Before working inside your computer

About this task

1. **NOTE**: The images in this document may differ from your computer depending on the configuration you ordered.

Steps

1. Save and close all open files and exit all open applications.
2. Shut down your computer. Click **Start > Power > Shut down**.
   
   **NOTE**: If you are using a different operating system, see the documentation of your operating system for shut-down instructions.
3. Disconnect your computer and all attached devices from their electrical outlets.
4. Disconnect all attached network devices and peripherals, such as keyboard, mouse, and monitor from your computer.
   
   **CAUTION**: To disconnect a network cable, first unplug the cable from your computer and then unplug the cable from the network device.
5. Remove any media card and optical disc from your computer, if applicable.

Safety instructions

Use the following safety guidelines to protect your computer from potential damage and to ensure your personal safety. Unless otherwise noted, each procedure included in this document assumes that you have read the safety information that shipped with your computer.

**WARNING**: Before working inside your computer, read the safety information that is shipped with your computer. For more safety best practices, see the Regulatory Compliance home page at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

**WARNING**: Disconnect your computer from all power sources before opening the computer cover or panels. After you finish working inside the computer, replace all covers, panels, and screws before connecting your computer to an electrical outlet.

**CAUTION**: To avoid damaging the computer, ensure that the work surface is flat, dry, and clean.

**CAUTION**: To avoid damaging the components and cards, handle them by their edges, and avoid touching the pins and the contacts.

**CAUTION**: You should only perform troubleshooting and repairs as authorized or directed by the Dell technical assistance team. Damage due to servicing that is not authorized by Dell is not covered by your warranty. See the safety instructions that is shipped with the product or at [www.dell.com/regulatory_compliance](http://www.dell.com/regulatory_compliance).

**CAUTION**: Before touching anything inside your computer, ground yourself by touching an unpainted metal surface, such as the metal at the back of the computer. While you work, periodically touch an unpainted metal surface to dissipate static electricity which could harm internal components.

**CAUTION**: When you disconnect a cable, pull it by its connector or its pull tab, not the cable itself. Some cables have connectors with locking tabs or thumbscrews that you must disengage before disconnecting the cable.
When disconnecting cables, keep them evenly aligned to avoid bending the connector pins. When connecting cables, ensure that the ports and the connectors are correctly oriented and aligned.

⚠️ CAUTION: Press and eject any installed card from the media-card reader.

⚠️ CAUTION: Exercise caution when handling Lithium-ion batteries in laptops. Swollen batteries should not be used and should be replaced and disposed properly.

ℹ️ NOTE: The color of your computer and certain components may appear differently than shown in this document.

**Electrostatic discharge—ESD protection**

ESD is a major concern when you handle electronic components, especially sensitive components such as expansion cards, processors, memory DIMMs, and system boards. Very slight charges can damage circuits in ways that may not be obvious, such as intermittent problems or a shortened product life span. As the industry pushes for lower power requirements and increased density, ESD protection is an increasing concern.

Due to the increased density of semiconductors used in recent Dell products, the sensitivity to static damage is now higher than in previous Dell products. For this reason, some previously approved methods of handling parts are no longer applicable.

Two recognized types of ESD damage are catastrophic and intermittent failures.

- **Catastrophic** – Catastrophic failures represent approximately 20 percent of ESD-related failures. The damage causes an immediate and complete loss of device functionality. An example of catastrophic failure is a memory DIMM that has received a static shock and immediately generates a "No POST/No Video" symptom with a beep code emitted for missing or nonfunctional memory.

- **Intermittent** – Intermittent failures represent approximately 80 percent of ESD-related failures. The high rate of intermittent failures means that most of the time when damage occurs, it is not immediately recognizable. The DIMM receives a static shock, but the tracing is merely weakened and does not immediately produce outward symptoms related to the damage. The weakened trace may take weeks or months to melt, and in the meantime may cause degradation of memory integrity, intermittent memory errors, etc.

The more difficult type of damage to recognize and troubleshoot is the intermittent (also called latent or "walking wounded") failure.

Perform the following steps to prevent ESD damage:

- Use a wired ESD wrist strap that is properly grounded. The use of wireless anti-static straps is no longer allowed; they do not provide adequate protection. Touching the chassis before handling parts does not ensure adequate ESD protection on parts with increased sensitivity to ESD damage.

- Handle all static-sensitive components in a static-safe area. If possible, use anti-static floor pads and workbench pads.

- When unpacking a static-sensitive component from its shipping carton, do not remove the component from the anti-static packing material until you are ready to install the component. Before unwrapping the anti-static packaging, ensure that you discharge static electricity from your body.

- Before transporting a static-sensitive component, place it in an anti-static container or packaging.

**ESD field service kit**

The unmonitored Field Service kit is the most commonly used service kit. Each Field Service kit includes three main components: anti-static mat, wrist strap, and bonding wire.

**Components of an ESD field service kit**

The components of an ESD field service kit are:

- **Anti-Static Mat** – The anti-static mat is dissipative and parts can be placed on it during service procedures. When using an anti-static mat, your wrist strap should be snug and the bonding wire should be connected to the mat and to any bare metal on the system being worked on. Once deployed properly, service parts can be removed from the ESD bag and placed directly on the mat. ESD-sensitive items are safe in your hand, on the ESD mat, in the system, or inside a bag.

- **Wrist Strap and Bonding Wire** – The wrist strap and bonding wire can be either directly connected between your wrist and bare metal on the hardware if the ESD mat is not required, or connected to the anti-static mat to protect hardware that is temporarily placed on the mat. The physical connection of the wrist strap and bonding wire between your skin, the ESD mat, and the hardware is known as bonding. Use only Field Service kits with a wrist strap, mat, and bonding wire. Never
use wireless wrist straps. Always be aware that the internal wires of a wrist strap are prone to damage from normal wear and tear, and must be checked regularly with a wrist strap tester in order to avoid accidental ESD hardware damage. It is recommended to test the wrist strap and bonding wire at least once per week.

- **ESD Wrist Strap Tester** – The wires inside of an ESD strap are prone to damage over time. When using an unmonitored kit, it is a best practice to regularly test the strap prior to each service call, and at a minimum, test once per week. A wrist strap tester is the best method for doing this test. If you do not have your own wrist strap tester, check with your regional office to find out if they have one. To perform the test, plug the wrist-strap's bonding-wire into the tester while it is strapped to your wrist and push the button to test. A green LED is lit if the test is successful; a red LED is lit and an alarm sounds if the test fails.

- **Insulator Elements** – It is critical to keep ESD sensitive devices, such as plastic heat sink casings, away from internal parts that are insulators and often highly charged.

- **Working Environment** – Before deploying the ESD Field Service kit, assess the situation at the customer location. For example, deploying the kit for a server environment is different than for a desktop or portable environment. Servers are typically installed in a rack within a data center; desktops or portables are typically placed on office desks or cubicles. Always look for a large open flat work area that is free of clutter and large enough to deploy the ESD kit with additional space to accommodate the type of system that is being repaired. The workspace should also be free of insulators that can cause an ESD event. On the work area, insulators such as Styrofoam and other plastics should always be moved at least 12 inches or 30 centimeters away from sensitive parts before physically handling any hardware components.

- **ESD Packaging** – All ESD-sensitive devices must be shipped and received in static-safe packaging. Metal, static-shielded bags are preferred. However, you should always return the damaged part using the same ESD bag and packaging that the new part arrived in. The ESD bag should be folded over and taped shut and all the same foam packing material should be used in the original box that the new part arrived in. ESD-sensitive devices should be removed from packaging only at an ESD-protected work surface, and parts should never be placed on top of the ESD bag because only the inside of the bag is shielded. Always place parts in your hand, on the ESD mat, in the system, or inside an anti-static bag.

- **Transporting Sensitive Components** – When transporting ESD sensitive components such as replacement parts or parts to be returned to Dell, it is critical to place these parts in anti-static bags for safe transport.

**ESD protection summary**

It is recommended that all field service technicians use the traditional wired ESD grounding wrist strap and protective anti-static mat at all times when servicing Dell products. In addition, it is critical that technicians keep sensitive parts separate from all insulator parts while performing service and that they use anti-static bags for transporting sensitive components.

**Transporting sensitive components**

When transporting ESD sensitive components such as replacement parts or parts to be returned to Dell, it is critical to place these parts in anti-static bags for safe transport.

**Entering Service Mode**

Service Mode allows users to immediately cut off electricity from the computer and conduct repairs without disconnecting the battery cable from the system board.

To enter **Service Mode**:

1. Shut down your computer and disconnect the AC adapter.
2. Hold <B> key on the keyboard and press the power button for 3 seconds or until the Dell logo appears on the screen.
3. Press any key to continue.

   **NOTE:** If the power adapter has not been disconnected, a message prompting you to remove the AC adapter appears on the screen. Remove the AC adapter and then press any key to continue the **Service Mode** procedure.

   **NOTE:** The **Service Mode** procedure automatically skips the following step if the **Owner Tag** of the computer is not set up in advance by the manufacturer.

4. When the ready-to-proceed message appears on the screen, press any key to proceed. The computer emits three short beeps and shuts down immediately.
Once the computer shuts down, you may perform the replacement procedures without disconnecting the battery cable from the system board.

**Exiting Service Mode**

**Service Mode** allows users to immediately cut off electricity from the computer and conduct repairs without disconnecting the battery cable from the system board.

To exit **Service Mode**:
1. Connect the AC adapter to the power-adapter port on your computer.
2. Press the power button to turn on the computer. Your computer will automatically return to normal functioning mode.

**After working inside your computer**

**About this task**

⚠️ **CAUTION:** Leaving stray or loose screws inside your computer may severely damage your computer.

**Steps**
1. Replace all screws and ensure that no stray screws remain inside your computer.
2. Connect any external devices, peripherals, or cables you removed before working on your computer.
3. Replace any media cards, discs, or any other parts that you removed before working on your computer.
4. Connect your computer and all attached devices to their electrical outlets.
5. Turn on your computer.
Removing and installing components

NOTE: The images in this document may differ from your computer depending on the configuration you ordered.

Recommended tools

The procedures in this document may require the following tools:

- Phillips screwdriver #0
- Phillips screwdriver #1
- Plastic scribe

Screw list

NOTE: When removing screws from a component, it is recommended to note the screw type, the quantity of screws, and then place them in a screw storage box. This is to ensure that the correct number of screws and correct screw type is restored when the component is replaced.

NOTE: Some computers have magnetic surfaces. Ensure that the screws are not left attached to such surfaces when replacing a component.

NOTE: Screw color may vary with the configuration ordered.

# Base cover

## Removing the base cover

**Prerequisites**

1. Follow the procedure in *Before working inside your computer*.
2. Enter *Service Mode*.

**About this task**

The following images indicate the location of the base cover and provide a visual representation of the removal procedure.
Steps
1. Remove the seven (M2x4) screws that secure the base cover to the palm-rest and keyboard assembly.
2. Loosen the two (M2x7.5) captive screws that secure the base cover to the palm-rest and keyboard assembly.
3. Using a plastic scribe, pry the base cover from the U-shaped indents at the top edge of the base cover and continue to work on the sides to release the base cover from the palm-rest and keyboard assembly.
4. Lift the base cover off the palm-rest and keyboard assembly.

Installing the base cover

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following images indicate the location of the base cover and provide a visual representation of the installation procedure.
Steps
1. Place the base cover on top of the palm-rest and keyboard assembly.
2. Align the screw holes on the base cover with the screw holes on the palm-rest and keyboard assembly, and then snap the base cover into place.
3. Tighten the two (M2x7.5) captive screws that secure the base cover to the palm-rest and keyboard assembly.
4. Replace the seven (M2x4) screws that secure the base cover to the palm-rest and keyboard assembly.
Next steps
1. Exit Service Mode.
2. Follow the procedure in After working inside your computer.

Battery

Lithium-ion battery precautions

⚠️ CAUTION:
- Exercise caution when handling Lithium-ion batteries.
- Discharge the battery completely before removing it. Disconnect the AC power adapter from the system and operate the computer solely on battery power—the battery is fully discharged when the computer no longer turns on when the power button is pressed.
- Do not crush, drop, mutilate, or penetrate the battery with foreign objects.
- Do not expose the battery to high temperatures, or disassemble battery packs and cells.
- Do not apply pressure to the surface of the battery.
- Do not bend the battery.
- Do not use tools of any kind to pry on or against the battery.
- Ensure any screws during the servicing of this product are not lost or misplaced, to prevent accidental puncture or damage to the battery and other system components.
- If the battery gets stuck inside your computer as a result of swelling, do not try to release it as puncturing, bending, or crushing a lithium-ion battery can be dangerous. In such an instance, contact Dell technical support for assistance. See www.dell.com/contactdell.
- Always purchase genuine batteries from www.dell.com or authorized Dell partners and resellers.
- Swollen batteries should not be used and should be replaced and disposed properly. For guidelines on how to handle and replace swollen Lithium-ion batteries, see Handling swollen Lithium-ion batteries.

Removing the battery

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the base cover.

About this task

⚠️ NOTE: Inspiron 15 7510 also supports 6-cell (86 Wh) battery.

The following image indicates the location of the 3-cell (56 Wh) battery and provides a visual representation of the removal procedure.
Steps
1. Disconnect the battery cable from the system board.
2. Remove the five (M2x3) screws that secure the 3-cell battery to the palm-rest and keyboard assembly.
3. Lift the 3-cell battery, along with its cable, off the palm-rest and keyboard assembly.

Installing the battery

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

**NOTE:** Inspiron 15 7510 also supports 6-cell (86 Wh) battery.

The following image indicates the location of the 3-cell (56 Wh) battery and provides a visual representation of the installation procedure.
Steps
1. Using the alignment posts, place the 3-cell battery on the palm-rest and keyboard assembly.
2. Align the screw holes on the 3-cell battery with the screw holes on the palm-rest and keyboard assembly.
3. Replace the five (M2x3) screws that secure the 3-cell battery to the palm-rest and keyboard assembly.
4. Connect the battery cable to the system board.

Next steps
1. Install the base cover.
2. Follow the procedure in After working on your computer.

Battery cable

Removing the battery cable

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the base cover.
3. Remove the battery.

**NOTE:** If battery is disconnected from system board for service, then there is a delay during system boot as the system undergoes RTC battery reset.

About this task
The following images indicate the location of the battery cable and provide a visual representation of the removal procedure.
Steps
1. Flip the battery and remove the battery cable from the routing guides on the battery.
2. Disconnect the battery cable from the connector on the battery.
3. Lift the battery cable off the battery.

Installing the battery cable

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the battery cable and provides a visual representation of the installation procedure.
Steps
1. Align and place the battery cable on the battery.
2. Route the battery cable through the routing guides on the battery.
3. Connect the battery cable to the connector on the battery.

Next steps
1. Install the battery.
2. Install the base cover.
3. Follow the procedure in After working on your computer.

Memory

Removing the memory module

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Enter Service Mode.
3. Remove the base cover.

About this task

**NOTE:** Inspiron 15 7510 supports two memory slots.

The following images indicate the location of the memory module and provide a visual representation of the removal procedure.
Steps
1. Lift the Mylar to access the memory module.
2. Pry the retention clips securing the memory module until the memory module pops-up.
3. Remove the memory module from the memory-module slot.

**NOTE:** Repeat step 1 to step 3 to remove any other memory module installed in your computer.

Installing the memory module

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

**NOTE:** Inspiron 15 7510 supports two memory slots.

The following image indicates the location of the memory module and provides a visual representation of the installation procedure.
Steps
1. Lift the Mylar to access the memory-module slot.
2. Align the notch on the memory module with the tab on the memory-module slot.
3. Slide the memory module firmly at an angle, into the memory-module slot.
4. Press the memory module down until it clicks into place.

**NOTE:** If you do not hear the click, remove the memory module and reinstall it.

**NOTE:** Repeat step 1 to step 4 to install any other memory modules in your computer.

Next steps
1. Install the base cover.
2. Exit Service Mode.
3. Follow the procedure in After working inside your computer.
Solid-state drive—M.2 slot one

Removing the 2230 solid-state drive from M.2 slot one

Prerequisites
1. Follow the procedure in Before working inside your computer.
   
   **NOTE:** Solid-state drives are fragile. Exercise care when handling the solid-state drive.

   **NOTE:** To avoid data loss, do not remove the solid-state drive while the computer is in sleep or on state.

2. Enter Service Mode.

3. Remove the base cover.

About this task

**NOTE:** The M.2 card installed on M.2 slot one depends on the configuration ordered. Supported card configurations on M.2 slot one:

- M.2 2230 solid-state drive + M.2 2230 bracket
- M.2 2280 solid-state drive

**NOTE:** If you have ordered a system with M.2 2280 solid-state drive in M.2 slot one and want to replace it with a M.2 2230 solid-state drive, you will need a bracket (sold separately, please contact Dell support).

**NOTE:** This procedure applies only to computers shipped with a 2230 solid-state drive installed in M.2 slot one.

The following image indicates the location of the 2230 solid-state drive that is installed in M.2 slot one and provides a visual representation of the removal procedure.
Steps
1. Remove the screw (M2x4) that secures the solid-state drive thermal shield and the solid-state drive to the palm-rest and keyboard assembly.
2. Slide and lift the solid-state drive thermal shield off the solid-state drive.
3. Slide and remove the solid-state drive bracket from the M.2 slot one.
4. Slide and remove the solid-state drive from the M.2 slot one.

**NOTE:** Solid-state drives are fragile. Exercise care when handling the solid-state drive.

**NOTE:** The M.2 card installed on M.2 slot one depends on the configuration ordered. Supported card configurations on M.2 slot one:
- M.2 2230 solid-state drive + M.2 2230 bracket
- M.2 2280 solid-state drive

**NOTE:** If you have ordered a system with M.2 2280 solid-state drive in M.2 slot one and want to replace it with a M.2 2230 solid-state drive, you may need a bracket (sold separately, please contact Dell support).

**NOTE:** This procedure applies only if you are installing a 2230 solid-state drive in M.2 slot one.

The following image indicates the location of the 2230 solid-state drive that is installed in M.2 slot one and provides a visual representation of the installation procedure.

**Steps**

1. Align the notch on the solid-state drive with the tab on the solid-state drive slot.
2. Slide the solid-state drive firmly into the solid-state drive slot at an angle.
3. Align the notch on the solid-state drive with the securing peg on the bracket and clamp the solid-state drive in place.
4. Place the solid-state drive thermal shield on the solid-state drive.
5. Replace the screw (M2x4) that secures the solid-state drive thermal shield and solid-state drive to the palm-rest and keyboard assembly.

**Next steps**

1. Install the base cover.
2. Exit Service Mode.
3. Follow the procedure in *After working inside your computer*.

## Removing the 2280 solid-state drive from M.2 slot one

**Prerequisites**

1. Follow the procedure in *Before working inside your computer*.
   - **NOTE:** Solid-state drives are fragile. Exercise care when handling the solid-state drive.
   - **NOTE:** To avoid data loss, do not remove the solid-state drive while the computer is in sleep or on state.

2. Enter **Service Mode**.

3. Remove the **base cover**.

**About this task**

- **NOTE:** The M.2 card installed on M.2 slot one depends on the configuration ordered. Supported card configurations on M.2 slot one:
  - M.2 2230 solid-state drive + M.2 2230 mounting bracket
  - M.2 2280 solid-state drive

- **NOTE:** If you have ordered a system with M.2 2280 solid-state drive in M.2 slot one and want to replace it with a M.2 2230 solid-state drive, you will need a mounting bracket (sold separately, please contact Dell support).

- **NOTE:** This procedure applies only to computers shipped with a 2280 solid-state drive installed in M.2 slot one.

The following image indicates the location of the 2280 solid-state drive that is installed in M.2 slot one and provides a visual representation of the removal procedure.

**Steps**

1. Remove the screw (M2x4) that secures the solid-state drive thermal shield and the solid-state drive to the palm-rest and keyboard assembly.

2. Slide and lift the solid-state drive thermal shield off the solid-state drive.

3. Slide and lift the 2280 solid-state drive off the M.2 solid-state drive slot one on the system board.
Installing the 2280 solid-state drive in M.2 slot one

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

**NOTE:** Solid-state drives are fragile. Exercise care when handling the solid-state drive.

**NOTE:** The M.2 card installed on M.2 slot one depends on the configuration ordered. Supported card configurations on M.2 slot one:
- M.2 2230 solid-state drive + M.2 2230 mounting bracket

**NOTE:** If you have ordered a system with M.2 2280 solid-state drive in M.2 slot one and want to replace it with a M.2 2230 solid-state drive, you will need a mounting bracket (sold separately, please contact Dell support).

**NOTE:** This procedure is applicable if you are installing a 2280 solid-state drive in M.2 slot one.

**NOTE:** When installing a M.2 2280 NVMe Gen4.0 x4 solid-state drive, you may order a copper thermal shield from Dell support for better thermal performance.

The following image indicates the location of the 2280 solid-state drive that is installed in M.2 slot one and provides a visual representation of the installation procedure.

Steps
1. Align the notch on the 2280 solid-state drive with the tab on the solid-state drive slot.
2. Slide the solid-state drive firmly into the solid-state drive slot at an angle.
3. Place the solid-state drive thermal shield on the solid-state drive.
4. Align the screw hole on the solid-state drive thermal shield with the screw hole on the palm-rest and keyboard assembly.
5. Replace the screw (M2x4) that secures the solid-state drive thermal shield and solid-state drive to the palm-rest and keyboard assembly.
Next steps
1. Install the base cover.
2. Exit Service Mode.
3. Follow the procedure in After working inside your computer.

Solid-state drive—M.2 slot two

Removing the 2230 solid-state drive from M.2 slot two

Prerequisites

1. Follow the procedure in Before working inside your computer.
   - **NOTE:** Solid-state drives are fragile. Exercise care when handling the solid-state drive.
   - **NOTE:** To avoid data loss, do not remove the solid-state drive while the computer is in sleep or on state.
2. Enter Service Mode.
3. Remove the base cover.

About this task
The following image indicates the location of the 2230 solid-state drive that is installed in M.2 slot two and provides a visual representation of the removal procedure.

Steps
1. Remove the screw (M2x4) that secures the solid-state drive thermal shield and the solid-state drive to the palm-rest and keyboard assembly.
2. Slide and lift the solid-state drive thermal shield off the solid-state drive.
3. Slide and remove the solid-state drive from the M.2 slot two.
Installing the 2230 solid-state drive in M.2 slot two

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

**NOTE:** Solid-state drives are fragile. Exercise care when handling the solid-state drive.

**NOTE:** M.2 slot two supports only 2230 solid-state drive.

**NOTE:** This procedure applies only to computers shipped with a 2230 solid-state drive installed in M.2 slot two.

The following image indicates the location of the 2230 solid-state drive that is installed in M.2 slot two and provides a visual representation of the installation procedure.

Steps

1. Align the notch on the 2230 solid-state drive with the tab on M.2 slot two on the system board.
2. Slide the solid-state drive into M.2 slot two on the system board.
3. Place the solid-state drive thermal shield on the solid-state drive.
4. Align the screw hole on the solid-state drive thermal shield with the screw hole on the palm-rest and keyboard assembly.
5. Replace the screw (M2x4) that secures the solid-state drive thermal shield and solid-state drive to the palm-rest and keyboard assembly.

Next steps

1. Install the base cover.
2. Exit Service Mode.
3. Follow the procedure in After working inside your computer.
Wireless card

Removing the wireless card

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Enter Service Mode.
3. Remove the base cover.

About this task
The following images indicate the location of the wireless card and provide a visual representation of the removal procedure.

Steps
1. Remove the screw (M2x4) that secures the wireless-card bracket to the wireless card and system board.
2. Remove the wireless-card bracket from the wireless card.
3. Disconnect the antenna cables from the wireless card.
4. Slide and remove the wireless card from the wireless-card slot.
Installing the wireless card

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the wireless card and provides a visual representation of the installation procedure.

Steps
1. Connect the antenna cables to the wireless card.
   The following table provides the antenna-cable color scheme for the wireless card that is supported by your computer.

2. Align the notch on the wireless card with the tab on the wireless-card slot on the system board.
3. Slide and insert the wireless card at an angle into the wireless-card slot on the system board.
4. Align the screw hole on the wireless-card bracket to the screw hole on the wireless card and system board.
5. Replace the screw (M2x4) that secures the wireless-card bracket to the wireless card and the system board.

**Next steps**
1. Install the base cover.
2. Exit Service Mode.
3. Follow the procedure in After working inside your computer.

### GPU fan

#### Removing the GPU fan

**Prerequisites**
1. Follow the procedure in Before working inside your computer.
2. Enter Service Mode.
3. Remove the base cover.

**About this task**
The figure indicates the location of the GPU fan and provides a visual representation of the removal procedure.

**Steps**
1. Flip the Mylar cover open.
2. Disconnect the GPU fan cable from the system board.
3. Remove the two (M2x4) screws that secure the GPU fan to the palm-rest and keyboard assembly.
4. Unroute the I/O cable from routing guides underneath the GPU fan.
5. Slide and lift the GPU fan off the palm-rest and keyboard assembly.
Installing the GPU fan

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The figure indicates the location of the GPU fan and provides a visual representation of the installation procedure.

Steps
1. Lift the Mylar cover to access the cable connector.
2. Route the I/O cable through the routing guides underneath the GPU fan.
3. Slide and place the GPU fan on the palm-rest and keyboard assembly.
4. Align the screw holes on the GPU fan with the screw holes on the palm-rest and keyboard assembly.
5. Replace the two (M2x4) screws to secure the GPU fan to the palm-rest and keyboard assembly.
6. Connect the GPU fan cable to the system board.

Next steps
1. Install the base cover.
2. Exit Service Mode.
3. Follow the procedure in After working inside your computer.
System fan

Removing the system fan

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Enter Service Mode.
3. Remove the base cover.

About this task
The following images indicate the location of the fan and provide a visual representation of the removal procedure.

Steps
1. Disconnect the fan cable from the system board.
2. Remove the two (M2x4) screws that secure the fan to the palm-rest and keyboard assembly.
3. Lift the fan off the palm-rest and keyboard assembly.

Installing the system fan

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the fan and provides a visual representation of the installation procedure.
Steps
1. Using the alignment posts, place the fan on the palm-rest and keyboard assembly.
2. Replace the two (M2x4) screws to secure the fan to the palm-rest and keyboard assembly.
3. Connect the fan cable to the system board.

Next steps
1. Install the base cover.
2. Exit Service Mode.
3. Follow the procedure in After working inside your computer.

Heat sink

Removing the heat sink

Prerequisites
1. Follow the procedure in Before working inside your computer.

⚠️ **CAUTION:** For maximum cooling of the processor, do not touch the heat transfer areas on the heat sink. The oils in your skin can reduce the heat transfer capability of the thermal grease.

⚠️ **NOTE:** The heat sink may become hot during normal operation. Allow sufficient time for the heat sink to cool before you touch it.
2. Enter Service Mode.
3. Remove the base cover.
About this task
The following images indicate the location of the heat sink and provide a visual representation of the removal procedure.

Steps
1. In reverse sequential order (as indicated on the Mylar cover), loosen the seven captive screws that secure the heat sink to the system board.
2. Lift the heat sink off the system board along with the Mylar cover.

Installing the heat sink

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

⚠️ CAUTION: Incorrect alignment of the heat sink can damage the system board and processor.

ℹ️ NOTE: If either the system board or the heat sink is replaced, use the thermal pad/paste provided in the kit to ensure that thermal conductivity is achieved.

About this task
The following image indicates the location of the heat sink and provides a visual representation of the installation procedure.
Steps
1. Align the screw holes on the heat sink and Mylar cover with the screw holes on the system board.
2. In sequential order (as indicated on the Mylar cover), tighten the seven captive screws that secure the heat sink to the system board.

Next steps
1. Install the base cover.
2. Exit Service Mode.
3. Follow the procedure in After working inside your computer.

I/O board

Removing the I/O board

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Enter Service Mode.
3. Remove the base cover.
4. Remove the GPU fan.

About this task
The following images indicate the location of the I/O board and provide a visual representation of the removal procedure.
Steps
1. Open the latch, and disconnect the power button with fingerprint reader cable from the I/O board.
2. Open the latch, and disconnect the power button cable from the I/O board.
3. Peel the tape that secures the I/O-board cable to the I/O board.
4. Open the latch and disconnect the I/O-board cable from the I/O board.
5. Peel the adhesive tape securing the I/O board to the palm-rest and keyboard assembly.
6. Remove the two (M2x4) screws that secure the I/O board to the palm-rest and keyboard assembly.
7. Lift the I/O board off the palm-rest and keyboard assembly.

Installing the I/O board

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the I/O board and provides a visual representation of the installation procedure.
Steps
1. Slide the I/O board into the slot on the palm-rest and keyboard assembly.
2. Align the screw holes on the I/O board with the screw holes on the palm-rest and keyboard assembly.
3. Replace the two (M2x4) screws that secure the I/O board to the palm-rest and keyboard assembly.
4. Connect the power button with fingerprint reader cable into the connector on the I/O board and close the latch to secure the cable.
5. Connect the power button cable to the I/O board.
6. Connect the I/O-board cable to the I/O board and close the latch to secure the cable.
7. Adhere the tape that secures the I/O-board cable to the I/O board.
8. Adhere the adhesive tape that secures the I/O board to the palm-rest and keyboard assembly.

Next steps
1. Install the GPU fan.
2. Install the base cover.
3. Exit Service Mode.
4. Follow the procedure in After working inside your computer.

Speakers

Removing the speakers

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Enter Service Mode.
3. Remove the base cover.
4. Remove the battery.
5. Remove the system board.
Steps

1. Peel the tape that secures the speaker cable to the palm-rest and keyboard assembly.
2. Note the speaker cable routing, and remove the speaker cable from the routing guides on the palm-rest and keyboard assembly.
3. Disconnect the speaker cable from the system board.
4. Lift the speakers, along with the cable, off the palm-rest and keyboard assembly.

Installing the speakers

Prerequisites

If you are replacing a component, remove the existing component before performing the installation procedure.

About this task

The following image indicates the location of the speaker and provides a visual representation of the installation procedure.
Steps
1. Using the alignment posts and rubber grommets, place the speakers on the slots of the palm-rest and keyboard assembly.
2. Connect the speaker cable to the system board.
3. Route the speaker cable through the routing guides on the palm-rest and keyboard assembly.
4. Adhere the tape that secures the speaker cable to the palm-rest and keyboard assembly.

Next steps
1. Install the system board.
2. Install the battery.
3. Install the base cover.
4. Exit Service Mode.
5. Follow the procedure in After working inside your computer.

Touchpad

Removing the touchpad

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the base cover.
3. Remove the battery.

About this task
The following images indicate the location of the touchpad and provide a visual representation of the removal procedure.
Steps
1. Open the latch and disconnect the touchpad cable from the system board.
2. Peel the tape that secures the touchpad bracket to the palm-rest and keyboard assembly.
3. Remove the three (M2x1.8) and the two (M2x3) screws that secure the touchpad bracket to the palm-rest and keyboard assembly.
4. Lift the touchpad bracket off the palm-rest and keyboard assembly.
5. Remove the two (M2x1.8) screws that secure the touchpad to the palm-rest and keyboard assembly.
6. Peel the tape that secures the speaker cable to the touchpad bracket.
7. Lift the touchpad, along with the touchpad cable, off the palm-rest and keyboard assembly.

Installing the touchpad

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the touchpad and provides a visual representation of the installation procedure.
Steps

1. Slide the touchpad into the slot on the palm-rest and keyboard assembly.

   **NOTE:** Turn the computer over and open the display. Ensure that the touchpad is equally aligned along all four sides.

2. Replace the two (M2x1.8) screws that secure the touchpad to the palm-rest and keyboard assembly.

3. Adhere the tapes that secure the touchpad to the palm-rest and keyboard assembly.

   **NOTE:** Adhere the tapes back to its original position so that it runs across touchpad and palmrest.
4. Align the screw holes on the touchpad bracket with the screw holes on the palm-rest and keyboard assembly.
5. Replace the three (M2x1.8) and two (M2x3) screws that secure the touchpad bracket to the palm-rest and keyboard assembly.
6. Slide the touchpad cable into the connector on the touchpad and close the latch to secure the cable.
7. Adhere the tape that secures the touchpad bracket to the palm-rest and keyboard assembly.
8. Adhere the tape that secures the speaker cable to the touchpad.

Next steps
1. Install the battery.
2. Install the base cover.
3. Follow the procedure in After working inside your computer.

Display assembly

Removing the display assembly

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Enter Service Mode.
3. Remove the base cover.
4. Remove the heat sink.

About this task
The following images indicate the location of the display assembly and provide a visual representation of the removal procedure.
Steps
1. Disconnect the display cable from its connector on the system board.
2. Remove the two (M2.5x5) screws that secure the left-display hinge to the system board.
3. Remove the two (M2.5x5) screws that secure the right-display hinge to the system board.
4. Open the display hinges at an angle of 90 degrees.
5. Gently slide the palm-rest and keyboard assembly off the display assembly.

Installing the display assembly

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the display assembly and provides a visual representation of the installation procedure.
Steps
1. Slide the display assembly at an angle, and place the display assembly on the palm-rest and keyboard assembly.
2. Using the alignment posts, close the display hinges.
3. Replace the two (M2.5x5) screws that secure the right-display hinge to the system board.
4. Replace the two (M2.5x5) screws that secure the left-display hinge to the system board.
5. Slide the display cable into the connector on the system board.

Next steps
1. Install the heat sink.
2. Install the base cover.
3. Exit Service Mode.
4. Follow the procedure in After working inside your computer.

Power-button board

Removing the power-button board

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Enter Service Mode.
3. Remove the base cover.
4. Remove the GPU fan.
5. Remove the heat sink.

About this task
The following images indicate the location of the power-button board and provide a visual representation of the removal procedure.

Steps
1. Disconnect the power-button cable from the I/O board.
2. Peel the adhesive tape securing the power-button cable to palm-rest and keyboard assembly.
3. Remove the screw (M2x4) that secures the power-button board with the cable to the palm-rest and keyboard assembly.
4. Lift the power-button board with the cable off the palm-rest and keyboard assembly.
Installing the power-button board

About this task
The following images indicate the location of the power-button board and provide a visual representation of the installation procedure.

Steps
1. Align and place the power-button board along with the cable on the palm-rest and keyboard assembly.
2. Replace the screw (M2x4) that secures the power-button board with the cable to the palm-rest and keyboard assembly.
3. Connect the power-button cable to the I/O board.

Next steps
1. Install the heat sink.
2. Install the GPU fan.
3. Install the base cover.
4. Exit Service Mode.
5. Follow the procedure in After working inside your computer.

Power button with optional fingerprint reader

Removing the power-button with optional fingerprint reader

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the base cover.
3. Remove the battery.
4. Remove the heat sink.
5. Remove the GPU fan.
6. Remove the power-button board.

About this task
The following image indicates the location of the power-button with optional fingerprint reader and provides a visual representation of the removal procedure.

Steps
1. Remove the screw (M2x4) that secures the power-button with optional fingerprint reader to the palm-rest and keyboard assembly.
2. Lift the power-button with optional fingerprint reader off the palm-rest and keyboard assembly.

Installing the power-button with optional fingerprint reader

Prerequisites
If you are replacing a component, remove the existing component before performing the installation process.

About this task
The following image indicates the location of the power-button with optional fingerprint reader and provides a visual representation of the installation procedure.
Steps

1. Using the alignment posts, place the power-button with optional fingerprint reader into its slot on the palm-rest and keyboard assembly.
2. Replace the screw (M2x4) that secures the power-button with optional fingerprint reader to the palm-rest and keyboard assembly.

Next steps

1. Install the power-button board.
2. Install the heat sink.
3. Install the GPU fan.
4. Install the base cover.
5. Exit Service Mode.
6. Follow the procedure in After working inside your computer.

**Installing the power button with fingerprint reader**

**About this task**

The following images indicate the location of the power button with fingerprint reader and provide a visual representation of the installation procedure.
Steps
1. Align and place the power button with fingerprint reader along with the cable on the palm-rest and keyboard assembly.
2. Replace the screw (M2x4) that secures the power button with fingerprint reader to the palm-rest and keyboard assembly.
3. Connect the power button with fingerprint reader cable to the I/O board.

Next steps
1. Install the power-button board.
2. Install the heat sink.
3. Install the GPU fan.
4. Install the base cover.
5. Exit Service Mode.

Power-adapter port

Removing the power-adapter port

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Enter Service Mode.
3. Remove the base cover.
4. Remove the heat sink.
About this task
The following images indicate the location of the power-adapter port and provide a visual representation of the removal procedure.

Steps
1. Remove the two (M2.5x5) screws that secure the right display-hinge to the system board.
2. Open the display hinge at an angle of 90 degrees.
3. Disconnect the power-adapter port cable from the system board.
4. Peel the tapes that secure the power-adapter port cable to the system board.
5. Remove the power-adapter port cable from the routing guide on the palm-rest and keyboard assembly.
6. Lift the power-adapter port, along with its cable, off the palm-rest and keyboard assembly.

Prerequisites
If you are replacing a component, remove the existing component before performing the installation procedure.

About this task
The following image indicates the location of the power-adapter port and provides a visual representation of the installation procedure.
Steps
1. Place the power-adapter port, along with its cable, into the slot on the palm-rest and keyboard assembly.
2. Route the power-adapter port cable through the routing guide on the palm-rest and keyboard assembly.
3. Adhere the tapes that secure the power-adapter port cable to the system board.
4. Connect the power-adapter port cable to the system board.
5. Close the right display-hinge and align the screw holes on the right display-hinge with the screw holes on the system board and palm-rest and keyboard assembly.
6. Replace the two (M2.5x5) screws that secure the right display-hinge to the system board and palm-rest and keyboard assembly.

Next steps
1. Install the heat sink.
2. Install the base cover.
3. Exit Service Mode.
4. Follow the procedure in After working inside your computer.

System board

Removing the system board

Prerequisites
1. Follow the procedure in Before working inside your computer.
   - **NOTE:** Your computer’s Service Tag is stored in the system board. You must enter the Service Tag in the BIOS setup program after you replace the system board.
   - **NOTE:** Replacing the system board removes any changes that you have made to the BIOS using the BIOS setup program. You must make the appropriate changes again after you replace the system board.
   - **NOTE:** Before disconnecting the cables from the system board, note the location of the connectors so that you can reconnect the cables correctly after you replace the system board.
2. Remove the base cover.
3. Remove the battery.
4. Remove the memory module.
5. Remove the M.2 2280 solid-state drive or M.2 2230 solid-state drive from M.2 slot one, whichever applicable.
6. Remove the M.2 2230 solid-state drive from M.2 slot two, if applicable.
7. Remove the wireless card.
8. Remove the GPU fan.
9. Remove the system fan.
10. Remove the heat sink.

About this task

**NOTE:** When removing the system board to replace/access other parts, the system board can be removed and installed with the heat sink attached in order to simplify the procedure and preserve the thermal bond between the system board and heat-sink.

Steps

1. Peel the tape that secures the display cable to the system board.
2. Open the latch and disconnect the display cable from the system board.
3. Peel the tape and disconnect the I/O-board cable from the system board.
4. Disconnect the speaker cable from the system board.
5. Open the latch, and disconnect the touchpad cable from the system board.
6. Open the latch, and disconnect the keyboard backlit cable from the system board.
7. Open the latch, and disconnect the keyboard cable from the system board.
8. Peel the tape and disconnect the power-adapter port cable from the system board.
9. Remove the two (M2x5) screws that secure the USB Type-C bracket to the system board.
10. Remove the two (M2x2) screws and one (M2x4) screw that secures the system board to the palm-rest and keyboard assembly.
11. Lift the system board off the palm-rest and keyboard assembly.

7. Speaker cable connector

The following image indicates the location of the system board and provides a visual representation of the installation procedure.
Steps
1. Align and place the system board on the palm-rest and keyboard assembly.
2. Replace the two (M2x2) screws and one (M2x4) screw that secure the system board to the palm-rest and keyboard assembly.
3. Connect the display cable to the system board and close the latch to secure the cable.
4. Adhere the tape that secures the display cable to the system board.
5. Connect the power-adapter port cable to the system board.
6. Adhere the tape that secures the power-adapter port cable to the system board.
7. Align the screw holes on the USB Type-C port bracket with the screw holes on the system board.
8. Replace the two (M2x5) screws that secure the USB Type-C port bracket to the system board.
9. Connect the keyboard cable to the system board and close the latch to secure the cable.
10. Connect the keyboard backlight cable to the system board and close the latch to secure the cable.
11. Connect the touchpad cable to the system board and close the latch to secure the cable.
12. Connect the speaker cable to the system board.
13. Connect the I/O-board cable to the system board.
14. Adhere the tape that secures the I/O-board cable to the system board.

Next steps
1. Install the heat sink.
2. Install the GPU fan.
3. Install the system fan.
4. Install the wireless card.
5. Install the M.2 2280 solid-state drive or M.2 2230 solid-state drive in M.2 slot one, whichever applicable.
6. Install the M.2 2230 solid-state drive in M.2 slot two, if applicable.
7. Install the memory module.
8. Install the battery.
9. Install the base cover.
10. Follow the procedure in After working inside your computer.

Palm-rest and keyboard assembly

Removing the palm-rest and keyboard assembly

Prerequisites
1. Follow the procedure in Before working inside your computer.
2. Remove the base cover.
3. Remove the battery.
4. Remove the memory module.
5. Remove the M.2 2280 solid-state drive or M.2 2230 solid-state drive from M.2 slot one, whichever applicable.
6. Remove the M.2 2230 solid-state drive from M.2 slot two, if applicable.
7. Remove the wireless card.
8. Remove the GPU fan.
9. Remove the system fan.
10. Remove the heat sink.
11. Remove the I/O board.
12. Remove the system board.

NOTE: The system board can be removed along with the heat sink.

13. Remove the power-button board.
14. Remove the power button with optional fingerprint reader based on the system configuration.
15. Remove the power button with fingerprint reader based on the system configuration.
16. Remove the power-adapter port.
17. Remove the speakers.
18. Remove the touchpad.
19. Remove the display assembly.

About this task
After performing the steps in the pre-requisites, you are left with the palm-rest and keyboard assembly.
Installing the palm-rest and keyboard assembly

**Prerequisites**
If you are replacing a component, remove the existing component before performing the installation procedure.

**About this task**
Place the palm-rest and keyboard assembly on a flat surface.
Next steps
1. Install the display assembly.
2. Install the touchpad.
3. Install the speakers.
4. Install the power-adapter port.
5. Install the power button with fingerprint reader based on system configuration.
6. Install the power button with optional fingerprint reader based on system configuration.
7. Install the power-button board.
8. Install the system board.
   **NOTE:** The system board can be installed along with the heat sink.
9. Install the I/O board.
10. Install the heat sink.
11. Install the GPU fan.
12. Install the system fan.
13. Install the wireless card.
14. Install the M.2 2280 solid-state drive or M.2 2230 solid-state drive in M.2 slot one, whichever applicable.
15. Install the M.2 2230 solid-state drive in M.2 slot two, if applicable.
16. Install the memory module.
17. Install the battery.
18. Install the base cover.
19. Follow the procedure in After working inside your computer.
Drivers and downloads

When troubleshooting, downloading or installing drivers it is recommended that you read the Dell Knowledge Based article, Drivers and Downloads FAQ 000123347.
System setup

CAUTION: Unless you are an expert computer user, do not change the settings in the BIOS Setup program. Certain changes can make your computer work incorrectly.

NOTE: Depending on the computer and its installed devices, the items listed in this section may or may not be displayed.

NOTE: Before you change BIOS Setup program, it is recommended that you write down the BIOS Setup program screen information for future reference.

Use the BIOS Setup program for the following purposes:
- Get information about the hardware installed in your computer, such as the amount of RAM and the size of the hard drive.
- Change the system configuration information.
- Set or change a user-selectable option, such as the user password, type of hard drive installed, and enabling or disabling base devices.

Entering BIOS setup program

About this task
Turn on (or restart) your computer and press F2 immediately.

Navigation keys

NOTE: For most of the System Setup options, changes that you make are recorded but do not take effect until you restart the system.

Boot Sequence

Boot Sequence allows you to bypass the System Setup–defined boot device order and boot directly to a specific device (for example: optical drive or hard drive). During the Power-on Self Test (POST), when the Dell logo appears, you can:
- Access System Setup by pressing F2 key
• Bring up the one-time boot menu by pressing F12 key.

The one-time boot menu displays the devices that you can boot from including the diagnostic option. The boot menu options are:

• Removable Drive (if available)
• STXXXX Drive (if available)
  \[\textbf{NOTE:} \ XXX \text{ denotes the SATA drive number.}\]
• Optical Drive (if available)
• SATA Hard Drive (if available)
• Diagnostics

The boot sequence screen also displays the option to access the System Setup screen.

### One time boot menu

To enter one time boot menu, turn on your computer, and then press F12 immediately.

\[\textbf{NOTE:} \text{ It is recommended to shutdown the computer if it is on.}\]

The one-time boot menu displays the devices that you can boot from including the diagnostic option. The boot menu options are:

• Removable Drive (if available)
• STXXXX Drive (if available)
  \[\textbf{NOTE:} \ XXX \text{ denotes the SATA drive number.}\]
• Optical Drive (if available)
• SATA Hard Drive (if available)
• Diagnostics

The boot sequence screen also displays the option to access the System Setup screen.

### System setup options

You can create a system password and a setup password to secure your computer.

⚠️ **CAUTION:** The password features provide a basic level of security for the data on your computer.

⚠️ **CAUTION:** Anyone can access the data that is stored on your computer if it is not locked and left unattended.

ℹ️ **NOTE:** System and setup password feature is disabled.

Assigning a system setup password

Prerequisites

You can assign a new **System or Admin Password** only when the status is in **Not Set**.

About this task

To enter the system setup, press F12 immediately after a power-on or reboot.

Steps

1. In the **System BIOS** or **System Setup** screen, select **Security** and press Enter. The **Security** screen is displayed.

2. Select **System/Admin Password** and create a password in the **Enter the new password** field.

   Use the following guidelines to assign the system password:
   - A password can have up to 32 characters.
   - At least one special character: ! " # $ % & ’ ( ) * + , - . / : ; < = > ? @ [ \ ] ^ _ ` { | }
   - Numbers 0 through 9.
   - Upper case letters from A to Z.
   - Lower case letters from a to z.
3. Type the system password that you entered earlier in the Confirm new password field and click OK.
4. Press Esc and save the changes as prompted by the pop-up message.
5. Press Y to save the changes. The computer restarts.

Deleting or changing an existing system setup password

Prerequisites
Ensure that the Password Status is Unlocked (in the System Setup) before attempting to delete or change the existing System and/or Setup password. You cannot delete or change an existing System or Setup password, if the Password Status is Locked.

About this task
To enter the System Setup, press F12 immediately after a power-on or reboot.

Steps
1. In the System BIOS or System Setup screen, select System Security and press Enter. The System Security screen is displayed.
2. In the System Security screen, verify that Password Status is Unlocked.
3. Select System Password, update, or delete the existing system password, and press Enter or Tab.
4. Select Setup Password, update, or delete the existing setup password, and press Enter or Tab.
   
   **NOTE:** If you change the System and/or Setup password, reenter the new password when prompted. If you delete the System and/or Setup password, confirm the deletion when prompted.

5. Press Esc and a message prompts you to save the changes.
6. Press Y to save the changes and exit from System Setup. The computer restarts.

Clearing CMOS settings

About this task

**CAUTION:** Clearing CMOS settings will reset the BIOS settings on your computer.

Steps
1. Remove the base cover.
2. Disconnect the battery cable from the system board.
3. Wait for one minute.
4. Connect the battery cable to the system board.
5. Replace the base cover.

Clearing BIOS (System Setup) and System passwords

About this task

To clear the system or BIOS passwords, contact Dell technical support as described at www.dell.com/contactdell.

**NOTE:** For information on how to reset Windows or application passwords, refer to the documentation accompanying Windows or your application.
Updating the BIOS

Updating the BIOS in Windows

Steps
1. Go to www.dell.com/support.
2. Click Product support. In the Search support box, enter the Service Tag of your computer, and then click Search.

   NOTE: If you do not have the Service Tag, use the SupportAssist feature to automatically identify your computer. You can also use the product ID or manually browse for your computer model.

3. Click Drivers & Downloads. Expand Find drivers.
4. Select the operating system installed on your computer.
5. In the Category drop-down list, select BIOS.
6. Select the latest version of BIOS, and click Download to download the BIOS file for your computer.
7. After the download is complete, browse the folder where you saved the BIOS update file.
8. Double-click the BIOS update file icon and follow the on-screen instructions.

   For more information, see knowledge base article 000124211 at www.dell.com/support.

Updating the BIOS using the USB drive in Windows

Steps
1. Follow the procedure from step 1 to step 6 in Updating the BIOS in Windows to download the latest BIOS setup program file.
2. Create a bootable USB drive. For more information, see the knowledge base article 000145519 at www.dell.com/support.
3. Copy the BIOS setup program file to the bootable USB drive.
4. Connect the bootable USB drive to the computer that needs the BIOS update.
5. Restart the computer and press F12.
6. Select the USB drive from the One Time Boot Menu.
7. Type the BIOS setup program filename and press Enter.
   The BIOS Update Utility appears.
8. Follow the on-screen instructions to complete the BIOS update.

Updating the BIOS from the F12 One-Time boot menu

Update your computer BIOS using the BIOS update.exe file that is copied to a FAT32 USB drive and booting from the F12 One-Time boot menu.

About this task

BIOS Update

You can run the BIOS update file from Windows using a bootable USB drive or you can also update the BIOS from the F12 One-Time boot menu on the computer.

Most of the Dell computers built after 2012 have this capability, and you can confirm by booting your computer to the F12 One-Time Boot Menu to see if BIOS FLASH UPDATE is listed as a boot option for your computer. If the option is listed, then the BIOS supports this BIOS update option.

NOTE: Only computers with BIOS Flash Update option in the F12 One-Time boot menu can use this function.

Updating from the One-Time boot menu

To update your BIOS from the F12 One-Time boot menu, you need the following:

- USB drive formatted to the FAT32 file system (key does not have to be bootable)
- BIOS executable file that you downloaded from the Dell Support website and copied to the root of the USB drive
AC power adapter that is connected to the computer
Functional computer battery to flash the BIOS

Perform the following steps to perform the BIOS update flash process from the F12 menu:

⚠️ CAUTION: Do not turn off the computer during the BIOS update process. The computer may not boot if you turn off your computer.

Steps
1. From a turn off state, insert the USB drive where you copied the flash into a USB port of the computer.
2. Turn on the computer and press F12 to access the One-Time Boot Menu, select BIOS Update using the mouse or arrow keys then press Enter.
   The flash BIOS menu is displayed.
3. Click Flash from file.
4. Select external USB device.
5. Select the file and double-click the flash target file, and then click Submit.
6. Click Update BIOS. The computer restarts to flash the BIOS.
7. The computer will restart after the BIOS update is completed.
Handling swollen Lithium-ion batteries

Like most laptops, Dell laptops use lithium-ion batteries. One type of lithium-ion battery is the lithium-ion polymer battery. Lithium-ion polymer batteries have increased in popularity in recent years and have become standard in the electronics industry due to customer preferences for a slim form factor (especially with newer ultra-thin laptops) and long battery life. Inherent to lithium-ion polymer battery technology is the potential for swelling of the battery cells.

Swollen battery may impact the performance of the laptop. To prevent possible further damage to the device enclosure or internal components leading to malfunction, discontinue the use of the laptop and discharge it by disconnecting the AC adapter and letting the battery drain.

Swollen batteries should not be used and should be replaced and disposed of properly. We recommend contacting Dell product support for options to replace a swollen battery under the terms of the applicable warranty or service contract, including options for replacement by a Dell authorized service technician.

The guidelines for handling and replacing Lithium-ion batteries are as follows:

- Exercise caution when handling Lithium-ion batteries.
- Discharge the battery before removing it from the system. To discharge the battery, unplug the AC adapter from the system and operate the system only on battery power. When the system will no longer power on when the power button is pressed, the battery is fully discharged.
- Do not crush, drop, mutilate, or penetrate the battery with foreign objects.
- Do not expose the battery to high temperatures, or disassemble battery packs and cells.
- Do not apply pressure to the surface of the battery.
- Do not bend the battery.
- Do not use tools of any type to pry on or against the battery.
- If a battery gets stuck in a device as a result of swelling, do not try to free it as puncturing, bending, or crushing a battery can be dangerous.
- Do not attempt to reassemble a damaged or swollen battery into a laptop.
- Swollen batteries that are covered under warranty should be returned to Dell in an approved shipping container (provided by Dell)—this is to comply with transportation regulations. Swollen batteries that are not covered under warranty should be disposed of at an approved recycling center. Contact Dell product support at https://www.dell.com/support for assistance and further instructions.
- Using a non-Dell or incompatible battery may increase the risk of fire or explosion. Replace the battery only with a compatible battery purchased from Dell that is designed to work with your Dell computer. Do not use a battery from other computers with your computer. Always purchase genuine batteries from https://www.dell.com or otherwise directly from Dell.

Lithium-ion batteries can swell for various reasons such as age, number of charge cycles, or exposure to high heat. For more information on how to improve the performance and lifespan of the laptop battery and to minimize the possibility of occurrence of the issue, see Dell Laptop Battery - Frequently Asked Questions.

Locate the Service Tag or Express Service Code of your Dell computer

Your Dell computer is uniquely identified by a Service Tag or Express Service Code. To view relevant support resources for your Dell computer, we recommend entering the Service Tag or Express Service Code at www.dell.com/support.

For more information on how to find the Service Tag for your computer, see Locate the Service Tag for your Dell Laptop.
System-diagnostic lights

The power and battery status light indicates the power and battery status of the computer. These are the power states:

**Solid white:** Power adapter is connected, and the battery has more than 5% charge.

**Amber:** Computer is running on battery, and the battery has less than 5% charge.

**Off:**
- Power adapter is connected, and the battery is fully charged.
- Computer is running on battery, and the battery has more than 5% charge.
- Computer is in sleep state, hibernation, or turned off.

The power and battery-status light may also blink amber or white according to predefined "beep codes" indicating various failures.

For example, the power and battery-status light blinks amber two times followed by a pause, and then blinks white three times followed by a pause. This 2,3 pattern continues until the computer is turned off, indicating no memory or RAM is detected.

The following table shows different power and battery-status light patterns and associated problems.

**NOTE:** The following diagnostic light codes and recommended solutions are intended for Dell service technicians to troubleshoot problems. You should only perform troubleshooting and repairs as authorized or directed by the Dell technical support team. Damage due to servicing that is not authorized by Dell is not covered by your warranty.
SupportAssist diagnostics

About this task
The SupportAssist diagnostics (previously known as ePSA diagnostics) performs a complete check of your hardware. The SupportAssist diagnostics is embedded in the BIOS and is launched by it internally. The SupportAssist diagnostics provides a set of options for particular devices or device groups. It allows you to:

- Run tests automatically or in an interactive mode.
- Repeat tests
- Display or save test results
- Run thorough tests to introduce additional test options and provide extra information about the failed device(s)
- View status messages that indicate if the tests are completed successfully
- View error messages that indicate if problems were encountered during the test

**NOTE:** Some tests are meant for specific devices and require user interaction. Ensure that you are present in front of the computer when the diagnostic tests are performed.

For more information, see SupportAssist Pre-Boot System Performance Check.

Backup media and recovery options

It is recommended to create a recovery drive to troubleshoot and fix problems that may occur with Windows. Dell proposes multiple options for recovering Windows operating system on your Dell PC. For more information, see Dell Windows Backup Media and Recovery Options.

Built-in self-test (BIST)

M-BIST

M-BIST (Built In Self-Test) is the system board's built-in self-test diagnostics tool that improves the diagnostics accuracy of system board embedded controller (EC) failures.

**NOTE:** M-BIST can be manually initiated before POST (Power On Self Test).

How to run M-BIST

**NOTE:** M-BIST must be initiated on the system from a power-off state either connected to AC power or with battery only.

1. Press and hold both the M key on the keyboard and the power button to initiate M-BIST.
2. With both the M key and the power button held down, the battery indicator LED may exhibit two states:
   a. OFF: No fault detected with the system board
   b. AMBER: Indicates a problem with the system board
3. If there is a failure with the system board, the battery status LED will flash one of the following error codes for 30 seconds:

**Table 22. LED error codes**

</tbody>
</table>
4. If there is no failure with the system board, the LCD will cycle through the solid color screens described in the LCD-BIST section for 30 seconds and then power off.

**LCD Built-in Self Test (BIST)**

Dell laptops have a built-in diagnostic tool that helps you determine if the screen abnormality you are experiencing is an inherent problem with the LCD (screen) of the Dell laptop or with the video card (GPU) and PC settings.

When you notice screen abnormalities like flickering, distortion, clarity issues, fuzzy or blurry image, horizontal or vertical lines, color fade etc., it is always a good practice to isolate the LCD (screen) by running the Built-In Self Test (BIST).

**How to invoke LCD BIST Test**

1. Power off the Dell laptop.
2. Disconnect any peripherals that are connected to the laptop. Connect only the AC adapter (charger) to the laptop.
3. Ensure that the LCD (screen) is clean (no dust particles on the surface of the screen).
4. Press and hold **D** key and **Power on** the laptop to enter LCD built-in self test (BIST) mode. Continue to hold the D key, until the system boots up.
5. The screen will display solid colors and change colors on the entire screen to white, black, red, green, and blue twice.
6. Then it will display the colors white, black and red.
7. Carefully inspect the screen for abnormalities (any lines, fuzzy color or distortion on the screen).
8. At the end of the last solid color (red), the system will shut down.

**NOTE:** Dell SupportAssist Pre-boot diagnostics upon launch, initiates an LCD BIST first, expecting a user intervention to confirm functionality of the LCD.

**Recovering the operating system**

When your computer is unable to boot to the operating system even after repeated attempts, it automatically starts Dell SupportAssist OS Recovery.

Dell SupportAssist OS Recovery is a standalone tool that is preinstalled in all Dell computers installed with Windows operating system. It consists of tools to diagnose and troubleshoot issues that may occur before your computer boots to the operating system. It enables you to diagnose hardware issues, repair your computer, back up your files, or restore your computer to its factory state.

You can also download it from the Dell Support website to troubleshoot and fix your computer when it fails to boot into their primary operating system due to software or hardware failures.

For more information about the Dell SupportAssist OS Recovery, see Dell SupportAssist OS Recovery User’s Guide at [www.dell.com/serviceabilitytools](http://www.dell.com/serviceabilitytools). Click **SupportAssist** and then, click **SupportAssist OS Recovery**.

**WiFi power cycle**

**About this task**

If your computer is unable to access the internet due to WiFi connectivity issues a WiFi power cycle procedure may be performed. The following procedure provides the instructions on how to conduct a WiFi power cycle:

**NOTE:** Some ISPs (Internet Service Providers) provide a modem/router combo device.

**Steps**

1. Turn off your computer.
2. Turn off the modem.
3. Turn off the wireless router.
4. Wait for 30 seconds.
5. Turn on the wireless router.
6. Turn on the modem.
Drain residual flea power (perform hard reset)

About this task
Flea power is the residual static electricity that remains in the computer even after it has been powered off and the battery is removed.

For your safety, and to protect the sensitive electronic components in your computer, you are requested to drain residual flea power before removing or replacing any components in your computer.

Draining residual flea power, also known as a performing a “hard reset”, is also a common troubleshooting step if your computer does not power on or boot into the operating system.

To drain residual flea power (perform a hard reset)

Steps
1. Turn off your computer.
2. Disconnect the power adapter from your computer.
3. Remove the base cover.
4. Remove the battery.
5. Press and hold the power button for 20 seconds to drain the flea power.
6. Install the battery.
7. Install the base cover.
8. Connect the power adapter to your computer.
9. Turn on your computer.

NOTE: For more information about performing a hard reset, see the knowledge base article 000130881 at www.dell.com/support.

Real Time Clock—RTC reset

The Real Time Clock (RTC) reset function allows you or the service technician to recover the recently launched model Dell Latitude and Precision systems from No POST/No Boot/No Power situations. You can initiate the RTC reset on the system from a power-off state only if it is connected to AC power. Press and hold the power button for 25 seconds. The system RTC reset occurs after you release the power button.

NOTE: If AC power is disconnected from the system during the process or the power button is held longer than 40 seconds, the RTC reset process gets aborted.

The RTC reset will reset the BIOS to Defaults, un-provision Intel vPro and reset the system date and time. The following items are unaffected by the RTC reset:

- Service Tag
- Asset Tag
- Ownership Tag
- Admin Password
- System Password
- HDD Password
- Key Databases
- System Logs

NOTE: The IT administrator’s vPro account and password on the system will be un-provisioned. The system needs to go through the setup and configuration process again to reconnect it to the vPro server.

The below items may or may not reset based on your custom BIOS setting selections:

- Boot List
- Enable Legacy Option ROMs
- Secure Boot Enable
- Allow BIOS Downgrade
