This document describes the new features, and known issues in Dell EMC License Manager Version 1.6.

Release type and definition

Dell EMC License Manager

Dell EMC License Manager is a one-to-many license deployment and reporting tool for integrated Dell Remote Access Controller (iDRAC) and Chassis Management Controller (CMC) licenses. License Manager can also inventory licensable systems to report the licensing status and currently enabled management controller feature level. Use iDRAC licenses to enable server management capabilities such as the virtual media and remote console support currently available in the Enterprise iDRAC feature set. Use CMC licenses to enable chassis management capabilities such as console integration, remote access, mutlichassis management, server cloning, and so on. To use the License Manager, inventory licensable servers and deploy licenses obtained from the Online Licensing Portal (www.dell.com/support/retail/lkm).

Version

1.6

Release Date

October 2020

Previous Version

1.5

Importance

OPTIONAL: Dell recommends the customer review specifics about the update to determine if it applies to your system. The update contains changes that impact only certain configurations, or provides new features that may/may not apply to your environment.

New in this release

- Support for latest generation of PowerEdge servers.
- Support for iDRAC Secure Enterprise Key Manager (SEKM) licenses.
- Support for iDRAC Datacenter licenses.
- Support for OpenManage Enterprise Advanced licences.
- Support for Dell EMC OpenManage Integration with Microsoft Windows Admin Center (OMIMSWAC) licenses.

- Support for Dell EMC OpenManage Integration with ServiceNow (OMISNOW) licenses.

Known issues

Issue 1

Description

The License Manager help content cannot be viewed in some versions of Microsoft Internet Explorer.

Resolution

Enable active scripting under security settings, and then retry the operation.

1. In Internet Explorer, click **Tools** > **Internet Options**.
The **Internet Options** window is displayed.
2. Click the **Security** tab, and then click **Custom level**.
The **Security Settings** window is displayed.
3. In the **Settings** pane, scroll down until you find **Scripting and Active Scripting**.
4. Click **Enable**, and then click **OK**.
The **Security Settings** window is closed.
5. In the **Internet Options** window, click **OK**.

Installation prerequisites

- **Microsoft .NET Framework 4.5**
www.microsoft.com/en-us/download/details.aspx?id=30653
- **Windows Remote Management (WinRM) 2.0 or later**
Part of Windows Management Framework Core package
www.support.microsoft.com/kb/968930
The WinRM prerequisite is also available through Microsoft Windows Update.
