Notes, cautions, and warnings

 **NOTE:** A NOTE indicates important information that helps you make better use of your product.

 **CAUTION:** A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

 **WARNING:** A WARNING indicates a potential for property damage, personal injury, or death.

Overview

This document contains updated information about OpenManage Integration for VMware vCenter(OMIVV) and any other Technical Documentation included with the OMIVV software.

The OpenManage Integration for VMware vCenter 4.0 provides the following features:

- Support for vSphere 6.5 and 6.0 U2
- Support for vSphere 6.5 Proactive HA and customize severity of the Dell host and chassis components
- Support for parallel firmware update jobs on multiple clusters
- Support for integration with vRealize Operations (vROPS)
- Support for OMSA 8.3 and OMSA 8.4
- Notification on the availability of the latest version of OMIVV
- Support for up to 1000 hosts with a single vCenter instance or multiple vCenter servers
- Support for all 13th generation platforms

 **NOTE:** From OMIVV 4.0 onwards, only VMware vSphere Web client is supported and the vSphere Desktop client is not supported.

 **NOTE:** For vCenter 6.5 and later, the OMIVV appliance is available only for the flash version. The OMIVV appliance is not available for the HTML5 version.

Space required for provisioned storage

The OMIVV virtual appliance requires at least 44 GB of disk space for provisioned storage.

Default virtual appliance configuration

The OMIVV virtual appliance is provisioned with 8 GB of RAM and 2 virtual CPU.

Supported resources

This chapter contains sections that provides information about the resources that support OpenManage Integration for VMware vCenter.

Topics:

- [Browser and flash player requirements](#)

Browser and flash player requirements

To display OpenManage Integration for VMware vCenter, a system must have a minimum 1024 x 768 screen resolution and a web browser that meets minimum requirements based on the operating system.

- NOTE:** The browser and flash player requirements are as per the VMware guidelines for OpenManage Integration for VMware vCenter. The supported browsers are the Microsoft Internet Explorer, Google Chrome, and Mozilla Firefox. For specific browser versions, see the VMware Documentation for the vCenter version that you are using.
- NOTE:** To access OpenManage Integration for VMware vCenter from Windows server 2012 or later, enable the Desktop Experience Feature to activate the flash player. Install the OpenManage Integration for VMware vCenter (virtual appliance) on any ESXi host.

BIOS, iDRAC, Lifecycle Controller versions

The BIOS, iDRAC, and the Lifecycle Controller versions required to enable the features of OpenManage Integration for VMware vCenter are listed in this section.

Dell recommends you to use Server Update Utility (SUU), Repository Manager, or Lifecycle Controller's Platform to update your servers to one of the following base versions before using OMIVV:

Port information

Virtual appliance and managed nodes

In OMIVV, when you deploy the OMSA agent by using the *Fix non-compliance hosts* link available in the **Fix Non-compliant vSphere Hosts** wizard, OMIVV performs the following action:

- Starts the HTTP Client service
- Enables port 8080
- Releases the port for ESXi 5.0 or later to download and install OMSA VIB

After the OMSA VIB installation is complete, the service automatically stops and the port is closed.

*In Cloud with model number C6320, health monitoring is not supported for the mezzanine cards.

**In Cloud with model number C6320, firmware updates are not supported for the mezzanine cards.

***Proactive HA feature is only applicable on vCenter 6.5 or later that has ESXi 6.0 or later.

Important notes

This section provides important information that you must consider when you are working on OpenManage Integration for VMware vCenter.

- OMIVV supports BIOS mode to deploy hypervisor on the target server. Ensure that you have BIOS mode selected in the reference hardware profile before applying the hypervisor profile. If there is no hardware profile selected, ensure that you manually configure the Boot mode as BIOS and reboot the server before applying the hypervisor profile.
- OMIVV currently supports only the community named "Public" or "public". The SNMP community name is not configurable. If another community name is used, the events are not received by OMIVV and the events are not displayed in the VMware vCenter.
- A hardware profile created using a reference server with a certain BIOS version can cause deployment to fail. Some BIOS versions do not provide accurate information for certain BIOS settings, such as the Embedded NIC1 and NIC2 settings. When a server with the minimum BIOS version is used as a reference server in a hardware profile, the fields are ignored by both the UI and deployment. An issue may occur, however, if the settings in question are required to have a certain value for deployment to complete successfully. The solution to this issue is to use a server with up-to-date BIOS as a reference server for a hardware profile.

NOTE: Servers being used for deployment should also have updated BIOS. If deployment tries to apply settings to a server with issues in BIOS, deployment fails. Currently the BIOS version is not checked for compliance, but it is displayed on the server compliance page. Warnings are displayed on the hardware profile reference server and BIOS settings pages and when you select a deployment template with an affected hardware profile during deployment.

- OMIVV registered with the VMware vCenter by using Fully Qualified Domain Name (FQDN) is highly recommended. For FQDN-based registrations, the host name of the vCenter should be properly resolvable by the DNS server.

NOTE: For more information about the DNS requirements for vSphere, see the following links:
