

Dell EMC SupportAssist Enterprise

Version 1.0 Reportable Items

Notes, cautions, and warnings

 NOTE: A NOTE indicates important information that helps you make better use of your product.

 CAUTION: A CAUTION indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

 WARNING: A WARNING indicates a potential for property damage, personal injury, or death.

Introduction

Dell EMC SupportAssist Enterprise is an application automates technical support for your Dell server, storage, and networking devices. By default, SupportAssist Enterprise collects system information periodically from each device and sends the data securely to Dell. Typically, system information is collected as follows:

- Periodically — At regular intervals, depending on the configured collection frequency. By default, SupportAssist Enterprise is configured to collect system information from your devices once a month.
- On case creation — When a support case is created for an issue that has been identified by SupportAssist Enterprise.
- Manual (on demand) — If requested by Dell Technical Support, you can initiate the collection of system information from one or more devices at any time.

NOTE: When an issue is detected on devices with a Basic Support entitlement, SupportAssist Enterprise does not create a support case. However, system information is collected and sent to Dell.

- Manual (on demand) — If requested by Dell Technical Support, you can initiate the collection of system information from one or more devices at any time.

NOTE: If required, you can disable the periodic collection of system information for a specific device type or for all device types. For more information, see the "Configuring data collection settings" section in the *Dell SupportAssist Enterprise Version 1.0 User's Guide* at Dell.com/ServiceabilityTools.

NOTE: If the security policy of your company restricts sending certain identity information outside of the company network, you can disable the collection of such data from your devices. For more information, see the "Configuring data collection settings" section in the *Dell EMC SupportAssist Enterprise Version 1.0 User's Guide* at Dell.com/ServiceabilityTools.

NOTE: If you have disabled the collection of identity information from devices, the identity information is replaced by tokenized values in the collected data. The tokenized values are represented as TOKEN n —for example, TOKEN0, TOKEN1, or TOKEN2.

The collected system information is saved in a secured database on the server where SupportAssist Enterprise is installed. Data collected from servers can be viewed by using the Configuration Viewer available in SupportAssist Enterprise. For storage, networking, and chassis devices, you can download the collected data and view it by using a web browser.

This document provides the list of attributes that may be available in the data collected by SupportAssist Enterprise from server, storage, networking, and chassis devices.

Items reported from servers running Windows

Data categories

The following are the top-level categories of data that you can view:

- Summary
- System
- Storage
- Software
- Logs

 **NOTE:** If a device that you have added in SupportAssist Enterprise by selecting the Device Type as Server / Hypervisor does not have Dell OpenManage Server Administrator (OMSA) installed, System and Storage items will not be available in periodic collections from that device.

Accessing the Summary items

To access the Summary items:

On the configuration viewer, click **PowerEdge xxx → Summary**.

Summary items

Summary

Items reported from servers running Linux

Data categories

The following are the top-level categories of data that you can view:

- Summary
- System
- Storage
- Software
- Logs

 **NOTE:** If a device that you have added in SupportAssist Enterprise by selecting the Device Type as Server / Hypervisor does not have Dell OpenManage Server Administrator (OMSA) installed, System and Storage items will not be available in periodic collections from that device.

Accessing the Summary items

To access the Summary items:

On the configuration viewer, click **PowerEdge xxx → Summary**.

Items reported in periodic collections from servers

The items reported in the data collected from servers vary depending on the following:

- **Device Type** used to add the device in SupportAssist Enterprise
- Type of collection (manual, periodic, or support case)

The following table provides a summary of the items reported in the collected data for a periodic collection from servers.

 **NOTE:** Data in a collection that is performed due to a support case creation and a manually-initiated collection is more detailed in comparison with the data collected in a periodic collection.

 **NOTE:** Data from periodic collections enables Dell to provide you an insight into your company's as-maintained environment configuration with proactive firmware recommendations and other reports.

Table 67. Items reported in periodic collections

| Items reported | Device added in SupportAssist Enterprise with Device Type as Server / Hypervisor | | Device added in SupportAssist Enterprise with the Device Type as iDRAC |
