters

- **community** Enter the keyword community to set the VLAN as a community VLAN.
- **isolated** Enter the keyword isolated to configure the VLAN as an isolated VLAN.
primary

Enter the keyword `primary` to configure the VLAN as a primary VLAN.

**Defaults**
none

**Command Modes**
INTERFACE VLAN

</tr>
</tbody>
</table>

**Usage Information**
The VLAN:

- can be in only one mode, either `community`, `isolated`, or `primary`.
- `mode` to `community` or `isolated` even before associating it to a primary VLAN. This secondary VLAN continues to work normally as a normal VLAN even though it is not associated to a primary VLAN. (A syslog message indicates this.)
- must not have a port in it when VLAN mode is being set.

Only ports (and port channels) configured as promiscuous, host, or PVLAN trunk ports (as previously described) can be added to the PVLAN. No other regular ports can be added to the PVLAN.

After using this command to configure a VLAN as a primary VLAN, use the `private-vlan mapping secondary-vlan` command to map secondary VLANs to this VLAN.

**Related Commands**
- `private-vlan mapping secondary-vlan` — maps secondary VLANs to the selected primary VLAN.
- `switchport mode private-vlan` — sets PVLAN mode of the selected port.

---

**private-vlan mapping secondary-vlan**

Map secondary VLANs to the selected primary VLAN.

**Z9000**

**Syntax**

```plaintext
[no] private-vlan mapping secondary-vlan vlan-list
```

To remove specific secondary VLANs from the configuration, use the `no private-vlan mapping secondary-vlan vlan-list` command syntax.

**Parameters**

- `vlan-list` : Enter the list of secondary VLANs to associate with the selected primary VLAN. The list can be in comma-delimited or hyphenated-range format, following the convention for the range input.

**Defaults**
none

**Command Modes**
INTERFACE VLAN

**Command History**

The following is a list of the Dell Networking OS version history for this command.
### switchport mode private-vlan

Set PVLAN mode of the selected port.

**Z9000**

#### Syntax

```
[no] switchport mode private-vlan {host | promiscuous | trunk}
```

To remove PVLAN mode from the selected port, use the `no switchport mode private-vlan` command.

#### Parameters

- **host**
  - Enter the keyword `host` to configure the selected port or port channel as an isolated interface in a PVLAN.

- **promiscuous**
  - Enter the keyword `promiscuous` to configure the selected port or port channel as a promiscuous interface.

- **trunk**
  - Enter the keyword `trunk` to configure the selected port or port channel as a trunk port in a PVLAN.

#### Defaults

Disabled.

#### Command Modes

INTERFACE

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

</tbody>
</table>
The assignment of the various PVLAN port types to port and port channel (LAG) interfaces is shown in the following example.

**Example**

Dell#conf
Dell(conf)#interface TenGigabitEthernet 2/1
Dell(conf-if-te-2/1)#switchport mode private-vlan promiscuous

Dell(conf)#interface TenGigabitEthernet 2/2
Dell(conf-if-te-2/2)#switchport mode private-vlan host

Dell(conf)#interface TenGigabitEthernet 2/3
Dell(conf-if-te-2/3)#switchport mode private-vlan trunk

Dell(conf)#interface port-channel 10
Dell(conf-if-te-2/3)#switchport mode private-vlan promiscuous

**Related Commands**

- `private-vlan mode` — sets the mode of the selected VLAN to community, isolated, or primary.
- `private-vlan mapping secondary-vlan` — sets the mode of the selected VLAN to primary and then associates the secondary VLANs to it.
Per-VLAN Spanning Tree Plus (PVST+)

The Dell Networking operating software implementation of per-VLAN spanning tree plus (PVST+) is based on the IEEE 802.1w standard spanning tree protocol.

Dell Networking OS supports PVST+ on the Z9000 platform.

**NOTE:** For easier command line entry, the plus (+) sign is not used at the command line.

**Topics:**
- description
- disable
- extend system-id
- protocol spanning-tree pvst
- show spanning-tree pvst
- spanning-tree pvst
- spanning-tree pvst err-disable
- tc-flush-standard
- vlan bridge-priority
- vlan forward-delay
- vlan hello-time
- vlan max-age

**description**

Enter a description of the PVST+.

**Z9000**

**Syntax**

```
description {description}
```

To remove the description, use the `no description {description}` command.

**Parameters**

- **description**
  
  Enter a description to identify the spanning tree (80 characters maximum).

**Defaults**

- none

**Command Modes**

SPANNING TREE PVST+ (The prompt is "config-pvst").

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</table>
### Version Description
- **8.3.11.1** Introduced on the Z9000.
- **8.3.7.0** Introduced on the S4810.
- **7.6.1.0** Introduced on the S-Series.
- **7.5.1.0** Introduced on the C-Series.
- **8.3.1.0** Introduced.

### Example
```
Dell#conf
Dell(conf)#protocol spanning-tree pvst
Dell(conf-pvst)#no disable
Dell(conf-pvst)#vlan 2 bridge-priority 4096
Dell(conf-pvst)#vlan 3 bridge-priority 16384
Dell(conf-pvst)#
Dell(conf-pvst)#show config
!
protocol spanning-tree pvst
  no disable
  vlan 2 bridge-priority 4096
  vlan 3 bridge-priority 16384
Dell#
```

### Usage Information
After you enable PVST+, the device runs an STP instance for each VLAN it supports.

### Related Commands
- `disable` — disables PVST+.
- `show spanning-tree pvst` — displays the PVST+ configuration.

### show spanning-tree pvst
View the Per-VLAN spanning tree configuration.

#### Z9000

##### Syntax
```
show spanning-tree pvst [vlan vlan-id] [brief] [guard]
```

##### Parameters
- **vlan vlan-id** (OPTIONAL) Enter the keyword `vlan` then the VLAN ID. The range is 1 to 4094.
- **brief** (OPTIONAL) Enter the keyword `brief` to view a synopsis of the PVST+ configuration information.
- **interface** (OPTIONAL) Enter one of the interface keywords along with the slot/port information:
  - For a Port Channel interface, enter the keyword `port-channel` then a number: The range is 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- **guard** (OPTIONAL) Enter the keyword `guard` to display the type of guard enabled on a PVST interface and the current port state.

##### Defaults
- `none`

##### Command Modes
- EXEC
- EXEC Privilege
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.5.1.0 | Added support for 4-port 40G line cards on ExaScale.
8.4.2.1 | Support for the optional `guard` keyword was added on the C-Series, S-Series, and E-Series TeraScale.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
6.4.1.0 | Expanded to display port error disable state (EDS) caused by loopback BPDU inconsistency and Port VLAN ID inconsistency.
6.2.1.1 | Introduced.

The following describes the `show spanning-tree pvst` command shown in the following examples.

**Field** | **Description**
--- | ---
Interface Name | PVST interface.
Instance | PVST instance.
Sts | Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut).
Guard Type | Type of STP guard configured (Root, Loop, or BPDU guard).

**Example (Brief)**

```

                        Te 1/3 5       EDS(Shut) Bpduguard
```

Related Commands

```
spanning-tree pvst — configure PVST+ on an interface.
```

**spanning-tree pvst**

Configure a PVST+ interface with one of these settings: edge port with optional bridge port data unit (BPDU) guard, port disablement if an error condition occurs, port priority or cost for a VLAN range, loop guard, or root guard.

**Z9000**

**Syntax**

```
spanning-tree pvst {edge-port [bpduguard [shutdown-on-violation]] | err-disable} vlan vlan-range {cost number | priority value} | loopguard | rootguard}
```

**Parameters**

- **edge-port**
  - Enter the keywords edge-port to configure the interface as a PVST+ edge port.
- **bpduguard**
  - Enter the keyword portfast to enable Portfast to move the interface into Forwarding mode immediately after the root fails.
  - Enter the keyword bpduguard to disable the port when it receives a BPDU.
- **shutdown-on-violation**
  - (OPTIONAL) Enter the keywords shutdown-on-violation to hardware disable an interface if a BPDU is received and the port is disabled.
- **err-disable**
  - Enter the keywords err-disable to enable the port to be put into the error-disable state (EDS) if an error condition occurs.
- **vlan vlan-range**
  - Enter the keyword vlan then the VLAN numbers. The range is from 1 to 4094.
- **cost number**
  - Enter the keyword cost then the port cost value. The range is from 1 to 200000.
- **priority value**
  - Enter the keyword priority then the Port priority value in increments of 16. The range is from 0 to 240. The default is 128.
loopguard (C-, S-, and E-Series TeraScale only) Enter the keyword `loopguard` to enable loop guard on a PVST+ port or port-channel interface.

rootguard (C-, S-, and E-Series TeraScale only) Enter the keyword `rootguard` to enable root guard on a PVST+ port or port-channel interface.

**Defaults**
Not configured.

**Command Modes**
INTERFACE

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>

<tr>
<td>7.4.1.0</td>
<td>Added the optional Bridge Port Data Unit (BPDU) guard.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**
The BPDU guard option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into the Error Disable state if a BPDU appears, and a message is logged so that the administrator can take corrective action.

NOTE: A port configured as an edge port, on a PVST switch, immediately transitions to the forwarding state. Only ports connected to end-hosts should be configured as an edge port. Consider an edge port similar to a port with a spanning-tree portfast enabled.

If you do not enable `shutdown-on-violation`, BPDDUs are still sent to the route process module (RPM) CPU.

You cannot enable `root guard` and `loop guard` at the same time on a port. For example, if you configure `loop guard` on a port on which `root guard` is already configured, the following error message is displayed: % Error: RootGuard is configured. Cannot configure LoopGuard.

When used in a PVST+ network, loop guard is performed per-port or per-port channel at a VLAN level. If no BPDDUs are received on a VLAN interface, the port or port-channel transitions to a Loop-Inconsistent (blocking) state only for this VLAN.

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a Blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

**Example**
```
Dell(conf-if-te-1/1)#spanning-tree pvst vlan 3 cost 1800
Dell(conf-if-te-1/1)#end
```
Dell(conf-if-te-1/1)#show config
!
interface TenGigabitEthernet 1/1
  no ip address
  switchport
  spanning-tree pvst vlan 3 cost 1800
  no shutdown
Dell(conf-if-te-1/1)#end

Related Commands

show spanning-tree pvst — views the PVST+ configuration.

spanning-tree pvst err-disable

Place ports in an Err-Disabled state if they receive a PVST+ BPDU when they are members an untagged VLAN.

Z9000

Syntax

spanning-tree pvst err-disable cause invalid-pvst-bpdu

Defaults

Enabled; ports are placed in the Err-Disabled state if they receive a PVST+ BPDU when they are members of an untagged VLAN.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

Usage Information

Some non-Dell Networking systems which have hybrid ports participating in PVST+ transmit two kinds of BPDUs: an 802.1D BPDU and an untagged PVST+ BPDU.

Dell Networking systems do not expect PVST+ BPDU on an untagged port. If this happens, Dell Networking OS places the port in the Error-Disabled state. This behavior might result in the network not converging. To prevent Dell Networking OS from executing this action, use the no spanning-tree pvst err-disable command cause invalid-pvst-bpdu.

Related Commands

show spanning-tree pvst — views the PVST+ configuration.
**tc-flush-standard**

Enable the MAC address flushing after receiving every topology change notification.

### Z-Series

**Syntax**
```
tc-flush-standard
```
To disable, use the `no tc-flush-standard` command.

**Defaults**
Disabled.

**Command Modes**
```
CONFIGURATION
```

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Introduced.</td>
</tr>
</tbody>
</table>

**Usage Information**
By default, Dell Networking OS implements an optimized flush mechanism for PVST+. This implementation helps in flushing the MAC addresses only when necessary (and less often) allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn this knob command on to enable flushing MAC addresses after receiving every topology change notification.

**vlan bridge-priority**

Set the PVST+ bridge-priority for a VLAN or a set of VLANs.

### Z-Series

**Syntax**
```
vlan vlan-range bridge-priority value
```
To return to the default value, use the `no vlan bridge-priority` command.

**Parameters**
- `vlan vlan-range` Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.
- `bridge-priority value` Enter the keywords `bridge-priority` then the bridge priority value in increments of 4096. The range is from 0 to 61440. The default is `32768`.

**Defaults**
```
32768
```

**Command Modes**
```
CONFIGURATION (conf-pvst)
```

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

**Related Commands**
- `vlan forward-delay` — changes the time interval before Dell Networking OS transitions to the Forwarding state.
- `vlan hello-time` — change the time interval between BPDUs.
- `vlan max-age` — changes the time interval before PVST+ refreshes.
- `show spanning-tree pvst` — displays the PVST+ configuration.

**vlan forward-delay**

Set the amount of time the interface waits in the Listening state and the Learning state before transitioning to the Forwarding state.

**Z9000**

**Syntax**

```
vlan vlan-range forward-delay seconds
```

To return to the default setting, use the `no vlan forward-delay` command.

**Parameters**

- `vlan vlan-range` Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.
- `forward-delay seconds` Enter the keywords `forward-delay` then the time interval, in seconds, that Dell Networking OS waits before transitioning PVST+ to the forwarding state. The range is from 4 to 30 seconds. The default is `15 seconds`.

**Defaults**

- `15 seconds`

**Command Modes**

- CONFIGURATION (conf-pvst)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

**Per-VLAN Spanning Tree Plus (PVST+)** 995
vlan hello-time

Set the time interval between generation of PVST+ BPDUs.

Z9000

Syntax

`vlan vlan-range hello-time seconds`

To return to the default value, use the `no vlan hello-time` command.

Parameters

- `vlan vlan-range`: Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.
- `hello-time seconds`: Enter the keywords `hello-time` then the time interval, in seconds, between transmission of BPDUs. The range is from 1 to 10 seconds. The default is 2 seconds.

Defaults

- 2 seconds

Command Modes

- CONFIGURATION (conf-pvst)

- `vlan forward-delay` — changes the time interval before Dell Networking OS transitions to the forwarding state.
- `vlan max-age` — changes the time interval before PVST+ refreshes.
- `show spanning-tree pvst` — displays the PVST+ configuration.
### vlan max-age

To maintain configuration information before refreshing that information, set the time interval for the PVST+ bridge.

#### Z-Series

**Syntax**

```
vlan vlan-range max-age seconds
```

To return to the default, use the `no vlan max-age` command.

**Parameters**

- `vlan vlan-range`: Enter the keyword `vlan` then the VLAN numbers. The range is from 1 to 4094.
- `max-age seconds`: Enter the keywords `max-age` then the time interval, in seconds, that Dell Networking OS waits before refreshing configuration information. The range is from 6 to 40 seconds. The default is 20 seconds.

**Defaults**

20 seconds

- `vlan hello-time` — changes the time interval between BPDUs.
- `show spanning-tree pvst` — displays the PVST+ configuration.
The Dell Networking operating software commands for quality of service (QoS) include traffic conditioning and congestion control. QoS commands are not universally supported on all Dell Networking Products. Z9000 platform.

This chapter contains the following sections:
- Global Configuration Commands
- Per-Port QoS Commands
- Policy-Based QoS Commands

Topics:
- Global Configuration Commands
- Per-Port QoS Commands
- Policy-Based QoS Commands
- DSCP Color Map Commands

Global Configuration Commands

There is only one global configuration QoS command.

**qos-rate-adjust**

By default, while rate limiting, policing, and shaping, Dell Networking OS does not include the Preamble, SFD, or the IFG fields. These fields are overhead; only the fields from MAC destination address to the CRC are used for forwarding and are included in these rate metering calculations. You can optionally include overhead fields in rate metering calculations by enabling QoS Rate Adjustment.

**Z9000**

**Syntax**

```
qos-rate-adjustment overhead-bytes
```

**Parameters**

- **overhead-bytes**
  Include a specified number of bytes of packet overhead to include in rate limiting, policing, and shaping calculations. The range is from 1 to 31.

**Defaults**

QoS rate adjustment is disabled by default.

**Command Modes**

</table>
Per-Port QoS Commands

Per-port QoS (port-based QoS) allows you to define the QoS configuration on a per-physical-port basis.

**dot1p-priority**

Assign a value to the IEEE 802.1p bits on the traffic this interface receives.

**Syntax**

```
dot1p-priority priority-value
```

To delete the IEEE 802.1p configuration on the interface, use the `no dot1p-priority` command.

**Parameters**

<table>
<thead>
<tr>
<th>priority-value</th>
<th>dot1p</th>
<th>Queue Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>2</td>
<td></td>
</tr>
<tr>

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

**Version**

- 9.7(0.0) Introduced on the S6000-ON.
- 9.0.2.0 Introduced on the S6000.
- 8.3.19.0 Introduced on the S4820T.
- 8.3.11.1 Introduced on the Z9000.
- 8.3.7.0 Introduced on the S4810.
- 7.5.1.0 Introduced on the C-Series.
- pre- 6.1.1.1 Introduced on the E-Series.

**Usage Information**

The `dot1p-priority` command changes the priority of incoming traffic on the interface. The system places traffic marked with a priority in the correct queue and processes that traffic according to its queue.

When you set the priority for a port channel, the physical interfaces assigned to the port channel are configured with the same value. You cannot assign the `dot1p-priority` command to individual interfaces in a port channel.
rate police

Police the incoming traffic rate on the selected interface.

Z-Series

Syntax

rate police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]] [vlan vlan-id]

Parameters

- **kbps**: Enter the keyword kbps to specify the rate limit in Kilobits per second (Kbps). The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).
- **committed-rate**: Enter the bandwidth in Mbps. The range is from 0 to 40000.
- **burst-KB** (OPTIONAL): Enter the burst size in KB. The range is from 16 to 200000. The default is 50.
- **peak peak-rate** (OPTIONAL): Enter the keyword peak then a number to specify the peak rate in Mbps. The range is from 0 to 4000.
- **peak peak-rate** (OPTIONAL): Enter the keyword peak then a number to specify the peak rate in Mbps. The range is from 0 to 40000.
- **vlan vlan-id** (OPTIONAL): Enter the keyword vlan then a VLAN ID to police traffic to those specific VLANs. The range is from 1 to 4094.

Defaults

Granularity for committed-rate and peak-rate is Mbps unless you use the kbps option.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

- **NOTE**: Per Port rate police is supported for Layer 2 tagged and untagged switched traffic and for Layer 3 traffic. Per VLAN rate police is supported on only tagged ports with Layer 2 switched traffic.

S-Series

On one interface, you can configure the rate police command for a VLAN or you can configure the rate police command for an interface.

rate shape

Shape the traffic output on the selected interface.

Z9000

Syntax

rate shape [kbps] rate [burst-KB]
Enter the keyword kbps to specify the rate limit in Kilobits per second (Kbps). On S-Series, make the value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).

rate

The range is from 10 to 40000.

burst-KB

(Optional) Enter the burst size in KB. The range is from 0 to 10000. The default is 50.

Default Granularity for rate is Mbps unless you use the kbps option.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

On 40-port 10G stack-unit if the traffic is shaped between 64 and 1000 Kbs, for some values, the shaped rate is much less than the value configured.

**NOTE:** When packets of size greater than 7000 bytes are expected to be received from the network, Dell Networking recommends that you configure the burst value to be more than 175 KB if you configured the rate shape. Such a setting ensures proper bandwidth sharing across queues.

Related Commands

rate-shape — shapes traffic output as part of the designated policy.

**service-class bandwidth-percentage**

Specify a minimum bandwidth for queues.

**Z9000**

**Syntax**

```
service-class bandwidth-percentage queue0 number queue1 number queue2 number queue3 number
```

**Parameters**

- `number`: Enter the bandwidth-weight, as a percentage.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.1</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
Guarantee a minimum bandwidth to different queues globally using the `service-class bandwidth-percentage` command from `CONFIGURATION` mode. The command is applied in the same way as the `bandwidth-percentage` command in an output QoS policy. The `bandwidth-percentage` command in QOS-POLICY-OUT mode supersedes the `service-class bandwidth-percentage` command.

**service-class dot1p-mapping**

Configure a service-class criterion based on a dot1p value.

**Z9000**

**Syntax**

```
service-class dot1p-mapping {dot1p0 queue | dot1p1 queue | dot1p2 queue | dot1p3 queue | dot1p4 queue | dot1p5 queue | dot1p6 queue | dot1p7 queue}
```

**Parameters**

- `queue` Enter a value from 0 to 7.

**Defaults**

For each dot1p Priority, the default CoS queue value is:
- Dot1p Priority : 0 1 2 3 4 5 6 7
- Queue : 2 0 1 3 4 5 6 7

**Command Modes**

`CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

To apply dot1p-queue-mapping, use the `service-class dynamic dot1p` command.

**Related Commands**

- `show qos dot1p-queue-mapping` — displays the dot1p priority to queue mapping on the switch.

**service-class dynamic dot1p**

Honor all 802.1p markings on incoming switched traffic on an interface (from INTERFACE mode) or on all interfaces (from CONFIGURATION mode). A CONFIGURATION mode entry supersedes an INTERFACE mode entry.

**Z9000**

**Syntax**

```
service-class dynamic dot1p
```

To return to the default setting, use the `no service-class dynamic dot1p` command.
Defaults

All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command. The default mapping is as follows:

<table>
<thead>
<tr>
<th>dot1p</th>
<th>Queue ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
</tr>
<tr>
<td>2</td>
<td>0</td>
</tr>
<tr>
<td>3</td>
<td>1</td>
</tr>
<tr>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

To honor all incoming 802.1p markings on incoming switched traffic on the interface, enter this command. By default, this facility is not enabled (that is, the 802.1p markings on incoming traffic are not honored).

You can apply this command on both physical interfaces and port channels. When you set the service-class dynamic for a port channel, the physical interfaces assigned to the port channel are automatically configured; you cannot assign the `service-class dynamic` command to individual interfaces in a port channel.

- All dot1p traffic is mapped to Queue 0 unless you enable the `service-class dynamic dot1p` command on an interface or globally.
- Layer 2 or Layer 3 service policies supersede dot1p service classes.

**strict-priority queue**

Configure a unicast queue as a strict-priority (SP) queue.

**Z-Series**

Syntax

```
strict-priority queue unicast number
```

Parameters

- **unicast number**
  - Enter the keyword `unicast` then the queue number. The range is from 1 to 3.

Defaults

none

Command Modes

CONFIGURATION
Policy-Based QoS Commands

Policy-based traffic classification is handled with class maps. These maps classify unicast traffic into one of eight classes in S-Series or eight classes in case of S6000. Dell Networking OS enables you to match multiple class maps and specify multiple match criteria. Policy-based QoS is not supported on logical interfaces, such as port-channels, VLANS, or loopbacks.

**bandwidth-percentage**

Assign a percentage of weight to the class/queue.

**Z9000 Syntax**

```
bandwidth-percentage percentage
```

Parameters:
- `percentage` Enter the percentage assignment of bandwidth to the class/queue. The range is from 1 to 100% (granularity 1%).

**Defaults**
- none

**Command Modes**
- CONFIGURATION (conf-qos-policy-out)

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>

<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

After you configure a unicast queue as strict-priority, that particular queue, on the entire chassis, is treated as a strict-priority queue. Traffic for a strict priority is scheduled before any other queues are serviced. For example, if you send 100% line rate traffic over the SP queue, it starves all other queues on the ports on which this traffic is flowing.
class-map

Create/access a class map. Class maps differentiate traffic so that you can apply separate quality-of-service policies to each class.

Z9000

class-map {match-all | match-any} class-map-name [cpu-qos] [layer2]

Parameters

match-all
Determines how packets are evaluated when multiple match criteria exist. Enter the keywords match-all to determine that the packets must meet all the match criteria in order to be a member of the class.

match-any
Determines how packets are evaluated when multiple match criteria exist. Enter the keywords match-any to determine that the packets must meet at least one of the match criteria in order to be a member of the class.

class-map-name
Enter a name of the class for the class map in a character format (32 character maximum).

cpu-qos
Enter the keyword cpu-qos to assign this Class Map to control plane traffic only (CoPP).

layer2
Enter the keyword layer2 to specify a Layer 2 Class Map. The default is Layer 3.

Defaults
Layer 3

Command Modes

<td>E-Series Only: Expanded to add support for Layer 2.</td>
</tr>
</tbody>
</table>

Usage Information
Packets arriving at the input interface are checked against the match criteria and configured using this command to determine if the packet belongs to that class. This command accesses CLASS-MAP mode, where the configuration commands include the match ip and match mac options.

Related Commands

ip access-list extended — configures an extended IP ACL.

ip access-list standard — configures a standard IP ACL.
match ip access-group — configures the match criteria based on the access control list (ACL).
match ip precedence — identifies the IP precedence values as match criteria.
match ip dscp — configures the match criteria based on the DSCP value.
match mac access-group — configures a match criterion for a class map based on the contents of the designated MAC ACL.
match mac dot1p — configures a match criterion for a class map based on a dot1p value.
match mac vlan — configures a match criterion for a class map based on VLAN ID.
service-queue — assigns a class map and QoS policy to different queues.
show qos class-map — views the current class map information.

**clear qos statistics**

Clear qos statistics clears statistics from show qos statistics.

**Z9000**

**Syntax**

clear qos statistics interface-name

**Parameters**

interface-name

Enter one of the following keywords:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Related Commands**

show qos statistics — displays the QoS statistics.

description

Add a description to the selected policy map or QoS policy.

**Z9000**

**Syntax**

description {description}

1006 Quality of Service (QoS)
To remove the description, use the no description (description) command.

Parameters

**description**
Enter a description to identify the policies (80 characters maximum).

Defaults

none

Command Modes

CONFIGURATION (policy-map-input and policy-map-output; conf-qos-policy-in and conf-qos-policy-out; wred)

Related Commands

- policy-map-input — creates an input policy map.
- policy-map-output — creates an output policy map.
- qos-policy-input — creates an input QoS-policy on the router.
- qos-policy-output — creates an output QoS-policy on the router.
- wred-profile — creates a WRED profile.

**match ip access-group**

Configure match criteria for a class map, based on the access control list (ACL).

**NOTE:** IPv6 class-maps and IP-any class-maps do not match. This condition is true for IPv6 and IP-any class-maps on both ACLs as well as VLANs.

**Z9000**

**Syntax**

```
match ip access-group access-group-name [set-ip-dscp value | set-color value]
```

To remove ACL match criteria from a class map, use the no match ip access-group access-group-name [set-ip-dscp value | set-color value] command.

**Parameters**

- **access-group-name**
Enter the ACL name whose contents are used as the match criteria in determining if packets belong to the class the class-map specifies.

- **set-ip-dscp value** (OPTIONAL) Enter the keywords set-ip-dscp then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

- **set-color value** (Optional) Enter the keyword set-color followed by a color value. Traffic that fulfills the match criteria is marked with the color value that you specify. The default value is Yellow.

**Defaults**

none

**Command Modes**

CLASS-MAP CONFIGURATION (config-class-map)
**match ip dscp**

Use a differentiated services code point (DSCP) value as a match criteria.

### Z9000

**Syntax**

```plaintext
match {ip | ipv6 | ip-any} dscp dscp-list [set-ip-dscp value]
```

**Parameters**

- `ip` Enter the keyword `ip` to support IPv4 traffic.
- `ipv6` Enter the keyword `ipv6` to support IPv6 traffic.
- `ip-any` Enter the keyword `ip-any` to support IPv4 and IPv6 traffic.
- `dscp-list` Enter the IP DSCP values that is to be the match criteria. Separate values by commas — no spaces (1,2,3) or indicate a list of values separated by a hyphen (1-3). The range is from 0 to 63.
- `set-ip-dscp value` (OPTIONAL) Enter the keywords `set-ip-dscp` then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

**Defaults**

- `none`

**Command Modes**

CLASS-MAP CONFIGURATION (config-class-map)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Added the <code>ipv6</code> and <code>ip-any</code> options on the Z9000, S6000, S4820T, S4810, MXL.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>
To access this command, enter the class-map command. After the class map is identified, you can configure the match criteria.

The `match ip dscp` and `match ip precedence` commands are mutually exclusive.

Up to 64 IP DSCP values can be matched in one match statement. For example, to indicate IP DSCP values 0 1 2 3 4 5 6 7, enter either the `match ip dscp 0,1,2,3,4,5,6,7` or `match ip dscp 0-7` command.

**NOTE:** Only one of the IP DSCP values must be a successful match criterion, not all of the specified IP DSCP values must match.

**Related Commands**

- `class-map` — identifies the class map.

### match ip precedence

Use IP precedence values as a match criteria.

**Syntax**

```
match {ip | ipv6 | ip-any} precedence ip-precedence-list [set-ip-dscp value]
```

To remove IP precedence as a match criteria, use the `no match {ip | ipv6 | ip-any} precedence ip-precedence-list [multicast] set-ip-dscp value` command.

**Parameters**

- `ip` Enter the keyword `ip` to support IPv4 traffic.
- `ipv6` Enter the keyword `ipv6` to support IPv6 traffic.
- `ip-any` Enter the keyword `ip-any` to support IPv4 and IPv6 traffic.
- `ip-precedence-list` Enter the IP precedence value(s) as the match criteria. Separate values by commas with no spaces (1,2,3) or indicate a list of values separated by a hyphen (1-3). The range is from 0 to 7.
- `set-ip-dscp value` (OPTIONAL) Enter the keywords `set-ip-dscp` then the IP DSCP value. The matched traffic is marked with the DSCP value. The range is from 0 to 63.

**Defaults**

`none`

**Command Modes**

CLASS-MAP CONFIGURATION (config-class-map)

<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

To access this command, enter the class-map command. After the class map is identified, you can configure the match criteria.

**Related Commands**

- **class-map** — identifies the class map.
**match mac dot1p**

Configure a match criterion for a class map based on a dot1p value.

**Z9000**

**Syntax**

```plaintext
match mac dot1p {dot1p-list}
```

**Parameters**

- `dot1p-list` Enter a dot1p value. The range is from 0 to 7.

**Defaults**

none

**Command Modes**

CLASS-MAP

**Command History**

</tr>
</tbody>
</table>

**Usage Information**

To access this command, enter the `class-map` command. After the class map is identified, you can configure the match criteria.

**Related Commands**

- `class-map` — identifies the class map.

**match mac vlan**

Configure a match criterion for a class map based on VLAN ID.

**Z9000**

**Syntax**

```plaintext
match mac vlan number
```

**Parameters**

- `number` Enter the VLAN ID. The range is from 1 to 4094.

**Defaults**

none

**Command Modes**

CLASS-MAP

**Command History**

<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>
policy-aggregate

Allow an aggregate method of configuring per-port QoS via policy maps. An aggregate QoS policy is part of the policy map (output) applied on an interface.

Z9000

Syntax

```
policy-aggregate qos-policy-name
```

To remove a policy aggregate configuration, use the `no policy-aggregate qos-policy-name` command.

Parameters

- `qos-policy-name` Enter the name of the policy map in character format (32 characters maximum).

Defaults

none

Command Modes

CONFIGURATION (policy-map-input and policy-map-output)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information

If the rate shape exists in both aggregate and per-queue qos-policy, minimum of 2 take effect. Some of all Queue-rate will not exceed aggregate.

Related Commands

- `policy-map-input` — creates an input policy map.
- `policy-map-output` — creates an output policy map.

policy-map-input

Create an input policy map.

Z9000

Syntax

```
policy-map-input policy-map-name cpu-qos | [layer2]
```
To remove an input policy map, use the `no policy-map-input policy-map-name cpu-qos \ [layer2]` command.

**Parameters**

- **policy-map-name** Enter the name of the policy map in character format (32 characters maximum).
- **cpu-qos** Enter the `cpu-qos` keyword to assign this ACL to control plane traffic only.
- **layer2** (OPTIONAL) Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is Layer 3.

**Defaults**

Layer 3

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

The input policy map is used to classify incoming traffic to different flows using class-map, QoS policy, or incoming packets DSCP. This command enables Policy-Map-Input Configuration mode (conf-policy-map-in).

**Related Commands**

- `service-queue` — assigns a class map and QoS policy to different queues.
- `service-policy input` — applies an input policy map to the selected interface.

### policy-map-output

Create an output policy map.

**Z9000**

**Syntax**

```
policy-map-output policy-map-name
```

To remove a policy map, use the `no policy-map-output policy-map-name` command.

**Parameters**

- **policy-map-name** Enter the name for the policy map in character format (32 characters maximum).

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
To assign traffic to different flows using QoS policy, use the Output Policy map. This command enables Policy-Map-Output Configuration mode (conf-policy-map-out).

Usage Information

To assign traffic to different flows using QoS policy, use the Output Policy map. This command enables Policy-Map-Output Configuration mode (conf-policy-map-out).

Related Commands

- `service-queue` — assigns a class map and QoS policy to different queues.
- `policy-aggregate` — allows an aggregate method of configuring per-port QoS using policy maps.
- `service-policy output` — applies an output policy map to the selected interface.

## qos-policy-input

Create a QoS input policy on the router.

### Z9000

**Syntax**

```
qos-policy-input qos-policy-name cpu-qos | layer2
```

To remove an existing input QoS policy from the router, use the `no qos-policy-input qos-policy-name cpu-qos | layer2` command.

**Parameters**

- `qos-policy-name` Enter the name for the policy map in character format (32 characters maximum).
- `cpu-qos` (OPTIONAL) Enter the keyword `cpu-qos` keyword to assign this ACL to control plane traffic only.
- `layer2` (OPTIONAL) Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is Layer 3.

**Defaults**

Layer 3

**Command Modes**

CONFIGURATION

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.

**Usage Information**

Use this command to specify the name of the input QoS policy. Once input policy is specified, rate-police can be defined. This command enables the `qos-policy-input` configuration mode— (conf-qos-policy-in).

When changing a Service-Queue configuration in a QoS policy map, all QoS rules are deleted and re-added automatically to ensure that the order of the rules is maintained. As a result, the Matched Packets value shown in the `show qos statistics` command is reset.

**Related Commands**

- `rate police` — incoming traffic policing function.
**qos-policy-output**

Create a QoS output policy.

### Z9000

**Syntax**

```
qos-policy-output qos-policy-name
```

To remove an existing output QoS policy, use the `no qos-policy-output qos-policy-name` command.

**Parameters**

- **qos-policy-name** Enter your output QoS policy name in character format (32 characters maximum).

**Defaults**

- none

**Command Modes**

- CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to specify the name of the output QoS policy. Once output policy is specified, rate-shape, scheduler strict, bandwidth-percentage, and WRED can be defined. This command enables the qos-policy-output configuration mode—`conf-qos-policy-out`.

**Related Commands**

- `bandwidth-percentage` — assigns percentage of bandwidth to the class/queue.
- `wred` — assigns yellow or green drop precedence.

---

**queue egress**

Assign a WRED Curve to all eight egress Multicast queues or designate the percentage for the Multicast bandwidth queue.

**Syntax**

```
queue egress multicast linecard {slot number port-set number | all} [wred-profile name | multicast-bandwidth percentage]
```

To return to the default, use the `no queue egress multicast linecard {slot number port-set number | all} [wred-profile name | multicast-bandwidth percentage]` command.

**Parameters**

- **linecard number** Enter the keyword `linecard` then the line card slot number.
- **port-set number** Enter the keywords `port-set` then the line card's port pipe. The range is from 0 or 1.
- **all** Enter the keyword `all` to apply to all line cards.
- **wred-profile name** (OPTIONAL) Enter the keywords `wred-profile` then your WRED profile name in character format (16 character maximum). Or use one of the pre-defined WRED profile names.
Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_g.

**multicast-bandwidth percentage** (OPTIONAL) Enter the keywords multicast-bandwidth then the bandwidth percentage. The range is from 0 to 100%.

**Defaults**
none

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.10</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Added support for multicast-bandwidth.</td>
</tr>
<tr>
<td>7.4.1.0 and 6.5.3.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
This command does not uniquely identify a queue, but rather identifies only a set of queues. The WRED curve is applied to all eight egress Multicast queues.

**Important Points to Remember — Multicast-Bandwidth Option**
- A unique multicast weighted fair queuing (WFQ) setting can be applied only on a per port-pipe basis. The minimum percentage of the multicast bandwidth assigned to any of the ports in the port-pipe takes effect for the entire port-pipe.
- If the percentage of multicast bandwidth is 0, control traffic going through multicast queues are dropped.
- The **no** form of the command without multicast-bandwidth and wred-profile removes both the wred-profile and multicast-bandwidth configuration.
- On 10-Gigabit ports only, the multicast bandwidth option works only if the total unicast bandwidth is more than the multicast bandwidth.
- If strict priority is applied along with multicast-bandwidth, the effect of strict priority is on all ports where unicast and multicast bandwidth are applied.
- When multicast bandwidth is assigned along with unicast bandwidth, first multicast bandwidth is reserved for that port, then the remaining unicast bandwidth configured is adjusted according to the bandwidth available after reserving for multicast bandwidth.

**queue ingress**

Assign a WRED Curve to all eight ingress Multicast queues or designate the percentage for the Multicast bandwidth queue.

**Syntax**
```
queue ingress multicast {linecard slot number port-set number | all} [wred-profile name]
```

To return to the default, use the **no queue ingress multicast {linecard slot number port-set number | all} [wred-profile name]** command.

**Parameters**
- **linecard number**  Enter the keyword linecard then the line card slot number.
- **port-set number**  Enter the keywords port-set then the line card’s port pipe. The range is from 0 or 1.
- **all**  Enter the keyword all to apply to all line cards.
(OPTIONAL) Enter the keywords wred-profile then your WRED profile name in character format (16 character maximum). Or use one of the pre-defined WRED profile names.

Pre-defined Profiles: wred_drop, wred-ge_y, wred_ge_g, wred_teng_y, wred_teng_g.

Defaults none

Command Modes CONFIGURATION

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.4.1.0 and 6.5.3.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information This command does not uniquely identify a queue, but rather identifies only a set of queues. The WRED Curve is applied to all eight ingress Multicast queues.

**NOTE:** The multicast-bandwidth option is not supported on queue ingress. If you attempt to use the multicast-bandwidth option, the following reject error message is generated:

```
%Error: Bandwidth-percent is not allowed for ingress multicast.
```

**rate-police**

Specify the policing functionality on incoming traffic.

Z9000

**Syntax**

```
rate-police [kbps] committed-rate [burst-KB] [peak [kbps] peak-rate [burst-KB]]
```

**Parameters**

- **kbps**
  - Enter the keyword kbps to specify the rate limit in Kilobits per second (Kbps). Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).

- **committed-rate**
  - Enter the bandwidth in Mbps. The range is from 0 to 40000.

- **burst-KB**
  - (OPTIONAL) Enter the burst size in KB. The range is from 16 to 200000. The default is 100.

- **peak peak-rate**
  - (OPTIONAL) Enter the keyword peak then a number to specify the peak rate in Mbps. The range is from 0 to 40000. The default is the same as designated for committed-rate.

**Defaults**

- Burst size is 100KB. peak-rate is by default the same as committed-rate. Granularity for committed-rate and peak-rate is Mbps unless you use the kbps option.

**Command Modes** QOS-POLICY-IN

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information
The default burst size is 100Kb. If a different value is required, you must configure the burst size to the required value.

Related Commands
- `rate police` — specifies traffic policing on the selected interface.
- `qos-policy-input` — creates a QoS output policy.

rate-shape
Shape traffic output as part of the designated policy.

Z9000

Syntax
```
rate-shape [kbps] rate [burst-KB]
```

Parameters
- **kbps**
  
  Enter the keyword `kbps` to specify the rate limit in Kilobits per second (Kbps).

  Make the following value a multiple of 64. The range is from 0 to 40000000. The default granularity is Megabits per second (Mbps).

- **rate**
  
  The range is from 10 to 40000.

- **burst-KB**
  
  (OPTIONAL) Enter the burst size in KB. The range is from 0 to 40000. The default is 100.

Defaults
Burst size is 10KB. Granularity for rate is Mbps unless you use the `kbps` option.

Command Modes
QOS-POLICY-OUT

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information
On 40-port 10G stack-unit if the traffic is shaped between 64 and 1000 Kbs, for some values, the shaped rate is much less than the value configured.

Related Commands
- `rate shape` — shapes traffic output as part of the designated policy.
- `qos-policy-output` — creates a QoS output policy.
**service-policy input**

Apply an input policy map to the selected interface.

**Z9000**

**Syntax**

```
service-policy input policy-map-name [layer2]
```

To remove the input policy map from the interface, use the `no service-policy input policy-map-name [layer2]` command.

**Parameters**

- `policy-map-name` Enter the name for the policy map in character format (32 characters maximum). You can identify an existing policy map or name one that does not yet exist.
- `layer2` (OPTIONAL) Enter the keyword `layer2` to specify a Layer 2 Class Map. The default is `Layer 3`.

**Defaults**

Layer 3

**Command Modes**

```
INTERFACE
```

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can attach a single policy-map to one or more interfaces to specify the service-policy for those interfaces. A policy map attached to an interface can be modified.

**NOTE:** The service-policy commands are not allowed on a port channel. The `service-policy input policy-map-name` command and the `service-class dynamic dot1p` command are not allowed simultaneously on an interface.

**Related Commands**

- `policy-map-input` — creates an input policy map.

---

**service-policy output**

Apply an output policy map to the selected interface.

**Z9000**

**Syntax**

```
service-policy output policy-map-name
```

To remove the output policy map from the interface, use the `no service-policy output policy-map-name` command.

**Parameters**

- `policy-map-name` Enter the name for the policy map in character format (32 characters maximum). You can identify an existing policy map or name one that does not yet exist.

**Defaults**

none
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Usage Information
A single policy-map can be attached to one or more interfaces to specify the service-policy for those interfaces.

Related Commands
- **policy-map-output** — creates an output policy map.

**service-queue**

Assign a class map and QoS policy to different queues.

**Z-Series**

**Syntax**

```
service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]
```

To remove the queue assignment, use the `no service-queue queue-id [class-map class-map-name] [qos-policy qos-policy-name]` command.

**Parameters**

- **queue-id**
  - Enter the value used to identify a queue. The range is from 0 to 7.

- **class-map class-map-name**
  - (OPTIONAL) Enter the keyword `class-map` then the class map name assigned to the queue in character format (32 character maximum).

  **NOTE:** This option is available under `policy-map-input` only.

- **qos-policy qos-policy-name**
  - (OPTIONAL) Enter the keywords `qos-policy` then the QoS policy name assigned to the queue in text format (32 characters maximum). This specifies the input QoS policy assigned to the queue under `policy-map-input` and output QoS policy under `policy-map-output` context.

**Defaults**

`none`

**Command Modes**

- **CONFIGURATION** (conf-policy-map-in and conf-policy-map-out)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>
set

Mark outgoing traffic with a differentiated service code point (DSCP) or dot1p value.

Z9000

Syntax

set {ip-dscp value | mac-dot1p value}

Parameters

  ip-dscp value  (OPTIONAL) Enter the keywords ip-dscp then the IP DSCP value. The range is from 0 to 63.
  mac-dot1p value  Enter the keywords mac-dot1p then the dot1p value. The range is from 0 to 7.

Defaults

  none

Command Modes

  CONFIGURATION (conf-qos-policy-in)

Command History

  This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

  The following is a list of the Dell Networking OS version history for this command.

  Version  Description
  9.7(0.0)  Introduced on the S6000-ON.
  9.0.2.0  Introduced on the S6000.
  8.3.19.0  Introduced on the S4820T.
  8.3.11.1  Introduced on the Z9000.
  8.3.7.0  Introduced on the S4810.

Usage Information

  After the IP DSCP bit is set, other QoS services can then operate on the bit settings.

show qos class-map

View the current class map information.

Z9000

Syntax

show qos class-map [class-name]

Parameters

  class-name  (Optional) Enter the name of a configured class map.

Defaults

  none
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

Example

```
Dell#show qos class-map
Class-map match-any CM
 Match ip access-group ACL
```

Related Commands

- `class-map` — identifies the class map.

### show qos dot1p-queue-mapping

Displays the dot1p priority to queue mapping on the switch.

**Syntax**

```
show qos dot1p-queue-mapping
```

**Defaults**

- dot1p Priority: 0 1 2 3 4 5 6 7
- Queue: 2 0 1 3 4 5 6 7

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

trust dot1p, dot1p-priority, service-class dynamic dot1; all these features work over the mapping in this command output.

**Related Commands**

- `service-class dot1p-mapping` — Identifies the class map.
show qos policy-map

View the QoS policy map information.

Z9000

Syntax

```
show qos policy-map {summary [interface] | detail}
```

Parameters

- **summary**
  - To view a policy map interface summary, enter the keyword `summary` and optionally one of the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- **interface**
  - To view a policy map interface in detail, enter the keyword `detail` and optionally one of the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

Defaults

```
none
```

Command Modes

- EXEC
- EXEC Privilege

Example

```
Dell#show qos qos-policy-output
Qos-policy-output qosOut
    Rate-limit 50 50 peak 50 50
    Wred yellow 1
    Wred green 1
```
show qos statistics

View QoS statistics.

Z9000

Syntax

show qos statistics {wred-profile [interface]} | [interface]

Parameters

- **wred-profile**
  - Enter the keywords **wred-profile** and optionally one of the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

- **interface**
  - Enter one of the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.

```
Dell#show qos wred-profile
Wred-profile-name   min-threshold  max-threshold  max-drop-rate
wred_drop                0             0              100
wred_teng_y             467           4671            100
wred_teng_g             467           4671            50
wred_fortyg_y           467           4671            50
wred_fortyg_g           467           4671            25
```

**test cam-usage**

Check the Input Policy Map configuration for the CAM usage.

**Z9000**

**Syntax**

```
test cam-usage service-policy input policy-map stack-unit {
     number | port-set portpipe number | [all]}
```

**Parameters**

- `policy-map` Enter the policy map name.
- `stack-unit number` (OPTIONAL) Enter the keyword stack-unit then the stack-unit slot number.
- `port-set portpipe number` Enter the keywords port-set then the stack-unit port pipe number. The range is from 0 or 1.
- `stack-unit all` (OPTIONAL) Enter the keywords stack-unit all to indicate all stack-unit.

**Defaults**

none

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

This feature allows you to determine if the CAM has enough space available before applying the configuration on an interface.
An input policy map with both Trust and Class-map configuration, the Class-map rules are ignored and only the Trust rule is programmed in the CAM. In such an instance, the Estimated CAM output column contains the size of the CAM space required for the Trust rule and not the Class-map rule.

The following describes the test cam-usage service-policy input policy-map stack-unit command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>stack-unit</td>
<td>Indicates the stack-unit slot number.</td>
</tr>
<tr>
<td>Portpipe</td>
<td>Indicates the portpipe number.</td>
</tr>
<tr>
<td>CAM Partition</td>
<td>The CAM space where the rules are added.</td>
</tr>
<tr>
<td>Available CAM</td>
<td>Indicates the free CAM space, in the partition, for the classification rules.</td>
</tr>
<tr>
<td>Estimated CAM per Port</td>
<td>Indicates the number of free CAM entries required (for the classification rules) to apply the input policy map on a single interface.</td>
</tr>
<tr>
<td>Status (Allowed ports)</td>
<td>Indicates if the input policy map configuration on an interface belonging to a stack-unit/port-pipe is successful — Allowed (n) — or not successful — Exception. The allowed number (n) indicates the number of ports in that port-pipe on which the Policy Map can be applied successfully.</td>
</tr>
</tbody>
</table>

**NOTE:** The CAM entries reserved for the default rules are not included in the Available CAM column; free entries, from the default rules space, cannot be used as a policy map for the classification rules.

**NOTE:** The CAM entries for the default rule are not included in this column; a CAM entry for the default rule is always dedicated to a port and is always available for that interface.

**NOTE:** In a Layer 2 Policy Map, IPv4/IPv6 rules are not allowed; therefore, the output contains only L2ACL CAM partition entries.

**Example**

```bash
Dell# test cam-usage service-policy input pmap_l2 stack-unit all
For a L2 Input Policy Map pmap_l2, the output must be as follows,

<table>
<thead>
<tr>
<th>stack-unit</th>
<th>Portpipe</th>
<th>CAM Partition</th>
<th>Available CAM</th>
<th>Estimated CAM</th>
<th>Status (Allowed ports)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>
<td>L2ACL</td>
<td>500</td>
<td>200</td>
<td>Allowed (2)</td>
</tr>
<tr>
<td>1</td>
<td>0</td>
<td>L2ACL</td>
<td>1000</td>
<td>200</td>
<td>Allowed (5)</td>
</tr>
<tr>
<td>1</td>
<td>1</td>
<td>L2ACL</td>
<td>0</td>
<td>200</td>
<td>Exception</td>
</tr>
<tr>
<td>13</td>
<td>1</td>
<td>L2ACL</td>
<td>400</td>
<td>200</td>
<td>Allowed (2)</td>
</tr>
</tbody>
</table>
Dell#```

**show qos policy-map-output**

View the output QoS policy map details.

**Z9000**

**Syntax**

```
show qos policy-map-output [policy-map-name] [qos-policy-output qos-policy-name]
```
Parameters

policy-map-name  Enter the policy map name.
qos-policy-output qos-policy-name  Enter the keyword qos-policy-output then the QoS policy name.

Defaults

none

Dell#

threshold

Specify the minimum and maximum threshold values for the configured WRED profiles.

Z-Series

Syntax

threshold min number max number max-drop-probability number

To remove the threshold values, use the no threshold min number max number command.

Parameters

min number  Enter the keyword min then the minimum threshold number for the WRED profile. The range is from 1 to 9360.
max-drop-probability number  Enter the keyword max-drop-probability followed by the maximum number of packets for the WRED profile. The range is from 0 to 100 KB

Defaults

none

Command Modes

CONFIGURATION (config-wred)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

Related Commands

- `wred-profile` — creates a WRED profile.

trust

Specify dynamic classification (DSCP) or dot1p to trust.

**Z9000**

**Syntax**

```
trust {diffserv [fallback] | dot1p [fallback]}
```

**Parameters**

- `diffserv` Enter the keyword `diffserv` to specify trust of DSCP markings.
- `dot1p` Enter the keyword `dot1p` to specify trust dot1p configuration.
- `fallback` Enter the keyword `fallback` to classify packets according to their DSCP or dot1p value as a secondary option in case no match occurs against the configured class maps.

**Defaults**

none

**wred**

Designate the WRED profile to yellow or green traffic.

**Z-Series**

**Syntax**

```
wred {yellow | green} profile-name
```

To remove the WRED drop precedence, use the no wred {yellow | green} [profile-name] command.

**Parameters**

- **yellow | green**
  - Enter the keyword yellow for yellow traffic. A DSCP value of xxx110 and xxx100, xxx101 maps to yellow.
  - Enter the keyword green for green traffic. A DSCP value of xxx0xx are green and DSCP 111111 are red packets.

- **profile-name**
  - Enter your WRED profile name in character format (32 character maximum). Or use one of the five pre-defined WRED profile names.
  - Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_.

**Defaults**

When WRED green is applied, default WRED yellow profiles take effect and vice-versa.

**Command Modes**

```
CONFIGURATION (conf-qos-policy-out)
```

Usage Information

When you enable wred ecn, and the number of packets in the queue is below the minimum threshold, packets are transmitted per the usual WRED treatment.

When you enable wred ecn, and the number of packets in the queue is between the minimum threshold and the maximum threshold, one of the following two scenarios can occur:

- If the transmission endpoints are ECN-capable and traffic is congested, and the WRED algorithm determines that the packet should have been dropped based on the drop probability, the packet is transmitted and marked so the routers know the system is congested and can slow transmission rates.
- If neither endpoint is ECN-capable, the packet may be dropped based on the WRED drop probability. This behavior is the identical treatment that a packet receives when WRED is enabled without ECN configured on the router.

When you enable wred ecn, and the number of packets in the queue is above the maximum threshold, packets are dropped based on the drop probability. This behavior is the identical treatment a packet receives when WRED is enabled without ECN configured on the router.

Related Commands

wred-profile — creates a WRED profile and name that profile.
**wred-profile**

Create a WRED profile and name the profile.

### Z9000

**Syntax**

```
wred-profile wred-profile-name
```

To remove an existing WRED profile, use the `no wred-profile` command.

**Parameters**

- **wred-profile-name**
  
  Enter your WRED profile name in character format (32 character maximum). Or use one of the pre-defined WRED profile names. You can configure up to 26 WRED profiles plus the five pre-defined profiles, for a total of 31 WRED profiles.

  Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_g.

**Defaults**

The five pre-defined WRED profiles. When you configure a new profile, the minimum and maximum threshold defaults to predefined wred_ge_g values.

If green profile is applied, default yellow also take effect and vice-versa.

**Command Modes**

- **CONFIGURATION**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use the default pre-defined profiles or configure your own profile. You cannot delete the pre-defined profiles or their default values. This command enables WRED configuration mode — (conf-wred).

**Related Commands**

- `threshold` — specifies the minimum and maximum threshold values of the WRED profile.

### service-pool wred

A global buffer pool that is a shared buffer pool accessed by multiple queues when the minimum guaranteed buffers for the queue are consumed can be configured on the S6000 and Z9000 platforms.

Create a global buffer pool that is a shared buffer pool accessed by multiple queues when the minimum guaranteed buffers for the queue are consumed. S4810, S4820T, S6000, and Z9000 platforms support four global service-pools in the egress direction. Two service pools are used—one for lossy queues and the other for lossless (priority-based flow control (PFC)) queues. You can enable WRED and ECN configuration on the global service-pools. You can define WRED profiles and weight on each of the global service-pools for both lossy and lossless (PFC) service-pools.

**Syntax**

```
[No] service-pool wred {green | weight | yellow} {{pool0 number/string} | {pool1 number/string}}
```

**Parameters**

- **service-pool**
  
  Define the mapping between the service class and policy-based QoS or routing.

- **wred**
  
  Specify WRED curve parameters for a queue.

- **green**
  
  Specify green (low) drop precedence to a queue.
**weight**
Specify a weight factor to a queue.

**yellow**
Specify yellow (medium) drop precedence to a queue.

**pool0**
Service-pool buffer 1 (default service-pool for PFC traffic).

**pool1**
Service-pool buffer 0 (default service-pool for lossy traffic).

**number**
Enter a weight for the queue as a number in the range of 1 to 15. This parameter applies only if you specify the green or yellow drop precedence.

**string**
Enter the WRED profile name. It is a string of up to 32 characters. Or use one of the five pre-defined WRED profile names. Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_. This parameter applies only if you specify a weight factor.

**Default**
All queues on backplane ports operate in tail-drop (best-effort traffic) mode by default. There is no default WRED green or yellow profile. The default weight is 0.

**Command Modes**
CONFIGURATION mode

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3.0.0</td>
<td>Introduced on the S6000 and Z9000 platforms</td>
</tr>
</tbody>
</table>

**Usage Information**
You can configure only service pools 0 and 1 because the Dell Networking OS uses only these two service pools. The pool, service0, is used for lossy queues and the pool, service1, is used for lossless (PFC) queues in all the platforms.

You can configure the weight for the WRED average queue size for service1 on the S6000 Switch, which is the only platform in which PFC is supported for this service pool. On the Z9000 Switch, only service0 can be configured because it does not support PFC.

A WRED profile contains a set of attributes, such as the minimum and maximum threshold values, and the maximum drop rate for the received packets. You can add or remove WRED parameter configurations for one or more shared service pools using a single command. The `service-pool wred` command is similar in usage and working to the `service-class bandwidth-percentage queue-id` command.

**Example**

```plaintext
Dell(conf-wred) #wred thresh-1
Dell(conf-wred) #threshold min 100 max 200 max-drop-rate 40

Dell(conf-wred) #wred thresh-2
Dell(conf-wred) #threshold min 300 max 400 max-drop-rate 80

Dell(conf) #service-pool wred green pool0 thresh-1 pool1 thresh-2
Dell(conf) #service-pool wred yellow pool0 thresh-3 pool1 thresh-4
Dell(conf) #service-pool wred weight pool0 11 pool1 4
```

---

### service-class wred

The mechanism to configure a weight factor for WRED and ECN functionality for backplane ports is supported on the Z9000 platform. Also, this mechanism to configure a weight for WRED and ECN functionality for front-end ports is supported on the Z9000 platforms. Create a weighted random early detection (WRED) profile and ECN functionality per queue granularity for backplane ports, and attach the WRED profile with a service class. You can enable or disable these parameters for each queue and specify minimum and maximum buffer thresholds for each color-coding of the packets. Also, you can specify the maximum drop rate percentage for yellow and green profiles. The per-queue profile configured is applicable to all the backplane ports.

**Z9000**

**Syntax**

```
[No] service-class wred {green | weight | yellow}(backplane) {([queue0 number/string] || [queue1 number/string] || [queue2 number/string]) || [queue3 number/string] || [queue4 number/string] || [queue5 number/string] || [queue6 number/string] || [queue7 number/string] || [queue8 number/string] || [queue9 number/string] || [queue10 number/string] || [queue11 number/string] || [queue12 number/string] || [queue13 number/string] || [queue14 number/string] || [queue15 number/string])
```
**Parameters**

- **service-class**
  - Define the mapping between the service class and policy-based QoS or routing

- **wred**
  - Specify WRED curve parameters for a queue

- **green**
  - Specify green (low) drop precedence to a queue

- **weight**
  - Specify a weight factor to a queue

- **yellow**
  - Specify yellow (medium) drop precedence to a queue

- **backplane**
  - Specify that the WRED weight and profile configured for each queue apply to backplane ports

- **queue 0 to queue 3**
  - Specify the queue number to which the WRED parameters apply

  - **number**
    - Enter a weight for the queue as a number in the range of 1 to 15. This parameter applies only if you specify the green or yellow drop precedence.

  - **string**
    - Enter the WRED profile name. It is a string of up to 32 characters. Or use one of the five pre-defined WRED profile names. Pre-defined Profiles: wred_drop, wred_ge_y, wred_ge_g, wred_teng_y, wred_teng_. This parameter applies only if you specify a weight factor.

**Default**

All queues on backplane ports operate in tail-drop (best-effort traffic) mode by default. There is no default WRED green or yellow profile. The default weight is 0.

**Command Modes**

- QOS-POLICY-OUT mode

**Command History**

- **Version 9.6.0.0**
  - Added support for backplane changes in the Z9000 platform.

- **Version 9.3.0.0**
  - Introduced on the Z9000 platform.

**Usage Information**

You can configure all the data queues. For Z9000, you can configure queues 0-3. WRED profile contains a set of characteristics, such as the minimum and maximum WRED thresholds and the maximum drop rate. You can add and remove WRED parameters for one or more queues by using the command in a single line. All of the configured attributes apply to all the backplane ports and are for each queue. To assign drop precedence to green or yellow traffic, use this command. If there is no honoring enabled on the input, all the traffic defaults to green drop precedence.

**Example**

```
Dell(conf-wred) #wred-profile thresh-1
Dell(conf-wred) #threshold min 100 max 200 max-drop-rate 40
Dell(conf-wred) #wred-profile thresh-2
Dell(conf-wred) #threshold min 300 max 400 max-drop-rate 80
Dell(conf) #service-class wred green backplane queue5 thresh-1 queue7 thresh-2
Dell(conf) #service-class wred yellow backplane queue1 thresh-2 queue3 thresh-1
Dell(conf) #service-class wred weight backplane queue0 11 queue6 4 queue7 9
```

---

**service-class wred ecn**

Create a service class and assign ECN marking for different queues on backplane ports to the service class. This functionality can be configured on the Z9000 platforms.

**Syntax**

```plaintext
[No] service-class wred ecn {backplane} queues-list
```

**Parameters**

- **service-class**
  - Define the mapping between the service class and policy-based QoS or routing

- **wred**
  - Associate WRED with ECN to mark packets instead of dropping them
ecn  Cause explicit congestion notification (ECN) to be used to indicate network congestion, rather than dropping packets. queues-list Enter the queue numbers, either as individual queue numbers separated by commas or as an inclusive list separating the starting and ending queue numbers with a hyphen.

backplane  Specify that the ECN marking configured for each queue applies to backplane ports.

Default  By default, ECN marking is disabled on all queues.

Command Modes  CONFIGURATION mode

Command History  

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.6.0.0</td>
<td>Added support for backplane changes in the Z9000 platform.</td>
</tr>
<tr>
<td>9.3.0.0</td>
<td>Introduced on the Z9000 platform.</td>
</tr>
</tbody>
</table>

Usage Information  
You can add or remove ECN marking configuration on a list of queues on all backplane ports. All of the configured attributes apply to all the backplane ports and are for each queue. You can configure all the data queues. For Z9000, you can configure queues 0-3. For S6000, you can configure queues 0-7. By default, ECN marking is disabled on all queues. When you enable wred-ecn, and the number of packets in the queue is below the minimum threshold, packets are transmitted per the usual WRED treatment. When you enable wred-ecn, and the number of packets in the queue is between the minimum threshold and the maximum threshold, one of the following two scenarios can occur:

- If the transmission endpoints are ECN-capable and traffic is congested, and the WRED algorithm determines that the packet should have been dropped based on the drop probability, the packet is transmitted and marked so the routers know the system is congested and can slow transmission rates.

- If neither endpoint is ECN-capable, the packet may be dropped based on the WRED drop probability. This behavior is the identical treatment that a packet receives when WRED is enabled without ECN configured on the router.

When you enable wred-ecn, and the number of packets in the queue is above the maximum threshold, packets are dropped based on the drop probability. This behavior is the identical treatment a packet receives when WRED is enabled without ECN configured on the router.

Example  
Dellconf) #service-class wred ecn backplane 0,3-5,7

DSCP Color Map Commands

The DSCP color map allows you to set the number of specific DSCP values to yellow or red. Traffic marked as yellow delivers traffic to the egress queue which will either transmit the packet if it has available bandwidth or drop the packet due to no ability to send. Traffic marked as red (high drop precedence) is dropped.

dscp

Sets the number of specific DSCP values for a color map profile to yellow or red.

Syntax  
dscp {yellow | red} [list-dscp-values]

To remove a color policy map profile, use the no dscp {yellow | red} [dscp-list] command.

Parameters  

- **Yellow**  
  Enter the yellow keyword. Traffic marked as yellow delivers traffic to the egress queue which either transmits the packet if it has available bandwidth or drops the packet due to no ability to send.

- **Red**  
  Enter the red keyword. Traffic marked as red is dropped.

- **dscp-list**  
  Enter a list of IP DSCP values. The dscp-list parameter specifies the full list of IP DSCP value(s) for the specified color. Each DSCP value in a list is separate values.
Defaults
None

Command Modes
CONFIG-COLOR-MAP

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5.0.0</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

Usage Information
If the specified color-map does not exist, the DiffServ Manager (DSM) creates a color map and sets all the DSCP values to green (low drop precedence).

The default setting for each DSCP value (0-63) is green (low drop precedence). This command allows setting the number of specific DSCP values to yellow or red.

Important Points to Remember
- All DSCP values that are not specified as yellow or red are colored green.
- A DSCP value cannot be in both the yellow and red lists. Setting the red or yellow list with any DSCP value that is already in the other list results in an error and no update to that list is made.
- Each color map can only have one list of DSCP values for each color; any DSCP values previously listed for that color that are not in the new DSCP list are colored green.

Example
Dell(conf-dscp-color-map)# dscp yellow 9,10,11,13,15,16

Related Commands
qos dscp-color-map — configures the DSCP color map
qos dscp-color-policy — configures a DSCP color policy

qos dscp-color-map
Configure the DSCP color map.

Syntax
qos dscp-color-map map-name
To remove a color map, use the no qos dscp-color-map map-name command.

Parameters
map-name Enter the name of the DSCP color map. The map name can have a maximum of 32 characters.

Defaults
None

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5.0.0</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>
A color map outlines the codepoint mappings to the appropriate color mapping (green, yellow, red) for the traffic. The system uses this information to handle the traffic on the interface based on the traffic priority and places it into the appropriate shaping queue. You cannot delete a DSCP color map when it is configured on an interface. If you do, all the DSCP values are set to green (low drop precedence). To delete the DSCP color map that is being used by one or more interfaces, remove the DSCP map from each interface.

Example

Dell(conf)# qos dscp-color-map mymap

Related Commands

qos dscp-color-map — associates the DSCP color map profile with an interface so that all IP packets received on it is given a color based on that color map
dscp — sets the number of specific DSCP values for color map profile to yellow or red.

**qos dscp-color-policy**

Associates the DSCP color map profile with an interface so that all IP packets received on it is given a color based on that color map.

**Syntax**

dscp-color-policy color-map-profile-name

To remove a color policy map profile, use the no dscp-color-policy color-map-profile-name command.

**Parameters**

- **color-map-profile-name**: Enter the color map profile name. The name can have a maximum of 32 characters.

**Defaults**

None

**Command Modes**

CONFIG-INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5.0.0</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the specified color-map does not exist, the Diffserv Manager (DSM) creates a color map and sets all the DSCP values to green (low drop precedence).

**Example**

The following example assigns the color map, bat-enclave-map, to interface te 1/11.

```
Dell(conf)# int te 1/11
Dell(conf-if-te-1/11)# qos dscp-color-policy bat-enclave-map
```

**Related Commands**

dscp — sets the number of specific DSCP values for color map profile to yellow or red.

qos dscp-color-map — configures the DSCP color map.

**show qos dscp-color-policy**

Display DSCP color policy configuration for one or all interfaces.

**Syntax**

show qos dscp-color-policy {summary [interface] | detail {interface}}
show qos dscp-color-policy

Display the DSCP color map for one or all interfaces.

**Syntax**

```
show qos dscp-color-policy map-name
```

**Parameters**

- `map-name`: Enter the name of the color map.

**Defaults**

None

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5.0.0</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

**Example**

Display summary information about a color policy on one or more interfaces.

```
Dell# show qos dscp-color-policy summary
Interface  dscp-color-map
TE 1/10    mapONE
TE 1/11    mapTWO
```

Display summary information about a color policy on a specific interface.

```
Dell# show qos dscp-color-policy summary te 1/10
Interface  dscp-color-map
TE 1/10    mapONE
```

Display detailed color policy information on an interface.

```
Dell# show qos dscp-color-policy detail te 1/10
Interface TenGigabitEthernet 1/10
Dscp-color-map mapONE
  yellow 4,7
  red  20,30
```

**Related Commands**

- Displays DSCP color maps: `show qos dscp-color-map`
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5.0.0</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

**Example**

Display all DSCP color maps.

Dell# show qos dscp-color-map
Dscp-color-map mapONE
   yellow 4,7
   red 20,30
Dscp-color-map mapTWO
   yellow 16,55

Display a specific DSCP color map.

Dell# show qos dscp-color-map mapTWO
Dscp-color-map mapTWO
   yellow 16,55

**Related Commands**

- `show qos dscp-color-policy` — Displaying a DSCP Color Policy Configuration
Routing Information Protocol (RIP)

Routing information protocol (RIP) is a distance vector routing protocol. The Dell Networking operating software supports both RIP version 1 (RIPv1) and RIP version 2 (RIPv2) on the Z9000 platform.

The Dell Networking OS implementation of RIP is based on IETF RFCs 2453 and RFC 1058. For more information about configuring RIP, refer to the Dell Networking OS Configuration Guide.

Topics:
- auto-summary
- clear ip rip
- debug ip rip
- default-information originate
- default-metric
- description
- distance
- distribute-list in
- distribute-list out
- ip poison-reverse
- ip rip receive version
- ip rip send version
- ip split-horizon
- maximum-paths
- neighbor
- network
- offset-list
- output-delay
- passive-interface
- redistribute
- redistribute isis
- redistribute ospf
- router rip
- show config
- show ip rip database
- show running-config rip
- timers basic
- version

**auto-summary**

Restore the default behavior of automatic summarization of subnet routes into network routes. This command applies only to RIP version 2.

**Syntax**

auto-summary

To send sub-prefix routing information, use the no auto-summary command.

**Defaults**

Enabled.

**Command Modes**

ROUTER RIP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre- 6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
This command triggers updates of the main RIP routing tables.

**debug ip rip**

Examine RIP routing information for troubleshooting.

**Z9000**

**Syntax**
debug ip rip [interface | database | events [interface] | trigger]

Routing Information Protocol (RIP) 1043
To turn off debugging output, use the `no debug ip rip` command.

**Parameters**

- **interface**  
  (OPTIONAL) Enter the interface type and ID as one of the following:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

- **database**  
  (OPTIONAL) Enter the keyword `database` to display messages when there is a change to the RIP database.

- **events**  
  (OPTIONAL) Enter the keyword `events` to debug only RIP protocol changes.

- **trigger**  
  (OPTIONAL) Enter the keyword `trigger` to debug only RIP trigger extensions.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

default-information originate

Generate a default route for the RIP traffic.

**Z9000**

**Syntax**

```
default-information originate [always] [metric metric-value] [route-map map-name]
```

To return to the default values, use the `no default-information originate` command.

**Parameters**

- **always**  
  (OPTIONAL) Enter the keyword `always` to enable the switch software to always advertise the default route.

- **metric metric-value**  
  (OPTIONAL) Enter the keyword `metric` then a number as the metric value. The range is from 1 to 16. The default is 1.

- **route-map map-name**  
  (OPTIONAL) Enter the keywords `route-map` then the name of a configured route-map.
Defaults

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The default route must be present in the switch routing table for the default-information originate command to take effect.

default-metric

Change the default metric for routes. To ensure that all redistributed routes use the same metric value, use this command with the redistribute command.

Z9000

Syntax

default-metric number

Parameters

number Specify a number. The range is from 1 to 16. The default is 1.

Defaults

1

Related Commands

router rip — enters ROUTER mode on the switch.

distance

Assign a weight (for prioritization) to all routes in the RIP routing table or to a specific route. Lower weights ("administrative distance") are preferred.

Z9000

Syntax
distance weight [ip-address mask [prefix-name]]

To return to the default values, use the no distance weight [ip-address mask] command.

Parameters

weight Enter a number from 1 to 255 for the weight (for prioritization). The default is 120.
**ip-address** *(OPTIONAL)* Enter the IP address, in dotted decimal format (A.B.C.D), of the host or network to receive the new distance metric.

**mask** If you enter an IP address, also enter a mask for that IP address, in either dotted decimal format or /prefix format (/x).

**prefix-name** *(OPTIONAL)* Enter a configured prefix list name.

**Defaults**

weight = 120

**Related Commands**

- `default-metric` — assigns one distance metric to all routes learned using the redistribute command.

### distribute-list in

Configure a filter for incoming routing updates.

**Z9000**

**Syntax**

distribute-list prefix-list-name in [interface]

**Parameters**

- **prefix-list-name** *(OPTIONAL)* Identifies the interface type slot/port as one of the following:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.

**Defaults**

Not configured.

**Related Commands**

- `ip prefix-list` — enters PREFIX-LIST mode and configures a prefix list.

**distribute-list out**

Configure a filter for outgoing routing updates.

**Z9000**

**Syntax**

```plaintext
distribute-list prefix-list-name out [interface | bgp | connected | isis | ospf | static]
```

To delete the filter, use the `no distribute-list prefix-list-name out` command.

**Parameters**

- `prefix-list-name` (OPTIONAL) Enter the name of a configured prefix list.
- `interface` (OPTIONAL) Identifies the interface type slot/port as one of the following:
  - For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.
- `connected` (OPTIONAL) Enter the keyword `connected` to filter only directly connected routes.
- `isis` (OPTIONAL) Enter the keyword `isis` to filter only IS-IS routes.
- `ospf` (OPTIONAL) Enter the keyword `ospf` to filter all OSPF routes.
- `static` (OPTIONAL) Enter the keyword `static` to filter manually configured routes.

Related Commands

- `ip split-horizon` — sets the RIP routing updates to exclude routing prefixes.
ip rip receive version

To receive specific versions of RIP, set the interface. The RIP version you set on the interface overrides the version command in ROUTER RIP mode.

Z9000

Syntax

ip rip receive version [1] [2]

To return to the default, use the no ip rip receive version command.

Parameters

1 (OPTIONAL) Enter the number 1 for RIP version 1.
2 (OPTIONAL) Enter the number 2 for RIP version 2.

Defaults

RIPv1 and RIPv2

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

If you want the interface to receive both versions of RIP, use the ip rip receive version 1 2 command.

Related Commands

ip rip send version — sets the RIP version for sending RIP traffic on an interface.
version — sets the RIP version the switch software uses.

ip rip send version

To send a specific version of RIP, set the interface. The version you set on the interface overrides the version command in ROUTER RIP mode.

Z9000

Syntax

ip rip send version [1] [2]

To return to the default value, use the no ip rip send version command.

Parameters

1 (OPTIONAL) Enter the number 1 for RIP version 1. The default is RIP version 1.
2 (OPTIONAL) Enter the number 2 for RIP version 2.
Defaults: RIPv1

Command Modes: INTERFACE

Command History: This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>

<tr>
<td>7.8.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information: To enable the interface to send both version of RIP packets, use the `ip rip send version 1 2` command.

Related Commands: `ip rip receive version` — sets the RIP version for the interface to receive traffic.

`version` — sets the RIP version for the switch software.

---

**ip split-horizon**

Enable split-horizon for RIP data on the interface. As described in RFC 2453, the split-horizon scheme prevents any routes learned over a specific interface to be sent back out that interface.

**Z9000**

Syntax: `ip split-horizon`

To disable split-horizon, use the `no ip split-horizon` command.

Defaults: Enabled

Command Modes: INTERFACE

Command History: This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

</tbody>
</table>

Routing Information Protocol (RIP) 1051
**maximum-paths**

Set RIP to forward packets over multiple paths.

**Z9000**

**Syntax**

```
maximum-paths number
```

To return to the default values, use the `no maximum-paths` commands.

**Parameters**

`number` Enter the number of paths. The range is from 1 to 16. The default is 4 paths.

**Defaults**

4

**Command Modes**

ROUTER RIP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<td>7.6.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre- 6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

RIP supports a maximum of 16 ECMP paths.

**neighbor**

Define a neighbor router with which to exchange RIP information.

**Z9000**

**Syntax**

```
neighbor ip-address
```

To delete a neighbor setting, use the `no neighbor ip-address` command.

**Parameters**

`ip-address` Enter the IP address, in dotted decimal format, of a router with which to exchange information.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

When a neighbor router is identified, unicast data exchanges occur. Multiple neighbor routers are possible.

To ensure that only specific interfaces are receiving and sending data, use the `passive-interface` command with the `neighbor` command.

Related Commands

- `passive-interface` — sets the interface to only listen to RIP broadcasts.

network

Enable RIP for a specified network. To enable RIP on all networks connected to the switch, use this command.

Z9000

**Syntax**

```
network ip-address
```

To disable RIP for a network, use the `no network ip-address` command.

**Parameters**

- `ip-address` Specify an IP network address in dotted decimal format. You cannot specify a subnet.

**Defaults**

No RIP network is configured.

**Command Modes**

ROUTER RIP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>
Usage Information
You can enable an unlimited number of RIP networks.
RIP operates over interfaces configured with any address the network command specifies.

offset-list

Specify a number to add to the incoming or outgoing route metrics learned using RIP.

Z9000

offset-list prefix-list-name {in | out} offset [interface]

To delete an offset list, use the no offset-list prefix-list-name {in | out} offset [interface] command.

Parameters

- **prefix-list-name**: Enter the name of an established Prefix list to determine which incoming routes are modified.
- **offset**: Enter a number from zero (0) to 16 to be applied to the incoming route metric matching the access list specified. If you set an offset value to zero (0), no action is taken.
- **interface**: (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a VLAN, enter the keyword vlan then a number from 1 to 4094.

Defaults
Not configured.

Command Modes

</tbody>
</table>
output-delay

Set the interpacket delay of successive packets to the same neighbor.

Z9000

Syntax
output-delay delay

To return to the switch software defaults for interpacket delay, use the no output-delay command.

Parameters
delay
Specify a number of milliseconds as the delay interval. The range is from 8 to 50.

Defaults
Not configured.

Command Modes
ROUTER RIP

Command History

</tbody>
</table>

Usage Information
This command is intended for low-speed interfaces.

passive-interface

Suppress routing updates on a specified interface.

Z9000

Syntax
passive-interface interface

To delete a passive interface, use the no passive-interface interface command.
Parameters

**interface**
Enter the following information:
- For a Port Channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a VLAN, enter the keyword `vlan` then a number from 1 to 4094.

Defaults
Not configured.

Command Modes
- ROUTER RIP

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
Although the passive interface does not send or receive routing updates, the network on that interface still includes in RIP updates sent using other interfaces.

Related Commands
- **neighbor** — enables RIP for a specified network.
- **network** — defines a neighbor.

redistribute

Redistribute information from other routing instances.

**Z9000**

Syntax

```
redistribute {connected | static}
```

To disable redistribution, use the no redistribute {connected | static} command.

Parameters

- **connected**
  - Enter the keyword `connected` to specify that information from active routes on interfaces is redistributed.

- **static**
  - Enter the keyword `static` to specify that information from static routes is redistributed.

Defaults
Not configured.

Command Modes
- ROUTER RIP
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

To redistribute the default route (0.0.0.0/0), configure the default-information originate command.

Related Commands:
- default-information originate — generates a default route for RIP traffic.

**redistribute isis**

Redistribute routing information from an IS-IS instance.

**Z9000**

**Syntax**

```
redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value] [route-map map-name]
```

To disable redistribution, use the no redistribute isis [tag] [level-1 | level-1-2 | level-2] [metric metric-value] [route-map map-name] command.

**Parameters**

- **tag** (OPTIONAL) Enter the name of the IS-IS routing process.
- **level-1** (OPTIONAL) Enter the keywords level-1 to redistribute only IS-IS Level-1 routes.
- **level-1-2** (OPTIONAL) Enter the keywords level-1-2 to redistribute both IS-IS Level-1 and Level-2 routes.
- **level-2** (OPTIONAL) Enter the keywords level-2 to redistribute only IS-IS Level-2 routes.
- **metric metric-value** (OPTIONAL) Enter the keyword metric then a number as the metric value. The range is from 0 to 16.
- **route-map map-name** (OPTIONAL) Enter the keywords route-map then the name of a configured route map.

**Defaults**

Not configured.

**Command Modes**

ROUTER RIP

This guide is platform-specific. For command information about other platforms, refer to the relevant FTOS Command Line Reference Guide.

The following is a list of the FTOS version history for this command.
**Version** | **Description**
---|---
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
pre-6.2.1.1 | Introduced on the E-Series.

### redistribute ospf

Redistribute routing information from an OSPF process.

**Z9000**

**Syntax**

```
redistribute ospf process-id [match external {1 | 2} | match internal | metric metric-value] [route-map map-name]
```

To disable redistribution, use the `no redistribute ospf process-id [match external {1 | 2} | match internal | metric metric-value] [route-map map-name]` command.

**Parameters**

- **process-id**
  - Enter a number that corresponds to the OSPF process ID to redistribute. The range is from 1 to 65355.

- **match external {1 | 2}**
  - (OPTIONAL) Enter the keywords `match external` then the numbers 1 or 2 to indicate that external 1 routes or external 2 routes should be redistributed.

- **match internal**
  - (OPTIONAL) Enter the keywords `match internal` to indicate that internal routes should be redistributed.

- **metric metric-value**
  - (OPTIONAL) Enter the keyword `metric` then a number as the metric value. The range is from 0 to 16.

- **route-map map-name**
  - (OPTIONAL) Enter the keywords `route-map` then the name of a configured route map.

**Defaults**

Not configured.

**Command Modes**

ROUTER RIP

**Usage Information**

To enable RIP, assign a network address using the `network` command.

**Example**

```
Dell(conf)#router rip
Dell(conf-router_rip)#
```

**Related Commands**

- `network` — enables RIP.
- `exit` — returns to CONFIGURATION mode.

**show config**

Display the changes you made to the RIP configuration. The default values are not shown.

**Z9000**

**Syntax**

```
show config
```

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
show ip rip database

Display the routes that RIP learns. If the switch learned no RIP routes, no output is generated.

Z9000

Syntax

show ip rip database [ip-address mask]

Parameters

- **ip-address**: (OPTIONAL) Specify an IP address in dotted decimal format to view RIP information on that network only. If you enter an IP address, also enter a mask for that IP address.
- **mask**: (OPTIONAL) Specify a mask, in /network format, for the IP address.

```

Routing Information Protocol (RIP)  1061
timers basic

Manipulate the RIP timers for routing updates, invalid, holddown times, and flush time.

Z9000

timers basic update invalid holddown flush

To return to the default settings, use the no timers basic command.

Parameters

- **update**: Enter the number of seconds to specify the rate at which RIP routing updates are sent. The range is from zero (0) to 4294967295. The default is 30 seconds.
- **invalid**: Enter the number of seconds to specify the time interval before routing updates are declared invalid or expired. The invalid value should be at least three times the update timer value. The range is from zero (0) to 4294967295. The default is 180 seconds.
- **holddown**: Enter the number of seconds to specify a time interval during which the route is marked as unreachable but still sending RIP packets. The holddown value should be at least three times the update timer value. The range is from zero (0) to 4294967295. The default is 180 seconds.
- **flush**: Enter the number of seconds to specify the time interval during which the route is advertised as unreachable. When this interval expires, the route is flushed from the routing table. The flush value should be greater than the update value. The range is from zero (0) to 4294967295. The default is 240 seconds.

Defaults

- update = 30 seconds
- invalid = 180 seconds
- holddown = 180 seconds
- flush = 240 seconds

ROUTER RIP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
</tbody>
</table>
version

Specify either RIP version 1 or RIP version 2.

Z9000

Syntax

```plaintext
version {1 | 2}
```

To return to the default version setting, use the `no version` command.

Parameters

- `1` Enter the keyword 1 to specify RIP version 1.
- `2` Enter the keyword 2 to specify RIP version 2.

Defaults

The Dell Networking OS sends RIPv1 and receives RIPv1 and RIPv2.

Command Modes

- ROUTER RIP

Related Commands:

- `ip rip receive version` — sets the RIP version the interface receives.
- `ip rip send version` — sets the RIP version the interface sends.
Remote Monitoring (RMON)

The Dell Networking operating software remote monitoring (RMON) is implemented on the Z9000 platform.

Dell Networking OS RMON is based on IEEE standards, providing both 32-bit and 64-bit monitoring and long-term statistics collection. Dell Networking OS RMON supports the following RMON groups, as defined in RFC-2819, RFC-3273, RFC-3434, and RFC-4502:

- Ethernet Statistics Table; RFC-2819
- Ethernet Statistics High-Capacity Table; RFC-3273, 64bits
- Ethernet History Control Table; RFC-2819
- Ethernet History Table; RFC-2819
- Ethernet History High-Capacity Table; RFC-3273, 64bits
- Alarm Table; RFC-2819
- High-Capacity Alarm Table (64bits); RFC-3434, 64bits
- Event Table; RFC-2819
- Log Table; RFC-2819
- User History; RFC-4502
- Probe Configuration (Capabilities, SoftwareRev, HardwareRev, DateTime and ResetControl); RFC-4502

Dell Networking OS RMON does not support the following statistics:

- etherStatsCollisions
- etherHistoryCollisions
- etherHistoryUtilization

**NOTE:** Only SNMP GET/GETNEXT access is supported. Configure RMON using the RMON commands. Collected data is lost during a chassis reboot.

Topics:

- rmon alarm
- rmon collection history
- rmon collection statistics
- rmon event
- rmon hc-alarm
- show rmon
- show rmon alarms
- show rmon events
- show rmon hc-alarm
- show rmon history
- show rmon log
- show rmon statistics

**rmon alarm**

Set an alarm on any MIB object.

**Z9000**

**Syntax**

```
 rmon alarm number variable interval {delta | absolute} rising-threshold value event-number falling-threshold value event-number [owner string]
```

To disable the alarm, use the `no rmon alarm number` command.
### Parameters

- **number**
  Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.

- **variable**
  Enter the MIB object to monitor. The variable must be in the SNMP OID format; for example, 1.3.6.1.2.1.1.3. The object type must be a 32-bit integer.

- **interval**
  Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.

- **delta**
  Enter the keyword delta to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.

- **absolute**
  Enter the keyword absolute to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.

- **rising-threshold value event-number**
  Enter the keywords rising-threshold then the value (32 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.

- **falling-threshold value event-number**
  Enter the keywords falling-threshold then the value (32 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero.

- **owner string**
  (OPTIONAL) Enter the keyword owner then the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.

### Defaults

- **owner**

---

### rmon collection history

Enable the RMON MIB history group of statistics collection on an interface.

**Z9000**

**Syntax**

```
rmon collection history [controlEntry integer] [owner name] [buckets number] [interval seconds]
```
To remove a specified RMON history group of statistics collection, use the `no rmon collection history {controlEntry integer}` command.

### Parameters

- **controlEntry**
  - `integer`
  - Enter the keyword `controlEntry` to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON group of statistics. The integer value must be a unique index in the RMON history table.

- **owner name**
  - (OPTIONAL) Enter the keyword `owner` then the owner name to record the owner of the RMON group of statistics.

- **buckets number**
  - (OPTIONAL) Enter the keyword `buckets` then the number of buckets for the RMON collection history group of statistics. The bucket range is from 1 to 1000. The default is 50.

- **interval seconds**
  - (OPTIONAL) Enter the keyword `interval` then the number of seconds in each polling cycle. The range is from 5 to 3600 seconds. The default is 1800 seconds.

### Defaults

- **none**

### rmon collection statistics

Enable RMON MIB statistics collection on an interface.

#### Z9000

**Syntax**

```
rmon collection statistics {controlEntry integer} [owner name]
```

To remove RMON MIB statistics collection on an interface, use the `no rmon collection statistics {controlEntry integer}` command.

**Parameters**

- **controlEntry**
  - `integer`
  - Enter the keyword `controlEntry` to specify the RMON group of statistics using a value. Then enter an integer value from 1 to 65535 that identifies the RMON Statistic Table. The integer value must be a unique in the RMON statistic table.

- **owner name**
  - (OPTIONAL) Enter the keyword `owner` then the owner name to record the owner of the RMON group of statistics.

**Defaults**

- **none**

**Command Modes**

- **CONFIGURATION INTERFACE (config-if)**

</tr>
</tbody>
</table>

**rmon event**

Add an event in the RMON event table.

**Z9000**

**Syntax**

```
rmon event number [log] [trap community] [description string]
```

To disable RMON on an interface, use the **no rmon event number** command.

**Parameters**

- **number**
  - Assign an event number in integer format. The range is from 1 to 65535. You must ensure that the value you enter is unique in the RMON event table.

- **log**
  - (OPTIONAL) Enter the keyword log to generate an RMON event log. This option sets the eventType to either log or log-and-snmptrap in the RMON event table. The default is None.

- **trap community**
  - (OPTIONAL) Enter the keyword trap followed by the SNMP community string to generate SNMP traps for an RMON event entry. This option sets the eventType to either snmptrap or log-and-snmptrap in the RMON event table. In addition to the SNMP traps, this option also generates a syslog.

- **description string**
  - (OPTIONAL) Enter the keyword description then a string describing the event.

- **owner name**
  - (OPTIONAL) Enter the keyword owner then the name of the owner of this event.

**Defaults**

As noted in the Parameters section.

</tbody>
</table>
**rmon hc-alarm**

Set an alarm on any MIB object.

### Z9000

**Syntax**

```
rmon hc-alarm number variable interval {delta | absolute} rising-threshold value event-number [owner string] [falling-threshold value event-number]
```

To disable the alarm, use the `no rmon hc-alarm number` command.

**Parameters**

- **number**: Enter the alarm integer number from 1 to 65535. The value must be unique in the RMON alarm table.
- **variable**: The MIB object to monitor. The variable must be in the SNMP OID format; for example, 1.3.6.1.2.1.1.3. The object type must be a 64-bit integer.
- **interval**: Time, in seconds, the alarm monitors the MIB variables; this is the alarmSampleType in the RMON alarm table. The range is from 5 to 3600 seconds.
- **delta**: Enter the keyword `delta` to test the change between MIB variables. This is the alarmSampleType in the RMON alarm table.
- **absolute**: Enter the keyword `absolute` to test each MIB variable directly. This is the alarmSampleType in the RMON alarm table.
- **rising-threshold**
  - **value event-number**: Enter the keywords `rising-threshold` then the value (64 bit) the rising-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the rising threshold exceeds its limit. This value is the same as the alarmRisingEventIndex or alarmTable of the RMON MIB. If there is no corresponding rising-threshold event, the value is zero.
- **falling-threshold**
  - **value event-number**: Enter the keywords `falling-threshold` then the value (64 bit) the falling-threshold alarm is either triggered or reset. Then enter the event-number to trigger when the falling threshold exceeds its limit. This value is the same as the alarmFallingEventIndex or the alarmTable of the RMON MIB. If there is no corresponding falling-threshold event, the value is zero.
- **owner string** (OPTIONAL): Enter the keyword `owner` then the owner name to specify an owner for the alarm. This is the alarmOwner object in the alarmTable of the RMON MIB.

**Defaults**

```
owner

The log table has a maximum of 500 entries. If the log exceeds that maximum, the oldest log entry is purged to allow room for the new entry.

Example (Index)

```
Dell#show rmon log 2
RMON log entry, alarm table index 2, log index 1
  log time: 14638 (THU AUG 12 22:10:40 2004)
  description: 2
Dell#
```

Example (Brief)

```
Dell#show rmon log br
eventIndex   description
------------------------
    2              2
    4              4
Dell#
```

**show rmon statistics**

Display the contents of RMON Ethernet statistics table.

**Z9000**

```
Syntax: show rmon statistics [index] [brief]
```

**Parameters**

- `index` (OPTIONAL) Enter the table index number to display just that entry.
- `brief` (OPTIONAL) Enter the keyword `brief` to display the RMON Ethernet statistics table in an easy-to-read format.

**Defaults**

none

**Command Modes**

EXEC

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>

9003    134791198 TenGigabitEthernet 3/1
9004    134791198 TenGigabitEthernet 3/1
Dell#
```
The Dell Networking operating software implementation of rapid spanning tree protocol (RSTP) is based on the IEEE 802.1w standard spanning-tree protocol. The RSTP algorithm configures connectivity throughout a bridged local area network (LAN) that is comprised of LANs interconnected by bridges.

Dell Networking OS supports RSTP.

Topics:

- bridge-priority
- debug spanning-tree rstp
- description
- disable
- forward-delay
- hello-time
- max-age
- protocol spanning-tree rstp
- show config
- show spanning-tree rstp
- spanning-tree rstp
- tc-flush-standard

bridge-priority

Set the bridge priority for RSTP.

Syntax

bridge-priority priority-value

To return to the default value, use the no bridge-priority command.

Parameters

priority-value Enter a number as the bridge priority value in increments of 4096. The range is from 0 to 61440. The default is 32768.

Defaults

32768

Command Modes

CONFIGURATION RSTP (conf-rstp)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

Related Commands

protocol spanning-tree rstp — enters rapid spanning tree mode.

debug spanning-tree rstp

Enable debugging of RSTP and view information on the protocol.

Syntax

debug spanning-tree rstp [all | bpdu interface {in | out} | events]

To disable debugging, use the no debug spanning-tree rstp command.

Parameters

- **all** (OPTIONAL) Enter the keyword all to debug all spanning tree operations.
- **bpdu interface {in | out}** (OPTIONAL) Enter the keyword bpdu to debug the bridge protocol data units. (OPTIONAL) Enter the keyword interface along with the type slot/port of the interface you want displayed. Type slot/port options are the following:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
  
  Optionally, enter an in or out parameter with the optional interface:
  - For Receive, enter in.
  - For Transmit, enter out.
- **events** (OPTIONAL) Enter the keyword events to debug RSTP events.

Command Modes

- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Example

```bash
Dell#debug spanning-tree rstp bpdu tengigabitethernet 2/1 ? in Receive (in) out Transmit (out)
```
description

Enter a description of the rapid spanning tree.

**Syntax**
```
description {description}
```

To remove the description, use the no description \{description\} command.

**Parameters**
- **description**
  - Enter a description to identify the rapid spanning tree (80 characters maximum).

**Defaults**
none

**Command Modes**
- SPANNING TREE (The prompt is “config-rstp”.)

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
forward-delay

Configure the amount of time the interface waits in the Listening State and the Learning State before transitioning to the Forwarding State.

Syntax

```plaintext
forward-delay seconds
```

To return to the default setting, use the `no forward-delay` command.

Parameters

- `seconds` Enter the number of seconds that Dell Networking OS waits before transitioning RSTP to the forwarding state. The range is from 4 to 30. The default is 15 seconds.

Defaults

15 seconds

Command Modes

CONFIGURATION RSTP (conf-rstp)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

Related Commands

- `hello-time` — changes the time interval between BPDUs.
- `max-age` — changes the wait time before RSTP refreshes the protocol configuration information.

hello-time

Set the time interval between the generation of the RSTP bridge protocol data units (BPDUs).

Syntax

```plaintext
hello-time [milli-second] seconds
```

To return to the default value, use the `no hello-time` command.

Parameters

- `seconds` Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10 seconds. The default is 2 seconds.
- `milli-second` Enter the keywords `milli-second` to configure a hello time on the order of milliseconds. The range is from 50 to 950 milliseconds

Defaults

2 seconds

Command Modes

CONFIGURATION RSTP (conf-rstp)
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>

<tr>
<td>7.6.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

The hello time is encoded in BPDUs in increments of 1/256ths of a second. The standard minimum hello time in seconds is 1 second, which is encoded as 256. Millisecond hello times are encoded using values less than 256; the millisecond hello time equals (x/1000)*256.

When you configure millisecond hellos, the default hello interval of 2 seconds is still used for edge ports; the millisecond hello interval is not used.

**Related Commands**

forward-delay — changes the wait time before RSTP transitions to the Forwarding state.

max-age — changes the wait time before RSTP refreshes the protocol configuration information.

---

**max-age**

To maintain configuration information before refreshing that information, set the time interval for the RSTP bridge.

**Syntax**

```
max-age seconds
```

To return to the default values, use the **no max-age** command.

**Parameters**

- **max-age**

  Enter a number of seconds the Dell Networking OS waits before refreshing configuration information. The range is from 6 to 40 seconds. The default is 20 seconds.

**Defaults**

20 seconds

**Command Modes**

CONFIGURATION RSTP (conf-rstp)

Usage Information

RSTP is not enabled when you enter RSTP mode. To enable RSTP globally on the system, use the no disable command from RSTP mode.

Example

    Dell(conf)#protocol spanning-tree rstp
    Dell(config-rstp)##no disable

Related Commands

    disable — disables RSTP globally on the system.

show config

View the current configuration for the mode. Only non-default values are displayed.

Syntax

    show config

Command Modes

    CONFIGURATION RSTP (conf-rstp)

Command History

    This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

    The following is a list of the Dell Networking OS version history for this command.
show spanning-tree rstp

Display the RSTP configuration.

**Syntax**

show spanning-tree rstp [brief] [guard]

**Parameters**

- **brief** (OPTIONAL) Enter the keyword brief to view a synopsis of the RSTP configuration information.
- **guard** (OPTIONAL) Enter the keyword guard to display the type of guard enabled on an RSTP interface and the current port state.

**Command Modes**

- EXEC
- EXEC Privilege

Designated bridge has priority 32768, address 0001.e801.6aa8
Designated port id is 128.257, designated path cost 0
Number of transitions to forwarding state 1
BDPU : sent 27, received 9
The port is not in the Edge port mode
Example (Guard)

```
Dell#show spanning-tree rstp guard
Interface                  Name Instance Sts Guard type
--------------------------- -------- ------------------- ------------
Te 1/1 0                  INCON (Root) Rootguard
Te 1/2 0                  FWD Loopguard
Te 1/3 0                  BLK Bpduguard
```

**spanning-tree rstp**

Configure an RSTP interface with one of these settings: port cost, edge port with optional bridge port data unit (BPDU) guard, port priority, loop guard, or root guard.

**Syntax**

```
spanning-tree rstp {cost [port-cost] | edge-port [bpduguard [shutdown-on-violation]] | priority [priority] | (loopguard | rootguard)}
```

**Parameters**

- **cost** *port-cost*:
  - Enter the keyword *cost* then the port cost value. The range is from 1 to 200000. The defaults are:
    - 100 Mb/s Ethernet interface = 200000
    - 1-Gigabit Ethernet interface = 20000
    - 10-Gigabit Ethernet interface = 2000
    - Port Channel interface with one 100 Mb/s Ethernet = 20000
    - Port Channel interface with one 1 Gigabit Ethernet = 2000
    - Port Channel interface with one 10 Gigabit Ethernet = 2000
    - Port Channel with two 1 Gigabit Ethernet = 18000
    - Port Channel with two 10 Gigabit Ethernet = 1800
    - Port Channel with two 100 Mbps Ethernet = 180000

- **edge-port**:
  - Enter the keywords *edge-port* to configure the interface as a rapid spanning tree edge port.

- **bpduguard**
  - (OPTIONAL) Enter the keyword *portfast* to enable Portfast to move the interface into Forwarding mode immediately after the root fails.

- **shutdown-on-violation**
  - (OPTIONAL) Enter the keywords *shutdown-on-violation* to hardware disable an interface when a BPDU is received and the port is disabled.

- **priority** *priority*:
  - Enter keyword *priority* then a value in increments of 16 as the priority. The range is from 0 to 240. The default is 128.

- **loopguard**
  - Enter the keyword *loopguard* to enable loop guard on an RSTP port or port-channel interface.

- **rootguard**
  - Enter the keyword *rootguard* to enable root guard on an RSTP port or port-channel interface.

**Defaults**

Not configured.

**Command Modes**

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>
The BPDU guard option prevents the port from participating in an active STP topology in case a BPDU appears on a port unintentionally, or is misconfigured, or is subject to a DOS attack. This option places the port into an Error Disable state if a BPDU appears and a message is logged so that the administrator can take corrective action.

**NOTE:** A port configured as an edge port, on an RSTP switch, immediately transitions to the Forwarding state. Only configure ports connected to end-hosts as edge ports. Consider an edge port similar to a port with a spanning-tree portfast enabled. If you do not enable shutdown-on-violation, BPDUs are still sent to the RPM CPU.

You cannot enable STP root guard and loop guard at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message displays: % Error: RootGuard is configured. Cannot configure LoopGuard.

Enabling Portfast BPDU guard and loop guard at the same time on a port results in a port that remains in a Blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

**Example**

```bash
Dell(conf)#interface tengigabitethernet 4/1
Dell(conf-if-gi-4/0)#spanning-tree rstp edge-port
Dell(conf-if-gi-4/0)#show config

interface TenGigabitEthernet 4/1
  no ip address
  switchport
  spanning-tree rstp edge-port
  no shutdown
Dell#
```

## tc-flush-standard

Enable the MAC address flushing after receiving every topology change notification.

**Syntax**

```
tc-flush-standard
```

To disable, use the no tc-flush-standard command.

**Defaults**

Disabled

**Command Modes**

CONFIGURATION (conf-rstp)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>

<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.5.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, Dell Networking OS implements an optimized flush mechanism for RSTP. This implementation helps in flushing MAC addresses only when necessary (and less often), allowing for faster convergence during topology changes. However, if a standards-based flush mechanism is needed, you can turn on this knob command to enable flushing MAC addresses after receiving every topology change notification.
Dell Networking operating software supports Software-Defined Networking (SDN). For more information, refer to the SDN Deployment Guide.
The commands in this chapter are available on Dell Networking OS.

This chapter contains various types of security commands offered in the Dell Networking operating software. The commands are listed in the following sections:

- AAA Accounting Commands
- Authorization and Privilege Commands
- Authentication and Password Commands
- RADIUS Commands
- TACACS+ Commands
- Port Authentication (802.1X) Commands
- SSH Server and SCP Commands
- Secure DHCP Commands

For configuration details, refer to the Security chapter in the Dell Networking OS Configuration Guide.

**NOTE:** Dell Networking OS implements LEAP with MSCHAP v2 supplicant.

**Topics:**
- AAA Accounting Commands
- Authorization and Privilege Commands
- Obscure Password Commands
- Authentication and Password Commands
- RADIUS Commands
- TACACS+ Commands
- Port Authentication (802.1X) Commands
- SSH Server and SCP Commands
- Secure DHCP Commands
- Role-Based Access Control Commands

### AAA Accounting Commands

AAA Accounting enables tracking of services that users are accessing and the amount of network resources being consumed by those services. When you enable AAA Accounting, the network server reports user activity to the TACACS+ security server in the form of accounting records. Each accounting record is comprised of accounting AV pairs and is stored on the access control server.

As with authentication and authorization, you must configure AAA Accounting by defining a named list of accounting methods, and then applying that list to various interfaces.

**aaa accounting**

Enable AAA Accounting and create a record for monitoring the accounting function.

**Z9000**

```
Syntax
aaa accounting {system | exec | commands level | role role-name} {name | default}{start-stop | wait-start | stop-only} {tacacs+}
```

To disable AAA Accounting, use the **no aaa accounting {system | exec | command level} {name | default}{start-stop | wait-start | stop-only} {tacacs+}** command.
Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>system</code></td>
<td>Enter the keyword <code>system</code> to send accounting information of any other AAA configuration.</td>
</tr>
<tr>
<td><code>exec</code></td>
<td>Enter the keyword <code>exec</code> to send accounting information when a user has logged in to EXEC mode.</td>
</tr>
<tr>
<td>`commands { level</td>
<td>role role-name`</td>
</tr>
</tbody>
</table>
| `name | default`        | Enter one of the following:  
  - For `name`, enter a user-defined name of a list of accounting methods.  
  - For `default`, the default accounting methods used. |
| `start-stop`       | Enter the keywords `start-stop` to send a "start accounting" notice at the beginning of the requested event and a "stop accounting" notice at the end of the event. |
| `wait-start`       | Enter the keywords `wait-start` to ensure that the TACACS+ security server acknowledges the start notice before granting the user’s process request. |
| `stop-only`        | Enter the keywords `stop-only` to instruct the TACACS+ security server to send a "stop record accounting" notice at the end of the requested user process. |
| `tacacs+`          | Enter the keyword `tacacs+` to use TACACS+ data for accounting. The Dell Networking OS currently only supports TACACS+ accounting. |

Defaults

none

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

In the example above, TACACS+ accounting is used to track all usage of EXEC command and commands on privilege level 15.

Privilege level 15 is the default. If you want to track usage at privilege level 1 for example, use the `aaa accounting command 1 command` command.

Example

```
Dell(conf)# aaa accounting exec default start-stop tacacs+
Dell(conf)# aaa accounting command 15 default start-stop tacacs+
Dell(conf)# aaa accounting command role secaadmin default start-stop tacacs+
```

Related Commands

`enable password` — changes the password for the `enable` command.
login authentication — enables AAA login authentication on the terminal lines.
password — creates a password.
tacacs-server host — specifies a TACACS+ server host.

### aaa accounting suppress

Prevent the generation of accounting records of users with the user name value of NULL.

**Syntax**

```
aaa accounting suppress null-username
```

To permit accounting records to users with user name value of NULL, use the `no aaa accounting suppress null-username` command.

**Defaults**

Accounting records are recorded for all users.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S600.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4280T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.3.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Dell Networking OS issues accounting records for all users on the system, including users whose username string, due to protocol translation, is NULL. For example, a user who comes on line with the `aaa authentication login method-list none` command is applied. To prevent the accounting records from being generated for sessions that do not have user names associated to them, use the `aaa accounting suppress` command.

### aaa radius group

Configure the RADIUS server group that is used for Authentication, Authorization and Accounting.

**Syntax**

```
aaa radius group group-name
```

To remove the RADIUS group configuration, use the `no aaa radius group group-name` command.

**Parameters**

- `group-name` Enter the name of the RADIUS server group.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
**tacacs-server group**

Creates a group of TACACS servers to be used for Authentication, Authorization, and Accounting.

**Syntax**

```plaintext
aaa tacacsgroup group-name
```

To delete a group of TACACS servers, use the `no tacacs-server group group-name` command.

**Parameters**

- `group-name` Enter the name of the TACACS server group.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.4.(0.0)</td>
<td>Introduced on the S-Series and Z-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the TACACS group is not configured for Authentication, Authorization, and Accounting, then globally configured TACACS servers are used for the purposes. When the TACACS group is removed, the AAA configuration is also removed.

**Example**

```plaintext
Dell(conf)#tacacs-server group group1
Dell(conf-tacacsgroup)#tacacs-server host 1.1.1.1 key secret
Dell(conf-tacacsgroup)#tacacs-server host 2.2.2.2 key secret
tengigabitethernet 1/47
Dell(conf-tacacsgroup)#tacacs-server vrf vrf1 source-interface tengigabitethernet 1/47
Dell(conf)#exit
```

**Related Commands**

- `aaa authentication login` — specifies the login authentication method.
- `tacacs-server key` — configures a TACACS+ key for the TACACS server.
accounting

Apply an accounting method list to terminal lines.

Syntax

```
accounting {exec | commands {level | role role-name} method-list
```

Parameters

- **exec**: Enter the keyword `exec` to apply an EXEC level accounting method list.
- **commands {level | role role-name}**: Enter the keywords `commands` and then the keyword `level` to apply an EXEC and CONFIGURATION level accounting method list by enter the keyword `role` and then the role name for accounting of commands executed by a user with that user role.
- **method-list**: Enter a method list that you defined using the `aaa accounting exec` or `aaa accounting commands`.

Defaults

- none

Command Modes

- LINE

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

This command steps through all active sessions and then displays the accounting records for the active account functions.

Example

```
Dell#show accounting
Active accounted actions on tty2, User admin Priv 1 Role
  Task ID 2, EXEC Accounting record, 00:02:03 Elapsed, service=shell
Active accounted actions on tty3, User ad Priv 15 Role
  Task ID 7, EXEC Accounting record, 00:01:22 Elapsed, service=shell
Active accounted actions on tty4, User ad Priv 15 Role
  Task ID 11, EXEC Accounting record, 00:00:35 Elapsed, service=shell
Active accounted actions on tty5, User ad1 Priv 1 Role sysadmin
  Task ID 16, EXEC Accounting record, 00:00:04 Elapsed, service=shell
Dell#
```

Related Commands

- `aaa accounting` — enables AAA Accounting and creates a record for monitoring the accounting function.

Authorization and Privilege Commands

To set command line authorization and privilege levels, use the following commands.

**authorization**

Apply an authorization method list to terminal lines.

**Z9000**

Syntax

```
authorization {exec | commands {level | role role-name}} method-list
```

Parameters

- `exec:` Enter the keyword exec to apply an EXEC level authorization method list.
- `commands {level | role role-name}:` Enter the keyword commands followed by either a privilege level for accounting of commands executed at that privilege level, or enter the keyword role then the role name for authorization of commands executed by a user with that user role.
- `method-list:` Enter a method list that you defined using the `aaa accounting exec` or `aaa accounting commands` commands.

Defaults

- `none`

Command Modes

- `LINE`

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

Security
aaa authorization commands

Set parameters that restrict (or permit) a user’s access to EXEC and CONFIGURATION level commands.

Syntax

```
aaa authorization commands {level | role role-name} {name|default} {local | tacacs+ | none}
```

Undo a configuration with the `no aaa authorization commands {level | role role-name} {name|default} {local | tacacs+ | none}` command.

Parameters

- `commands level`: Enter the keyword `commands` then the command privilege level for command level authorization.
- `role role-name`: Enter the keyword `role` then the role name.
- `name`: Define a name for the list of authorization methods.
- `default`: Define the default list of authorization methods.
- `local`: Use the authorization parameters on the system to perform authorization.
- `tacacs+`: Use the TACACS+ protocol to perform authorization.
- `none`: Enter the keyword `none` to apply no authorization.

Defaults

`none`

Usage Information

By default, the `aaa authorization commands` command configures the system to check both EXEC level and CONFIGURATION level commands. Use the command `no aaa authorization config-commands` to enable only EXEC-level command checking.

aaa authorization exec

Set parameters that restrict (or permit) a user’s access to EXEC-level commands.

Syntax

```
aaa authorization exec {name | default} {local || tacacs+ || if-authenticated || none}
```

To disable authorization checking for EXEC level commands, use the `no aaa authorization exec` command.

Parameters

- `name`: Define a name for the list of authorization methods.
- `default`: Define the default list of authorization methods.
- `local`: Use the authorization parameters on the system to perform authorization.
- `tacacs+`: Use the TACACS+ protocol to perform authorization.
Enter the keyword **none** to apply no authorization.

**Defaults**

```
none
```

### privilege level (CONFIGURATION mode)

Change the access or privilege level of one or more commands.

**Syntax**

```
privilege mode {level level command | reset command}
```

To delete access to a level and command, use the no privilege mode level level command command.

**Parameters**

- **mode**
  - Enter one of the following keywords as the mode for which you are controlling access:
    - configure for **CONFIGURATION** mode
    - exec for **EXEC** mode
    - interface for **INTERFACE** modes
    - line for **LINE** mode
    - route-map for **ROUTE-MAP** mode
    - router for **ROUTER OSPF**, **ROUTER RIP**, **ROUTER ISIS** and **ROUTER BGP** modes

- **level level**
  - Enter the keyword **level** then a number for the access level. The range is from 0 to 15.

  Level 1 is **EXEC** mode and Level 15 allows access to all CLI modes and commands.

- **reset**
  - Enter the keyword **reset** to return the security level to the default setting.

- **command**
  - Enter the command’s keywords to assign the command to a certain access level. You can enter one or all of the keywords.

**Defaults**

Not configured.

<td>Introduced on the S4810, S4820T, S5000, S6000, Z9000, Z9500, MXL</td>
</tr>
</tbody>
</table>

Usage Information

By default, the `service password-encryption` command stores encrypted passwords. For greater security, you can also use the `service obscure-passwords` command to prevent a user from reading the passwords and keys, including RADIUS, TACACS+ keys, router authentication strings, VRRP authentication by obscuring this information. Passwords and keys are stored encrypted in the configuration file and by default are displayed in the encrypted form when the configuration is displayed. Enabling the `service obscure-passwords` command displays asterisks instead of the encrypted passwords and keys. This command prevents a user from reading these passwords and keys by obscuring this information with asterisks.

Password obscuring masks the password and keys for display only but does not change the contents of the file. The string of asterisks is the same length as the encrypted string for that line of configuration. To verify that you have successfully obscured passwords and keys, use the `show running-config` command or `show startup-config` command.

If you are using role-based access control (RBAC), only the system administrator and security administrator roles can enable the `service obscure-passwords` command.

Related Commands

- `show running-config` — Display the current configuration and display changes from the default values.
- `service password-encryption` — Encrypts all passwords configured in the system.

Authentication and Password Commands

To manage access to the system, use the following the commands.

aaa authentication enable

Configure AAA Authentication method lists for user access to EXEC privilege mode (the “Enable” access).

Syntax

```
aaa authentication enable {default | method-list-name} method [... method2]
```

To return to the default setting, use the `no aaa authentication enable {default | method-list-name} method [... method2]` command.

Parameters

- `default` Enter the keyword `default` then the authentication methods to use as the default sequence of methods for the Enable login. The default is `default enable`.
- `method-list-name` Enter a text string (up to 16 characters long) to name the list of enabled authentication methods activated at login.
Enter one of the following methods:

- **enable**: use the password the `enable password` command defines in CONFIGURATION mode.
- **line**: use the password the `password` command defines in LINE mode.
- **none**: no authentication.
- **radius**: use the RADIUS servers configured with the `radius-server host` command.
- **tacacs+**: use the TACACS+ server(s) configured with the `tacacs-server host` command.

(OPTIONAL) In the event of a “no response” from the first method, Dell Networking OS applies the next configured method.

**Defaults**

Use the `enable password`.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>

</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, the `Enable password` is used. If you configure `aaa authentication enable default`, Dell Networking OS uses the methods defined for `Enable access` instead.

Methods configured with the `aaa authentication enable` command are evaluated in the order they are configured. If authentication fails using the primary method, Dell Networking OS employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is reachable, but the server key is invalid, Dell Networking OS proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

**Related Commands**

- `enable password` — changes the password for the `enable` command.
- `login authentication` — enables AAA login authentication on the terminal lines.
- `password` — creates a password.
- `radius-server host` — specifies a RADIUS server host.
- `tacacs-server host` — specifies a TACACS+ server host.

### aaa authentication login

Configure AAA Authentication method lists for user access to EXEC mode (Enable log-in).

**Z9000**

**Syntax**

```
aaa authentication login {method-list-name | default} method [... method]
```

1100 Security
To return to the default setting, use the `no aaa authentication login {method-list-name | default}` command.

**Parameters**

- `method-list-name` Enter a text string (up to 16 characters long) as the name of a user-configured method list that can be applied to different lines.
- `default` Enter the keyword `default` to specify that the method list specified is the default method for all terminal lines.
- `method` Enter one of the following methods:
  - `enable`: use the password the `enable password` command defines in CONFIGURATION mode. Not available if role-only is in use.
  - `line`: use the password the `password` command defines in LINE mode. Not available if role-only is in use.
  - `local`: use the password for the userid contained in the local password database.
  - `none`: no authentication. Not available if role-only is in use.
  - `radius`: use the RADIUS servers configured with the `radius-server host` command.
  - `tacacs+`: use the TACACS+ servers configured with the `tacacs-server host` command.

... `method4` (OPTIONAL) Enter up to four additional methods. In the event of a “no response” from the first method, the system applies the next configured method (up to four configured methods).

**Defaults**

Not configured (that is, no authentication is performed).

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, the locally configured username password is used. If you configure `aaa authentication login default`, Dell Networking OS uses the methods this command defines for login instead.

Methods configured with the `aaa authentication login command` are evaluated in the order they are configured. If users encounter an error with the first method listed, Dell Networking OS applies the next method configured. If users fail the first method listed, no other methods are applied. The only exception is the local method. If the user’s name is not listed in the local database, the next method is applied. If the correct user name/password combination is not entered, the user is not allowed access to the switch.

**NOTE:** If authentication fails using the primary method, Dell Networking OS employs the second method (or third method, if necessary) automatically. For example, if the TACACS+ server is
reachable, but the server key is invalid, Dell Networking OS proceeds to the next authentication method. The TACACS+ is incorrect, but the user is still authenticated by the secondary method.

After configuring the `aaa authentication login` command, configure the `login authentication` command to enable the authentication scheme on terminal lines.

Connections to the SSH server work with the following login mechanisms: local, radius, and tacacs.

**Related Commands**

- `login authentication` — enables AAA login authentication on the terminal lines.
- `password` — creates a password.
- `radius-server host` — specifies a RADIUS server host.
- `tacacs-server host` — specifies a TACACS+ server host.

### access-class

Restrict incoming connections to a particular IP address in a defined IP access control list (ACL).

**Syntax**

```plaintext
access-class access-list-name
```

To delete a setting, use the `no access-class` command.

**Parameters**

- `access-list-name` Enter the name of an established IP Standard ACL.

**Defaults**

Not configured.

**Command Modes**

LINE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

</tbody>
</table>

**Related Commands**

- `line` — applies an authentication method list to the designated terminal lines.
- `ip access-list standard` — names (or selects) a standard access list to filter based on the IP address.
- `ip access-list extended` — names (or selects) an extended access list based on the IP addresses or protocols.

### enable password

Change the password for the `enable` command.

**Syntax**

```plaintext
enable password [level level] [encryption-type] password
```

To delete a password, use the `no enable password [encryption-type] password [level level]` command.
### Parameters
- **level level** *(OPTIONAL)* Enter the keyword level then a number as the level of access. The range is from 1 to 15.
- **encryption-type** *(OPTIONAL)* Enter the number 7 or 0 as the encryption type.
  - Enter a 7 then a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.
  - Use this parameter only with a password that you copied from the show running-config file of another Dell Networking router.
- **password** Enter a text string, up to 32 characters long, as the clear text password.

### Defaults
No password is configured. **level = 15**.

### Command Modes

### Usage Information
To control access to command modes, use this command to define a password for a level and use the `privilege level (CONFIGURATION mode)` command.

Passwords must meet the following criteria:
- Start with a letter, not a number.
- Passwords can have a regular expression as the password. To create a password with a regular expression in it, use CNTL + v prior to entering regular expression. For example, to create the password `abcd\]e`, you type `abcd CNTL v ]e`. When the password is created, you do not use the CNTL + v key combination and enter `abcd\]e`.

**NOTE:** The question mark (?) and the tilde (~) are not supported characters.

### Related Commands
- `show running-config` — views the current configuration.
- `privilege level (CONFIGURATION mode)` — controls access to the command modes within the switch.

---

### enable restricted

Allows Dell Networking technical support to access restricted commands.

#### Syntax

```
enable restricted [encryption-type] password
```

To disallow access to restricted commands, use the `no enable restricted` command.

#### Parameters
- **encryption-type** *(OPTIONAL)* Enter the number 7 as the encryption type.
  - Enter 7 followed a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.
Use this parameter only with a password that you copied from the show running-config file of another Dell Networking router.

**password**

Enter a text string, up to 32 characters long, as the clear text password.

**Defaults**

Not configured.

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Only Dell Networking Technical Support staff use this command.

---

**enable secret**

Change the password for the enable command.

**Syntax**

```
enable secret [level level] [encryption-type] password
```

To delete a password, use the no enable secret [encryption-type] password [level level] command.

**Parameters**

- **level level**
  
  (OPTIONAL) Enter the keyword level then a number as the level of access. The range is from 1 to 15.

- **encryption-type**
  
  (OPTIONAL) Enter the number 5 or 0 as the encryption type.

  Enter a 5 then a text string as the hidden password. The text string must be a password that was already encrypted by a Dell Networking router.

  Use this parameter only with a password that you copied from the show running-config file of another Dell Networking router.

- **password**

  Enter a text string, up to 32 characters long, as the clear text password.

**Defaults**

No password is configured. level = 15.

**Command Modes**

CONFIGURATION

**Command History**

### Usage Information
To control access to command modes, use this command to define a password for a level and use the `privilege level` (CONFIGURATION mode) command.

Passwords must meet the following criteria:
- Start with a letter, not a number.
- Passwords can have a regular expression as the password. To create a password with a regular expression in it, use `CNTL + v` prior to entering regular expression. For example, to create the password `abcd\]e`, you type `"abcd\]e\ v\ e\ c\ CNTL v\ e\ `\ e\``` When the password is created, you do not use the `CNTL + v` key combination and enter `"abcd\]e`.

**NOTE:** The question mark (?) and the tilde (~) are not supported characters.

### Related Commands
- `show running-config` — views the current configuration.
- `privilege level` (CONFIGURATION mode) — controls access to the command modes within the switch.

## login authentication

To configure authentication for console or remote access, apply an authentication method list.

### Syntax
```
login authentication {method-list-name | default}
```

To use the local user/password database for login authentication, use the `no login` authentication command.

### Parameters
- **method-list-name**
  - Enter the keywords `method-list-name` to specify that method list, created in the `aaa authentication login` command, to be applied to the designated terminal line.
- **default**
  - Enter the keyword `default` to specify that the default method list, created in the `aaa authentication login` command, is applied to the terminal line.

### Defaults
No authentication is performed on the console lines. Local authentication is performed on the virtual terminal and auxiliary lines.

### Command Modes
LINE

### Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>
Version | Description
---|---
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-6.2.1.0 | Introduced on the E-Series.

Usage Information

When configuring authentication, consider the following:

- If you configure the default authentication list using the default keyword, the list applies it to all the local and remote connections globally, unless you have specified some another authentication list for a specific connection.

- If you configure an authentication lists other than default, you must apply those authentication lists to each connection.

- If you configure the `aaa authentication login default` command, the `login authentication default` command automatically is applied to all terminal lines.

Related Commands

- `aaa authentication login` — selects the login authentication methods.

`password`

Specify a password for users on terminal lines.

**Syntax**

```
password [encryption-type] password
```

To delete a password, use the `no password password` command.

**Parameters**

- `encryption-type` (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the password entered. The options are
  - 0 is the default and means the password is not encrypted and stored as clear text.
  - 7 means that the password is encrypted and hidden.

- `password` Enter a text string up to 32 characters long. The first character of the password must be a letter. You cannot use spaces in the password.

**Defaults**

No password is configured.

**Command Modes**

LINE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
---|---
9.7(0.0) | Introduced on the S6000–ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-6.2.1.0 | Introduced on the E-Series.
Dell Networking OS prompts users for these passwords when the method for authentication or authorization used is "line".

**Related Commands**

- `enable password` — sets the password for the `enable` command.
- `login authentication` — configures an authentication method to log in to the switch.
- `service password-encryption` — encrypts all passwords configured in Dell Networking OS.
- `radius-server key` — configures a key for all RADIUS communications between the switch and the RADIUS host server.
- `tacacs-server key` — configures a key for communication between a TACACS+ server and client.
- `username` — establishes an authentication system based on user names.

**password-attributes**

Configure the password attributes (strong password).

**Syntax**

```
password-attributes [min-length number] [max-retry number] [lockout-period minutes] [character-restriction [upper number] [lower number] [numeric number] [special-char number]]
```

To return to the default, use the `no password-attributes [min-length number] [max-retry number] [lockout-period minutes] [character-restriction [upper number] [lower number] [numeric number] [special-char number]]` command.

**Parameters**

- **min-length number** (OPTIONAL) Enter the keywords `min-length` then the number of characters. The range is from 0 to 32 characters.
- **max-retry number** (OPTIONAL) Enter the keywords `max-retry` then the number of maximum password retries. The range is from 0 to 16.
- **lockout-period minutes** (OPTIONAL) Enter the keyword `lockout-period` then the number of minutes. The range is from 1 to 1440 minutes. The default is 0 minutes and the lockout-period is not enabled. This parameter enhances the security of the switch by locking out sessions on the Telnet or SSH sessions for which there has been a consecutive failed login attempts. The console is not locked out.
- **character-restriction** (OPTIONAL) Enter the keywords `character-restriction` to indicate a character restriction for the password.
- **upper number** (OPTIONAL) Enter the keyword `upper` then the upper number. The range is from 0 to 31.
- **lower number** (OPTIONAL) Enter the keyword `lower` then the lower number. The range is from 0 to 31.
- **numeric number** (OPTIONAL) Enter the keyword `numeric` then the numeric number. The range is from 0 to 31.
- **special-char number** (OPTIONAL) Enter the keywords `special-char` then the number of special characters permitted. The range is from 0 to 31.

The following special characters are supported:

```
! * # % & ' ( ) ; < = > ? [ \ ] ^ _ { | } ~ @ $
```

**Defaults**

- `none`

**Command Modes**

</tr>
</tbody>
</table>

**Usage Information**

> **CAUTION:** Encrypting passwords with this command does not provide a high level of security. When the passwords are encrypted, you cannot return them to plain text unless you re-configure them. To remove an encrypted password, use the `no password` command.

To keep unauthorized people from viewing passwords in the switch configuration file, use the `service password-encryption` command. This command encrypts the clear-text passwords created for user name passwords, authentication key passwords, the privileged command password, and console and virtual terminal line access passwords.
To view passwords, use the `show running-config` command.

### show privilege

View your access level.

**Syntax**

```
show privilege
```

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Example**

```
Dell#show privilege
Current privilege level is 15.
Dell#

Dell#show privilege
Current privilege level is 14.
Dell#
Dell#show privilege
Current privilege level is 10.
Dell#
```

**Related Commands**

- `privilege level (CONFIGURATION mode)` — assigns access control to different command modes.

### show users

Allows you to view information on all users logged in to the switch.

**Syntax**

```
show users [all]
```

**Parameters**

- `all` (OPTIONAL) Enter the keyword `all` to view all terminal lines in the switch.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
</tbody>
</table>
Version | Description
------- | -------
9.5(0.0) | Added support for roles on the Z9000, S6000, S4820T, S4810, MXL.
9.2(1.0) | Introduced on the Z9500.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-6.1.1.0 | Introduced on the E-Series.

Usage Information

The following describes the `show user` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(untitled)</td>
<td>Indicates with an asterisk (*) which terminal line you are using.</td>
</tr>
<tr>
<td>Line</td>
<td>Displays the terminal lines currently in use.</td>
</tr>
<tr>
<td>User</td>
<td>Displays the user name of all users logged in.</td>
</tr>
<tr>
<td>Host(s)</td>
<td>Displays the terminal line status.</td>
</tr>
<tr>
<td>Location</td>
<td>Displays the IP address of the user.</td>
</tr>
</tbody>
</table>

Example

```console
Dell# show users
Authorization Mode: role or privilege

Line   User                      Role             Priv
Host(s) Location
*   0  console 0                                unassigned         1
    idle
    2  vty 0          admin                     unassigned         1
    idle       10.16.127.35
    3  vty 1          ad                         unassigned        15
    idle       10.16.127.145
    4  vty 2          ad1                        sysadmin           1
    idle       10.16.127.141
    5  vty 3          ad1                        sysadmin           1
    idle       10.16.127.145
    6  vty 4          ad                         unassigned        15
    idle       10.16.127.141
    7  vty 5          ad                         unassigned         1
    idle       10.16.127.141

Dell#
```

Related Commands

- `username` — enables a user.

**timeout login response**

Specify how long the software waits for the login input (for example, the user name and password) before timing out.

**Syntax**

```plaintext
timeout login response seconds
```

**Parameters**

- `seconds` Enter a number of seconds the software waits before logging you out. The range is:
  - VTY: the range is from 1 to 30 seconds, the default is **30 seconds**.
● Console: the range is from 1 to 300 seconds, the default is **0 seconds** (no timeout).
● AUX: the range is from 1 to 300 seconds, the default is **0 seconds** (no timeout).

**Defaults**

See the defaults settings shown in Parameters.

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The software measures the period of inactivity defined in this command as the period between consecutive keystrokes. For example, if your password is “password” you can enter “p” and wait 29 seconds to enter the next letter.

**username**

Establish an authentication system based on user names.

**Syntax**

```plaintext
username name [access-class access-list-name] [nopassword | {password | secret} [encryption-type] password] [privilege level] [role role-name]
```

If you do not want a specific user to enter a password, use the `nopassword` option.

To delete authentication for a user, use the `no username name` command.

**Parameters**

- `name`: Enter a text string for the name of the user up to 63 characters.
- `access-class access-list-name`: Enter the keywords `access-class then` then the name of a configured access control list (either an IP access control list or MAC access control list).
- `nopassword`: Enter the keyword `nopassword` to specify that the user should not enter a password.
- `password`: Enter the keyword `password` then the encryption-type or the password.
- `secret`: Enter the keyword `secret` then the encryption-type or the password.
- `encryption-type`: Enter an encryption type for the `password` that you enter.
  - `0` directs the system to store the password as clear text. It is the default encryption type when using the `password` option.
  - `7` to indicate that a password encrypted using a DES hashing algorithm follows. This encryption type is available with the `password` option only.
  - `5` to indicate that a password encrypted using an MD5 hashing algorithm follows. This encryption type is available with the `secret` option only, and is the default encryption type for this option.

Security 1111
password Enter a string up to 32 characters long.

privilege level Enter the keyword privilege then a number from zero (0) to 15.

role role-name Enter the keyword role followed by the role name to associate with that user ID.

secret Enter the keyword secret then the encryption type.

Defaults The default encryption type for password option is 0. The default encryption type for secret option is 0. The default value of privilege level is 1.

**ip radius source-interface**

Specify an interface’s IP address as the source IP address for RADIUS connections.

**Syntax**

```
ip radius source-interface interface
```

To delete a source interface, use the no `ip radius source-interface` command.

**Parameters**

- `interface`
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
    - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
    - For a port channel interface, enter the keywords `port-channel` then a number from 1 to 128.
    - For a Null interface, enter the keyword `null` then the Null interface number.
    - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Dell(conf-radius-group)##

Related Commands

- login authentication — sets the database to be checked when a user logs in.
- radius-server key — sets an authentication key for RADIUS communications.
- radius-server retransmit — sets the number of times the RADIUS server attempts to send information.
- radius-server timeout — sets the time interval before the RADIUS server times out.

radius-server host

Configure a RADIUS server host.

Syntax

radius-server host {hostname | ipv4-address | ipv6-address} [auth-port port-number] [retransmit retries] [timeout seconds] [key [encryption-type] key]

Parameters

- hostname
  - Enter the name of the RADIUS server host.
- ipv4-address | ipv6-address
  - Enter the IPv4 address (A.B.C.D) or IPv6 address (X:X:X:X::X) of the RADIUS server host.
- auth-port port-number
  - (OPTIONAL) Enter the keywords auth-port then a number as the port number. The range is from zero (0) to 65535. The default port-number is 1812.
- retransmit retries
  - (OPTIONAL) Enter the keyword retransmit then a number as the number of attempts. This parameter overwrites the radius-server retransmit command. The range is from zero (0) to 100. The default is 3 attempts.
- timeout seconds
  - (OPTIONAL) Enter the keyword timeout then the seconds the time interval the switch waits for a reply from the RADIUS server. This parameter overwrites the radius-server timeout command. The range is from 0 to 1000. The default is 5 seconds.
- key [encryption-type] key
  - (OPTIONAL) Enter the keyword key then an optional encryption-type and a string up to 42 characters long as the authentication key. The RADIUS host server uses this authentication key and the RADIUS daemon operating on this switch. For the encryption-type, enter either zero (0) or 7 as the encryption type for the key entered. The options are:
    - 0 is the default and means the password is not encrypted and stored as clear text.
    - 7 means that the password is encrypted and hidden. Configure this parameter last because leading spaces are ignored.

Defaults

Not configured.

Command Modes

- RADIUS SERVER GROUP
- CONFIGURATION

Command History

</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>
**Version** | **Description**
---|---
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.4.1.0 | Added support for IPv6.
8.3.7.0 | Introduced on the S4810.
7.7.1.0 | Authentication key length increased to 42 characters.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.
pre-6.2.1.0 | Introduced on the E-Series.

**Usage Information**

To configure any number of RADIUS server hosts for each server host that is configured, use this command. Dell Networking OS searches for the RADIUS hosts in the order they are configured in the software.

The global default values for the timeout, retransmit, and key optional parameters are applied, unless those values are specified in the radius-server host or other commands. To return to the global default values, if you configure the timeout, retransmit, or key values, include those keywords when using the no radius-server host command syntax.

You can use duplicate host names or IP addresses among RADIUS groups. However, you cannot use duplicate host names or IP addresses within the same RADIUS group. If a VRF is not configured on the RADIUS group, then servers configured in the group are considered to be on the default VRF. RADIUS servers that are configured in the CONFIGURATION mode are also considered to be on the default VRF.

You must configure the RADIUS group explicitly with the aaa radius group command in order for the AAA servers to use the group of RADIUS servers. The 802.1x servers use the group of RADIUS servers based on the VRF where the 802.1x request is received. As a result, it is possible that both globally configured RADIUS servers as well as the group-configured RADIUS servers (without VRF or default VRF) are used for processing the 802.1x requests that are received at the default VRF. The order in which the RADIUS servers are tried depends on the order in which the RADIUS servers are configured.

**Example**

```
Dell(conf)#radius-server group group1
Dell(conf-radius-group)#radius-server host 1.1.1.1 key secret
Dell(conf-radius-group)#no radius-server host 1.1.1.1
```

**Related Commands**

- `login authentication` — sets the database to be checked when a user logs in.
- `radius-server key` — sets an authentication key for RADIUS communications.
- `radius-server retransmit` — sets the number of times the RADIUS server attempts to send information.
- `radius-server timeout` — sets the time interval before the RADIUS server times out.

### radius-server key

Configure a key for all RADIUS communications between the switch and the RADIUS host server.

**Syntax**

```
radius-server key [encryption-type] key
```

To delete a password, use the `no radius-server key` command.

**Parameters**

- `encryption-type` (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
  - 0 is the default and means the key is not encrypted and stored as clear text.
  - 7 means that the key is encrypted and hidden.

- `key` Enter a string that is the key to be exchanged between the switch and RADIUS servers. It can be up to 42 characters long.
Defaults
Not configured.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
The key configured on the switch must match the key configured on the RADIUS server daemon.

If you configure the key parameter in the radius-server host command, the key configured with the radius-server key command is the default key for all RADIUS communications.

Related Commands
radius-server host — configures a RADIUS host.

radius-server retransmit

Configure the number of times the switch attempts to connect with the configured RADIUS host server before declaring the RADIUS host server unreachable.

Syntax
radius-server retransmit retries

To configure zero retransmit attempts, use the no radius-server retransmit command.

To return to the default setting, use the radius-server retransmit 3 command.

Parameters
retries
Enter a number of attempts that FTOS tries to locate a RADIUS server. The range is from zero (0) to 100. The default is 3 retries.

Defaults
3 retries

radius-server timeout

To reply to a request, configure the amount of time the RADIUS client (the switch) waits for a RADIUS host server.

Syntax

radius-server timeout seconds

To return to the default value, use the no radius-server timeout command.

Parameters

- **seconds**: Enter the number of seconds between an unsuccessful attempt and the Dell Networking OS times out. The range is from zero (0) to 1000 seconds. The default is 5 seconds.

Defaults

5 seconds

Related Commands

radius-server host — configures a RADIUS host.

radius-server vrf

Create an association between a RADIUS server group and a VRF and source interface.

Syntax

radius-server vrf vrf-name [source-interface interface]

To delete the association between a RADIUS server group and a VRF and source interface, use the no radius-server vrf vrf-name [source-interface interface] command.

Parameters

- **vrf vrf-name**: Enter the keyword vrf and then the name of the VRF to associate a RADIUS server group with that VRF.
interface

Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Defaults

Not configured.

</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S-Series and Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

You can use this command to associate a group of RADIUS servers with a VRF and source interface. You can configure the source interface only with the VRF attribute and source interface is optional with the VRF attributes.

If VRF is not configured on the RADIUS group, then the group is considered to be on the default VRF. It is possible to use the default VRF name; however, you cannot configure the source interface with the default VRF as such a configuration results in conflicts between the source interfaces corresponding to the 802.1x supplicants on that default VRF.

RADIUS groups and VRFs have one-to-one mapping. If a VRF is configured with one RADIUS group, then you cannot use the same VRF with another RADIUS group. When the VRF is removed, then the corresponding RADIUS group is also removed automatically.

Example

```
Dell(conf)#radius-server group group1
Dell(conf-radius-group)#radius-server vrf vrf1 source-interface TenGigabitEthernet 1/40
Dell(conf)#radius-server group group2
Dell(conf-radius-group)#radius-server vrf default
```

TACACS+ Commands

Dell Networking OS supports TACACS+ as an alternate method for login authentication.

**debug tacacs+**

To assist with troubleshooting, view TACACS+ transactions.

**Syntax**

```
debug tacacs+
```

To disable debugging of TACACS+, use the `no debug tacacs+` command.
tacacs-server group

Creates a group of TACACS servers.

Syntax  
tacacs-server group group-name

To delete a group of TACACS servers, use the no tacacs-server group group-name command.

Parameters  
  group-name  Enter the name of the TACACS server group.

Defaults  
Not configured.

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
You can associate a TACACS server group with a VRF.

Example

```
Dell(conf)#tacacs-server group group1
Dell(conf-tacacs-group)#tacacs-server host 1.1.1.1 key secret
Dell(conf-tacacs-group)#tacacs-server host 2.2.2.2 key secret
Dell(conf-tacacs-group)#tacacs-server vrf vrf1 source-interface tengigabitethernet 1/42
Dell(conf-tacacs-group)#show config
!
tacacs-server group group1
tacacs-server vrf vrf1 source-interface TenGigabitEthernet 1/42
Dell(conf-tacacs-group)#
```

Related Commands

- `aaa authentication login` — specifies the login authentication method.
tacacs-server key — configures a TACACS+ key for the TACACS server.

**tacacs-server host**

Specify a TACACS+ host.

**Syntax**

```
tacacs-server host { hostname | ipv4-address | ipv6-address } [port number] [timeout seconds] [key key]
```

**Parameters**

- **hostname**
  - Enter the name of the TACACS+ server host.

- **ipv4-address | ipv6-address**
  - Enter the IPv4 address (A.B.C.D) or IPv6 address (X:X::X) of the TACACS+ server host.

- **port number**
  - (OPTIONAL) Enter the keyword `port` then a number as the port to be used by the TACACS+ server. The range is from zero (0) to 65535. The default is 49.

- **timeout seconds**
  - (OPTIONAL) Enter the keyword `timeout` then the number of seconds the switch waits for a reply from the TACACS+ server. The range is from 0 to 1000. The default is 10 seconds.

- **key key**
  - (OPTIONAL) Enter the keyword `key` then a string up to 42 characters long as the authentication key. This authentication key must match the key specified in the `tacacs-server key` command for the TACACS+ daemon.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Added support for IPv6.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Authentication key length increased to 42 characters.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

To list multiple TACACS+ servers to be used by the `aaa authentication login` command, configure this command multiple times.

If you are not configuring the switch as a TACACS+ server, you do not need to configure the `port`, `timeout` and `key` optional parameters. If you do not configure a key, the key assigned in the `tacacs-server key` command is used.

You can use duplicate host names or IP addresses among TACACS groups. However, you cannot use duplicate host names or IP addresses within the same TACACS group.

If a VRF is not configured on the TACACS group, then servers configured in the group are considered to be on the default VRF. TACACS servers that are configured in the CONFIGURATION mode are also considered to be on the default VRF.
For AAA servers to use a group of TACACS servers, you must explicitly configure the group using the `aaa tacacs group group-name` command. The order in which the TACACS servers are tried depends on the order in which they are configured.

Example

Dell(conf)#tacacs-server group group1
Dell(conf-tacacs-group)#tacacs-server host 1.1.1.1 key secret
Dell(conf-tacacs-group)#no tacacs-server host 1.1.1.1

Related Commands

- `aaa authentication login` — specifies the login authentication method.
- `tacacs-server key` — configures a TACACS+ key for the TACACS server.

### tacacs-server vrf

Create an association between a TACACS server group and a VRF and source interface.

**Syntax**

```
tacacs-server vrf vrf-name [source-interface interface]
```

To delete the association between a TACACS server group and a VRF and source interface, use the `no tacacs-server vrf vrf-name [source-interface interface]` command.

**Parameters**

- `vrf vrf-name` Enter the keyword `vrf` and then the name of the VRF to associate a TACACS server group with that VRF.
- `source-interface interface` Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number.
  - For a Null interface, enter the keyword `null` then the Null interface number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

**Command Modes**

TACACS SERVER GROUP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.4.(0.0)</td>
<td>Introduced on the S-Series and Z-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can use this command to associate a group of TACACS servers with a VRF and source interface. You can configure the source interface only with the VRF attribute and source interface is optional with the VRF attributes.

If VRF is not configured on the TACACS group, then the group is considered to be on the default VRF.

RADIUS groups and VRFs have one-to-one mapping. If a VRF is configured with one RADIUS group, then you cannot use the same VRF with another RADIUS group. When the VRF is removed, then the corresponding RADIUS group is also removed automatically.

**Example**

Dell(conf)#tacacs-server group group1
Dell(conf-tacacs-group)#tacacs-server vrf vrf1 source-interface
tengigabitethernet 1/36
Dell(conf)#tacacs-server group group2
Dell(conf-tacacs-group)#tacacs-server vrf default

tacacs-server key

Configure a key for communication between a TACACS+ server and a client.

Syntax

```
tacacs-server key [encryption-type] key
```

To delete a key, use the `no tacacs-server key key` command.

Parameters

- **encryption-type** (OPTIONAL) Enter either zero (0) or 7 as the encryption type for the key entered. The options are:
  - 0 is the default and means the key is not encrypted and stored as clear text.
  - 7 means that the key is encrypted and hidden.

- **key** Enter a text string, up to 42 characters long, as the clear text password. Leading spaces are ignored.

Defaults

Not configured.

Command Modes

CONFIGURATION

</tr>
</tbody>
</table>

Usage Information

The key configured with this command must match the key configured on the TACACS+ daemon.

ip tacacs source-interface

Specify an interface’s IP address as the source IP address for TACACS+ connections.

Syntax

```
ip tacacs source-interface interface
```

To delete a source interface, use the `no ip tacacs source-interface interface` command.

Parameters

- **interface** Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword ```TenGigabitEthernet``` then the slot/port information.
For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.

- For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
- For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
- For a Null interface, enter the keyword `null` then the Null interface number.
- For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

**Defaults**

Not configured.

### Port Authentication (802.1X) Commands

An authentication server must authenticate a client connected to an 802.1X switch port. Until the authentication, only Extensible Authentication Protocol over LAN (EAPOL) traffic is allowed through the port to which a client is connected. After authentication is successful, normal traffic passes through the port.

Dell Networking OS supports RADIUS and Active Directory environments using 802.1X Port Authentication.

### Important Points to Remember

Dell Networking OS limits network access for certain users by using VLAN assignments. 802.1X with VLAN assignment has these characteristics when configured on the switch and the RADIUS server.

- 802.1X is supported on Dell Networking OS.
- 802.1X is not supported on the LAG or the channel members of a LAG.
- If no VLAN is supplied by the RADIUS server or if 802.1X authorization is disabled, the port is configured in its access VLAN after successful authentication.
- If 802.1X authorization is enabled but the VLAN information from the RADIUS server is not valid, the port returns to the Unauthorized state and remains in the configured access VLAN. This prevents ports from appearing unexpectedly in an inappropriate VLAN due to a configuration error. Configuration errors create an entry in Syslog.
- If 802.1X authorization is enabled and all information from the RADIUS server is valid, the port is placed in the specified VLAN after authentication.
- If port security is enabled on an 802.1X port with VLAN assignment, the port is placed in the RADIUS server assigned VLAN.
- If 802.1X is disabled on the port, it is returned to the configured access VLAN.
- When the port is in the Force Authorized, Force Unauthorized, or Shutdown state, it is placed in the configured access VLAN.

---

1124  Security
If an 802.1X port is authenticated and put in the RADIUS server assigned VLAN, any change to the port access VLAN configuration does not take effect.

The 802.1X with VLAN assignment feature is not supported on trunk ports, dynamic ports, or with dynamic-access port assignment through a VLAN membership.

dot1x authentication (Configuration)

Enable dot1x globally; dot1x must be enabled both globally and at the interface level.

Syntax
dot1x authentication

To disable dot1x on globally, use the no dot1x authentication command.

Defaults
Disabled.

### Related Commands
- `dot1x authentication (Configuration)`: Enables dot1x globally.

---

### dot1x auth-fail-vlan

Configure an authentication failure VLAN for users and devices that fail 802.1X authentication.

**Syntax**
```
dot1x auth-fail-vlan vlan-id [max-attempts number]
```

To delete the authentication failure VLAN, use the `no dot1x auth-fail-vlan vlan-id [max-attempts number]` command.

**Parameters**
- **vlan-id**: Enter the VLAN Identifier. The range is from 1 to 4094.
- **max-attempts number** (OPTIONAL): Enter the keywords `max-attempts` then number of attempts desired before authentication fails. The range is from 1 to 5. The default is 3.

**Defaults**
- 3 attempts

**Command Modes**
- **CONFIGURATION (conf-if-interface-slot/port)**

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000–ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>

<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the C-Series, S-Series, and E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
If the host responds to 802.1X with an incorrect login/password, the login fails. The switch attempts to authenticate again until the maximum attempts configured is reached. If the authentication fails after all allowed attempts, the interface is moved to the authentication failed VLAN.

After the authentication VLAN is assigned, the port-state must be toggled to restart authentication. Authentication occurs at the next re-authentication interval (`dot1x reauthentication`).

### Related Commands
- `dot1x port-control`: Enables port-control on an interface.
- `dot1x guest-vlan`: Configures a guest VLAN for non-dot1x devices.
- `show dot1x interface`: Displays the 802.1X information on an interface.

---

### dot1x auth-server

Configure the authentication server to RADIUS.

**Syntax**
```
dot1x auth-server radius
```

**Defaults**
- none

**Command Modes**
- **CONFIGURATION**

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the C-Series, S-Series, and E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

802.1X authentication is enabled when an interface is connected to the switch. If the host fails to respond within a designated amount of time, the authenticator places the port in the guest VLAN.

If a device does not respond within 30 seconds, it is assumed that the device is not 802.1X capable. Therefore, a guest VLAN is allocated to the interface and authentication for the device occurs at the next re-authentication interval (dot1x reauthentication).

If the host fails authentication for the designated number of times, the authenticator places the port in authentication failed VLAN (dot1x auth-fail-vlan).

**NOTE:** The layer 3 portion of guest VLAN and authentication fail VLANs can be created regardless if the VLAN is assigned to an interface or not. After an interface is assigned a guest VLAN (which has an IP address), routing through the guest VLAN is the same as any other traffic. However, the interface may join/leave a VLAN dynamically.

**Related Commands**

dot1x auth-fail-vlan — configures a VLAN for authentication failures.
dot1x reauthentication — enables periodic re-authentication.
**show dot1x interface** — displays the 802.1X information on an interface.

## dot1x mac-auth-bypass

Enable MAC authentication bypass. If 802.1X times out because the host did not respond to the Identity Request frame, Dell Networking OS attempts to authenticate the host based on its MAC address.

### Syntax

```
[no] dot1x mac-auth-bypass
```

### Defaults

Disabled

</tr>
</tbody>
</table>

### Usage Information

To disable MAC authentication bypass on a port, enter the `no dot1x mac-auth-bypass` command.

## dot1x max-eap-req

Configure the maximum number of times an extensive authentication protocol (EAP) request is transmitted before a session times out.

### Syntax

```
dot1x max-eap-req number
```

To return to the default, use the `no dot1x max-eap-req` command.

### Parameters

- `number` Enter the number of times an EAP request is transmitted before a session time-out. The range is from 1 to 10. The default is 2.

### Defaults

2

**Usage Information**

The authenticator performs authentication only when port-control is set to auto.

**dot1x quiet-period**

Set the number of seconds that the authenticator remains quiet after a failed authentication with a client.

```
Syntax

dot1x quiet-period seconds
```

- **seconds**: Enter the number of seconds. The range is from 1 to 65535. The default is 30.

**Defaults**

30 seconds

**Command Modes**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
Introduction:

**dot1x reauthentication**

Enable periodic re-authentication of the client.

**Syntax**

```
dot1x reauthentication [interval seconds]
```

To disable periodic re-authentication, use the no dot1x reauthentication command.

**Parameters**

- **interval seconds** (Optional) Enter the keyword `interval` then the interval time, in seconds, after which re-authentication is initiated. The range is from 1 to 31536000 (1 year). The default is 3600 (1 hour).

**Defaults**

3600 seconds (1 hour)

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
---|---
9.7(0.0) | Introduced on the S6000–ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the C-Series and S-Series.
7.4.1.0 | Introduced on the E-Series.

**Related Commands**

- `interface range` — configures a range of interfaces.
- `dot1x reauth-max` — Configure the maximum number of times a port can re-authenticate before the port becomes unauthorized.

**dot1x reauth-max**

Configure the maximum number of times a port can re-authenticate before the port becomes unauthorized.

**Syntax**

```
dot1x reauth-max number
```

To return to the default, use the no dot1x reauth-max command.

**Parameters**

- **number** Enter the permitted number of re-authentications. The range is from 1 to 10. The default is 2.

**Defaults**

2
**dot1x server-timeout**

Configure the amount of time after which exchanges with the server time-out.

**Syntax**
```
dot1x server-timeout seconds
```

To return to the default, use the `no dot1x server-timeout` command.

**Parameters**
- `seconds` Enter a time-out value in seconds. The range is from 1 to 300, where 300 is implementation dependant. The default is 30.

**Defaults**
30 seconds

dot1x tx-period

Configure the intervals at which EAPOL PDUs are transmitted by the Authenticator PAE.

Syntax

```
dot1x tx-period seconds
```

To return to the default, use the `no dot1x tx-period` command.

Parameters

- **seconds**
  - Enter the interval time, in seconds, that EAPOL PDUs are transmitted. The range is from 1 to 65535 (1 year). The default is 30.

Defaults

30 seconds

show dot1x interface

Display the 802.1X information on an interface.

Syntax

```
show dot1x interface interface
```

Parameters

- `interface`
  - Enter one of the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.

Defaults

none

Command Modes

- EXEC
- EXEC privilege

SSH Server and SCP Commands

Dell Networking OS supports secure shell (SSH) protocol versions 1.5 and 2.0. SSH is a protocol for secure remote login over an insecure network. SSH sessions are encrypted and use authentication.

crypto key generate

Generate keys for the SSH server.

Syntax

```plaintext
crypto key generate {rsa | rsa1}
```

Parameters

- **rsa**
  
  Enter the keyword rsa then the key size to generate a SSHv2 RSA host keys. The range is from 1024 to 2048 if you did not enable FIPS mode; if you enabled FIPS mode, you can only generate a 2048-bit key. The default is 1024.

  ```plaintext
  NOTE: You must have a license to access the FIPS mode. For more information, contact your Dell Networking representative.
  ```

- **rsa1**
  
  Enter the keyword rsa1 then the key size to generate a SSHv1 RSA host keys. The range is from 1024 to 2048. The default is 1024.

  ```plaintext
  NOTE: This option is not available in FIPS mode.
  ```

Defaults

Key size 1024; if you enable FIPS mode, the key size is 2048.

**Related Commands**

crypto key generate — Generate keys for SSH server
**debug ip ssh**

Enables collecting SSH debug information.

**Syntax**

`debug ip ssh {client | server}`

To disable debugging, use the `no debug ip ssh {client | server}` command.

**Parameters**

- `client` Enter the keyword `client` to enable collecting debug information on the client.
- `server` Enter the keyword `server` to enable collecting debug information on the server.

**Defaults**

Disabled on both client and server.

**Command Modes**

EXEC

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

Debug information includes details for key-exchange, authentication, and established session for each connection.

**ip scp topdir**

Identify a location for files used in secure copy transfer.

**Syntax**

`ip scp topdir directory`

To return to the default setting, use the `no ip scp topdir` command.

**Parameters**

- `directory` Enter a directory name.

**Defaults**

The internal flash (`flash:`) is the default directory.

**Command Modes**

CONFIGURATION

</tbody>
</table>
Version Description
8.3.7.0 Introduced on the S4810.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
pre-6.1.1.0 Introduced on the E-Series.

Usage Information
To configure the switch as an SCP server, use the `ip ssh server` command.

Related Commands
`ip ssh server` — enables the SSH and SCP server on the switch.

**ip ssh authentication-retries**

Configure the maximum number of attempts that should be used to authenticate a user.

Syntax
```
ip ssh authentication-retries 1-10
```

Parameters
```
1-10
```
Enter the number of maximum retries to authenticate a user. The range is from 1 to 10. The default is 3.

Defaults
3

Command Modes

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
This command specifies the maximum number of attempts to authenticate a user on an SSH connection with the remote host for password authentication. SSH disconnects when the number of password failures exceeds authentication-retries.

**ip ssh connection-rate-limit**

Configure the maximum number of incoming SSH connections per minute.

Syntax
```
ip ssh connection-rate-limit 1-10
```

Parameters
```
1-10
```
Enter the number of maximum numbers of incoming SSH connections allowed per minute. The range is from 1 to 10 per minute. The default is 10 per minute.

Defaults
10 per minute

**ip ssh hostbased-authentication**

Enable hostbased-authentication for the SSHv2 server.

**Syntax**

```
ip ssh hostbased-authentication enable
```

To disable hostbased-authentication for SSHv2 server, use the `no ip ssh hostbased-authentication enable` command.

**Parameters**

- `enable`

  Enter the keyword `enable` to enable hostbased-authentication for SSHv2 server.

**Defaults**

Disabled.

**Command Modes**

CONFIGURATION

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you enable this command, clients can log in without a password prompt. This command provides two levels of authentication:

- rhost-authentication is done with the file specified in the `ip ssh rhostfile` command.
- checking client host-keys is done with the file specified in the `ip ssh pub-key-file` command.

**NOTE:** Administrators must specify the two files (`rhosts` and `pub-key-file`) to configure host-based authentication.
ip ssh key-size

Configure the size of the server-generated RSA SSHv1 key.

Syntax

```
ip ssh key-size 512-869
```

Parameters

- **512-869**: Enter the key-size number for the server-generated RSA SSHv1 key. The range is from 512 to 869. The default is **768**.

Defaults

Key size **768**

Command Modes

</tr>
</tbody>
</table>

Usage Information

The server-generated key is used for SSHv1 key-exchange.

ip ssh password-authentication

Enable password authentication for the SSH server.

Syntax

```
ip ssh password-authentication enable
```

To disable password-authentication, use the `no ip ssh password-authentication enable` command.

Parameters

- **enable**: Enter the keyword `enable` to enable password-authentication for the SSH server.

Defaults

Enabled

</table>

**Usage Information**

This command specifies the file used for the host-based authentication. The `creates/` file overwrites the flash://ADMIN_DIR/ssh/knownhosts file and deletes the user-specified file. Even though this command is a global configuration command, it does not appear in the running configuration because you only need to run this command once.

The file contains the OpenSSH-compatible public keys of the host for which host-based authentication is allowed. An example known host file format:

```
poclab4,123.12.1.123 ssh-rsa AAAAB3NzaC1yc2EAAAABIwAAAIEAox/Qqp8xYhz0Xn07yh4VGPAC0UfgKoieTHO9G4aNV+ui+DWEc3cqYAcU5La11MU2ODrzhCwyDNp05tKBU3tReGl08AxLi6+s4hyEMqHzkzBFNVqHzpQc+Rs4p2urzV0F4pRKnaXdhf3lK4D460HZRh0vrixgeNxPDpEn WIMPj10ds= ashwani@poclab4
```

**NOTE:** For rhostfile and pub-key-file, the administrator must FTP the file to the chassis.
Example

```
Dell(conf)# ip ssh pub-key-file flash://knownhosts
Dell(conf)#
```

Related Commands

show ip ssh client-pub-keys — displays the client-public keys used for the host-based authentication.

### ip ssh rekey

Configures the time rekey-interval or volume rekey-limit threshold at which to re-generate the SSH key during an SSH session.

**Syntax**

```
ip ssh rekey [time rekey-interval] [volume rekey-limit]
```

To reset to the default, use no ip ssh rekey [time rekey-interval] [volume rekey-limit] command.

**Parameters**

- **time minutes**
  
  Enter the keywords `time` then the amount of time in minutes. The range is from 10 to 1440 minutes. The default is 60 minutes.

- **volume rekey-limit**
  
  Enter the keywords `volume` then the amount of volume in megabytes. The range is from 1 to 4096 megabytes. The default is 1024 megabytes.

**Defaults**

The default time is 60 minutes. The default volume is 1024 megabytes.

**Command Modes**

CONFIGURATION mode

**Command History**

</tr>
</tbody>
</table>

### ip ssh rhostsfile

Specify the rhost file used for host-based authorization.

**Syntax**

```
ip ssh rhostsfile {WORD}
```

**Parameters**

- **WORD**
  
  Enter the rhost file name for the host-based authentication.

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>
This command specifies the rhost file used for host-based authentication. This creates/ file overwrites the flash://ADMIN_DIR/ssh/shosts file and deletes the user-specified file. Even though this command is a global configuration command, it does not appear in the running configuration because you only need to run this command once.

This file contains hostnames and usernames, for which hosts and users, rhost-authentication can be allowed.

**NOTE:** For rhostfile and pub-key-file, the administrator must FTP the file to the switch.

### ip ssh rsa-authentication (Config)

Enable RSA authentication for the SSHv2 server.

#### Syntax

```
ip ssh rsa-authentication enable
```

To disable RSA authentication, use the `no ip ssh rsa-authentication enable` command.

#### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

#### Usage Information

Enabling RSA authentication allows the user to log in without being prompted for a password. In addition, the OpenSSH compatible SSHv2 RSA public key must be added to the list of authorized keys (ip ssh rsa-authentication my-authorized-keys device://filename command).
**ip ssh rsa-authentication (EXEC)**

Add keys for the RSA authentication.

**Syntax**

```
ip ssh rsa-authentication {my-authorized-keys WORD}
```

To delete the authorized keys, use the `no ip ssh rsa-authentication {my-authorized-keys}` command.

**Parameters**

- `my-authorized-keys WORD` Enter the keywords `my-authorized-keys` then the filename of the RSA authorized-keys.

**Defaults**

none

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>

<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-Version 6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you want to log in without being prompted for a password, log in through RSA authentication. To do that, first add the SSHv2 RSA public keys to the list of authorized keys. This command adds the specified RSA keys to the following file: `flash://ADMIN_DIR/ssh/authorized-keys-username` (where `username` is the user associated with this terminal).

NOTE: The `no` form of this command deletes the file `flash://ADMIN_DIR/ssh/authorized-keys-username` file.

**Related Commands**

- `show ip ssh rsa-authentication` — displays the RSA authorized keys.
- `ip ssh rsa-authentication (Config)` — enables RSA authentication.

**ip ssh server**

Configure an SSH server. SSH server is enabled by default.

**Z9000**

**Syntax**

```
ip ssh server {ciphers cipher-list} {enable | port port-number} [kex key-exchange-algorithm] [mac hmac-algorithm] [version {1 | 2}]
```

| NOTE: | Some of the parameters in this command require licensing to access. For more information, contact your Dell Networking representative. |
To disable SSH server functions, use the `no ip ssh server {ciphers cipher-list} {enable | port port-number} {kex key-exchange-algorithm} {mac hmac-algorithm} [version {1 | 2}]` command.

**Parameters**

**enable**

Enter the key word `enable` to start the SSH server.

**ciphers cipher-list**

Enter the keyword `ciphers` and then a space-delimited list of ciphers that the SSH server supports.

The following ciphers are available:

- 3des-cbc
- aes128-cbc
- aes192-cbc
- aes256-cbc
- aes128-ctr
- aes192-ctr
- aes256-ctr

The default cipher list is used:

- 3des-cbc
- aes128-cbc
- aes192-cbc
- aes256-cbc
- aes128-ctr
- aes192-ctr
- aes256-ctr

**mac hmac-algorithm**

Enter the keyword `mac` then a space-delimited list of hash message authentication code (HMAC) algorithms supported by the SSH server for keying hashing for the message authentication.

The following HMAC algorithms are available:

- hmac-shal
- hmac-shal-96
- hmac-sha2-256
- hmac-sha2-256-96

When FIPS is enabled, the default HMAC algorithm is `hmac-shal-96`.

When FIPS is not enabled, the default HMAC algorithms are the following:

- hmac-md5
- hmac-md5-96
- hmac-shal
- hmac-shal-96
- hmac-sha2-256
- hmac-sha2-256-96

**kex key-exchange-algorithm**

Enter the keyword `kex` and then a space-delimited list of key exchange algorithms supported by the SSH server.
The following key exchange algorithms are available:

- `diffie-hellman-group-exchange-sha1`
- `diffie-hellman-group1-sha1`
- `diffie-hellman-group14-sha1`

When FIPS is enabled, the default key-exchange-algorithm is `diffie-hellman-group14-sha1`.

When FIPS is not enabled, the default key-exchange-algorithms are the following:

- `diffie-hellman-group-exchange-sha1`
- `diffie-hellman-group1-sha1`
- `diffie-hellman-group14-sha1`

```
port port-number (OPTIONAL) Enter the keyword port then the port number of the listening port of
the SSH server. The range is from 1 to 65535. The default is 22.

[version {1 | 2}] (OPTIONAL) Enter the keyword version then the SSH version 1 or 2 to specify
only SSHv1 or SSHv2.
```

**NOTE:** If you enable FIPS mode, you can only select version 2.

**Defaults**

- Default listening port is 22.
- Default cipher list is 3des-cbc,aes128-cbc,aes192-cbc,aes256-cbc,aes128-ctr,aes192-ctr,aes256-ctr.
- When FIPS is enabled, the default is hmac-sha1-96.
- When FIPS is not enabled, the default is hmac-md5,hmac-md5-96,hmac-sha1,hmac-sha1-96,hmac-sha2-256,hmac-sha2-256-96.
- **When FIPS is enabled, the default is** `diffie-hellman-group14-sha1`.
- **When FIPS is not enabled, the default is** `diffie-hellman-group-exchange-sha1,diffie-hellman-group1-sha1,diffie-hellman-group14-sha1`.

**Command Modes**

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>pre-6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command enables the SSH server and begins listening on a port. If a port is not specified, listening is on SSH default port 22.
**NOTE:** Starting with Dell Networking OS Release 9.2(0.0), SSH server is enabled by default.

### Example

```
Dell# conf
Dell(conf)# ip ssh server port 45
Dell(conf)# ip ssh server enable
Dell#
```

### Related Commands
- `show ip ssh` — displays the ssh information.

### ip ssh server vrf

Configure an SSH server on either a specific VRF or a management VRF.

#### Syntax

```
ip ssh server vrf {management | vrf-name}
```

To disable the SSH server configuration, use the `no ip ssh server vrf {management | vrf-name}` command.

#### Parameters

- **vrf management**
  - Enter the key word `vrf` followed by the keyword `management` to configure an SSH server on a management VRF.

- **vrf vrf-name**
  - Enter the key word `vrf` followed by the VRF name to configure an SSH server on that VRF.

#### Defaults

None

#### Command Modes

CONFIGURATION

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S-Series and Z9000.</td>
</tr>
</tbody>
</table>

#### Usage Information

You can enable the SSH server on either a management VRF or a user defined VRF but not both. If no VRF is specified, then the SSH server is enabled on the default VRF.

If the SSH server is enabled on a VRF with name vrf1, then use the following command to restart the SSH server on a VRF with name vrf2: `ip ssh server vrf vrf2`. If the SSH server is enabled on a VRF with name vrf1, then use the following command to restart the SSH server on the default VRF: `ip ssh server vrf`.  

#### Example

- `Dell(conf)#ip ssh server vrf vrf1`
- `Dell(conf)#no ip ssh server vrf`
- `Dell(conf)#ip ssh server vrf management`
- `Dell(conf)#no ip ssh server vrf`

#### Related Commands
- `show ip ssh` — displays the ssh information.
ip ssh source-interface

Specifies an interface’s IP address as the source IP address for an outgoing SSH connections.

Syntax

```
ip ssh source-interface interface
```

To delete a source interface, use the no ip ssh source-interface command.

Parameters

- **interface**
  - Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For a port channel interface, enter the keywords `port-channel` then a number. The range is from 1 to 128.
  - For a Null interface, enter the keyword `null` then the Null interface number.
  - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S-Series and Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

The `source-interface interface` attribute is applicable for both the SSH client as well as the COPY (SCP) commands. Using these attributes the client session tags an error to the user during run time, in case there is a mismatch between this command and the `ip ssh vrf` command.

Example

```
Dell(conf)#ip ssh source-interface tengigabitethernet 1/42
Dell(conf)#do ssh 10.10.10.2 -l admin
Dell(conf)#no ip ssh source-interface
```

ip ssh vrf

Specify a VRF for an outgoing SSH connections.

Syntax

```
ip ssh vrf vrf-name
```

To delete a VRF for an outgoing SSH connection, use the no ip ssh vrf vrf-name command.

Parameters

- **vrf vrf-name**
  - Enter the keyword `vrf` and then the name of the VRF to configure that VRF for an outgoing SSH session.

Defaults

Not configured.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S-Series and Z9000.</td>
</tr>
</tbody>
</table>
show crypto

Display the public part of the SSH host-keys.

Syntax

```
show crypto key mypubkey {rsa | rsa1}
```

Parameters

- **Key**
  - Enter the keyword key to display the host public key.
- **mypubkey**
  - Enter the keyword mypubkey to display the host public key.
- **rsa**
  - Enter the keyword rsa to display the host SSHv2 RSA public key.
- **rsa1**
  - Enter the keyword rsa1 to display the host SSHv1 RSA public key.

Defaults

none

Command Modes

EXEC

Usage Information

This command displays the contents of the flash:/ADMIN_DIR/ssh/authorized-keys.username file.

Example

```
Dell#show ip ssh rsa-authentication my-authorized-keys
ssh-rsa
AAAAB3NzaC1yc2EAAAABIAwAAAIEAyB17l4gFp4r2DRHIvMc1VZd0Sg5QXRV1y1X1JOMeO6Nd0WuYyzzRQ4qIAoBwtno0XfLCBHF3V2hcMIqa2N+CRCnw/zCMlNC9F+qVTdloofsea5r09kS0Xtp0CNFHXZ3NuGCq90v33m9+U9tMwhS8vy8AvxdH4x4km3c3t5Jvc= freedom@poclab4
Dell#
```

Related Commands

- `ip ssh rsa-authentication (Config)`: configures the RSA authorized keys.

**ssh**

Open an SSH connection specifying the hostname, username, encryption cipher, HMAC algorithm, port number, and version of the SSH client.

**Syntax**

```
ssh {hostname | ipv4 address | ipv6 address} [-c encryption cipher | -l username | -m HMAC algorithm | -p port-number | -v {1 | 2}]
```

**Parameters**

- `hostname`: (OPTIONAL) Enter the IP address or the host name of the remote device.
- `vrf instance`: (OPTIONAL) E-Series Only: Enter the keyword vrf then the VRF Instance name to open an SSH connection to that instance.
- `ipv4 address`: (OPTIONAL) Enter the IPv4 address in dotted decimal format A.B.C.D.
- `ipv6-address`: (OPTIONAL) Enter the IPv6 address in the x:xx:xx:xx::xx format then the prefix length in the /x format. The range is from /0 to /128.
- `prefix-length`: (OPTIONAL) Enter the prefix length in the /x format. The range is from /0 to /128.
- `-c encryption cipher`: Enable the "FIPS mode enable", this mode will support only v2 client.
- `no fips mode enable*(disable) will support v1 & v2 client. This comment is applicable for both ciphers & HMAC algorithms:
  - `3des-cbc`: Force ssh to use 3des-cbc encryption cipher.
  - `aes192-cbc`: Force ssh to use aes192-cbc encryption cipher.
-l username  (OPTIONAL) Enter the keyword -l then the user name used in this SSH session. The default is the user name of the user associated with the terminal.

-m HMAC algorithm Enter one of the following HMAC algorithms to use. (For v2 clients only):
- "no fips mode enable"(disable) will support v1 & v2 client.
  - hmac-md5: Force ssh to use hmac-md5 HMAC algorithm.
  - hmac-md5-96: Force ssh to use hmac-md5-96 HMAC algorithm.
  - hmac-shal: Force ssh to use hmac-sha1 HMAC algorithm.
  - hmac-sha1-96: Force ssh to use hmac-sha1-96 HMAC algorithm.
  - hmac-sha2-256: Force ssh to use hmac-sha2-256 HMAC algorithm.
  - hmac-sha2-256-96: Force ssh to use hmac-sha2-256-96 HMAC algorithm.

-p port-number  (OPTIONAL) Enter the keyword -p then the port number. The range is from 1 to 65535. The default is 22.

-v {1 | 2}  (OPTIONAL) Enter the keyword -v then the SSH version 1 or 2. The default is the version from the protocol negotiation.

Defaults As shown in the Parameters section.

Command Modes EXEC Privilege

Command History This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

- 9.0.2.0   Introduced on the S6000.
- 8.3.19.0   Introduced on the S4820T.
- 8.3.11.1   Introduced on the Z9000.
- 8.3.12.0   Added support for the -c and -m parameters on the S4810.
- 8.3.7.0     Introduced on the S4810.
- 7.6.1.0   Introduced on the S-Series.
- 7.5.1.0   Added IPv6 support. Introduced on the C-Series.
- pre-6.1.1.0   Introduced on the E-Series.

Usage Information Dell Networking OS supports both inbound and outbound SSH sessions using IPv4 or IPv6 addressing. Inbound SSH supports accessing the system through the management interface as well as through a physical Layer 3 interface.

Example

Dell#ssh 10.16.151.48 -l anvltest

Trying 10.16.151.48...
01:18:16: %STKUNIT0-M:CP %SEC-5-SSH_USAGE: Initiated SSH Client v2 (FIPS Disabled) to anvltest@10.16.151.48 by default from console anvltest@10.16.151.48's password:
Last login: Thu Jan 5 00:17:47 2012 from login-maa-101
[anvltest@dt-maa-linux-1 ~]# exit
logout
Dell#
Secure DHCP Commands

DHCP as defined by RFC 2131 provides no authentication or security mechanisms. Secure DHCP is a suite of features that protects networks that use dynamic address allocation from spoofing and attacks.

**clear ip dhcp snooping**

Clear the DHCP binding table.

**Syntax**  
clear ip dhcp snooping binding

**Defaults**  
none

**Command Modes**  
EXEC Privilege

**Command History**  
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

Usage Information

When enabled, no learning takes place until you enable snooping on a VLAN. After disabling DHCP Snooping, the binding table is deleted and Option 82, IP Source Guard, and Dynamic ARP Inspection are disabled.

Related Commands

ip dhcp snooping vlan — enables DHCP Snooping on one or more VLANs.

ip dhcp snooping binding

Create a static entry in the DHCP binding table.

Syntax

[no] ip dhcp snooping binding mac address vlan-id vlan-id ip ip-address interface type slot/port lease number

Parameters

mac address Enter the keyword mac then the MAC address of the host to which the server is leasing the IP address.

vlan-id vlan-id Enter the keywords vlan-id then the VLAN to which the host belongs. The range is from 2 to 4094.

ip ip-address Enter the keyword ip then the IP address that the server is leasing.

interface type Enter the keyword interface then the type of interface to which the host is connected.

slot/port Enter the slot and port number of the interface.

lease time Enter the keyword lease then the amount of time the IP address is leased. The range is from 1 to 4294967295.

Defaults

none

Command Modes

EXEC

Version Description
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.8.1.0 Introduced on the C-Series and S-Series.

ip dhcp snooping vlan

Enable DHCP Snooping on one or more VLANs.

Syntax
[no] ip dhcp snooping vlan name

Parameters
name Enter the name of a VLAN on which to enable DHCP Snooping.

Defaults
Disabled.

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.8.1.0 Introduced on the C-Series and S-Series.

Usage Information
When enabled, the system begins creating entries in the binding table for the specified VLANs.

NOTE: Learning only happens if there is a trusted port in the VLAN.

Related Commands
ip dhcp snooping trust — configures an interface as trusted.

show ip dhcp snooping

Display the contents of the DHCP binding table.

Syntax
show ip dhcp snooping binding

Defaults
none

Command Modes
• EXEC
• EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
Role-Based Access Control Commands

With Role-Based Access Control (RBAC), access and authorization is controlled based on a user’s role. Users are granted permissions based on their user roles, not on their individual user ID. User roles are created for job functions and through those roles they acquire the permissions to perform their associated job function.

This section describes the syntax and usage of RBAC-specific commands. You can find information on other related security commands in this chapter:

- `aaa accounting`
- `aaa authentication login`
- `aaa authorization commands`
- `authorization`
- `show accounting`
- `show users`
- `username`

### aaa authorization role-only

Configure authentication to use the user’s role only when determining if access to commands is permitted.

**Syntax**

```
aaa authorization role-only
```

To return to the default setting, use the `no aaa authentication role-only` command.

**Parameters**

- `name`
  
  Enter a text string for the name of the user up to 63 characters. It cannot be one of the system defined roles (sysadmin, secadmin, netadmin, netoperator).

- `inherit existing-role-name`
  
  Enter the `inherit` keyword then specify the system defined role to inherit permissions from (sysadmin, secadmin, netadmin, netoperator).

**Defaults**

- none

**Command Modes**

- CONFIGURATION

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

By default, access to commands are determined by the user’s role (if defined) or by the user’s privilege level. If the `aaa authorization role-only` command is enabled, then only the user’s role is used.

Before you enable role-based only AAA authorization:

1. Locally define a system administrator user role. This will give you access to login with full permissions even if network connectivity to remote authentication servers is not available.
2. Configure login authentication on the console. This ensures that all users are properly identified through authentication no matter the access point.

3. Specify an authentication method (RADIUS, TACACS+, or Local).

4. Specify authorization method (RADIUS, TACACS+ or Local).

5. Verify the configuration has been applied to the console or VTY line.

Related Commands
login authentication, password, radius-server host, tacacs-server host

role
Changes command permissions for roles.

Syntax
role mode (addrole | deleterole) role-name | reset command
To delete access to a command, use the no role mode role-name

Parameters
mode Enter one of the following keywords as the mode for which you are controlling access:
  configure for CONFIGURATION mode
  exec for EXEC mode
  interface for INTERFACE modes
  line for LINE mode
  route-map for Route-map mode
  router for Router mode
addrole Enter the keyword addrole to add permission to the command. You cannot add or delete rights for the sysadmin role.
deleterole Enter the keyword deleterole to remove access to the command. You cannot add or delete rights for the sysadmin role.
role-name Enter a text string for the name of the user role up to 63 characters. These are 3 system defined roles you can modify: secadmin, netadmin, and netoperator.
reset Enter the keyword reset to reset all roles back to default for that command.
command Enter the command’s keywords to assign the command to a certain access level. You can enter one or more keywords.

Defaults
none

Command Modes
CONFIGURATION

Command History
Version Description
9.7(0.0) Introduced on the S6000-ON.
9.5(0.0) Introduced on the Z9000, S6000, S4820T, S4810, and MXL.

Related Commands
userrole

show role
Display information on permissions assigned to a command, including user role and/or permission level.

Syntax
show role mode {mode} {command}
Parameters

command

Enter the command's keywords to assign the command to a certain access level. You can enter one or all of the keywords.

mode mode

Enter keyword then one of the following modes.

- configure
- exec
- interface
- line
- route-map
- router

Defaults

none

Command Modes

EXEC Privilege

</tr>
</tbody>
</table>

Related Commands

userrole, username
**userrole**

Create user roles for the role-based security model.

**Syntax**

```
userrole name inherit existing-role-name
```

To delete a role name, use the no userrole name command. Note that the reserved role names may not be deleted.

**Parameters**

- `name` Enter a text string for the name of the user up to 63 characters. It cannot be one of the system defined roles (sysadmin, secadmin, netadmin, netoperator).

- `inherit existing-role-name` Enter the inherit keyword then specify the system defined role to inherit permissions from (sysadmin, secadmin, netadmin, netoperator).

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

- 9.7(0.0) Introduced on the S6000-ON.
- 9.5(0.0) Introduced on the Z9000, S6000, S4820T, S4810, MXL.

**Usage Information**

Instead of using the system defined user roles, you can create a new user role that best matches your organization. When you create a new user role, you first inherit permissions from one of the system defined roles. Otherwise you would have to create a user role from scratch. You then restrict commands or add commands to that role. For information about this topic, See Modifying Command Permissions for Roles.

**NOTE:** You can change user role permissions on system pre-defined user roles or user-defined user roles.

**Important Points to Remember**

Consider the following when creating a user role:

- Only the system administrator and user-defined roles inherited from the system administrator can create roles and usernames. Only the system administrator, security administrator, and roles inherited from these can use the role command to modify command permissions. The security administrator and roles inherited by security administrator can only modify permissions for commands they already have access to.

- Make sure you select the correct role you want to inherit.

**NOTE:** If you inherit a user role, you cannot modify or delete the inheritance. If you want to change or remove the inheritance, delete the user role and create it again. If the user role is in use, you cannot delete the user role.

**Related Commands**

- `role mode ( { addrole | deleterole } role-name ) | reset` command - Modifies (adds or deletes) command permissions for newly created user roles and system defined roles.
Service Provider Bridging

Service provider bridging is composed of virtual local area network (VLAN) Stacking, Layer 2 Protocol Tunneling, and Provider Backbone Bridging as described in the Dell Networking OS Configuration Guide Service Provider Bridging chapter.

This chapter includes command line information (CLI) for the Dell Networking operating software Layer 2 Protocol Tunneling (L2PT). L2PT enables protocols to tunnel through an 802.1q tunnel.

Dell Networking OS supports L2PT on Dell Networking OS.

For more information, refer to VLAN Stacking, Spanning Tree Protocol (STP), and GARP VLAN Registration (GVRP).

Important Points to Remember

- L2PT is enabled at the interface VLAN-Stack VLAN level. For more information about Stackable VLAN (VLAN-Stacking) commands, refer to VLAN Stacking.
- The default behavior is to disable protocol packet tunneling through the 802.1q tunnel.
- Rate-limiting is required to protect against bridge protocol data units (BPDU) attacks.
- A port channel (including through link aggregation control protocol [LACP]) can be configured as a VLAN-Stack access or trunk port.
- Address resolution protocol (ARP) packets work as expected across the tunnel.
- Far-end failure detection (FEFD) works the same as with Layer 2 links.
- Protocols that use Multicast MAC addresses (for example, open shortest path first [OSPF]) work as expected and carry over to the other end of the VLAN-Stack VLAN.

Topics:

- debug protocol-tunnel
- protocol-tunnel
- protocol-tunnel destination-mac
- protocol-tunnel enable
- protocol-tunnel rate-limit
- show protocol-tunnel

debug protocol-tunnel

Enable debugging to ensure incoming packets are received and rewritten to a new MAC address.

Syntax

debbug protocol-tunnel interface {in | out | both} [vlan vlan-id] [count value]

To disable debugging, use the no debug protocol-tunnel interface {in | out | both} [vlan vlan-id] [count value] command.

Parameters

- interface
  - Enter one of the following interfaces and slot/port information:
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
    - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
    - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
in | out | both Enter the keyword in, out, or both to debug incoming interfaces, outgoing interfaces, or both incoming and outgoing interfaces.

vlan vlan-id Enter the keyword vlan then the VLAN ID. The range is from 1 to 4094.

count value Enter the keyword count then the number of debug outputs. The range is from 1 to 100.

Defaults Debug disabled.

**protocol-tunnel**

Enable protocol tunneling on a stacked (Q-in-Q) VLAN for specified protocol packets.

**Syntax**

```
protocol-tunnel {rate-limit rate | stp}
```

To disable protocol tunneling for a Layer 2 protocol, use the no protocol-tunnel command.

**Parameters**

- **rate-limit rate** Enter the keyword rate-limit followed by a number for the rate-limit for tunneled packets on the VMAN. The range is from 64 to 320.
- **stp** Enter the keyword stp to enable protocol tunneling on a spanning tree, including STP, MSTP, RSTP, and PVST.

**Defaults**

none

**Command Modes**

CONF-IF-VLAN

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>

</tr>
<tr>
<td>8.5.1.1</td>
<td>Added support for 802.1X, E-LMI, GMRP, GVRP, LLDP, LACP, MMRP, MVRP, and OAM 802.3ah protocol traffic to the E-Series ExaScale.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the C-Series, E-Series, and E-Series ExaScale.</td>
</tr>
</tbody>
</table>
**Example**

Dell#conf
Dell(conf)#interface vlan 2
Dell(conf-if-vl-2)#vlan-stack compatible
Dell(conf-if-vl-2)#member Te 1/2-3
Dell(conf-if-vl-2)#protocol-tunnel stp
Dell(conf-if-vl-2)#protocol-tunnel enable

**Related Command**

- `show protocol-tunnel` — displays tunneling information for all VLANs.

---

## protocol-tunnel destination-mac

Overwrite the BPDU destination MAC address with a specific value.

**Syntax**

```
protocol-tunnel destination-mac xstp address
```

**Parameters**

- `stp` Change the default destination MAC address used for L2PT to another value.

**Defaults**

The default destination MAC is 01:01:e8:00:00:00.

</tbody>
</table>

Dell Networking OS must have the default CAM profile with the default microcode before you enable L2PT.

**protocol-tunnel rate-limit**

Enable traffic rate limiting per box.

**Syntax**

```
protocol-tunnel rate-limit rate
```

To reset the rate limit to the default, use the `no protocol-tunnel rate-limit rate` command.

**Parameters**

- `rate`
  
Enter the rate in frames per second. The range is from 75 to 3000. The default is 75.

**Defaults**

75 frames per second.

**Example**

```
Dell#
Dell(conf)#protocol-tunnel rate-limit 1000
Dell(conf)#
```

**Related Commands**

- `show protocol-tunnel` — displays tunneling information for all VLANs.
- `show running-config` — displays the current configuration.
show protocol-tunnel

Display protocol tunnel information for all or a specified VLAN-Stack VLAN.

Syntax

```
show protocol-tunnel [vlan vlan-id]
```

Parameters

- **vlan vlan-id** (OPTIONAL) Enter the keyword `vlan` then the VLAN ID to display information for the one VLAN. The range is from 1 to 4094.

Defaults

- none

Command Modes

- EXEC

Command History

Example

```
Dell#show protocol-tunnel
System Rate-Limit: 75 frames/second
VLAN  Protocols   Interface
1000  STP, PVST   Te 5/7, Te 5/6
1001  LLDP, GVRP  Te 5/7, Te 5/6
1002  MMRP, MVRP  Te 5/7, Te 5/6
1003  LACP, DOT1X Te 5/7, Te 5/6
1004  OAM, PAUSE  Te 5/7, Te 5/6
1005  E-LMI       Te 5/7, Te 5/6
```

Example (Specific VLAN)

```
Dell#show protocol-tunnel vlan 2
System Rate-Limit: 1000 Frames/second
Interface  Vlan  Protocol(s)
Te1/2      2     STP, PVST
Dell#
```

Related Commands

- `show running-config` — displays the current configuration.
sFlow

The Dell Networking operating software (OS) supports sFlow commands on Dell Networking OS.

Dell Networking operating software sFlow monitoring system includes an sFlow Agent and an sFlow Collector.

- The sFlow Agent combines the flow samples and interface counters into sFlow datagrams and forwards them to the sFlow Collector.
- The sFlow Collector analyses the sFlow Datagrams received from the different devices and produces a network-wide view of traffic flows.

Important Points to Remember

- Dell Networking recommends that the sFlow Collector be connected to the Dell Networking chassis through a line card port rather than the route processor module (RPM) Management Ethernet port.
- Dell Networking operating software exports all sFlow packets to the sFlow Collector. A small sampling rate can equate to many exported packets. A backoff mechanism is automatically applied to reduce this amount. Some sampled packets may be dropped when the exported packet rate is high and the backoff mechanism is about to or is starting to take effect. The dropEvent counter, in the sFlow packet, is always zero.
- sFlow sampling is done on a per-port basis.
- Community list and local preference fields are not filled up in the extended gateway element in the sFlow datagram.
- The 802.1P source priority field is not filled up in the extended switch element in the sFlow datagram.
- Only Destination and Destination Peer AS numbers are packed in the dst-as-path field in the extended gateway element.
- If the packet being sampled is redirected using policy-based routing (PBR), the sFlow datagram may contain incorrect extended gateway/router information.
- sFlow does not support packing extended information for IPv6 packets. Only the first 128 bytes of the IPv6 packet is shipped in the datagram.
- The source virtual local area network (VLAN) field in the extended switch element is not packed if there is a routed packet.
- The destination VLAN field in the extended switch element is not packed if there is a multicast packet.
- The sFlow sampling functionality is supported only for egress traffic and not for ingress traffic.
- The maximum number of packets that can be sampled and processed per second is:
  - 7500 packets when no extended information packing is enabled.
  - 7500 packets when only extended-switch information packing is enabled (refer to sflow extended-switch enable).

sflow collector

Configure a collector device to which sFlow datagrams are forwarded.

Syntax

sflow collector {ip-address | ipv6-address} agent-addr {ip-address | ipv6-address} [number [max-datagram-size number]] | [max-datagram-size number] [vrf management]

To delete a configured collector, use the no sflow collector {ip-address | ipv6-address} agent-addr {ipv4-address | ipv6-address} [number [max-datagram-size number]] | [max-datagram-size number] [vrf management] command.

Parameters

- **sflow collector ip-address | ipv6-address**: Enter the IP address of the collector in dotted decimal format for IPv4 or x:x:x:x format for IPv6.
  
  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **agent-addr ip-address | ipv6-address**: Enter the keyword agent-addr followed by the sFlow agent IP address in dotted decimal format for IPv4 or x:x:x:x format for IPv6.
  
  **NOTE:** The :: notation specifies successive hexadecimal fields of zeros.

- **number**: (OPTIONAL) Enter the user datagram protocol (UDP) port number. The range is from 0 to 65535. The default is 6343.

- **max-datagram-size number**: (OPTIONAL) Enter the keyword max-datagram-size then the size number in bytes. The range is from 400 to 1500. The default is 1400.

- **vrf management**: (OPTIONAL) Enter the keyword vrf followed by the keyword management to configure the collector device corresponding to the default VRF and the management VRF respectively.

Defaults

Not configured.

<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
Usage Information
You can configure up to two sFlow collectors (IPv4 or IPv6). If two collectors are configured, traffic samples are sent to both.

The sFlow agent address is carried in a field in SFlow packets and is used by the collector to identify the sFlow agent.

In sFlow, the agent address is a single invariant IPv4 or IPv6 address used to identify the agent to the collector. It is usually assigned the address of a loopback interface on the agent, which provides invariance. The agent address is carried as a field in the payload of the sFlow packets.

As part of the sFlow-MIB, if the SNMP request originates from a configured collector, Dell Networking OS returns the corresponding configured agent IP in the MIB requests. Dell Networking OS checks to ensure that two entries are not configured for the same collector IP with a different agent IP. Should that happen, Dell Networking OS generates the following error: %Error: Different agent-addr attempted for an existing collector.

Example
```
Dell(conf)#sflow collector 10.1.1.25 agent-addr 10.1.1.10 vrf management
```

sflow enable (Global)

Enable sFlow globally.

Syntax
```
sflow enable
```
To disable sFlow, use the `no sflow enable` command.

Defaults
Disabled.

Usage Information
sFlow is disabled by default. In addition to this command, sFlow needs to be enabled on individual interfaces where sFlow sampling is desired.

Related Commands
- `sflow enable (Interface)` — enables sFlow on interfaces.
sflow ingress-enable

Enable sFlow ingress on interfaces.

Syntax

```
sflow ingress-enable
```

To disable sFlow, use the `no sflow ingress enable` command.

Defaults

Disabled.

Command Modes

INTERFACE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S-Series, Z-Series, and MXL switch.</td>
</tr>
</tbody>
</table>

Usage Information

When you enable ingress sFlow on an interface, flow sampling is done on any incoming traffic.

**NOTE:** After a physical port is a member of a LAG, it inherits the sFlow configuration from the LAG port.

Related Commands

- `sflow enable (Global)` — turns sFlow globally.

sflow extended-switch enable

Enable packing information on a switch only.

Syntax

```
sflow extended-switch enable
```

To disable packing information, use the `no sflow extended-switch [enable]` command.

Parameters

```
enable
```

Enter the keyword `enable` to enable global extended information.

Defaults

Disabled.

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Sample-rate is the average number of packets skipped before the sample is taken. This command changes the global default sampling rate. You can configure an interface to use a different sampling rate than the global sampling rate. If the value entered is not a correct power of 2, the command generates an error message with the previous and next power of 2 value. Select one of these two packet numbers and re-enter the command.

Related Commands

- **sflow sample-rate (Interface)** — changes the interface sampling rate.

sflow sample-rate (Interface)

Change the interface default sampling rate.

Syntax

```
sflow sample-rate value
```

To return to the default sampling rate, use the `no sflow sample-rate` command.
Parameters

value

Enter the sampling rate value. For the C-Series and S-Series, the range is from 256 to 8388608 packets. Enter values in powers of 2 only; for example, 4096, 8192, 16384, etc. The default is 32768 packets.

Defaults

The Global default sampling.

Usage Information

This command changes the sampling rate for an interface. By default, the sampling rate of an interface is set to the same value as the current global default sampling rate. If the value entered is not a correct power of 2, the command generates an error message with the previous and next power-of-2 value. Select one of these two number and re-enter the command.

Related Commands

sflow sample-rate (Global) — changes the sampling rate globally.

show sflow

Display the current sFlow configuration.

Syntax

show sflow [interface]

Parameters

interface

(OPTIONAL) Enter the following keywords and slot/port or number information:

- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1. The port range is 0.
- For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
- For a 100/1000 Ethernet interface, enter the keyword GigabitEthernet then the slot/port information.

Command Modes

- EXEC
- EXEC Privilege
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The dropEvent counter (sFlow samples dropped due to sub-sampling) shown in the following example always displays a value of zero.

```
Dell#show sflow
sFlow services are enabled
Egress Management Interface sFlow services are disabled
Global default sampling rate: 32768
Global default counter polling interval: 20
Global default extended maximum header size: 128 bytes
Global extended information enabled: none
1 collectors configured
Collector IP addr: 100.1.1.1, Agent IP addr: 1.1.1.2, UDP port: 6343
VRF: Default
0 UDP packets exported
0 UDP packets dropped
0 sFlow samples collected

stack-unit 1 Port set 1
  Te 1/1: configured rate 16384, actual rate 16384  <<< sampling rate based on line speed if global sampling rate is default
Dell#
```

**show sflow linecard**

Display the sFlow information on a line card.

**Syntax**

```
show sflow linecard {slot number}
```

**Parameters**

- **slot number**  
  (OPTIONAL) Enter a slot number to view information on the line card in that slot.

**Command Modes**

- EXEC
- EXEC Privilege

**Usage Information**

The dropEvent counter (sFlow samples dropped due to sub-sampling) shown in the following example below always displays a value of zero.

**Example**

```
Dell#show sflow linecard 1
Linecard 1
 Samples rcvd from h/w : 165
 Samples dropped for sub-sampling : 0
 Total UDP packets exported : 0
 UDP packets exported via RPM : 77
 UDP packets dropped : 0
Dell#
```
Simple Network Management Protocol (SNMP) and Syslog

This chapter contains commands to configure and monitor the simple network management protocol (SNMP) v1/v2/v3 and Syslog. Both features are supported on Dell Networking OS.

The chapter contains the following sections:
- SNMP Commands
- Syslog Commands

Topics:
- SNMP Commands
- Syslog Commands

SNMP Commands

The following SNMP commands are available in the Dell Networking OS.

The simple network management protocol (SNMP) is used to communicate management information between the network management stations and the agents in the network elements. Dell Networking OS supports SNMP versions 1, 2c, and 3, supporting both read-only and read-write modes. Dell Networking OS sends SNMP traps, which are messages informing an SNMP management system about the network. Dell Networking OS supports up to 16 SNMP trap receivers.

Important Points to Remember

- Typically, 5-second timeout and 3-second retry values on an SNMP server are sufficient for both LAN and WAN applications. If you experience a timeout with these values, the recommended best practice on Dell Networking switches (to accommodate their high port density) is to increase the timeout and retry values on your SNMP server to the following:
  - SNMP Timeout — greater than 3 seconds.
  - SNMP Retry count — greater than 2 seconds.
- If you want to query an E-Series switch using SNMP v1/v2/v3 with an IPv6 address, configure the IPv6 address on a non-management port on the switch.
- If you want to send SNMP v1/v2/v3 traps from an E-Series using an IPv6 address, use a non-management port.
- SNMP v3 informs are not currently supported with IPv6 addresses.
- If you are using access control lists (ACLs) in an SNMP v3 configuration, group ACL overrides user ACL if the user is part of that group.
- SNMP operations are not supported on a virtual local area network (VLAN).

show snmp

Display the status of SNMP network elements.

Syntax

    show snmp

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
7.5.1.0 | Introduced on the C-Series.

**E-Series legacy command**

<table>
<thead>
<tr>
<th>Example</th>
</tr>
</thead>
</table>
Dell# show snmp
32685 SNMP packets input
   0 Bad SNMP version errors
   0 Unknown community name
   0 Illegal operation for community name supplied
   0 Encoding errors
96988 Number of requested variables
   0 Number of altered variables
31681 Get-request PDUs
   968 Get-next PDUs
   0 Set-request PDUs
61727 SNMP packets output
   0 Too big errors (Maximum packet size 1500)
   9 No such name errors
   0 Bad values errors
   0 General errors
32649 Response PDUs
29078 Trap PDUs
Dell#

**Related Commands**
- snmp-server community — enables the SNMP and set community string.

**show snmp engineID**

Display the identification of the local SNMP engine and all remote engines that are configured on the router.

**Syntax**

```
show snmp engineID
```

**Command Modes**
- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**
--- | ---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
7.6.1.0 | Introduced on the S-Series.
show snmp group

Display the group name, security model, status, and storage type of each group.

Syntax

show snmp group

Command Modes

- EXEC
- EXEC Privilege

E-Series legacy command

Usage Information

The following Example displays a group named ngroup. The ngroup has a security model of version 3 (v3) with authentication (auth), the read and notify name is nview with no write view name specified, and finally the row status is active.

Example

Dell#show snmp group
groupname: vlv2creadg    security model: v1
readview : vlv2cdefault  writeview: no write view specified
notifyview: vlv2cdefault  context: no context specified
row status: active
Dell#

Related Commands

snmp-server group — configures an SNMP server group.
show snmp user

Display the information configured on each SNMP user name.

Syntax

    show snmp user

Command Modes

</tbody>
</table>
### snmp-server community

Configure a new community string access for SNMPv1 v2 and v3.

**Syntax**

```
snmp-server community community-name {ro | rw} [ipv6 ipv6-access-list-name [ipv6 ipv6-access-list-name | access-list-name | security-name name] | security-name name [ipv6 ipv6-access-list-name | access-list-name | security-name name] [access-list-name [ipv6 ipv6-access-list-name | access-list-name | security-name name]]]
```

To remove access to a community, use the `no snmp-server community community-string {ro | rw} [security-name name [access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]]` command.

**Parameters**

- `community-name` Enter a text string (up to 20 characters long) to act as a password for SNMP.
- `ro` Enter the keyword `ro` to specify read-only permission.
- `rw` Enter the keyword `rw` to specify read-write permission.
- `ipv6 access-list-name` (Optional) Enter the keyword `ipv6` then an IPv6 ACL name (a string up to 16 characters long).
- `security-name name` (Optional) Enter the keywords `security-name` then the security name as defined by the community MIB.
- `access-list-name` (Optional) Enter a standard IPv4 access list name (a string up to 16 characters long).

**Defaults**

none

<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

### Usage Information

The following example configures a community named **public** that is mapped to the security named **guestuser** with Read Only (ro) permissions.

```plaintext
Dell#config
Dell(conf)# snmp-server community public ro
Dell(conf)# snmp-server community guest ro security-name guestuser
Dell(conf)#
```

The `security-name` parameter maps the community string to an SNMPv3 user/security name as defined by the community MIB.

If a community string is configured without a `security-name` (for example, `snmp-server community public ro`), the community is mapped to a default security-name/group:

- `v1v2creadu / v1v2creadg` — maps to a community with `ro` (read-only) permissions.
- `v1v2cwriteu/ v1v2cwriteg` — maps to a community with `rw` (read-write) permissions.

### Example

```plaintext
Dell(conf)# snmp-server community public ro
Dell(conf)# snmp-server community guest ro security-name guestuser
```

### Example

```plaintext
Dell(conf)# ip access-list standard snmp-ro-acl
Dell(config-std-nacl)# seq 5 permit host 10.10.10.224
Dell(config-std-nacl)# seq 10 deny any count
`

```plaintext
Dell(conf)# snmp-server community guest ro snmp-ro-acl
Dell(conf)#
```

### Related Commands

- `ip access-list standard` — names (or selects) a standard access list to filter based on IP address.
- `ipv6 access-list` — configures an access list based on IPv6 addresses or protocols.
- `show running-config` — displays the current SNMP configuration and defaults.

### snmp-server contact

Configure contact information for troubleshooting this SNMP node.

```plaintext
Syntax

```

```

```plaintext
snmp-server contact text
```

```plaintext
```
To delete the SNMP server contact information, use the `no snmp-server contact` command.

**Parameters**

| text | Enter an alphanumeric text string, up to 55 characters long. |

**Defaults**

none

**Command Modes**

CONFIGURATION

</table>

**E-Series legacy command**

`snmp-server enable traps [notification-type] [notification-option]`

Enable SNMP traps.

**Syntax**

To disable traps, use the `no snmp-server enable traps [notification-type] [notification-option]` command.

**Parameters**

- **notification-type**
  - Enter the type of notification from the following list:
    - bgp — Notification of changes in the BGP process.
    - config — Notification of changes to the startup or running configuration.
    - ecfm — Notification of changes to ECFM.
    - ecmp — Enable an ECMP trap to notify of ECMP or link bundle traffic imbalances.
    - envmon — For Dell Networking device notifications when an environmental threshold is exceeded.
    - isis — Notification of intermediate service traps.
    - lacp — Notification of changes.
    - snmp — Notification of RFC 1157 traps.
    - stp — Notification of a state change in the spanning tree protocol (RFC 1493).
    - vlt — Notification of virtual link trunking.
    - vrrp — Notification of a state change in a VRRP group.
    - xstp — Notification of a state change in MSTP (802.1s), RSTP (802.1w), and PVST+.

- **notification-option**
  - For the envmon notification-type, enter one of the following optional parameters:
    - cam-utilization
    - fan
    - supply
    - temperature
For the snmp notification-type, enter one of the following optional parameters:
- authentication
- coldstart
- linkdown
- linkup

Defaults
Not enabled.

</tr>
</tbody>
</table>

Usage Information
Dell Networking OS supports up to 16 SNMP trap receivers.
If you do not configure this command, no traps controlled by this command are sent. If you do not specify a notification-type and notification-option, all traps are enabled.

Related Commands
- snmp-server community — enables SNMP and sets the community string.

snmp-server engineID

Configure the name for both the local and remote SNMP engines on the router.

Syntax
snmp-server engineID [local engineID] [remote ip-address udp-port port-number engineID]

To return to the default, use the no snmp-server engineID [local engineID] [remote ip-address udp-port port-number engineID] command.

Parameters
- local engineID
  - Enter the keyword local followed by the engine ID number that identifies the copy of the SNMP on the local device.
  - Format (as specified in RFC 3411): 12 octets.
  - The first four octets are set to the private enterprise number.
  - The remaining eight octets are the MAC address of the chassis.
remote ip-address

Enter the keyword remote followed by the IP address that identifies the copy of the SNMP on the remote device.

udp-port port-number engineID

Enter the keywords udp-port followed by the user datagram protocol (UDP) port number on the remote device. The range is from 0 to 65535. The default is 162.

Defaults

As above.

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

Changing the value of the SNMP Engine ID has important side effects. A user’s password (entered on the command line) is converted to a message digest algorithm (MD5) or secure hash algorithm (SHA) security digest. This digest is based on both the password and the local Engine ID. The command line password is then destroyed, as required by RFC 2274. Because of this deletion, if the local value of the Engine ID changes, the security digests of SNMPv3 users is invalid and the users will have to be reconfigured.

For the remote Engine ID, the host IP and UDP port are the indexes to the command that are matched to either overwrite or remove the configuration.

Related Commands

- `show snmp engineID` — displays the SNMP engine and all the remote engines that are configured on the router.
- `show running-config snmp` — displays the SNMP running configuration.

**snmp-server group**

Configure a new SNMP group or a table that maps SNMP users to SNMP views.

**Syntax**

```
snmp-server group [group_name {1 | 2c | 3 {auth | noauth | priv}}] [read name] [write name] [notify name] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]
```

To remove a specified group, use the `no snmp-server group [group_name {v1 | v2c | v3 {auth | noauth | priv}}] [read name] [write name] [notify name] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]` command.

**Parameters**

- **group_name**
  - Enter a text string (up to 20 characters long) as the name of the group. The following groups are created for mapping to read/write community/security-names (defaults):
    - `vlv2creadg` — maps to a community/security-name with ro permissions.
**1v2write** — maps to a community/security-name rw permissions.

| 1 | 2c | 3 |

(OPTIONAL) Enter the security model version number (1, 2c, or 3):
- 1 is the least secure version.
- 3 is the most secure of the security modes.
- 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

The default is 1.

**auth**

(OPTIONAL) Enter the keyword auth to specify authentication of a packet without encryption.

**noauth**

(OPTIONAL) Enter the keyword noauth to specify no authentication of a packet.

**priv**

(OPTIONAL) Enter the keyword priv to specify both authentication and then scrambling of the packet.

**read name**

(OPTIONAL) Enter the keyword read then a name (a string of up to 20 characters long) as the read view name. The default is GlobalView and is assumed to be every object belonging to the internet (1.3.6.1) OID space.

**write name**

(OPTIONAL) Enter the keyword write then a name (a string of up to 20 characters long) as the write view name.

**notify name**

(OPTIONAL) Enter the keyword notify then a name (a string of up to 20 characters long) as the notify view name.

**access access-list-name**

(Optional) Enter the standard IPv4 access list name (a string up to 16 characters long).

**ipv6 access-list-name**

(Optional) Enter the keyword ipv6 then the IPv6 access list name (a string up to 16 characters long).

**ipv6 access-list-name**

(Optional) Enter both an IPv4 and IPv6 access list name.

**Defaults**

As above.

**Command Modes**

CONFIGURATION

**Command History**

</tr>
</tbody>
</table>

**Usage Information**

The following Example specifies the group named harig as a version 3 user requiring both authentication and encryption and read access limited to the read named rview.

**NOTE:** The number of configurable groups is limited to 16 groups.
Example

Dell#conf
Dell(conf)# snmp-server group harig 3 priv read rview
Dell#

Related Commands

show snmp group — displays the group name, security model, view status, and storage type of each group.
show running-config — displays the SNMP running configuration.

snmp-server host

Configure the recipient of an SNMP trap operation.

Syntax

snmp-server host ip-address | ipv6-address traps | informs [version 1 | 2c | 3] [auth | no auth | priv] [community-string] [udp-port port-number] [notification-type]

To remove the SNMP host, use the no snmp-server host ip-address traps | informs [version 1 | 2c | 3] [auth | noauth | priv] [community-string] [udp-port number] [notification-type] command.

Parameters

ip-address 

Enter the keyword host then the IP address of the host (configurable hosts is limited to 16).

ipv6-address 

Enter the keyword host then the IPv6 address of the host in the x:x:x:x::x format.

NOTE: The :: notation specifies successive hexadecimal fields of zero.

traps

(Optional) Enter the keyword traps to send trap notifications to the specified host. The default is traps.

informs

(Optional) Enter the keyword informs to send inform notifications to the specified host. The default is traps.

version 1 | 2c | 3

(Optional) Enter the keyword version to specify the security model then the security model version number 1, 2c, or 3:

- Version 1 is the least secure version.
- Version 3 is the most secure of the security modes.
- Version 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.

The default is version 1.

auth

(Optional) Enter the keyword auth to specify authentication of a packet without encryption.

noauth

(Optional) Enter the keyword noauth to specify no authentication of a packet.

priv

(Optional) Enter the keyword priv to specify both authentication and then scrambling of the packet.

community-string

Enter a text string (up to 20 characters long) as the name of the SNMP community.

NOTE: For version 1 and version 2c security models, this string represents the name of the SNMP community. The string can be set using this command; however, Dell Networking OS recommends setting the community string using the snmp-server community command before executing this command. For version 3 security model, this string is the USM user security name.

udp-port port-number

(Optional) Enter the keywords udp-port followed by the port number of the remote host to use. The range is from 0 to 65535. The default is 162.

notification-type

(Optional) Enter one of the following keywords for the type of trap to be sent to the host:
- bgp — Enable BGP state change traps.
- ecfm — Enable ECFM state change traps.
- entity — Enable entity change traps.
- envmon — Enable SNMP environmental monitor traps.
- eoam — Enable EOAM state change traps
- ets — Enable ets traps
- fips — Enable FIP Snooping state change traps
- lacp — Enable LACP state change traps.
- isis — Enable ISIS adjacency change traps
- pfc — Enable pfc traps
- snmp — Enable SNMP trap
- stp — Enable 802.1d state change traps
- vlt — Enable VLT traps
- vrrp — Enable VRRP state change traps
- xstp — Enable 802.1is, 802.1w, and PVST+ state change traps

The default is all trap types are sent to host.

**Defaults**
As above.

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4.(0.0)</td>
<td>Added support for VRF.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.1(0.0)</td>
<td>Added support for config and ecmp traps.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>

<td>7.6.1.0</td>
<td>Added support for STP and xSTP notification types. Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
In order to configure the router to send SNMP notifications, enter at least one `snmp-server host` command. If you enter the command with no keywords, all trap types are enabled for the host. If you do not enter an `snmp-server host` command, no notifications are sent.

In order to enable multiple hosts, issue a separate `snmp-server host` command for each host. You can specify multiple notification types in the command for each host.

When multiple `snmp-server host` commands are given for the same host and type of notification (trap or inform), each succeeding command overwrites the previous command. Only the last `snmp-server host` command will be in effect. For example, if you enter an `snmp-server host inform` command for a host and then enter another `snmp-server host inform` command for the same host, the second command replaces the first command.

The `snmp-server host` command is used with the `snmp-server enable` command to specify which SNMP notifications are sent globally. For a host
to receive most notifications, at least one snmp-server enable command and the snmp-server host command for that host must be enabled.

NOTE: For v1 / v2c trap configuration, if the community-string is not defined using the snmp-server community command prior to using this command, the default form of the snmp-server community command automatically is configured with the community-name the same as specified in the snmp-server host command.

Configuring Informs

To send an inform, use the following steps:
1. Configure a remote engine ID.
2. Configure a remote user.
3. Configure a group for this user with access rights.
4. Enable traps.
5. Configure a host to receive informs.

E-Series legacy command

snmp-server packetsize

Set the largest SNMP packet size permitted. When the SNMP server is receiving a request or generating a reply, use the snmp-server packetsize global configuration command.

Syntax

```
snmp-server packetsize byte-count
```
Parameters  

byte-count  
Enter one of the following values 8, 16, 24 or 32. Packet sizes are 8000 bytes, 16000 bytes, 32000 bytes, and 64000 bytes.

Defaults  

8

E-Series legacy command

snmp-server trap-source

Configure a specific interface as the source for SNMP traffic.

Syntax  

snmp-server trap-source interface

To disable sending traps out a specific interface, use the no snmp trap-source command.

Parameters  

interface  
Enter the following keywords and slot/port or number information:
- For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
- For a port channel interface, enter the keywords port-channel then a number.
- For a Null interface, enter the keyword null then the Null interface number.
- For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults  
The IP address assigned to the management interface is the default.

Command Modes

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**E-Series legacy command**

**Usage Information**

To enable this `snmp-server trap-source` command, configure an IP address on the interface and enable the interface configured as an SNMP trap source.

**Related Commands**

- `snmp-server community` — sets the community string.

---

### snmp-server user

Configure a new user to an SNMP group.

**Syntax**

```plaintext
snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv {des56 | aes128} priv password] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]
```

To remove a user from the SNMP group, use the `no snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv {des56 | aes128} priv password] [access access-list-name | ipv6 access-list-name | access-list-name ipv6 access-list-name]` command.

**Parameters**

- **name**
  
  Enter the name of the user (not to exceed 20 characters), on the host that connects to the agent.

- **group_name**
  
  Enter a text string (up to 20 characters long) as the name of the group. The following groups are created for mapping to read/write community/security-names (defaults):
  - `v1v2creadu` — maps to a community with `ro` permissions.
  - `v1v2cwriteu` — maps to a community `rw` permissions.

- **remote ip-address**
  
  Enter the keywords `udp-port` then the user datagram protocol (UDP) port number on the remote device. The range is from 0 to 65535. The default is 162.

- **udp-port port-number**
  
  Enter the keywords `udp-port` then the UDP (User Datagram Protocol) port number on the remote device. The range is from 0 to 65535. The default is 162.

- **1 | 2c | 3**
  
  (OPTIONAL) Enter the security model version number (1, 2c, or 3):
  - 1 is the least secure version.
  - 3 is the most secure of the security modes.
  - 2c allows transmission of informs and counter 64, which allows for integers twice the width of what is normally allowed.
  
  The default is 1.

- **encrypted**
  
  (OPTIONAL) Enter the keyword `encrypted` to specify the password appear in encrypted format (a series of digits, masking the true characters of the string).

- **auth**
  
  (OPTIONAL) Enter the keyword `auth` to specify authentication of a packet without encryption.

- **md5 | sha**
  
  (OPTIONAL) Enter the keyword `md5` or `sha` to designate the authentication level.
auth-password  (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the agent to receive packets from the host. Minimum: eight characters long.

priv  (OPTIONAL) Enter the keywords priv to initiate a privacy authentication level setting.

des56 | aes128  (OPTIONAL) Enter the keyword des56 or aes128 to specify the encryption mode.

priv password  (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the host to encrypt the contents of the message it sends to the agent. Minimum: eight characters long.

access access-list-name  (Optional) Enter the standard IPv4 access list name (a string up to 16 characters long).

ipv6 access-list-name  (Optional) Enter the keyword ipv6 then the IPv6 access list name (a string up to 16 characters long).

access-list-name ipv6 access-list-name  (Optional) Enter both an IPv4 and IPv6 access list name.

Defaults  As above.

Command Modes  CONFIGURATION

Command History  This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
</tbody>
</table>

Usage Information

NOTE: For IPv6 ACLs, only IPv6 and UDP types are valid for SNMP. TCP and ICMP rules are not valid for SNMP. In IPv6 ACLs port rules are not valid for SNMP.

No default values exist for authentication or privacy algorithms and no default password exists. If you forget a password, you cannot recover it; the user must be reconfigured. You can specify either a plain-text password or an encrypted cypher-text password. In either case, the password is stored in the configuration in an encrypted form and displayed as encrypted in the show running-config command.

If you have an encrypted password, you can specify the encrypted string instead of the plain-text password. The following command is an Example of how to specify the command with an encrypted string.

NOTE: The number of configurable users is limited to 16.
snmp-server user (for AES128-CFB Encryption)

Specify that AES128-CFB encryption algorithm needs to be used for transmission of SNMP information. The Advanced Encryption Standard (AES) Cipher Feedback (CFB) 128-bit encryption algorithm is in compliance with RFC 3826. RFCs for SNMPv3 define two authentication hash algorithms, namely, HMAC-MD5-96 and HMAC-SHA1-96. These are the full forms or editions of the truncated versions, namely, HMAC-MD5 and HMAC-SHA1 authentication algorithms.

Z9000

Syntax

```
snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv {des56 | aes128-cfb} priv-password] [access access-list-name | ipv6 access-list-name ipv6 access-list-name]
```

To remove a user from the SNMP group, use the no snmp-server user name {group_name remote ip-address udp-port port-number} [1 | 2c | 3] [encrypted] [auth {md5 | sha} auth-password] [priv {des56 | aes128-cfb} priv-password] [access access-list-name | ipv6 access-list-name ipv6 access-list-name] command.

Parameters

- **auth-password** (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the agent to receive packets from the host and to send packets to the host. Minimum: eight characters long.
- **aes128** (OPTIONAL) Enter the keyword aes128 to initiate the AES128-CFB encryption algorithm for transmission of SNMP packets.
- **priv-password** (OPTIONAL) Enter a text string (up to 20 characters long) password that enables the host to encrypt the contents of the message it sends to the agent and to decrypt the contents of the message it receives from the agent. Minimum: eight characters long.

Defaults

If no authentication or privacy option is configured, then the messages are exchanged (attempted anyway) without any authentication or encryption.

Command Modes

- **CONFIGURATION**

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
</tbody>
</table>
**Description**

*9.3(0.0)*

Added support for the AES128-CFB encryption algorithm on the S4820T, S4810, S6000 and Z-Series platforms.

**Usage Information**

To enable robust, effective protection and security for SNMP packets transferred between the server and the client, you can use the `snmp-server user username group groupname auth auth-password priv aes128 priv-password` command to specify that AES128-CFB encryption algorithm needs to be used.

You cannot modify the FIPS mode if SNMPv3 users are already configured and present in the system. An error message is displayed if you attempt to change the FIPS mode by using the `fips mode enable` command in Global Configuration mode. You can enable or disable FIPS mode only if SNMPv3 users are not previously set up. Otherwise, you must remove the previously configured users before you change the FIPS mode.

**Example**

```
Dell# snmp-server user privuser v3group v3 encrypted auth md5 9fc53d9d908118b2804fe80e3ba8763d priv aes128 d0452401a8c3ce42804fe80e3ba8763d
```

**Related Commands**

- `show snmp user` — Displays the information configured on each SNMP user name.
- `snmp-server vrf` — Configures an SNMP agent to bind to a specific VRF.
- `snmp-server view` — Configure an SNMPv3 view.

### snmp-server vrf

**Description**

Configures an SNMP agent to bind to a specific VRF.

**Syntax**

```
snmp-server vrf vrf-name
```

To undo the SNMP agent configuration, use the `no snmp-server vrf vrf-name` command.

**Parameters**

- `vrf-name`  
  Enter the keyword `vrf` and then the name of the VRF to associate an SNMP agent with that VRF.

**Defaults**

Not Enabled.

**Command Modes**

- `CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S-Series and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

Use this command to bind an SNMP agent to a VRF. The SNMP agent processes the requests from the interfaces that belong to the specified VRF. If no VRF is specified, then the default VRF is used.

**Related Commands**

- `show snmp user` — Displays the information configured on each SNMP user name.

### snmp-server view

**Description**

Configure an SNMPv3 view.

**Syntax**

```
snmp-server view view-name oid-tree {included | excluded}
```

To remove an SNMPv3 view, use the `no snmp-server view view-name oid-tree {included | excluded}` command.
Parameters

- **view-name**: Enter the name of the view (not to exceed 20 characters).
- **oid-tree**: Enter the OID sub tree for the view (not to exceed 20 characters).
- **included**: (OPTIONAL) Enter the keyword `included` to include the MIB family in the view.
- **excluded**: (OPTIONAL) Enter the keyword `excluded` to exclude the MIB family in the view.

Defaults

- `none`

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The `oid-tree` variable is a full sub-tree starting from 1.3.6 and cannot specify the name of a sub-tree or a MIB. The following Example configures a view named `rview` that allows access to all objects under 1.3.6.1.

**Example**

```
Dell(conf) snmp-server view rview 1.3.6.1 included
```

Related Commands

- `show running-config snmp` — displays the SNMP running configuration.

**snmp trap link-status**

Enable the interface to send SNMP link traps, which indicate whether the interface is up or down.

**Syntax**

```
snmp trap link-status
```

To disable sending link trap messages, use the `no` `snmp trap link-status` command.

**Defaults**

- Enabled.

**Command Modes**

- INTERFACE

Related Commands

```
logging trap — limit messages logged to the Syslog servers based on severity.
```

logging

Configure an IP address or host name of a Syslog server where logging messages are sent. Multiple logging servers of both IPv4 and/or IPv6 can be configured.

Syntax

```
logging {ip-address | ipv6-address | hostname} {{udp {port}} | {tcp {port}}}
```

To disable logging, use the `no logging` command.

Parameters

```
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ip-address</td>
<td>Enter the IPv4 address in dotted decimal format.</td>
</tr>
<tr>
<td>ipv6-address</td>
<td>Enter the IPv6 address in the x:x:x:x::X format.</td>
</tr>
<tr>
<td>hostname</td>
<td>Enter the name of a host already configured and recognized by the switch.</td>
</tr>
<tr>
<td>udp</td>
<td>Enter the keyword <code>udp</code> to enable transmission of log message over UDP followed by port number. The default port is 514</td>

</table>

**E-Series legacy command**

Usage Information

Multiple logging servers of both IPv4 and/or IPv6 can be configured.

Related Commands

- `logging on` — enables the logging asynchronously to logging buffer, console, Syslog server, and terminal lines.
- `logging trap` — enables logging to the Syslog server based on severity.

**logging buffered**

Enable logging and specify which messages are logged to an internal buffer. By default, all messages are logged to the internal buffer.

**Syntax**

```
logging buffered [level] [size]
```

To return to the default values, use the `default logging buffered` command.

To disable logging stored to an internal buffer, use the `no logging buffered` command.

**Parameters**

- `level` (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following equivalent words: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or `debugging`.

- `size` (OPTIONAL) Indicate the size, in bytes, of the logging buffer. The number of messages buffered depends on the size of each message. The range is from 40960 to 524288. The default is `40960 bytes`.

**Defaults**

```
level = 7; size = 40960 bytes
```

**Command Modes**

`CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
</tbody>
</table>
### Version Description

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

When you decrease the buffer size, all messages stored in the buffer are lost. Increasing the buffer size does not affect messages stored in the buffer.

**Related Commands**

- `clear logging` — clears the logging buffer.
- `default logging buffered` — returns the logging buffered parameters to the default setting.
- `show logging` — displays the logging setting and system messages in the internal buffer.

---

### logging console

Specify which messages are logged to the console.

**Syntax**

```plaintext
logging console [level]
```

To return to the default values, use the `default logging console` command.

To disable logging to the console, use the `no logging console` command.

**Parameters**

- `level` (OPTIONAL) Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or `debugging`.

**Defaults**

- `level = 7`; `size = debugging`  

**Command Modes**

- `CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>--------------------------------------------------</td>
</tr>
</tbody>
</table>
| E-Series legacy command | clear logging — clears the logging buffer.  
default logging console — returns the logging console parameters to the default setting.  
show logging — displays the logging setting and system messages in the internal buffer. |

### logging extended

Logs security and audit events to a system log server.

**Syntax**

```
logging extended
```

**Defaults**

none

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, Z9000, and MXL.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command is available with or without RBAC enabled. When RBAC is enabled you can restrict access to audit and security logs based on the CLI sessions’ user roles. If extended logging is disabled, you can only view system events, regardless of RBAC user role.

When you enabled RBAC and extended logging:

- Only the system administrator role can execute this command.
- The system administrator and system security administrator roles can view security events and system events.
- The system administrator role can view audit, security, and system events.
- The network administrator and network operator roles can view system events.

**Examples**

```
Dell(conf)#logging extended
```

**Related Commands**

- `show logging auditlog` — displays audit log,  
  `clear logging auditlog` — clears audit log

### logging facility

Configure the Syslog facility used for error messages sent to Syslog servers.

**Syntax**

```
logging facility [facility-type]
```

To return to the default values, use the no logging facility command.

**Parameters**

- `facility-type`  
  (OPTIONAL) Enter one of the following parameters:
  - `auth` (authorization system)
- cron (Cron/at facility)
- daem (system daemons)
- kern (kernel)
- local0 (local use)
- local1 (local use)
- local2 (local use)
- local3 (local use)
- local4 (local use)
- local5 (local use)
- local6 (local use)
- local7 (local use)
- lpr (line printer system)
- mail (mail system)
- news (USENET news)
- sys9 (system use)
- sys10 (system use)
- sys11 (system use)
- sys12 (system use)
- sys13 (system use)
- sys14 (system use)
- syslog (Syslog process)
- user (user process)
- uucp (Unix to Unix copy process)

The default is local7.

**Defaults**
- local7

**Command Modes**
- CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**E-Series legacy command**

**Related Commands**
- logging — enables logging to a Syslog server.
- logging on — enables logging.
**logging history**

Specify which messages are logged to the history table of the switch and the SNMP network management station (if configured).

**Syntax**

```plaintext
logging history level
```

To return to the default values, use the `no logging history` command.

**Parameters**

- `level`
  Indicate a value from 0 to 7 or enter one of the following equivalent words: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 4 or warnings.

**Defaults**

- `warnings` or 4

**Command Modes**

- `CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

**E-Series legacy command**

**Usage Information**

When you configure the `snmp-server trap-source` command, the system messages logged to the history table are also sent to the SNMP network management station.

**Related Commands**

- `show logging` — displays information logged to the history buffer.

---

**logging history size**

Specify the number of messages stored in the Dell Networking logging history table.

**Syntax**

```plaintext
logging history size size
```

To return to the default values, use the `no logging history size` command.

**Parameters**

- `size`
  Indicate a value as the number of messages to be stored. The range is from 0 to 500. The default is 1 message.

**Defaults**

- 1 message

**Command Modes**

- `CONFIGURATION`

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
logging monitor

Specify which messages are logged to Telnet applications.

Syntax

logging monitor [level]

To disable logging to terminal connections, use the no logging monitor command.

Parameters

level

Indicate a value from 0 to 7 or enter one of the following parameters: emergencies, alerts, critical, errors, warnings, notifications, informational, or debugging. The default is 7 or debugging.

Defaults

7 or debugging

</tr>
</tbody>
</table>

E-Series legacy command

Usage Information

When the number of messages reach the limit you set with the logging history size command, older messages are deleted as newer ones are added to the table.

Related Commands

show logging — displays information logged to the history buffer.
logging on

Specify that debug or error messages are asynchronously logged to multiple destinations, such as the logging buffer, Syslog server, or terminal lines.

**Syntax**

logging on

To disable logging to logging buffer, Syslog server and terminal lines, use the no logging on command.

**Defaults**

Enabled.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**E-Series legacy command**

When you use the no logging on command, messages are logged only to the console.

**Related Commands**

- logging — enables logging to the Syslog server.
- logging buffered — sets the logging buffered parameters.
- logging console — sets the logging console parameters.
- logging monitor — sets the logging parameters for the terminal connections.

logging source-interface

Specify that the IP address of an interface is the source IP address of Syslog packets sent to the Syslog server.

**Syntax**

logging source-interface interface

To disable this command and return to the default setting, use the no logging source-interface command.

**Parameters**

- **interface**

  Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a Loopback interface, enter the keyword loopback then a number from 0 to 16383.
  - For the Management interface on the stack-unit, enter the keyword ManagementEthernet then the slot/port information. The slot range is from 0 to 1. The port range is 0.
For a port channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
For a Null interface, enter the keyword null then the Null interface number.
For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.

Defaults
Not configured.

Command Modes

</tr>
</tbody>
</table>

Usage Information
Syslog messages contain the IP address of the interface used to egress the router. By configuring the logging source-interface command, the Syslog packets contain the IP address of the interface configured.

Related Commands
logging — enables logging to the Syslog server.

logging synchronous
Synchronize unsolicited messages and Dell Networking OS output.

Syntax
logging synchronous [level level | all] [limit number-of-buffers]

To disable message synchronization, use the no logging synchronous [level level | all] [limit number-of-buffers] command.

Parameters
all
Enter the keyword all to ensure that all levels are printed asynchronously.

level level
Enter the keyword level then a number as the severity level. A high number indicates a low severity level and vice versa. The range is from 0 to 7. The default is 2.

all
Enter the keyword all to turn off all.

limit number-of-buffers
Enter the keyword limit then the number of buffers to be queued for the terminal after which new messages are dropped. The range is from 20 to 300. The default is 20.

Defaults
Disabled. If enabled without the level or number-of-buffers options specified, level = 2 and number-of-buffers = 20 are the defaults.
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>

E-Series legacy command

When you enable `logging synchronous`, unsolicited messages appear between software prompts and outputs. Only the messages with a severity at or below the set level are sent to the console.

If the message queue limit is reached on a terminal line and messages are discarded, a system message appears on that terminal line. Messages may continue to appear on other terminal lines.

Related Commands

- `logging on` — enables logging.
- `logging trap` — specify which messages are logged to the Syslog server based on the message severity.

**logging trap**

Specify which messages are logged to the Syslog server based on the message severity.

**Syntax**

```
logging trap [level]
```

To return to the default values, use the `default logging trap` command.

To disable logging, use the `no logging trap` command.

**Parameters**

- `level`  
  Indicate a value from 0 to 7 or enter one of the following parameters: `emergencies`, `alerts`, `critical`, `errors`, `warnings`, `notifications`, `informational`, or `debugging`. The default is 6 or `informational`.

**Defaults**

6 or `informational`

**Command Modes**

CONFIGURATION

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series, S55.</td>
</tr>
</tbody>
</table>
Version | Description
---|---
7.5.1.0 | Introduced on the C-Series.

E-Series legacy command

Usage Information
To block a type of message parameter, set the logging trap level to a lower number. For example, to block severity messages at level 6, set the level to 5.

Related Commands
logging — enables the logging to another device.
logging on — enables logging.

logging version

Displays syslog messages in a RFC 3164 or RFC 5424 format.

Syntax
logging version {0|1}

Defaults
0

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, Z9000, and MXL.</td>
</tr>
</tbody>
</table>

Example
Dell(conf)#logging version ?
<0-1> Select syslog version (default = 0)
Dell(conf)#logging version 1

show logging

Display the logging settings and system messages logged to the internal buffer of the switch.

Syntax
show logging [number | history [reverse][number] | reverse [number] | summary]

Parameters
- number: (OPTIONAL) Enter the number of messages displayed in the output. The range is from 1 to 65535.
- history: (OPTIONAL) Enter the keyword history to view only information in the Syslog history table.
**reverse** *(OPTIONAL)* Enter the keyword `reverse` to view the Syslog messages in FIFO (first in, first out) order.

**summary** *(OPTIONAL)* Enter the keyword `summary` to view a table showing the number of messages per type and per slot. Slots *7* and *8* represent RPMs.

### Command Modes

- EXEC
- EXEC Privilege

### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>

```

1210  Simple Network Management Protocol (SNMP) and Syslog
show logging auditlog

Displays an audit log.

**Syntax**

```
show logging auditlog
```

**Defaults**
none

**Command Modes**
EXEC

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, Z9000, and MXL.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell(conf)#show logging audit
```

**Related Commands**
- `clear logging auditlog` — clears audit log.

show logging driverlog stack-unit

Display the driver log for the specified stack member.

**Syntax**

```
show logging driverlog stack-unit unit#
```

**Parameters**

- `stack-unit unit#` Enter the keywords `stack-unit` followed by the stack member ID of the switch for which you want to display the driver log. The range is from 0 to 7.

**Defaults**
none

**Command Modes**
- EXEC
- EXEC Privilege

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
</tbody>
</table>
This command displays internal software driver information, which may be useful during troubleshooting switch initialization errors, such as a downed Port-Pipe.

**terminal monitor**

Configure the Dell Networking OS to display messages on the monitor/terminal.

**Syntax**

```plaintext
terminal monitor
```

To return to default settings, use the `terminal no monitor` command.

**defaults**

Disabled.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

All commands in this chapter are specific to the Dell Networking operating software.

You can use the commands to pre-configure a switch, so that the configuration settings are invoked when the switch is attached to other S-Series units.

For information about using the S-Series stacking feature, refer to the “Stacking S-Series Switches” chapter in the Dell Networking OS Configuration Guide.

The Dell Networking OS commands for data center bridging features include 802.1Qbb priority-based flow control (PFC), 802.1Qaz enhanced transmission selection (ETS), and the data center bridging exchange (DCBX) protocol.

Topics:

- redundancy disable-auto-reboot
- redundancy force-failover stack-unit
- redundancy protocol
- reset stack-unit
- show redundancy
- show system stack-ports
- stack-unit priority
- stack-unit provision
- stack-unit stack-group
- upgrade system stack-unit

redundancy disable-auto-reboot

Prevent the S-Series stack management unit, stack member unit, and standby unit from rebooting if they fail.

Syntax

```
redundancy disable-auto-reboot stack-unit [members | 0-7]
```

To return to the default, use the `no redundancy disable-auto-reboot stack-unit` command.

Parameters

- **stack-unit**
  - Enter the stack-unit number. For the Z9000, the range is from 0 to 7.

- **members**
  - Enter the keyword members for all stack-units.

Defaults

Disabled (the failed switch is automatically rebooted).

Command Modes

CONFIGURATION

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Added the members option.</td>
</tr>
</tbody>
</table>
Enabling this command keeps the failed switch in the Failed state. The switch does not reboot until it is manually rebooted. When enabled, it is not displayed in the running-config. When disabled, it is displayed in the running-config.

**show redundancy** — displays the current redundancy status.

### redundancy force-failover stack-unit

Force the standby unit in the stack to become the management unit.

**Syntax**

```
redundancy force-failover stack-unit
```

**Parameters**

- `stack-unit` Enter the stack unit. For the Z9000, the range is from 0 to 7.

**Defaults**

Not enabled.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Added the members option.</td>
</tr>
</tbody>
</table>

###冗余协议

Enable hitless failover for a protocol.

**Syntax**

```
redundancy protocol
```

**Protocols**

- `lacp` Enter the LACP protocol
- `xstp` Enter one of the following protocols: STP, RSTP, MSTP, PVST.

**Defaults**

Not enabled.

**Command Modes**

CONFIGURATION

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Added the members option.</td>
</tr>
</tbody>
</table>
**reset stack-unit**

Reset any designated stack member except the management unit (master unit).

**Syntax**

```
reset stack-unit hard
```

**Parameters**

- `stack-unit` Enter the stack-unit number. For the Z9000, the range is from 0 to 7.
- `hard` Reset the stack unit if the unit is in a problem state.

**Defaults**

none

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.1.0</td>
<td>Added the <code>hard</code> reset option.</td>
</tr>
</tbody>
</table>

**Usage Information**

Resetting the management unit is not allowed, and an error message displays if you try to do so. Resetting is a soft reboot, including flushing the forwarding tables.

Starting with Dell Networking OS version 7.8.1.0, you can run this command directly on the stack standby unit (standby master) to reset the standby. You cannot reset any other unit from the standby unit.

**Example**

To modify your results, use the `show redundancy [pipe]` command, as follows:

- `except` — show only text that does not match a pattern.

**Related Commands**

- `reload` — reboots Dell Networking OS.
show system stack-ports

Display information about the stacking ports on all switches in the stack.

**Syntax**

```
show system stack-ports [status | topology]
```

**Parameters**

- `status` *(OPTIONAL)*: Enter the keyword `status` to display the command output without the Connection field.
- `topology` *(OPTIONAL)*: Enter the keyword `topology` to limit the table to just the Interface and Connection fields.

**Defaults**

none

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the `show system stack-ports` command shown in the following example.

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Topology</td>
<td>Lists the topology of stack ports connected: Ring, Daisy chain, or Standalone.</td>
</tr>
<tr>
<td>Interface</td>
<td>The unit/port ID of the connected stack port on this unit.</td>
</tr>
<tr>
<td>Link Speed</td>
<td>Link Speed of the stack port (10 or 40) in Gb/s.</td>
</tr>
<tr>
<td>Admin Status</td>
<td>The only currently listed status is Up.</td>
</tr>
<tr>
<td>Connection</td>
<td>The stack port ID to which this unit’s stack port is connected.</td>
</tr>
</tbody>
</table>

Example

Example (Status)

**Example (Topology)**

- `reset stack-unit` — resets the designated stack member.
- `show hardware stack-unit` — displays the data plane or management plane input and output statistics of the designated component of the designated stack member.
- `show system (S-Series and Z-Series)` — displays the current status of all stack members or a specific member.
**stack-unit priority**

Configure the ability of a switch to become the management unit of a stack.

**Syntax**

```
stack-unit stack-unit number priority 1-14
```

**Parameters**

- `stack-number` Enter the stack member unit identifier.
- `1-14` This preference parameter allows you to specify the management priority of one backup switch over another, with 0 the lowest priority and 14 the highest. The switch with the highest priority value is chosen to become the management unit if the active management unit fails or on the next reload.

**Defaults**

0

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

**Related Commands**

- `reload` — reboots Dell Networking OS.

**stack-unit provision**

Preconfigure a logical stacking ID of a switch that joins the stack. This is an optional command that is executed on the management unit.

**Syntax**

```
stack-unit [stack-number] provision {S4810|S4820T|S6000|Z9000}
```

**Parameters**

- `stack-unit` Enter a stack member identifier of the switch that you want to add to the stack.
- `S4810|S4820T|S6000|Z9000` Enter the model identifier of the switch to be added as a stack member. This identifier is also referred to as the provision type.

**Defaults**

When this value is not set, a switch joining the stack is given the next available sequential stack member identifier.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>
**Related Commands**

- **reload** – reboots Dell Networking OS.
- **show system (S-Series and Z-Series)** – displays the status of all stack members or a specific member.

**stack-unit stack-group**

Configure the stacking unit and stacking group by specifying an ID when adding units to a stack to ensure the unit is assigned to the correct group.

**Syntax**

```
stack-unit unit-id stack-group stack-group-id
```

To remove the current stack group configuration, use the `no stack-unit unit-id stack-group stack-group-id` command.

**Parameters**

- **unit-id**
  - Enter the stack unit ID.
- **stack-group-id**
  - Enter the stacking group ID.

**Defaults**

- **none**

**Command Modes**

- **CONFIGURATION**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.1</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Reset command mode from EXEC to CONFIGURATION.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following message displays to confirm the command.

```
Setting ports Fo 1/60 as stack group will make their interface configs obsolete after a reload. [confirm yes/no]: If “y” is entered, all non-default configurations on any member ports of the current stack group will be removed when the unit is rebooted.
```

**NOTE:** Any scripts used to streamline the stacking configuration process must be updated to reflect the Command Mode change from EXEC Privilege to CONFIGURATION to allow the scripts to work correctly.

**upgrade system stack-unit**

Copy the boot image or Dell Networking OS from the management unit to one or more stack members.

**Syntax**

```
upgrade {boot | system} stack-unit {all | stack-unit-number | A | B}
```

**Parameters**

- **boot**
  - Enter the keyword `boot` to copy the boot image from the management unit to the designated stack members.
- **system**
  - Enter the keyword `system` to copy the Dell Networking OS image from the management unit to the designated stack members.
- **stack-unit**
  - Enter the stack-unit number. For the Z9000, the range is from 0 to 7.
- **all**
  - Enter the keyword `all` to copy the designated image to all stack members.
- **A**
  - Enter the keyword `A` to upgrade all stacked units in System A ( only).
Enter the keyword B to upgrade all stacked units in System B (only).

Defaults

none

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>

<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>

Usage Information

To reboot using the new image, use the upgrade boot system stack-unit command.

Related Commands

- reload — reboots Dell Networking OS.
- reset stack-unit — resets the designated stack member.
- show system (S-Series and Z-Series) — displays the status of all stack members or a specific member.
- show version — displays the current Dell Networking OS version information on the system.
The Dell Networking operating software storm control feature allows you to limit or suppress traffic during a traffic storm (Broadcast/Unknown Unicast Rate Limiting or Multicast on the C-Series and S-Series).

Storm control is supported on Dell Networking OS.

Important Points to Remember

- Interface commands can only be applied on physical interfaces (virtual local area networks [VLANs] and link aggregation group [LAG] interfaces are not supported).
- An INTERFACE-level command only supports storm control configuration on ingress.
- An INTERFACE-level command overrides any CONFIGURATION-level ingress command for that physical interface, if both are configured.
- You can apply the CONFIGURATION-level storm control commands at ingress or egress and are supported on all physical interfaces.
- When storm control is applied on an interface, the percentage of storm control applied is calculated based on the advertised rate of the line card. It is not based on the speed setting for the line card.
- Do not apply per-VLAN quality of service (QoS) on an interface that has storm control enabled (either on an interface or globally).
- When you enable broadcast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 1 is configured for the data traffic, the traffic goes to queue 1 instead of queue 0.
- Similarly, if you enable unicast storm control on an interface or globally on ingress, and DSCP marking for a DSCP value 2 is configured for the data traffic, the traffic goes to queue 2 instead of queue 0.

**NOTE:** Bi-directional traffic (unknown unicast and broadcast) along with egress storm control causes the configured traffic rates split between the involved ports. The percentage of traffic that each port receives after the split is not predictable. These ports can be in the same/different port pipes or the same/different line cards.

**NOTE:** The policy discard drop counters are common across storm-control drops, ACL drops and QoS drops. Therefore, if your configuration includes ACL and QoS, those drops are also computed and displayed in the policy discard drops counter field along with storm-control drops. The packets dropped by the storm control feature can be monitored by viewing the value of the Policy Discard Drops field of the output of the `show hardware stack-unit stack-unit-number drops` command.

Topics:

- show storm-control broadcast

- storm-control unknown-unicast (Interface)

**show storm-control broadcast**

Display the storm control broadcast configuration.

**Syntax**

```
show storm-control broadcast [interface]
```
Parameters

*interface*  
(OptionalAL) Enter one of the following interfaces to display the interface-specific storm control configuration:
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.

Defaults

none

Command Modes

- EXEC

</tbody>
</table>

**show storm-control multicast**

Display the storm control multicast configuration.

Syntax

`show storm-control multicast [interface]`

Parameters

*interface*  
(OptionalAL) Enter one of the following interfaces to display the interface specific storm control configuration:
- For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
- For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
- For a port channel interface, enter the keywords `port-channel` then a number.

Defaults

none

</tbody>
</table>
show storm-control unknown-unicast

Display the storm control unknown-unicast configuration.

Syntax

```
show storm-control unknown-unicast [interface]
```

Parameters

- `interface` (OPTIONAL) Enter one of the following interfaces to display the interface specific storm control configuration:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a port channel interface, enter the keywords `port-channel` then a number.

</tbody>
</table>
storm-control broadcast (Configuration)

Configure the percentage of broadcast traffic allowed in the network.

Syntax

```
storm-control broadcast [packets_per_second in]
```

To disable broadcast rate-limiting, use the `no storm-control broadcast [packets_per_second in]` command.

Parameters

- `percentage decimal_value in | out` Enter the percentage of broadcast traffic allowed in or out of the network. Optionally, you can designate a decimal value percentage, for example, 55.5%. The decimal range is from .1 to .9.
- `wred-profile name` Enter the keyword `wred-profile` followed by the profile name to designate a wred-profile.
- `packets_per_second in` Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

Defaults

none

</table>

Usage Information

Broadcast storm control is valid on Layer 2/Layer 3 interfaces only. Layer 2 broadcast traffic is treated as unknown-unicast traffic.

storm-control broadcast (Interface)

Configure the percentage of broadcast traffic allowed on an interface (ingress only).

Syntax

```
storm-control broadcast [packets_per_second in]
```

To disable broadcast storm control on the interface, use the `no storm-control broadcast [packets_per_second in]` command.
**storm-control multicast (Configuration)**

Configure the packets per second (pps) of multicast traffic allowed into the C-Series and S-Series networks only.

**Syntax**

```
storm-control multicast packets_per_second in
```

To disable storm-control for multicast traffic into the network, use the `no storm-control multicast packets_per_second in` command.

**Parameters**

- `packets_per_second` Enter the packets per second of multicast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults**

- none

</tr>
</tbody>
</table>
Broadcast traffic (all 0xFs) should be counted against the broadcast storm control meter, not against the multicast storm control meter. It is possible, however, that some multicast control traffic may get dropped when storm control thresholds are exceeded.

## storm-control multicast (Interface)

Configure the percentage of multicast traffic allowed on an C-Series or S-Series interface (ingress only) network only.

**Syntax**

`storm-control multicast packets_per_second in`

To disable multicast storm control on the interface, use the `no storm-control multicast packets_per_second in` command.

**Parameters**

`packets_per_second in` Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554368.

**Defaults**

none

**Command Modes**

</table>
storm-control unknown-unicast (Interface)

Configure percentage of unknown-unicast traffic allowed on an interface (ingress only).

Syntax

```
storm-control unknown-unicast [percentage decimal_value in] | [wred-profile name] [packets_per_second in]  
```

To disable unknown-unicast storm control on the interface, use the `no storm-control unknown-unicast [percentage decimal_value in] | [wred-profile name] [packets_per_second in]` command.

Parameters

- `percentage decimal_value [in | out]` E-Series Only: Enter the percentage of broadcast traffic allowed in or out of the network. Optionally, you can designate a decimal value percentage, for example, 55.5%.
  - The percentage is from 0 to 100:
  - 0% blocks all related traffic.
  - 100% allows all traffic into the interface.
  - The decimal range is from 0.1 to 0.9.

- `wred-profile name` E-Series Only: (Optionally) Enter the keywords `wred-profile` followed by the profile name to designate a wred-profile.

- `packets_per_second in` C-Series and S-Series Only: Enter the packets per second of broadcast traffic allowed into the network. The range is from 0 to 33554431.

Defaults

`none`

Command Modes

`INTERFACE (conf-if-interface-slot/port)`

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

</table>
Spanning Tree Protocol (STP)

The commands in this chapter configure and monitor the IEEE 802.1d spanning tree protocol (STP) and are supported on the Dell Networking switch/routing platform.

Topics:
- bridge-priority
- bpdu-destination-mac-address
- debug spanning-tree
- description
- disable
- forward-delay
- hello-time
- max-age
- protocol spanning-tree
- show config
- show spanning-tree 0
- spanning-tree

bridge-priority

Set the bridge priority of the switch in an IEEE 802.1D spanning tree.

Syntax

```
bridge-priority {priority-value | primary | secondary}
```

To return to the default value, use the `no bridge-priority` command.

Parameters

- **priority-value**: Enter a number as the bridge priority value. The range is from 0 to 65535. The default is 32768.
- **primary**: Enter the keyword `primary` to designate the bridge as the root bridge.
- **secondary**: Enter the keyword `secondary` to designate the bridge as a secondary root bridge.

Defaults

- `priority-value = 32768`

Command Modes

- SPANNING TREE (The prompt is “config-stp”)

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>

<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.7.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>
bpdu-destination-mac-address

Use the Provider Bridge Group address in Spanning Tree or GVRP PDUs.

Syntax
bpdu-destination-mac-address [stp | gvrp] provider-bridge-group

Parameters
  xstp Force STP, RSTP, and MSTP to use the Provider Bridge Group address as the destination MAC address in its BPDUs.
  gvrp Forces GVRP to use the Provider Bridge GVRP Address as the destination MAC address in its PDUs.

Defaults
The destination MAC address for BPDUs is the Bridge Group Address.

Command Modes
CONFIGURATION

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Introduced on the C-Series and S-Series.</td>
</tr>
</tbody>
</table>

debug spanning-tree

Enable debugging of the spanning tree protocol and view information on the protocol.

Syntax
debug spanning-tree {stp-id | all | bpdu | config | events | exceptions | general | root | protocol}

To disable debugging, use the no debug spanning-tree command.

Parameters
  stp-id Enter zero (0). The switch supports one spanning tree group with a group ID of 0.
  protocol Enter the keyword for the type of STP to debug, either mstp, pvst, or rstp.
  all (OPTIONAL) Enter the keyword all to debug all spanning tree operations.
  bpdu (OPTIONAL) Enter the keyword bpdu to debug bridge protocol data units.
  config (OPTIONAL) Enter the keyword config to debug configuration information.
  events (OPTIONAL) Enter the keyword events to debug STP events.
  general (OPTIONAL) Enter the keyword general to debug general STP operations.
  root (OPTIONAL) Enter the keyword root to debug STP root transactions.

Command Modes
EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
When you enable debug spanning-tree bpdu for multiple interfaces, the software only sends information on BPDUs for the last interface specified.

Related Commands
protocol spanning-tree — enters SPANNING TREE mode on the switch.

description

Enter a description of the spanning tree.

Syntax
description {description}

To remove the description from the spanning tree, use the no description {description} command.

Parameters
description

Enter a description to identify the spanning tree (80 characters maximum).

Defaults
none

Command Modes
SPANNING TREE (The prompt is "config-stp").

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tbody>
</table>

Related Commands
protocol spanning-tree — enters SPANNING TREE mode on the switch.

disable

Disable the spanning tree protocol globally on the switch.

Syntax
disable
To enable Spanning Tree Protocol, use the `no disable` command.

**Defaults**
- Enabled (that is, the spanning tree protocol is disabled.)

**Command Modes**
- SPANNING TREE

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Related Commands**
- `protocol spanning-tree` — enters SPANNING TREE mode on the switch.

### forward-delay

The amount of time the interface waits in the Listening state and the Learning state before transitioning to the Forwarding state.

**Syntax**

```
forward-delay seconds
```

To return to the default setting, use the `no forward-delay` command.

**Parameters**
- `seconds` Enter the number of seconds the Dell Networking OS waits before transitioning STP to the Forwarding state. The range is from 4 to 30. The default is 15 seconds.

**Defaults**
- 15 seconds

**Command Modes**
- SPANNING TREE

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
hello-time

Set the time interval between generation of the spanning tree bridge protocol data units (BPDUs).

Syntax

```
hello-time seconds
```

To return to the default value, use the `no hello-time` command.

Parameters

- `seconds`
  - Enter a number as the time interval between transmission of BPDUs. The range is from 1 to 10. The default is 2 seconds.

Defaults

2 seconds

Command Modes

SPANNING TREE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

Related Commands

- `forward-delay` — changes the wait time before STP transitions to the Forwarding state.
- `max-age` — changes the wait time before STP refreshes protocol configuration information.

max-age

To maintain configuration information before refreshing that information, set the time interval for the spanning tree bridge.

Syntax

```
max-age seconds
```

To return to the default values, use the `no max-age` command.

Parameters

- `seconds`
  - Enter a number of seconds the Dell Networking OS waits before refreshing configuration information. The range is from 6 to 40. The default is 20 seconds.

Defaults

20 seconds

Command Modes

SPANNING TREE

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

**Related Commands**

- `forward-delay` — changes the wait time before STP transitions to the Forwarding state.
- `hello-time` — changes the time interval between BPDUs.

## protocol spanning-tree

To enable and configure the spanning tree group, enter SPANNING TREE mode.

**Syntax**

```
protocol spanning-tree stp-id
```

To disable the Spanning Tree group, use the `no protocol spanning-tree stp-id` command.

**Parameters**

- **stp-id**
  
Enter zero (0). Dell Networking OS supports one spanning tree group, group 0.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

</tbody>
</table>

**Usage Information**

STP is not enabled when you enter SPANNING TREE mode. To enable STP globally on the switch, use the `no disable` command from SPANNING TREE mode.

**Example**

```
Dell(conf)#protocol spanning-tree 0
Dell(config-stp)#
```

**Related Commands**

- `disable` — disables spanning tree group 0. To enable spanning tree group 0, use the `no disable` command.
show config

Display the current configuration for the mode. Only non-default values display.

**Syntax**
show config

**Command Modes**
SPANNING TREE

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

**Example**

```
Dell(config-stp)#show config
protocol spanning-tree 0
  no disable
Dell(config-stp)#
```

show spanning-tree 0

Display the spanning tree group configuration and status of interfaces in the spanning tree group.

**Syntax**
show spanning-tree 0 [active | brief | guard | interface interface | root | summary]

**Parameters**
- **0**
  - Enter 0 (zero) to display information about that specific spanning tree group.
- **active**
  - (OPTIONAL) Enter the keyword active to display only active interfaces in spanning tree group 0.
- **brief**
  - (OPTIONAL) Enter the keyword brief to display a synopsis of the spanning tree group configuration information.
- **guard**
  - (OPTIONAL) Enter the keyword guard to display the type of guard enabled on an STP interface and the current port state.
- **interface**
  - (OPTIONAL) Enter the keyword interface and the type slot/port of the interface you want displayed. Type slot/port options are the following:
    - For a Port Channel interface, enter the keywords port-channel then a number. The range is from 1 to 128.
    - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
    - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
- **root**
  - (OPTIONAL) Enter the keyword root to display configuration information on the spanning tree group root.
summary  (OPTIONAL) Enter the keyword summary to only the number of ports in the spanning tree group and their state.

</tbody>
</table>

Usage Information

Enable spanning tree group 0 prior to using this command.

The following describes the show spanning-tree 0 command shown in the example.

Field                   Description
“Bridge Identifier...”  Lists the bridge priority and the MAC address for this STP bridge.
“Configured hello...”   Displays the settings for hello time, max age, and forward delay.
“We are...”             States whether this bridge is the root bridge for the STG.
“Current root...”       Lists the bridge priority and MAC address for the root bridge.
“Topology flag...”      States whether the topology flag and the detected flag were set.
“Number of...”           Displays the number of topology changes, the time of the last topology change, and on what interface the topology change occurred.
“Timers”                Lists the values for the following bridge timers: hold time, topology change, hello time, max age, and forward delay.
“Times”                 List the number of seconds since the last:
  ● hello time
  ● topology change
  ● notification
  ● aging
“Port 1...”             Displays the Interface type slot/port information and the status of the interface (Disabled or Enabled).
“Port path...”           Displays the path cost, priority, and identifier for the interface.
“Designated root...”    Displays the priority and MAC address of the root bridge of the STG that the interface belongs.
### Example

Dell\# show span 0

Executing IEEE compatible Spanning Tree Protocol
Bridge Identifier has priority 32768, Address 0001.e800.0a56
Configured hello time 2, max age 20, forward delay 15
We are the root of the spanning tree
Current root has priority 32768 address 0001.e800.0a56
Topology change flag set, detected flag set
Number of topology changes 1 last change occurred 0:00:05 ago from TenGigabitEthernet 1/3
Timers: hold 1, topology change 35
hello 2, max age 20, forward_delay 15
Times: hello 1, topology change 1, notification 0, aging 2

Port 26 (TenGigabitEthernet 1/1) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.26
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.26, designated path cost 0
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:18, received 0
The port is not in the portfast mode

Port 27 (TenGigabitEthernet 1/2) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.27
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.27, designated path cost 0
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:18, received 0
The port is not in the portfast mode

Port 28 (TenGigabitEthernet 1/3) is Forwarding
Port path cost 4, Port priority 8, Port Identifier 8.28
Designated root has priority 32768, address 0001.e800.0a56
Designated bridge has priority 32768, address 0001.e800.0a56
Designated port id is 8.28, designated path cost 0
Timers: message age 0, forward_delay 0, hold 0
Number of transitions to forwarding state 1
BPDU: sent:31, received 0
The port is not in the portfast mode

Dell#
The following describes the `show spanning-tree 0 guard` command shown in the example.

### Field | Description
--- | ---
**Interface Name** | STP interface.
**Instance** | STP 0 instance.
**Sts** | Port state: root-inconsistent (INCON Root), forwarding (FWD), listening (LIS), blocking (BLK), or shut down (EDS Shut).
**Guard Type** | Type of STP guard configured (Root, Loop, or BPDU guard).

### Example (Guard)

```
Dell#show spanning-tree 0 guard

+-------+--------+------------+--------------------------+
| Name   | Instance| Sts         | Guard type               |
+-------+--------+------------+--------------------------+
| Te 1/1 | 0      | INCON(Root)| Rootguard                |
| Te 1/2 | 0      | LIS        | Loopguard                |
| Te 1/3 | 0      | EDS (Shut) | Bpduguard                |
```

### spanning-tree

Assigns a Layer 2 interface to STP instance 0 and configures a port cost or port priority, or enables loop guard, root guard, or the Portfast feature on the interface.

**Syntax**

```
spanning-tree stp-id {cost cost | {loopguard | rootguard} | portfast [bpduguard [shutdown-on-violation]] | priority priority}
```

To disable Spanning Tree group on an interface, use the `no spanning-tree stp-id {cost cost | {loopguard | rootguard} | portfast [bpduguard [shutdown-on-violation]] | priority priority}` command.

**Parameters**

- **stp-id**
  - Enter the STP instance ID. The range is 0.
- **cost cost**
  - Enter the keyword `cost` then a number as the cost. The range is from 1 to 65535. The defaults are:
    - 1-Gigabit Ethernet interface = 4.
    - 10-Gigabit Ethernet interface = 2.
    - Port Channel interface with 100 Mb/s Ethernet = 18.
    - Port Channel interface with 1 Gigabit Ethernet = 3.
    - Port Channel interface with 10 Gigabit Ethernet = 1.
- **loopguard**
  - Enter the keyword `loopguard` to enable STP loop guard on a port or port-channel interface.
- **rootguard**
  - Enter the keyword `rootguard` to enable STP root guard on a port or port-channel interface.
- **portfast [bpduguard [shutdown-on-violation]]**
  - Enter the keyword `portfast` to enable Portfast to move the interface into Forwarding mode immediately after the root fails.
  - Enter the optional keyword `bpduguard` to disable the port when it receives a BPDU.
  - Enter the optional keyword `shutdown-on-violation` to hardware disable an interface when a BPDU is received and the port is disabled.
- **priority priority**
  - Enter keyword `priority` then a number as the priority. The range is from zero (0) to 15. The default is 8.

**Defaults**

- cost = depends on the interface type; priority = 8

**Command Modes**

INTERFACE
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
</tbody>
</table>

If you enable portfast bpduguard on an interface and the interface receives a BPDU, the software disables the interface and sends a message stating that fact. The port is in ERR_DISABLE mode, yet appears in the show interface commands as enabled. If you do not enable shutdown-on-violation, BPDUs are still sent to the RPM CPU.

STP loop guard and root guard are supported on a port or port-channel enabled in any Spanning Tree mode: Spanning Tree Protocol (STP), Rapid Spanning Tree Protocol (RSTP), Multiple Spanning Tree Protocol (MSTP), and Per-VLAN Spanning Tree Plus (PVST+).

Root guard is supported on any STP-enabled port or port-channel except when used as a stacking port. When enabled on a port, root guard applies to all VLANs configured on the port.

STP root guard and loop guard cannot be enabled at the same time on a port. For example, if you configure loop guard on a port on which root guard is already configured, the following error message is displayed: % Error: RootGuard is configured. Cannot configure LoopGuard.

Do not enable Portfast BPDU guard and loop guard at the same time on a port. Enabling both features may result in a port that remains in a blocking state and prevents traffic from flowing through it. For example, when Portfast BPDU guard and loop guard are both configured:

- If a BPDU is received from a remote device, BPDU guard places the port in an Err-Disabled Blocking state and no traffic is forwarded on the port.
- If no BPDU is received from a remote device, loop guard places the port in a Loop-Inconsistent Blocking state and no traffic is forwarded on the port.

To display the type of STP guard (Portfast BPDU, root, or loop guard) enabled on a port, enter the show spanning-tree 0 command.
The commands in this chapter configure time values on the system, either using the Dell Networking operating software, or the hardware, or using the network time protocol (NTP). With NTP, the switch can act only as a client to an NTP clock host.

For more information, refer to the “Network Time Protocol” section of the Management chapter in the Dell Networking OS Configuration Guide.

The commands in this chapter are generally supported on Dell Networking OS with some exceptions, as notes in the Command History fields.

Topics:
- clock summer-time date
- clock summer-time recurring
- clock timezone
- debug ntp
- ntp authenticate
- ntp authentication-key
- ntp broadcast client
- ntp disable
- ntp multicast client
- ntp master <stratum>
- ntp server
- ntp source
- ntp trusted-key
- show clock
- show ntp associations
- show ntp vrf associations
- show ntp status

**clock summer-time date**

Set a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

**Syntax**
```
clock summer-time time-zone date start-month start-day start-year start-time end-month end-day end-year end-time [offset]
```

To delete a daylight saving time zone configuration, use the no clock summer-time command.

**Parameters**
- **time-zone**
  - Enter the three-letter name for the time zone. This name is displayed in the show clock output.
- **start-month**
  - Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.
- **start-day**
  - Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month year.
- **start-year**
  - Enter a four-digit number as the year. The range is from 1993 to 2035.
- **start-time**
  - Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.
- **end-day**
  - Enter the number of the day. The range is from 1 to 31. You can enter the name of a month to change the order of the display to time day month year.
clock summer-time recurring

Set the software clock to convert to daylight saving time on a specific day each year.

Syntax

```
clock summer-time time-zone recurring [start-week start-day start-month start-time end-week end-day end-month end-time [offset]]
```

Parameters

time-zone

- Enter the three-letter name for the time zone. This name is displayed in the show clock output. You can enter up to eight characters.

start-week

- (OPTIONAL) Enter one of the following as the week that daylight saving begins and then enter values for start-day through end-time:
  - week-number: Enter a number from 1 to 4 as the number of the week in the month to start daylight saving time.
  - first: Enter this keyword to start daylight saving time in the first week of the month.
  - last: Enter this keyword to start daylight saving time in the last week of the month.

start-day

- Enter the name of the day that you want daylight saving time to begin. Use English three letter abbreviations; for example, Sun, Sat, Mon, and so on. The range is from Sun to Sat.

start-month

- Enter the name of one of the 12 months in English. You can enter the name of a day to change the order of the display to time day month year.

start-time

- Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

end-month

- Enter a four-digit number as the year. The range is from 1993 to 2035.

end-time

- Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is 60 minutes.

Related Commands

- `clock summer-time recurring` — sets a date (and time zone) on which to convert the switch to daylight saving time each year.
- `show clock` — displays the current clock settings.
**start-month**
Enter the name of one of the 12 months in English.

**start-time**
Enter the time in hours:minutes. For the hour variable, use the 24-hour format; example, 17:15 is 5:15 pm.

**end-week**
Enter the one of the following as the week that daylight saving ends:
- **week-number**: enter a number from 1 to 4 as the number of the week to end daylight saving time.
- **first**: enter the keyword first to end daylight saving time in the first week of the month.
- **last**: enter the keyword last to end daylight saving time in the last week of the month.

**end-day**
Enter the weekday name that you want daylight saving time to end. Enter the weekdays using the three letter abbreviations; for example, Sun, Sat, Mon, and so on. The range is from Sun to Sat.

**end-month**
Enter the name of one of the 12 months in English.

**end-time**
Enter the time in hours:minutes:seconds. For the hour variable, use the 24-hour format; example, 17:15:00 is 5:15 pm.

**offset**
(Optional) Enter the number of minutes to add during the summer-time period. The range is from 1 to 1440. The default is 60 minutes.

**Defaults**
Not configured.

**Command Modes**

**Related Commands**
clock summer-time date — sets a date (and time zone) on which to convert the switch to daylight saving time on a one-time basis.

show clock — displays the current clock settings.

clock timezone

Configure a timezone for the switch.

**Syntax**
clock timezone timezone-name offset

To delete a timezone configuration, use the no clock timezone command.

**Parameters**
- **timezone-name**  Enter the name of the timezone. You cannot use spaces.
offset Enter one of the following:
- a number from 1 to 23 as the number of hours in addition to universal time coordinated (UTC) for the timezone.
- a minus sign (-) then a number from 1 to 23 as the number of hours.

Defaults Not configured.

Usage Information Coordinated universal time (UTC) is the time standard based on the International Atomic Time standard, commonly known as Greenwich Mean time. When determining system time, include the differentiator between UTC and your local timezone. For example, San Jose, CA is the Pacific Timezone with a UTC offset of -8.

debug ntp

Display network time protocol (NTP) transactions and protocol messages for troubleshooting.

Syntax debug ntp {adjust | all | authentication | events | loopfilter | packets | select | sync}

To disable debugging of NTP transactions, use the no debug ntp {adjust | all | authentication | events | loopfilter | packets | select | sync} command.

Parameters adjust Enter the keyword adjust to display information on NTP clock adjustments.
all Enter the keyword all to display information on all NTP transactions.
authentication Enter the keyword authentication to display information on NTP authentication transactions.
events Enter the keyword events to display information on NTP events.
loopfilter Enter the keyword loopfilter to display information on NTP local clock frequency.
packets Enter the keyword packets to display information on NTP packets.
select Enter the keyword select to display information on the NTP clock selection.
sync Enter the keyword sync to display information on the NTP clock synchronization.

**ntp authenticate**

Enable authentication of NTP traffic between the switch and the NTP time serving hosts.

**Syntax**

```plaintext
ntp authenticate
```

To disable NTP authentication, use the `no ntp authentication` command.

**Defaults**

Not enabled.

**Command Modes**

CONFIGURATION

<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

You also must configure an authentication key for NTP traffic using the `ntp authentication-key` command.

**ntp authentication-key**

Specify a key for authenticating the NTP server.

**Syntax**

```plaintext
ntp authentication-key number md5 [0 | 7] key
```

**Parameters**

- `number` Specify a number for the authentication key. The range is from 1 to 4294967295. This number must be the same as the `number` parameter configured in the `ntp trusted-key` command.
### ntp authentication-key

Specify that the authentication key is encrypted using the specified algorithm.

- **md5** Specify that the authentication key is encrypted using MD5 encryption algorithm.
- **0** Specify that the authentication key is entered in an unencrypted format (default).
- **7** Specify that the authentication key is entered in DES encrypted format.

**Defaults**
NTP authentication is not configured by default. If you do not specify the option [0 | 7], 0 is selected by default.

**Command Modes**
CONFIGURATION

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.2.1.0</td>
<td>Added options [0</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**
After configuring the `ntp authentication-key` command, configure the `ntp trusted-key` command to complete NTP authentication.

Dell Networking OS versions 8.2.1.0 and later use an encryption algorithm to store the authentication key that is different from previous Dell Networking OS versions; beginning in version 8.2.1.0, Dell Networking OS uses DES encryption to store the key in the startup-config when you enter the `ntp authentication-key` command. Therefore, if your system boots with a startup-configuration from an Dell Networking OS versions prior to 8.2.1.0 in which you have configured `ntp authentication-key`, the system cannot correctly decrypt the key, and cannot authenticate NTP packets. In this case you must re-enter this command and save the running-config to the startup-config.

**Related Commands**
- `ntp authenticate` — enables NTP authentication.
- `ntp trusted-key` — configures a trusted key.

### ntp broadcast client

Set up the interface to receive NTP broadcasts from an NTP server.

**Syntax**

```
ntp broadcast client
```

**Defaults**
Disabled.

**Command Modes**
INTERFACE

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

---

**ntp multicast client**

To receive NTP information from the network via multicast, configure the switch.

**Syntax**

```plaintext
ntp multicast client [multicast-address]
```

To disable multicast reception, use the `no ntp multicast client [multicast-address]` command.

**Parameters**

- `multicast-address` (OPTIONAL) Enter a multicast address. Enter either an IPv4 address in dotted decimal format or an IPv6 address in X:X:X:X::X format. If you do not enter a multicast address, the address:
  - 224.0.1.1 is configured if the interface address is IPv4
  - ff05::101 is configured if the interface address is IPv6

**Defaults**

Not configured.

</tr>
</tbody>
</table>

**ntp server**

Configure an NTP time-serving host.

**Syntax**

```
ntp server[vrf vrf-name] {hostname | ipv4-address | ipv6-address} [key keyid] [prefer] [version number]
```

**Parameters**

- **vrf vrf-name**
  - (Optional) Enter the keyword `vrf` and then the name of the VRF to configure a NTP time-serving host corresponding to that VRF.

- **ipv4-address | ipv6-address**
  - Enter an IPv4 address (A.B.C.D) or IPv6 address (X:X::X::X) of NTP server.

- **hostname**
  - Enter the hostname of the server.

- **key keyid**
  - (OPTIONAL) Enter the keyword `key` and a number as the NTP peer key. The range is from 1 to 4294967295.
preference \( (\text{OPTIONAL}) \) Enter the keyword \texttt{preference} to indicate that this peer has priority over other servers.

\texttt{version \textit{number}} \( (\text{OPTIONAL}) \) Enter the keyword \texttt{version} and a number to correspond to the NTP version used on the server. The range is from 1 to 4.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can configure multiple time-serving hosts. From these time-serving hosts, the Dell Networking OS chooses one NTP host with which to synchronize. To determine which server was selected, use the \texttt{show ntp associations} command.

Because many polls to NTP hosts can impact network performance, Dell Networking recommends limiting the number of hosts configured.

**Related Commands**

\texttt{show ntp associations} — displays the NTP servers configured and their status.

---

\texttt{ntp source}

Specify an interface’s IP address to be included in the NTP packets.

**Syntax**

\texttt{ntp source \textit{interface}}

To delete the configuration, use the \texttt{no ntp source} command.

**Parameters**

\texttt{interface}  

Enter the following keywords and slot/port or number information:

- \texttt{TenGigabitEthernet}  
- \texttt{fortyGigE}  
- \texttt{loopback}  
- \texttt{lag}  
- \texttt{vlan}

**Defaults**

Not configured.

### ntp trusted-key

Set a key to authenticate the system to which NTP synchronizes.

**Syntax**

```
ntp trusted-key number
```

To delete the key, use the `no ntp trusted-key number` command.

**Parameters**

- `number`  
  Enter a number as the trusted key ID. The range is from 1 to 4294967295.

**Defaults**

Not configured.

**Command Modes**

- **CONFIGURATION**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.5.1.0</td>
<td>Added support for 4-port 40G line cards on ExaScale.</td>
</tr>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `number` parameter in the `ntp trusted-key` command must be the same number as the `number` parameter in the `ntp authentication-key` command. If you change the `ntp authentication-key` command, you must also change the `ntp trusted-key` command.

**Related Commands**

- `ntp authentication-key` — sets an authentication key for NTP.
- `ntp authenticate` — enables the NTP authentication parameters you set.

### show clock

Display the current clock settings.

**Syntax**

```
show clock [detail]
```
Parameters
detail (OPTIONAL) Enter the keyword detail to view the source information of the clock.

Command Modes
- EXEC
- EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

Example
Dell#show clock
11:05:56.949 UTC Thu Oct 25 2001
Dell#

Example (Detail)
Dell#show clock detail
12:18:10.691 UTC Wed Jan 7 2009
Time source is RTC hardware
Summer time starts 02:00:00 UTC Sun Mar 8 2009
Summer time ends 02:00:00 ABC Sun Nov 1 2009
Dell#

Related Commands
clock summer-time recurring — displays the time and date from the switch hardware clock.

show ntp associations

Display the NTP master and peers.

Syntax
show ntp associations

Command Modes
- EXEC
- EXEC Privilege

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>
The following describes the `show ntp associations` command shown in the Example below.

**Field**

<table>
<thead>
<tr>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>(none)</td>
</tr>
</tbody>
</table>

One or more of the following symbols could be displayed:

- * means synchronized to this peer.
- # means almost synchronized to this peer.
- + means the peer was selected for possible synchronization.
- - means the peer is a candidate for selection.
- ~ means the peer is statically configured.

**remote**

Displays the remote IP address of the NTP peer.

**ref clock**

Displays the IP address of the remote peer’s reference clock.

**st**

Displays the peer’s stratum, that is, the number of hops away from the external time source. A 16 in this column means the NTP peer cannot reach the time source.

**when**

Displays the last time the switch received an NTP packet.

**poll**

Displays the polling interval (in seconds).

**reach**

Displays the reachability to the peer (in octal bitstream).

**delay**

Displays the time interval or delay for a packet to complete a round-trip to the NTP time source (in milliseconds).

**offset**

Displays the relative time of the NTP peer’s clock to the switch clock (in milliseconds).

**disp**

Displays the dispersion.

**Example**

```bash
Dell#show ntp associations
remote   ref clock  st when poll reach delay  offset  disp
-------------------------------------------------------------
10.10.120.5 0.0.0.0     16 - 256        0 0.00 0.000 16000.0
*172.16.1.33 127.127.1.0 11 6 16         377   -0.08 -1499.9 104.16
172.31.1.33 0.0.0.0     16 - 256        0 0.00 0.000 16000.0
192.200.0.20 0.0.0.0     16 - 256        0 0.00 0.000 16000.0
* master (synced), # master (unsynced), + selected, - candidate
Dell#
```

**Related Commands**

- `show ntp status` — displays the current NTP status.

### show ntp vrf associations

Displays the NTP servers configured for the VRF instance `<vrf-name>`.

**Syntax**

```bash
show ntp [vrf] <vrf-name> associations.
```
show ntp status

Display the current NTP status.

Syntax

```
show ntp status
```

Command Modes

- EXEC
- EXEC Privilege

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.1.1.0</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

The following describes the `show ntp status` command shown in the Example below.

Field Description

```
“Clock is...”  States whether or not the switch clock is synchronized, which NTP stratum the system is assigned and the IP address of the NTP peer.
```

```
“frequency is...” Displays the frequency (in ppm), stability (in ppm) and precision (in Hertz) of the clock in this system.
```

```
“reference time is...” Displays the reference time stamp.
```

```
“clock offset is...” Displays the system offset to the synchronized peer and the time delay on the path to the NTP root clock.
```

```
“root dispersion is...” Displays the root and path dispersion.
```

```
“peer mode is...” State what NTP mode the switch is. This should be Client mode.
```
Example

Dell#show ntp status
Clock is synchronized, stratum 2, reference is 100.10.10.10
frequency is -32.000 ppm, stability is 15.156 ppm, precision is 4294967290
reference time is BC242FD5.C7C5C000 (10:15:49.780 UTC Mon Jan 10 2000)
clock offset is clock offset msec, root delay is 0.01656 sec
root dispersion is 0.39694 sec, peer dispersion is peer dispersion msec
peer mode is client
Dell#

Related Commands

show ntp associations — displays information on the NTP master and peer configurations.
Tunneling is supported on Dell Networking OS.

Topics:

- tunnel-mode
- tunnel source
- tunnel keepalive
- tunnel allow-remote
- tunnel dscp
- tunnel flow-label
- tunnel hop-limit
- tunnel destination
- ip unnumbered
- ipv6 unnumbered

## tunnel-mode

Enable a tunnel interface.

**Syntax**

```
tunnel mode {ipip | ipv6 | ipv6ip}[decapsulate-any]
```

To disable an active tunnel interface, use the **no tunnel mode** command.

**Parameters**

- **ipip**
  - Enable tunnel in RFC 2003 mode and encapsulate IPv4 and/or IPv6 datagrams inside an IPv4 tunnel.

- **ipv6**
  - Enable tunnel in RFC 2473 mode and encapsulate IPv4 and/or IPv6 datagrams inside an IPv6 tunnel.

- **ipv6ip**
  - Enable tunnel in RFC 4213 mode and encapsulate IPv6 datagrams inside an IPv4 tunnel.

- **decapsulate-any**
  - (Optional) Enable tunnel in multipoint receive-only mode.

**Defaults**

There is no default tunnel mode.

**Command Modes**

INTERFACE TUNNEL

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3(0.1)</td>
<td>Introduced on the S6000 and Z9000.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Added the decapsulate-any command.</td>
</tr>
</tbody>
</table>

**Usage Information**

To enable a tunnel interface, use this command. You must define a tunnel mode for the tunnel to function. If you previously defined the tunnel destination or source address, the tunnel mode must be compatible. Including the decapsulate-any option causes the command to fail if any of the following tunnel transmit options are configured: tunnel destination, tunnel dscp, tunnel flow-label, tunnel hop-limit, or tunnel keepalive. Conversely, if you configure any tunnel allow-remote entries, the `tunnel-mode` command fails unless the decapsulate-any option is included.

Configuration of IPv6 commands over decapsulate-any tunnel causes an error.
tunnel source

Set a source address for the tunnel.

Syntax

```plaintext
tunnel source {ip-address | ipv6-address | interface-type-number | anylocal}
```

To delete the current tunnel source address, use the no tunnel source command.

Parameters

- **ip-address**: Enter the source IPv4 address in A.B.C.D format.
- **ipv6-address**: Enter the source IPv6 address in X:X:X::X format.
- **interface-type-number**: For a port channel interface, enter the keywords port-channel then a number from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a VLAN interface, enter the keyword vlan then a number from 1 to 4094.
- **anylocal**: Enter the anylocal command to allow the multipoint receive-only tunnel to decapsulate tunnel packets destined to any local ip address.

Defaults

```
none
```

Command Modes

```
INTERFACE TUNNEL (conf-if-tu)
```

Command History

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Added the tunnel source anylocal command.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the MXL 10/40GbE Switch IO Module.</td>
</tr>
</tbody>
</table>

Usage Information

Added an optional keyword “anylocal” to the tunnel source command. The anylocal argument can be used in place of the ip address or interface, but only with the multipoint receive-only mode tunnels. The tunnel source anylocal command allows the multipoint receive-only tunnel to decapsulate tunnel packets addressed to any IPv4 or IPv6 (depending on the tunnel mode) address configured on the switch that is operationally Up.

---

tunnel keepalive

Configure the tunnel keepalive target, interval and attempts.

Syntax

```plaintext
tunnel keepalive {ip-address | ipv6-address}[interval {seconds}] [attempts {count | unlimited}]
```

To disable the tunnel keepalive probes use the no tunnel keepalive command.

Parameters

- **ip-address ipv6 address**: Enter the IPv4 or IPv6 address of the peer to which the keepalive probes will be sent.
- **interval seconds**: Enter the keyword interval then the interval time, in seconds, after which the restart process to keepalive probe packets.
  - The range is from 5 to 255. The default is 5.
- **count**: (OPTIONAL) Enter the keyword count to count packets processed by the filter.
  - The range is from 3 to 10. The default is 3.
unlimited

Enter the keyword **unlimited** to specify the unlimited number of keepalive probe packets.

**Defaults**

Tunnel keepalive is disabled.

**Command Modes**

INTERFACE TUNNEL

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000 and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

Enabling tunnel keepalive causes ICMP echo packets to be sent to the keepalive target. The ICMP echo will be sourced from the tunnel interface logical IPv4 or IPv6 address and will be tunnel encapsulated. The response will be accepted whether it returns tunnel encapsulated or not.

When configuring tunnel keepalive at both end points of a tunnel interface it is recommended to set the tunnel keepalive target to the logical IPv4 or IPv6 address of the far end tunnel peer, rather than to the tunnel destination. This reduces the chance of both ends of the tunnel staying in keepalive down state. If both ends get into a keepalive down state that does not clear in a few seconds, then performing shutdown - no shutdown sequence on one end should bring both ends back to up.

**tunnel allow-remote**

Configure an IPv4 or IPv6 address or prefix whose tunneled packets are accepted for decapsulation. If you do not configure allow-remote entries, tunneled packets from any remote peer address is accepted.

This feature is supported on Dell Networking OS.

**Syntax**

```
 tunnel allow-remote {ip-address | ipv6-address} [mask]
```

To delete a configured allow-remote entry use the `no tunnel allow-remote` command. Any specified address/mask values must match an existing entry for the delete to succeed. If the address and mask are not specified, this command deletes all allow-remote entries.

**Parameters**

- `ip-address`: Enter the source IPv4 address in A.B.C.D format.
- `ipv6-address`: Enter the source IPv6 address in X:X:X::X format.
- `mask` (OPTIONAL) Enter a network mask in /prefix format (/x) or A.B.C.D to match a range of remote addresses. The default mask is /32 for IPv4 addresses and /128 for IPv6 addresses, which match only the specified address.

**Defaults**

If you do not configure `tunnel allow remote`, all traffic which is destined to tunnel source address is decapsulated.

**Defaults**

By default there are no tunnel allow remote entries.

**Command Modes**

INTERFACE TUNNEL

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3(0.1)</td>
<td>Introduced on the S6000 and Z9000.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000 and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

You can configure up to eight allow-remote entries on any multipoint receive-only tunnel.

This command fails if the address family entered does not match the outer header address family of the tunnel mode, tunnel source, or any other tunnel allow-remote.

If you configure any allow-remote, the tunnel source or tunnel mode commands fail if the outer header address family does not match that of the configured allow-remote.
Usage Information
Allow-remote entries can be configured only on multipoint receive-only tunnels, that is tunnel mode includes decapsulate-any option. This command will fail if any bidirectional tunnel options are configured. Likewise, attempts to configure bidirectional tunnel options will fail if any allow-remote entries are configured.

**tunnel dscp**

Configure the method to set the DSCP in the outer tunnel header.

**Syntax**
```
tunnel dscp {mapped | <value>}
```

To use the default tunnel mapping behavior, use the `no tunnel dscp value` command.

**Parameters**
- `mapped`
  - Enter the keyword `mapped` to map the original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.
- `value`
  - Enter a value to set the DSCP value in the tunnel header. The range is from 0 to 63. The default value of 0 denotes mapping of original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.

**Defaults**
0 (Mapped)

**Command Modes**
INTERFACE TUNNEL (conf-if-tu)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the S6000, S4810, S4820T, Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**
This command configures the method used to set the high 6 bits (the differentiated services codepoint) of the IPv4 TOS or the IPv6 traffic class in the outer IP header. A value of 0 copies original packet DSCP (IPv4)/Traffic Class (IPv6) to the tunnel header DSCP (IPv4)/Traffic Class (IPv6) depending on the mode of tunnel.

**tunnel flow-label**

Configure the method to set the IPv6 flow label value in the outer tunnel header.

**Syntax**
```
tunnel flow-label value
```

To return to the default value of 0, use the `no tunnel flow-label value` command.

**Parameters**
- `value`
  - Enter a value to set the IPv6 flow label value in the tunnel header. The range is from 0 to 1048575. The default value is 0.

**Defaults**
0 (Mapped original packet flow-label value to tunnel header flow-label value)

**Command Modes**
INTERFACE TUNNEL (conf-if-tu)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the S6000, S4810, S4820T, Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**
This command is only valid for tunnel interfaces with an IPv6 outer header.
tunnel hop-limit

Configure the method to set the IPv4 time-to-live or the IPv6 hop limit value in the outer tunnel header.

**Syntax**

```
tunnel hop-limit value
```

To restore the default tunnel hop-limit, use the `no tunnel hop-limit` command.

**Parameters**

- **value**
  
  Enter the hop limit (ipv6) or time-to-live (ipv4) value to include in the tunnel header. The range is from 0 to 255. The default is 64.

**Defaults**

64 (Time-to-live for IPv4 outer tunnel header or hop limit for IPv6 outer tunnel header)

**Command Modes**

INTERFACE TUNNEL (conf-if-tu)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the S6000, S4810, S4820T, Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

A value of 0 copies the inner packet hop limit (ipv6) or time-to-live (ipv4) in the encapsulated packet to the tunnel header hop limit (ipv6) or time-to-live (ipv4) value.

---

**tunnel destination**

Set a destination endpoint for the tunnel.

**Syntax**

```
tunnel destination {ip-address | ipv6-address}
```

To delete a tunnel destination address, use the `no tunnel destination {ip-address | ipv6-address}` command.

**Parameters**

- **ip-address**
  
  Enter the destination IPv4 address for the tunnel.

- **ipv6-address**
  
  Enter the destination IPv6 address for the tunnel.

**Defaults**

none

**Command Modes**

INTERFACE TUNNEL (conf-if-tu)

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000 and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

The tunnel interface is inoperable without a valid tunnel destination address for the configured Tunnel mode.

To establish a logical tunnel to the particular destination address, use the destination address of the outer tunnel header. If you configure a tunnel interface or source address, the tunnel destination must be compatible.

---

**ip unnumbered**

Configure a tunnel interface to operate without a unique IPv4 address and select the interface from which the tunnel borrows its address.

**Syntax**

```
ip unnumbered {interface-type interface-number}
```
To set the tunnel back to default logical address use the `no ip unnumbered` command. If the tunnel was previously operational, the tunnel interface is operationally down unless you also configure the tunnel IPv6 address.

**Parameters**

- `interface-type interface-number`
  - Enter the interface type, followed by a slot number.
- `(OPTIONAL) interface-type interface-number`
  - (OPTIONAL) Instead of entering the keyword interface followed by the interface type, slot and port information, as above, you can enter the interface type, followed by just a slot number.

**Defaults**

None

**Command Modes**

INTERFACE TUNNEL

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3(0.1)</td>
<td>Introduced on the S6000 and Z9000.</td>
</tr>
<tr>
<td>9.4(0.1)</td>
<td>Introduced on the S4810, S4820T, S6000 and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `ip unnumbered` command fails in two conditions:

- If the logical ip address is configured.
- If Tunnel mode is ipv6ip (where ip address over tunnel interface is not possible).

To ping the unnumbered tunnels, the logical address route information must be present at both the ends.

**NOTE:** The `ip unnumbered` command can specify an interface name that does not exist or does not have a configured IPv6 address. The tunnel interface is not changed to operationally up until the logical ip address is identified from one of the address family.

**ipv6 unnumbered**

Configure a tunnel interface to operate without a unique IPv6 address and select the interface from which the tunnel borrows its address.

**Syntax**

```plaintext
ipv6 unnumbered {interface-type interface-number}
```

To set the tunnel back to default logical address use the `no ipv6 unnumbered` command. If the tunnel was previously operational, the tunnel interface is operationally down unless you also configure the tunnel IPv4 address.

**Parameters**

- `interface-type interface-number`
  - Enter the interface type, followed by the type, slot and port information.
- `(OPTIONAL) interface-type interface-number`
  - (OPTIONAL) Instead of entering the keyword interface followed by the interface type, slot and port information, as above, you can enter the interface type, followed by just a slot number.

**Defaults**

None

**Command Modes**

INTERFACE TUNNEL

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.3(0.1)</td>
<td>Introduced on the S6000 and Z9000.</td>
</tr>
<tr>
<td>9.4(0.1)</td>
<td>Introduced on the S4810, S4820T, S6000 and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

The `ip unnumbered` command fails in two conditions:
- If the logical ip address is configured.
- If Tunnel mode is ipv6ip (where ip address over tunnel interface is not possible).

To ping the unnumbered tunnels, the logical address route information must be present at both the ends.

**NOTE:** The `ipv6 unnumbered` command can specify an interface name that does not exist or does not have a configured IPv6 address. The tunnel interface is not changed to operationally up until the logical ip address is identified from one of the address family.

The `ipv6 unnumbered` command will fail if the tunnel interface already has an explicit IPv6 address assigned. Likewise the `ipv6 address` command will fail if `ipv6 unnumbered` is already configured. While unlikely, an interface can be configured to be `ipv6 unnumbered` for IPv6 while also having an explicit IPv4 address.

**NOTE:** The `ipv6 unnumbered` command can specify an interface name that does not exist or does not have a configured IPv6 address. The tunnel interface is not changed to operationally up until the logical ip address is identified from the one of the address family.
VLAN Stacking

With the virtual local area network (VLAN)-stacking feature (also called stackable VLANs and QinQ), you can “stack” VLANs into one tunnel and switch them through the network transparently.

The Dell Networking operating software supports this feature on Dell Networking OS.

For more information about basic VLAN commands, refer to the Virtual LAN (VLAN) Commands section in the Layer 2 chapter.

Important Points to Remember

- If you do not enable the spanning tree protocol (STP) across the stackable VLAN network, STP bridge protocol data units (BPDUs) from the customer’s networks are tunneled across the stackable VLAN network.
- If you do enable STP across the stackable VLAN network, STP BPDUs from the customer’s networks are consumed and not tunneled across the stackable VLAN network unless you enable protocol tunneling.

NOTE: For more information about protocol tunneling on the E-Series, refer to Service Provider Bridging.
- Layer 3 protocols are not supported on a stackable VLAN network.
- Assigning an IP address to a stackable VLAN is supported when all the members are only stackable VLAN trunk ports. IP addresses on a stackable VLAN-enabled VLAN are not supported if the VLAN contains stackable VLAN access ports. This facility is provided for the simple network management protocol (SNMP) management over a stackable VLAN-enabled VLAN containing only stackable VLAN trunk interfaces. Layer 3 routing protocols on such a VLAN are not supported.
- Dell Networking recommends that you do not use the same MAC address, on different customer VLANs, on the same stackable VLAN.
- Interfaces configured using stackable VLAN access or stackable VLAN trunk commands do not switch traffic for the default VLAN. These interfaces are switch traffic only when they are added to a non-default VLAN.
- Starting with Dell Networking OS version 7.8.1 for C-Series and S-Series (Dell Networking OS version 7.7.1 for E-Series, 8.2.1.0 for E-Series ExaScale), a vlan-stack trunk port is also allowed to be configured as a tagged port and as an untagged port for single-tagged VLANs. When the vlan-stack trunk port is also a member of an untagged vlan, the port must be in Hybrid mode. Refer to portmode hybrid.

**dei honor**

Honor the incoming DEI value by mapping it to an Dell Networking OS drop precedence. Enter the command once for 0 and once for 1.

**Syntax**

dei honor {0 | 1} {green | red | yellow}

**Parameters**

- **0 | 1**
  - Enter the bit value you want to map to a color.
- **green | red | yellow**
  - Choose a color:
    - **Green**: High priority packets that are the least preferred to be dropped.
    - **Yellow**: Lower priority packets that are treated as best-effort.
    - **Red**: Lowest priority packets that are always dropped (regardless of congestion status).

**Defaults**

Disabled; Packets with an unmapped DEI value are colored green.

**Command Modes**

INTERFACE

**Usage Information**

You must first enable DEI for this configuration to take effect.

**Related Commands**

dei enable — Make packets eligible for dropping based on their DEI value.
**dei mark**

Set the DEI value on egress according to the color currently assigned to the packet.

### Z9000

**Syntax**

```plaintext
dei mark {green | yellow} {0 | 1}
```

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>1</td>
</tr>
<tr>
<td>green</td>
<td>red</td>
</tr>
<tr>
<td>green</td>
<td>Yellow: Lower priority packets that are treated as best-effort.</td>
</tr>
</tbody>
</table>

**Defaults**

All the packets on egress are marked with DEI 0.

</tr>
</tbody>
</table>

**Usage Information**

You must first enable DEI for this configuration to take effect.

**Related Commands**

- **dei enable** — Make packets eligible for dropping based on their DEI value.

---

**member**

Assign a stackable VLAN access or trunk port to a VLAN. The VLAN must contain the `vlan-stack compatible` command in its configuration.

**Syntax**

```plaintext
member interface
```

To remove an interface from a Stackable VLAN, use the `no member interface` command.

**Parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>interface</td>
<td>Enter the following keywords and slot/port or number information:</td>
</tr>
<tr>
<td></td>
<td>● For a Port Channel interface, enter the keywords <code>port-channel</code> then a number. The range is from 1 to 128.</td>
</tr>
<tr>
<td></td>
<td>● For a 10-Gigabit Ethernet interface, enter the keyword <code>TenGigabitEthernet</code> then the slot/port information.</td>
</tr>
<tr>

Usage Information

You must enable the stackable VLAN (using the `vlan-stack compatible` command) on the VLAN prior to adding a member to the VLAN.

Related Commands

`vlan-stack compatible` — enables stackable VLAN on a VLAN.

```
stack-unit stack-group
```

Configure a stacking group specified by an ID.

Syntax

```
[no] stack-unit unit-id stack-group stack-group-id
```

Parameters

- `unit-id` Enter the stack unit ID.
- `stack-group-id` Enter the stack group ID. The range is from 0 to 16.
- `[no]` Use `no stack-unit unit-id stack-group stack-id` to remove the current stack group configuration.

</tr>
</tbody>
</table>

E-Series original Command

Usage Information
Prior to disabling the stackable VLAN feature, remove the members.
To view the stackable VLANs, use the `show vlan` command in EXEC Privilege mode. Stackable VLANs contain members, designated by the M in the Q column of the command output.

**Example**

```
Dell#show vlan
Codes: * - Default VLAN, G - GVRP VLANs

NUM  Status    Q Ports
*  1    Inactive
  2    Active    M Te 1/13
       M Te 1/1-3
  3    Active    M Po1(Te 1/14-15)
       M Te 1/18
       M Te 1/4
  4    Active    M Po1(Te 1/14-15)
       M Te 1/18
       M Te 1/5
  5    Active    M Po1(Te 1/14-15)
       M Te 1/18
       M Te 1/6

Dell#
```

### vlan-stack dot1p-mapping

Map C-Tag dot1p values to a S-Tag dot1p value. You can separate the C-Tag values by commas and dashed ranges are permitted. Dynamic mode CoS overrides any Layer 2 QoS configuration in case of conflicts.

**Syntax**

```
vlan-stack dot1p-mapping c-tag-dot1p values sp-tag-dot1p value
```

**Parameters**

- `c-tag-dot1p value`: Enter the keyword `c-tag-dot1p` then the customer dot1p value that is mapped to a service provider dot1p value. The range is from 0 to 7.
- `sp-tag-dot1p value`: Enter the keyword `sp-tag-dot1p` then the service provider dot1p value. The range is from 0 to 7.

**Defaults**

none

</tbody>
</table>

### vlan-stack protocol-type

Define the stackable VLAN tag protocol identifier (TPID) for the outer VLAN tag (also called the VMAN tag). If you do not configure this command, Dell Networking OS assigns the value 0x9100.

**Syntax**

```
vlan-stack protocol-type number
```

**Parameters**

- `number`: Enter the hexadecimal number as the stackable VLAN tag.
You may specify both bytes of the 2-byte S-Tag TPID. The range is from 0 to FFFF. The default is \texttt{9100}.

<table>
<thead>
<tr>
<th>Defaults</th>
<th>0x9100</th>

<td>0x0081</td>
</tr>
<tr>
<td>8100</td>
<td>0x8100</td>
</tr>
</tbody>
</table>

**Related Commands**

- `portmode hybrid` — sets a port (physical ports only) to accept both tagged and untagged frames. A port configured this way is identified as a hybrid port in report displays.
- `vlan-stack trunk` — specifies a Layer 2 port or port channel as a trunk port to the Stackable VLAN network.

### vlan-stack trunk

Specify a Layer 2 port or port channel as a trunk port to the Stackable VLAN network.

**Syntax**

```
vlan-stack trunk
```

To remove a trunk port designation from the selected interface, use the `no vlan-stack trunk` command.

**Defaults**

Not configured.

**Command Modes**

- **INTERFACE**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
**Version** | **Description**
---|---
9.7(0.0) | Introduced on the S6000-ON.
9.0.2.0 | Introduced on the S6000.
8.3.19.0 | Introduced on the S4820T.
8.3.11.1 | Introduced on the Z9000.
8.3.7.0 | Introduced on the S4810.
8.2.1.0 | Introduced on the E-Series ExaScale. C-Series and S-Series accept both bytes of the 2-byte S-Tag TPID.
7.8.1.0 | Functionality augmented for C-Series and S-Series to enable multi-purpose use of the port.
7.7.1.0 | Functionality augmented for E-Series to enable multi-purpose use of the port.
7.6.1.0 | Introduced on the C-Series and S-Series.

**E-Series original Command**

Usage Information

Prior to using this command, to place the interface in Layer 2 mode, execute the switchport command.

To remove the trunk port designation, first remove the port (using the no member interface command) from all stackable VLAN-enabled VLANs.

Starting with Dell Networking OS version 7.8.1.0, a VLAN-Stack trunk port is also allowed to be configured as a tagged port and as an untagged port for single-tagged VLANs. When the VLAN-Stack trunk port is also a member of an untagged VLAN, the port must be in Hybrid mode. Refer to portmode hybrid.

In Example 1, a VLAN-Stack trunk port is configured and then also made part of a single-tagged VLAN.

In Example 2, the tag protocol identifier (TPID) is set to 8848. The “Gi 3/10” port is configured to act as a VLAN-Stack access port, while the “TenGi 8/0” port acts as a VLAN-Stack trunk port, switching stackable VLAN traffic for VLAN 10, while also switching untagged traffic for VLAN 30 and tagged traffic for VLAN 40. (To allow VLAN 30 traffic, the native VLAN feature is required, by executing the portmode hybrid command. Refer to portmode hybrid in Interfaces.

```
Virtual Link Trunking (VLT)

Virtual link trunking (VLT) allows physical links between two chassis to appear as a single virtual link to the network core. VLT eliminates the requirement for Spanning Tree protocols by allowing link aggregation group (LAG) terminations on two separate distribution or core switches, and by supporting a loop-free topology.

VLT provides Layer 2 multipathing, creating redundancy through increased bandwidth and enabling multiple parallel paths between nodes and load-balancing traffic where alternative paths exist.

NOTE: When you launch the VLT link, the VLT peer-ship is not established if any of the following is TRUE:
- The VLT System-MAC configured on both the VLT peers do not match.
- The VLT Unit-Id configured on both the VLT peers are identical.
- The VLT System-MAC or Unit-Id is configured only on one of the VLT peers.
- The VLT domain ID is not the same on both peers.

If the VLT peer-ship is already established, changing the System-MAC or Unit-Id does not cause VLT peer-ship to go down.

Also, if the VLT peer-ship is already established and the VLT Unit-Id or System-MAC are configured on both peers, then changing the CLI configurations on the VLT Unit-Id or System-MAC is rejected if any of the following become TRUE:
- After making the CLI configuration change, the VLT Unit-Id becomes identical on both peers.
- After making the CLI configuration change, the VLT System-MAC do not match on both peers.

When the VLT peer-ship is already established, you can remove the VLT Unit-Id or System-MAC configuration from either or both peers. However, removing configuration settings can cause the VLT ports to go down if you configure the Unit-Id or System-MAC on only one of the VLT peers.

back-up destination

Configure the IPv4 or IPv6 address of the management interface on the remote VLT peer to be used as the endpoint of the VLT backup link for sending out-of-band hello messages.

Syntax

```
back-up destination { [ipv4-address] | [ipv6 ipv6-address] [interval seconds] }
```

Parameters

- `ipv4-address`: Enter the IPv4 address of the backup destination.
- `ipv6`: Enter the keyword `ipv6` then an IPv6 address in the X:X::X format.
- `interval seconds`: Enter the keyword `interval` to specify the time interval to send hello messages. The range is from 1 to 5 seconds. The default is 1 second.

Defaults

1 second

</tbody>
</table>

Usage Information

To delay the system from bringing up the VLT port for a brief period to allow IGMP Snooping and Layer 3 routing protocols to converge, use the delay-restore parameter. Use this feature:
● after a VLT device is reloaded.
● if the Peer VLT device was up at the time the VLTI link failed to the time when it was restored.

Related Commands
show vlt statistics — displays statistics on VLT operations.

**lACP ungroup member-independent**

Prevent possible loop during the bootup of a VLT peer switch or a device that accesses the VLT domain.

**Syntax**

```plaintext
lACP ungroup member-independent {vlt | port-channel}
```

**Parameters**

- **port-channel**
  - Force all LACP port-channel members to become switchports.

- **vlt**
  - Force all VLT LACP members to become switchports.

**Defaults**

Not configured.

**Command Modes**

CONFIGURATION

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

<tr>
<td>8.3.12.0</td>
<td>Added port-channel parameter on the S4810.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

LACP on the VLT ports (on a VLT switch or access device), which are members of the virtual link trunk, is not brought up until the VLT domain is recognized on the access device.

On the S4810, during boot-up in a stacking configuration, the system must be able to reach the DHCP server with the boot image and configuration image. During boot-up, only untagged DHCP requests are sent to the DHCP server to receive an offer on static LAGs between switches. The DHCP server must be configured to start in BMP mode. If switches are connected using LACP port-channels like the VLT peer and Top of Rack (ToR), use the **port-channel** parameter on the ToR-side configuration to allow member ports of an ungrouped LACP port-channel to inherit vlan membership of that port channel to ensure untagged packets that are sent by a VLT peer device reach the DHCP server located on the ToR.

To ungroup the VLT and port-channel configurations, use the **no lACP ungroup member-independent** command on a VLT port channel, depending on whether the port channel is VLT or non-VLT.

**Example**

```plaintext
Dell(conf)#lACP ungroup member-independent ?
port-channel LACP port-channel members become switchports
vlt All VLT LACP members become switchports
```
**multicast peer-routing timeout**

Configure the time for a VLT node to retain synced multicast routes or synced multicast outgoing interface (OIF) after a VLT peer node failure.

**Syntax**

```
multicast peer-routing timeout value
```

To restore the default value, use the `no multicast peer-routing timeout` command.

**Parameters**

- **value**
  - Enter the timeout value in seconds. The range is from 1 to 1200. The default is 150.

**Command Modes**

- VLT DOMAIN (conf-vlt-domain)

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>

</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
</tbody>
</table>

**peer-link port-channel**

Configure the specified port channel as the chassis interconnect trunk between VLT peers in the domain.

**Syntax**

```
peer-link port-channel port-channel-number peer-down-vlan vlan id
```

**Parameters**

- **port-channel-number**
  - Enter the port-channel number that acts as the interconnect trunk. The range is from 1 to 128.
- **peer-down-vlan**
  - Enter the keyword `peer-down-vlan` then a VLAN ID to configure the VLAN that the VLT peer link uses when the VLT peer is down.

**Defaults**

Not configured.

**Command Modes**

- VLT DOMAIN

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.</td>

<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Added support for the <code>peer-down-vlan</code> parameter.</td>
</tr>
</tbody>
</table>
**Version** | **Description**
--- | ---
8.3.8.0 | Introduced on the S4810.

**Usage Information**
To configure the VLAN from where the VLT peer forwards packets received over the VLTi from an adjacent VLT peer that is down, use the `peer-down-vlan` parameter. When a VLT peer with bare metal provisioning (BMP) is booting up, it sends untagged DHCP discover packets to its peer over the VLTi. To ensure that the DHCP discover packets are forwarded to the VLAN that has the DHCP server, use this configuration.

### peer-routing

Enable L3 VLT peer-routing. This command is applicable for both IPV6/ IPV4.

**Syntax**
```
peer-routing
```

To disable L3 VLT peer-routing, use the `no peer-routing` command.

**Defaults**
Disabled.

**Command Modes**
VLT DOMAIN (conf-vlt-domain)

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Added the support for IPV6 / IPV4.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.</td>
</tr>
<tr>
<td>9.2(0.2)</td>
<td>Introduced on the Z9000, S4810, and S4820T.</td>
</tr>
</tbody>
</table>

### peer-routing-timeout

Configure the delay after which peer routing is disabled when the peer is unavailable. This command is applicable for both IPV6/IPV4. If not configured, peer-routing will not be disabled at all even though the peer is unavailable.

**Syntax**
```
peer-routing-timeout value
```

To restore the default value, use the `no peer-routing-timeout` command.

**Parameters**
- `value` Enter the timeout value in seconds. The range is from 1 to 65535. The default value is infinity.

**Command Modes**
VLT DOMAIN (conf-vlt-domain)

**Command History**
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Added support for default value on the S-Series and Z-Series.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
</tbody>
</table>
**primary-priority**

Assign the priority for master election among VLT peers.

**Syntax**

```
[no] primary-priority
```

**Parameters**

- `value`: To configure the primary role on a VLT peer, enter a lower value than the priority value of the remote peer. The range is from 1 to 65535.

**Default**

32768

**Command Modes**

VLT DOMAIN

**Usage Information**

When the timer expires, the software checks to see if the VLT peer is now available. If the VLT peer is not available, peer-routing is disabled on that peer.

After you configure the VLT domain on each peer switch on both sides of the interconnect trunk, by default, the Dell Networking OS software elects a primary and secondary VLT peer device. To reconfigure the primary role of VLT peer switches, use the `priority` command.

**show vlt brief**

Displays summarized status information about VLT domains currently configured on the switch.

**Syntax**

```
show vlt brief
```

**Default**

Not configured.

**Command Modes**

EXEC

**Usage Information**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

After you configure the VLT domain on each peer switch on both sides of the interconnect trunk, by default, the Dell Networking OS software elects a primary and secondary VLT peer device. To reconfigure the primary role of VLT peer switches, use the `priority` command.
show vlt brief

Displays information on the VLT. This is a VLT version number which is different from the Dell Networking OS version number. VLT version numbers are begin with odd numbers such as 3 or 5.

Usage Information

Example (Brief)

Dell(conf) #show vlt brief
VLT Domain Brief
-----------------------------
Domain ID:                                10
Role:                                        Primary
Role Priority:                            32768
ICL Link Status:                        Up
Heart Beat Status:                    Not Established
VLT Peer Status:                        Up
Version:                                    5 (1)
Local System MAC address:        00:01:e8:8b:14:3c
Remote System MAC address:        00:01:e8:8b:15:20
Remote System Version:                5 (1)
Delay-Restore timer:                90 seconds

show vlt backup-link

Displays information on the backup link operation.

Syntax

show vlt backup-link

Default

Not configured.

Command Modes

EXEC

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Example

Dell_VLTpeer1# show vlt backup-link
VLT Backup Link
------------------------
Destination:                 10.11.200.18
Peer HeartBeat status:       Up
HeartBeat Timer Interval:    1
show vlt counters

Displays the counter information.

**Syntax**

```plaintext
show vlt counters [arp| igmp-snoop | interface | mac | ndp]
```

**Parameters**

- **arp**
  - Enter the keyword `arp` to display the ARP counter information for the VLT.
- **igmp-snoop**
  - Enter the keywords `igmp-snoop` to display the igmp-snooping counter information for the VLT.
- **interface**
  - Enter the keyword `interface` to display the interface counter information for the VLT.
- **mac**
  - Enter the keyword `mac` to display the MAC address counter information for the VLT.
- **ndp**
  - Enter the keyword `ndp` to display the VLT counter information for NDP.

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant *Dell Networking OS Command Line Reference Guide*.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

If you do not add a parameter such as `arp` or `mac`, the output displays all of the counters.

**Example**

```
Dell# show vlt counter
Total VLT counters
-------------------------
L2 Total MAC-Address Count :
IGMP MRouter Vlans count :
IGMP Mcast Groups count :
ARP entries count :
```

**Example (igmp-snoop)**

```
Dell# show vlt counter igmp-snoop
Total IGMP VLT counters
-------------------------
IGMP MRouter Vlans count : 1
IGMP Mcast Groups count : 5
```
**show vlt detail**

Displays detailed status information about VLT domains currently configured on the switch.

**Syntax**

```plaintext
show vlt detail
```

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

System Role Priority: 32768
Local System MAC address: 00:01:e8:8a:df:e6
Local System Role Priority: 32768

show vlt statistics

Displays statistics on VLT operations.

Syntax

show vlt statistics [arp | domain | igmp-snoop | mac | multicast | ndp]

Parameters

domain

Display the VLT statistics for the domain.

multicast

Display the VLT statistics for multicast.

mac

Display the VLT statistics for the MAC address.

arp

Display the VLT statistics for ARP.

igmp-snoop

Display the VLT statistics for IGMP snooping.

ndp

Display the VLT statistics for NDP.
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

```

**NOTE:** The following example shows the statistics for all of the VLT parameters. If you enter a specific keyword, such as mac, only the statistics for that VLT parameter displays.
show vlt statistics igmp-snoop

Displays the informational packets and IGMP control PDUs that are exchanged between VLT peer nodes.

**Syntax**

```
show vlt statistics igmp-snoop
```

**Default**

Not configured.

**Command Modes**

EXEC

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>Version 9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>Version 9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>Version 8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>Version 8.3.12.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Example**

```
Dell_VLTpeer1#show vlt statistics igmp-snoop
VLT Igmp-Snooping Statistics

IGMP Info Pkts sent: 4
IGMP Info Pkts Rcvd: 1
IGMP Reg Request sent: 1
IGMP Reg Request rcvd: 2
IGMP Reg Response sent: 1
IGMP Reg Response rcvd: 1
IGMP PDU Tunnel Pkt sent: 5
IGMP PDU Tunnel Pkt rcvd: 10
IGMP Tunnel PDUs sent: 10
IGMP Tunnel PDUs rcvd: 19
```

**system-mac**

Reconfigure the default MAC address for the domain.

**Syntax**

```
system-mac mac-address
```
### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>mac-address</td>
<td>Enter the system MAC address for the VLT domain.</td>
</tr>
</tbody>
</table>

### Defaults

Not configured.

### Command Modes

VLT DOMAIN

### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programable-Mux (PMUX) mode only.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

### Usage Information

When you create a VLT domain on a switch, Dell Networking OS automatically creates a VLT-system MAC address used for internal system operations.

To reconfigure the default MAC address for the domain by entering a new MAC address in the format nn:nn:nn:nn:nn:nn, use the `system-mac` command.

You must also reconfigure the same MAC address on the VLT peer switch.

### unit-id

Explicitly configure the default unit ID of a VLT peer switch.

#### Syntax

```plaintext
unit-id [0 | 1]
```

#### Parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>1</td>
</tr>
</tbody>
</table>

#### Defaults

Automatically assigned based on the MAC address of each VLT peer. The peer with the lower MAC address is assigned unit 0; the peer with the higher MAC address is assigned unit 1.

#### Command Modes

VLT DOMAIN

#### Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programable-Mux (PMUX) mode only.</td>
</tr>
<tr>

</tbody>
</table>

Virtual Link Trunking (VLT) 1289
When you create a VLT domain on a switch, Dell Networking OS automatically assigns a unique unit ID (0 or 1) to each peer switch. The unit IDs are used for internal system operations. Use the `unit-id` command to explicitly configure the unit ID of a VLT peer. Configure a different unit ID (0 or 1) on each peer switch.

To minimize the time required for the VLT system to determine the unit ID assigned to each peer switch when one peer reboots, use this command.

**vlt domain**

Enable VLT on a switch, configure a VLT domain, and enter VLT-domain configuration mode.

**Syntax**

```plaintext
vlt domain domain-id
```

**Parameters**

- `domain-id` Enter the Domain ID number. Configure the same domain ID on the peer switch. The range of domain IDs is from 1 to 1000.

**Command Modes**

- **CONFIGURATION**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.2(0.0)</td>
<td>Introduced on the M I/O Aggregator. This command is supported in Programmable-Mux (PMUX) mode only.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

The VLT domain ID must be the same between the two VLT devices. If the domain ID is not the same, a syslog message is generated and VLT does not launch.

**Related Commands**

- `show vlt` — uses the `show vlt brief` command to display the delay-restore value.

**vlt-peer-lag port-channel**

Associate the port channel to the corresponding port channel in the VLT peer for the VLT connection to an attached device.

**Syntax**

```plaintext
vlt-peer-lag port-channel id-number
```

**Parameters**

- `id-number` Enter the respective vlt port-channel number of the peer device. The range is from 1 to 128.

**Defaults**

Not configured.

**Command Modes**

- **INTERFACE PORT-CHANNEL**

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>

<tbody>
<tr>
<td>12.2(40)</td>
<td>Virtual Link Trunking (VLT)</td>
</tr>
</tbody>
</table>
Specifying VLT Nodes in a PVLAN

You can configure VLT peer nodes in a private VLAN (PVLAN). VLT enables redundancy without the implementation of Spanning Tree Protocol (STP), and provides a loop-free network with optimal bandwidth utilization.

Because the VLT LAG interfaces are terminated on two different nodes, PVLAN configuration of VLT VLANs and VLT LAGs are symmetrical and identical on both the VLT peers. PVLANs provide Layer 2 isolation between ports within the same VLAN. A PVLAN partitions a traditional VLAN into sub-domains identified by a primary and secondary VLAN pair. With VLT being a Layer 2 redundancy mechanism, support for configuration of VLT nodes in a PVLAN enables Layer 2 security functionalities. To achieve maximum VLT resiliency, you should configure the PVLAN IDs and mappings to be identical on both the VLT peer nodes.

The association of PVLAN with the VLT LAG must also be identical. After the VLT LAG is configured to be a member of either the primary or secondary PVLAN (which is associated with the primary), ICL becomes an automatic member of that PVLAN on both switches. This association helps the PVLAN data flow received on one VLT peer for a VLT LAG to be transmitted on that VLT LAG from the peer.

You can associate either a VLT VLAN or a VLT LAG to a PVLAN. First configure the VLT interconnect (VLTi) or a VLT LAG by using the `peer-link port-channel id-number` command or the VLT VLAN by using the `peer-link port-channel id-number peer-down-vlan vlan interface number` command and the `switchport` command. After you specify the VLTi link and VLT LAGs, you can associate the same port channel or LAG bundle that is a part of a VLT to a PVLAN by using the `interface` and `switchport mode private-vlan` commands.

When a VLTi port in trunk mode is a member of symmetric VLT PVLANs, the PVLAN packets are forwarded only if the PVLAN settings of both the VLT nodes are identical. You can configure the VLTi in trunk mode to be a member of non-VLT PVLANs if the VLTi is configured on both the peers. MAC address synchronization is performed for VLT PVLANs across peers in a VLT domain.

Keep the following points in mind when you configure VLT nodes in a PVLAN:

- Configure the VLTi link to be in trunk mode. Do not configure the VLTi link to be in access or promiscuous mode.
- You can configure a VLT LAG or port channel to be in trunk, access, or promiscuous port modes when you include the VLT LAG in a PVLAN. The VLT LAG settings must be the same on both the peers. If you configure a VLT LAG as a trunk port, you can associate that LAG to be a member of a normal VLAN or a PVLAN. If you configure a VLT LAG to be a promiscuous port, you can configure that LAG to be a member of PVLAN only. If you configure a VLT LAG to be in access port mode, you can add that LAG to be a member of the secondary VLAN only.
- ARP entries are synchronized even when a mismatch occurs in the PVLAN mode of a VLT LAG.

Any VLAN that contains at least one VLT port as a member is treated as a VLT VLAN. You can configure a VLT VLAN to be a primary, secondary, or a normal VLAN. However, the VLT VLAN configuration must be symmetrical across peers. If the VLT LAG is tagged to any one of the primary or secondary VLANs of a PVLAN, then both the primary and secondary VLANs are considered as VLT VLANs.

If you add an ICL or VLTi link as a member of a primary VLAN, the ICL becomes a part of the primary VLAN and its associated secondary VLANs, similar to the behavior for normal trunk ports. VLAN parity is not validated if you associate an ICL to a PVLAN. Similarly, if you dissociate an ICL from a PVLAN, although the PVLAN parity exists, ICL is removed from that PVLAN.
Association of VLTi as a Member of a PVLAN

If a VLAN is configured as a non-VLT VLAN on both the peers, the VLTi link is made a member of that VLAN if the VLTi link is configured as a PVLAN or normal VLAN on both the peers. If a PVLAN is configured as a VLT VLAN on one peer and a non-VLT VLAN on another peer, the VLTi is added as a member of that VLAN by verifying the PVLAN parity on both the peers. In such a case, if a PVLAN is present as a VLT PVLAN on at least one of the peers, then symmetric configuration of the PVLAN is validated to cause the VLTi to be a member of that VLAN. Whenever a change in the VLAN mode on one of the peers occurs, the information is synchronized with the other peer and VLTi is either added or removed from the VLAN based on the validation of the VLAN parity.

For VLT VLANs, the association between primary VLAN and secondary VLANs is examined on both the peers. Only if the association is identical on both the peers, VLTi is configured as a member of those VLANs. This behavior is because of security functionalities in a PVLAN. For example, if a VLAN is a primary VLT VLAN on one peer and not a primary VLT VLAN on the other peer, VLTi is not made a part of that VLAN.

MAC Synchronization for VLT Nodes in a PVLAN

For the MAC addresses that are learned on non-VLT ports, MAC address synchronization is performed with the other peer if the VLTi (ICL) link is part of the same VLAN as the non-VLT port. For MAC addresses that are learned on VLT ports, the VLT LAG mode of operation and the primary to secondary association of the VLT nodes is determined on both the VLT peers. MAC synchronization is performed for the VLT LAGs only if the VLT LAG and primary-secondary VLT peer mapping are symmetrical.

The PVLAN mode of VLT LAGs on one peer is validated against the PVLAN mode of VLT LAGs on the other peer. MAC addresses that are learned on that VLT LAG are synchronized between the peers only if the PVLAN mode on both the peers is identical. For example, if the MAC address is learned on a VLT LAG and the VLAN is a primary VLT VLAN on one peer and not a primary VLAN on the other peer, MAC synchronization does not occur.

Whenever a change occurs in the VLAN mode of one of the peers, this modification is synchronized with the other peers. Depending on the validation mechanism that is initiated for MAC synchronization of VLT peers, MAC addresses learned on a particular VLAN are either synchronized with the other peers, or MAC addresses synchronized from the other peers on the same VLAN are deleted. This method of processing occurs when the PVLAN mode of VLT LAGs is modified.

Because the VLTi link is only a member of symmetric VLT PVLANs, MAC synchronization takes place directly based on the membership of the VLTi link in a VLAN and the VLT LAG mode.

PVLAN Operations When One VLT Peer is Down

When a VLT port moves to the Admin or Operationally Down state on only one of the VLT nodes, the VLT Lag is still considered to be up. All the PVLAN MAC entries that correspond to the operationally down VLT LAG are maintained as synchronized entries in the device. These MAC entries are removed when the peer VLT LAG also becomes inactive or a change in PVLAN configuration occurs.

PVLAN Operations When a VLT Peer is Restarted

When the VLT peer node is rebooted, the VLAN membership of the VLTi link is preserved and when the peer node comes back online, a verification is performed with the newly received PVLAN configuration from the peer. If any differences are identified, the VLTi link is either added or removed from the VLAN. When the peer node restarts and returns online, all the PVLAN configurations are exchanged across the peers. Based on the information received from the peer, a bulk synchronization of MAC addresses that belong to spanned PVLANs is performed.

During the booting phase or when the ICL link attempts to come up, a system logging message is recorded if VLT PVLAN mismatches, PVLAN mode mismatches, PVLAN association mismatches, or PVLAN port mode mismatches occur. Also, you can view these discrepancies if any occur by using the show vlt mismatch command.

Interoperation of VLT Nodes in a PVLAN with ARP Requests

When an ARP request is received, and the following conditions are applicable, the IP stack performs certain operations.

- The VLAN on which the ARP request is received is a secondary VLAN (community or isolated VLAN).
Layer 3 communication between secondary VLANs in a private VLAN is enabled by using the `ip local-proxy-arp` command in INTERFACE VLAN configuration mode.

- The ARP request is not received on the ICL.

Under such conditions, the IP stack performs the following operations:
- The ARP reply is sent with the MAC address of the primary VLAN.
- The ARP request packet originates on the primary VLAN for the intended destination IP address.

The ARP request received on ICLs are not proxied, even if they are received with a secondary VLAN tag. This behavior change occurs because the node from which the ARP request was forwarded would have replied with its MAC address, and the current node discards the ARP request.

### Scenarios for VLAN Membership and MAC Synchronization With VLT Nodes in PVLAN

The following table illustrates the association of the VLTi link and PVLANs, and the MAC synchronization of VLT nodes in a PVLAN (for various modes of operation of the VLT peers):

<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.3(0.0)</td>
<td>Introduced on the Z9000, S4810, and S4820T.</td>
</tr>
</tbody>
</table>

Usage Information

If you add an ICL or VLTi link as a member of a primary VLAN, the ICL becomes a part of the primary VLAN and its associated secondary VLANs, similar to the behavior for normal trunk ports. VLAN symmetry is not validated if you associate an ICL to a PVLAN. Similarly, if you dissociate an ICL from a PVLAN, although the PVLAN symmetry exists, ICL is removed from that PVLAN in such a case. The ICL Status field denotes the type of the VLAN port of the VLTi link configured in a PVLAN.

Example

Dell#show vlt private-vlan vlan-id

Codes: C - Community, I - Isolated, V - Internally tagged, T - tagged, * - VLT Pvlan

<table>
<thead>
<tr>
<th>Primary</th>
<th>Secondary</th>
<th>ICL Status</th>

</tr>
</tbody>
</table>
The Virtual link trucking (VLT) proxy gateway feature allows a VLT domain to locally terminate and route L3 packets that are destined to a L3 end point in another VLT domain. Enable the VLT proxy gateway using the link layer discover protocol (LLDP) method or the static configuration. For more information, refer to Dell Networking OS Command Line Reference Guide.

Topics:
- proxy-gateway lldp
- proxy-gateway static
- remote-mac-address exclude-vlan
- peer-domain-link port-channel exclude-vlan
- proxy-gateway peer-timeout
- vlt-peer-mac transmit
- show vlt-proxy-gateway

**proxy-gateway lldp**

Enables the proxy-gateway feature using LLDP protocol.

**Z9000**

**Syntax**

```
[no] proxy-gateway lldp
```

**Command Modes**

VLT DOMAIN

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

The configuration is cached and sent to LLDP only in one of the following conditions:
1) The port-channel connecting the two VLT domains, across DC, must be a VLT LAG
2) The protocol lldp command is globally enabled
3) The proxy-gateway LLDP configuration is applied.

**Example**

```
Dell(conf)#vlt-domain 1
Dell(conf-vlt-domain)#proxy-gateway lldp
```

**proxy-gateway static**

Enables the proxy-gateway feature using static configurations.

**Z9000**

**Syntax**

```
[no] proxy-gateway static
```

**Command Modes**

VLT DOMAIN
### remote-mac-address exclude-vlan

Configure the proxy-gateway static entry and exclude a VLAN or a range of VLANs from proxy routing.

#### Z9000

**Syntax**

```
[no] remote-mac-address mac-address [exclude-vlan vlan-range]
```

**Parameters**

- `remote-mac-address` Specify the mac-addresses of the VLT peers which are in the remote VLT Domain.
- `mac-address` Enter the 48-bit hexadecimal address in nn:nn:nn:nn:nn:nn format.
- `vlan-range` Enter the VLAN IDs in which proxy gateway is not needed. The VLANs are excluded from doing proxy gateway. The value can be a single VLAN ID or comma-separated, VLAN IDs or a range of VLAN IDs or a combination. For example:
  - Comma-separated: 3, 4, 6
  - Range: 5-10
  - Combination: 3, 4, 5-10, 8

**Command Modes**

VLT DOMAIN PROXY GW STATIC

### Usage Information

You can configure the MAC address, of a VLT peer in remote VLT Domain, to be associated with the static VLT proxy gateway and exclude a VLAN or a range of VLANs from proxy routing.

### Example

```
Dell(conf)#vlt-domain 1
Dell(conf-vlt-domain)#proxy-gateway static
Dell(conf-vlt-domain-proxy-gw-static)#remote-mac-address 00:01:e8:06:95:ac exclude-vlan 3
```
**peer-domain-link port-channel exclude-vlan**

Configure the VLT port channel, which is connected to remote VLT domain for Proxy Gateway and configure the VLANs that needs to be excluded from VLT Proxy Gateway.

**Z9000**

**Syntax**

```
[no] peer-domain-link port-channel interface-identifier exclude-vlan vlan-range
```

**Parameters**

- **port-channel**: Configure the proxy-gateway interface port-channel. Port channel range is from 1 to 128.
- **vlan-range**: Enter the VLAN IDs in which proxy gateway is not needed. The VLANs are excluded from doing proxy gateway. The value can be a single VLAN ID or comma-separated, VLAN IDs or a range of VLAN IDs or a combination. For example:
  - Comma-separated: 3, 4, 6
  - Range: 5-10
  - Combination: 3, 4, 5-10, 8

**Command Modes**

VLT DOMAIN PROXY GW LLDP

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

The VLT port channel interface which is connecting to the remote VLT domain must be configured as peer-domain-link. Configure the VLANs that needs to be excluded from VLT Proxy Gateway.

**Example**

```
Dell(conf)#vlt-domain 1
Dell(conf-vlt-domain)#proxy-gateway lldp
Dell(conf-vlt-domain-proxy-gw-lldp)#peer-domain-link port-channel 20 exclude-vlan 3
```

**proxy-gateway peer-timeout**

Enables the VLT node to timeout the transmission of peer’s mac address, when the VLT peer is down.

**Z9000**

**Syntax**

```
[no] peer-timeout value
```

**Parameters**

- **value**: Enter the timeout value in seconds. The range is from 1 to 65535.

**Command Modes**

VLT DOMAIN PROXY GW LLDP

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.7(0.0)</td>
<td>Removed the default value on the S-Series and Z-Series.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, Z9000, and MXL Switch.</td>
</tr>
</tbody>
</table>
When a VLT peer goes down, the local VLT node must stop sending its peer’s MAC address. If this timeout is configured, the local VLT node will send its peer’s MAC address, till the timer expires. By default this timer value is infinity. This timer comes into play, only when the `vlt-peer-mac transmit` is enabled. Square VLT Topology with single link connecting to the remote peers, is a typical use case for this configuration.

**Example**

```bash
Dell(conf-vlt-domain-proxy-gw-lldp)# peer-timeout 5
```

### vlt-peer-mac transmit

Enables the device to transmit, the peer’s MAC address along with its own mac-address in the LLDP TLV packets, to the remote VLT Domain.

**Z9000**

**Syntax**

```
[no] vlt-peer-mac transmit
```

**Command Modes**

VLT DOMAIN PROXY GW LLDP

**Version**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command enables the device to transmit its VLT peer’s MAC address along with its own MAC address to the remote VLT domain. By default, a node will send only its own MAC address to the remote VLT domain. This configuration is applicable only for a LLDP proxy gateway. Square VLT Topology with single link connecting to the remote peers, is a typical use case for this configuration.

**Example**

```bash
Dell(conf-vlt-domain-proxy-gw-lldp)# vlt-peer-mac transmit
```

### show vlt-proxy-gateway

Display the VLT proxy gateway configuration.

**Z9000**

**Syntax**

```
show vlt-proxy-gateway [info] {lldp | static}
```

**Parameters**

- **lldp**: Display details about the LLDP VLT proxy gateway configuration
- **static**: Display details about the static VLT proxy gateway configuration

**Command Modes**

EXEC

EXEC Privilege

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.4(0.0)</td>
<td>Introduced on the S4810, S4820T, S6000, and Z9000.</td>
</tr>
</tbody>
</table>

**Usage Information**

At any point of time the proxy-gateway feature may go operationally down for the following reasons,

1) LLDP globally disabled
2) LLDP disabled per port
3) VLT port-channel is down
4) LLDP neighbor down

So, the proxy-gateway feature could be operationally down though properly configured and this will be reported in the "show command".

When more than one VLT port-channel terminates on the same TOR, output of the show VLT proxy-gateway info lldp command may show the port-channel id incorrectly.

### Example

| Dell#show vlt proxy-gateway
| VLT Proxy Gateway Brief
| -------------------------
| Config Mode:                         LLDP
| Global LLDP Config Status:           Enabled
| peer-mac-transmit Status:            Disabled

Virtual Router Redundancy Protocol (VRRP)

Virtual router redundancy protocol (VRRP) is supported by the Dell Networking operating system on Dell Networking OS.

Topics:
- IPv4 VRRP Commands
- IPv6 VRRP Commands
- advertise-interval
- description
- disable
- hold-time
- preempt
- priority
- show config
- track
- virtual-address

IPv4 VRRP Commands

The following are IPv4 VRRP commands.

advertise-interval

Set the time interval between VRRP advertisements.

Syntax
advertise-interval {seconds | centisecs centisecs}

To return to the default settings, use the no advertise-interval command.

Parameters

- **seconds**
  - Enter a number of seconds. The range is from 1 to 255. The default is 1 second.

- **centisecs**
  - Enter the keyword centisecs followed by the number of centisecs in multiple of 25 centisecs. The range is 25 to 4075 centisecs in multiples of 25 centisecs.

Defaults
1 second or 100 centisecs.

Command Modes
INTERFACE-VRRP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Added support for centisecs on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
<tr>
<td>9.2(1.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
</tbody>
</table>
authentication-type

Enable authentication of VRRP data exchanges.

Syntax

```
authentication-type simple [encryption-type] password
```

Parameters

- `simple` (OPTIONAL) Enter the keyword `simple` to specify simple authentication.
- `encryption-type` Enter one of the following numbers:
  - `0` (zero) specifies an un-encrypted authentication data follows.
  - `7` (seven) specifies a hidden authentication data follows.
  - `LINE` is the un-encrypted (cleartext) authentication data.
- `password` Enter a character string up to eight characters long as a password. If you do not enter an encryption-type, the password is stored as clear text.

Defaults
Not configured.

Command Modes
VRRP

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
The given password is encrypted by the system and the `show config` displays an encrypted text string for any of the encrypted typed used.
**clear counters vrrp**

Clear the counters maintained on VRRP operations.

### Z9000

**Syntax**

```
clear counters vrrp [vrrp-id] [ipv6]
```

**Parameters**

- **vrrp-id**  
  (OPTIONAL) Enter the number of the VRRP group ID. The range is from 1 to 255.

- **ipv6**  
  (OPTIONAL) Enter the keyword ipv6 to clear counters from the IPv6 VRRP group.

**Command Modes**

EXEC Privilege

**Command History**

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**debug vrrp**

Allows you to enable debugging of VRRP.

**Syntax**

```
debug vrrp interface [vrrp-id] {all | bfd | database | interface | ipv6 | packets | state | timer}
```

To disable debugging, use the no debug vrrp interface [vrrp-id] {all | bfd | database | interface | ipv6 | packets | state | timer} command.

**Parameters**

- **interface**  
  Enter the following keywords and slot/port or number information
  - For Port Channel interface types, enter the keywords port-channel then the number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a 40-Gigabit Ethernet interface, enter the keyword fortyGigE then the slot/port information.
  - For a VLAN interface, enter the keyword vlan then the VLAN ID. The VLAN ID range is from 1 to 4094.

- **vrrp-id**  
  (OPTIONAL) Enter a number from 1 to 255 as the VRRP group ID.

- **all**  
  Enter the keyword all to enable debugging of all VRRP groups.

- **bfd**  
  Enter the keyword bfd to enable debugging of VRRP BFD interactions.

- **database**  
  Enter the keyword database to enable debugging of configuration changes.
interface
Enter the keyword `interface` to enable debugging of interface state changes.

ipv6
Enter the keyword `ipv6` to enable debugging for IPv6.

packets
Enter the keyword `packets` to enable debugging of VRRP control packets.

state
Enter the keyword `state` to enable debugging of VRRP state changes.

timer
Enter the keyword `timer` to enable debugging of the VRRP timer.

**Command Modes**

- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If no options are specified, debug is active on all interfaces and all VRRP groups.

description

Configure a short text string describing the VRRP group.

**Syntax**

```
description text
```

To delete a VRRP group description, use the `no description` command.

**Parameters**

- `text`
Enter a text string up to 80 characters long.

**Defaults**

Not enabled.

**Command Modes**

- VRRP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>

<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>
disable

Disable a VRRP group.

Syntax
disable

To re-enable a disabled VRRP group, use the no disable command.

Command Modes
VRRP

Usage Information
To enable VRRP traffic, assign an IP address to the VRRP group using the virtual-address command and enter no disable.

Related Commands
virtual-address — specifies the IP address of the virtual router.

hold-time

Specify a delay (in seconds) before a switch becomes the MASTER virtual router. By delaying the initialization of the VRRP MASTER, the new switch can stabilize its routing tables.

Syntax
hold-time {seconds | centisecs centisecs}

To return to the default value, use the no hold-time command.

Parameters
seconds
Enter the number of seconds. The range is from 0 to 65535. The default is zero (0) seconds.

centisecs
Enter the keyword centisecs then the number of centisecs in units of 25 centisecs. The range is from 0 to 65525 in units of 25 centisecs.

Defaults
zero (0) seconds or (0) centiseconds

Command Modes
VRRP

Usage Information
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

Version Description
9.7(0.0) Introduced on the S6000-ON.
9.0.2.0 Introduced on the S6000.
8.3.19.0 Introduced on the S4820T.
8.3.11.1 Introduced on the Z9000.
8.3.7.0 Introduced on the S4810.
7.6.1.0 Introduced on the S-Series.
7.5.1.0 Introduced on the C-Series.
6.2.1.1 Introduced on the E-Series.
### preempt

To preempt or become the MASTER router, permit a BACKUP router with a higher priority value.

**Syntax**

```plaintext
preempt
```

To prohibit preemption, use the ```no preempt``` command.

**Defaults**

Enabled (that is, a BACKUP router can preempt the MASTER router).

**Command Modes**

VRRP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

### priority

Specify a VRRP priority value for the VRRP group. The VRRP protocol uses this value during the MASTER election process.

**Syntax**

```plaintext
priority priority
```

To return to the default value, use the ```no priority``` command.

**Parameters**

- **priority**
  
  Enter a number as the priority. Enter 255 only if the router’s virtual address is the same as the interface’s primary IP address (that is, the router is the OWNER). The range is from 1 to 255. The default is **100**.
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.16.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

To guarantee that a VRRP group becomes MASTER, configure the VRRP group’s virtual address with same IP address as the interface’s primary IP address and change the priority of the VRRP group to 255.

If you set the priority command to 255 and the virtual-address is not equal to the interface’s primary IP address, an error message appears.

show config

View the non-default VRRP configuration.

Syntax

```
show config [verbose]
```

Parameters

- `verbose` (OPTIONAL) Enter the keyword verbose to view all VRRP group configuration information, including defaults.

Command Modes

VRRP

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Example

```
Dell(conf-if-vrid-4)#show config
vrrp-group 4
```
**show vrrp**

View the VRRP groups that are active. If no VRRP groups are active, the Dell Networking OS returns No Active VRRP group.

**Z9000**

**Syntax**

```
show vrrp [vrrp-id] [interface] [brief][ipv6]
```

**Parameters**

- **vrrp-id**  (OPTIONAL) Enter the Virtual Router Identifier for the VRRP group to view only that group. The range is from 1 to 255.
- **interface**  (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For Port Channel interface types, enter the keywords port-channel then the number. The range is from 1 to 128.
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a VLAN interface, enter the keyword vlan then the VLAN ID. The VLAN ID range is from 1 to 4094.
- **brief**  (OPTIONAL) Enter the keyword brief to view a table of information on the VRRP groups.
- **ipv6**  (OPTIONAL) Enter the keyword ipv6 to view only VRRP IPv6 groups.

**Command Modes**

- EXEC
- EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>

<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

The following describes the show vrrp brief command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interface</td>
<td>Lists the interface type, slot and port on which the VRRP group is configured.</td>
</tr>
<tr>
<td>Grp</td>
<td>Displays the VRRP group ID.</td>
</tr>
<tr>
<td>Pri</td>
<td>Displays the priority value assigned to the interface. If the track command is configured to track that interface and the interface is disabled, the cost is subtracted from the priority value assigned to the interface.</td>
</tr>
<tr>
<td>Item</td>
<td>Description</td>
</tr>
<tr>
<td>-----------</td>
<td>--------------------------------------------------</td>
</tr>
<tr>
<td>Pre</td>
<td>States whether preempt is enabled on the interface.</td>
</tr>
<tr>
<td></td>
<td>● Y = Preempt is enabled.</td>
</tr>
<tr>
<td></td>
<td>● N = Preempt is not enabled.</td>
</tr>
<tr>
<td>State</td>
<td>Displays the operational state of the interface by using one of the following:</td>
</tr>
<tr>
<td></td>
<td>● NA/IF (the interface is not available).</td>
</tr>
<tr>
<td></td>
<td>● MASTER (the interface associated with the MASTER router).</td>
</tr>
<tr>
<td></td>
<td>● BACKUP (the interface associated with the BACKUP router).</td>
</tr>
<tr>
<td>Master addr</td>
<td>Displays the IP address of the MASTER router.</td>
</tr>
<tr>
<td>Virtual addr(s)</td>
<td>Displays the virtual IP addresses of the VRRP routers associated with the interface.</td>
</tr>
</tbody>
</table>

**Example (Brief)**

```plaintext
Dell>Interface Grp Pri Pre State Master addr Virtual addr(s)
Description--------------------------------------------------------
Te 1/37 1 100 Y Master 200.200.200.200 200.200.200.201
Te 1/37 3 100 Y Master 1.1.1.1 1.1.1.2
... short desc
Dell>
```

**Usage Information**

The following describes the `show vrrp` command shown in the following example.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TenGigabitEthernet net 1/3...</td>
<td>Displays the Interface, the VRRP group ID, and the network address. If the interface is not sending VRRP packets, 0.0.0.0 appears as the network address.</td>
</tr>
<tr>
<td>State: master...</td>

Dell>

virtual-address

Configure up to 12 IP addresses of virtual routers in the VRRP group. To start sending VRRP packets, set at least one virtual address for the VRRP group.

Syntax

virtual-address ip-address1 [ ... ip-address12]

To delete one or more virtual IP addresses, use the no virtual-address ip-address1 [ ... ip-address12] command.

Parameters

ip-address1 (mandatory) Enter an IP address of the virtual router in dotted decimal format. The IP address must be on the same subnet as the interface's primary IP address.

... ip-address12 (OPTIONAL) Enter up to 11 additional IP addresses of virtual routers in dotted decimal format. Separate the IP addresses with a space. The IP addresses must be on the same subnet as the interface's primary IP address.

Defaults

Not configured.

Command Modes

VRRP

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>
**vrrp delay minimum**

Set the delay time for VRRP initialization after an interface comes up.

**Syntax**

```
vrrp delay minimum seconds
```

**Parameters**

- `seconds`: Enter the number of seconds for the delay for VRRP initialization after an interface becomes operational. The range is from 0 to 900 (0 indicates no delay).

**Defaults**

0

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>9.0.0.0</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command applies to a single interface. When used with the `vrrp delay reload CLI`, the later timer rules the VRRP enabling. For example, if `vrrp delay reload` is 600 and the `vrrp delay minimum` is 300:

- When the system reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all interfaces that are up and configured for VRRP.
- When an interface comes up, whether as part of a system reload or an interface reload, the system waits 300 seconds (5 minutes) to bring up VRRP on that interface.

**Related Command**

- `vrrp delay reload` — sets the delay time for VRRP initialization after a system reboot.

**vrrp delay reload**

Set the delay time for VRRP initialization after a system reboot.

**Syntax**

```
vrrp delay reload seconds
```

1310   Virtual Router Redundancy Protocol (VRRP)
**Parameters**

- **seconds**
  
  Enter the number of seconds for the delay. The range is from 0 to 900 (0 indicates no delay).

**Defaults**

0

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>

<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.8.0</td>
<td>Introduced on the S4810.</td>
</tr>
</tbody>
</table>

**Usage Information**

This command applies to all the VRRP configured interfaces on a system. When used with the `vrrp delay minimum` CLI, the later timer rules the VRRP enabling. For example, if `vrrp delay reload` is 600 and the `vrrp delay minimum` is 300:

- When the system reloads, VRRP waits 600 seconds (10 minutes) to bring up VRRP on all interfaces that are up and configured for VRRP.
- When an interface comes up, whether as part of a system reload or an interface reload, the system waits 300 seconds (5 minutes) to bring up VRRP on that interface.

Save the configuration and reload the system for the delay timers to take effect.

**Related Command**

- `vrrp delay minimum` — sets the delay time for VRRP initialization after a line card reboot.

---

**vrrp-group**

Assign a VRRP ID to an interface. You can configure up to 12 VRRP groups per interface.

**Syntax**

```
vrrp-group vrrp-id
```

**Parameters**

- **vrrp-id**
  
  Enter a number as the group ID. The range is from 1 to 255.

**Defaults**

Not configured.

**Command Modes**

INTERFACE

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>

<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
</tbody>
</table>
Version Description
6.2.1.1 Introduced on the E-Series.

Usage Information
The VRRP group only becomes active and sends VRRP packets when a virtual IP address is configured. When you delete the virtual address, the VRRP group stops sending VRRP packets.

Related Command
virtual-address — assigns up to 12 virtual IP addresses per VRRP group.

version
Set VRRP protocol version for IPv4 group.

Syntax
version {2 | 3 | both}
To return to the default setting, use the no version command.

Parameters
2 Enter the 2 parameter to specify VRRP version 2 as defined by RFC 3768, Virtual Router Redundancy Protocol.
3 Enter the 2 parameter to specify VRRP version 3 as defined in RFC 5798, Virtual Router Redundancy.
both Enter the both keyword for in-service migration from VRRP version 2 to VRRP version 3.

Defaults
2

Command Modes
VRRP

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.
The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Introduced on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
</tbody>
</table>

Usage Information
You can use the version both command to migrate from VRRPv2 to VRRPv3. When you set the VRRP protocol version to both, the switch sends only VRRPv3 advertisements but can receive either VRRPv2 or VRRPv3 packets. To migrate an IPv4 VRRP group from VRRPv2 to VRRPv3:
1. Set the switches with the lowest priority to “both”.
2. Set the switch with the highest priority to version to 3.
3. Set all the switches from both to version 3.

NOTE: Do not run VRRP version 2 and version 3 in the same group for an extended period of time.

Example

```
Dell(conf-if-te-1/1-vrid-100)#version ?
2 VRRPv2
3 VRRPv3
both Interoperable, send VRRPv3 receive both

Dell(conf-if-te-1/1-vrid-100)#version 3
```
**IPv6 VRRP Commands**

The following are IPv6 VRRP commands.

- clear counters vrrp ipv6
- debug vrrp ipv6
- show vrrp ipv6
- vrrp-ipv6-group

The following commands apply to IPv4 and IPv6:

- advertise-interval
- description
- disable
- hold-time
- preempt
- priority
- show config
- virtual-address

### clear counters vrrp ipv6

Clear the counters recorded for IPv6 VRRP groups.

**Syntax**

```
clear counters vrrp ipv6 [vrid | vrf vrf-name]
```

**Parameters**

- **vrid**  
  (OPTIONAL) Enter the number of an IPv6 VRRP group. The range is from 1 to 255.

- **vrf vrf-name**  
  (OPTIONAL) Enter the name of a VRF instance (32 characters maximum) to clear the counters of all IPv6 VRRP groups in the specified VRF.

**Command Modes**

EXEC Privilege

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.10.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Introduced on E-Series ExaScale, C-Series, and S-Series. Support was added for IPv6 VRRP groups in non-default VRF instances.</td>
</tr>
<tr>
<td>8.3.2.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
</tbody>
</table>

### debug vrrp ipv6

Allows you to enable debugging of VRRP.

**Syntax**

```
depbug vrrp ipv6 interface [vrid] {all | packets | state | timer}
```

**Parameters**

- **interface**  
  Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword TenGigabitEthernet then the slot/port information.
  - For a Port Channel interface, enter the keywords port-channel then a number.
For a VLAN interface, enter the keyword `vlan` then the VLAN ID. The VLAN ID range is from 1 to 4094.

- **vrpid** (OPTIONAL) Enter a number from 1 to 255 as the VRRP group ID.
- **all** Enter the keyword `all` to enable debugging of all VRRP groups.
- **bfd** Enter the keyword `bfd` to enable debugging of all VFFP BFD interactions.
- **database** Enter the keyword `database` to display changes related to group, prefix, and interface entries in the VRRP table.
- **packets** Enter the keyword `packets` to enable debugging of VRRP control packets.
- **state** Enter the keyword `state` to enable debugging of VRRP state changes.
- **timer** Enter the keyword `timer` to enable debugging of the VRRP timer.

### Command Modes
- EXEC Privilege

### Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.10.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Introduced on E-Series ExaScale, C-Series, and S-Series. Support was added for IPv6 VRRP groups in non-default VRF instances.</td>
</tr>
<tr>
<td>8.3.2.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
</tbody>
</table>

### Usage Information
If no options are specified, debug is active on all interfaces and all VRRP groups.

## show vrrp ipv6

View the IPv6 VRRP groups that are active. If no VRRP groups are active, the Dell Networking OS returns *No Active VRRP group.*

### Syntax
```
show vrrp ipv6 [vrpid] [interface] [brief]
```

### Parameters
- **vrpid** (OPTIONAL) Enter the virtual router identifier for the VRRP group to view only that group. The range is from 1 to 255.
- **interface**
  - Enter the following keywords and slot/port or number information:
    - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
    - For a port channel interface, enter the keywords `port-channel` then a number.
    - For a VLAN interface, enter the keyword `vlan` then a number from 1 to 4094.
- **brief** (OPTIONAL) Enter the keyword `brief` to view a table of information on the VRRP groups.

### Command Modes
- EXEC
- EXEC Privilege

### Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.
### Version

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.10.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.2.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
</tbody>
</table>

### Usage Information

The following describes the `show vrrp ipv6` command shown in the following example.

<table>
<thead>
<tr>
<th>Line Beginning with</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GigabitEthernet..</td>
<td>Displays the Interface, the VRRP group ID, and the network address. If the interface is no sending VRRP packets, 0.0.0.0 appears as the network address.</td>
</tr>
<tr>
<td>VRF</td>
<td>VRF instance to which the interface (on which the VRRP group is configured) belongs.</td>
</tr>
</tbody>
</table>
| State: master...    | Displays the interface's state:  
  - Na/If (not available).  
  - master (MASTER virtual router).  
  - backup (BACKUP virtual router).  
  the interface’s priority and the IP address of the MASTER. |
| Hold Down...        | This line displays additional VRRP configuration information:  
  - Hold Down displays the hold down timer interval in seconds.  
  - Preempt displays TRUE if preempt is configured and FALSE if preempt is not configured.  
  - AdvInt displays the Advertise Interval in seconds. |
| Adv rcvd...         | This line displays counters for the following:  
  - Adv rcvd displays the number of VRRP advertisements received on the interface.  
  - Adv sent displays the number of VRRP advertisements sent on the interface.  
  - Bad pkts rcvd displays the number of invalid packets received on the interface. |
| Virtual MAC address | Displays the virtual MAC address of the VRRP group. |
| Virtual IP address  | Displays the virtual IP address of the VRRP router to which the interface is connected. |
| Tracking states...  | Displays information on the tracked interfaces or objects configured for a VRRP group (`track` command), including:  
  - UP or DOWN state of the tracked interface or object (Up or Dn).  
  - Interface type and slot/port or object number, description, and time since the last change in the state of the tracked object.  
  - Cost to be subtracted from the VRRP group priority if the state of the tracked interface/object goes DOWN. |

### Example

```
Dell#show vrrp ipv6
------------------
VRF: 0 default-vrf  
State: Master, Priority: 101, Master: fe80::201:e8ff:fe7a:6bb9 (local)  
Hold Down: 0 centisec, Preempt: TRUE, AdvInt: 100 centisec  
Accept Mode: FALSE, Master AdvInt: 100 centisec  
Adv rcvd: 0, Bad pkts rcvd: 0, Adv sent: 64  
Virtual MAC address: 00:00:5e:00:02:ff  
Virtual IP address: 1::255 fe80::255
```
vrrp-ipv6-group

Assign an interface to a VRRP group.

Syntax
vrrp-ipv6-group vrid

Parameters
vrid
Enter the virtual-router ID number of the VRRP group. The VRID range is from 1 to 255.

Defaults
Not configured.

Command Modes
INTERFACE

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>8.4.2.1</td>
<td>The range of valid VRID values on the E-Series when VRF microcode is loaded in CAM changed from 1 to 15.</td>
</tr>
<tr>
<td>8.4.1.0</td>
<td>Introduced on the E-Series ExaScale, C-Series, and S-Series.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>8.3.2.0</td>
<td>Introduced on the E-Series TeraScale.</td>
</tr>
</tbody>
</table>

Usage Information
The VRRP group only becomes active and sends VRRP packets when a link-local virtual IP address is configured. When you delete the virtual address, the VRRP group stops sending VRRP packets.

- When VRF microcode is not loaded in CAM, the VRID for a VRRP group is the same as the VRID number configured with the `vrrp-group` or `vrrp-ipv6-group vrid` command.
- When VRF microcode is loaded in CAM, the VRID for a VRRP group is equal to 16 times the `vrrp-group` or `vrrp-ipv6-group vrid` number plus the `ip vrf vrf-id` number. For example, if VRF microcode is loaded and VRRP group 10 is configured in VRF 2, the VRID used for the VRRP group is \((16 \times 10) + 2\), or 162. This VRID value is used in the lowest byte of the virtual MAC address of the VRRP group and is also used for VRF routing.

NOTE: Configure the same VRID on neighboring routers (Dell Networking or non-Dell Networking) in the same VRRP group in order for all routers to interoperate.

Related Commands
- `virtual-address` — assigns up to 12 virtual IP addresses per VRRP group.

advertise-interval

Set the time interval between VRRP advertisements.

Syntax
advertise-interval { seconds | centisecs centisecs }

To return to the default settings, use the no advertise-interval command.

Parameters
- `seconds` Enter a number of seconds. The range is from 1 to 255. The default is 1 second.
- `centisecs` Enter the keyword `centisecs` followed by the number of centisecs in multiple of 25 centisecs. The range is 25 to 4075 centisecs in multiples of 25 centisecs.

Defaults
1 second or 100 centisecs.

Command Modes
INTERFACE-VRRP
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Added support for centisecs on the Z9000, S6000, S4820T, S4810, and MXL.</td>
</tr>
<tr>
<td>9.2(1.0)</td>
<td>Introduced on the Z9500.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Dell Networking recommends keeping the default setting for this command. If you do change the time interval between VRRP advertisements on one router, change it on all routers.

description

Configure a short text string describing the VRRP group.

Syntax

```
description text
```

To delete a VRRP group description, use the `no description` command.

Parameters

- **text**: Enter a text string up to 80 characters long.

Defaults

Not enabled.

Command Modes

VRRP

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

To enable VRRP traffic, assign an IP address to the VRRP group using the virtual-address command and enter no disable.

**Related Commands**

- virtual-address — specifies the IP address of the virtual router.

hold-time

Specify a delay (in seconds) before a switch becomes the MASTER virtual router. By delaying the initialization of the VRRP MASTER, the new switch can stabilize its routing tables.

**Syntax**

hold-time {seconds | centisecs centisecs}

To return to the default value, use the no hold-time command.

**Parameters**

- **seconds**
  
Enter the number of seconds. The range is from 0 to 65535. The default is zero (0) seconds.

- **centisecs centisecs**
  
Enter the keyword centisecs then the number of centisecs in units of 25 centisecs. The range is from 0 to 65525 in units of 25 centisecs.

**Defaults**

zero (0) seconds or (0) centiseconds

**Command Modes**

VRRP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.5(0.0)</td>
<td>Added support for centisecs on the Z9000, S6000, S4820T, S4810, and MxL.</td>
</tr>
</tbody>
</table>
**Version** | **Description**  
---|---  
9.2(1.0) | Introduced on the Z9500.  
9.0.2.0 | Introduced on the S6000.  
8.3.19.0 | Introduced on the S4820T.  
8.3.11.1 | Introduced on the Z9000.  
8.3.7.0 | Introduced on the S4810.  
7.6.1.0 | Introduced on the S-Series.  
7.5.1.0 | Introduced on the C-Series.  
6.2.1.1 | Introduced on the E-Series.  

**Usage Information**  
If a switch is a MASTER and you change the hold timer, disable and re-enable VRRP for the new hold timer value to take effect.

**Related Commands**  
disable — disables a VRRP group.

---

**preempt**

To preempt or become the MASTER router, permit a BACKUP router with a higher priority value.

**Syntax**

preempt

To prohibit preemption, use the no preempt command.

**Defaults**

Enabled (that is, a BACKUP router can preempt the MASTER router).

**Command Modes**

VRRP

**Command History**

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

**Version** | **Description**  
---|---  
9.7(0.0) | Introduced on the S6000-ON.  
9.0.2.0 | Introduced on the S6000.  
8.3.19.0 | Introduced on the S4820T.  
8.3.11.1 | Introduced on the Z9000.  
8.3.7.0 | Introduced on the S4810.  
7.6.1.0 | Introduced on the S-Series.  
7.5.1.0 | Introduced on the C-Series.  
6.2.1.1 | Introduced on the E-Series.

---

**priority**

Specify a VRRP priority value for the VRRP group. The VRRP protocol uses this value during the MASTER election process.

**Syntax**

priority priority

To return to the default value, use the no priority command.
Parameters

**priority**

Enter a number as the priority. Enter 255 only if the router’s virtual address is the same as the interface’s primary IP address (that is, the router is the OWNER). The range is from 1 to 255. The default is 100.

Defaults

100

Command History

This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.16.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information

To guarantee that a VRRP group becomes MASTER, configure the VRRP group’s virtual address with the same IP address as the interface’s primary IP address and change the priority of the VRRP group to 255. If you set the `priority` command to 255 and the `virtual-address` is not equal to the interface’s primary IP address, an error message appears.

**show config**

View the non-default VRRP configuration.

Syntax

```
show config [verbose]
```

Parameters

**verbose**

(Optional) Enter the keyword `verbose` to view all VRRP group configuration information, including defaults.

Command Modes

VRRP

</tbody>
</table>
track

Monitor an interface and lower the priority value of the VRRP group on that interface if it is disabled.

**Syntax**

```
track interface [priority-cost cost]
```

To disable monitoring, use the `no track interface` command.

**Parameters**

- **interface** (OPTIONAL) Enter the following keywords and slot/port or number information:
  - For a 10-Gigabit Ethernet interface, enter the keyword `TenGigabitEthernet` then the slot/port information.
  - For a Loopback interface, enter the keyword `loopback` then a number from 0 to 16383.
  - For Port Channel interface types, enter the keywords `port-channel` then a number.
  - For a 40-Gigabit Ethernet interface, enter the keyword `fortyGigE` then the slot/port information.
  - For a VLAN interface, enter the keyword `vlan` followed by the VLAN ID. The VLAN ID range is from 1 to 4094.

- **priority-cost** (OPTIONAL) Enter a number as the amount to be subtracted from the priority value. The range is 1 to 254. The default is 10.

**Defaults**

priority cost = 10

VRRP

**Command History**

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series (S50 only).</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

**Usage Information**

If the interface is disabled, the cost value is subtracted from the priority value and forces a new MASTER election if the priority value is lower than the priority value in the BACKUP virtual routers.

virtual-address

Configure up to 12 IP addresses of virtual routers in the VRRP group. To start sending VRRP packets, set at least one virtual address for the VRRP group.

**Syntax**

```
virtual-address ip-address1 [ ... ip-address12]
```

To delete one or more virtual IP addresses, use the `no virtual-address ip-address1 [ ... ip-address12]` command.

**Parameters**

- **ip-address1** Enter an IP address of the virtual router in dotted decimal format. The IP address must be on the same subnet as the interface’s primary IP address.
(OPTIONAL) Enter up to 11 additional IP addresses of virtual routers in dotted decimal format. Separate the IP addresses with a space. The IP addresses must be on the same subnet as the interface’s primary IP address.

Defaults
Not configured.

Command History
This guide is platform-specific. For command information about other platforms, refer to the relevant Dell Networking OS Command Line Reference Guide.

The following is a list of the Dell Networking OS version history for this command.

<table>
<thead>
<tr>
<th>Version</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>9.7(0.0)</td>
<td>Introduced on the S6000-ON.</td>
</tr>
<tr>
<td>9.0.2.0</td>
<td>Introduced on the S6000.</td>
</tr>
<tr>
<td>8.3.19.0</td>
<td>Introduced on the S4820T.</td>
</tr>
<tr>
<td>8.3.11.1</td>
<td>Introduced on the Z9000.</td>
</tr>
<tr>
<td>8.3.7.0</td>
<td>Introduced on the S4810.</td>
</tr>
<tr>
<td>7.6.1.0</td>
<td>Introduced on the S-Series.</td>
</tr>
<tr>
<td>7.5.1.0</td>
<td>Introduced on the C-Series.</td>
</tr>
<tr>
<td>7.4.1.0</td>
<td>Introduced support for telnetting to the VRRP group IP address assigned using this command.</td>
</tr>
<tr>
<td>6.2.1.1</td>
<td>Introduced on the E-Series.</td>
</tr>
</tbody>
</table>

Usage Information
The VRRP group only becomes active and sends VRRP packets when a virtual IP address is configured. When you delete the virtual address, the VRRP group stops sending VRRP packets.

A system message appears after you enter or delete the virtual-address command.

To guarantee that a VRRP group becomes MASTER, configure the VRRP group’s virtual address with the same IP address as the interface’s primary IP address and change the priority of the VRRP group to 255.

You can ping the virtual addresses configured in all VRRP groups.
