

Dell OpenManage Server Administrator 8.2 — Technical Information Sheet for Red Hat Enterprise Linux 7.2

At Dell, we strive to make Systems Management Support available to you with the General Availability (GA) of an operating system. Though the GA of an operating system may not be in line with the release of our Systems Management Software product(s), we believe in enhancing our customer experience by providing our best effort support for Systems Management Software product(s) and full support will be available in the next available version of Systems Management Software.

This Technical Information Sheet documents information related to any limitations or known issues in using Dell OpenManage Server Administrator 8.2 on systems running the Red Hat Enterprise Linux 7.2 operating system.

Known Issues and Limitations

- **Description:** Mismatch in the BIOS attributes in Server Administrator 8.2 and **F2** BIOS.

On Dell PowerEdge R905 running the Red Hat Enterprise Linux 7.2 operating system, the BIOS **Setup** page in Server Administrator 8.2 displays an attribute called **DUAL NIC**. This **DUAL NIC** attribute is displayed in the operating system report, but not displayed in the **F2** BIOS screen.

Resolution: This is a known issue and does not cause any functionality limitation. The fix for this issue can be expected in the next available version of Dell OpenManage Server Administrator.

- **Description:** NVMe PCIe SSDs are not detected on the latest version of Dell OpenManage Storage Services.

 **NOTE:** NVMe PCIe SSDs are not supported on systems running the Red Hat Enterprise Linux 7.2 operating system. The fix for this issue can be expected in the next available version of Dell OpenManage Storage Services.
